It is a mistake to suppose that a wise and beneficent Creator intended only a part of the earth's surface for the use and abode of mankind. Every part of this planet was designed to be of use to human beings in the great, munificent scheme of creation, a circumstance better realized today than ever before, and many localities once considered uninhabitable by civilized beings, are now peopled by some of the most prosperous and progressive communities in the world. While primitive man, whose wants were few, found a most congenial location for his existence in tropical climes where most of his physical needs were supplied with little effort on his part, the successive stages of progress made by civilization have each been marked by an increase in the number of material things required for man's use and these wants, in turn, have stimulated the industry and ingenuity by which he has striven to supply them. Without this stimulus, the world would, long since, have drifted into a lethargy of indolence, ignorance and depravity fearful to contemplate. The advances made in the art of husbandry as well as commerce, manufacturing and other industries are, primarily, the result of man's natural covetousness and a desire to better his condition steadily developed through many generations. The highest type of civilization today draws upon every part of the world to supply its wants.

One circumstance emphasized by the progress of the race is the fact that human development does not achieve its highest state in the most congenial climates, but that civilization often reaches its highest ideals in locations where the greatest efforts are required to combat the forces of nature. It is well established that the most vigorous and progressive nations have been developed in the higher latitudes of the north temperate zone. The nations whose military and civil achievements have been most conspicuous in the modern history of the world have been nurtured in climates once considered unfit for human habitation.

JOHN U. SEBENIUS' REGISTERED GUERNSEYS, ST. LOUIS COUNTY, MINN.

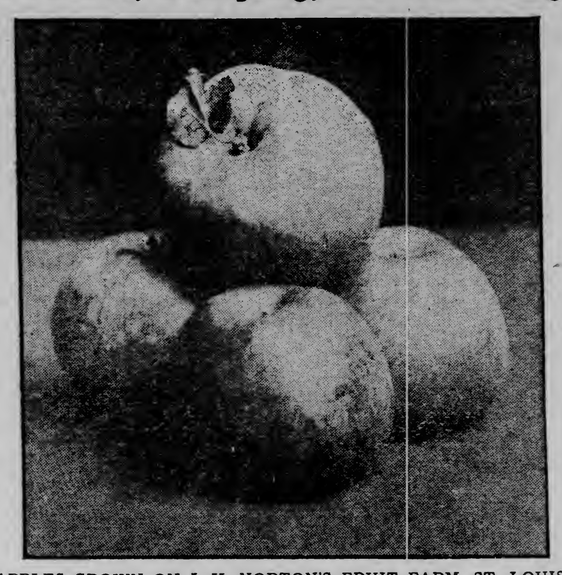
MISCONCEPTIONS CONCERNING NORTHLAND

Until quite recently much misapprehension prevailed regarding the agricultural advantages of the great Northland, a term which comprehends the vast empire formerly occupied by the pine and hardwood forests of Northern Minnesota, Wisconsin and Michigan, extending from Marquette on the east to Crookston on the west and from the latitude of the Twin Cities on the south to Rainy Lake on the north—an empire the area of which is one-half as great as that of the dominion ruled by the mikado of Japan and which equals the territory comprised in the six New England states together with that of Delaware and Maryland.

It was formerly believed, even by many people living in this region, but who had made no adequate investigation of the subject, that the climate and soil of this vast empire precluded the possibility of its ever being devoted to successful farming. No greater error could be imagined. But the oversights of one generation generally redound to the benefit of the next. Had the advantages in certain lines of farming in this section been realized thirty years ago, not an acre would now be for sale at the ridiculously low prices which prevail.

EXCELLENT SOIL AND CLIMATE.

It has been amply demonstrated that the average fertility of the soil of this region is unsurpassed by that of any other territory of equal area on the globe and it has been repeatedly shown that the chances of success for the settler of limited means in this region equal, if they do not exceed, those of the settler who makes a start in any other new and undeveloped country. The soil varies in different localities of this vast territory, but consists for the most part of black or sandy loams which are readily stirred by the plow and are surprisingly prolific, having been enriched for ages by decaying vegetation and the foliage of deciduous trees. In many localities the soil is impregnated with marl (disintegrated sea shells) which causes it to be wonderfully productive. The marl beds of Northern Minnesota now rank among the most valuable commercial fertilizers and large quantities of these deposits are sacked and shipped to florists and market gardeners in other sections of the country. People who are accustomed to soils of similar appearance in other places are inclined to think that these soils would not grow a weed until convinced of their mistakes by actual demonstration. The clay sub-soil which underlies the surface nearly everywhere helps to retain the moisture and fertility and these soils are not as readily exhausted as those of many places of much more promising appearance.



THE ERA OF DRAINAGE.

The best lands in the North are what is commonly termed swamp land that only need proper drainage by ditching to make them the choicest agricultural and grass lands that the sun has ever shone upon. The state of Minnesota alone owns 2,750,000 acres of wet and unfit land for cultivation in its present condition. Practically 90 per cent of this wet land is located in the counties of St. Louis, Itasca, Roseau, Beltrami, Aitkin, Lake and Cook. The Herald has made a persistent campaign during the whole of 1906 to arouse the state to the necessity of draining these lands in order to make them tillable and, finally, put them on the tax rolls. This educational campaign has brought the subject to the attention of the whole state and, as a result, the state will drain the whole of these lands under a system of state drainage. The reclaiming of these lands to agriculture will add untold millions of dollars of wealth annually to the Northland in the crops to be grown thereon. It is a well demonstrated fact that the low or wet lands are the most fertile in the state as to crop production and will be the high priced lands of the future. This 2,750,000 acres of swamp land, when drained, and cut up into farms of 100 acres each will add 27,500 farms or, at the rate of five to each family, will give us an increased population of 137,500 people where there is now a barren waste. This is a great educational work that The Herald has accomplished, for the state will furnish the money to carry on the work in a systematic manner to reclaim every acre of this rich and fertile valley land of the Northland which will create vast markets for Duluth's jobbing and industrial makeup. If this land is devoted to the one crop, timothy and clover, the 2,750,000 acres reclaimed by drainage, would produce on an average three tons per acre or 8,250,000 tons which at the average wholesale market price of $10 per ton would bring $82,500,000 annually, and if devoted to dairying and stock-raising, those figures would be doubled. It will be seen at a glance that state drainage is one of the most profitable investments, from a dollar-and-cents standpoint, that has ever been brought to the attention of our people. Now that the grand work has been inaugurated, there will be no backward step, but the great work of reclaiming the wet or swamp lands will go forward until every acre has been reclaimed to agriculture.

GOOD ROADS MOVEMENT GROWING.

For some time past a great movement has been in progress looking to the building of more and better wagon roads in many of the counties of Northern Minnesota and adjacent states. This is one of the innovations which have long been needed to encourage the settlement of the wild and undeveloped lands and enable the settlers already located in remote sections to market their products. Much has already been done toward this end by state and county authorities as well as by individual efforts. Many good highways have already been established but many more will be necessary in the near future. The Duluth & Iron Range Railroad company has set an excellent example by building a number of miles of good road for the accommodation of settlers upon its lands at Meadowlands, St. Louis county, an example worthy the emulation of other corporations and individuals owning large tracts of undeveloped lands in this portion of the state.

Movements are also on foot to promote the building of a number of lines of electric railroad through the country contiguous to Duluth in St. Louis and other counties. This would enable many farmers to send their crops, timber, etc., to this market without a long haul by team and would afford a practicable means of transportation for passengers and freight at all seasons. With the abundance of electric power which is now available there would seem to be no good reason why the scheme is not practicable and it is certain that nothing else would cause as rapid development of the agricultural sections contiguous to the city. A number of lines of steam railway are also in course of construction which will open up great tracts of territory which have hitherto been inaccessible to travel or settlement and a number of other lines are being projected. Among the lines which will be completed during the present year are the Duluth, Virginia & Winnipeg which will afford direct connection between this city and International Falls, one of the most promising towns of the Northland, and thence with all points along the line of the Canadian Northern railroad. The Minnesota & International railroad will also reach the same terminus by way of Bemidji and open up a vast region heretofore lacking in railroad facilities. The new line of the Wisconsin Central will intersect a region of the Badger state which has been far removed from transportation facilities.

APPLES GROWN ON J. H. NORTON'S FRUIT FARM, ST. LOUIS COUNTY, MINN.

PIONEERS WERE NOT FARMERS.

Some degree of plausibility was lent to the statement so often made that "Nothing would grow in this northern country," by the experience of many amateur farmers who secured homestead claims adjacent to sawmills, lumber camps, mines and other locations which promised them employment for most of the time. These settlers were, in most cases, men of little or no experience as tillers of the soil and, as their attention was given to the cultivation of their lands, only at intermittent periods when other work was slack, the result was much the same as might be expected from any other occupation pursued in this desultory fashion. In many instances, "claims" were made with the intention only of securing the timber thereon; in such cases, barely enough attempt at cultivation was made to comply with the requirements of the homestead law and as soon as title was secured and the timber disposed of, the lands were either abandoned or sold for a trifling consideration without the owner ever knowing or caring what its agricultural value might be.

PRACTICAL FARMERS NOW COMING.

Within a few years past, however, renewed attention has been drawn to the cut-over timber lands to much of which the rays of the sun penetrated for the first time in centuries after the lumbermen's work was done. Many experienced and practical farmers have been attracted to the Northland from the prairie states of the West and elsewhere. With these men have come advanced methods and modern ideas concerning the various branches of agriculture to which this region is adapted. Their experience has demonstrated beyond farther question the practicability of pursuing most branches of farming and stock raising with satisfactory results by men of energy, intelligence and practical experience in modern husbandry. Hundreds of improved farms have sprung into existence as if by magic and many localities have taken on the appearance of rural communities in the older states.

COMPARES FAVORABLY WITH OHIO VALLEY.

The problem presented to the settler in the Northland today is much the same as that which, in the early part of the last century, confronted the pioneers of Western Pennsylvania and Southern Ohio and Indiana, except that man's ingenuity has devised means for subduing the wilderness with a speed and effectiveness little dreamed of by our ancestors of 100 years ago. Another advantage possessed by the woodland pioneer of the present day is found in the fact that there is a market for every stick of timber remaining upon his land and he is not put to the necessity of laboriously burning huge log heaps for the sole purpose of removing them from his fields before beginning the work of cultivation. And when subdued, the lands of this vast region are found to be in every way as productive as the fertile bottoms and uplands of the Ohio valley.

It may be urged by those who have not given serious thought to the matter that the climate of this latitude will not permit the growing to maturity of some of the products of Southern Illinois, Indiana and Ohio. This again, is a delusion! For, while the winters of this region are more severe, there is always an abundance of snow affording a mantle of protection to vegetation throughout the winter and less frost penetrates the ground in an ordinary season than in the latitude referred to. It is not an uncommon occurrence for flowers to continue in bloom in the fall until covered with a blanket of snow and when the snow disappears in the spring, for the blossoms to be found still fresh and green and they often continue to thrive without interruption.

TWILIGHT PROLONGS GROWING SEASON.

Nature also makes compensatory provision for the apparent disadvantage of a short summer; the warm soil responds readily to the action of the sun's rays and, owing to the long twilights which prevail both morning and evening in northern latitudes, the mid-summer days are about three hours longer than in the Ohio valley. These conditions, together with the fact that there is plenty of moisture at all times, greatly stimulate the growth of plant life and the rapidity with which crops are matured is surprising to the beholder from lower latitudes.

The climate of this region will compare favorably with that of any portion of the United States, being invigorating and salubrious at all seasons of the year. Some people have supposed this region to be desirous as a place of residence only in summer, but the clear, dry bracing atmosphere of winter affords many delights unknown to people in latitudes which they imagine to be more congenial. Minnesota has long been famed as a mecca for people afflicted with malarial and lung affections and many people who have been driven to come here on this account have found, upon their recovery, that no other location afforded as many advantages for a continuous place of residence. Tornadoes and hailstorms are unknown in this region, as well as earthquakes and thunder storms are of rare occurrence.

LARGE FARMS NOT NECESSARY.

Like most other portions of the earth, this wondrous Northland is better adapted to growing some products than others, but every crop which has been successfully grown elsewhere in this latitude, thrives here. This region is not likely to soon become a formidable rival of states like Iowa and Nebraska in supplying the corn crop of the country, nor is it probable that the spring wheat crop of the Dakotas will be materially decreased owing to our competition. Nor is it at all necessary that we should compete with those great states in the production of such staples in order to become equally prosperous. Neither is it necessary that production should attain such bulky proportions as prevail in the West; for modern farming must be more intensive and results must be measured by the quality rather than the quantity of the product sent to market. Success depends as much upon intelligent marketing of the crop as it does upon its most advantageous production, a consideration which has been too often overlooked by western farmers.

INTENSIVE FARMING MOST PROFITABLE.

Contiguous to every city in the East may be found many farms comprising from five to twenty acres whose owners realize more clear profit from their crops than are made by the average western farmer with 160 acres or more of land. One great advantage possessed by the farmer in nearly every portion of the Northland is the proximity of a good cash market for whatever he may produce, and the man of intelligence and up-to-date ideas will realize as much net profits for his labor from a few acres in this region as can be done in many places from an area several times as great. In no place in the world are surer returns to be had for the labor intelligently and systematically expended. Protracted droughts and floods are unknown and no healthier climate can be found in the world.

As has been the case in many other localities, the severity of the winters of this region is being gradually decreased simultaneously with the clearing away of the forests and the consequent penetration of the sun's rays to the surface of the earth; tillage of the soil also has a modifying effect upon the climate and these changes will be more marked in future than they have been heretofore.

FIVE OAKS STOCK FARM, PROPERTY OF B. E. BAKER.

BEAUTIFUL NORTHLAND FARM VIEW EXEMPLIFYING GOOD ROADS.

What Duluth and Its Neighbors Consume

Duluth daily consumes 500 bushels of potatoes and the Iron Range towns 400, making 900 bushels per day or 330,000 per year, while total receipts in 1906, were 1,100,000.

There are 5,000 gallons of milk and 400 of cream consumed daily in addition to condensed milk and cream.

We daily consume 10,000 pounds of butter or 3,500,000 pounds per annum.

The consumption of fruits and vegetables was 4,000 cars in 1906.

Total value of butter and cheese, eggs and poultry, fruits and vegetables marketed annually reaches $6,000,000.

The apple market in 1906 reached 40,000 barrels.

Hay and straw market in 1906 reached 6,500 carloads.

NORTHLAND SOIL AND CLIMATE EXCELS THE WORLD FOR ROOT CROPS.

EXHIBIT OF GRAIN, GRASSES, FRUITS AND VEGETABLES GROWN IN ROSEAU COUNTY, MINN.

GRASS EXCELS IN GROWTH and QUALITY.

One branch of husbandry in which the Northland excels all other parts of the United States is the growing of rich grasses. Red and white clover, timothy, redtop and bluegrass seem to be indigenous to this soil, while alfalfa, millet and other annual forage crops are equally thrifty. And grass and hay grown here have been shown by scientific tests as well as practical experience to contain 15 per cent more nutriment than those grown in the prairie states. This is accounted for, in part at least, by the heavy dews which prevail throughout the season, causing the grass roots to continue fresh and vigorous and enables them to be active at all times in drawing sustenance from the earth. To procure a good stand of grass in this region, it is only necessary to clear away the underbrush from the surface and permit the sunlight to reach the ground. Many of the finest meadows can be seen on which no seed has ever been scattered by human agencies. Contrary to the conditions which prevail in most other states, clover does not winter kill but continues to be thrifty and vigorous from year to year indefinitely. The yield of timothy and clover is from two to three tons per acre and two crops are frequently cut in a season while the aftermath of the meadows affords abundant pasturage for livestock until covered by the snows of winter.

AN IDEAL DAIRY COUNTRY.

It follows, as a natural inference, that a place where the richest and most productive grasses spring up as if by magic and cannot be exterminated, is an ideal location for the dairyman and stockgrower. This fact is just beginning to be realized by the farmers already located in the fertile fields of the Northland. With land unsurpassed in the production of forage, and a market at hand requiring no expensive rail shipment, the dairyman of this region is advantageously situated to meet the competition of any portion of the world. It is sometimes argued that the long and severe winters of this region entail additional expense in the keeping of cows and preclude the possibility of competition with the dairy products of milder climates, but that this idea is a fallacy, is easily shown. Under the conditions which have heretofore prevailed, the expense of keeping a cow in winter was somewhat greater than in places where all the grain and fodder was produced on the farm and, therefore, obtained at first cost, but this additional cost of wintering livestock is fully overbalanced by the decreased expense of keeping in summer. If the dairy farmers of Illinois and Wisconsin can pasture cows at a profit on land worth from $80 to $125 per acre, what are possibilities for their competitors in this region where abundant pasturage can be had for the fencing and, in many cases, without even this expense. It is urged by some people who have been acustomed to farming as carried on in the so-called "corn belt" that dairying cannot be successfully conducted beyond the northern limits of that region. This, again, has been repeatedly proven to be a fallacy. While corn is not as staple a crop in some portions of the Northland, enough of it can be grown in most places for home consumption. But it is not necessary to grow any corn in order to produce an ideal ration for the dairy cow. Other grains, such as barley, oats and rye, make excellent substitutes for corn and are considered preferable by many of the most experienced feeders. When supplemented by the root crops, carrots, mangels, rutabagas and others which are sure crops and reach their highest state of development in the soil and climate of the North, this ration together with the superior nutriment of northern grown clover hay and fodder, is unsurpassed for the production of an abundance of the richest milk. Numerous instances can be shown of dairy farms which do not produce an ear of maize, where no larger portion of the feed consumed is purchased than is the rule with dairymen in the states named above.

EXHIBIT OF APPLES AND PLUMS GROWN IN PINE COUNTY, MINN.

NUMEROUS CREAMERIES.

Wherever a sufficient number of settlers have congregated to justify it, creameries are being established enabling the dairyman to find a ready market for his product, while many farmers obtain good prices for fresh milk in the cities, towns, lumber camps and mining localities which abound throughout this region. Creameries are usually managed on the co-operative plan and the patrons receive the full benefit of the best markets. The abundance of clear, fresh water and the superior quality of the grasses which abound guarantee the highest quality of dairy products when the business is intelligently handled while the by-products of the dairy can be made an important adjunct of the farmer's income.

What has been stated regarding the adaptability of this country to the keeping of dairy cows will apply with equal force to the growing of young stock. Owing to the perpetual freshness of the grass, cattle are able to gain their subsistence therefrom at all times when the ground is not covered with snow and the grazing season is prolonged considerably beyond that which prevails from 300 to 500 miles farther south where drought sometimes necessitates the feeding of cattle in mid-summer. The stockman who doubts these assertions need only visit this section of the country in mid-summer and note the prevailing thriftiness of the livestock to be convinced of their truthfulness.

ADAPTED TO GROWING BACON HOGS.

Every experienced swine grower knows that an abundance of clover pasture with the by-products of the dairy are important essentials to the growth of young pigs and nowhere else can these conditions be as readily provided as in this section. Under present conditions, the production of heavy pork may not be as advantageously pursued as in some other places, but many of the most successful farmers find the raising of bacon hogs a profitable branch of their industry. Field peas are an abundant crop of superior feeding value in the production of bacon.

INCREASE IN SHEEP BREEDING.

Sheep breeding is a branch of husbandry especially adapted to new and undeveloped localities, as they forage readily upon lands from which no other income could be derived and the heavy blankets provided by nature enable them to be exceedingly thrifty during the cold dry winters. There is comparatively little labor connected with sheepraising and they are quite helpful in clearing the cut-over lands from brush and brambles. Numerous flocks are already found and their number is rapidly increasing from year to year.

POULTRY A GREAT SUCCESS.

The opportunities awaiting the poultry raiser in the Northland are almost unlimited. Fowls are nowhere more thrifty than here and, as their keeping requires but very little cleared land, they can be made an immediate source of income to the settler. The consumption of poultry products at the Head of the Lakes and throughout the North is enormous and the demand will exceed the home product for many years to come. Poultry breeding is receiving special attention from a few individuals and choice fowls of the best breeds can be secured by the farmer who wishes to engage in the business either as a professional breeder or for the purpose of supplying eggs and fowls for the market.

VARIETY OF CROPS GROWN.

Except in the southern part of the territory included in the boundaries of the Northland, the growing of cereals has not generally been engaged in on an extensive scale, but ample experiments have been made to establish the facts that wheat, oats, barley and rye are as prolific here as in any part of the United States and some phenomenal yields have been reported which, while well authenticated, can be quoted only at the risk of being accused of exaggeration. The quality of the grain grown here is especially remarkable; the weight of a crop of oats will often indicate from 30 to 50 per cent greater yield than its measurement, while the No. 1 hard wheat grown here has been shown to be unusually rich in flour making qualities. It is a well-known fact that the "corn belt" is steadily expanding; within the recollection of the present generation its limits have been extended far to the north and northwest of its former boundaries and this process is steadily going on. Careful and continuous experiments with acclimated seed and the most approved methods of culture have already demonstrated that this great staple can be sucessfully grown in the most northern latitudes of Minnesota and its use as a fodder plant is already well established throughout the Northland.

ROOT CROPS VERY PROLIFIC.

Much of the soil of this region, especially the sandy loams, is peculiarly adapted to raising potatoes, the yield being enormous while the quality is unsurpassed and tubers grown in this belt command the highest price in the markets of the country. Through much of this territory there is a home demand which exceeds the supply and enables the producer to command from 50 to 100 per cent better prices than if located at points where the expense of shipping and handling were interposed between himself and the consumer. Other roots and vegetable crops are equally fruitful and, when not consumed upon the farm, find a ready home market. Carrots, beets, parsnips, turnips and rutabagas, manzel wurtzels, cabbage, peas, beans and other garden products have a superior tenderness and flavor and thrive to a remarkable degree, and the farmer who is advantageously situated to engage in market gardening has an assured income requiring the cultivation of but a few acres if pursued with energy and intelligence.

Average Crop Yields

Wheat, No. 1 hard, per acre (bushels)	25	to	40
Oats per acre (bushels)	50	to	70
Rye per acre (bushels)	20	to	30
Barley per acre (bushels)	25	to	35
Beans per acre (bushels)	12	to	18
Peas per acre (bushels)	10	to	16
Potatoes per acre (bushels)	250	to	400
Timothy per acre (tons)	2	to	3
Clover per acre (tons)	2½	to	3½

FRUIT GROWING.

Only recently have the great possibilities in the way of fruit culture been realized by the people of the Northland, but sufficient experiments extending over a series of years, have been made to prove that nearly every variety of fruit suited to the temperate zone can be successfully grown here while, in the Lake Superior basin especially, many fruits thrive more readily than in some localities far to the southward. It is but reasonable to suppose that a region especially prepared by nature for timber growing should be more conducive to the artificial culture of trees and shrubbery than one which is, naturally, a bare prairie. Many of the hardier varieties of apples and crabs are grown in abundance when given reasonable attention and red and blue plums are also very prolific crops, while cherries thrive in most parts of this region. In the production of small fruits, every portion of the Northland will compare favorably with the best-known fruit sections. Strawberries, raspberries, gooseberries, red and black currants and blackberries here attain their greatest perfection, the quality and flavor being far superior to those grown elsewhere. As these fruits reach maturity at a season when the supply of other localities is exhausted, the surplus always finds a ready market in the cities of the country at much higher prices than prevail while the crop is plentiful.

CELERY CULTURE.

This is one specialty to which attention has been drawn in the last few years and has proved a great success where properly handled. Many of the tamarack swamps found in this region are especially adapted to the growing of this crop when properly drained and cultivated. Experts who have had many years' experience in raising celery have began investigations looking to the establishment of the industry on an extended scale. The plants are grown in hotbeds in early spring and, later, transplanted to the field, about 25,000 plants being required per acre. As there is always a good market for this esculent salad, its growing can be made very profitable. Seven hundred dollars to $1,000 per acre may be realized. The former method of bleaching the plants by banking with earth has been superceded by a system of bleaching between boards extended horizontally along each side of the row which makes it practicable to bleach and utilize the entire plant.

Taken altogether, the opportunities for "truck" farming or market gardening in this region are far superior to those which prevail elsewhere.

TIMBER OFTEN PAYS FOR CLEARING.

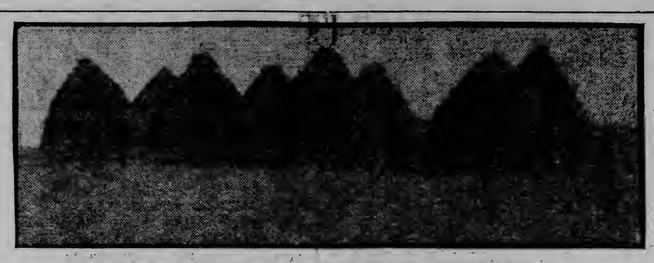
An important consideration to the settler in the Northland is the fact that, in many cases, there is still considerable hardwood, pine, cedar and tamarack timber standing on the cut-over tracts. In most instances this is sufficient to supply his own wants in the way of fuel, fencing and building material, while there is often a surplus for which a ready cash market can always be obtained. The cutting and hauling of this timber will furnish winter employment for men and teams for years to come and enable many settlers to spend their time profitably at all seasons of the year. The capital required to start with on a cut-over timber farm is much less than is necessary to begin business on one of the large prairie farms of the West where the winter is usually spent in idleness and is accordingly devoid of financial returns.

REGISTERED RED POLL CATTLE—S. F. SNIVELY'S FARM, ST. LOUIS COUNTY, MINN.

GREAT MARKET AT HEAD OF LAKES.

Duluth is the metropolis of this great Northland and affords the best market for most of its products, while Superior and the numerous mining and lumbering towns also consume large quantities, much of which is handled through the markets of this city. A large share of the provisions consumed in these cities and towns is now shipped from points far beyond the boundaries within which it should be produced and reaches the consumer in a more or less depreciated condition, owing to the long delays in transportation and handling. To a great extent, this difficulty could be obviated, to the mutual advantage of producer and consumer, if the lands contiguous to this city were settled by intelligent farmers, dairymen and market gardeners. This will sooner or later, be the case. Plans are now being matured for the establishment of a regular produce market in this city which will enable the farmer to dispose of his products in a similar manner to that which prevails in other large cities. Fully 200,000 people are now supplied with provisions from the markets of this city and the number is steadily increasing while the markets of St. Paul, Minneapolis and other Western cities are as readily reached as from any other important source of production.

A CREAMERY SCENE IN NORTHERN MINNESOTA.



REGISTERED PERCHERON HORSES, BRED IN ST. LOUIS COUNTY, MINN.

Agricultural Heritage of the Great Northland

AN UNEQUALED CLIMATE AND SOIL.

If the people of this vast rich and fertile agricultural region thirty years ago had only realized what fortunes awaited them after the harvest of fine tree forests had been sawed up into lumber, there would not be an acre of this land unimproved today. The great agricultural wealth of the cut-over timber lands of St. Louis, Carlton, Pine, Aitkin, Beltrami, Itasca, Roseau and Koochiching counties are just being recognized, and as a result the last five years have witnessed thousands of acres of this land developed into diversified farming, dairying and stock-raising fields. The future of this section is full of promise, and bids fair to excel any other agricultural section of the United States as a crop producer for small grain, apples and fruit, potatoes and other root crops, timothy, blue joint grass and red clover.

This section is tributary to the world's best and highest priced markets, Duluth-Superior, at the western end of Lake Superior, risen in the past three decades from mere clearings in the woods, skirting Lake Superior, to opulent commercial cities, where the four great trunk lines, Great Northern, Chicago, Milwaukee & St. Paul, Northern Pacific, Duluth, South Shore & Atlantic, and other lines of railroads, meet the passenger and freight lines that reach the great inland seas, in the heart of the North American continent. A tributary territory to Duluth-Superior more vast than that controlled by Chicago-Milwaukee. All that has been needed to develop this most fertile territory has been the march of progress, and this has reached a goal, where health and fortune await all who

WHEAT STACK YARD NEAR HINCKLEY.

come to clear up a farm in the cut-over pine land regions of the Northland. Where cities and towns have been blazed out of the forest wilds; where churches and schools rival those of older states; where the steel horse and country roads traverse the whole country, giving the best of facilities for getting to market by rail and wagon; where the air is dry and bracing; where work is plenty at the highest wage scale the whole year round. The geographical agricultural center, possessing advantages not surpassed on the American continent.

The wealth of this territory in standing pine, hardwood and iron is as cents to dollars when compared to the untouched and undeveloped agricultural resources of the soil, when put under the civilizing touch of the plow.

The soil in these lands varies from a light sandy to a dark rich loam, with clay subsoil, fertilized for ages by the autumual crops of vegetation, making it an almost inexhaustible crop producer. It is a soil that grows two or three tons of red clover or timothy to the acre, two crops every season, no drouth or crop failure; that grows 40 bushels of wheat, 70 bushels of oats, 300 bushels of potatoes to the acre. So productive is the soil, that the potatoes fight one another for growing room. It is a great fruit country for apples and berries. It is the dairyman's and stock grower's paradise. The herds thrive and fatten on the pasture of wild clover and grasses, better than the grain fed and pastured cattle in the prairie states. The clover and grass of this section has 18 per cent more nutrition than those grown in the other states. This is why the future dairy and creamery industries will make themselves felt in Northern Minnesota. This is why the farm renters in the prairie states are buying a cut-over timber farm in preference to one of the treeless, damp and bleak West.

The golden opportunity of becoming a landowner, a farmer, a free American citizen, has been overlooked. The actual farmers of the Middle West have heard of the richness of the soil and the opportunities that await them in Western Minnesota, and are locating here, where cleared farming land will bring in another five years from $80 to $100 an acre.

Minnesota Is the "Bread and Butter State" of Uncle Sam's Domain

BUTTER IS KING.

Minnesota is recognized among the union constellation as the "Bread and Butter State." No other state in this country of ours can point with greater pride to the splendid results accomplished along dairy lines in the past few years as can Minnesota.

Look at the achievements of her buttermakers and creameries during the years 1904 to 1906, and what Minnesotian does not feel proud of his state?

The reason is obvious. H. C. Hanson of Smith's Mill, Minn., won the world's championship cup awarded by the National Buttermakers' association for the highest average score for six consecutive months. The World's Fair championship to the buttermaker having the highest average score for the four World's Fair contests was awarded J. C. Joslin of Winsted, Minn. The grand prize to state and country making the largest percentage of scores of 95 or better, fell within Minnesota's grasp. Minnesota captured the highest scores on print, dairy and unsalted butter, and six out of nine highest scores on creamery butter. The grand prize for the best single tub at the October scoring, which was a combination of the World's Fair Educational and National, went to W. S. Taylor of Glenville, Minn., who won by a score of 98½. Furthermore Minnesotians won a large percentage of the $4,000 put up in cash prizes by the National Buttermakers' association. Outside of creamery butter Minnesota championship winners at the St. Louis Exposition numbered four for dairy butter, and four for prints on averages ranging from 92 to 97½. At the World's Fair contest, covering an average for four months, four Minnesota buttermakers won gold medals on averages all above 96, and 172 won silver medals, not one with an average below 91.62, and some with averages as high as 95.87. In the Minnesota Educational contest those having an average of over 91 and who exhibited six or more times numbered 110.

Yes, butter is king in Minnesota. In view of the fact that Minnesota has taken a position of prominence among the agricultural states of the union, especially in regard to the high quality of her dairy products and it behooves every individual interested in maintaining the excellent reputation which our state has acquired to leave nothing undone which will tend to produce even better results in the future.

In this connection the biennial reports of the Minnesota State Dairy and Food Commissioner have been of special interests by reason of the attention that is given the great butter industry and which is here given in part:

COMMISSIONER'S REPORT.

During the past two years this department has persistently advocated the branding of Minnesota dairy products in order to more firmly establish the reputation of these products in the markets, and to secure a price commensurate with high quality, what we fondly hoped to bring about

B. C. CHURCH'S FARM, CARLTON COUNTY, MINN.

by thus branding Minnesota butter is being accomplished by other means. The sentiment of paying for butter according to quality is fast becoming prominent, and will, no doubt, continue to develop in the future. The practice of paying a certain premium above market quotations for butter, irrespective of quality, is gradually becoming a thing of the past, and justly so. We confidently believe that the day will soon come when dairy products will be graded as closely in the markets as wheat is at the present time. Speed the day when this shall be true.

Many of our best creameries are receiving from one to one and a half cent premium for their butter, while others receive the usual half cent above. The latter are unable to secure this high premium because of the fact that their butter is of a defective quality. This additional premium of one-half to one cent for the average creamery means an additional income from $500 to $1,000 a year, a sum sufficient in many cases to pay the buttermaker's salary.

High premiums are obtained only by producing butter of a fine quality; therefore, whatever will tend to raise the quality of butter manufactured at the creamery should be adopted in the interest of higher financial returns. It is a well known truth that it is impossible to manufacture fine butter from poor milk. The scientific, skillful buttermaker will manufacture an article superior to that produced by inferior methods, but it is absolutely impossible to produce a really fine article of butter—butter that will command a high premium—without good, clean raw material.

In view of the fact that the producer is responsible for the quality of milk and cream delivered at the factory we would urge upon the creamery patrons of Minnesota the necessity of adopting those methods that will insure a high grade article of butter at the creamery. The buttermaker who strives earnestly to manufacture a fine grade of butter and to secure a high premium for his butter should be encouraged in his efforts by all possible means, and the co-operation of the patrons is absolutely necessary. Upon the extent to which they lend their co-operation will depend the quality of the butter as well as the success of the institution.

HIGH PRICED STOCK NOT NECESSARY.

It has been said that the cows in the Northwest are not the right kind for the dairy business, but that is a wrong impression. The cows found in any part of the state will average in productiveness of dairy products, and will bring the owners a good profit if they will do their part in proper care and management, such as providing comfortable quarters in winter, plenty of food such as can be raised on every farm in the state, and give them kind treatment. We do, however, recommend and believe it to be very important that our dairy farmers use in their herds registered sires of their choice, guarding closely the quality and prepotency of the sire and dam for milk production.

After a farmer has all the cows he wants then is the time to cull out the poor ones, which can be done by keeping account of the amount of milk each cow gives during the year, the length of time they give milk, and the average test of the milk each month during their milking period. Of course, if a farmer has a sow he knows is not giving him a profit he should turn her off any time.

CHEAP MILK.

What Minnesota needs is cheaper milk, and that can only be obtained by improved dairy methods in the way of providing good food for the cows and by proper care of the herd. The future of dairying depends very largely upon the intelligence of the dairymen.

CHANGE IN SYSTEM.

Some years ago there was a change from the gathered cream system (which was not satisfactory or profitable to either the farmers or creamery proprietors) to the whole milk system which has been of so much financial benefit to the farmers.

The creamery business of the Northwest has been built up to the high standard it occupies today by the whole milk system and we caution the dairymen to thoroughly investigate before taking up something new. There is no other way by which as good a quality of butter can be made as by the delivery of whole milk to the creamery and there skimmed, the skim milk pasteurized, and the cream ripened by the buttermaker.

AN APPEAL FOR CO-OPERATION.

We appeal to the farmers of the state to stand by the local creameries. They are the institutions which have made the dairy industry of Minnesota what it is today. Butter may be and is being made cheaper by the local creameries, of which there are about 700 in the state, than by any other system, and patrons receive better prices for their product. True, when a creamery first starts it may not be possible to pay as high prices as some of the larger ones, but by the co-operation of the farmers the small creamery may soon be built up, as hundreds in the state have, and then be in a position to pay as much as their neighboring creamery, or any other and keep the business in their own hands.

An Ideal Farming Country!

The Boston and Duluth Farm Land Company of Duluth, Minnesota, Own 100,000 Acres of Farming Lands in the Counties of Carlton and St. Louis, and Offer Same at

ONE OF MANY CREAMERIES LOCATED TRIBUTARY TO OUR FARM LANDS.

EXTREMELY LOW PRICES AND ATTRACTIVE TERMS

SHEEP FARM IN NORTHERN MINNESOTA.

They are tributary to the cities of Duluth and Superior at the "Head of the Great Lakes" which furnish an unparalleled market for farm products at remunerative prices. Besides this there are incomparable mines in St. Louis county employing thousands of men who are non-producers, but consumers of farm products. They must be fed, thus creating a market for all kinds of farm products. We say without fear of successful contradiction that this section of the **country cannot be excelled in its production of all kinds of small grains, root crops and its magnificent grasses.** Timothy and the clovers produce prodigious crops. Small fruits of all kinds are perfectly at home. St. Louis county took first prize on strawberry exhibit at the St. Louis exposition. Other kinds do equally well. The best judges concede this district of country possesses wonderful advantages in the remarkable fertility of its soil, its unsurpassed markets that easily make it the leading and most inviting section of the Northwest for dairying and diversified farming.

Beautiful small lakes and sparkling streams of pure water are abundant. Abundance of timber for farm use, and in many cases the timber **when removed and sold will pay for the land.** These lands are traversed by five railroads. This is without doubt a propitious time to buy lands in this section and engage in stock raising, dairying and diversified farming. The examination of these lands strengthens our convictions relative to the adaptation which this favored district possesses. A personal examination will convince the most skeptical that these lands offer superior inducements to the homeseeker. Think of it, rich fertile lands, good water, timber on the land ample to develop a farm and supply fuel continuously, unexcelled railroad facilities, right at the threshold of one of the most promising cities in the country, at seven to ten dollars per acre, on easy terms. BOSTON & DULUTH FARM LAND CO.,

No. 18 Fifth Avenue West, Duluth, Minn.

Duluth and Iron Range R. R. Lands for Actual Settlers Only

BUY SOME LAND AND LIVE ON IT.

The man who owns a farm in St. Louis county and lives on it is independent. The timber on the land, will in most cases, furnish him with building material, fences and fuel for years to come. He raises his own food and feed for his stock. Eighty acres of land and ten or a dozen cows will keep a man busy the year round and give him an income of $50.00 per month, outside of his living expenses.

MEADOWLANDS

Is a desirable place to locate as it is only 45 miles from Duluth and is crossed by a railroad with the station of Meadowlands right in the center of the township. It is a district of light timber and open meadows, easily, quickly and cheaply put under cultivation. No stumps or stones. Water is clear and pure. Good neighbors. Excellent wagon roads. Rich soil. Big crops. School, store and postoffice. Church to be built soon. New settlers coming in.

NOW IS THE TIME TO INVESTIGATE

This proposition. Go and look at the land as soon as possible and get the pick of the lot. Prices are reasonable and terms most liberal ever offered. Meadowlands map and full information free for the asking. Mention this ad. A man will go with you and show the land free of charge.

THE FLOODWOOD DISTRICT

Is in the southwestern part of St. Louis county and is crossed by the Great Northern Railway line from Duluth to Crookston, thus assuring settlers of best of railroad facilities for transportation of products both east and west. Farm products should be shipped to Duluth and timber, lumber and cordwood to the West. This is an excellent dairying, diversified farming and stock raising district. Also fine for small fruits and berries. Some very nice farms have been opened up in this district and a lot of people have bought land there, who will move on during the next year or two and begin the development of farms.

DO NOT WAIT UNTIL THE BEST IS TAKEN,

But look this up at once if interested. This district is well settled and has good wagon roads, schools, churches, stores and postoffice. Floodwood is a thriving village of about 1,000 inhabitants and furnishes a good market for all farm produce. Lands shown free of charge. No trouble to answer questions. Full information and a St. Louis county map on application.

THE RIGHT SYSTEM.

DEAN WILLIAM M. LIGGETT, director of the Minnesota State Agricultural farm at St. Anthony Park, Minn., says:

"To my mind the Northern counties of Minnesota are the richest in natural dairying advantages that can be found anywhere. If the pioneer farmers who are just now opening this agricultural paradise do not succeed it will be because they could not have met with success anywhere on earth."

Here is where "the right system" of farming comes in. Unless a man has plenty of means and a family of boys to help him, he should not attempt to handle more than eighty acres of land in the beginning. Cows and dairying. There is the secret. This part of the country has a rich soil naturally, but where a man goes into dairying he returns to the soil in manure the elements which are taken from it in crops. Another thing where dairying comes in is that a man can quickly fence up his land and the cows will pick up a living all summer long on the uncleared land.

Denmark is known as the greatest dairying country in the world and the price of the land in Denmark is from $200 to $300 per acre and dairying surely pays or they would not keep at it. If they can make money at dairying where land is worth $300 per acre, it stands to reason that where land is worth only $10 to $15 per acre a man will make a very much larger profit on his investment. With eighty acres of land and ten good cows a man is independent, for he will have an income of $25 to $50 per month the year round, to say nothing of what he will get in the way of increase in stock, returns from pigs and chickens and from the crops he raises which he does not have to feed to the cows. Good crops of all kinds of small grains are raised in St. Louis county. Also potatoes and other roots, vegetables of all kinds, berres and small fruits, etc. From three to five tons of timothy and clover hay per acre in a season is the usual crop, and corn fodder goes from five to ten tons to the acre. If a man does not want to go into dairying let him try truck farming, gardening and diversified farming. The land will return him from $30 to $70 per acre each year if he raises nothing but tame hay. Can any grain farmer in Minnesota, North or South Dakota, Iowa or elsewhere beat or equal that? One farmer in St. Louis county during the summer of 1906 raised fourteen and one-half tons of hay on three acres of land at two cuttings which he sold at $17 per ton. This land averaged him a little better than $80 per acre income for the season. Others are making more than that each year in truck gardening and small fruit raising.

One of the greatest factors in the development of any new country is the markets for the farm produce raised by the farmers settling in that district and right here is where Northeastern Minnesota excels. The markets of Duluth and the Range towns are the best to be found anywhere and it is estimated that not over 10 per cent of the produce consumed is raised in Northern Minnesota. During the last year over 10,000 car loads of produce other than potatoes were shipped into this part of the country, mostly from Southern Minnesota, Wisconsin and Iowa, and it is no exaggeration to state that there was very little of this that cannot be raised right here in the counties surrounding the Head of the Lakes. Thousands of men are employed in the vast mining and shipping enterprises, to say nothing of the thousands of men who are engaged in lumbering and other industries. Now comes the report that the United State Steel corporation will commence the erection of a steel plant at Duluth to cost from $6,000,000 to $10,000,000, which will give employment to a great number of men and bring at least 20,000 more people into Duluth.

The Great Northern Power company has recently opened up one of the greatest electrical power plants in the world, supplying cheap power to manufacturing plants, elevators, street railways and numerous other manufacturing enterprises, all of which brings in additional men and their families. The outlook for manufacturing at the Head of the Lakes is certainly bright and any man who is looking for a farm home will make a grave mistake if he does not investigate St. Louis county before locating elsewhere, for he will make no error if he buys a farm anywhere within fifty to 100 miles of Duluth.

The price of land in St. Louis county ranges from $5 per acre up, and good agricultural land can be had at $10 to $15 per acre, according to location, quality, cost of clearing, etc. Most of this land can be bought on easy terms so that any man who is desirous of securing a farm home now has the opportunity to do so.

Several years ago the Duluth & Iron Range Railroad company adopted the plan of selling land to actual settlers only, believing that to be the only way to settle up the country with a desirable class of settlers and to the best interest of St. Louis county. This plan has caused many caustic remarks from various sources, principally from real estate agents who wanted to buy land for speculation. Their idea is to buy land as cheap as possible and sell it at an advance, not caring whether the country is settled and developed or not, so long as they make a profit on the land.

The "actual settler" plan is working very satisfactorily. The sales of land are not so large as they would be if speculators could buy, but every sale means a new settler on a small farm which he improves and adds to the wealth of the county. These settlers are all "boosters," too, and get their friends interested and get them to come and look at the land and settle. In carrying out this colonization scheme the railroad company has gone ahead and built wagon roads and bridges and assisted in various ways in opening up new districts and is still assisting the settlers by extending the roads, building ditches, etc.

St. Louis county now has about 2,500 farmers, but there is room for many thousands more and the only right plan for the settlement of the country is the sale of land to actual settlers only.

In order to help the movement along the Duluth & Iron Range Railroad company is selling its land to actual settlers only on terms of $1 per acre down at time of purchase, interst payments only at 6 per cent per annum on the deferred principal, at the end of first, second, third and fourth years. The deferred principal is divided into ten equal annual installments with interest at 6 per cent per annum, the first payment of deferred principal falling due at the end of the fifth year. Purchasers have the privilege of paying down as much as they desire and of paying up in part or in full at any time. The first three or four years are the hardest in a new country and the above plan enables men of small means to buy land and settle on it and improve it and by the end of the fifth year their land is in shape to bring them in good returns and in most cases the land is paid for long before the final payments become due. Where the settlers living on land purchased from the railroad company need their money to go ahead with their improvements, liberal extensions of time are granted on principal payments.

These lands consist of all kinds from cut-over lands and hardwood timber to open meadows which need practically no clearing in order to put them under cultivation.

In writing for information it is advisable for prospective buyers to state how much and just what kind of land they are considering buying and an intelligent reply can then be given. The very best time to look over land is from Aug. 1 to Sept. 30, as the growing crops can then be seen, but the land can be seen to advantage any time from May 1 until the snow comes in the fall, which is usually about the middle of November.

Attention is called to several desirable districts in this article, but the railroad company also has land in other districts which can be had at reasonable prices.

THE LITTLE FORK VALLEY

Is crossed by the Duluth, Rainy Lake & Winnipeg railway, which is building its line through to the Canadian line and will form the first through line from Duluth to Winnipeg. Line will be completed within a few months. This is a first-class general farming and stock raising district where good crops of all kinds of small grains, vegetables, etc., are raised. Lots of settlers and more coming in rapidly.

ASHAWA

Is the principal town and is the distributing point for a large territory to the east and west, where logging operations are going on now and will continue for a number of years to come. Lots of good land. Now is the time to get a farm-home and settle on it. When the Steel Plant is built at Duluth there will be a heavy demand for everything that the settlers can raise and prices are big. The Duluth, Rainy Lake & Winnipeg railway will undoubtedly build on through to Duluth and that will be an important district. It has a good soil and is bound to be one of the best districts in St. Louis county. Write for St. Louis county map and any further information desired. Prices and terms given upon application.

EMBARRASS RIVER DISTRICT

Is the place to locate if you want a cheap farm. This is a very good district, located about 85 miles from Duluth and 15 miles from the Vermilion range on The Duluth & Iron Range Road. Soil is a sandy loam with a few stones and makes the very best of land for truck farming and market gardening and you have excellent markets at Tower and Ely, the biggest towns in that part of the county. New mines also being opened up at Mesaba station on the D. & I. R. R. R. just a few miles to the south of Embarrass. There is a large and prosperous settlement of Finns in this district and the country is well opened up by wagon roads. They also have schools and churches and quite a number are going in for dairying and stock raising. This district is

COMING TO THE FRONT

and we expect to put a lot of new settlers in there during the coming summer. If you want a cheap farm here is the place to get it and on terms so easy that it is better than paying rent. You can sell every stick of timber on the land for lagging if you want to, but it is best to keep plenty for fuel and fencing. Most of this land has sufficient timber on it for all the buildings you will need also. When writing for further information state how much and what kind of land you want and what price you expect to pay. Also state where you saw this advertisement. Map of St. Louis county and full information free upon application.

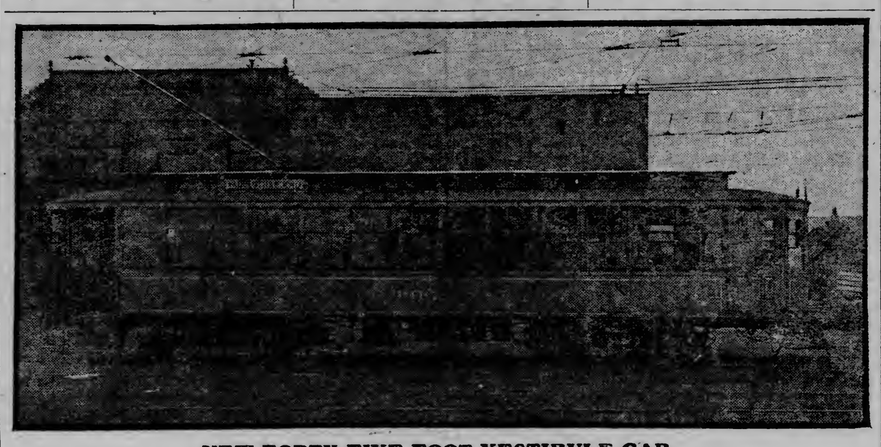
Duluth's Magnificent Street Car System, Service and Equipment

A Pioneer in City Expansion.

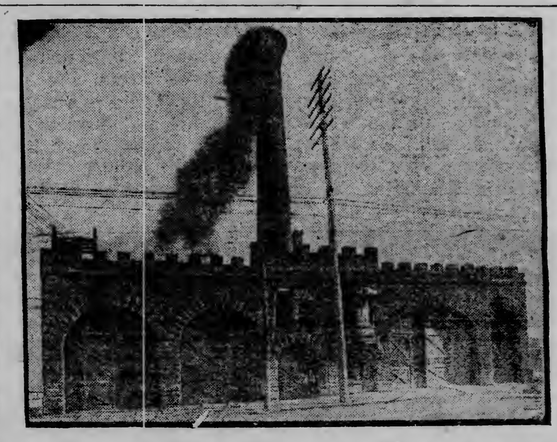
ONE of the potent influences for good in city building and expansion, is the transportation facilities as represented in the public service, afforded by rapid transit to the people of all sections, radiating from business centers to residence districts. In this particular Duluthians have been most fortunate, as from the beginning of the city, the service has been far ahead of that in cities of twice the population. Even the horse and mule car service of the pioneer epoch, with its jaunty little "Bob-tail" cars was the envy of the cities of St. Paul, St. Louis and Pittsburg. The cars were run on a time table, thus affording the patrons an opportunity to ride or walk. It is not the province of this article to dwell at any length upon the magnificent achievements of the Duluth Street Railway company by spending millions of dollars for equipment and blasting out roadways from solid granite; climbing almost impregnable granite bluffs, in order to give Duluth people the best electrical car service enjoyed by any American or European city of its population in the world. These are matters of every day history, and these are the potent powers that have pushed Duluth far ahead of her sister cities of the North and West in population and wealth. This is why the real estate market is always on the upward turn, as all of the outlying sections have an up-to-date, five to thirty minutes service, making the residence portion as easy of access as the business center, so far as street car transportation is concerned. If one would stop and listen to the "Knocker" without giving his idle babble thought, he would be apt to join with him and believe, for the moment, that the city had made great sacrifices in giving the use of its streets for our present unexcelled street car service, which makes it possible for the rich and the poor to own their palaces and cottages in the suburbs, free from the smoke and turmoil of city strife, where each can enjoy deep breathing of pure air, and the sunshine of prosperity, thus rebuilding shattered nerves and giving tone to the system. This has been made possible by the street railway extensions into the remotest corners of the city's corporate limits. It has been our splendid electric street car service that has made our city parks the centers of attraction, the great outing grounds for the populace. Rapid transit is one of the necessary adjuncts to city building. In fact, if it were not for this modern mode of transportation there would be no great cities, and with no great cities, there would be no such thing as great real estate values. This being true, the real estate dealer, the land grabber, and the tax dodger could never have flourished as they do today. These evils are directly chargeable to the innovation of rapid transit. No man would think of locating in a city where the electric car lines were not sufficient to take care of the increasing population and to make it possible for his family to reach the churches, schools, parks and trade centers with the least possible delay. These are the first things taken into consideration in selecting a new home, and yet, these very same people are often the first to throw stones of discontent at the very system that has been, and is doing, so much to advance their personal and material interests. The Duluth street car system is a corporation that has ever had in mind the best interests of Duluth, as a city, and its people. Always on the alert to give the best of service, and extend its lines that every resident and property owner may enjoy equal service. The best service, that money has been able to produce. Large vestibule cars, electric heated in winter, and open for summer, manned by uniformed conductors and motormen, giving every attention to the comfort of patrons. And yet, with all this up-to-date service and unequalled equipment, one man out of a thousand

"BOB-TAIL" CARS OF PIONEER DAYS.



Will Go Into Delirium

over some little, technical, unavoidable happening and will actually attract the attention at times of our city council and newspapers, the molders of public opinion. It is such incidents that retard progress, and make capital shy of investing in public utilities where franchises are required to operate the system. It is to be hoped that these gnats of society will not be allowed to block the wheels of progress in the further development of Duluth's street railway system. Many miles of extensions are needed to fully develop the residence portions of the city, to relieve the congestion of the business districts. These impovements will not be made unless there is a community of interests manifested. A sort of guarantee that when these extensions are made, he public will be satisfied with reasonable service, such as the Duluth Street Car company has always furnished on its whole system. This company has many millions invested in its equipment and plant and gives employment to over 400 men the whole year round, which makes it one of the large paymasters of the city, the payroll footing up to $300,000 per year. Another $100,000 is expended for construction material. There are 197 conductors and motormen, while in the big shops, there are 60 skilled employes. The system has 72½ miles of track, laid with 80-pound steel rails, while there are 90 cars in daily operation, which combines the Duluth and Superior service. Great as the Duluth street car system is, yet it is lacking in giving the service that it desires to do, owing to the lack of electrical power. This deficiency has been taken into consideration as the company has contracted for 10,000 electrical horse-power with the Great Northern Power company, which is now at their service and will be used to develop the territory tributary to Duluth,, which will mean much to our retail merchants and will contribute to the general prosperity of the whole city. It is the ambition of the Duluth Street Railway company to do all in its power to make Duluth a metropolis equal to the Twin Cities. The men who have put their dollars into this corporation stand out conspicuously as city builders, who have had the welfare of the city at heart, and who have not been afraid of

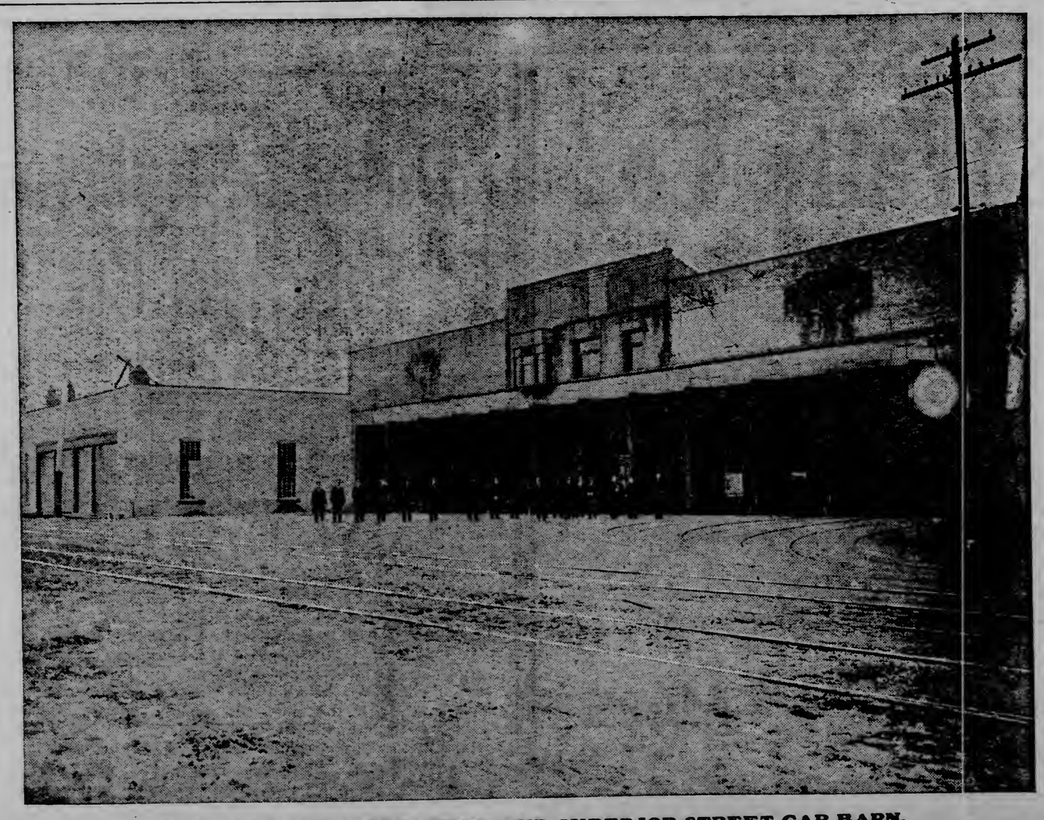


The Future Permanency

of their investments. Yet it has taken nerve and a high grade of business foresight to look into the future as they have done, in anticipating our 80,000 population of today and figuring on 150,000 in another decade. In talking with General Manager Herbert Warren, in reference to the ever onward march of progress of the Duluth Street Railway company, he said:

"There is no business in the world more dependent upon a friendly public sentiment for success than the street railway business. We simply have to please the public; if we don't our receipts fall off heavily and cut down, perhaps wipe out altogether, our profits. Long experience in this line having taught us these facts, we lose no opportunity to keep our service up to the standard. This company has been buying every season during the last few years modern, up-to-date cars. In order to make room for these we have destroyed many old ones. We are rather proud of the type of car we are placing in service. The total length of the body, including vestibules is forty-five feet, and it has a seating capacity of 84. These and all similar cars are equipped with general electric 40-horse-power motors and an air-brake equipment. All winter cars are heated by hot water. It is the purpose of the management to keep the tracks and equipment in first-class shape and to give such satisfactory service that it will encourage travel. A complete set of records of the schedules and the number of persons carried is kept and we try to provide additional service when it seems to be needed."

NEW FORTY-FIVE FOOT VESTIBULE CAR.



GENERAL OFFICES AND POWER HOUSE OF SYSTEM

Rapid Growth of the System.

We wish to call attention to the remarkable growth of what is now one of the best equipped electrical street car systems in the world, based upon the number of miles of track traveled by all the cars on all routes: In the year 1891, the mileage operated was 641,000 miles; in 1905, it was 2,761,000. In 1891, the gross earnings of the company amounted to $114,-218. In 1906 it was over $750,000. The figures show that enterprise in the expansion and improvement of the system has brought is own reward, for while the miles operated have increased four and one-half times, the gross earnings have multiplied nearly six times. But the increase in gross earnings does not indicate a like increase in profits, for the proportion of passengers carried. Though the earnings are vastly greater now than in 1891, the universal transfers, which do not show in the gross earnings, largely increase the mileage the passengers are carried. Still there is indubitable evidence of a satisfactory growth in population and in the new business created by the company in the knowledge that the total number of paid passengers carried in 1901 was 2,284,360, while the number in 1906 was 13,268,-460.

There are now in operation in Duluth 51 miles of track and in Superior 21½ miles. Two divisions, one for each city, is maintained, each under a superintendent.

TWENTY-SIXTH AVENUE WEST AND SUPERIOR STREET CAR BARN.

The Personnel of the Company.

The officers of the Duluth Street Railway company are: C. G. Goodrich, president; L. Mendenhall, treasurer; S. L. Reichert, secretary and auditor; directors, Thomas Lowry, C. G. Goodrich, Minneapolis; M. D. Munn, St. Paul; G. G. Hartley, Joseph Sellwood, Herbert Warren, S. L. Reichert, T. W. Hoopes, L. Mendenhall. The administrative officers are: Herbert Warren, general manager; D. C. Moore, superintendent Duluth division; Alfred Williams, superintendent Superior division; A. A. Mendenhall, purchasing agent; R. J. Crawford, master mechanic; John Carson, chief engineer, and Thomas A. Armstrong, roadmaster.

PHENOMENAL GROWTH OF THE L. W. LEITHHEAD DRUG COMPANY.

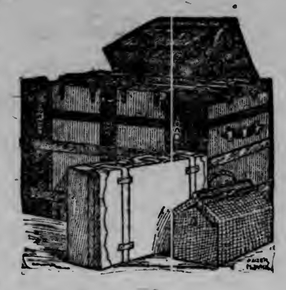
Leading Importers and Jobbers of Drugs and Druggist Sundries—A Duluth House That Has Made Good.

L. W. LEITHHEAD, President and Manager.

A VERY BUSY HOUSE.

Nowhere in the history of Duluth's jobbing makeup is there another such striking instance of successful trade building as the drug line under the tactful management displayed by L. W. Leithhead, a graduate pharmacist and chemist of the first grade, who has devoted the best years of his young manhood to making Duluth a leading wholesale market for every line of goods pertaining to drugs and druggist sundries, until today the L. W. Leithhead Drug company holds a commanding position as the leading importers and jobbers of the North and West, having built up a trade that covers the territory of Northern Minnesota, Wisconsin and Michigan, while in the states of North Dakota, Montana, Iowa and South Dakota the house has a splendid growing trade, that runs into hundreds of thousands of dollars annually. The L. W. Leithhead Drug company's success as a trade builder rests almost entirely upon absolute purit, quality and pharmacology, many bearing the Leithhead trade-mark. In the last two years the business assumed such phenomenal growth that new quarters were found necessary and as a result we now find the company housed in magnificent seven-story and basement brick and stone building 50x150 feet, fitted up with every appliance known to twentieth century successful business methods. Each of the eight floors are connected with passenger and freight elevator, parcel tubes and package slides, while each floor has a telephone service, supplied from its own exchange. One-half of the first floor is devoted to the use of the clerical force, and is one of the finest in the city, having private offices for the president and manager. Mr. L. W. Leithhead and Oscar Lonegren, secretary and credit man of the company; the other half is the receiving and shipping department of the house. The transportation department is in charge of Chief Clerk Ed Carlson and the shipping clerk, J. W. Casey. The basement is the storehouse for oils, high wines and crude drugs. Second floor is given over to the order and pharmaceutical departments and is in charge of Sigurd Rhode. Third floor, sundry and other lines under the management of F. C. Moore. Fourth floor, bottles, and fifth, laboratory, where a full line of pharmaceutical preparations are manufactured, all bearing the pure food guarantee No. 353. Both of these departments are under L. J. McDonald, chemist. The sixth floor, high wines and imported goods and original packages, William Hall in charge. The seventh floor is devoted to the advertising department and has at its head E. H. Hollingshead.

Among their many salesmen who have been for years with the house we would mention Mr. J. A. Kirkwood, who makes the range towns and Michigan, a veteran and prince of a man; city salesmen, Mr. D. C. Wakeman, a favorite; Mr. B. L. Bentson of North Dakota, an old landmark of the house; L. T. Brazeau; F. L. Engberg, Ed Quistgard and F. R. Brown, all honored representatives of the L. W. Leithhead Drug company, all of whom have a splendid standing with the trade. There are sixty people on the payroll and to give each a personal mention would be out of question, no matter how deserving.



OSCAR LONEGREN, Secretary and Credit Man.

The master mind of the L. W. Leithhead Drug company is its president and manager, Mr. L. W. Leithhead, a man qualified by training and education for making a success of any business undertaking, but especially the drug line. He is a born diplomat, who has a kindly manner that attracts men to him. Second in importance to him is Mr. Oscar Lonegren, the secretary and credit man of the house. He is of the "Old Hickory" mould, suave or stern, as the passing fancy suits him, but a keen, just, liberal financier who has contributed much to make the L. W. Leithhead Drug company what it is today, the leading importer and jobber of drugs and druggist sundries in the North and West. This article would not be complete without giving a passing notice to the "Middle West Price Current," an up-to-date buyers' guide, handsomely illustrated with souvenir picturesque scenery of the Middle West in each issue. It is a most valuable guide to the retail drug trade, as the price lists are corrected up to the hour of going to press, making the quotations of great value to out-of-town drug buyers. No retail druggist can afford to be without the "Middle West Price Current," published by L. W. Leithhead Drug company, Duluth, Minn.

The Brewing of Lager Beer One of Duluth's Great and Growing Industries

161,107 Barrels Manufactured, $154,064.00 Paid In Revenue Tax In 1906.

A Temperance Discourse.

In this age of temptation, with fanatics and extremists on all sides, it is indeed hard to escape the delirium of extremes in everything that pertains to the social uplifting of the human family. There are fitful waves of reform under the guise of God, Home and Native Land, and still crime and dissipation walk hand in hand and seem surprised at the meagerness of the harvest. This has proven such a perplexing question that many of the pulpits have discarded the doctrine of "Christ and Him Crucified" and have undertaken to attract the public mind by preaching lay sermons, giving picture shows, and delving into every public question that would have a tendency to fill the empty pews in our houses of worship. One of the fruitful topics frequently resorted to, to arouse public interest is the temperance question under the head of "The Lid." This is a mighty question, one that strikes at the very foundation of society as to intemperance has laid 90 per cent of all the crimes of the present day. The tearing asunder of the marriage tie, defalcations and murders are filling our jails and almshouses full to overflowing, and yet there seems to be no remedy as the mill of intemperance grinds on. The evil has been fought by iniquitous prohibition laws, high license and local option, all of which have signally failed to correct or even modify the evil. As a total result of a twenty years' test of prohibition in Iowa, the replacing of the open saloon with the "drug store saloon" has caused an increase of 50 per cent in insanity which can only be accounted for by the sale of high proof and "doctored" whisky, which was sold to any applicant who went through the formality of signing an affidavit that it was for medical use. A bottle or two of such whisky produces the sure result, an alcoholic stomach, in the shortest possible time and, when the habit is once formed, statistics tell us, that only one in a hundred are ever reclaimed to society. The result of prohibition in Iowa made millionaires out of the proprietors of "drug store saloons" and closed up the brewing interests of the state until the farce of prohibition was finally recognized and was wiped out and in its place was set up the "Mulct law," which really means that Iowa has gone back to first principles in order to put a check on insanity and lighten the burdens of society. The evils of intemperance, however, have not been reached and never will be until there is a divorcement of whisky and beer at public bars. Whisky is a drunkard's drink, while beer is an invigorating, non-intoxicating tonic, containing only 3½ per cent of alcohol, a pure barley, malt and hop liquid food that should not be regulatd by high license as it never has and never will produce a drunkard. It may be misused by the glutton but it will not produce an alcoholic stomach or fire the brain to commit any of the acts complained of by society. Beer as a beverage is nature's drink and is so being classed by all thoughtful men and women. It has been caught in bad company by being sold over the same bar with whisky, the fluid that fires the brain, that creates an alcoholic stomach and sends its victims by millions to fill pauper graves. The only reason it is tolerated is the revenue derived from it. The crusade against the drink habit, if conducted along rational lines, would accomplish much, but this must be done by eliminating the alcoholic drinks and pushing the introduction and sale of the non-intoxicant lager beer. This done, and society will have no fault to find against the ills of intemperance, as they will be entirely void when liquor drinking is pushed aside as then the vile fusil oils in alcoholic beverages will not be allowed to ruin the body and soul.

DULUTH'S GREAT BREWERIES.

There is no one industrial line that has grown faster than that of the brewing interest, having built up from a small beginning until there were manufactured 161,107 barrels in 1906, which paid an internal revenue tax of $154,064.00, which gives some little idea of the growth and magnitude of this business. Both of our two breweries have magnificent plants built of brick and stone, with their own artesian water supplies, ice plants, the latest sterilizing apparatus, great malting houses and extensive bottling establishments, giving employment to hundreds of men and doing an annual business of upwards of two million dollars. In addition to all this they are large city real estate owners and have out-of-town depots for their beer, covering all the territory tributary to Duluth's jobbing and shipping trade. The men who are at the head of these great industrial plants are of the best mold as to citizenship, manufacturing, as they do, a true temperance drink for the upbuilding of humanity in all walks of life. A health-giving liquid, containing only 3½ per cent of alcohol, just enough for a mild tonic, yet not intoxicating. A great home drink where all the family can join in and renew the vigor of health. A great stomach invigorator. Not an ache or a pain in a million barrels of it. Better than tea or coffee, as it is free from narcotics and, therefore, it does not shatter the nerves or weaken the flow of gastric juice. The "Lid" advocates should have no fight to make against beer, as it is not an intoxicant in the true sense of the word, but is a health-giving, liquid food that should be sold without a license or government tax the same as other health foods. The brewing interests of Duluth have done much towards expanding its resources and are entitled to every consideration on the part of all thoughtful people. It is an industry that is still in its infancy for, when the delirium of prohibition and "Lid" laws have run their race, public sentiment will veer around to the just and sane policy of building up and encouraging our home industries and, in this particular, none are more worthy of public commedation than is the brewing interests as represented by the Duluth Brewing & Malting company and the Fitger Brewing company, manufacturers of the best and purest lager and bottled beers brewed in the United States.

Duluth Edison Electric Company

THE GREAT WHITE LIGHT.

Within the recollection of the present generation, some remarkable innovations have taken place as to the systems of lighting in vogue both for the illumination of residences, shops, stores and factories and as regards the banishment of the gloom of night from the streets of cities and villages. Many people now living recall the time when the candle or tallow dip represented the epitome of invention in the way of artificial luminosity for use in the most refined homes while many of the ablest scholars and statesmen, which this nation has produced, acquired their educations from home study, pursued by the glare of an open fire of pine knots. From these crude attempts to dispel the nocturnal obscurity, it is a far cry to the brilliancy of the modern electric light which prevails even in small villages and irradiates streets and buildings alike throughout the hours which nature would consign to the shades of Erebus. It is due to man's inventive genius that means have been found to transform the evening hours of the day from a period of enforced inactivity to a season in which nearly every avocation may be pursued to advantage, but which is more generally devoted to social gatherings and diversions from the cares which infest the day.

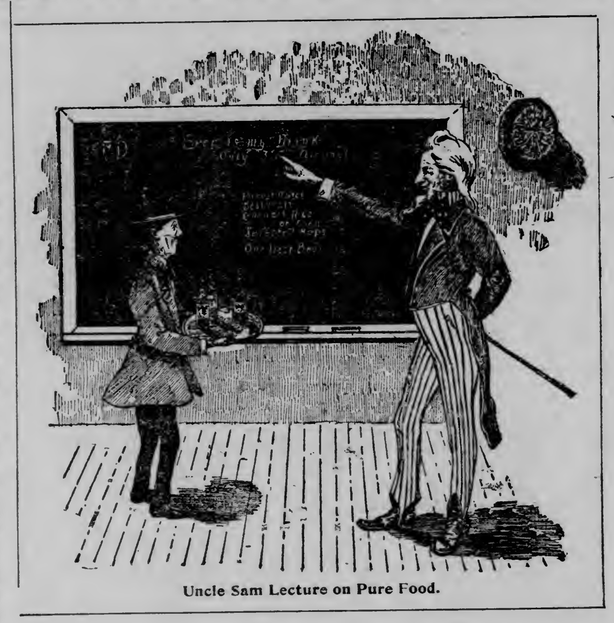
Benjamin Franklin's advice to the Parisians: "Quit using lamp light and begin using daylight," as a measure of public economy applies to that epoch of prodigality which reached its climax during the reign of Louis XIV., was, no doubt, a sage suggestion, but, in these strenuous times, when the expense of artificial lighting has been reduced to a minimum, its use is a great economy on account of the prolongation of the day and the extra time utilized thereby.

The city of Duluth is especially fortunate in the excellent system of lighting provided for public and private use by the Duluth Edison Electric company. The plant of the company is located at Fifth avenue west and Commerce street, and its operation requires the use of 3,000 horsepower. Its lines are being constantly extended to correspond with the growth of the city and to meet the demands caused by the realization on the part of the people that this is the best, cleanest and most economical light to be obtained.

One thousand arc lights and 80,000 incandescent lamps have already been installed and are used daily in this city, 600,000 miles of wire being required to keep them in operation. Seventy employes are kept busy in the operation and extension of the business. An all-meter service is maintained and the rates charged to consumers are remarkably low as compared with those which prevail in other cities, as may be seen by the following schedule, showing the net rates made by the Duluth Edison company:

One hundred thousand to 200,000 watts, 8 cents per thousand watts.

Two hundred thousand to 300,000 watts, 7.2 cents per thousand watts.



Three hundred to 500,000 watts, 5.2 cents per thousand watts.

All over 500,000 watts, 4.8 cents per thousands watts.

The Duluth Edison Electric company furnishes electrical power for all kinds of manufacturing plants and in this specialty will expand its business tenfold as it has a contract with the Great Northern Power company that will greatly increase its whole electrical power.

The success of the company may be attributed to the excellent judgment shown by its officials and the fair and equitable treatment uniformly accorded to its patrons. Duluth is known today as one of the best lighted cities on the continent and one in which the expense of lighting, in proportion to the quality of the service, is the smallest.

The officers of the Duluth Edison Electric company are as follows: A. W. Hartman, president; O. C. Hartman, vice president; C. F. Hartman, treasurer, and C. E. Van Bergen, secretary and general manager.

Uncle Sam Lecture on Pure Food.

The Best Tonic to Put Vim and Ginger—The Glow of Health Into Sallow and Pale Faced People is

"Moose Beer!"

Not a Headache in a Million Gallons!!

"You can fool some beer drinkers part of the time,
And part of the beer drinkers all of the time,
But you can't fool a 'Moose Beer' drinker at any time."

AND THIS IS THE REASON WHY:

It is a Pure Liquid Malt Food—the ingredients being only germinated barley, choice rice, select Bohemian hops, with artesian crystal water, making "Moose Beer" the choicest product of the "Brewers' Art." **A Life-Giving Tonic**—free from chemicals, microbes or bacteria. **The Choicest Drink for Table Use.**

Moose Beer is brewed by a **Process all its own**—the result of **Scientific Research** and experiment. Not an imitation, possessing an individual sparkle and clearness known only to **"Moose Beer."** When served from the bottle or keg—an appetizing and satisfying pure liquid malt drink.

"MOOSE BEER" is the Aristocrat Drink of the Northland. **Duluth Beer is Famous, the "MOOSE BRAND" made it so!**

Our "VITOSIA EXTRACT OF MALT" is a splendid aid for the ailing and sick, especially after wasting illness, for weak men, women and children, as it is a highly concentrated **Non-Intoxicating, Extract of Pure Malt.** Made from the best materials, containing the nerve-feeding, sedative properties gained from the choicest imported Saazer hops, noted for their tonic properties.

Renewed Vigor in Every Drink.

OUR FAMOUS MOOSE BOTTLED BEER AND PORTER.

Our "XXX" Porter aids digestion, creates appetite and tones the system.

Our Celebrated **"REX" Bottled Beer,** an ideal beverage and the favorite family beer. No other is brewed or bottled with so much care or contains the wealth of assimilated food properties, furnishing a maximum of nutrition for brain and brawn—deliciously appetizing—refreshing and vitalizing.

THERE IS RENEWED HEALTH AND LONG LIFE IN EVERY GLASS OF "MOOSE BEER!"

Duluth Brewing & Malting Company, Duluth, Minn.

Fitger Brewing Co.
DULUTH MINN.

Fitger Brewing Company

AS TO FITGER'S BEER:

It was unnecessary for Uncle Sam's servants in congress to spend weeks to enact its "Pure Food Act." As far as Fitger's Beer is concerned the act might as well be repealed as there never has been and never will be used any impurities or foreign substances in its brew or its bottling. Nothing but the finest and best hops and malt is used—regardless of cost.

Nothing is too good!
Nothing is too pure!!
Upon this foundation is built the reputation of

FITGER'S BEER

"Go 'ye and Enjoy the Best in the Land."—Prosit.

Duluth Artificial Limb House.

One of the unique industries which flourishes in Duluth is the manufacture of artificial limbs for alleviation physical defects in human anatomy, and the relief of persons who have suffered deformity or loss of limbs or members through accidents or other causes. A great variety of deformities are successfully remedied through the appliances which are produced at this establishment, which was incorporated in 1902 with a capitalization of $30,000. The trade of the concern extends to all parts of the United States and Canada and to many places in Europe as well. William M. Kespohl is the manager and G. A. Meyer secretary of the company. These gentlemen are inventors of some of the appliances which they manufacure, and understand the business of fitting every defect or deformity whether the result of nature's freaks or of accident. The establishment is located at No. 13 First avenue east, and is one of the evidences of Duluth's progress in the employment of skilled workmen.

THE DRINK HABIT

By ALICE PARKER.

The bad effects of over-drinking are not confined entirely to those who partake of alcoholic drinks. The doctrine of drinking all the pure water, even that one can during the day is extremely pernicious. I don't mean drinking all you need; that is different. Then is this "need" always a good sign, and how can we determine whether our thirst habits are normal and how can we make them so?

To eat only when hungry and to drink only when thirsty are safe rules for those who live in harmony with Nature's laws. How many of us do that?

To make oneself deliberately drink so many quarts of water at stated intervals just because some one tells us it is good for us, is absurd. Of course, I am laying myself open to the same charge, but it is well to hear all sides of a question.

True, thirst, like hunger, is caused by a constitutional need, by a demand of the whole body for building material. There is a thirst, however, that is that true, that is caused by abnormal conditions. Pepper, spices, alcohol and such stimulants irritate the delicate mucous lining of the mouth and throat to such an extent that a continual craving for drink of some kind is felt by those who indulge in them unless a large amount of liquid is consumed during meals, which is highly detrimental to digestion. Sugar and meat are also great producers of unnatural thirst. If the lining of the mouth is so affected how must it be with the stomach?

Now the result of this local craving for drink caused by the use of stimulants is that a great quantity of fluid of some sort is gulped down into the stomach. As there is no constitutional thirst this fluid is not readily taken up by the blood and it therefore follows that in time the stomach not only becomes distended, but also sags down on account of the weight which it must carry until it can be worked off. If some of this unnecessary fluid is absorbed by the blood the kidneys are given additional work to do in getting rid of the undue amount of water. As the kidneys cannot be treated too tenderly, kidney troubles are thereby hastened.

With true thirst the results are entirely different. If one takes a drink of cool water when feeling warm and thirsty it is immediately absorbed and used by the blood, and the whole system feels its refreshing effects.

This distension and sagging of the stomach caused by over-drinking, as can be readily understood, is most injurious and in time will result in serious digestive disturbances. The muscles of the stomach lose their tonicity, they allow this organ to drop so that it happens that food which is not naturally digested in the stomach, and which should be passed on into the intestines stays in the stomach for an undue period. By thus staying in the stomach, undigested, it putrifies and by the time the system has been able to overcome the difficulties it has been working under and can push it on into the intestines, it has become an absolute poison and works evil in different ways according to one's makeup. It may be taken into the blood, causing headaches, colds or more serious illness, or it may simply be hurried on so fast that looseness of the bowels occurs.

So it will readily be seen that the practice of making oneself drink so many glasses or even quarts of water through the day time when there is no real thirst for it is harmful.

Our poor, overworked stomachs have enough labor put on them as it is, without adding this additional one of making tanks of them. We are not camels and cannot carry a reservoir in our insides. The best we can do is to avoid all stimulants, which include, beside alcoholic drinks, tea, coffee, meat, fish, sugar, spices and condiments so that there will be none of this abnormal craving for drink. When we are really and truly thirsty what is more gratifying than a good drink of cold water, not ice water?

The idea that the system is washed out, cleansed by this over-drinking is absurd. The blood is self cleansing. If you are suffering from one of the many forms of an undue accumulation of dirt in the system, stop running the risk of adding more dirt to it. In other words, stop eating, working and worrying; do more deep breathing. The body will be so helped in throwing off its impurities that on the resumption of its regular work the increase in strength will be felt throughout every part. Continually flushing the kidneys is like continually taking cathartics. It is only in exceptional cases that it should be resorted to.

The digestive tract cannot be flushed like a sewer, though with many its condition is worse than that of the foulest sewer. By flooding the stomach and intestines impurities, that by proper fasting, dieting and general hygenic living, would pass out without trouble, are rendered soluable and therefore more easily taken up by the blood. This poison, as it can be called nothing else, must be gotten rid of either through the kidneys, lungs, skin or else through extra organs of excretion by which is meant any kind of bodily derangement.

Instead of cleansing the system by flushing the alimentary canal, you are really adding impurities to the blood and taxing your reserve force. Dieting, fasting and deep breathing of pure air are the only purifiers, the only true spring tonics. If one has the lung capacity exercise may be added to the list, but exercising should always be kept well within the breathing ability or it will be harmful rather than beneficial. Don't be afraid to drink water when you really need it, but be sure you need it, and don't forget that water can only be drunk, all other liquids must be treated as food and insalivated.

NO CHANGE IN GOLDEN GRAIN BELT BEERS

THE IDEAL HOME BEER.

We Have Always Guaranteed Its Absolute Purity.

Duluth's Big Jobbing Hardware and Other Leading Lines

A Story on Trade Development.

There is no questioning the truth that Duluth is the great jobbing hardware center of the vast section of territory covering the states of Michigan, Wisconsin, Minnesota, Iowa, North and South Dakota, Washington and Montana, because of its pivotal geographical position as an emporium of general distribution, with matchless system of railroads, great harbor and its commerce all in close touch with the industrial arteries of the manufacturing districts of the East; Duluth will always maintain its position as the leading wholesale hardware market of America, for all lines of shelf and builders' hardware, electrical, house furnishings, stoves, ranges, furnaces, sporting goods, cutlery, harness, saddlery, paints, oils, varnishes, mill, mining and railroad supplies, iron steel and metal. Indeed, Duluth's jobbing trade leads all other cities in its class, while it is the wealthiest in America, according to its population. Here are to be found the most extensive wholesale establishments in all branches of business, and the second largest hardware house in the world; Duluth iron ore mines excels the world's output; in coal and docks it ranks among the first, while the United States Steel corporation has decided to build steel mills, which will make Duluth a second Pittsburg in the manufacture of steel rails and other iron and steel products. There will be no backward step to mark the even tide of Duluth's progress, for the foundation has been laid for a great jobbing and industrial city, the equal of any in the world's history. In all ages of the world, great commercial and industrial enterprises have followed closely in the pathway opened up by the onward march of civilization and the unfolding of human activities, but there is probably no land or country where the growth of the wholesale trade in hardware has been so rapid and the natural resources were as quickly adapted to the wants of mankind as in the discovery of iron ore on the Mesaba ranges.

Wholesale Hardware, Iron and Steel, Mining and Milling Supplies.

The Marshall-Wells Company.

This is the second largest hardware house in the world and has a capital of $2,000,000. It has branch houses at Winnipeg, Manitoba and at Portland, Oregon, and dominates the trade throughout the great Northwest in both the United States and Canada. Duluth, the home house of Marshall-Wells Company, occupies nine acres of floor space or including the branch houses, Portland and Winnipeg, seventeen acres. The company employs 700 people, of which 500 are on the payrolls of the parent house, besides 100 traveling salesmen and 200 in the branch houses. There are 250 persons employed at clerical work in the Duluth office and forty-five in the publicity department, where "The Zenith" monthly magazine is published in its own print shop, which truly represents "Duluth, the Gateway of the Northwest —Establishel by Nature at the Head of America's Greatest Waterway." The great wholesale and manufacturing house of Marshall-Wells Company occupies seven stories, a description of the whole would fill pages and then the pen picture would be unwritten. On the first floor of the main building and the annex is where the heavy hardware stock is carried, while just below in the basement is the cordage and nails, in original packages, and the heating and power plant, where the great electrical generators are located. The first floor is on a level with the dock line, where the monster lake frieghters are unloaded by stevedores into the building, where the freight is loaded on three hydraulic elevators for distribution. Second floor is devoted to the clerical force—main office and packing department, where the orders are filled. Third floor, assorted ware and show rooms, sporting goods, cutlery, silverware and kindred lines. Fourth floor, stores and shelf hardware. Fifth floor, woodenware and housefurnishings. Sixth floor, paints, and supplies, and where a special stock of Heath & Milligan paints are carried. Seventh floor, is devoted to the manufacture of harness and saddles, a department that has done so much to build up Marshall-Wells Company's reputation. Every style of horse clothing is here made from durable logging harness to the most fashionable saddles for the town gentleman and frontiersman. The entire seventh floor is devoted to this line, while the collar manufacturing plant is on the fourth, in the new annex, where 9,000 dozen were turned out in 1906. The officers of this, the second largest hardware house in the world are: A. M. Marshall, president; A. H. Comstock, vice president; H. C. Marshall, treasurer, and F. W. Parsons, secretary.

Kelley-How-Thomson Company.

This house does an annual business that runs into hundreds of thousands of dollars, covering as they do the whole field as it pretains to the wholesale hardware, iron and steel, milling and mining supplies. The business was started on a cash capital of $25,000 ten years ago and today it has $500,000. The magnitude of the enterprise is proportionate in every respect to the enormous capital employed in the transaction of its business, the proportions of which are still expanding at a surprising ratio; or one which would be surprising to a person not accustomed to the startling developments which are being constantly revealed in Duluth's manifold industries. The trade of this house has been steadily extended until it covers all the immense territory which is naturally tributary to Duluth, reaching westward to the Rocky Mountains and its field is being constantly expanded. The "Hickory Brand" of hardware, which is handled exclusively by this firm, has achieved a remarkable reputation and this trade mark has become a symbol of superior quality in the goods to which it is affixed and has created an almost unparalleled demand for such goods which would have swamped the facilities for supplying them in a less resourceful establishment than that of the Kelley-How-Thomson Company, which is equipped with every convenience for the expeditious filling of rush orders on an elaborate scale. The quality of its goods and the prices which it is enabled to quote are such as to defy the keenest competition. The directors of the corporation are: M. H. Kelley, J. F. Killorin, A. D. Thomson, George W. Welles and B. W. How, all of whom are capable and experienced business men of the class which does not embark in an undertaking until convinced of the practicability of making it a success and who do not allow any obstacles to interfere with the success of an enterprise when once undertaken.

Wholesale Furniture

DeWitt-Seitz Furniture Company.

This is one of Duluth's most progressive and growing jobbing and manufacturing houses. The business was established in 1905 and today it is the leading wholesale furniture firm in the Northwest, having built up a business that extends to all the territory tributary to Duluth — Upper Michigan, Northern Wisconsin and Minnesota, North and South Dakota. The De Witt-Seitz Furniture Company carry a complete line of everything pertaining to house and office furniture, in their salesrooms, Nos. 14 and 16 East Michigan street, where they occupy four floors 50x100 feet each, and a warehouse having three floors, each a 100 feet square. The growing business of the house has been so rapid that they have outgrown their present extensive quarters and are at this writing, making arrangements to double their floor space. The company has just issued a trade catalogue, handsomely illustrated, an invaluable book to out of town dealers in house and office furniture, which is mailed to the trade for the asking. The officers of the De Witt-Seitz Furniture Company are: Charles E. De Witt, president; James E. Granger, vice president, and Henry F. Seitz, secretary and treasurer.

Dry Goods and Notions

F. A. Patrick & Co.

This mammoth wholesale dry goods establishment was organized in 1900, with the following officers, under whose capable management the business is still conducted: F. A. Patrick, president; George C. Stone, vice president; W. B. Cross, treasurer, and P. B. Neff, secretary. It began business on an extensive scale, which has about doubled each year since, so that the volume of trade transacted during a single month of 1906 equalled the total for the first year of the company's existence. The amount of room occupied has rapidly increased from year to year until in 1906 there was built an exact duplicate in size of the splendid building which had been erected by the company only three years before. The building is a brick and stone, eight stories high, 125x150 feet. It is a handsome and imposing structure, located in the very heart of the wholesale district. A force of thirty-seven traveling salesmen are employed, who cover all the territory between the Eastern extremity of Northern Michigan and Puget Sound. Much of the fame achieved by the house has been spread by the "Northland" brand of shirts, overalls and mackinaw clothing, which is manufactured especially for its own trade and where 150 people are employed in this department alone. Full and extensive lines of all kinds of staple dry goods are handled, especial attention being given to the lines of goods which are in greatest demand in the wide range of territory covered, and in which it is prepared to meet the competition of all other dry goods jobbing houses. Everything about this establishment is of the most modern type and every circumstance is taken advantage of which will tend to accelerate the rapid and economical dispatch of its transactions without impairing the quality of the service rendered. The president of the company, Mr. F. A. Patrick, has been identified with the business interests of Duluth for many years and his experience and business acumen have been important factors in the marvelous success attained by this enterprise.

Duluth's Advantages as a Wholesale Grocery Center

GROCERIES BUILT DULUTH'S JOBBING TRADE.

The great prominence that Duluth enjoys as a jobbing center has grown almost entirely upon the early foundation built by the pioneer grocery firm of the Stone-Ordean-Wells company, which had its origin in 1872. It was this interest that educated the pioneer merchants and extended them credit; that has finally developed one of the largest and most successful wholesale grocery, manufacturing and importing houses in Duluth, equal to any between Chicago and San Francisco. The business of these houses runs into millions of dollars annually and employs an army of traveling salesmen, that invades every section where there is a retail grocery store. It has been this aggressive campaign that has enabled the other jobbing houses to successfully establish their business, such as hardware, drugs, dry goods, hats and caps, clothing, crockery, furniture and many other lines. It was the wholesale grocery line that introduced Duluth's greatness and natural advantages as a jobbing center.

The prime reason for the success of our jobbing trade is its eight trunk lines of railroad and their feeders, as follows: The Great Northern, Wisconsin Central, Chicago, St. Paul, Minneapolis & Omaha, Northern Pacific, Duluth, South Shore & Atlantic, Chicago, Milwaukee & St. Paul, Duluth & Iron Range, Duluth, Missabe & Northern, while the "Soo Line" and the Duluth, Virginia & Winnipeg are building in, tapping the whole Northwest country, while the Lake Superior commerce is ever on the increase, assuring the cheapness of freight rates from Eastern sea ports which, in part, may account for Duluth's unbroken record as the greatest jobbing center midway between the Atlantic and the Pacific oceans. There is not longer any dread of competition in this line, for we have the advantage of water freights from the East for seven months of the year, which gives our jobbers an advantage over such inland cities as St. Paul and Minneapolis. There seems to be no stopping the growth and development in the grocery line as the increase of business in 1906 was 25 per cent greater than in 1905, and there will be another record making epoch when 1907 is finished. The reasons for this have been two-fold: First, prices have advanced; while no section of the United States is increasing so fast in population and wealth as has the Northland in the past few years, and there seems no reason why this growth will not multiply instead of diminishing. This record, however, is largely due to the energy and push of these firms, going farther afield in search of new trade. Every inch of the territory now occupied is so thoroughly threshed over that no outsider may even "look-in" where our jobbing grocery houses are selling goods. And by this method the business has yielded larger returns every year as the work of development progressed. There can be little doubt that this business will touch the twenty million mark in the next five years to keep pace with the rapid development of the country tributary to the Head of the Lakes. It is a recognized truth that there is no friendship in business, but that prices and freight rates attract the trade and on this sound basis Duluth's supremacy has been built and will be maintained until the trade of our jobbing houses exceeds that of Chicago. This can be made possible by the reclaiming of the so-called swamp lands that lie between here and International Falls, 2,700,000 acres, all of which is the best grass and root crop land the sun has ever shone upon and every acre of which will be under the civilizing touch of the plow by the close of the first quarter of the present century. For, as the years roll by, the importance of Duluth's location, where rails and water meet, as a jobbing and manufacturing center will exceed that of any city on the continent and in the years to come as in the years past, the wholesale grocery business of Duluth will lead all other lines.

STONE-ORDEAN-WELLS COMPANY.

This is "a great house in a great location," which has grown and prospered since its establishment in 1872. It has made Duluth known in the jobbing world as one of the leading grocery markets in the United States. Stone-Ordean-Wells company have done more than this, for they have given the Zenith City, a standing and reputation as the manufacturing and packing center for their celebrated "Nokomis" brand of canned goods and extracts, owing to their superior quality and purity. This house has a trade that covers all the territory from Lake Michigan—on the east to the Rocky mountains on the West, and have followed up the ever onward march of progress by establishing branch houses at Minot, North Dakota, and Billings, Montana. The annual business of Stone-Ordean-Wells company run into millions of dollars, and fifty salesmen are employed the whole year round to represent them in their territory.

The officers of the company are: W. P. Stone, president; A. L. Ordean, vice president; Cameron R. Rust, treasurer, and James E. Granger, secretary and buyer.

WRIGHT-CLARKSON MERCANTILE COMPANY.

This enterprising wholesale grocery house has done a leading business ever since its incorporation ten years ago. The increase in its trade is strikingly illustrated by the fact that, while its business was at first accommodated in a small five-story building, it now requires a six-story establishment with a frontage of 150 feet and is crowded for room in which to handle its rapidly increasing business. At the beginning thirteen persons were on the pay roll, while now there are forty-five names, and the trade reaches over the greater part of five states, extending far into the Canadian Northwest. In 1904 a manufacturing plant was installed in connection with the jobbing trade, which enables the company to guarantee the quality of many staple articles which are produced on its own premises and greatly stimulate the trade by the excellence of their quality. Among the articles put up expressly for their own patrons are package teas, fruits, syrups, extracts, vinegar, bluing and ammonia. The trade has come to realize that goods bearing the trade mark of Wright-Clarkson Mercantile company can be relied upon as to quality, and the demand has steadily increased since their introduction to the trade. Progress has been the motto of the company from its beginning and the idea expressed by this simple watchword has been carried through all the ramifications of the business. The utmost efficiency is maintained in every department and the highest integrity marks the dealings of the company with its employes as well as with its legions of customers.

The officials of the Wright-Clarkson company are: W. S. Brown, president; F. A. Clarkson, vice president; C. A. Phelps, secretary; G. A. Everest, treasurer; J. O. Linning, general manager; R. H. Redman, buyer, and F C. Berry, sales agent.

WHOLESALE CIGAR DEALERS.

A. M. BALFANY'S CIGAR HOUSE.

This business was established in 1903, and has grown to be a leader in its line, covering all the territory tributary to the Head of the Lakes. The sales for 1906 reach a million and a half of the celebrated brands. "Tam O'Shanter," "Duke of Ormond," "Isaac Pitman," "Seal of America," and "Sveriges Val," a union made 10c domestic, that is having a big run with the union boys. A. M. Balfany, is one of Duluth's younger type of men, who has made good. His jobbing house is located at No. 15 West Superior street, where a cordial welcome awaits all who call.

J. J. CULLEN.

This gentleman is the pioneer jobber of cigars in Duluth, having been in business since 1891, during which time he has built up a large business, employing four traveling men, who tour the territory of Upper Michigan, Northern Wisconsin, North and South Dakota. The leading sellers are: "Berkely," "Belle of Washington," "Aristo," "Fam de Vana," "General Putnam" and some other sixty brands that all have an active sale. J. J. Cullen does a $50,000 a year business, selling over 1,200,000 cigars a year, besides other lines of goods. The salesroom and office is No. 109 Lake avenue south, Duluth, Minn.

The "Young Giant" Fastest Growing Grocery House In Northwest

Profit Sharing Fully Developed.

The great problem of trade building has been one of the chief studies of the ever-expanding jobbing grocery house of Gowan-Peyton-Twohy Co., making a study, as they have, of placing their dollars in such a way as to make a double profit to their customers. This the "Young Giant" has been able to do, on account of the commanding geographical location of Duluth, where rails and water meet, midway between the Atlantic and Pacific oceans, and the pivotal railroad center of the United States. These conditions have all contributed to making Duluth the great wholesale distributing emporium of the matchless North and West, the richest and fastest growing section of the world's territory. These are a few of the salient reasons why this grocery house has had such a phenomenal growth in all branches of its business at the threshold of the twentieth century, and why the business is still growing and expanding and will so continue as long as Gowan-Peyton-Twohy Co. give their customers an additional profit over all competitors. In other words, "location" is, after all, the "Keystone" in the impregnable archway of the "Young Giant's business success in the grocery line. It has been only a question of profit-sharing as between customer and the house. This co-partnership or community of interests plan, has been more fully developed by Gowan-Peyton-Twohy Co. than by any other jobbing house at the Head of the Lakes and, as a result, the business has been built up on entirely new lines and has been one of amazing growth and extension little dreamed of when this policy was first inaugurated.

The Company's Great Business.

This company was incorporated in 1901 and occupies a splendid nine-story brick building, each having a floor space of 100x100 feet, built expressly for the business and fitted up with all the equipments for handling this line of trade; freight elevators connecting all the nine floors and basement. On the first floor are located the expansive and well furnished offices and the shipping rooms, where the goods are marked for local and out of town trade. The whole nine floors are stocked with every variety of goods called for in the grocery and kindred lines. One of the large departments is the flour warehouses which is given special attention, while fruits and tobaccos, coffees, spices, teas, paper and paper bags, butter-dishes, twin, ropes and other departments complete the stock.

MAMMOTH ESTABLISHMENT OF GOWAN-PEYTON-TWOHY CO., WHERE LAKE MEETS RAILS FOR SPEEDY HANDLING OF GOODS.

In the basement, are stored the heaviest and most bulky goods, those which are required to be packed and transported in large boxes, bales, casks or barrels, which can be unloaded from vessels or cars, and reloaded, as occasion requires, without any unnecessary hoisting or lifting, thus saving an important item of expense, which has to be borne by other jobbing houses not so advantageously situated. On the upper floors are placed the less weighty goods, the lightest of all being nearest the top of the building, so that the labor and expense of handling is reduced to a minimum. Many of these goods are taken up and down in elevators, as in the older style of buildings, while there are also ingenious slides or shoots arranged for bringing packages from the upper floors, with the least possible delay. Dispatch is the watchword of this house, and advantage is taken of every natural force and artificial condition which is conducive to expedition without detriment to the quality of the service. Orders are filled and the goods shipped with a rapidity which would astound many people who are not accustomed to the swift execution which characterizes the business transactions of the Northland, and of Duluth in particular. These circumstances, together with the fact that most of the goods are brought direct from factories in the East by water, and, therefore, at a minimum of expense for freight charges, enables this house to quote prices to their customers which cannot be duplicated for the same qualities of goods, in the territory covered, by dealers who are lacking in these great advantages. An important department recently opened is a complete stock of choice brands of cigars, the handling of which is made a specialty. This branch of the trade is showing a very gratifying increase under the impetus given it by the "Young Giant," the mere fact that a certain brand of these goods is handled and recommended by this house, being a sufficient guarantee of its quality, and is accepted as such by the trade as well as by consumers.

Two-thirds of a million dollars represents the volume of business done by this establishment during the very first year of its existence, which was certainly a very flattering start, but those figures were nearly doubled the next year, and have shown a tremendous increase for each succeeding year, now exceeding $2,000,000 annually.

Pure Food Department.

A portion of the goods dealt in by this great house is packed and sent out under its own guarantee. These canned goods are known by the brands, "Reception" and "Simon Pure," and have won a wide renown on account of their excellent and uniform flavor and quality, and the demand for them is speedily increasing wherever they have once been introduced. They also put up a full line of flavoring extracts, bluing and ammonia that carry the trade mark of the "Young Giant," which is a guarantee of absolute purity and quality.

The Territory Covered.

An army of traveling salesmen is employed by the "Young Giant" grocery house in disposing of its immense stock which have a trade covering the lines of the "Omaha" and "Northwestern" in Wisconsin and Northern Michigan, as well as the route traversed by the "South Shore" in the same states, all of Northern Minnesota, including the Rainy Lake country, in which territory its trade will be greatly extended upon the completion of the Duluth, Virginia & Winnipeg, shortening the distance by rail and bringing that prolific field into close and direct communication with Duluth. Westward the expanding trade of this house covers North Dakota and extends over a considerable portion of Montana as well as reaching into portions of several other states. So great is the trade of this house and the promptitude with which orders are filled that the entire stock is turned over one in thirty days. Nothing has an opportunity to become shopworn in the hands of this enterprising concern and the remarkable freshness of its goods is another feature which commends them to the trade.

The Personnel of the "Young Giant."

The officers of this corporation are: Andrew Gowan, president, T. J. Burke, vice president, and W. R. Peyton, secretary and treasurer. Besides these the board of directors includes Eugene O'Neil, Chester A. Congdon, B. F. Meyers and Hamilton M. Peyton.

Each of the officials of this great corporation has had experience which gives him a special capacity for the position he fills. The president, Andrew Gowan, has long been identified with the lumbering interests of the Northwest and brings to the discharge of his office the sagacity acquired in a lifelong career as the executive of great projects. T. J. Burke, the vice president, has charge of the buying and selling. He has been connected with this house only one year, but has been in touch with the grocery trade of the Northwest for many years, and has learned every detail of his duties in the school of experience. He is eminently fitted to oversee the work of the traveling force who look after the sales throughout the Northwest. W. R. Peyton, secretary and treasurer, has been identified with financial affairs from boyhood, and is peculiarly adapted to take charge of the company's funds and assets, as well as to oversee the mass of clerical work which is a necessary adjunct of the business. Of the other directors, Eugene O'Neil is a prominent citizen of Stillwater, Minn., and closely connected with the vast lumbering industries for which that city is famed. Chester A. Congdon is one of the numerous capitalists who have acquired fortunes by judicial investments upon the iron ranges. B. F. Meyers is a member of the well known firm of Meyers Brothers, promoters of various public improvements in Duluth, and whose speculations on the Mesaba range have been notably successful. Hamilton M. Peyton is one of the pioneer business men of Duluth's most important interests from the start and, despite of his advancing years, still fills the responsible position of president of the American Exchange bank. This corporation has an abundance of capital available for the prosecution and expansion of its business, and the financial succor which might be brought to expand the business in case of need, is unsurpassed by that of any business institution in the Northwest.

STONE-ORDEAN-WELLS CO.

The Strongest Drama Ever Written

is weak in human interest compared with the plain, simple story of actual commercial achievement, of big things done in business.

The Stone-Ordean-Wells Co. has "done things." It has won a success seldom equaled in either the manufacturing or jobbing world.

It has won this success because the men who direct its policies were clear-sighted enough to see the possibilities of this extraordinary location.

They saw the economic importance of this great harbor at the Head of the Lakes—the only natural and logical doorway between the East and the great Northwest.

They saw that this doorway was the entrance to a great undeveloped empire, an empire 300 miles wide and 1,500 miles long, stretching in unbroken fertility straight west from Lake Superior to the Rocky mountains; they saw the tremendous possibilities of this empire when it should become dotted with cities and towns, and all its vast prairies turned into farms.

They Saw All of These Things and Acted.

While others dreamed and doubted, Stone-Ordean-Wells pushed and worked.

Anticipating the march of progress, they established branch houses at Minot, North Dakota, and Billings, Montana, like the advance guard of an army establishing supply depots in time to be ready the moment needed. And these branch houses have grown with such rapidity that even now they rival in volume of business some of the regular jobbing houses.

This great Northwest empire was hardly born when Stone-Ordean-Wells started. Today it is passing from infancy to childhood. Five years from now it will have five times as many people for Stone-Ordean-Wells to feed as it has today.

Enterprise and progressiveness and push and the capacity to see a future demand and be ready for it—these are the factors that have given this house its tremendous lead over all competitors, and which will enable it to hold its position as the foremost grocery house of the Northwest for years to come.

DULUTH'S PRESENT AND FUTURE

Duluth's Marvelous Growth, Wealth and Glowing Prospects.

NO city in America—and that means the world as well—has made such marvelous and substantial progress as Duluth in the last quarter century. Today its annual receipts from its industries aggregate nearly $55,000,000 and its invested wealth is $150,000,000.

And no city on the whole earth stands today with such grandly glorious prospects—not of the dim and distant future but of the immediate time to come. Its annual receipts will soon be in the hundreds of millions while its material wealth will be incalculable.

Few even of the people of this city, much less those of the nation and of the world at large, realize what Duluth has done in its growth from a village a quarter century ago, what it is today and what it will be in a wonderfully short time.

To tell to the people of city, state, nation and world, what Duluth has in actuality and what is assured beyond peradventure—what is practically a realitty—The Herald presents herewith an accurate and carefully prepared statement of Duluth's wonderful growth, grand possessions and rarely glowing prospects—all the product of the last twenty-five years.

First and foremost as a factor assuring to Duluth the pre-eminent position of manufacturing metropolis of the great Nothwest, with all the commercial and financial glories and the large population that this implies, is the magnificent steel plant to the construction and equipment of which at least $7,000,000 will be devoted by the titanic United States Steel corporation. This will include blast furnace, six open-hearth furnaces, blowing mill, rail and shape mill, two-bar mills, by-product coke ovens, coal docks, shops, cement plant and other accessories, all of the very latest type and all constructed on the highest lines.

Not only will this assure to Duluth the steel supremacy of the entire Northwest, even to the Pacific coast and as far to the north as civilization extends, but it will bring to the city itself an increase in population of fully 20,000. To provide homes for these at least 5,000 modern houses will have to be constructed. To supply them with fresh food of all kinds, all Northern Minnesota will be called on to awaken from its sleep of centuries and thousands of farmers and dairymen will find prosperous employment.

And this is not all, for the increased demand for iron ore consequent on the demands of the new mills will cause the doubling of the population of the range towns. These will call on Duluth to supply them with substantial necessities and will aid to spur Northern Minnesota on to marvelous agricultural advancement.

Hand-in-hand with the steel plant and an equally great factor in assuring the manufacturing supremacy of Duluth is the vast electrical plant of the Great Northern Power company on the St. Louis river. This has developed already for the needs of Duluth, present and immediately prospective, no less than 30,000-horse power—enough to run a goodly army of factories—all of which has been contracted for. In addition to this, the company stands ready, whenever the demand shall exceed the present supply, to add 170,000-horse power. In fact, part of this is likely to be developed at once in view of the coming assured demand.

This marvelous power, the full extent of which no one not deeply versed in mechanics can appreciate, is a development of the past few years and will be unexcelled by any similar plant in the world. It will easily supply the power necessary for the factories of a city of 500,000 inhabitants. It means also power at such a low rate that the manufacturers will easily be able to overcome all competitors and hold for themselves the full control of the trade of the Northwest. This means an incalculable increase in population of skilled mechanics and their families.

Third, and of especial value to the vast and wonderfully expanding lake trade of Duluth, comes a great ship yard and a huge dry dock. The first of these will give to the city an independent plant where vessels to meet the ever increasing transportation demands will be constructed. The dry dock will be devoted to the needs of the steamers and other ships that ply the Great Lakes.

The vessel owners will profit greatly through reduced insurance rates and being afforded opportunity to make speedy repairs in the event of mishap and all seamen will benefit in superior safety to their lives in that they will not be compelled to make long and dangerous voyages on vessels that have suffered from accidents. These two new industries will require an expenditure of at least $2,000,000 and will add several more thousands to Duluth's population.

Other large industries are practically assured, supplementing these colossal enterprises and calculated to supply the varied needs of the new populations of Duluth and the range towns and certain to make conquests of the trade of the great Northwest on both sides of the line.

Duluth has already many and larger industries which any city of twice its size would be proud to claim for its own. These are already running to the tops of their bents and all are making ready for enlargement to meet the new demands. The shipping business is advancing at a phenomenal rate. The grain trade is enormous and is constantly enlarging. The coal business is vast.

Not only is Duluth assured the future unapproachable supremacy of the Northwest but today it stands ready to defend its title to being the greatest industrial and commercial section of this section of America. Its wealth is in the tens of millions and its annual receipts from its vast industries will soon make that wealth run up into the hundreds of millions.

Many and Varied Industries of the Northwest's Industrial Queen.

THAT Duluth is today one of the greatest industrial centers of the Northwest and that few, or no cities of twice or three times its size has as many and varied lines of trade, few even of those who have lived here for years really realize and the vast majority of the people will be astounded to learn that no less than $150,000,000 is invested in real estate, buildings and equipments while the annual value of the output of the factories and other industries is $54,485,000 and these factories employ 10,465 people to whom $9,418,500 is paid annually in wages.

Yet these are the actual figures for last year and they show what a really great industrial center Duluth has become. The facts are set forth all through The Herald's edition of today and they will surprise not only all America but the great bulk of the people of this city itself. And yet no one should be surprised when it is considered that Duluth is the greatest coal center of the Northwest, has an enormous elevator business, is the second port in America and bids fair to soon be the first, leads the world in the production of white pine lumber and has the largest plants on earth in two lines of industry.

At the Head of the Lakes are no less than eighteen great coal docks with 3,200,000 tons storage capacity. These are filled to repletion each year during the period of navigation and from these the fuel needs of the greater portion of the Northwest are supplied throughout the year. This in itself is an industry of which any city might well be proud.

The grain elevators of Duluth and Superior number at present twenty-seven and are certain to be added to in the near future. These elevators have a capacity of 3,500,000 bushels of grain and they are seldom idle. They contribute materially toward the phenomenal lake trade of the city and help to feed the people of the world.

The American Carbolite company's plant is the largest in the world. It has a daily output of no less than 2,000,000 pounds of the product from which acetylene gas is made. This is capable of producing 12,000,000 cubic feet of brilliant white gas and the factory that covers nine acres of floor space is kept in constant operation so great is the demand.

The largest sandpaper plant in America—that of the Minnesota Mining and Manufacturing company—is also located in Duluth. It has a well-nigh inexhaustible supply of highest grade corundum and it manufactures all kinds of sandpaper, emery boards, emery cloths and similar products.

Duluth has also a great match factory that supplies to the households, factories, stores and offices and to the smokers of the Northwest no less than 42,000,000 matches each day. It is, even with its huge output, hardly able to keep up with the demands made on it.

On Superior bay is located also one of the great ship yards of the Great Lakes. There the largest of vessels that ply these fresh-water seas are constructed by skilled workmen. Connecetd with the plant are dry docks capable of containing the greatest of all of the lake steamers.

The cigar factories of Duluth produced last year no less than 6,560,545 cigars—all union made—and paid $19,607 internal revenue taxes. The business of all of these factories is growing at a rapid rate and all will soon have to have increased space.

At the Zenith furnaces, of which Captain A. B. Wolvin, one of Duluth's most progressive citizens, was the founder and of which he is the head, are fifty coke ovens that make 225 tons of coke every twenty-four hours while 200 tons of pig iron are the daily product. A great gas plant is also an accessory. This is an industry of which Duluth may well be proud.

Two breweries, both of which are crowded beyond their present capacities—the Duluth Brewing & Malting Co. and the Fitger Brewing Co.—are another goodly industry of Duluth. Their output last year was 161,107 barrels and they added $154,064 to the government's internal revenue receipts.

A prosperous trunk factory—that of the Duluth Trunk company—is still another of Duluth's many industries.

The furniture manufacturing business is well represented by the De Witt-Seitz company.

The various metals trades find strong representatives in the Clyde Iron works, the Gogebic Steam Boiler company, the Marine Iron company, the Duluth Brass Works company, the National Iron company, the Duluth Corrugated and Roofing company and many smaller industries.

The Standard Oil company also has great storage tanks here from which it supplies all of its products to a large portion of the Northwest.

Several of the wholesale houses have manufacturing plants in connection with their business and these serve to swell materially the industrial wealth of Duluth.

The sash, door and interior finish factories are also a most important part of Duluth's great industries. The mills are the best equipped of any in the country and their outputs aggregate millions each year.

Truly Duluth, even without its vast steel plant and its magnificent Northern Power company's electrical works, may well lay claim to being one of the great industrial centers of the United States, unequalled by any city of twice or thrice its size.

Duluth's Wonderful Lake Trade and Her Magnificent Harbor.

THAT Duluth is the second port in the New World and probably the third on this globe incontestible figures prove. That this traffic is advancing year by year at a phenomenal rate and that, if it shall keep up its present rate of increase for the next ten years while its only American rival, New York city, does not progress any more rapidly than it has done for years, Duluth will lead the maritime cities of America and will challenge London for the world's supremacy is not to be doubted.

Various things have contributed toward giving Duluth her proud position. The harbor is the largest and best and safest on this continent, if not in the entire world. The Great Lakes affords a means of communication with the East that no railroads can meet in competition. The iron output of Minnesota that is growing year by year is nearly all sent to the vast plants in the East by water. The largest part of the farm products of Minnesota and the Dakotas and a goodly portion of those of the Canadian Northwest are brought here for cheap transportation to the East. This city is the center of the coal business of the Northwest, the products of the mines of the East being brought here by lake for distribution.

What Duluth did last year during the eight months of the navigation season is best told in the following figures compiled by the United States officer of the port: Vessels arriving and departing, 14,854; passengers arriving and departing, 96,964; average tons shipped per day, 92,464; increase of tonnage over 1905, 28.64 per cent; total tonnage shipments, 23,023,507, including iron ore, wheat, flax and other grains, flour and lumber; value of shipments, $165,832,390; total tonnage receipts, 6,147,714, including 5,324,540 tons of coal and 26,900,000 feet of logs; total value of receipts, $86,470,954; total value of both receipts and shipments, $251,899,844.

The flour shipments alone would have furnished a barrel to every person in London while the combined wheat and flour shipments would have given a barrel for every three persons of the British Isles. The iron ore shipments last year were the magnificent total of 19,368,186 tons. The increase in all kinds of products since 1890 when the total was 3,000,000 tons has been 26,000,000 tons. It is estimated that fully $50,000,000 has been saved in freight charges over the rates by rail. One steamship company alone—the Pittsburg—has no less than 15 great vessels sailing from and to this port. Four of these vessels are the largest freighters in the world.

To the Great Lake Dredge and Dock company is due, next to the United States government itself, the credit for Duluth's unequalled harbor. Yet the government, though it knows full well what the Duluth port is doing year by year, has expended for the improvement of the harbor less money than it has on any one of its battleships—and this despite the fact that it owns the greatest means of freight transportation in the world, one far superior in cheapness and in capacity to all of the railroads.

Statistics show that in the season of 1905, the average freight rates on all commodities to and from this harbor was .85 mills per ton per mile and the average haul was 833.3 miles. The all-rail rate for the same distance is at least 3 mills per mile. This meant a saving that year on the total lake tonnage of 22,676,145 tons or over $40,000,000. If this be the saving for one year on freight sent East and brought West during the 253 days of navigation, it would certainly seem as if the federal government would be far more liberal with its appropriations for improving the harbor.

Instead of $450,000 such as would complete the dredging of the harbor, only $200,000 is provided. A breakwater outside the harbor should also be constructed for it will speedily repay its cost of $2,186,920. The new steel plant and the ship yard and dry dock will require a vast amount of dredging, the enlargement of the harbor basin and new channels for docks and slips. New industries will require still more work in the upper harbor. The improvement of the harbor affects the interests of the entire West.

Duluth has the greatest harbor in America but it can be made still greater if the federal government shall be more liberal. At present there are only 17 miles of dredged channel of an average depth of twenty feet. This is inadequate to care for present needs and it is imperative with the certain increased demand for harbor space that immediate moves be made to lengthen, widen and deepen the present channels. The greatest harbor can be made still greater if the government will act and thereby it will save millions yearly to the people of the West.

Duluth as Center of and Market Place for Rare Agricultural Region.

WITH the assured great increase in the population of Duluth and the range towns consequent on the establishment of vast industries here that will draw more heavily than ever on the iron deposits, the matter of supplying the added thousands with dairy and truck farm products will assume greater and greater importance. Fortunately, however, the problem can easily be solved by the development of the millions of acres of rarely rich lands throughout Northern Minnesota and this is a question of but two or three years at best.

Today with its population of over 70,000 and with virtually 30,000 people in the range towns looking to this city for supplies, Duluth sends to other states no less than $3,000,000 for dairy products and vegetables and the like. With the certain increases of population here and in the towns of this section, that amount is likely to be tripled or even quadrupled unless Northern Minnesota shall be aroused by an incoming host of dairy and truck farmers—a probability that is well-nigh a certainty with the section moving into the world's limelight as it is doing now.

All kinds of vegetables can be raised in this part of Minnesota in the greatest profusion. Of this there is absolutely no doubt. Fruits of all kinds—tropical and semi-tropical excepted, of course, can also be made to flourish here. The fact that in the crop season the sun shines three hours longer each day than it does in the Ohio valley assures this. The rich red clover that grows with unequalled luxuriance in all of Northern Minnesota will make the richest milk and the finest butter in the world, the famed product of Denmark not excepted. The best of beef cattle and sheep rivaling those of Vermont and England can be made to flourish and attain rare fatness and flavor in this section. It is a remarkable fact that all things in this section grow throughout the twenty-four hours.

Until thorough tests were made in recent years, it had been the almost universal opinion that the climate and soil of this imperial region—greater in extent than all Japan or New England—precluded successful farming. Careful experiments in all parts of Northern Minnesota have shown what an egregious error this was and now the farmers of the East and of Europe, seeking new homes, are beginning to learn these facts. In a very short time, it is almost beyond question, the whole of Northern Minnesota will be a series of richly productive dairy, truck and fine stock farms.

As The Herald has pointed out year after year the richest portions of Northern Minnesota are what are termed swamp lands. The Herald has had these thoroughly investigated by experts and their unanimous reports are that every one of the 2,750,000 acres of lands of this character, lying in St. Louis, Beltrami, Itasca, Aitkin, Lake, Cook and Roseau counties, is capable of drainage and then of the most marvelous productiveness.

The Herald's drainage educational campaign is bearing fruit and within the next ten years all of these lands will be drained and under high cultivation. All are tributary to Duluth and they will supply the million bushels of potatoes, the 15,000 or 20,000 gallons of milk, the 10,000,000 pounds of butter and the 12,000 cars of fruits and vegetables that the people of Duluth and the range towns will then be calling for, besides furnishing much of the meats and hay and straw used in these places.

To assure prosperity to the farmers, good roads are absolutely essential. To the importance of these the people are awakening and stretches of excellent highways are becoming more and more frequent. As the country shall settle up, electric roads, the modern system of cheap transportation, are sure to come. It will not be many years, therefore, before the swamp lands will be drained and utilized by farmers, the other lands will all be transferred into fine farms, the whole section will be gridironed with good roads and electric and steam lines will run into all parts of Northern Minnesota.

The average crop yields per acre of Northern Minnesota are: Wheat, 25 to 40 bushels; oats, 50 to 70 bushels; barley, 25 to 35; beans, 12 to 18; peas, 10 to 16; potatoes, 250 to 400; and clover and timothy, 2 to 3½ tons. Poultry raising has been found easy and most profitable and other farm products of the famous Ohio valley can be surpassed in this section.

Minnesota has long been known as the "Bread and Butter State." The richest and best portion is certain to be the region about this city and to its industrial supremacy, Duluth is certain to add a rich and rare agricultural and dairy crown.

Duluth's Ideal Summer Resort, Surrounded by an Ideal Region.

FOR years, Duluth has been known to people all over the United States as an ideal summer resort and, slowly but surely, the wonderful attractions of the exquisitely beautiful lakes that thickly dot Northern Minnesota are growing into general appreciation. The railroads that are penetrating these charming sections are pointing out their advantages and it will be only a short time before thousands of people from the superheated cities will be coming to this section for rest and comfort during the summers.

The hotels of Duluth, spacious as they are, have been taxed, and overtaxed, for some years by the people from the East and from the large cities of the West who come here to escape the heat and to secure the blessings of this perfect climate. In fact, beside being known far and wide as a superb summer resort, Duluth is regarded by great numbers as a place to drive away many kinds of ills and bring restoration of health. And what is true of this city is equally true of the many small towns on the exquisite lakes of this section.

The fame of Northern Minnesota as a paradise for the hunt of bear, deer, moose, small animals and game birds has long been great throughout the land while all disciples of Izaak Walton in all of the large cities know that no finer fishing grounds can be found in all the world than are in Lake Superior itself and in the hundreds of tributary streams and myriad of inland lakes of this great Northland. The game may move away as the region becomes thickly settled by prosperous farmers but the fishing will be here for centuries.

To add to the attractiveness of Duluth not only for its own people but for the hosts of summer visitors, many beautiful natural parks have been set apart. These preserve their primeval loveliness as any one can see by spending a day each in Lester, Chester, Cascade and Lincoln parks. No such ideal spots are known anywhere in America. Fine driveways such as the Boulevard near the crest of the bluff and London road along the lake shore are being constructed. Exquisite are also Park Point, Oatka Beach, Fond du Lac, Isle Royale, and all of the places up the beautiful St. Louis river. In fact, Duluth has attractions unequalled by any city of Old or New World.

To cater to the amusement of citizens and summer sojourners are yacht and boat clubs, golf links and other resorts while excursions on the lake and up the river are under way at all hours of the day in summer. To the permanent residents, the winter sports in great variety are not less attractive than are the summer amusements.

Truly, the fame of Northern Minnesota as an unapproachable summer resort will soon become world-wide and the new population that the great new industries will bring here will "bless their stars" for the superb region to which fortune sends them.

Duluth's Jobbing Trade.

WHEREVER great factories are to be found centered in any city, there also are to be found large wholesale and jobbing concerns. This is pre-eminently true of Duluth at the present time. But this city would inevitably be a great wholesale center even if it were not for its factories because of its commanding position at the Head of the Lakes and because of the vast and growing territory that looks to it for supplies of all kinds.

This city has one of the largest wholesale dry goods houses in the entire Northwest in the institution that bears the name of F. A. Patrick & Co. To it is joined large factories for the manufacture of some of the finished goods in which it deals.

The drug business is well represented by the L. W. Leithhead Drug company, one of the largest concerns in Minnesota.

In the Marshall-Wells Hardware company, Duluth has the second largest hardware company in the world. It has large branches also at Portland, Ore., and Winnipeg, Man. Next to this great concern is the Kelley-How-Thomson company, which does an annual business in the millions.

The Northern Shoe company not only handles great quantities of footwear but has a large factory that must soon be greatly enlarged.

Hats and caps are both supplied by wholesale and manufactured by the Blake & Waite company.

Three large wholesale groceries—Gowan-Peyton-Twohy company, Stone-Ordean-Wells company, and Wright-Clarkson Mercantile company—do millions of dollars business each year in supplying edibles to the people of the whole Northwest. So prosperous are they and so high do they stand that their business last year was 25 per cent larger than in 1905.

Three wholesale cigar houses and a score or more of smaller jobbing companies assist in making Duluth the commercial and business center of this region.

Twentieth Century Will Be Memorable As The Electrical Age

CHARLES COIT COKEFAIR, President Great Northern Development Company.

THE subject of this sketch is a man whose best efforts have been directed toward encouraging the establishment of great industries, a promoter, organizer and financier of important business and commercial enterprises; a man who has succeeded where others have failed, because of his intelligent and persistent effort and because he has not watched the clock. Such men move toward the accomplishment of things and carve out their own destinies.

Mr. Cokefair embodies in a magnified degree the energy, perseverance and devotion to principle which characterized his Huguenot Ancestors who settled in New Jersey long before the Revolutionary war. There they purchased a large tract of land and established a homestead, which remained in the family for four successive generations. On this homestead, near Montclair, in the year 1848, Charles C. Cokefair, the subject of this sketch was born, and there developed the physical, mental and moral characteristics which have enabled him to carry to a successful culmination the important projects with which it has since become his mission to deal. He early received a liberal education in the public and private schools of Bloomfield, New Jersey, and at Pennington seminary.

In 1872 Mr. Cokefair began business in New York city, opening an office in the Wall street district, which he maintained for upwards of twenty-five years, conducting a general banking and brokerage business, handling investment securities and becoming intimately acquainted with many of the leading financiers of the Metropolis, keeping in close touch with the men who controlled the great monetary affairs of the country. At an early date he became interested in organizing and financing important railway, mining and industrial corporations, and his wide acquaintance among men of millions enabled him to find the necessary funds for his various undertakings.

Capital is always timid about venturing into new and untried fields, and the man who is to secure the co-operation of capital, especially for large undertakings, must be endowed with an unusual degree of tact and diplomacy and must have such absolute confidence in the merits of his proposition as to inspire the same confidence on the part of those whom he seeks to interest. These qualities are possessed by few to a degree in which they are embodied in the personality of Mr. Charles C. Cokefair. His earlier achievements along industrial lines were principally in connection with the development of

IRON AND COAL MINES,

and the operation of slate quarries in the states of Pennsylvania, Virginia and Ohio. But the work through which Mr. Cokefair is best known to the people of Duluth is in connection with the acquirement and development of the water power of the St. Louis river and of its tributaries. This undertaking, second only in possibilities to the great power developments of Niagara, was no trifling matter, and the schemes which had been contemplated by others for a generation or more for the development of the rapids on the St. Louis presented many practical difficulties aside from those of actual construction, which no previous devotee of the undertaking had been able to overcome. Had it not been for the united and persistent efforts of Mr. Charles C. Cokefair and of his son, Mr. Francis A. Cokefair, now chief engineer of the Great Northern power company, this gigantic enterprise might still be a thing of the future.

When the Cokefairs came to Duluth, in the year 1899, it would have been impossible to interest either local capital or local influence in this development, so prejudiced was the public mind against its practicability, and so vague was the public conception of its actual worth. The Cokefairs, however, in the course of two or three years, in the face of many opposing forces, worked up the proposition in such an attractive form, both from an engineering and financial standpoint, as to appeal to the business judgment of several leading citizens, and these were in due course influenced to lend the enterprise the moral support of their association. This was a part of Mr. Cokefair's original plan and became a valuable asset in the hands of the promoter, in addition to the merits of the proposition itself as shown in his prospectus, for financing the whole project later on.

Mr. Cokefair then went East and presented the proposition to his financial friends there with a view to placing an issue of bonds to provide funds for the actual work of construction. Money market conditions, however, were unfavorable and the bonds were not immediately sold. There was a delay of weeks and months, presidential year intervened, and Mr. Cokefair's associates not so familiar with the

METHODS AND MOODS OF WALL STREET

became discouraged. Mr. Cokefair, however, was persistent in his efforts, remaining in the East, and upon a favorable turn in the market was there on the spot ready to take advantage of new conditions. This time his efforts were successful and resulted in securing pledges for a sufficient amount to start the wheels going and to insure the completion of an initial installation of 30,000 electrical horse-power, besides other permanent improvements relating to future developments.

A permanent organizaton was then effected in the East with an authorized capital stock of $10,000,000, and an authorized bond issue for a like amount, which, in the judgment of the bankers would be required to successfully float the enterprise, and which, in their opinion, and of the parties already interested, would conservatively represent the value of the property, riparian rights, moneys already expended and to be thereafter expended upon the project. A syndicate was next formed for underwriting a part of the company's bonds and $4,000,000 of the same were offered to investors. Within five days this issue was largely oversubscribed by New York, Boston, Philadelphia and Pittsburg parties. By special arrangement a small allotment was reserved for local directors in Duluth, all of which was eagerly taken.

This, in brief, is an outline of the successful promotion and financing of one of the most important hydro-electric developments on this continent, and upon which several million dollars have already been expended for material, labor and supplies, much of it right here at the Head of the Lakes and to the material advantage of the citizens of Duluth.

As to the present commercial value of the proposition, it was recently pronounced by a leading official of the United States Steel company here from the East, as being equal to that of a coal mine at our very doors, producing a million tons per year, an important difference being that the water power is perpetual while the life of the coal mine is necessarily limited. The potential power of the

ST. LOUIS RIVER

is second only to that of two or three other streams in the world, and ranks next in the United States to that of Niagara. It is a peculiar circumstance that these two gigantic water powers should naturally occur at either end of the chain of Great Lakes, which have been such an important factor in the growth of the internal commerce of this continent.

When the late Jay Cooke of Philadelphia, in the early seventies secured the lands and riparian rights for a distance of some five miles along the rapids of the St. Louis river, with a view to their future development for direct hydraulic power, he had no knowledge or thought of such a development as was later proposed by the Cokefairs, and which has since become an accomplished fact.

Negotiations were opened in 1902 with Mr. Cooke and his representatives by Mr. Cokefair, resulting in the acquirement, for the present power company, of all the riparian rights along the rapids and such lands from Mr. Cooke's extensive holdings as were deemed necessary for the proposed development. Mr. Cokefair also succeeded, after much effort, in securing

A FAVORABLE FRANCHISE

from the city of Duluth for the distribution of heat, light and power; and also secured reliable contracts for the sale of sufficient power to cover the operating expenses and fixed charges from the starting up of the plant. Local parties whom he associated with him on the board of directors were selected from among the most prominent and substantial business men of the community. No financial aid was asked either from the city or from private individuals toward this important improvement and no stock was ever offered for sale in the community except to the few whose personal association and influence Mr. Cokefair specially desired to aid him in financing the whole proposition along broad lines later on.

With the successful placing of the bonds in the East Mr. Cokefair's arduous labors in connection with the development of the Great Northern Power company were completed, the actual work of construction then being taken up and being continued ever since uder the direction of his son, F. A. Cokefair, as chief engineer, and a special committee selected for that work by the directors and syndicate managers, the first installation of

30,000 ELECTRICAL HORSE-POWER

being now practically completed. Mr. Cokefair remains a director in the Great Northern Power company, but in the meantime, as pesident of the Great Northern Development company, has more recently given much attention to the development of another great water power on the Upper Mississippi, and has organized the Mississippi River Electric Power company, of which he is also president and general manager, and for which company he has acquired lands and riparian rights for a distance of some forty miles on both sides of the river, extending from Otsego to St. Cloud, Minnesota. The river has a fall of more than 100 feet in this distance, and the first development, plans for which have been worked up by the engineers, will be but twenty-five miles distant from the city of Minneapolis, where there is a large market for power at remunerative rates. An installation of 60,000 electrical horse-power is contemplated.

That Mr. Cokefair will succeed in the accomplishment of his plans for this last named development there seems no reasonable doubt. Noteworthy progress has already been made toward the execution of this project, into which Mr. Cokefair has thrown his customary zeal and enthusiasm, and it is a safe prediction that he will allow no impediment, however formidable, to prevent the accomplishment of this great undertaking.

For several years past Mr. Cokefair and his family have been residents of Duluth, where they are well and most favorably known. He is identified with all the leading clubs of the city, and none who meet him, either in a social or business capacity, can fail to be impressed by his magnetic personality

FRANCIS ALBERTSON COKEFAIR, CHIEF ENGINEER GREAT NORTHERN POWER COMPANY

THIS comparatively young man who has achieved unusual eminence in the engineering profession at an early age, is a thorough going American in spirit, ambition and determination who inspires every one he meets with the necessity of forging ahead. In these days of keen competition, when every phase of life seems to be intensified under the highest pressure, it is the man of indomitable energy who is by nature exhilerated and stimulated by the ceaseless demands upon his every faculty who attains the greatest measure of success. Under such strenuous conditions it is only the most optimistic individual, he who retains at all times and under all circumstances an unbounded faith in the ultimate achievement of his purposes, who can expect to become an important factor in the world's progress.

Frank Cokefair, as he is familiarly known, was born in New Jersey in 1869, and reached his majority at a time when the era of wonderful scientific discoveries and phenomenal mechanical advancement which marked the last half of the nineteenth century had nearly reached its climax. His education was acquired during a period of research and investigation which embraced nearly every aspect of human deliberation, an epoch of both material and intellectual progress during which novel theories were advanced and new principles promulgated concerning science, philosophy, religion, political economy and scores of other topics. The very atmosphere was redolent of advanced thought and scrutiny into the foundation principles of every system of reasoning or action. Under such conditions young men of active and retentive mind had great opportunities to grasp and retain the best thoughts of the ablest intellects of the times. And it is plainly evident that Frank Cokefair did not neglect his opportunities. Apparently endowed by nature whith the attributes essential to the making of a great engineer, he did not fail to cultivate those faculties under the tutelage of men who were versed in the most modern phases of that science. In 1894 he was awarded the degree of civil engineer in the School of Mines of Columbia university. He became active in the profession at once and was shortly identified with some of the most important engineering enterprises on this continent.

One undertaking with which he was connected for a time was that of the French Panama Canal company, in which he was associated with Gustav Tusca, the chief engineer of that concern. He became familiar with problems which had to do with vast engineering projects and his mind was prepared to grasp the manifold intricacies and the utmost possibilities which might be comprehended in any proposition in the line of scientific engineering. While he was busily engaged upon the work of the engineering plans of the Panama canal, his attention was first directed to the water power possibilities of the St. Louis river at Duluth. It was some time later before he was able to give the subject much serious thought, but in the meantime he had secured the report and maps of the United States Topographical Survey for this section which convinced him of the wonderful possibilities for water power development at this point.

After discussing the subject at length with his father, Charles C. Cokefair, a New York business man of affairs, he came to Duluth and quietly proceeded to make a personal examination of the topography about the city and along the St. Louis river. These investigations intensified his previous convictions that this field offered an opportunity for a gigantic engineering enterprise which could be turned to practical use if properly carried out. The matter was further discussed between father and son, each of whom has ever retained the utmost confidence in the other, the ultimate result being that it was agreed between them to undertake the exploitation of this tremendous water power, the engineering plans of the enterprise to be worked out by Frank A. Cokefair while the promoting, organizing and financing of the business end of the proposition was to be taken in charge by his father, Charles C. Cokefair. To the credit of both it should be added that the two important branches of

THE VAST UNDERTAKING

Went simultaneously forward to its final culmination, the most harmonious relation prevailing at all times betwixt these component factors in the stupendous project.

Embarking upon this enterprise necessitated the relinquishment of some other cherished plans and alluring prospects on the part of Frank Cokefair, but when the matter was definitely decided and he was once positively enlisted for the campaign his whole heart and soul became imbued with enthusiasm and there was no relaxation of his efforts until the actual installation of the contemplated power became an accomplished fact.

Having ascertained that the rights pertaining to the natural rapids of the St. Louis river between Thomson and Fond du Lac were tied up in the hands of the Jay Cooke interests, and which interests lacked the disposition to either improve or to dispose of the same, the attention of the Cokefairs was directed toward the possibility of bringing the water of the river directly into the city of Duluth by a plan which came to be known as that of the Highland Canal & Power company, a corporation organized by them for this purpose. With this end in view F. A. Cokefair plunged into the

WILDERNESS TO THE NORTH,

Spending the greater part of two years in carefully going over the territory, making preliminary surveys, taking stream gaugings and working out plans for the construction of a canal and series of reservoirs from the upper courses of the St. Louis river directly to the top of the bluff above Duluth for utilizing the fall thus made available of more than 700 feet.

Complete designs for this proposed development were afterward made in Mr. Cokefair's office from the data thus obtained; also plans for the utilization of water from a series of lakes and rivers still farther north along the Canadian border, should such a course be found necessary and feasible. The acquisition of the Jay Cooke interests by the elder Cokefair in the meantime, however, and which interests were finally consolidated with those of the Cokefairs as included in the plans of the Highland Canal & Power company, brought about a new condition and it was deemed advisable to make the first actual development of power on the Cooke property directly at the rapids near the mouth of the river, under a working head of 378 feet. This involved the preparation of many additional plans and specifications, the designing of a formidable concrete dam across the river above the rapids for creating a service reservoir, some two miles of canal with a capacity of flow sufficient to develop 100,000 hydro-electric horse power, a forebay and headgates with a series of conduits or penstocks extending another mile down the hill to the power house on the bank of the river nearly 400 feet below; also plans in detail for the big generating station, containing the largest power units ever yet installed, a 14-mile private right of way with a steel tower transmission line to the sub-station at Duluth with its complete electrical equipment for distribution of power to the cities of

DULUTH AND SUPERIOR.

All of these, and many other details, were carefully and accurately figured out by F. A. Cokefair and his efficient corps of engineers with such nicety and precision that in the actual construction of these great works, costing millions of dollars, little or no alterations even to the smallest details were made.

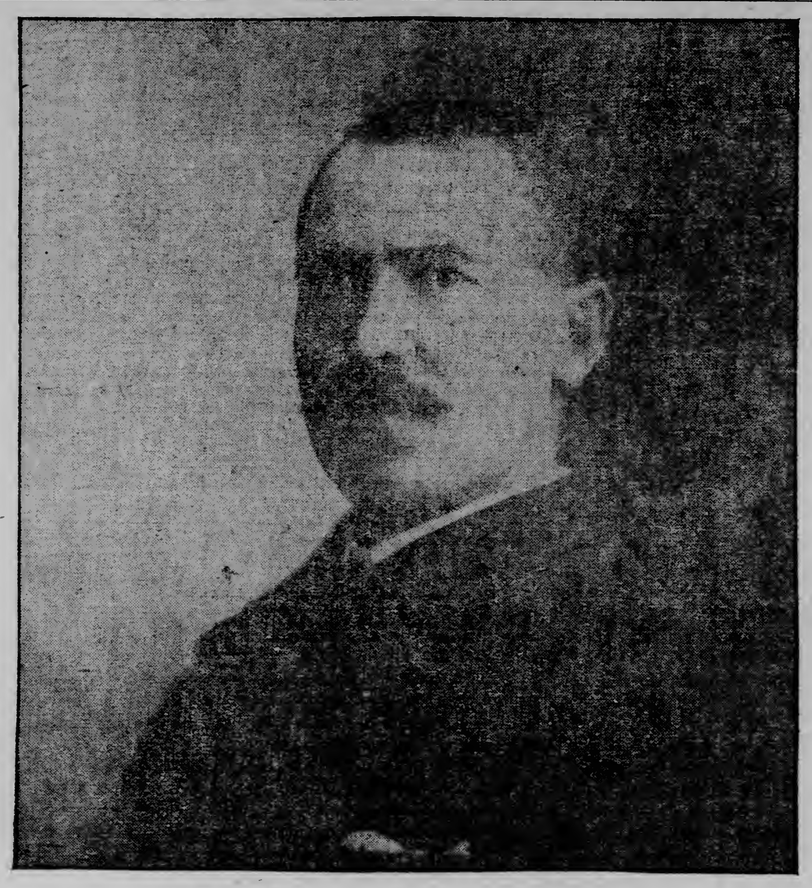
Such, in brief, is an outline of the work accomplished by Frank Cokefair, now considered by his associates in the profession as one of the ablest and most successful civil and hydraulelectric engineers in this country. He will doubtless be heard from in connection with other great enterprises at no distant day, but, however that may be, too much credit cannot be accorded him by the people of Duluth for the distinguished part which he has played in formulating and bringing about the culmination of one of the greatest undertakings in the history of the city and one which is destined to have an important bearing upon the future development of the whole Northwest.

FRANCIS ALBERTSON COKEFAIR

Major John Uno Sebenius, a Duluth Man of Affairs

The phenomenal developments on the Mesaba Iron Range have attracted to this region men of intellect and ability from all parts of the world. For the exploitation of this mining range was accomplished by means and methods entirely new, for the most part, in the field of mechanics and engineering. The solution of the practical problems here presented brought to their consideration men of original ideas and great executive skill; men whose mental grasp was broad enough to be unhampered by tradition and who were capable of formulating new principles and devising entirely new schemes for the utilization of natural and artificial forces. Experience counted for little in this remarkable development for nothing of a similar character had ever been encountered in the history of mining operations.

The geological formation here was entirely different from that of other mining regions and it had been repeatedly asserted by men of scientific training that merchantable ore could not exist on this range. But Nature has a habit, at intervals, of setting at naught the theories exhaustively evolved and promulgated by the wisest men; and principles, once considered as thoroughly established, are sometimes found to be entirely without foundation in fact. The early explorers in this field groped in the dark to a great extent, having no idea of the district concerning which no tenable theory had been evolved. In the early test pits which were sunk at intervals nearly all over the range, there was very little system or theory about the experiments. After the first discoveries of merchantable ore, prospectors flocked to the range in scores and much of the work was prosecuted indiscriminately for the next few years.



It remained for men who followed the original prospectors in this region to look carefully into the formation and unfold the theories which experience has shown to be founded on the facts in the case concerning the nature and extent of the ore deposits.

Major John Uno Sebenius.

One of the men who has been the most active, thorough and methodical in this research and is acknowledged to be the best informed concerning matters pertaining to the range is Mr. John Uno Sebenius, chief mining engineer and superintendent of exploration of the Oliver Iron Mining company, a man of genius and determination, a man of inherent wisdom and erudition whose education, both theoretical and experimental, has been discreetly directed and thoroughly utilized. Mr. Sebenius was born in Sweden, where he enjoyed schooling advantages of a superior order, becoming familiar with the English language and the system of govenment and other institutions in the United States and other countries. Having fitted himself for the profession of a mining engineer, he left his native land and came to this country in 1888, at the beginning of a period when the work of the engineer was beginning to assume an importance which had not hitherto been attached to that profession. During the next four years he became familiar with much of the work that was being done in this country pertaining to engineering and for a portion of this time filled the position of assistant superintendent of iron mines on Lake Champlain operated by the firm of Witherbee, Sherman & Co.

Begins Scientific Exploration.

When the great discoveries of iron ore on the Mesaba range came to his knowledge, Mr. Sebenius came hither and began a systematic survey of the range, preparing maps and notes to which he has ever been making copious additions. In 1894 he was engaged as mining engineer by the Rouchleau-Ray company and was associated with Mr. Louis Rouchleau in the discovery of the East Fayal mine and he has since had much to do with the development and operation of that famous ore deposit, the vastness of which is almost incomprehensible. He spent about four years in exploration and mapping work on the Rouchleau-Ray properties, an immense undertaking, which can be best understood when it is known that the production of these properties, including that still to be removed, will approximate 60,000,000 tons. His investigations in connection with these properties, and some private explorations, made in the meantime, gave him a knowledge of the ores on the range and the best and most practicable means of handling them, which is unsurpassed by any engineer. He devoted the utmost enthusiasm to his work and permitted no obstacles to interfere with its prosecution. His intimate knowledge of conditions on the range was recognized when he was called as an expert to give his testimony in the celebrated railroad rate inquiry of 1898. In that year he accepted a position with the Lake Superior Consolidated Iron Mines Company as mining engineer. With this concern he continued until the formation of the United States Steel corporation, since which time, he has been identified with the interests of that institution as a mining engineer and filled the position of superintendent of exploration for the Oliver Iron Mining Company on the Mesaba range.

MAJOR JOHN UNO SEBENIUS

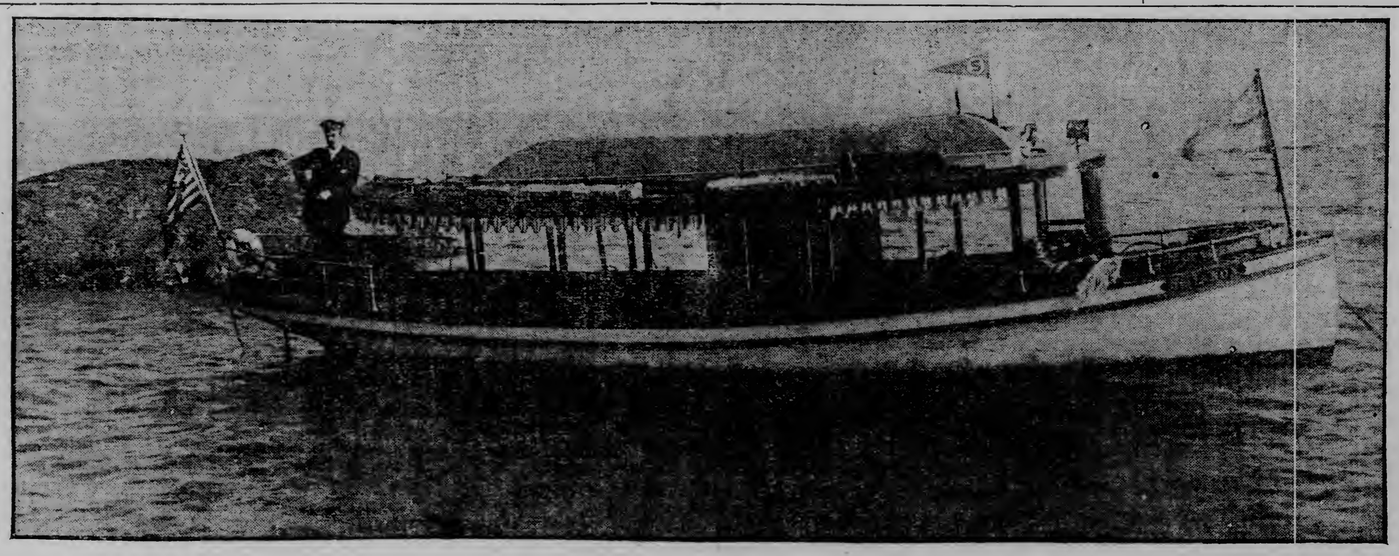
A Responsible Position.

The duties of this office require an intimate knowledge of ore conditions on the range, it being the policy of the corporation to conserve and economize the extraction of the ore to the end that the deposits may not be prematurely exhausted nor the work pursued in a wasteful and extravagant manner. The meaning of these statements, as applied to a business conducted on so elaborate a scale, can scarcely be comprehended by a person not familiar with many details pertaining to this gigantic enterprise. Suffice it to say that there is just as great need and opportunity for the exercise of well directed economy in a work of this magnitude as there is, proportionately, in the minor affairs of every day life. His familiarity with the location, extent and quality of the different deposits throughout the range enable Mr. Sebenius to lay out this work for several years in advance, so that it may be conducted to the best possible advantage.

The Oliver Iron Mining Co., a component part of the United States Steel corporation, is one of the great commercial organizations by means of which gigantic industrial undertakings are made possible and the greatest results secured in proportion to the expenditure of capital and energy. This corporation controls and operates the greater portion of the mines upon the Mesaba range and its interests demand that every possible advantage shall be taken and utilized in the prosecution of its business. The enormity of the enterprise demands the services of many men who shall excel in one or more lines of attainment and the service rendered by Mr. Sebenius is fully appreciated by the officials of the company.

Eminent In His Profession.

Maj. Sebenius stands well to the front in his profession—a calling which ranks among the most important in the industrial domain of this great "Age of Steel." In former times the engineer's position was secondary to that of the promoter who planned great enterprises and depended upon the engineer to assist in the execution of his schemes. But in the projection of modern exploits, involving the expenditure of large capital, the engineer is made the pioneer in the field, being often sent on long journeys to distant lands to pass judgment upon the feasibility of contemplated improvements as well as to execute plans and estimate the expenditures and the success of many gigantic enterprises in recent years can be traced more directly to the engineering skill involved than to any other single influence.



The eminence which he has attained as an engineer is duly appreciated by his fellow members of that profession who accord to him the highest honors. He is affiliated with the Lake Superior Mining Institute, the American Society of Swedish Engineers and the American Society of Mining Engineers.

Honored by Gov. Johnson.

Though he is not accustomed to take an active interest in the agitation of political issues, he maintains broad and comprehensive views on all public questions and is fearless in the expression of his convictions whenever occasion makes it expedient to do so. It was, doubtless, a recognition of these qualities which led Governor Johnson to appoint him as a member of his official staff with the rank of major, an appointment which was highly approved by public sentiment.

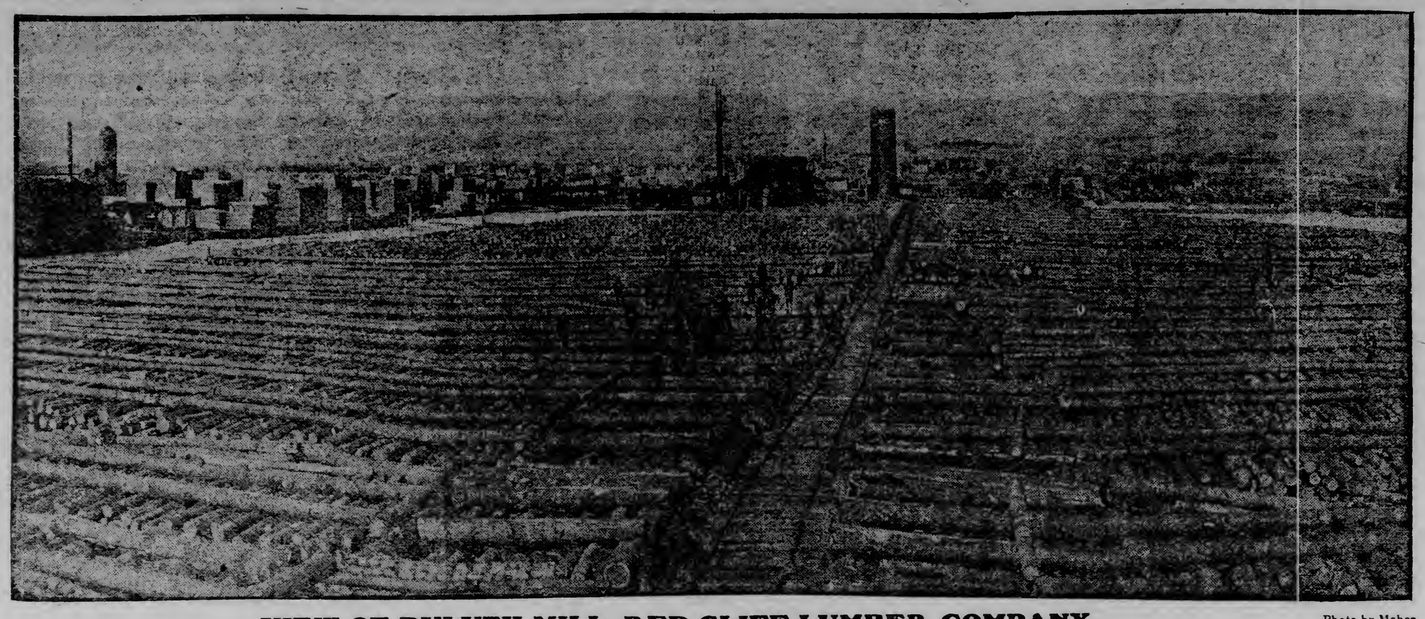
Maps Are Recognized Standard.

The maps prepared by Mr. Sebenius during his fifteen years' connection with the Mesaba range are the most complete and accurate of any in existence. They cover the whole extent of the range and are referred to or copied by parties interested in the subject wherever they are known. His map was copied in a monograph on the Mesaba range published by the United States Geological Survey in 1901, in which the author says: "This map is based upon a private map in the possession of the Lake Superior Consolidated Iron Mines Company—made by J. Uno Sebenius, mining geologist, under the direction of W. J. Olcott, superintendent of mines. Without this map as a basis, it would have been impossible to publish the accompanying map at the present time. The most important source of our information is, however, the mining men who have developed the district. W. J. Olcott and J. U. Sebenius have furnished us a vast amount of information."

MAJOR J. U. SEBENIUS' YACHT "TRIANON"

Leader In Copper Development.

Mr. Sebenius' wonderful knowledge of mining matters has been utilized in other fields as well as in connection with iron mining and he is one of the numerous citizens of Duluth who have become heavily interested in copper development. He is a director in the North Butte Copper Company and also in the Globe Consolidated Copper Mining Company, of which latter corporation he is also secretary. He is a man of versatile attainments and brings to whatever matter he directs his attention an enthusiasm and energy which ensures the success of the undertaking from the start, while constituting a perpetual source of inspiration to his associates and coadjutors.



An Ideal Homestead

In recent years Maj. Sebenius has seen fit to divert a portion of his time and attention from the cares of business to the pursuit of wholesome and genteel recreations; the magnificent estate of twenty acres to the tasteful improvement of which he is devoting much of his leisure time, is rapidly becoming one of the most pronounced models of landscape gardening in the city and, upon the completion of the elegant residence which he contemplates the erection of in the near future, it will form an ideal suburban home. These grounds are intersected by the famous London road, one of the most delightful drives to be found in any city, and have a frontage of 1,000 feet on Lake Superior, combining a view of land and water which is unsurpassed for scenic beauty.

He is one of Duluth's wealthy citizens who is taking a paternal interest in the development of the agricultural resources of the Northland and especially in the introduction of thoroughbred livestock. His dairy is graced by the presence of some of the most aristocratic bovine specimens of the breeds which have spread the fame of the islands of Guernsey and Jersey throughout the world.

Mr. Sebenius is an enthusiastic patron of refined sports and takes a wholesome interest in the social life and culture of the city. He is identified with the Kitchi Gammi and Commercial Clubs of Duluth as well as being a member of the Northland Country club and the Duluth Yacht club. He also holds membership in the Washington Club at Isle Royale and in the Chicago Athletic Club of Chicago. He finds one of his greatest pleasures in sailing and is the owner of one of the finest yachts on Lake Superior, the "Trianon" named to correspond with his suburban home of which it is considered a part and parcel. The yacht is thirty-two feet in length and is equipped with all the appurtenances belonging to an up-to-date pleasure craft.

DULUTH LEADS THE WORLD IN THE PRODUCTION OF WHITE PINE LUMBER

VIEW OF DULUTH MILL, RED CLIFF LUMBER COMPANY. Photo by Maher.

ONLY SOURCE OF SUPPLY.

PRACTICALLY all the white pine timber remaining in the United States is in the district tributary to Duluth. The fearful inroads made upon the forests of Minnesota, Wisconsin and Michigan during the last generation have practically exhausted the supply of white pine in those states with the exception of Northern Minnesota, which will continue to manufacture this valuable product for a number of years to come. The consumption of this important variety of timber, however, by no means marks the end of the lumber industry in either of the states mentioned, as there remain in each of them vast forests of hardwood and other timber which will continue to be a source of revenue for at least another generation. With the increasing scarcity and advancing prices of lumber there has been for some years past a pronounced tendency to conserve the remaining forests and to abandon the wasteful methods which marked the earlier lumbering operations. It is estimated that during the last half century in the three states referred to, more timber has been destroyed by forest fires than has been converted into lumber, while timber that would now be worth many millions of dollars has been allowed to rot upon the ground. But this age of prodigality is past as far as the lumber interests of this region are concerned. Owing to the rapid curtailment of the large timber tracts and the interposition of settlers' clearings, combined with the increased vigilance of lumber companies and fire wardens, extensive fires are of rare occurrence in recent years; the lands which have been cleared, either by the loggers or by forest fires are soon covered with a vigorous second growth and, while much of this ground is being opened up for agricultural purposes, enough will be left in growing timber to supply the home demand for ages to come.

For at least two decades Duluth has been the most important center of lumber production in the Northwest, and while the output reached its greatest proportions in 1903 when the grand total was nearly 1,000,000,000 feet, the annual production continues to be enormous, having aggregated 827,903,000 feet in 1906 for the district lying within one hundred miles of Duluth, the greater part of which was marketed at this point or shipped from this harbor. In the city of Duluth alone in the year 1906, there was manufactured 219,574,000 feet of lumber, 21,366,000 lath and 119,772,000 shingles.

SOME INTERESTING FIGURES.

According to the statistics compiled by the American Lumberman, the lumber cut of the Duluth district in the last fifteen years equals the grand total of 9,375,005,000 feet. If this enormous output were loaded upon cars with the necessary engines, tenders and cabooses for its transportation and all coupled together in one continuous train, it would reach 3,730 miles or clear across the continent from Halifax, Nova Scotia, to San Francisco, California. Allowing five persons to each family and 10,000 feet of lumber for each house, it would have entirely rebuilt the city of San Francisco, providing a home for each of its 300,000 people, and it would not only have done this but it would perform a similar service for fifteen other cities of the same size. At the same rate it would build a home for every family in the great state of Illinois and still leave a large surplus. After providing for home consumption in Duluth and all the other cities and towns in this district. There were approximately 400,000,000 feet of lumber shipped from this harbor by water during the navigation season of 1906, to say nothing of the shipments by rail.

The lumber industry provides employment for several thousand men in the city of Duluth, to say nothing of the thousands of men who are employed in lumbering and logging operations through the vast realm which is contiguous to this city. Besides the thousands of horses which are utilized in this work, there are hundreds of miles of railroad used exclusively for the transportation of logs, the building and operation of which employs hundreds of additional men. This stupendous product of the "Northland," although it is the outgrowth of a much more limited area than the dominion of "King Cotton," is, nevertheless, a formidable rival of that mythical monarch as a candidate for first place among the great productive industries of this nation. Millions of dollars of capital are invested in timber and timber lands, sawmills, logging railroads and other equipments for carrying on this giant industry, and thousands of fortunes have been accumulated in the lumber business. Much of the capital gathered in this way is now invested in other lines of business and in the development of other important industries in Duluth and elsewhere. Besides the numerous mills engaged in converting logs into sawed lumber, there are a number of establishments in this city devoted exclusively to the manufacture of sash, doors and mouldings, and the utilization of the product of the sawmills in the manufacture of furniture, packing boxes and many other articles. The indirect benefits which come to this city on account of its being the center of an immense lumbering region, it would be impossible to calculate with any degree of accuracy, but would amount to an enormous figure if fully computed.

TIMBER CULTURE IN FUTURE.

Despite the many substitutes which have taken the place of timber for many purposes in the building business, the consumption of lumber is steadily increasing in recent years. The extended use of structural iron and of stone, brick, tile, cement, felt and other articles have already superceded the use of lumber for many purposes for which it was used exclusively in the early days of the present generation, but these substitutes do not seem to keep pace with the increasing demand due to a growing population and the universal prosperity which prevails throughout the country. There are still great forests in the extreme West and Northwest, as well as in the South, but the Duluth district practically includes all the available supply of pine in the Middle North. It is obvious that coming generations will find it necessary to use other materials for building to a far greater extent than has been the case in the past. The cultivation of timber, to which careful attention is given by the government in Germany and some other European countries, has been neglected almost altogether in this country, but is beginning to receive some attention in the prairie states, and there is a gradual awakening to the necessity of conserving the forests where they already exist. There are many varieties of excellent and durable timber which make a rapid growth if given an opportunity, and it is only necessary to apply the same intelligence and systematic care which is bestowed upon the cultivation of other products of the soil to restore much of the denuded forest area of the country within a reasonable period of years. In many places more valuable hardwoods would take the place of the slaughtered pine if given half a chance.

There can be no doubt that the restoration of the forests in much of the area which nature prepared for their growth and the establishment of groves and timber belts at intervals through the great prairie regions of the west would have a very beneficial effect upon the climate of the localities affected thereby. It has long been obvious to those whose attention was directed to the subject, that there is a gradual diminution in the natural water supply of regions where the forests had been generally cleared away and the soil brought under cultivation while the introduction of extensive groves of growing timber in a natural prairie region has the opposite effect. Political economists are giving careful consideration to this subject at the present time and it is one which will demand increasing interest as time passes. The fuel question which has already become acute in parts of the country, seems likely to be met to a considerable extent by the increased use of electricity, but there will always be an ample demand for all the timber produced in the United States for one purpose or another.

DULUTH, MINN.

Lumber, Sash, Doors and Interior Finish

THE VARIOUS lines of manufacturing which are incident to the lumber dustry are assuming a growing importance in Duluth which becomes more apparent each year. The construction of buildings, like many other industries, has undergone some remarkable revolutions within the lifetime of a generation and much of the material entering into the construction of a building which was formerly dressed and fitted on the premises at great expense of time and labor on the part of the mechanic is now prepared at the factory by the use of machinery and requires only to be placed in position upon reaching the premises for which it is intended and the occupation of house carpenters has been much simplified as compared with the intrinsic skill required in a workman in that line a hali-century ago.

This being one of the greatest original points of production for different kinds of lumber, is especially adapted to the production and distribution of what is known as "mill work" and there are a number of establishments in Duluth engaged in the manufacture of sash, doors, blinds, mouldings, stair work, office fixtures and cabinet work. Many varieties of lumber enter into the production of these classes of work, maple, oak, birch and other hardwoods which abound in the northland being used to a great extent and the products from these varieties of timber are very popular with builders. Much of the finished product of Duluth mills finds a market at distant points and the reputation of Duluth manufacturers for this class of work has been extended all over the United States and Canada.

Millions of dollars of capital has been invested in establishing these special plants and in equiping them with modern machinery for turning out sash, doors, mouldings and interior finish work in all lines of woods. Employment is given to an army of people by this branch of industry, and the revenues derived from the business runs into millions of dollars annually.

Scott-Graff Lumber Company.

This is one of the oldest and best-known organizations in Duluth and manufactures an immense quantity of sash, doors, mouldings, office and stair work, and all lines of interior finish. The company's factory, consisting of saw and planing mills, together with its extensive storage warehouses and yards, comprise a tract of land which is one-half mile in length and one-fourth of a mile in width. In this establishment and the logging camps of the company 700 men are kept at work. The company has every facility for turning out the very best quality of work and makes a specialty of manufacturing hardwood interior finish for residences, offices and public buildings. Its reputation for superior workmanship in this line is well established and its sales extend as far east as Pittsburg and southward to St. Louis, while it is filling numerous orders from the Pacific coast in Oregon, Washington and Southern California. Among the public buildings for which the company has furnished the interior finish are the post-offices at the following places: Superior, Wis.; Laramore, Wyo.; Pierre, S. D.; Deadwood, S. D., and Fresno, Cal.

The sash, door and blind factory consists of four floors, 100x110; 100x110; 80x100, and 80x100 feet. There is a warehouse of four stories each 80x120 feet; a double dry kiln each section 20x100 feet, with a capacity for drying thirteen carloads of lumber at once; the second floor, 40x100 feet, being devoted to the storage of selected hardwood. There is also a dry storage warehouse, 150x250 feet, for select grades only of yellow and white pine and another dry storage warehouse, 50x100 feet, two stories, for hardwood lumber only.

The Scott-Graff Lumber company has abundant resources for carrying on its extensive business and its financial standing is of the highest. Officers of the corporation are Edmund D. Graff, president; Zar D. Scott, vice president, treasurer and general manager; and Jesse A. Bradley, secretary. Mr. Graff resides in Worthington, Pa., and the other officials are residents of Duluth.

Ouellette & Baxter Company

This enterprising firm manufactures sash, doors, mouldings, house finishing materials and all kinds of mill work on an extended scale. The firm occupies two blocks at Michigan street and Garfield avenue and employs sixty people in carrying on its business. The dry kiln has a capacity of 20,000 feet of lumber and all varieties of seasoned hardwood are kept in stock at all times to meet the demands of its patrons. The value of these products annually runs from $150,000 upwards and the trade extends throughout the western and northern territory which looks to Duluth for the bulk of its supplies in manufactured goods.

The firm of Oulette & Baxter was organized in 1901 and has prospered in a noteworthy degree which will soon necessitate its seeking a more commodious location. There is nothing in the line of woodwork entering into the construction of office or residence buildings which this concern is not prepared to furnish all ready for installing. It is prepared to furnish estimates upon application to parties who contemplate building or making repairs and improvements of any description. The establishment is equipped with all modern machinery and every convenience for filling orders with dispatch; skillful and experienced men are employed in the operation of the factory, and the business is conducted in a thorough-going and up-to-date manner which insures the satisfaction and good will of all its partons.

Red Cliff Lumber Company

This is one of the big industries of the Northland, operating as it does two sawmills located at Duluth and on Red Cliff Indian reservation, in Bayfield, Wis. The output of these two plants will reach 60,000,000 feet annually, white pine and hemlock. The Duluth saw and planing mills, yards and docks gives employment to 300 men, while 150 are employed at Red Cliff. In addition to its mill work, the company has 1,400 men at work in its camps, getting out the logs, those for the Duluth mill being brought hither by railroad. This company owns some of the largest blocks of standing timber remaining in the Duluth district. Its stumpage of white pine in Lake and Cook counties, Minnesota, is sufficient to keep its mills in operation for the next ten years, while it has extensive tracts of hemlock at Red Cliff, besides owning 1,500,000,000 feet of yellow fir timber at Vancouver, British Columbia. The Duluth plant of this corporation, which includes its sawmill, planing mill, dock and yards, covers an area of sixty acres.

The officers of the corporation are: F. L. Gilbert, president; A. E. Gilbert, secretary; E. T. Buxton, treasurer. Besides its main office in Duluth, the company maintains branch offices in New York city, Philadelphia, Pittsburg, Springfield, Mass., and Springfield, Ohio.

Lake Superior Bag Company.

THE Lake Superior Bag company, one of the leading jobbing firms of this section, is identified with both Duluth and Superior—maintaining a jobbing house in each city.

This institution is a branch of Bemis Bros. Bag company—the largest Bag manufacturing corporation in the world—with plants in Boston, St. Louis, San Francisco, Seattle, Omaha, Kansas City, New Orleans, Memphis, Indianapolis, Minneapolis, Winnipeg, Superior and Duluth, and having a paid-up capital of $5,000,000.

At the Head of the Lakes they are doing an extensive business in the line of wrapping papers, building papers, paper bags, printer's stock, stationery, cotton and burlap bags, and burlap by the bale.

The Paper line was added to the business in February, 1900. They have in the Superior house an up-to-date rotary wrapping-paper press, the only one at the Head of the Lakes, which enables them to handle with dispatch all orders for printed and striped wrapping-papers and paper bags.

They have a large and constantly increasing trade in Northern Minnesota-Wisconsin and North Dakota, and carry a heavy and complete stock in all their lines. The local manager of the company is Theodore W. Rogers.

American Heating Company.

IN a community which is growing as rapidly as that at the Head of the Lakes, and where many new buildings are being erected each year, sufficient to meet the demands of a rapidly increasing population as well as to replace or repair many old and out-of-date buildings, there is naturally a growing demand for all kinds of building equipments, and in a Northern climate, such as ours, the call for heating and ventilating apparatus is a pressing and urgent one. This demand in the cities of Duluth and Superior is fully and capably met by the American Heating company, which for some years past has made a specialty of installing heating plants in houses, factories and other buildings. The business of the company also includes ventilating appliances and plumbing and pipe covering. Ample stocks are kept at the company's establishments in both Duluth and Superior for doing first class work in any of these lines and the installation work is conducted by men of skill and experience. Most of the leading buildings in both cities have been equipped by this concern in the various lines of which it makes a specialty.

The Duluth establishment is located at 228 West Michigan street, where a large stock of heating and plumbing goods are always on exhibition, and the Superior office and store is at 1813-1815 Winter street, where a similar stock of goods is kept. The American Heating company has been engaged in business for eleven years past, and its facilities and experience are unequaled for work in its respective lines at the Head of the Lakes. The officers of the company are: P. J. Eckstrand, president; J. L. Cash, vice-president, and B. H. Ober, secretary and treasurer.

Whitney Bros. Co., Wrecking, Lightering, Towing, Pile Driving, Dock Work.

HISTORY OF THE PLANT.

ONE OF THE most essential industries at the Head of the Lakes is the general contracting business conducted by the Whitney Bros. company. This concern is prepared at all times to undertake large contracts in the way of wrecking, pile driving, dock building, lightering and general towing; also for furnishing beach sand and gravel in any quantity for building purposes, street grading and other work. Their equipment for executing difficult and extensive contracts of these various natures are unsurpassed and are available on the shortest possible notice in case of great emergencies such as frequently arise through the casualties of navigation. This equipment consists of powerful tugs, pile drivers, scows and sandsuckers. Some of the scows have a carrying capacity of 1,700 tons, and are often called into service for lightering vessels which have been wrecked or stranded. By this means cargoes of coal or ore are often removed and saved, which would otherwise have to be dumped into the lake. The company employs on an average 200 people and has extensive docks in both Duluth and Superior, in the latter city covering nine acres of ground on the bay front between Hammond and Cumming avenues. Many of the largest contracts for dock building and pile driving on this harbor have been filled by this concern.

One instance which illustrates the capacity of this company to meet any emergency in the way of wrecking contracts, was the removal of the 230-foot span of the

STEEL INTERSTATE BRIDGE

after the wrecking of that ponderous structure in August, 1906. This is an immense draw-bridge, forming the only thoroughfare of overland travel between the cities of Duluth and Superior and which is drawn many times each day during the season of navigation to permit the passage of vessels to and from the inner harbor. Cargoes aggregating 15,000,000 tons pass through the draw of this bridge every year and when it was accidentally wrecked by coming in collision with a passing steamer and the channel effectually blocked by its ruins, there was consternation among ship owners for a number of vessels were penned within the harbor waiting to get out, while others were arriving hourly which could not reach their docks to discharge the cargoes with which they were laden. Under these conditions every day's delay meant a loss of thousands of dollars. It being impracticable to readily remove the ruins of the wrecked bridge, it was decided to open a new channel by removing one of the permanent spans of the bridge and the Whitney Bros. Co. was commissioned to accomplish this with the least possible loss of time. In seventeen hours after the accident the work was begun and seventy-two hours later the 230-foot steel span of the bridge connecting the Superior shore had been

LIFTED FROM ITS PIERS

floated away and mounted on piles, driven in the meantime for that purpose, where it could rest until the time came for restoring it to its former location. This was accomplished without injury to the structure by pacing several scows beneath the span of the bridge which were then filled with water and sunk; upon their decks were built wooden trestle works reaching to the under side of the bridge, after which the water was pumped from the scows and the span of the bridge floated from its foundation piers and towed to the location prepared for it when it was lowered by a similar process. The plan of work was not a novel one, but its accomplishment in such a brief period of time would have been impossible but for the ample equipment maintained by this company and which was at once available for the work.

In addition to its

OTHER LINES OF WORK

this company is prepared at all times to deliver on cars or at any dock on Lake Superior sand and gravel for the making of concrete to the amount of 500 cubic yards per day. Its remarkable resources enables the concern to fill many orders without delay, which could be undertaken by no other firm on Lake Superior.

The capital of this corporation is $200,000 and its business has steadily grown since it began in 1889, until it now does an annual business amounting to from $300,000 to $500,000, according to the demands of the season for work in this line. W. A. Whitney is president and treasurer, and E. H. Whitney vice president and manager of the company.

WHY NOT THE BEST?

THE DULUTH TELEPHONE SYSTEM

218 WEST FIRST ST.

The Crack Salesman

Of almost every business is the Telephone. Every wide awake business house receives many dollars' worth of business over the Telephone every day, and could not afford to do without the telephone service for one hour a day.

And this **Crack Salesman** combines salary, expense account and all into from ten to fifty cents a day.

Don't stint your facilities for telephone service. It is the last thing you ought to lessen. Your business needs a certain amount of service, and it is suicidal not to have it.

Make sure today that you have enough, and that the line isn't busy and drives people elsewhere when they want to call you up. Your private exchange may need more trunk lines; you may need a special, or an individual, instead of what you have.

If you have no extension service you may need that, or if you have, your business may need a private exchange. Right telephone service is a first item of business economy.

Improve the Great Lake Waterways is the Watchword of the Hour.

How to Foster and Expand Duluth's Big Lake Shipping Industry—Channels Must be Widened and Deepened—Harbors and Breakwaters Extended.

THE RATHER bombastic statement that Duluth has "the greatest harbor in the world" or that "Duluth leads the world in the volume of its commerce" has become so familiar to the residents of the city that it has almost ceased to have any meaning.

The words no longer make any impression on Duluthians and fail to make them appreciate the wonderful magnitude of the shipping that annually passes between the great concrete piers of the Duluth ship canal. The freight is handled with such a quiet celerity that the onlooker would never guess at the magnitude of the shipping industry.

If the type of vessels in use a quarter of a century ago or even ten years ago, were still in use, the harbor would be a perfect forest of tapering masts, with scores of puffing little tugs, and wooden steamers, hurrying about or waiting to get to the docks. The pictures of the old London docks with their piles of merchandise, and maze of masts and spars, would be reproduced on an even greater scale.

But times have changed. Nowadays, a great steel hull slips silently up to a half mile of ore dock, 10,000 tons of freight are dumped into her hold in a few hours, and she casts off and is on her way to the lower lake with the cargo of a dozen or a score of the old wooden vessels. One of the great steel freighters of today does the work of a fleet of the old wooden vessels, and it is done so rapidly and so quietly that the ordinary citizen would never guess at the volume of the business. Three or four of the great freighters might slip in through the piers after dark, take on their loads at the ore docks, and leave before morning with enough ore to have swamped twenty of the old wooden steamers of ten or fifteen years ago.

There are no fancy frills to the modern lake freighter. It is built for a purpose and it answers that purpose most admirably.

Speed Is Vital.

And the day has passed when a vessel can afford to lie in the harbor for a day or two days or a week. A week lost means a trip lost, and that means 10,000 tons less of freight moved in a season. The time the boats spend at their docks has been cut to hours, and even the hours are jealously watched. "Keep your boats moving" is the cry of the dispatcher, and the captain who loses the least time during the season is the captain who finds favor in the eyes of the owners.

The handling of the freight of the great lakes must necessarily be carried on at high pressure. The time is limited. On the ocean, if freight is not moved this month, it can be moved next month, but on the lakes if the amount of freight moved in one month is less than it should be, that much more must be moved the next month. The shipping season seldom lasts more than eight months, and any freight left over at the close of navigation in the fall must be sent forward by the expensive rail route or stored until the following spring.

The following table shows the opening and closing of navigation for the last eleven years:

Year.	Opened.	Closed.
1895	April 23	December 11
1896	April 18	December 9
1897	April 2	December 13
1898	April 13	December 15
1899	April 29	December 19
1900	April 22	December 12
1901	April 27	December 11
1902	April 4	December 16
1903	April 9	December 11
1904	May 5	December 14
1905	April 14	December 17
1906	April 15	December 19

What Has the Government Done?

What has the government done for the shipping?

It has done much, but not a tithe of what is needed.

Because England has shipping interests in all parts of the world, England built a navy—the greatest in the world. Millions of dollars were poured out yearly by the English people for the protection of their shipping, and the navy has been made the terror of the rival nations of the globe.

The shipping of the great lakes does not need a navy for its protection, but it does need channels, and harbors, and docks, and lighthouses, and aids to navigation. England has spent more money on a single vessel for her navy, than the government of the United States has spent all told on the greatest harbor on the chain of lakes—Duluth. Battleships are not needed on Lake Superior to protect the shipping. They would be in the way, and block up the channels and harbors, but if the cost of one battleship were expended on the Duluth harbor, it would be made perfect in the lake captains' eyes.

The people of the United States are calling for good roads. Why? The answer is no puzzle. Good roads facilitate the movement of merchandise, and the quick communication between communities.

The railroads of the United States are double tracking their systems, and adding new engines and equipment. The answer here is also plain. A good roadbed and good tracks mean better service.

But the United States owns the greatest means of freight transportation in the world. It is the chain of Great Lakes connecting the populous centers of the East with the great resources of the West. To improve this great waterway; to widen and deepen the channels; to construct harbors and breakwaters where they are needed; and to throw every safeguard and convenience about the wonderful shipping industry that depends for its life on this waterway, is the only course open to the government. During the past winter the people of the West have been given a hint of the horrors of a coal famine, brought on by inadequate means of transportation. What might that famine have been if it had not been for the lake shipping industry. If instead of having a convenient distributing point in Duluth, where mountains of coal are brought and dumped each summer by the leviathians of the lakes, the people of the Dakotas had been obliged to send for their coal to the fields of Pennsylvania, and bring it all the way to the West in little square boxes on wheels, what might have been the result?

Lakes Are Artery of Trade.

The Great Lakes are the mainstay of trade for the northern half of the country, and the railroads are merely the smaller veins leading to and from this artery. What the result would be if the veins had to bear all the burden that is placed upon this artery, can be better imagined than described. There would be a freight blockade that would paralyze every railroad in the country.

President Roosevelt was alive to the importance of developing the inland waterways of the country, as is shown in his recent action in appointing an inland waterway commission. Following are some extracts from his views on the inland waterways:

"In creating this commission I am influenced by broad considerations of national policy. The control of our navigable waterways lies with the federal government, and carries with it corresponding responsibilities and obligations. The energy of our people has hitherto been largely directed toward industrial development connected with field and forest and with coal and iron, and some of these sources of material and power are already largely depleted, while our inland waterways as a whole have thus far received scant attention. Works designed to control our waterways have thus far usually been undertaken for a single purpose, such as the improvement of navigation, the development of power, the irrigation of arid lands, the protection of low lands from flood, or to supply water for domestic and manufacturing purposes. While the rights of the people to these and similar use of water must be respected, the time has come for merging local projects and uses of the inland waters in a comprehensive plan designed for the benefit of the entire country. Such a plan should consider and include all the uses to which streams may be put, and should bring together and co-ordinate the points of view of all users of water.

Water vs. Rail Rates.

Statistics go to show that during the season of 1905 the average freight rate on all commodities passing through the "Soo" canal to and from this harbor was .85 mills per ton, per mile, and the average haul was 833.3 miles, figuring this tonnage on the basis of an all-rail rate, and figuring that this rate would be 3 mills per ton, per mile, the total saving to commerce by the all-water route on the total tonnage of 22,676,145 tons, which covers the season of 1905, would show a saving of something over $40,000,000, or in other words, a difference of about $1.80 per ton. Ordinarily the public does not give this matter very much thought, as we have grown to look upon it somewhat as a matter of course, but it must be admitted that these figures certainly are food for thought, and all go to show the urgent necessity for this harbor being placed in a position to accommodate all the growing contingencies, which follow in the wake of such commercial advancement; this saving of some $40,000,000 during the season of 1905 is, roughly speaking, within $10,000,000 of the total appropriation by the United States government since its earliest inception applicable on the Great Lakes from Niagara Falls to Duluth.

The Railroads Are Inadequate.

"It is common knowledge that the railroads of the United States are no longer able to move crops and manufactures rapidly enough to secure a prompt transaction of the business of the nation, and there is small prospect of immediate relief. Representative railroad men point out that the products of the northern interior states have doubled in ten years, while the railroad facilities have increased but one-eighth, and there is reason to doubt whether any development of the railroads possible in the near future will suffice to keep transportation abreast of production. There appears to be but one complete remedy—the development of a complementary system of transportation by water.

"It is not possible properly to frame so large a plan as this for the control of our inland lakes without taking account of the development of other natural resources. Therefore, I ask that the inland waterways commission shall consider the relations of the streams to the use of all the great permanent natural resources and their conservation for the making and maintenance of prosperous homes.

MONEY FOR IMPROVEMENTS IS WELL EXPENDED.

"Any plan for utilizing our inland waterways, to be feasible, should recognize the means for exercising it already in existence, both in the federal departments of war, interior, agriculture and commerce and labor, and in the states and their sub-divisions; and it must not involve unduly burdensome expenditures from the national treasury. The cost will necessarily be large in proportion to the magnitude of the benefits to be conferred, but it will be small in comparison with the $17,000,000,000 of capital now invested in steam railways in the United States—an amount that would have seemed enormous and incredible half a century ago. Yet the investment has been a constant source of profit to the people and without our industrial progress would have been impossible.

"The questions which will come before the inland waterways commission must necessarily relate to every part of the United States and affect every interest within its borders. Its plans should be considered in the light of the widest knowledge of the country and its people and from the most diverse points of view. Accordingly when its work is sufficiently advanced, I shall add to the commission certain consulting members with whom I shall ask that its recommendation shall be fully discussed before they are submitted to me. The reports of the commission should include both a general statement of the problem and recommendations as to the manner and means of attacking it."

It is a fact which cannot be disputed that the aids to lake shipping have not been keeping pace with the shipping itself. The commerce of the Duluth-Superior harbor is jumping ahead at the rate of three or four million tons a year.

The private interests are quietly but effectively keeping pace with this progress. The facilities for storing coal at the Head of the Lakes were inadequate. Last winter the coal companies were brought to see this fact, and this spring many new docks will be built. The storage capacity of the harbor will be increased by something like 1,000,000 tons this summer.

The Duluth, Missabe & Northern railroad did not have a big enough ore dock. The company did not try to make the old ones do, but promptly invested $750,000 in the biggest ore dock in the world.

The equipment of the ore hauling roads was inadequate to handle the ore during the season. A few hundred new ore cars, and a score or two of engines were purchased and put into service.

The boats of the Pittsburg Steamship company were not carrying enough freight. Half a dozen new ones, from 500 to 600 feet in length and carrying more than 10,000 tons apiece, were constructed.

This has been the policy of the private interests. If the old equipment was inadequate, new was purchased. "Never mind the cost if the expenditures are necessary to move the freight." Their business is moving the freight, and it must be moved as rapidly as possible.

If the government would adopt this policy in improving its waterways, it would be money well invested.

This year there will be available for dredging the sum of $200,000 for the purpose of making a larger harbor basin, but it will require at least $250,000 more to propely complete the work. There is also a breakwater to construct outside of the harbor, which would take $2,186,920.

With the new $7,000,000 steel plant constructed in West Duluth, a vast area of dredging will be necessary in the upper harbor. The harbor basin will have to be enlarged, and new channels for docks and slips will have to be made. As the manufacturing industries spring up through West Duluth, the need of extensive work on the upper harbor will become imperative, and if the growth of Duluth and the Northwestern states is not to be retarded, this must be undertaken in the very near future.

These matters will be laid before Congressman Bede and the rivers and harbors commission, and an earnest effort made to secure a generous appropriation for this work, which is of vital importance not only to the city of Duluth, but to the entire Northwest, which is dependent upon the Duluth harbor for so many of the necessities of life.

It is not a mere matter of local interest in which Duluth is selfishly seeking to secure an improvement which will be of but questionable benefit. As has been pointed out above, the improvement of the Duluth-Superior harbor is something that affects all the country west of Lake Superior from Iowa, Kansas and Nebraska, Montana, the Dakotas, as far north as Canadian provinces of Alberta and Saskatchewan. The people in all this vast territory are dependent on the Duluth harbor for many of the necessities of life. To keep this waterway open and facilitate the movement of merchandise through it is the duty of the government. Neglect it and throw the burden of moving the country's merchandise entirely upon the railroads, and there will be a freight tie-up, to which the one of last winter will not begin to compare.

The improvement of the harbor is a work, therefore, which the government cannot afford to neglect or treat in a niggardly manner. The most generous attitude should be adopted toward it, with the motto not "how cheapy can it be improved," but "how well can it be improved."

Government Appropriations.

In the matter of the appropriations there has been spent for general improvement by the United States government in this harbor $4,915,441.08, between the years 1867 and 1895. Since the year 1895 there has been no government appropriations for general improvements during the period between 1867 and 1895. There has been received and shipped from here 178,224,046 tons of all commodities with a total valuation of $2,340,832,262. In the year 1895, which was the advent of our prosperity and the forerunner of our present identity as a receiving and shipping port, there was received and shipped 6,325,351 tons with a total valuation of $95,000,000. The commerce kept increasing by leaps and bounds during the subsequent ten years, and during the season of 1905, there was received and shipped 22,676,145 tons with a valuation of $196,751,583, during the season of 1906, a most phenomenal record was made, there being received and shipped from this port 29,171,221 tons with a valuation of $251,899,844

The excess tonnage received and shipped in 1906, over 1905, was 6,495,076 tons ,or in other words greater than the entire tonnage handled during the season of 1895. These figures will readily show the tremendous increase in the commerce at the Head of the Lakes, and are conclusive evidence in themselves, that the port is destined within a very few years to be the greatest receiving and shipping point in America, figures compiled this last season show that we are now in point of tonnage, received and shipped, the second port in the United States, New York city being first.

The Duluth-Superior harbor is nature's own production, being the only one on the lakes that has a natural protection for its 47 miles of dock frontage. At present we have but seventeen miles of dredged channels of an average depth of about twenty feet, which is really inadequate to take care of present needs. As the class of freighters handling the traffic of this port is principally of the modern type, ranging from 7,000 to 12,000 tons carrying capacity and drawing from eighteen to twenty feet of water, also taking into consideration the new and large boats that are being built, it is very essential that the channels of our harbor should be adequate in width and at least twenty-five feet deep, and further, in view of the great commercial improvements which will be made on the harbor in the shape of new docks, yards, etc., by the many railroad companies, iron mining companies, coal companies and elevator interests, it will be absolutely necessary in order to fully accommodate these many concerns that an immediate move be made to lengthen, widen and deepen the present channels, so that all the harbor frontage may be available and no hardship be worked on any of these many interests. It is also imperative that we have in the harbor the necessary mooring basin for this vast fleet that is plying to and fro carrying the products of this great Northwest.

Records show that since the year 1895 there has not been any appropriations made by congress for the general improvement of this harbor, there has been small sums appropriated for maintenance, such as dredging out shoals at mouths of rivers, and keeping the channels clear. In view of the great importance of this harbor and the vast amount of tonnage handled, it being the gateway of the great Northwest, it would seem that it has been somewhat neglected or overlooked in the matter of appropriation for the present necessary as well as growing improvements. We want to most emphatically say that it is the duty of every citizen of Duluth and Superior to exercise their influence with our representative in congress to get for the harbor what it is justly entitled to. We wish to thank our present representatives for their able work in this connection, in securing for us the present appropriation, and trust that they well keep up a continuance of the good work as they are entirely familiar with our needs.

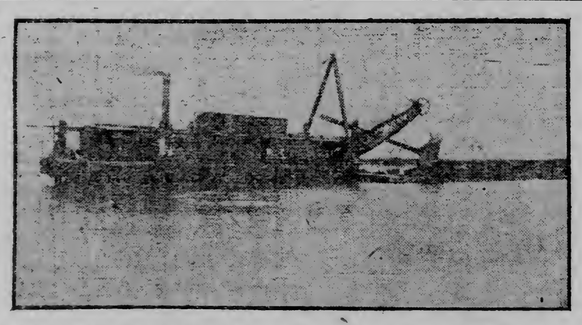
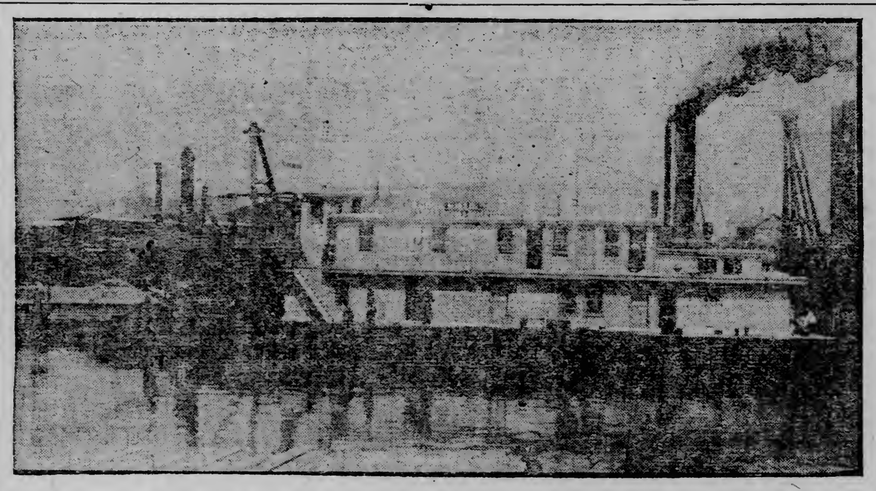
H. C. WILD	Treasurer
GEO. H. JACKSON	Auditor
D. McCARTHY	General Supt.



Cutting Through a Hill Into Lake Michigan at Gary, Ind.—Seven Dredges, Pile Drivers and Pumps at Work—a $3,000,000 Contract.



WE have identified with the dredging interest at the Head of the Lakes, the Great Lakes Dredge & Dock Co. This company is the successor to the Duluth Dredge & Dock Company and the Lake Superior Contracting & Dredging Company, both of which were Duluth concerns, and held a very prominent position in the dredging field. These two plants were purchased a year ago by the Great Lakes Dredge & Dock Company. This company has come to the Head of the Lakes to remain permanently, and is one of Duluth's most prominent concerns.

The field of operations of this company is the entire chain of lakes. The head offices are located in the Chamber of Commerce building, Chicago, with division offices at Duluth-Superior, Sault Ste. Marie, Toledo, Sandusky, Loraine, Clevland, Ashtabula, South Chicago, Indiana Harbor, and Gary, Ind. At all of which places they have extensive contracts.

The contracts which they have at Gary, Ind. (an illustration of the harbor entrance shown on this page) of building the harbor, intake, pumping station and tunnels connected therewith, is one of the largest jobs of its kind ever undertaken on the Great Lakes. The tunnels are 15,000 feet long and cement lined throughout, and are for the purpose of supplying water for the city of Gary, as well as the entire supply for the Indiana Steel Company plant. There is in connection with this work extensive pile driving aggregating some 20,000 piles; the contract for this work was awarded in its entirety by the U. S. Steel Corporation, and approximates $3,000,000.

NAPOLEON 8-YARD DIPPER DREDGE—Length 125, Width 40, 12 feet deep; which holds the records for excavating more material in one month (August, 1905, 205,000 cubic yards), than any other dipper dredge on fresh water to date.

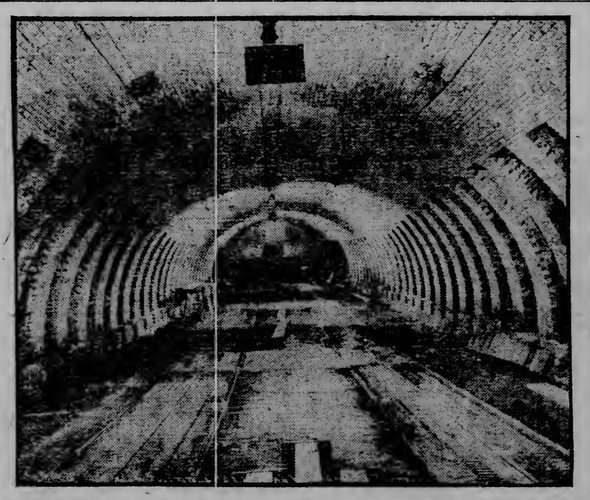
DREDGE OHIO—Length 125, Width 40, 12 Deep—Fitted With Triple Expansion Engines, 16x28x42; 22-inch stroke—750 h. p.; 2 Scott's Marine Boilers, 12x14; Morrison's Corrugated Furnace; 20-inch Suction and Morris Centrifugal Pump, 12 feet in diameter.

They have recently completed the mammoth dry dock at Toledo, Ohio, (an illustration on this page gives a better idea of the magnitude of the work), for the Toledo Ship Building Company, which is considered one of the finest dry docks on the lakes. They have contracts for lowering all the tunnels under the Chicago river. These are unusually difficult undertakings. For instance, the Van Buren street tunnel, which is to have the old top removed and a new top built on, and the side walls lowered eight feet lower than the present level. This work to be completed within a year from the time of starting, without any interference to navigation. The work is progressing very fast, and will be completed much in advance of the specified time, as will also the other tunnel jobs. They have also built every Bascule bridge foundation in the city of Chicago. They have so far this year contracts for 5,000,000 cubic yards of dredging, and over two miles of dock of both concrete and timber construction.

The company's plants are of such a nature owing to the special care used in their construction and design adaptable to almost any condition that may arise in connection with any work which may from its peculiar nature require any special equipment.

This company has the largest dredge and dock construction equipment of any concern of its kind in the United States, and is able to take care of any job of dredging and dock construction of any magnitude that may come up.

The plant consists of 36 dipper dredges, 10 hydraulic dredges, 39 tugs, 4 rock drills, 35 floating and land derricks, 37 pile drivers, 78 dump scows, 51 deck scows, 2 floating dry docks, locomotives, steam shovels, etc.



The Duluth division of this company, has a vast amount of work contracted for to be completed this season, as has also the other divisions of this company.

During the season of 1906, this company did the following work in Duluth-Superior harbor, dock fills for the Northern Pacific Railway company at Rice's Point, and their dock No. 5 fill at Fourth avenue, Duluth, also fills for the Northern Coal & Dock company, and Northwestern Fuel company, on Superior bay, and dredged new channels for Duluth, Missabe & Northern Railway company besides several smaller dredging jobs.

At the time the Interstate Bridge was put out of commission through a steamboat collision and entirely blocked the channel to St. Louis upper bay, it was a grave question as to what was best to do to relieve the congestion and open up the channel. This company volunteered a method which immediately appealed to the Great Northern people, and was adopted by them. The plan suggested was to use some of the company's large scows and sink them under the span, and when decks were awash to timber up to the bottom girders of the fixed span on the Superior side of channel, then pump the water out of scows until the span was raised clear of the foundation; when this was all done the span was towed away a considerable distance and placed on a piling berth, which had been constructed for it. The Great Lakes Dredge & Dock company furnished all the scows necessary and did all the dredging connected with the removal of this span. They having all this work direct from the Great Northern Railway company.

This company constructed a year ago at their Chicago yards one of the largest and most modern hydraulic dredges on the lakes. The cut of which is shown, as is also one of their large dipper dredges, which holds the record for excavating more material in one month than any other dipper dredge on fresh water to date.

Owing to the vast increase of the business of this company, it has been found necessary to enlarge their plant very materially, which they contemplate doing this coming winter, by building new epuipment consisting of dipper, hydraulic and clam-shell dredges, tugs, dredge scows, etc., with the end in view of equipping their many divisions with extra machines to take care of their rapidly increasing business. This company fully realizes the great importance of our home harbor, and the vast amount of work necessary for our harbor improvements, as well as the commercial interests, and have decided to send to the Duluth-Superior division all the new equipment necessary to take care of its business in this locality.

Interior View showing the work of Lowering the Roofs of the Van Buren Street Tunnel, Chicago.

Duluth Destined To Be the One Great Iron and Steel Manufacturing Center of the World

THE old Duluth "boomers" were dreamers of dreams.

They picked up the maps of the United States, and saw Duluth at the point of the "finger of destiny." They saw a network of railroads stretching forth to the West, to the North, and to the South, and bringing in the riches of the great West to be dumped into Duluth's lap. They saw the great waterway to the East dotted with ships carrying the wealth of the West to the crowded centers of the East, and bringing back coal. They saw the great iron mines of the Mesaba and Vermilion shipping their ore to Duluth instead of to Pittsburg, and they saw a forest of great brick chimneys and the glare of 100 furnaces shining out over St. Louis bay. They saw the country around Duluth cleared and settled with prosperous market gardeners and dairy farmers, who were finding a ready market in the great city at the Head of the Lakes. They saw innumerable small factories springing up in the city. They saw the rows of houses creeping up over the brow of the hill, and they saw incline roads running back to the growing suburbs in the plateau. They saw in West Duluth a great manufacturing center such as Allegheny is to Pittsburg. They saw in short, Duluth as a great throbbing center of humanity—a busy, bustling metropolis of half a million souls.

DREAMS OF BOOMERS WERE PREMATURE.

They thought it was coming in two or three years, and that is the only place they erred. Boom towns may spring up in the night beside a railroad siding, but a great city like the boomers dreamed of was not to be built in a year, or even a decade. It takes the labor of generations to build such a city even in these days of the marvelous development of the West.

The bubble was pricked one night, and paper millionaires awoke in the morning to find themselves paupers. Visions of a great metropolis at the Head of the Lakes faded with the awakening, and the little handful of disheartened boomers cursed themselves for their folly. A few kept their faith in their dreams, but they carefully wrapped the visions up and stored them away for future use, while they attended to the more pressing business of getting bread and butter to supply their everyday necessiites.

There followed years of sore disappointment for this faithful little band. They never lost faith in the future greatness of the city, but "hope deferred maketh the heart sick," and they grew weary with waiting. They saw the wealth of the iron ranges passing through the city and being carried down the lakes to the great centers in the East. Pittsburg and Allegheny and the other big manufacturing centers were getting the corn while Duluth had to be content with the husks, which consisted in the mere handling of the raw material.

The faithful saw themselves growing old. They felt that they had been cast up into a backwater while the great stream of business activity was flowing past them. The child of the hopes was hardly holding her own in a business way. Men became discouraged with the inactivity of the city, and sought milder climes where life moved in easier channels, and where there was more to be seen in the present and less in the future.

But not so with the faithful. They had caught the vision of what was to be. "Better fifty years of Europe than a cycle of Cathay." Rather would they stake their all on the greatness of Duluth, and bear the lean years in the hope of better things, than seek some other city with no future but its present.

The years slipped by and gradually, almost imperceptibly matters began to mend.

Vacant houses began filling up. Stores were occupied. A few minor industries began springing up. Men began to find that they were making a little more than was necessary to supply their everyday wants. Faith in the city returned with redoubled strength and the city began to grow, slowly, but steadily.

The first big advance came when the Zenith Furnace company opened its blast furnace at West Duluth. The lumber business was gradually falling away, and it was seen that it could not last many years longer. Something had to be found to take its place. The Zenith Furnace company was the first of these industries.

SOMETHING WAS WRONG WITH CITY.

But although the city was prospering, it was not going forward in the way that it should. "Something is wrong," said the old guard. "We are not growing the way we should. We have got to have factories here, but we cannot get factories until the country around us is settled up, and the cost of living is lowered. And the country will not be settled up until we have factories to supply a market for the produce that will be grown when the country is settled."

From this circle of reasoning there appeared to be but one escape. "Duluth has got to have a steel plant," was the cry, and it was plainly the only solution of the problem. "Give the city a steel plant, and let us manufacture the ore that is now being shipped down the lakes and all the rest of these things will follow. The country around us will be settled up, and the small factories will spring up under the shadow of the steel mills."

This was the thought that filled the mind of every well-wisher of Duluth, and every man who had pinned his faith in her future greatness waited for the day to come when the great United States Steel corporation would seize the opportunity at hand and establish such a plant here.

WOLVIN SEVEN-STORY MODEL OFFICE BUILDING—DULUTH HOME OF UNITED STATES STEEL CORPORATION THAT SHIPPED 23,792,882 TONS OF IRON ORE FROM THE MESABA AND 1,792,355 TONS FROM THE VERMILION RANGES IN 1906.

RUMORS OF A STEEL PLANT.

A few months ago it began to be rumored that the steel corporation directors, urged on by such men as Thomas F. Cole, W. J. Olcott, Joseph B. Cotton and Frank B. Kellogg, were considering the matter. They went at it quietly. To spring such a proposition pre-maturely would have been almost fatal to its success, and the plans were pushed in secret. A few who were in a position to know the facts in the matter, guessed that the corporation officials were considering Duluth as a location for a plant which would supply the great and ever growing demands of the West for steel products.

On Thursday, Feb. 28, Mr. Cole returned from New York and gave out to The Herald a statement that at a meeting of the United States Steel corporation in New York, the plan to erect a steel plant at Duluth had been considered by the finance committee of the United States Steel corporation, and the following resolutions adopted:

"Resolved, that it is the sense of this committee that a substantial plant for the manufacture of iron and steel be constructed and operated in the vicinity of Duluth, Minn., provided it is practical and will be reasonably profitable, and

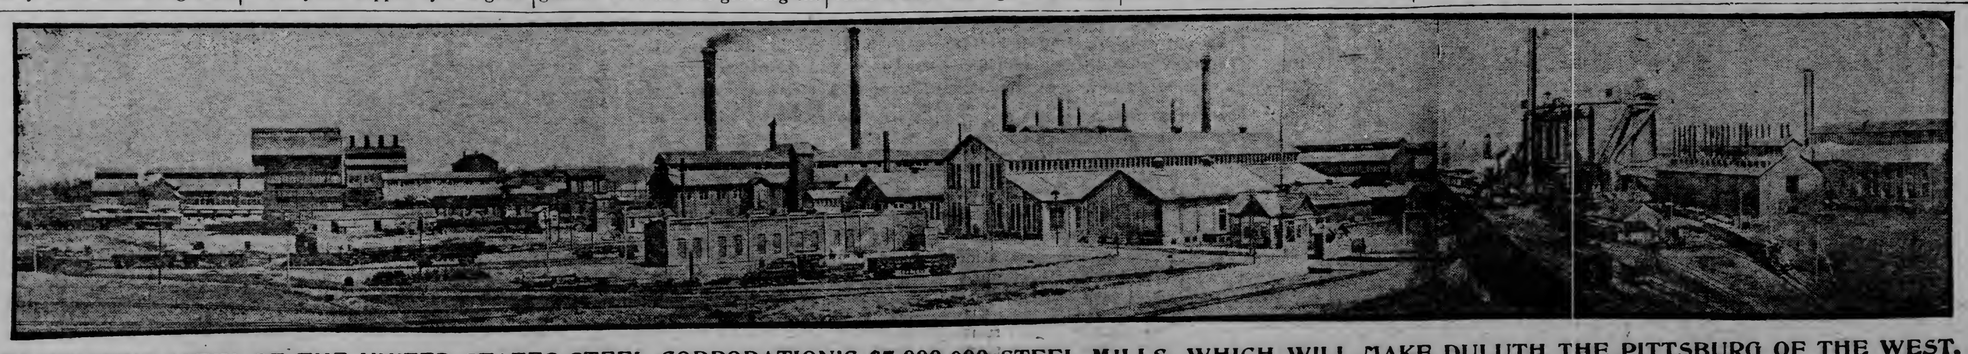
"Resolved further, that the subject matter be referred to a special committee consisting of Messrs. Gary, Corey, Perkins and Frick to make an exhaustive study of the question and report the facts at their earliest convenience to this committee."

COMMITTEE COMES TO INVESTIGATE.

Mr. Cole also stated that a special committee of experts had been selected to visit Duluth and investigate conditions here, with a view to ascertaining whether or not the establishment of such a plant would be practical and profitable. The committee consisted of W. B. Dickson of New York, second vice president of the United States Steel corporation; John Reis of New York, assistant to the president; E. E. Slick of Pittsburg, chief mechanical engineer of the Carnegie Steel company, and T. V. Robinson of Chicago, first vice president of the Illinois Steel company.

The experts came, and they were royally entertained by the people of Duluth. Statistics had been compiled by the Duluth Real Estate Exchange and the Duluth and West Duluth Commercial clubs, and the visitors were given every opportunity to investigate conditions as they existed. Private records were produced by the business firms, and the city was thrown open to their inspection. The members of the committee returned to New York and for a few days there was a certain amount of suspense felt by the citizens of Duluth, although it was tinged with hopefulness, as on leaving the members of the committee had expressed themselves as being favorably impressed, without giving out any definite statement.

APRIL 1, 1907, A MEMORABLE DAY.



Monday, April 1, 1907, was a memorable day in the history of Duluth. About 4 o'clock on the afternoon of that day, a brief message was received at the office of The Evening Herald, signed by Thomas F. Cole, Joseph B. Cotton and Frank B. Kellogg. The telegram was as follows:

NEW YORK, April 1.—The United States Steel corporation has today decided to establish an iron and steel plant at Duluth. The plans are not yet fully developed, but they probably will include a blast furnace, six open-hearth furnaces, blooming mill, rail and shape mill, two bar mills, by-product coke ovens, coal docks, shops, cement plant, etc., etc., and will involve something like $5,000,000 or $6,000,000. The members of the finance committee were unanimous. We think they were influenced by the fact that Duluth seems to be a good location for a plant of this kind, and the further fact that public sentiment in Minnesota has always been favorable toward the steel interests. (Signed.)

THOMAS F. COLE,
FRANK B. KELLOGG,
JOSEPH B. COTTON.

It was the biggest piece of news that had even been given to the people of Duluth, and The Herald "extras" that evening were devoured by the eager citizens. The statement was necessarily a rather meager one, but it was sufficient. No one needed to tell the readers what the announcement meant to the city.

It was the realization of old dreams. It was the thing which the citizens of Duluth had been wishing and hoping for, for years.

PROSPECTIVE VIEW OF THE UNITED STATES STEEL CORPORATION'S $7,000,000 STEEL MILLS, WHICH WILL MAKE DULUTH THE PITTSBURG OF THE WEST.

WHAT THE STEEL PLANT MEANS.

Just what does the establishment of a steel plant in Duluth mean to the city? In the first place it is proposed to expend $7,000,000 in the plant, which will include, as stated above, a blast furnace, six open hearth furnaces, blooming mill, a rail and shape mill, two bar mills, by-product coke ovens, coal docks, shops, cement plant, and other smaller industries connected with such an establishment.

It will probably require about two years from the time the ground is first broken, to complete the plant. At the expiration of that time the population of Duluth will have increased approximately 20,000 people as a result of the steel plant alone. In other words about 20,000 people will be directly dependent upon the steel plant and the various industries included in it, for their support. That means that the plant will employ from 4,000 to 5,000 workmen, who will have to come to Duluth with their families.

The kind of men employed by a steel plant are not of the cheap class of labor. The great majority of them are skilled workmen, machinists and other high paid men. They are the class of men who own their own homes and bring up families, making permanent residents of the city. They are different from the woodsmen and sawmill men who are, in a large measure, transients, and follow the lumber industry farther and farther back into the wilderness.

The bringing of these men to the city will mean the building of 5,000 model homes for workingmen—a small city in itself. Already there is a great scarcity of houses in West Duluth, and every family brought to that part of the city will mean a new home. West Duluth should double and perhaps triple in size during the next five years.

These men and their families have to be provided with provisions, and clothing, and the necessaries of life. Supplying a city of 20,000 people with these necessities is a big item in itself. It means more stores, more wholesale houses, more retail industries of every kind.

OTHER INDUSTRIES WILL COME.

But the 20,000 people who will be added to the population of Duluth by the steel plant, tell but a small part of the tale. It has been the history of the steel industry everywhere, that it brings other industries in its trail. There seems to be a magic in the very word that attracts business. Smaller factories follow in the wake of the steel mills, and industries that Duluth people have never dreamt of will spring up. The steel mills seem to draw business in their wake. They drew factories and mills, and workshops to Pittsburg, a city located far from the natural advanttges which usually attract such industries. What had Pittsburg to offer the manufacturer? There was no such waterway as Duluth possesses in the Great Lakes. There was no waterfall supplying cheap power. There was no strategic position on the great highway of commerce such as Duluth offers. Pittsburg was made by the steel industry. It is today one of the first seven cities of the United States. The United States census of 1900 gave Pittsburg a population of 321,616, making it eleventh in the country. Allegheny by the 1900 census had a population of 129,896. Today the two cities combined, and including some of the smaller towns in the vicinity, have close to 1,000,000 souls within their limits. Greater Pittsburg today probably stands fourth among the cities of the country in population, and in proportion to its size it is the wealthiest and busiest city in the republic.

That is what the steel industry has done for Pittsburg—a city without natural advantages. What then can it do for Duluth, a city with the greatest natural advantages in the country? Duluth has a great deep water harbor with a commanding position on the greatest natural inland waterway in the world. Duluth can supply unlimited water power for industries of any kind. Duluth is the natural distributing point for the country from the lakes to the coast.

The steel industry brought 1,000,000 people and billions of dollars to Pittsburg. What can the steel industry and all of Duluth's natural advantages bring to Duluth?

BUSINESS DRIFTING WESTWARD.

The tendency in every industry in these modern times is Westward, ever Westward. The time is coming, and it is not far in the distance, when Duluth will wrest the steel supremacy of the country, that means of the world, from Pittsburg. The steel can be manufactured cheaper in Duluth than it can in any place in the world. Duluth does not have to send 500 or 1,000 miles for its ore. It backs a train load of cars into a pit, fills them with a great steam shovel, and runs them down hill to the point where they are needed. There is no handling necessary, and no transportation down the lakes by water, unloading and reloading at the lower lake ports, and then another rail haul, as is the case with Pittsburg. Where such vast quantities of ore are handled every cent on a ton counts.

STEEL CENTER OF FUTURE A LAKE PORT.

The great steel center of the future will be a lake port. It is inevitable, and what lake port could compete with Duluth for the purpose? Certainly not Chicago. Chicago has to bring her coal from one part of the country, and her ore from Duluth. She has no water power, and no such harbor as the great, deep basin of St. Louis bay.

A writer in a recent issue of a Chicago paper attempted to prove that Chicago was destined to wrest the steel supremacy from Pittsburg, and made the following statements:

"The coming of the iron and steel industry to Chicago, its logical center, is inevitable; the iron and steel kings, in the near future, will be compelled to entrench themselves in Chicago, the commercial Gibraltar of the continent; for in the terrific war for commercial supremacy victory can be achieved only along the line of the motto, 'The Maximum Output for the Minimum Outlay.'

"The only law of twentieth century industrialism is 'the survival of the fittest.'

"Now for the proof that the stupendous iron and steel industry must soon be transferred from Pittsburg to Chicago.

"Both iron and steel can be manufactured more cheaply in Chicago than in Pittsburg. Here is the crux of the whole industrial problem. The maps shows at a glance Chicago's much more advantageous location over that of Pittsburg.

"Notice the triangle formed by air-lines connecting Pittsburg, Duluth and Chicago; thus, Chicago is seen to be equi-distant between the world's greatest coking-coal region and the world's richest iron mines, the former lying just south of Pittsburg, around Connelsville, the latter in the Mesaba range, Minnesota, seventy-five miles northwest of Duluth. As a crow would fly, from Chicago to the Connelsville coal region, it is four hundred miles, and it is the same distance from Chicago to Duluth.

"Now, notice, that while Chicago's distance from coking-coal and her distance from iron ore form two equal sides of a triangle, the distance between Pittsburg and her ore supply is represented by the hypothenuse of the same triangle. In other words, while Pittsburg is by air-line seven hundred and forty-five miles from Duluth, her nearest port, Chicago, is only four hundred miles from Duluth.

"Duluth is made one angle of the great industrial triangle, because it is the main ore-receiving port for both Chicago and Pittsburg in all lake shipments from the Mesaba range. Duluth is linked with Mesaba mines by seventy-five miles of specially constructed ore railway. Chicago's ore is taken to South Chicago and to Gary, the latter being commercially and virtually one of the suburbs of Chicago; while Pittsburg's ore reaches her by way of Cleveland, her nearest port. From Cleveland to Pittsburg the distance is one hundred miles, the connecting industrial link being an ore railway.

"From the foregoing facts the logical conclusion follows that Pennsylvania iron and steel magnates will, at no late day, make Chicago the marvelous base of their operations; for it is self-evident that these captains of industry dare not ignore the fact that to remove to Chicago will be to save millions of dollars annually.

"Commercial and industrial success flow along the lines of least resistance. For manufacturers in this strenuous, competitive age to ignore even the smallest economies in obtaining raw commodities would be sure and wanton suicide.

"Now follows the complete demonstration of the industrial problem in Chicago's favor.

"By consulting the map it will be seen that ore at the Mesaba mines, destined for Pittsburg, before it can reach its destination, must be handled and shipped as follows:

1. Loaded onto ore cars at mines.

2. Loaded second time on board the steel freighter at Duluth docks.

3. Loaded at Cleveland on board the industrial cars.

"The same cargo, of course, must be also unloaded (a) at Duluth's docks, (b) at Cleveland, (c) at blast furnace in Pittsburg; thus the ponderous cargo for Pittsburg must be loaded three times, and unloaded three times.

"A cargo of ore destined for Chicago is handled only as follows:

1. Loaded on cars at Mesaba mines.

2. Loaded aboard a mammoth steel propeller—a 600-footer with 12,000 tonnage—at Duluth docks; then the same cargo must be unloaded only as follows: (a) at Duluth docks; (b) at the blast furnace at South Chicago or at Gary!

"Thus is saved the great expense of time and labor of once loading and once unloading all the ore used anually by the Chicago iron and steel manufacturers."

BUT WHY NOT DULUTH?

But he stopped just when he threatened to become interesting. He could have gone a step further and said that the same ore need be handled but once to come to Duluth. It is run down into the yards of the company and dumped into the blast furnaces. There is no handling at all there, and the 600-footers are cut out of the scheme of things entirely, meaning that much saving. The finished product is also hundreds of miles nearer to its market in the Great Northwest than it would be at Chicago, and if it is to be sent East it can be sent just as cheaply from Duluth by water as it can from Chicago. That is the "complete demonstration." Duluth solves the transportation problem completely, and reduces the expense of transportation to a minimum. That means that the Duluth plant will be running when every other steel plant in the country is shut down. It will be the most economical plant owned by the great United States Steel corporation, and if the time ever comes again, when a great industrial depression holds the country in its grasp, the Duluth plant will be the last one to close.

CITY MUST FULFILL ITS DESTINY.

Here then are the dreams of the boomers coming true. No longer can Duluth be denied her destiny. It is coming as surely as the world will continue to turn on its axis. Not in a year, perhaps not in five years. But steadily and swiftly the city is bound to grow and prosper, and who shall say that in ten or fifteen years there will not be a greater metropolis at the Head of the Lakes than is now located at Pittsburg? It is not too much to expect that in that time Duluth will grow to become a city of half a million souls. This great skeleton of a city will be filled out with factories and homes. The great piles of rock will be uesd for building purposes. The ravines will be filled up and levelled off. Great brick and steel structures will replace the frame shacks of the boom town days. Duluth will emerge from her chrysalis stage, and change from an overgrown town to a metropolis.

OTHER TOWNS WILL ALSO BENEFIT.

But the benefits accruing from the establishment of this industry at the Head of the Lakes will not stop with Duluth. Superior cannot but feel the invigorating influence. The great straggling town across the bay will be electrified into life. A bridge across the upper harbor would bring Superior close to the center of this great manfacturing center, and doubtless many of the wokingmen would find cheap homes in the Wisconsin city.

And food must be found to support this city. Underneath the cut-over forests of Northern Minnesota is some of the finest grazing land, and some of the richest garden truck loam that lies outdoors. The land can be picked up for a mere trifle now. The market is already here, and it will double and triple in size in the years to come. Electric roads will tap this country, giving the farmers ready access to the city both for themselves and their families, and for garden produce. The land is waiting for the settler's hand, and it has not much longer to wait. As the market grows the clearings in the woods will widen, and garden patches and farms will replace the forests and brush wood.

And what of the range towns? By 1909 it is estimated that 50,000,000 tons of iron ore will be mined and shipped from the range towns. That means that the population of the ranges will double in that time. Hibbing and Eveleth, and Virginia and Coleraine will become cities of from 10,000 to 20,000 people.

But much remains to be done before the city is ready for the steel plant. The company will need something like 300 acres of land for its mills, and docks and coke ovens, and the harbor must be dredged and deepened to make room for its slips and docks. The government should do $1,000,000 worth of dredging during the next three or four years, to put the harbor in the proper condition.

STEEL INDUSTRY WILL COME TO STAY.

Steel, then, and the Mesaba and Vermilion ranges will make Duluth a new and greater Pittsburg of the West. They have made the United States a world power in the business realm. They have enabled Uncle Sam to invade every market in the world with his iron and steel products, and while the mines of the Mesaba and Vermilion ranges last they will make Duluth one of the great cities of the American republic. And how long will they last? The answer to this question is best found in some testimony given by Thomas F. Cole before the legislative committee a few weeks ago. Following are some extracts from the official stenographic report of the proceedings:

"Q. Reverting for a moment to the iron on the Mesaba and Vermilion ranges, has the probably iron-bearing region there been pretty well mapped out at the present time?

A. "I don't think so.

"Q. Why not?

"A. Well, nature has done its work on a tremendous scale in the Lake Superior district. Many years ago, when I was at work in the copper mining districts in Michigan, it was supposed the copper mines had reached a point where they would be exhausted in a few years. Many people sold their little homes, thinking they were pretty near the end. Sometimes they would sell them at sacrifice prices. Today over in the copper district thev are beginning to realize they have just scratched the rocks over there, they are practically only beginning mining, and these rocks extend well down to the St. Croix river over here to the east edge of our great state.

"Nature has worked on a wonderfully large scale. Every once in a while we hear of ores found out in counties in Minnesota, and it means that some day you will find this great synclinal still comes into your state, way out in here and this southern range is going to be found connecting with the range from the north, and nothing has been done. A little work has been done on the line of magnetic attraction and ore has been disclosed at present. True, it is low grade, but nevertheless it is ore and for the amount of work done a large amount of ore has been disclosed. That is only one point in this territory in which work has been done and that has disclosed ore bodies. There is no reason why other lines of attraction won't be taken up and show that this evidence of ore found in our counties may disclose good paying ore deposits. Some may not be high grade, it is true. We can not take it out today and sell steel for as low as the steel makers are doing it, but the day is coming when every ton will be taken out and utilized. One does not have any comprehension about what these rocks contain. Every once in a while people come down from the territory between the international boundary and our Mesaba range and say that they have a specimen of iron ore. Sometimes they bring down pretty good specimens. Undoubtedly, it comes from ore deposits.

"Glaciers have worked havoc with the rocks up there. In some cases they have taken away deposits and broken them into fragments and the time is coming when all that great territory extending east and west from Tower, Minnesota, will disclose ore bodies because you have only run along now for a distance of twenty miles. The formations go through. Lying south of the granite range over in Wisconsin and Michigan we find the Messembria. You take it as far as Baraboo, Wisconsin, and you have the slates and deposits existing there. It is low grade, but it is going to be utilized some day, and with this synclinal through two-thirds of our state no one can tell what is going to be produced in the way of ore deposits in the state of Minnesota."

THE FUTURE HAS A ROSY TINGE.

Who then will say that the old "boomers" were idle dreamers, and that their hopes and predictions were the idle and empty talk of fevered imaginations? Their dreams may have been premature, and their realization may still be many years in the future, but that future is certainly glowing with promise of many great things in store for Duluth.

Editor's Note: It is the prediction of the best posted mining experts that the Messaba and Vermilion Iron Ranges will mine and ship 50,000,000 tons by 1910, which means the doubling of the population of all the Range towns. The output for 1906 was only 25,585,257 tons.

Duluth Has Unequaled Hotel Accommodations for Summer Tourists and Health Seekers

AN ALL NATURE'S PARADISE.

"SHOW me a city with full hotels, and I'll show you a prosperous city," said a Duluth hotel proprietor the other day.

No better criterion of the growth of a city in business importance is needed than the growth of the hotel business.

When the hotels are filled with guests and difficulty is frequently found in providing room for the visitors, it means that the business of the city must be in a flourishing condition. The traveling public is not generally attracted to a "dead town."

Judging from the hotel business, Duluth is certainly enjoying a healthy boom at the present time. During the past year and the present one, Duluth hotel owners will have spent something like $300,000 in improvements and additions to their buildings.

All four of the largest hotels in Duluth are torn up at the present time and in the hands of the builders, who are preparing for the busy summer season. Improvements now under way or just completed, aggregate, as above, about $300,000, and when they are completed, Duluth will have four thoroughly modern and up-to-date hostelries, in addition to an almost unlimited number of first-class smaller hotels.

* * *

The Spalding hotel, which was built in 1889, is probably the largest of the four main hotels. Its original cost was $350,000, but fully that much more has been spent on the building to keep it in a first-class state of repair. It is a big, roomy, home-like hotel. The building is of brick, eight stories in height, with about 200 guest rooms, seventy of which are provided with private baths.

Travelers who visit it say that it compares very favorably with the best hotels found in cities of much larger population than Duluth, and the improvements now under way will make it still more modern and complete. The interior of the building is being thoroughly renovated and partly remodeled. The need for additional cafe service has long been felt, as the present room on the Superior street floor has been found inadequate, and many guests were accommodated in the American dining room on the top floor. The space which has been occupied by the billiard room, the lavatories, the barber shop and the writing room, will be turned into a handsomely appointed European cafe. The lavatories, billiard rooms, and barber shop will be moved down to the basement floor on Michigan street, and the kitchen will also be moved down there from the top floor for the purpose of expediting the cafe service.

The lobby is also being most handsomely redecorated.

One feature which the Spalding possesses and which is unique in hotels, is the sun parlor on the roof of the building. The view from the sun parlor is equalled in but few spots in the country. All parts of the city, harbor, and lake can be seen from this vantage point, and it is truly a wonderful panorama which spreads out before the eye from the roof of this big hotel in the very heart of the city.

A small fortune is to be spent this spring in remodelling the St. Louis hotel, and before the repairs have all been completed, approximately $100,000 will have been expended.

For years the lobby of the St. Louis hotel has been the favorite rendezvous for all kinds of meetings and gatherings. Appointments between local business men are made for the St. Louis lobby, and it is the favorite stopping place with range people who run down to Duluth for a day or two. It is the big popular hotel, and as such it is subjected to an immense amount of wear and tear. But the owners are determined to keep it up to its high sandard of excellence, and this spring it is being put in first-class shape for the summer rush. It is planned to almost rebuild the ground floor of the hotel. A beaut ful new cafe will be installed on the ground floor in the space now taken by the billiard room, and facing on Michigan street. It is planned to make this cafe just as complete and as modern as money will make it. The lobby will be altered and the entrance entirely remodelled. The kitchen will be moved down to the Michigan street floor, and the present dining room will be turned into an extensive parlor and sitting room for the guests. The bedrooms will be refinished and refurnished, and twenty additional private baths will be installed, giving the hotel 180 in all. Manager J. T. Michaud is planning to make the St. Louis the most attractive and popular hotel in the Northwest before he is through with the work.

It only took the Lenox hotel owners, the Ribenack brothers, 4-story building was insufficient. When they constructed the Lenox hotel two years ago, they thought about a year to find out that their they were building for the future, but in a little more than a year after it was opened, they began to find themselves cramped for room, and were compelled to plan for additions. This spring two additional stories will be ready for use, and now it is found necessary to enlarge the dining room and lobby. The owners will expend anywhere from $50,000 to $75,000 in these repairs and additions before they are through. The lobby will be more than doubled in size, and will include the space now occupied by the buffet. Another storeroom on the ground floor will be utilized for a hand-some new European cafe, and the dining room will be enlarged to meet the increased demands.

Ever since the Lenox was completed its popularity has been unquestioned. It has been filled to its capacity winter and summer, and during the rush season it has been necessary to turn guests away almost every day in the week. The proprietors were determined that this summer would find them prepared for the increased business, and consequently the two additional floors were added.

The history of the McKay hotel during the last year or two has been the same as that of the other three. The McKay brothers have just completed and opened a new 3-story addition to the building, and also some alterations to the ground floor. The old lobby was entirely too small for the increasing business, and this spring it was extended to take in one of the storerooms facing First street. The hotel now has a large, roomy lobby, with a homelike fireplace, and a view of First street and the postoffice building. It is a most comfortable and attractive lounging place at any period of the year. New lavatories have also been installed on the lobby floor, and a handsome new tile floor laid in the lobby and corridor.

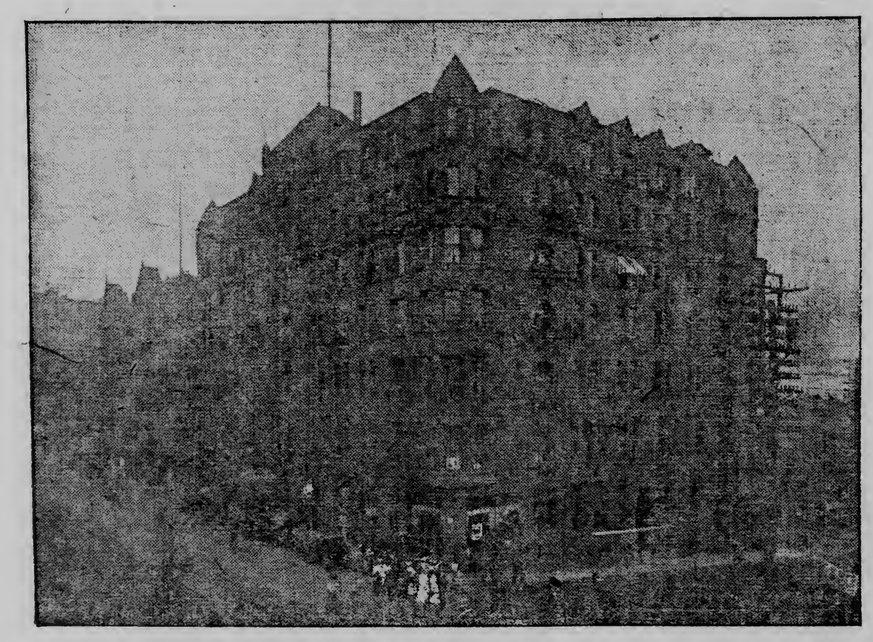
If the city is well supplied with first-class $2 to $5 a day hotels, it is no less fortunate in its cheaper hostelries.

There is a big demand in a city like Duluth for an European hotel where people can get a room at a moderate cost, and pay for what meals they require. Especially is this the case in the summer time, when crowds of visitors from all parts of the country flock into Duluth, to spend a few days looking over the city and enjoying the cool lake breezes. All they want is a place to lay their heads at night, and perhaps breakfast in the morning. Noon may find them at Fond du Lac, or the White City, or on their way to Isle Royale, or at Lester Park, and they want to be free to come and go as they please, without feeling that they are running a double bill of expense.

For such people Duluth offers a wide choice in the line of moderate hotels. Such hostelries as the Miller, the Alvarado, the Astoria, the Nicollet, and the Metropole furnish rooms and board that are little, if any, below the standard of the first-class hotels in other cities. At any one of these places, a visitor may spend any length of time from a day to a year, and spend almost any sum per day from 50 cents to $10.

* * *

Duluth is extremely fortunate in possessing the hotels that she does, and in the management of these hotels. Grasping hotel proprietors could do more harm to a city like Duluth than a dozen Commercial clubs could remedy. Duluth relies largely on her summer visitors for advertising. People flock to the city from every part of the civilized world, attracted by the unique situation, and the beautiful summer climate with its cool lake breezes. The passenger travel of the northern half of the continent is sifted through Duluth.



Naturally this causes a great summer rush in the hotels. At times this is so great that the accommodations are taxed beyond their capacity, and landlords could charge about what they pleased for accommodations. If this policy were pursued, however, it would give the city a blackeye with the traveling public that would take years to overcome. The policy which has been pursued by the hotel proprietors has been, on the contrary, a most liberal one. Their aim is always to please the visitors rather than get their money. Just as great an effort is made to please the guests during the summer rush when the hotels are crowded and accommodations at a premium, as during the winter season when the tourist trade amounts to little or nothing.

"Send them away pleased," said one clerk of the hotel proprietors, "and you make a friend and a booster for the city. Bleed them, and you make a permanent knocker. If we could make a friend for Duluth out of every tourist that passes through here in the summer months, we would have a little army of boosters scattered all over this country and Canada."

And that's just what the Duluth hotels are doing for the city.

The location of the city at the head of navigation, in the center of a continent, 1,400 miles from the sea, gives it unequaled facilities (through 8,000 miles of railways centering here) as a natural distributing point for a great and prosperous section.

We have cheap power, cheap coal, cheap gas, cheap iron, cheap raw material of woods, in vast quantities with unequaled transportation facilities in every direction.

DULUTH

The Commercial Gateway to the Great Northwest—An Empire in Extent.

Nature has provided a magnificent harbor with forty-nine miles of frontage, and its floating commerce is exceeded by only three ports in the entire world.

The United States Steel Corporation has set the mark of approval on Duluth as a manufacturing plant by announcing the immediate erection here of a blast furnace and steel plant, at a cost of over $7,000,000.

This means that Duluth is to grow as never before and be one of the great centers of the steel industry in the United States.

It means that the development of 200,000 hydraulic electric horsepower, 30,000 being now completed, will attract other large manufacturers, to utilize the steel products.

It means the building of 5,000 more houses, and the early development of the country about, for which Duluth furnishes a fine market.

Duluth invites correspondence with manufacturers who would consider a Western location, where all conditions are most favorable for success. Address—

A. H. COMSTOCK, Chairman Industrial Committee

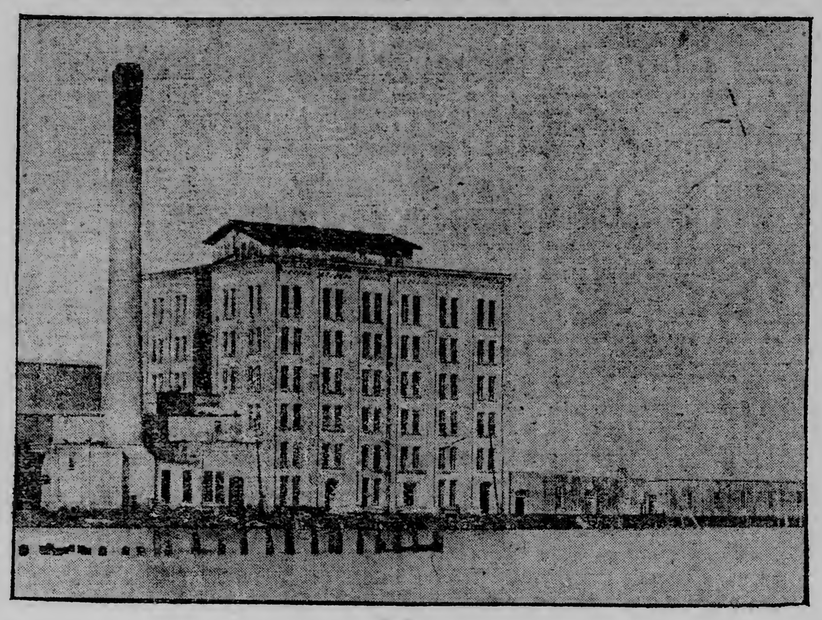
COMMERCIAL CLUB OF DULUTH.

THE LARGEST AND BEST EQUIPPED SANDPAPER FACTORY IN THE WORLD

Two Great Milling Plants, One at Crystal Bay, a Lake Superior Port, Where Are Located Their Inexhaustible Corundum Quarries and the Other Factory and Mills at Duluth, Minn.

Has the World For a Market.

The growth of Minnesota's industries is one of the greatest wonders of our time, while that of Duluth's has always been a striking example of what can be accomplished where Nature's storehouse has been provided for so abundantly in raw materials, from which to make the finished articles. One of the most notable examples of this, is the establishment of the largest and most perfectly equipped sandpaper industries on the globe, the Minnesota Mining & Manufacturing company, that has won a world wide reputation for its crystal Corundum paper and cloth, garnet paper and cloth, emery paper and cloth and flint paper from a process all of its own. The annual sales of this industry foots up to more than $500,000 and gives employment to sixty skilled high priced artisans. The business of the company has more than doubled since the opening day of the factory in Duluth and has already outgrown the clothes of an infant industry and become one of the world's largest industries in its class.



Little Sheets of Sandpaper.

The little sheet of sandpaper with which the workman imparts a finished surface to the wood or metal which he may be employed in converting into useful form, seems like an insignificant factor in the great industrial processes of the present day, but it has come to be a very important and essential part of the mechanical equipment in many lines of work and in all the lands where civilization has reached. One of the most available mines or beds of material for the manufacture of this simple little article is found at Point Corundum on the North Shore of Lake Superior, only sixty miles from Duluth. The fact of the existence of this bed of corundum so near to this location was the chief influence which led to the establishment of a plant in this city for the manufacture of corundum, garnet and emery paper and cloth.

The corundum deposits of Lake Superior are located about one mile from the shore near Crystal Bay at the mouth of the river St. Jean Baptist. The crystals are mined or quarried and run down to the landing on the bay, by means of a tramway built for that purpose. At that place the company has established a crushing plant, where it is run through rollers that grinds it into small pieces of the various grades. It is then filled into sacks of 100 pounds each and transported by the company's lines of boats to the Duluth plant. The main factory and mills covers a ground space 110 feet square, a splendid brick structure six stories high, each floor fitted up with machinery, much of which was especially designed for the grinding, pulverizing and bolting the various grades of corundum used in the manufacture of the finished product. In addition to the factory and mills there are two warehouses size 60 by 178 feet, two stories and 75 by 110 feet one-story high, which gives some little idea of the magnitude of the operations carried on at the Minnesota Mining & Manufacturing company's great plant.

Process of Making Sandpaper.

The raw material is dumped into a hopper and run again through rolls for further reduction by grinding and the milled product is then elevated into a series of bins and sent by gravity to an elaborate bolting plant, where it is sifted with the same care that is given to the sifting of flour. Stretching away acros the length of a long room is a series of bolting machines, each equipped with a scren of a different texture. Bolting silk of every size of mesh used in a flour mill is used in the various bolting machines, and the ground material is sifted through into hoppers, the contents of eaeh being nicely exact in the size of the atoms to which the corundum has been reduced. The product, ready for the sandpaper varies in degree of fineness from the coarse article that is used on the heaviest sandpaper to an impalpable dust that leaves no suggestion of grit when rubbed between the fingers, but which retains the cutting qualities of the corundum intact. The bolted material is stored in bins for use and then taken thence to the upper floors.

MINNESOTA MINING & MANUFACTURING COMPANY'S SANDPAPER PLANT AND MILLS.

The process for applying the sand to the paper begins on the sixth floor, where the glue is handled. This comes in big barrels and is so important a factor in the making of sandpaper that there have been 900 barrels used since January last. The dry glue is fed through a hopper in the floor into a vast boiler in which it is cooked and the hot material is again conducted, on the floor below, to the machines, the corundum being fed to the proper machines from the same floor. The fourth floor, where the sandpaper is actually made, looks at first glance like the drying room of a great laundry, immense folds of paper being suspended from racks that move automatically, the paper being carried in a waving line through hundreds of yards of space, weaving its way back and forth on the drying racks.

The machinery with which the paper, glue and corundum are brought together is ponderous and intricate, but looks simple enough. The light brown paper of various weights comes in rolls up to forty-eight inches wide. This is run into a machine the first function of which is that of a printing press, for on each section of the paper that represents, in the ultimate, a sheet of sandpaper, there is printed the name of the product, the trade-mark of the "3 M. Co."—the Minnesota Mining & Manufacturing company—and the statement that it is made in Duluth.

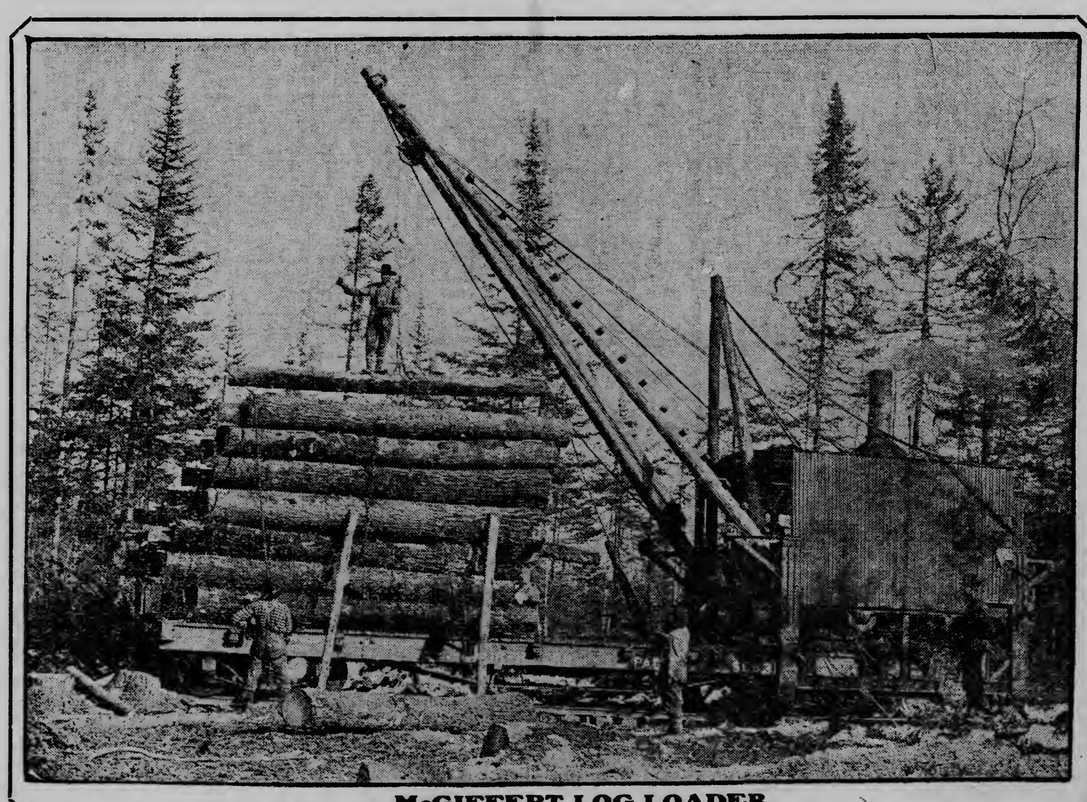
Trade-Mark Goes Everywhere.

These litle sheets of paper which carry the company's trade-mark all over the world and into the hands of thousands of people, are 9 by 11 inches in size and the daily product of the factory is 30 reams of 400 sheets each. If for no other reason, this institution would be a valuable acquisition to Duluth on account of the advertising which the city derives from its business.

As the paper is printed it is carried on through another set of rolls and receives its coating of glue. Turning over, above, to another machine, it passes through controlling rollers and receives its deposit of corundum of the size proper to the texture of the paper, then is subjected to another coating of thin glue, which acts as sizing and serves to set the corundum firmly on the base. Then it is picked up automatically and carried up to the drying racks. As the paper comes out of the machine it is caught up from beneath so that it is attached to and suspended from the rack in folds about ten feet in length. By a queer, halting motion the racks move on to the end of the building just as fast as the paper comes through the machine. Just before it reaches the wall it automatically rounds a curve and comes back in a line parallel with its first course, to repeat the process at the end of the line and turn again. The distance traversed to the far side of the room, where the paper is taken from the racks is quite sufficient to permit the drying of the very heaviest paper, and as that of lighter weight has to travel the same distance, provision is made for slightly moistening the hanging fold of this latter so that it shall not break because of its brittleness. From the racks the paper is carried to a shaft and rolled into large rolls and the process of manufacture is complete but for the cutting and packing.

On the floor below are the cutting machines. The roll of sandpaper is fed into a machine that cuts it longitudinally into desired width and, as it is run off, it is cut into lengths by a steel bar that strikes it against another revolving bar, breaking, rather than cutting it. A dozen men and girls stand about the sorting table and pack the sheets into quires and reams to be put into various sized packages, according to the purposes of distribution. That destined for export is wrapped—after being compressed into four ream packages by hydraulic power—in tar paper. That which is to be supplied to the trade is put up in more elaborate packages of assorted sizes and wrapped like stationery, in bundles, each of which bears the trade-mark and place of manufacture. This is the process of packing for the ordinary sheets. A great deal of the product is put up in rolls of varying width for use on drums and in woodworking establishments. The grades of fineness vary from the coarse paper that is used for the finishing of buckets, made from pulp to that designed for the most delicate polishing operations. Some of it is very fine in texture and Mr. Boynton has invented one form which is coated with the corundum on both sides and of which each sheet may be split, making two sheets of a paper so slight in texture that the workman crumples it up in his hand before using it and scarcely observes the fact that it is coated with a cutting material so sharp that it will eat its way through very hard substances.

Flattering Progress Made.



The Minnesota Mining & Manufacturing company began business in January, 1906, and the first cargo of its product was shipped two months later. The company is capitalized at $500,000. The general manager is Mr. H. W. Boynton, who has had nearly a quarter of a century's experience in the manufacture of sandpaper and has designed much of the machinery in use at the factory. Under his skillful management, this plant has already become one of the greatest producers of sandpaper in the world. The different styles of goods turned out at this place are known respectively as a Crystal Bay Corundum Paper, Crystal Bay Corundum Cloth, Garnet Paper and Garnet Cloth, Emery Paper and Emery Cloth, and Flint Paper. Of these varied products, Corundum paper is rapidly superceding the others for most purposes as fast as its advantages become generally known. The goods are handled through jobbing and commission houses, the general sales office being in Chicago, and there are warehouses maintained by the company in that city, New York, Boston and St. Louis. The officers of the corporation are: L. P. Ordway, president; H. W. Cable, first vice president; F. B. Ober, second vice president; D. D. Smith, treasurer, and John Dwan, secretary.

As the demand for these products is constantly increasing, the importance of this industry to Duluth is one which can not be overestimated. One of the peculiarities of corundum and one which makes it superior to ordinary sandpaper is the fact that no matter how fine it may be ground, its cutting qualities are the same. This makes it possible to produce the finest grades of sandpaper as well as the coarser qualities from the same metal as the peculiar fracture of corundum permits of its being ground to particles of any size, without affecting their sharpness. Corundum beds are found in a few other places in the United States, but at no place which is so readily accessible to transportation facilities. The demand for sandpaper in the United States already calls for the production of over $8,000,000 worth annually, and the portion supplied by the Duluth plant is likely to increase steadily from year to year. The men in charge of the establishment are capable and reliable and have brought the business to important proportions in a short time, since taking hold of the enterprise, though the existence of the corundum deposits at Crystal Bay or Point Corundum has been known for a number of years, its great value as a commercial product was not fully appreciated until quite recently, when its exploitation was undertaken by Mr. Boynton, with such satisfactory results.

Duluth Made Cigars Reached the Grand Total of 6,560,545 In 1906!

AN INDUSTRY THAT NEEDS "BOOSTING."

The manufacture of cigars has become an important factor in the upbuilding of Duluth's industrial fabric, giving employment to 150 skilled workmen, who produce $300,000 annually, of which "Uncle Sam" got in internal revenue, $19,607.08 in 1906, the total number of cigars manufactured being 6,560,545. It is estimated by a competent authority that if union men would use their influence as individuals and buy only home made, union cigars and, if their efforts were re-enforced by the jobbers and retail dealers, this industry would be swelled to 20,000,000 cigars, representing $1,000,000 a year and give employment to 500 skilled, high-priced artizans the whole year round. This would have the effect of booming real estate values, stimulate the retail trade in all lines, especially in all classes of union made goods. There is no other interest in the industrial line that would yield so great or so quick a return as that of "boosting" our local cigar factories. They do not need money or enlarged capital, but the home union made brands need earnest "boosters" among all classes of smokers. What is the use of expending money in seeking new industries when we set our face against those we already have? We take the stand that every business man who smokes a foreign made cigar is a "knocker" with a big "K," and that every trade unionist is a fraud and a traitor to union principles when he smokes non-union foreign made cigars. This is straight talk from the shoulder, but it is the only kind that meets the situation. Let there be inaugurated an active campaign in behalf of one of our "infant industries," Duluth's cigar factories.

The demand for cigars is constantly on the increase throughout the Northwest and the consumption in this city is rapidly growing, both as regards quantity and quality. There is no good reason why this demand should not be met entirely by the manufacturers of Duluth whose facilities for producing the best grades are unexcelled by the cigar manufacturers of any other city on the globe, and the reputations already established for the brands of Duluth made cigars afford an ample illustration of the ability of local factories to take care of the demand and cater to the varied tastes of all classes of individual smokers.

WHY DULUTH BRAND OF CIGARS?

The tobacco used in the manufacture of Duluth cigars is imported directly from the most famous tobacco growing localities in the world, places where the plant reaches its greatest perfection and is cultivated by the most artful tobacco growers. The superior quality of our union home made cigars is attested by their growing popularity with smokers who give them a square deal. It is true of cigars, as of most other articles that the tastes of consumers are educated to a great extent by the quality of the goods the market affords and the presentation of any new and meritorious brand always paves the way for the introduction of others of equal or greater virtue. Among Duluth's smokers are numerous connoisseuers whose discriminating and aesthetic tastes can only be satisfied by a "La Verdad," "Mataafa," "American Editor," "La Della," "Head of the Lakes," or "La Nark," for they give a most satisfying smoke.

The manufacture of high-grade cigars has been reduced to a science by Duluth makers, who rank among the most accomplished followers of the craft. Cigar making is an art which calls for the exercise of peculiar dexterity and fine discrimination, one in which much depends upon careful selection and sorting of stock, as well, as upon the skillful rolling and filling of the leaves. And the marketing of the goods is by no means an insignificant factor in the success of the business. The successful cigar manufacturer must be constantly on the alert to study and meet the wants of the trade and keep in advance of it.

RON-FERNANDEZ CIGAR COMPANY.

This establishment is easily the leading cigar factory in the Northwest, occupying three floors, each 50 by 100 feet, at 102 and 104 West Michigan street, where 3,000,00 of the highest grades of cigars are produced each year. This is the birthplace of the renowned "La Verdad" and "La Linda" brands, so well known to smokers of refined tastes in Duluth and all the territory contiguous to its jobbing trade. The finest tobacco grown in the world enters into the manufacture of these celebrated cigars, a fact which accounts for the widespread reputation which the brands have won and maintained wherever introduced. This company imports all its tobacco directly from the western part of the island of Cuba, where the cultivation of the plant reaches its highest degree of perfection, and where the most experienced and skillful tobaco growers are loated. The plantations on which the tobacco used by the Ron-Fernandez Company is produced are in the District of Vuelta Abajo, Province of Pinar del Rio. The leaves are shipped directly from the grower to the Duluth factory of this company, and lose none of their superior fragrance and quality by unnecessary handling or exposure.

Another feature which accounts, in large measure, for the unexcelled quality of the cigars produced at this factory, is the high standard of the labor employed; none but the most skilled union workmen have a hand in the making of these goods. In this as in other lines of human endeavor, pre-eminence can be attained only by exercising the utmost care and vigilance. The cigars are sorted with the utmost care, and none are permitted to enter the higher grades which are lacking in any degree as to color or other qualities which distinguish their superlative excellence. Smokers of fastidious tastes are quick to recognize any deviation in the flavor of the goods to which they have become accustomed, and the continued and increasing demand for the ever-popular "La Verdad" and "La Linda" brand is accounted for by the circumstance of their uniform character, which has always been maintained from the first introduction as candidates for public favor.

The officers of the Ron-Fernandez company are as follows: Thomas Thompson, president; F. A. Ron, vice president; C. T. Fitzsimmons, treasurer, and H. B. Detweiler, secretary. Business acumen enters largely into the personality of these gentlemen, who have been instrumental in building up a remarkable industry and establishing a name and reputation for one of Duluth's best known products.

DULUTH CIGAR COMPANY.

This is one of the enterprising and progressive firms engaged in the manufacture of high grade cigars in Duluth. It manufactures 1,500,000 cigars each year, and finds a ready sale for the goods. Among its popular domestic brands are the "Duluth Fashion" and the "Mataafa," and the well known "La Van," a clear Havana, are great favorites with many smokers. Special brands are also manufactured for the jobbing trade, which handles a good share of the product of the establishment. The business of the Duluth Cigar company is increasing from year to year, as the excellence of its goods become better and more widely known through the city and its tributary territory. Tessman & Kentel are the proprietors, whose gentlemanly manners and straightforward business methods have had much to do with the growing popularity of their goods.

GOERING'S CIGAR FACTORY.

This is the pioneer cigar industry of Duluth, the business having been established by E. Goering in April, 1897. He is located at No. 326 West Superior street, and has prospered with Duluth's growth, until today the annual output is over 200,000 cigars, which embraces the following well-known brands: "American Editors," a very popular trade mark, which displays the photographs of the three veteran journalists, Charles A. Dana, Horace Greeley and James Gordon Bennett; "Peace and Plenty," which is a favorite domestic 10-cent cigar, and "Actividad," a brand which is in great demand with many smokers.

LA DELLA CIGAR FACTORY.

This is one of the comparatively new candidates for popularity, but which is achieving a growing popularity. The proprietors are Frank Piering and Julius Dworschak, old residents of Duluth, who have been identified with the local Cigarmakers' union for over twenty years, and are very popular among the members of that fraternity. They are up-to-date in every thing pertaining to the trade, and manufacture 150,000 cigars per year, which are all disposed of to the local trade. Their leading brand, "La Della," is a domestic 10-cent cigar, for which there is a constantly increasing demand. This firm began business in April, 1906, and is now well established, being recognized as one of the stable institutions in its line.

THE HEAD OF THE LAKES CIGAR CO.

One of the favorite brands of cigars made in Duluth is the "Head of the Lakes," a 10-center, from which its manufacturers have christened the establishment. This business was started in 1900 and turns out 450,000 high grade cigars every twelve months. The proprietors are N. Grindereng and his brother, L. Grindereng, and the factory is located at No. 2730 West Third street. The "Head of the Lakes" brand meets with exceeding great favor among smokers who appreciate a superior smoke. It is handled by the firm's own salesmen, as well as by jobbers, and its sale reaches all over the territory tributary to Duluth and Superior. The excellence of the brands, combined with the good business judgment of the proprietors, have made this concern a noteworthy success.

SCHROEDER CIGAR COMPANY.

The demands for high class cigars in Duluth has attracted a number of firms to engage in the manufacture, and none is more deserving of wide popularity than the Schroeder Cigar company, which was incorporated May 11, 1906, with a capital of $10,000. The company makes a specialty of high grade clear Havana and domestic cigars, 500,000 being the number annually placed upon the market. The leading brands of this corporation are the "Puradora" and "La Nark," the former a 10-cent Key West, widely known among epicurean smokers, while the latter is a 10-cent domestic article which affords a very gratifying smoke. The sale of these excellent goods is bound to continue to increase as they become more widely known. The trade has rapidly been expanding from the start and the company ranks among the substantial business concerns of the city.

TOM REED CIGAR COMPANY.

This busy factory was established in 1900 and every year since its business has been on the increase, until in 1906, the Tom Reed Cigar company manufactured 1,800,000 cigars, and jobbed as many more. Their special brands are "Tom Reed" and "La Misno," that have a sale covering the Duluth and Twin City territory. The factory gives employment to fifty skilled union workmen. If you want to smoke the best cigar ever manufactured, call for a "Tom Reed" or "La Misno," and you will not experience a disappointment.

DULUTH'S WHOLESALE FRUIT AND PRODUCE BUSINESS REACHES MILLIONS OF DOLLARS ANNUALLY

THERE is no branch of Duluth's wholesale trade, aside from that of groceries, equal to the dairy and farm products. The firms engaged in these lines, as to integrity and financial standing, are the equals of those to be found in Chicago, Milwaukee or the Twin Cities, while the volume of business transacted runs into the millions of dollars annually, and is yearly being expanded as the output of the iron and copper ranges of Minnesota, Wisconsin and Michigan are increased, to say nothing of the growing trade in the territory of the Dakotas and Iowa. The Duluth general commission merchants and wholesale dealers in foreign and domestic fruits, vegetables, veal and poultry, butter, eggs and cheese have many advantages over such inland places as St. Paul-Minneapolis, as they have both water and rail transportation facilities, receiving daily shipments of

Fruits Direct

from the vineyards of California, the dairy and farm products of the South, West and North, to say nothing of berries and small fruits from Michigan and the South. Duluth is not only an immense consumer but has a large territory that depends entirely upon this market for its supplies.

In primitive ages the consumption of the earth's products was confined to the immediate localities in which they were produced for the most part and the perishable forms of merchandise which are now shipped for thousands of miles were often wasted for lack of available markets. If for no other reason, it would have been impossible to develop a city the size of Duluth, at this location a century ago, for lack of means to feed its population, as it would have been impracticable to transport even the barest necessities for the long distances which intervened between Duluth and points where these articles were then produced. Though a small item compared with its total commerce, the transportation of the produce annually brought to this city would be considered a tremendous business by some cities of more metropolitan pretensions, for the fruits and farm products brought hither by rail in the year 1906 amounted to

DULUTH'S FRUIT AND PRODUCE COMMISSION HOUSES.

A BUSY STREET

4030 Car Loads

to say nothing of immense quantities received by lake and in less than car lots, of which no accurate statistics are available. In addition to this the orchards of New York, Ohio and Michigan shipped 60,000 barrels of apples by lake to Duluth. The above figures, however, represent but a small portion of the provisions received and consumed as the quantity of butter, cheese, eggs, poultry, fish and other farm products would aggregate many hundred times the number of carloads classed as fruits and vegetables.

The handling and distribution of the provisions received at this point constitutes, in itself, an industry of great importance and requires the attention of a dozen wholesale fruit, produce and general commission firms to handle. Owing to the perishable nature of the goods handled, the utmost vigilance and alacrity has to be exercised in their disposition, in order that they may reach the consumer in a good state of preservation and to also guard the interest of the consignors, that they may receive

A Fair Profit

out of the shipments. Duluth produce commission firms are always on the alert to keep the market supplied with the freshest and best that the season affords and are familiar with the principal sources of supply, for different products, and are able to keep in touch with the vagaries of the market and offset a shortage of any certain crop in one locality by obtaining a stock from some other part of the country, where the season has been more propitious. Who are able to anticipate and measure the home demand for perishable goods so as to provide a plenty at the most propitious time for its disposal and to avoid a large surplus with its consequent waste. The conditions of this business require a constant study of the supply and demand, here and elsewhere, and the exercise of experience and nicety of judgment which is realized by comparatively few of the dealers who are benefited by this sedulous foresight.

Millions of Dollars Required.

It requires millions of dollars to handle this trade, which is no small item in the swelling of the Duluth bank deposits to twenty millions of dollars. The fruit, dairy and farm produce houses and commission firms all have a high financial rating and what is more each of the men and firms identified with the business have the highest standing for honest, square dealings, which is fully as important as an A-1 commercial rating.

Some Statistics.

It will be of interest to quote the official figures pertaining to the manufacture of butter and cheese for 1906:

"In 1906, there were 8,926 establishments engaged in the industry, having a capital of $47,255,556, employing 15,557 wage earners, paying $8,412,937 in wages, and reporting a cost of materials amounting to $142,920,277 and products valued at $168,182,789. All of these items except the number of establishments show substantial increases since the census of 1900, that in value of products amounting to $37,399,440, which represents an increase of 28.6 per cent, or over one-fourth."

Of the total number of establishments in the industry, 74 per cent were located in six states—Minnesota, New York, Wisconsin, Iowa, Illinois and Pennsylvania. These states reported products valued at $113,799,670, or 67.7 per cent of the total for the United States valued at $31,047,776."

THE DULUTH PRODUCE AND FRUIT EXCHANGE

THE DULUTH PRODUCE EXCHANGE.

WHAT the Duluth Board of Trade is to the grain commission men of the city and the North Dakota farmers, the Duluth Produce Exchange is to the produce dealers of Duluth and the truck gardeners.

It is there that the prices for produce of all kinds are made for the Duluth market, not by the arbitrary action of a combination of dealers, but by the law of supply and demand. The quotations are based upon the condition of the local market, and the innumerable causes affecting that condition.

The exchange benefits the shipper just as the Duluth Board of Trade benefits the grain shipper. The farmer is protected by having a price set on his goods. Without the exchange the shipper might send in his produce and he would be entirely at the mercy of the dealer. If the dealer were unscrupulous he could practically fix his own prices, within the bounds of reason, and remit to the shipper on his own price basis. The shipper being remote from the market, and unfamiliar with the market conditions, would be practically at the mercy of the dealer, and would have no means of knowing whether or not he was being honestly treated.

AFFORDS MUTUAL PROTECTION.

Under the old system a market gardener living thirty or forty or perhaps 100 miles from Duluth might ship in a carload of potatoes to be sold on commission at the best market prices. The dealer to whom he consigned the potatoes might dispose of them at fifty cents a bushel. If he were unscrupulous he could write the farmer saying that the market was weak for potatoes and that the best price he could get for them was forty cents. The farmer would be compelled to accept a remittance on the basis of forty cents and the dealer would pocket ten cents a bushel in addition to his regular commission for selling the potatoes.

The reputable dealers saw that the old system was working an injustice not only to the shippers but to them, as they were at a disadvantage in competing with unscrupulous dealers who did not hesitate to shave the remittances made to the shippers. To protect themselves and to give the commission houses in general, a good name with the farmers, some of the better class of dealers got together and organized the Duluth Produce Exchange.

The exchange is an official body, and its prices are a matter of record. These prices are published every day in The Herald, corrected up to 12 o'clock. Farmers who are subscribers of The Herald can secure them in this way, or if they prefer, can look up the prices for any particular day on the records of the exchange. They can then ascertain whether or not they are being fairly treated by the dealers to whom they ship their goods.

Duluth possesses the distinction of having the first produce exchange in the Northwest.

The Duluth Produce Exchange was organized in 1902, and the following year the Minneapolis exchange was organized, this being the second exchange in the country.

But the Duluth exchange did not remain alone in the field for any great length of time. Other cities recognized the value of such a body, and followed in the wake of the Duluth dealers, organizing exchanges until now practically every city of any importance in the Northwest, where there is any commission business to speak of, has such an organization.

At the present time the Duluth exchange has eight firms in its membership. These are the Fitzsimmons-Palmer company, the Knudsen Fruit company, the Thomas Thompson company, the Baker-Cannon company, the E. A. Tessman company, the Duluth Grain & Produce company, the Ellison-Hatch-Dabold company, and the Victor company.

The officers of the exchange are as follows: W. H. Wilson, president; Frank S. Sleeper, first vice-president; George H. Cannon, second vice-president; C. E. Peaslee, secretary and treasurer.

The importance of the Duluth Produce Exchange can best be realized when it is stated that the total amount of business done by the firms belonging to it, aggregates $3,000,000 per year.

Owing to the situation of Duluth, the manner in which the business of the wholesale fruit merchants is conducted, is a matter of great importance, and the exchange is one of the most important bodies to the welfare of the city. Practically every pound of fruit that is consumed in Duluth and the range towns has to be handled by the commission men, as there is little or no fruit grown in this part of the country.

Even for produce the people have to deal almost entirely through the commission men. Gradually the country about Duluth is being settled up with truck gardeners, and some produce reaches the consumer through other channels than the produce exchange or the members of it, but during the greater part of the year the grocers of Duluth and the range towns have to rely almost entirely on the commission men for their supplies of fruit and vegetables, which are brought in from all corners of the country.

ENCOURAGES TRUCK FARMING.

The exchange is also of great value in helping to build up the truckfarming industry in the vicinity of Duluth. The land about the city is known to be as valuable market gardening land as there is in any part of the country, when it is cleared and properly worked. It is capable of producing almost every kind of vegetable needed for a city, but the farmers working these lands must be assured of a square deal when they ship their produce to the city, and know that they will get a fair, market value for it, instead of being held up and skinned by some unscrupulous dealer. The Duluth Produce Exchange assures the farmer of this, as far as it is possible to do so. It at least gives him every opportunity to know what the fair market value for his produce is, and he can very easily keep himself informed on these lines.

Such in brief is the Duluth Produce Exchange. It is not a trust arbitrarily fixing prices, and the chief benefit that it is to the dealers themselves is indirectly through a credit list which it maintains. This is a list of the retailers, and those who are known to be delinquent or "uncertain pay" are posted on this list. They are not restrained from buying from any of the members of the exchange, but they are forced to pay cash for their goods, and no further credit is advanced to them until they liquidate their indebtedness or convince the members of the exchange of their financial responsibility.

The firms which are members of the exchange are all reputable houses. Just as a membership in a board of trade gives a grain commission firm a standing in the business world, so does a membership in the Duluth Produce Exchange give a produce commission firm a standing in this business. Dealers with questionable business reputations, or those who cannot show that they are in business on a basis which promises some degree of permanency, are barred from becoming members. This also reacts in favor of the shipper, for he is assured that in sending his produce to a firm which is a member of the Duluth Produce Exchange, he does not run much chance of having his checks returned marked "no funds."

Duluth Manufacturing Plants Produced $54,485,000 In 1906, Employing 10,465 Wage Earners

AN ERA OF INDUSTRIAL PROSPERITY.

DULUTH'S manufacturing development has ever been on the increase until today the city is a veritable hive of industry. Many lines of manufactured goods are represented, important among these being the lumber industry and its attendant manufactures of sash, doors, mouldings and planing mill products, besides furniture, packing boxes and other articles into which lumber and timber are converted. Another industry of prominence is shipbuilding, while the manufacture of iron and steel products is of especial consequence in the city's industrial make-up. These include pig iron, milling machinery, log loaders, boilers and castings of many kinds, sheet and corrugated iron. Other products of Duluth factories comprise matches, carbolite, brass castings, pumps and windmills, coke, cement, gas, ammonia lime, tarred felt, sandpaper, wagons, carriages and sleighs, electrical supplies, show cases, beer, cigars, flour, butter, candy, dried fish, pure food products, clothing, shoes, knit goods, suspenders, bedding, tents and awnings, plate and beveled glass, books, trunks, harness and saddlery, artificial limbs and many others. The capital invested in real estate, buildings and equipments exceeds $150,000,000, while the total value of manufactured products in 1906 reached $54,485,000, giving employment to 10,465 people who were paid in wages a daily average of $31,395 or $9,418,500 for the year. All of these industries are growing at a lively pace and will be supplemented by others before the close of the present year. Great as has been the progress of our manufacturing interests, it is quite evident that this department of our activities is still in its infancy.

Present conditions are adequately described in the following from the able pen of Mr. A. H. Comstock, vice president of the Marshall-Wells Hardware company, and chairman of the industrial committee of the Commercial club of Duluth:

"The manufacture of pig iron here, on a large scale, is now an assured success, with an increasing demand for the product.

"The development of 200,000 hydraulic electric horse-power, 30,000 being now about completed, will attract large manufactures of many different lines, for which the West will be a growing market.

"Duluth is an attractive and progressive city, unique in many ways, and a delightful and healthful place of residence.

"Duluth invites correspondence with manufacturers who would consider a Western location, where all conditions are most favorable for success."

POSITION UNSURPASSED.

The location of Duluth at the head of navigation on the greatest interior waterway in the world, in the center of a continent, 1,400 miles from tide water and the Eastern terminus of the principal railway systems of the Northwest, gives it unparalleled facilities as a natural distributing point, the commercial gateway of a vast empire. And these advantages apply as well to commerce originating at this point. Here is the natural cradle of industrial effort: We have cheap electrical power, cheap coal, cheap gas, cheap iron, cheap raw material of woods in unlimited quantities with unequalled transportation facilities in every direction. Nature has provided a magnificent harbor with forty-nine miles of water frontage upon which already floats a commerce the proportions of which can be compared with those of only one or two other ports in the entire world.

Supplementing the natural advantage of being the extreme Northwestern point attainable by water are the railroads which radiate in every direction from Duluth and are being augmented from year to year by the building of additional lines and branches centering at the Head of the Lakes. At least three trunk lines are now in course of construction which will be running cars into this city within a twelvemonth, and each will open up great stretches of country which have not heretofore been readily accessible to Duluth jobbing houses as well as improving the facilities for intercourse with many other points. By those who understand the situation, it is generally conceded that this city occupies the enviable position of being a center of commercial growth, the supply depot for the population of a vast region, the possibilities of which have been realized only in small part as yet. The trade of Duluth not only extends to Alaska and the Canadian Northwest but, in certain lines, it has already been carried across the Pacific and into the Orient.

A GREAT STEEL MILL COMING.

The United States Steel corporation has decided to establish great steel mills at this place. All the details have been worked out at this writing, and not less than a $5,000,000 plant will be built. It will take one of three forms. If it is a wire and nail plant, it will employ 1,000 people; if structural iron is made, employment will be given to 1,500, and should it be a steel rail mill, it will require from 2,000 to 3,000 men, most of whom will be skilled artisans, commanding high wages. Whatever course the project may assume, it will only serve to pave the way along which other iron and steel industries must inevitably follow. Organizations of the manitude of the Steel corporation do not make such investments merely for the purpose of experimentation, and it has been its obvious policy for several years past to develop prodigious establishments at points which combined the advantages of affording power, raw material and transportation at nominal expense. In addition to the expansion which will naturally follow the inauguration of its plant, on the part of this great corporation, other manufacturers cannot fail to be impressed by its example as well as being attracted by the same considerations. Steel enters largely into the manufacture of many articles which can best be made at locations contiguous to its production and, with the ever increasing demand for manufactured goods in the territory most accessible to this location, the advantages of this city as a steel mill center will constantly become more apparent.

Besides such industries as are naturally accessory to a supply of iron and steel, there are numerous enterprises for the establishment of which Duluth offers exceptional advantages, as paper and pulp mills, furniture factories, handle factories, shoe factories, woolen mills and many other lines of manufacturing. Duluth is not only destined to become the "Pittsburg of the West," without many of the disadvantages and inconveniences which distinguish that smoky metropolis, but it will eventually combine the most striking features of other great cities, including Buffalo, Chicago, Milwaukee, Cleveland and Detroit. As regards the volume of business done in one or more lines, Duluth already exceeds each of the above cities, and its supremacy will become more and more apparent with each succeeding year.

MANUFACTURING STATISTICS FOR 1906.

Capital invested in Real Estate, Buildings and Equipments	$150,000,000
Value of Outputs of Factories	54,485,000
Number of People Employed	10,465
Average Daily Wages Paid	31,395
Total Yearly Pay Roll	9,418,500

ADVANTAGES OF COMPETITION.

The supremacy of Duluth as a manufacturing center has been brought about so rapidly that it is realized by few people outside of the territory directly affected by these circumstances. As these facts become generally recognized, many lines of commercial industry and business effort are receiving additional representation and new lines of activity are being introduced, creating competitive markets and deflecting to this city currents of trade which formerly flowed past our doors to markets in other cities. The establishment of new industries here will largely minimize the attractions of other markets and with the growth and spread of new lines of business, Duluth is steadily and swiftly coming into her own. It is a well authenticated fact that no established business in this city has ever suffered through additional competition in the local market, but has been the gainer through the wider recognition that has come to the city as a market in that particular line.

Straight business competition is not a thing to be dreaded and continued accessions to the ranks of our manufacturers must be expected from now on as a result of the marvelous growth in trade possibilities of the country contiguous to Duluth and for which this city is the most natural market in which to both buy and sell.

DULUTH'S GRAND CAREER OF PROGRESS, REVIEWED TO DATE

The history of a city, as well as that of a nation, may be appropriately divided into successive epochs, each representing a distinct feature of its evolution either in the way of material development or a certain stage of intellectual, moral or social culture. Progress along some lines is often simultaneous with degeneration in others and the beginnings and endings of these periods are sometimes merged in those which precede or follow.

Duluth, though one of the youngest cities of its class, is already in the midst of a great era of commercial activity, probably unsurpassed in the rapidity of its development by that of any other city on the globe, past or present. This commerce, while it has attained enormous proportions, is still growing by tremendous leaps and bounds and its volume for the year 1907 promises to far exceed all previous records.

While this publication partakes chiefly of a retrospective character, affording ample reason for congratulating the people of Duluth upon what has been accomplished in various forms of material growth and civic progress, yet it was not conceived merely with a view to gratifying the pride which our own citizens may justly feel in their city, nor to astounding the stranger, whose eye it might encounter, with a marvelous revelation of our greatness, and it is deemed but prudent, while rehearsing some of the facts concerning this place, at the same time to call attention to some of its present needs and future prospects and possibilities. It is said that the forces of nature are never still but constantly growing or changing to new forms of development. So it is with the growth of communities; changing conditions and circumstances continually call for renewed enterprise and repeated efforts, a fact which is nowhere better realized than among our citizens and it is confidently believed that Duluth will continue to avail itself of the wondrous advantages with which it was endowed by nature and take its place in due time among the greatest metropolitan cities of the world.

The maritime commerce of the Duluth-Superior harbor during the season of 1906 amounted to more than 29,000,000 tons, a tonnage exceeded by only two ports in the world, those of London and New York. When it is taken into consideration that this port is open only for seven or eight months of the year, while those of the two cities above mentioned are open throughout the year, the showing is certainly a very flattering one for Duluth. Including the enormous traffic carried on by rail, the amount of freight handled at the Head of the Lakes will compare favorably with that of any American city, while the toll collected at this harbor upon all this commerce amounts to no inconsiderable sum, students of economic conditions have for years been considering whether the income derived from this trade might not be appreciably increased by turning a larger portion of the raw material into manufactured product. Natural advantages are often overcome in a considerable degree by artificial conditions. Were it not for the fact that immense fortunes had previously been invested and gigantic manufacturing enterprises established in Eastern cities, the development of the Mesabi iron range, which produces more than one-half of the iron ore mined in the United States, would, ere this, have led to the upbuilding of great steel and iron industries at the Head of the Lakes. It is believed to be only a question of time when industrial conditions will lead to such establishments here. In the meantime there are many other enterprises which may be advantageously located and carried on in this vicinity. While millions have been spent and are being spent to good advantage for the purpose of improving the harbor and otherwise facilitating our great carrying trade, the people of Duluth are beginning to realize that money may also be spent advantageously in developing more manufacturing institutions, thereby affording employment to a larger and more stable population and increasing the value of our natural wealth by sending it away in the form of finished product. Capital has already been enlisted and expended to the extent of about $5,000,000 in harnessing one of the forces of nature which for countless ages has been wasting its power and accomplishing no useful purpose other than the gratification of the eye which might be contemplating the beauties of nature. There is now abundant power available for the operation of all the public utilities of the cities of Duluth and Superior, as well as for other enterprises of almost any magnitude.

The people of Duluth have made a reputation for carrying out whatever they undertake to accomplish and if the figures no prophetic eye to discern the dawning of a new era of activity; one which will not only greatly increase our commerce, but attract to this locality a multitude of people, manufacturers, artisans, tradesmen, tradesmen, laborers, professional men, farmers and others together with their families. These various industries and occupations are inter-dependent upon each other and must be simultaneously built up to accomplish the best results. Heretofore this region has not only been sending away its great wealth of raw materials but, at the same time, importing many of its means of subsistence, a larger portion of which might be advantageously made or produced within its borders.

Within short distances from this city are extensive tracts of lands which can be converted into productive farms and made to produce much of the provisions consumed here to the mutual advantage of both producer and consumer. And this is destined to be brought about soon after these facts are fully realized by all concerned. Duluth is probably the largest city in the United States (if not in the world), which imports the greater portions of its provisions from such great distances. Out of the earnings of people in Duluth, Superior and the iron range towns several million dollars are annually paid for food to people who, at the same time, spend nothing here. There are a number of innovations which might be suggested to make this a more inviting place of residence for desirable classes of people, one of which, perhaps, more essential than that the adjacent country should be settled by a class of practical, industrious and intelligent farmers. Elsewhere in this paper, we shall endeavor to show some of the advantages which this locality offers to prospective settlers as well as to business men, investors and others who may be considering the advisability of seeking new locations.

EARLY HISTORY.

Much has been written and published from time to time concerning the early history of "The Zenith City" and the contiguous region about the Head of the Lakes so that it is hardly necessary nor expedient to dwell at length in this article upon many matters which might otherwise be of considerable interest and importance. Just how many successive races or nations occupied the Lake Superior basin before it was known to modern civilization will probably always remain a mystery. There is ample evidence that a race of people once lived here, or at least made extended visits to this region, who had made noteworthy progress in civilization and art; a people who had acquired at least one secret which our boasted twentieth century civilization is obliged to class among the "lost arts," that of tempering copper and constructing edge tools from that metal. The writer will not undertake herein to speculate upon the origin nor identity of this race; nor to fix the date of its appearance or departure from our shores. Sufficient obscurity hovers about the history of the Chippewa or Ojibway tribe which occupied most of the Superior basin at the beginning of recorded history. Many of the legends and superstitions of this people have been preserved to us and some of their descendants still live in our midst but the identity of the first workers of the copper mines is as great a mystery to them as is that of the pyramid builders to the natives who now inhabit the valley of the Nile. Numerous poems and romances have been bequeathed to us which give some idea of the customs and characteristics of the Ojibways, the most conspicuous of which is Longfellow's famous epic, "Hiawatha," recognized as one of the choicest contributions to modern English literature.

Not many years had elapsed after the planting of the first settlement along the Atlantic coast, before adventurous Frenchmen began exploring the region about the Great Lakes. By the middle of the seventeenth century the "Voyageurs" and "Courier de Bois" had penetrated to the shores of Lake Superior and commenced negotiations for the opening of the fur trade which soon constituted the principal commerce of the upper lake region for about 200 years. Accompanying these traders in their "Batteaux," came the explorers and Jesuit missionaries, Groseilliers, Radisson, Menard, Marquette, Allouez, Dablon and others whose "Relations" afford most of the authentic records of the time. Daniel Greyselon Du Lhut, in whose honor this city was eventually named, did not reach the Head of the Lakes until 1679. He came as the representative of a company of Montreal merchants in which Governor Frontenac was interested and, during the few years of his stay, did much to promote the fur trade among the Chippewas of Sault and other tribes about the territory now known as Northern Minnesota. It should also be stated that he used his best efforts to discourage the whisky traffic, that curse which has ever been the bane of the aborigines and continues to be one of the greatest reproaches to modern civilization as regards its influence upon them. Du Lhut was a man of much influence and ability whose name is fittingly perpetuated in the city whose existence he may or may not have foreseen. Though interrupted at times, the traffic in furs and peltries flourished to a greater or less degree throughout the Northwest the principal and most practical route of transportation being afforded by the waters of the great lakes and tributary streams though extended portages were required at the rapids of the St. Mary and St. Lawrence rivers. Numerous canoes and batteaux employed at times to assist in the transportation of the product to the markets at Quebec and Montreal whence most of it was shipped to Paris and other European cities. Almost annual depots or trading posts were maintained to which the peltries gathered in the surrounding country were brought and stored preparatory to their shipment down the lakes for which purpose extensive warehouses were built at each summer. Among the most important of these posts on Lake Superior were those at La Pointe, Grand Portage and Fond du Lac. The last name included all the locality about the Head of the Lake until a comparatively recent period. For some years the actual site of the post was on the Wisconsin side of the bay of Superior near the present location of the gas plant, but for most of the time it was established on the site of the present suburb of that name in the city limits of Duluth. This location at the foot of the rapids of the St. Louis river and the ultimate point attained by the bateaux was the real headquarters of all the commerce centering about this harbor until the building began of modern vessels of too deep draught to enable them to penetrate so far from the entrance of the harbor. The fur trade after a time came to be monopolized by the Northwestern Fur company and, later, when the United States acquired domain over this territory, by the American Fur company with the famous John Jacob Astor at its head. Photographs are still in existence of the log trading post maintained by that noted individual at the present village of Fond du Lac. Until a few years since, this building was still standing with the initials and the date, 1797, carved upon one of its logs. The exact extent of the trade carried on by way of Lake Superior is unknown but it is recorded that it reached the value of about $300,000 in a certain season, a figure which would not arouse much comment in these days of great commercial enterprises, but must have been an important consideration at that time. The development of this trade wrought some important transformations in the lives of the Indians who received in exchange for their peltries many articles which soon became an indispensible part of their living, including guns, steel traps and tempered knives as well as ornamental trinkets of various kinds. Before the coming of the White man, the savages were obliged to fashion all their implements and weapons and had developed considerable art and cunning in their manufacture, each tribe, if not each family, being able to produce whatever its necessities required so that they were practically independent. Now, however, it became easier to obtain better goods from the whites, the various native crafts were neglected and forgotten and each succeeding generation became more and more dependent upon the Caucasians for its means of existence and whenever the trade between the two races was interrupted for any considerable period, much suffering and inconvenience resulted to Indians as well as white men.

ERA OF MODERN PROGRESS.

The few trappers, traders, missionaries and explorers who visited the vast wilderness of Northern Minnesota during the first two centuries after its discovery were forced to lead the lives of hermits for the most part owing to the long and arduous journeys required in passing to and from the older and more civilized portions of the country. Their accounts of the country attracted little attention from a nation which was busy in developing other localities more easily accessible and supposed to have more congenial climates.

It is a noteworthy circumstance that the progress of civilization is concurrent with the growth of commerce. While the fur trade followed by pioneers, ventured of civilized life into the upper lake country, towards the middle of the nineteenth century this business was rapidly declining due, no doubt, to the practical extermination of many species of animals which had theretofore yielded the pelts and skins by which the industry was sustained. About 1847 the American Fur company abandoned its post at Fond du Lac and many of its former employes drifted away from the Superior basin and the whole region seemed in a fair way to be forgotten. About this time some adventurous and enterprising spirits began to penetrate the unexplored wilds in search of the great deposits of copper ore in Northern Michigan near the shore of Lake Superior. There was an active demand for this metal which led to the construction of the canal and locks at the Sault Ste. Marie (opened in 1855), and vessels which had previously been confined to the lower lakes were soon navigating the waters of Lake Superior. Even before the completion of this undertaking, some hardy pioneers and far-sighted business men had discerned the advantage of founding one or more cities upon the great natural harbor of which was the straightest path toward the center of the continent attainable by water. As early as 1853, a city had been laid out and settled at Old Superior which continued to be the headquarters for planning and executing all important undertakings about the head of the lakes for nearly a score of years. Among the original promoters of that city were Stephen A. Douglas, John C. Breckenridge and a number of other men, several of whom were subsequently, conspicuous in the organization of the Southern confederacy, and other men prominent in the United States senate and other official positions.

A year or two after the founding of Superior, some settlers began locating on the Minnesota side of the harbor where several promising town sites were platted at least four of which are now included in the city of Duluth. These settlements were regarded with considerable scorn and ridicule on the part of the promoters of Superior which location, it must be admitted, possessed many natural advantages not to be found elsewhere upon this harbor. But natural advantages are not the only requisite of modern city building and various other circumstances have exerted a greater influence in determining the location of more than one of the leading cities of the world. The panic of 1857 put an end to the "boom" which had set in about the Head of the Lakes and most of the 2,500 people who had congregated there were constrained to seek a livelihood elsewhere and for some years the few sanguinary prospectors who remained endured a great deal of hardship and privation. Among those who survived that depressing period, who were located within the present limits of this city, and who were than as afterwards prominently identified with its history, may be mentioned Henry W. Bennett, Rev. Edward F. Ely, Luke Marvin, Col. J. B. Culver, William and George E. Nettleton, Commodore Horace Saxton, George R. Stuntz, James D. Ray, Lewis H. Merritt and Judge John R. Carey as well as Clinton Markell, E. R. Jefferson and Capt. John J. Hibbard, who still reside here. There were, doubtless, others whose names should be included in this category but are not recalled at this writing.

Among those located at Fond du Lac at that time was Peter J. Peterson, who located land on which a portion of that village was laid out and a plat of the same made by him in 1857 is still in existence. His son, Charles A. Peterson, is, doubtless, the oldest native of the city, having been born at Fond du Lac, Dec. 21, 1857. This distinction might have been disputed a few years ago by an eccentric character, well known about the Head of the Lakes, named Stephen Bungo. He was a part blood negro and part Indian, born on the site of the same hamlet during the beginning of the last century, and always proudly asserted that he was "The first white man born at the Head of the Lakes."

Following a few years after the panic of 1857 came the great Civil war which ruined the lives and prospects of most of the original promoters of Old Superior, scattering and entangling the titles to property therein and otherwise embarrassing the progress of that embryo city and for some years the results appeared to be equally disasterous to Duluth.

HARDSHIPS OF THE PIONEERS.

The original town site, divided in two parts known respectively as Upper and Lower Duluth, included only the strip of flat ground lying to the south of Minnesota Point which has since been intersected by the canal. As late as 1865 this was the least promising of the four towns, which had been platted within the present city limits and others to be subsequently known as Portland, Oneota and Fond du Lac. In December of that year only two or three families were living in Upper Duluth though there were a number of vacant houses including the one built by Robert E. Jefferson in 1856, which is still standing, and said to be the first frame building erected in the city. At that date, the late Judge John R. Carey moved his household from Oneota to the point and, after looking over the vacant houses, decided to establish his domicile in the Jefferson house, where he lived for several years serving as United States commissioner and filling numerous other official positions. His history of those days, published many years afterward, is a number of St. Paul people were interested in property at Duluth and Oneota which fact, together with a natural feeling of state pride impelled them to favor a road which should be all within the state. As early as 1861 the people of Duluth and Oneota had petitioned the legislature for permission to bond St. Louis county to the extent of $150,000 in aid of the proposed Mississippi & Lake Superior railroad. There was some local jealousy between the people of the two budding communities above mentioned as to which should be the terminus of the proposed railroad, but united action was secured by the agreement to leave that question for the builders of the road to determine. Luke Marvin and Edmund F. Ely were appointed commissioners to present the petition to the legislature and secure the necessary permission. Suffice it to say that the measure was carried, the bonds were issued and paid in due time; that is, upon the completion of the road "from the crossing of the St. Louis river to Duluth or the head of St. Louis." The actual building of the track was commenced at the St. Paul end in 1867 and from the Duluth end in 1869, the first through train from St. Paul arriving in Duluth Aug. 1, 1870. A branch of the Northern Pacific between this place and Brainerd was completed soon after and that corporation made arrangements to use the terminals of the Lake Superior & Mississippi which has since become a part of the Northern Pacific system. The management of the road apparently decided to extend its tracks along the shore of the bay as far as Duluth, thereby fixing the nucleus about which the coming city was to center. Oneota and the other towns which had been platted on the North shore in St. Louis county were eventually absorbed in the city as well as Lakeside, West Duluth and New Duluth which came into existence at later dates.

In anticipation of the completion of the above-mentioned railroads, people had begun congregating at Duluth so that the city began at once to take on a business air and the commerce which centered here assumed noteworthy proportions. Other railroads reached the Head of the Lakes within the next few years and the prospects were very bright until the panic of 1873 again put a serious check upon the business enterprise of the whole country and the fruition of many a project was deferred until a more propitious season.

Duluth was not the only locality benefited by the acquisition of its new railroad connections. All the farmers in Southern Minnesota shared in the result, which was a reduction of 50 per cent in the freight rates from St. Paul to Milwaukee, which latter city was at that time the greatest wheat market on the Great Lakes. It may be interesting to note here that the grain shipments for the season of 1870-71 received at this harbor amounted to a little over half a million bushels. This figure seems insignificant when compared with the receipts for the season of 1905-6, which reached a total of more than eighty-one and three-fourths million bushels. As the receipts at other terminal points have also considerably increased during the period referred to, some idea may be gained of the great increase in grain production for the Northwest.

A NEW ERA OF PROSPERITY.

Avarice, in some of its exaggerated forms, is, perhaps, among the worst of human passions. Yet, when its gratification is directed by enlightened foresight, it becomes a powerful influence for the spread of civilization, and the zeal which it inspires overcomes obstacles which appall the mere enthusiast who may have embarked in an undertaking of less magnitude to which he was urged by higher motives. The greed for gain, while it often affords the means for gratifying baser passions, also incidentally promotes many of the nobler instincts of mankind, and the forces which make for the enlightenment and elevation of human nature usually reach their highest attainments in those localities which enjoy the greatest commercial success.

Another epoch of business activity began to open up throughout the United States almost simultaneously with the resumption of specie payments in 1879. To what extent the former circumstance was the result of the latter is a problem over which political economists are still arguing and one which will not enter into this discussion. Suffice it for our purpose to note that subsequent decades have witnessed the organization of numerous enterprises requiring greater or less aggregations of capital to carry out their designs. Much as we may deplore some of the methods pursued by great corporations, it cannot be denied that Northern Minnesota owes most of its development to the existence of such organizations. Had not their enterprises must depend in great measure upon securing facilities for transportation between that point and the prairie country to the West and Southwest where a vast agricultural region was already being rapidly opened up and numerous towns were springing into existence. Almost simultaneous with the platting of the prospective cities on this harbor, projects were set on foot for securing railroad connections with St. Paul, already the commercial center of the state of Minnesota and a good share of Wisconsin, and connected by rail and river transportation with the markets of St. Louis, New Orleans, Milwaukee, Chicago and other thriving business centers. But the execution of these commendable plans was quite another matter. Tremendous obstacles must be encountered and overcome before the schemes of the promoters could be realized. Charters had been secured for several lines of railroad reaching the north shore of Superior for their northern terminus, including the old "Air Line" to Chicago, before the panic of 1857, which, as before noted, called a sudden halt to all new financial undertakings and was followed by several years of business depression. Most of the important influences which had been interested in Superior were diverted by the Civil War and these undertakings slumbered almost unmolested for a decade. When these enterprises began to be revived, the people on the Minnesota side of the harbor were keenly alive to the importance of securing the terminals of the first road which should build to the Head of the Lakes while those still remaining who had interests in Superior seem to have slumbered in the calm assurance that they controlled the only available site for railroad terminals upon this harbor. Added to the zeal of the Minnesota "boosters" was the fact that a number of St. Paul people were interested in property at Duluth and Oneota which fact, together with a natural feeling of state pride impelled them to favor a road which should be all within the state. As early as 1861 the people of Duluth and Oneota had petitioned the legislature for permission to bond St. Louis county to the extent of $150,000 in aid of the proposed Mississippi & Lake Superior railroad. There was some local jealousy between the people of the two budding communities above mentioned as to which should be the terminus of the proposed railroad, but united action was secured by the agreement to leave that question for the builders of the road to determine. Luke Marvin and Edmund F. Ely were appointed commissioners to present the petition to the legislature and secure the necessary permission. Suffice it to say that the measure was carried, the bonds were issued and paid in due time; that is, upon the completion of the road "from the crossing of the St. Louis river to Duluth or the head of St. Louis." The actual building of the track was commenced at the St. Paul end in 1867 and from the Duluth end in 1869, the first through train from St. Paul arriving in Duluth Aug. 1, 1870. A branch of the Northern Pacific between this place and Brainerd was completed soon after and that corporation made arrangements to use the terminals of the Lake Superior & Mississippi which has since become a part of the Northern Pacific system. A NEW ERA OF PROSPERITY.

Avarice, in some of its exaggerated forms, is, perhaps, among the worst of human passions. Yet, when its gratification is directed by enlightened foresight, it becomes a powerful influence for the spread of civilization, and the zeal which it inspires overcomes obstacles which appall the mere enthusiast who may have embarked in an undertaking of less magnitude to which he was urged by higher motives. The greed for gain, while it often affords the means for gratifying baser passions, also incidentally promotes many of the nobler instincts of mankind, and the forces which make for the enlightenment and elevation of human nature usually reach their highest attainments in those localities which enjoy the greatest commercial success.

Another epoch of business activity began to open up throughout the United States almost simultaneously with the resumption of specie payments in 1879. To what extent the former circumstance was the result of the latter is a problem over which political economists are still arguing and one which will not enter into this discussion. Suffice it for our purpose to note that subsequent decades have witnessed the organization of numerous enterprises requiring greater or less aggregations of capital to carry out their designs. Much as we may deplore some of the methods pursued by great corporations, it cannot be denied that Northern Minnesota owes most of its development to the existence of such organizations. Had not the lumbermen, the mining and transportation companies, and other concerns with ample financial backing desired to profit by the vast resources of nature abounding in this region, the puny efforts of individuals could have accomplished but little toward its improvement.

One of the first important industries to respond to this renewed demand for its products was the lumber business. As previously noted, a small sawmill had been erected at Oneota as early 1855 and this establishment was supplemented by others from time to time in different parts of the city, but owing to the fluctuating demand for lumber in the early years, there were protracted periods of idleness and in the busiest seasons the combined product would have seemed small compared with the output of a single modern sawmill. The inroads made upon the forests about the Head of the Lakes previous to 1873, were hardly perceptible. At that date a new impetus was given to the industry by the opening of a large mill by the firm of Graff, Little & Co., whose example was followed within a few years by several other concerns and Duluth soon became the center of a great lumbering district.

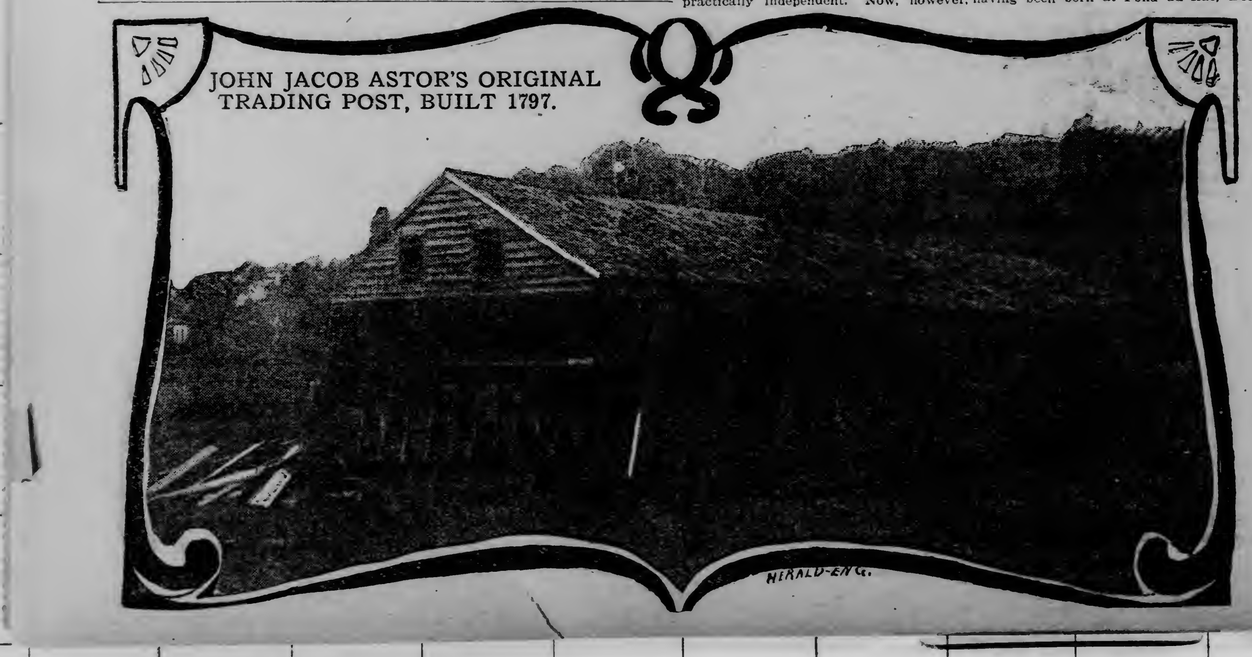
IRON IS KING.

The existence of considerable deposits of mineral wealth in the Lake Superior basin was known even in pre-historic times. We have previously noted that the opening of "The Copper Country" of Michigan led to the building of the "Soo" canals which opened the way for the tremendous shipping business which rapidly developed upon "the great unsalted sea" and caused that famous channel to become the greatest artificial artery of commerce in the world. About ten years after the opening of the canal another discovery was made upon the north side of the lake which, for a brief periods promised to rival the copper deposits in importance but, although the existence of gold at Lake Vermilion was a fact, the effort to mine it to advantage proved unsuccessful and disappointing and the district was soon forgotten by most people. At another period, the existence of rich silver mines on Isle Royale was reported and attracted numerous prospectors and capitalists, but if the rich metal existed there, the propitious time for its exploitation had not arrived and the excitement soon subsided.

While the rush for gold to Vermilion lake failed of its object, it served at least one useful purpose. The existence of iron ore on the range was learned by the prospectors, but overlooked by most of them in the search for the more precious metal. Among the exceptions to this rule were George R. Stuntz and Henry Mayhew who brought some rich specimens of the ore upon their return to Duluth and succeeded in interesting a few other persons in the subject. Prof. H. H. Eames of Philadelphia, who was stopping at Duluth at that time, was appointed state geologist and spent two seasons exploring the country about Vermilion lake and along the north shore of Lake Superior. His report aroused more interest than a serious circumstance in the iron deposits of the Vermilion range and was confirmed by subsequent examinations by other experts. Through the influence of George C. Stone of Duluth, Charlemagne Tower, a prominent capitalist of Philadelphia, became interested in these iron deposits and the ultimate result was the building of the Duluth and Iron Range railroad which was completed from Vermilion lake to Two Harbors in 1883. Its control soon passed into the hands of the Minnesota Iron company. The shipments of ore from this range to date aggregate about 20,000,000 tons.

The development of the famous Mesaba iron range was due primarily to the efforts of the Merritt Brothers, old residents of Duluth, who spent several years in surveying and prospecting thereon and subsequently interested other parties, the final result being the opening of the richest iron mines of the world from which are now taken more than half the total annual product of the United States.

The building of the Duluth, Missabe & Northern railroad in 1891-2 was a natural sequence to the discovery of the immense deposits of ore along the Mesabe range. To accomplish this it was necessary to enlist the support of Eastern capital and the control of the road as well as that of most of the valuable mines on both Mesabe and Vermilion ranges soon came under the control of various companies constituting the vast syndicate which has come to be known as "The Steel Trust." This organization erected one of the largest and most modern business blocks in Duluth in which the offices of the different companies for this end of the lakes are maintained. Farther details of the business will be given elsewhere in this publication, but it may be interesting to note here that the output of iron ore for St. Louis county exceeds that of any other nation in the world.



No other event in the history of St. Louis county has affected its development like the discovery of the iron ranges. Although the existence of these deposits was known for many years to a few people their extent and value was not realized until within the last fifteen or sixteen years if, indeed, it is fully known at the present time. When the first shipments of ore from the Mesaba range were made in 1892, it suddenly began to dawn upon the world at large that this matter was of some importance to people outside of this immediate locality and when it was realized that here were not only the richest iron deposits in the world but those most accessible, there was a rush of prospectors and speculators to this field which equalled, if it did not exceed the California gold excitement in '49 and the early '60s. Towns sprang up in the midst of the wilderness and rocky wastes along the range and numerous fortunes were made and lost during the period of wild speculation which ensued. Gradually, however, the era of feverish excitement subsided and subsequent investments have usually been preceded by systematic explorations. New deposits are continually being found and many people have shared in the great prosperity which has been a natural consequence of this remarkable development.

It is impossible for the promoters of any great industry to monopolize the benefits which accrue therefrom. Thus, while the most important factors in the upbuilding of Northern Minnesota have been shown herein, it must not be forgotten that many other industries, some of them of much importance, have come into existence of which farther notice is given upon other pages of this publication.

GROWTH OF DULUTH SINCE 1860.

The increase in population is shown in the following statistics:

1860—Total population of St. Louis county	406
1870—City of Duluth (United States census)	3,131
1880—City of Duluth (United States census)	5,415
1890—City of Duluth (United States census)	33,115
1900—City of Duluth (United States census)	52,969
1905—City of Duluth (State census)	64,945
1906—City of Duluth (R. L. Polk & Co.'s Directory estimate)	81,303

Duluth's Climate, Parks, Forests, Drives and Elysian Springs.

STATE FISH HATCHERY ADJOINING LESTER PARK.

Parks and Boulevards.

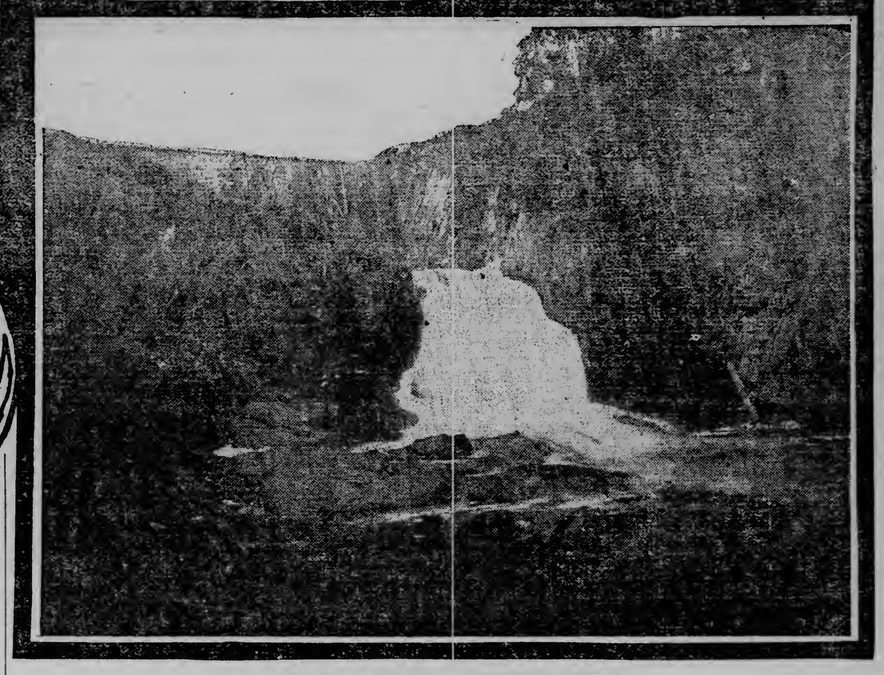
"Among the fair islands that glitter in heaven—
On the dim, undiscovered and beautiful shore—
Some glimpse of a lovlier scene may be given
To the eyes of the perfect, but never before!"

The surface of Lake Superior lies many hundreds of feet below the head waters of the Mississippi river, some tributaries of which approach within thirty or forty miles of its western extremity, and the ground about the shores of the lake at this point have the least elevation above sea level of any portion of the state of Minnesota. As the basin of the lake is narrow, extending only from thirty to fifty miles from its shores on either side, and is bounded by high, rocky divides or "ranges" which form the watersheds between the Mississippi, Red River of the North and St. Lawrence valleys, the many streams which are fed by crystal springs bubbling forth from the apex and slopes of these ranges and find their way to the "Great Unsalted Sea," are invariably of rapid descent, their strong currents plunging over rocky precipices and winding by tortuous courses through dense thickets and forming together with adjacent landscapes, some of the most charming and romantic scenery which human eyes have ever beheld.

A number of the most picturesque of these scenes have been preserved in all their pristine loveliness, right in the city of Duluth. Other cities have beautiful parks and pleasure grounds but, in most cases, these have been artificially formed at great pains and exist, like the hanging gardens of Babylon, as monuments to the wealth and power, as well as the inventive genius of the finite beings who planned and executed their construction. But, in the contemplation of Duluth's parks, the spectator is reminded rather of the sublime handiwork of nature best described in the following lines of the poet:

"But the spirit that ruled o'er the thick, tangled wood,
And deep in its gloom fixed his murky abode.
* * * * * *
"He rent the rude rock, the steep precipice gave,
And hurled down the chasm the thundering wave,
Countless moons have since rolled in the long lapse of time,
No culture has softened these features sublime.
* * * * * *
"And the stranger still gazes with wondering eye,
On the rocks rudely torn and groves mounted on high;
Still loves on the cliffs' dizzy borders to roam,
Where the torrents leap headlong, embosomed in foam."

Comparatively little human labor was required to provide this city with an extensive system of parks and boulevards which is unsurpassed in the variety of scenery which it presents within a compass sufficiently limited to be traversed and enjoyed in a single day, though no stranger is ever satisfied to go away and bid adieu to these sylvan scenes after giving them so brief a period of inspection.



No visitor to the Head of the Lakes can afford to forego taking the "boulevard drive" which extends for a number of miles near the crest of the bluff which overlooks the city and, on a clear day, presents to the delighted eye a natural panorama which, once viewed, will never be forgotten. Among the shifting scenes which follow each other in rapid succession are the vast expanse of Lake Superior stretching away to the eastward, the largest body of fresh water on the globe, majestic and awe-inspiring in whatever mood it may be encountered; the sandy beaches of Minnesota Point stretching out like a tiny thread to separate the waters of the outer harbor from those of the lake; the outer and inner harbors themselves with boats of every size and description gliding over their surface; and the valley of the St. Louis river extending for miles to the westward displaying the tortuous windings of the stream among wooded islands and granite hills, while right at one's feet lies the city with its many luxurious homes, beautiful parks and avenues, residence suburbs, bustling business blocks and thoroughfares, stupendous docks and warehouses and scores of factories and other hives of industry. Sweeping far across the intervening landscape, a distance of fifty miles or more, the enchanted optics behold an emerald border to this delightful vision formed by the Wisconsin copper range whose summit meets the horizon as if to shut out all recollection of the world beyond the confines of this favored valley.

"And high overhead,
The wrecks of the combat of Titans are spread."

The route of the boulevard drive follows closely the line marked by geologists as having once been the shore of Lake Superior ere some unknown cause drained away a great portion of its water, lowering the surface to its present level. Towering still above this ancient shore line are numerous cliffs of rock and granite apparently thrown into their present positions by some mighty upheaval or brought thither and deposited by Herculean hands.

When the plans of the Duluth board of park commissioners have been fully carried out, the boulevard will connect all the parks of the city forming a continuous driveway through Lester Park, on the East, with its magnificent groves and cataracts, the new park along Tischer's creek with its numerous wildwood glens, Chester Park with its bewitching waterfalls and sequestered nooks and Lincoln Park with its winding streams, grassy lawns and shelving rapids, to say nothing of the beautiful parks and pleasure grounds in the vicinity of West Duluth, and the tourist should not neglect to pay a visit to Cascade Park, the nearest to the heart of the city, yet the most difficult of access, but whose delights are ample recompense for the laborious ascent by which it is reached by the person who goes on foot. Through each of the parks named flows one or more limpid streams fed by the purest mountain springs and repeatedly filtered and cleansed by the rapid current which carries them leaping over successive rapids and cascades and presenting a charming vista which is a perennial source of delight to every visitor.

Park Point and Oatka Beach will not be overlooked by any person sojourning at the Head of the Lakes. Whether it may best suit his taste to participate in any or all of the numerous forms of recreation and refined sport which are almost continually carried on, or whether it better suits his fancy to stroll beneath the majestic pines or commune with nature on the sandy beach, he is sure to feel a satisfaction which is realized nowhere else.

BEAUTIFUL LAKESIDE--CHESTER CREEK.

A Health Resort As Well.

The climate and surroundings of Duluth do not cater alone to the outward senses, they not only delight the eye but invigorate the lungs and stimulate the appetite as well. Thousands of sufferers from asthma, hay fever, malaria and other ills come to the Lake Superior basis each season to rest and recuperate, realizing the most gratifying results. No one can breathe the pure, ozonic atmosphere and drink the pure sparkling waters which everywhere abound without feeling their invigorating effects. In short, this location combines in one all the advantages of sea shore, mountains and inland lakes to reach but one of which many people undertake long and weary pilgrimages each year. If one so desires, he may here enjoy all the seclusion of the most remote inland resort for an indefinite period without going beyond the city limits and still be within easy reach of all the conveniences which civilization has to offer.

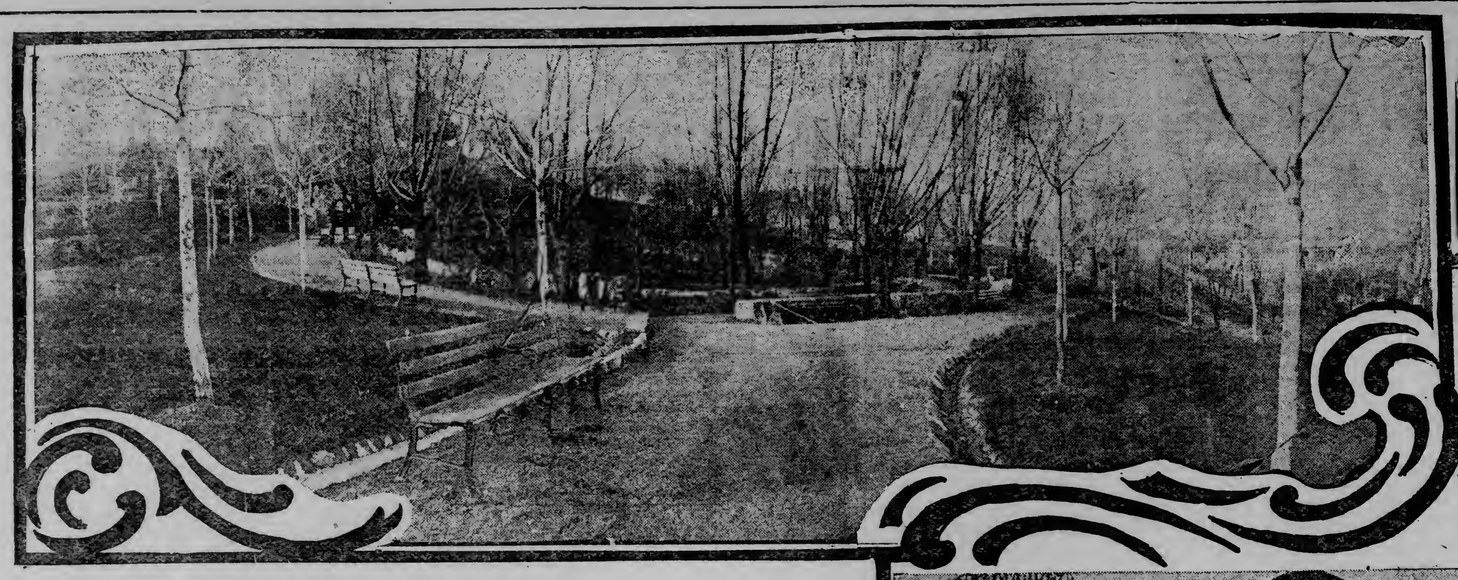
It is little wonder that the Dakotahs, Ojibways and other aboriginal nations contested with each other for ages over the possession of this ideal location which has never failed to excite the admiration of every beholder, Caucasian or savage, and will, doubtless, continue to attract future generations for all time. No lover of nature can visit this region and fail to go away impressed with the satisfaction of time well spent and he will be sure to feel a renewed zest in living and be inspired by new ideals and loftier aspirations as a consequence of coming in close contact with these undefiled haunts of nature which surround the "Big Sea Water."

Fond du Lac, a Locality Filled With Romantic and Historic Interest.

Besides the numerous pleasure resorts in the city proper, there are many charming and attractive places contiguous to the Head of the Lakes richly deserving a visit from the traveler "on pleasure bent," and which may be readily reached by one form of conveyance or another. The ride along the north shore as far as Isle Royale is replete with delightful vistas and experiences and a prolonged sojourn at that island or any of the intervening points will be time spent to good advantage. A trip overland to Black River Falls in Douglas county, Wis., is one which never fails to afford an ample reward; and an excursion along the south shore as far as the Apostle islands will be equally profitable in the sense of recreative returns.

Probably the most popular trip with citizens or tourists in this region is the ride to Fond du Lac, which suburb is now included in the city limits, and excursion steamers make regular trips to that charming resort daily during the summer season in addition to which there are several railway trains each day and many visitors go thither by carriage, automobile or other means of conveyance. The trip by the St. Louis river covers a distance of twenty miles winding in and out among numerous islands and promontories so that every minute of the voyage in either direction is filled with the most pleasurable experiences. The village itself with its shady groves by the river bank and perspective of picturesque bluffs is a most exhilarating location for a day's outing. In addition to its ever-present natural charms there are historic interests clustering about the place which, with numerous Indian legends and romances, add immensely to its attractiveness. Reference has been made in another article in this paper to the explorations and missionary labors of the Frenchmen who were the first Caucasians to visit the Head of the Lakes. These worthies and their successors who came to prosecute the fur trade found this a most convenient center from which to carry on their operations and there have been but few intervals, if any, in the last two and a half centuries that there were not white men making this location their homes, or at least their business headquarters.

In 1826 the first representatives of the United States government, Lewis Cass, then governor of Michigan territory (in which this region was included), and T. L. McKenney, came to Fond du Lac and concluded a treaty with the Indians which gave the United States the right to explore for and carry away any metals or minerals which might be found in the territory contiguous to Lake Superior. The Indians assembled here on this occasion came from as far north as Rainy Lake, as far south as St. Croix Falls and from Crow Wing and other distant places to the west. It may be well to note here that in August, 1847, another treaty was made at Fond du Lac by J. A. Verplank and Henry M. Rice, commissioners on the part of the United States government, by which all the land to the westward and southwestward from the Head of the Lake was ceded to the United States government by the Indians and, by another treaty made at La Pointe, Wis., in September, 1854, the country between the north shore and the northern boundary of Minnesota was relinquished by the Indians.



In describing the expedition mentioned above, Mr. McKenney speaks of the abundance of white and yellow lilies and other aquatic plants which grew in the St. Louis river, a circumstance which continues to be a perennial source of delight to many people who explore that stream and the numerous bayous and lagoons contiguous thereto. Among the most conspicuous of these is Spirit lake, in the center of which rises Spirit island, a prominent landmark visible for many miles around. This has been considered a sacred place by the Indians for many generations, and none were ever known to enter the lake nor take fish therefrom. Just above Fond du Lac is the foot of the rapids in the St. Louis river and a little farther upstream is the new power house of the Great Northern Power company. Though some might regard this advent of modern commercialism as a desecration of one of nature's greatest pictures, it only serves as a limited contrast to the scene and there yet remain many miles of the rapids untouched by the pitiless grasp of mammon and beyond the power of human pen to describe—it must be seen to be appreciated.

SCENE ON ST. LOUIS RIVER SHOWING GREAT NORTHERN POWER COMPANY'S DAM.

SOUL INSPIRING SCENE IN LINCOLN PARK

A PRETTY VISTA IN CASCADE PARK.

VIEW OF DULUTH YACHT CLUB ON PARK POINT.

The Hunter's and Fisherman's Paradise.

"In whate'er you sweat, indulge your taste,
Some love the tennis most and some the graceful dance,
Others, more hardy, range the purple heath where, from field to field,
The swift winged covies urge their laboring flight,
Eager, amid the rising cloud, to pour the guns unerring thunder."

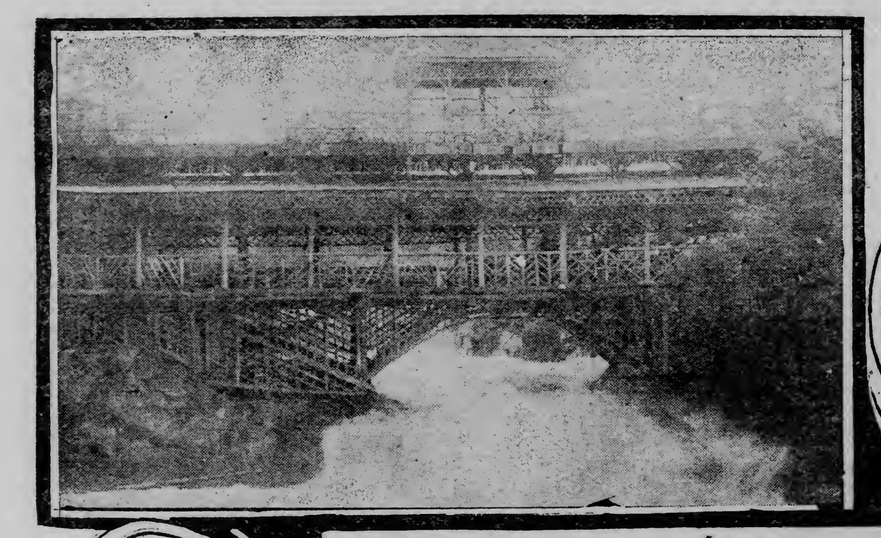
Those who delight in the quest of big game have no occasion to make any long journey from Duluth in order to satisfy their taste; for the bear, the moose, the deer and the wolf, as well as many smaller animals, still abound in the forests adjacent to the city and occasionally wander about its streets upon tours of inspection and curiosity. No finer fishing grounds can be found in the world than are afforded by Lake Superior and its hundreds of tributary streams, as well as the myriad inland lakes with which the great Northland is dotted. And the person who has not partaken of the many varieties of lake and brook trout, whitefish, perch, herring and other species taken fresh from these ice cold waters, has missed an epicurean treat unknown to other latitudes.

Many Places of Amusement In Duluth

"To hold the mirror up to nature" expresses a purpose for which artists have studied and striven, moving their audiences to greater or less degrees of enthusiasm, in all climes and in all ages. Before the development of the art of printing which brought the best thoughts of the greatest minds, as well as the news of the day, to the fireside of every family, the histrionic art filled a position of greater comparative importance in the social and educational life of the times than it has done in more recent epochs. In the days of ancient Greece, knowledge of the immortal epics of Homer and other great poets were disseminated through their recital at the famous Olympiads where were congregated the wealth, beauty, science, skill, art and intellect of the nation. And for centuries thereafter, writers and poets, as well as musicians and orators, found the stage and the rostrum the most practicable mediums through which to gain the attention of the public. Notwithstanding the multitudinous means of diversion and amusement which are accessible to the people of today, the stage still occupies an important place among the social institutions of every city, for many phases of human nature cannot be as aptly illustrated by any other means as by that of cultivated mimicry. The present generation owes its conception of past events, in great measure, to the interpretation of historic characters displayed upon the stage.

The people of Duluth are not lacking in ability to appreciate the talents of the actor and the musician as is attested by the liberal patronage bestowed on the play houses already here and the fact that others are likely to soon be established.

The Lyceum theater is pronounced by competent authorities to be the finest in the state of Minnesota and one of the best in the United States. It was built by A. M. Miller, who employed all mechanics and laborers engaged in its construction by the day and selected only the best of material for use therein. It is one of the most conspicuous and substantial buildings in the city, the walls being of stone and brick, six stories in height with the main floor devoted to the body of the theater. It is arranged throughout with a view to the comfort and convenience of both audience and artists. It is thoroughly fireproof, will seat 1,600 people, and, among other features, are two complete lighting plants installed expressly for the use of the building. The manager, Charles A. Marshall, permits only the best and most talented artists to appear in this opera house and its patrons are sure of a treat whenever they see fit to while away a leisure hour therein.



The Metropolitan theater was opened for the first performance, Christmas, 1902, and has always enjoyed a liberal patronage. The building is of brick 50x115 feet, four stories on Superior street and six on Michigan street. The auditorium will seat 1,150 people, there are eight boxes and the stage is 26x50 feet. The present manager, W. H. Longstreet, has been in charge for two years and has demonstrated his ability in catering to the public taste. Owing to the purchase of this site by the Wisconsin Central railroad for a passenger station, negotiations are in progress for the erection of a new theater to replace the Metropolitan. Though these arrangements are not yet completed, Mr. Longstreet expects by another year to open a large, new opera house with all modern arrangements suited to burlesque theatricals.

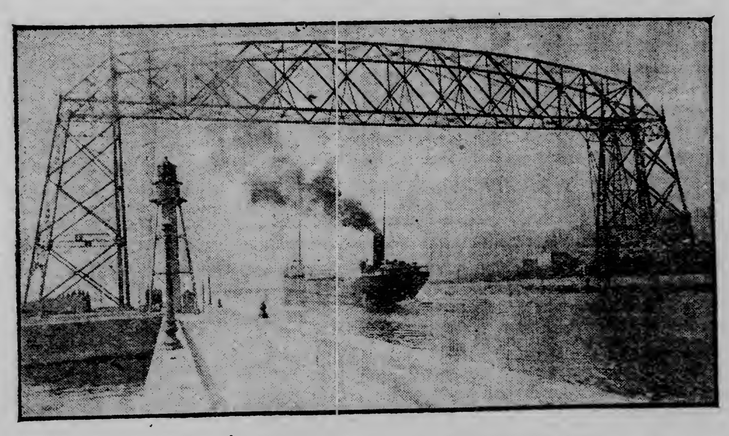
The Bijou theater was built in 1905 and is admirably adapted to vaudeville performances to which it is exclusively devoted. It has accommodations for about 1,200 spectators. The manager, James Maitland, has exhibited excellent taste in securing the best talent in this line and the public has accorded a liberal patronage from the start.

The White City.

Conspicuous among the many pleasure attractions of Duluth is the White City which was opened at Oatka Beach in the summer of 1906 and will be continued on an extended and grander scale during the summer of 1907. Delightfully situated amidst the refreshing breezes which are wafted from Lake Superior on the one hand and the bay of Superior on the other, no pleasanter location could be imagined within a few minutes' ride of the business center of a great city. Several acres have been set apart for this exhibition which combines most of the best amusement features usually congregated at fairs, carnivals, museums and summer resorts. A miniature railway transports visitors between the different portions of the grounds and a mystic river takes the visitor on a tour through a great variety of scenery and adventures. Many of the attractions are changed at frequent intervals and the place is a popular resort with Duluth citizens as well as with the many tourists and others who sojourn here during all or a portion of the summer.

RUSTIC BRIDGE AND PAVILION—LESTER PARK.

Winter Sports In Great Variety.



It may be thought by some people at a distance that the climate of Duluth precludes the indulgence in outdoor sports during the winter season. Nothing could be farther from the truth, the clear, bracing winter atmosphere of this climate serves as an almost continuous invitation to spend both days and evenings in the open, and the robust health which is so marked among Duluth people is due, in great measure, to indulgence in outdoor sports on the part of both sexes. Nowhere else is greater interest shown in skiing, curling, skating, tobogganing, ice boating and various other forms of outdoor winter recreation; numerous are the clubs and organizations devoted to the promotion of skill in these different diversions and many the trophies which have been won in tournaments, bonspiels and other sporting meets throughout the North and Northwest and proudly exhibited by Duluth players. This city has been the meeting place of many of these gatherings and its fame as a center of interest in winter sports is constantly increasing.

Clubs, Health and Pleasure Resorts

Kitchi Gammi Club.

Club life had a beginning in Duluth nearly a quarter of a century since, and the first and only exclusively social club in the city is still one of its recognized and established institutions. Numerous other associations designated as clubs have come into existence and enjoy marked degrees of popularity but, in every other instance, some object other than sociability has been combined in the purpose for which the association exists.

The Kitchi Gammi club was incorporated "for the purpose of social culture," September 26, 1883. The first president of the club was E. A. Gilbert, then, and for many years thereafter, a prominent business man in this city, but now a resident of Santa Barbara, Cal. The rooms of the club were in the Opera house block until that building was destroyed by fire in 1892, when the club made its home for a time at Second avenue west and Second street. For twelve years past, it has occupied comfortable and commodious rooms at the southeast corner of First street and Third avenue west, where it has made ample provision for the entertainment of its members and their guests. There is an excellent library and reading room and separate cafes are kept open for ladies and gentlemen, provided with first-class accommodations and an unexcelled cuisine. In short, all the appointments of the place will compare favorably with the best clubs in many larger cities.

Among the corporate members of this club who are still well known residents of the city may be mentioned. M. J. Forbes, A. S. Chase, F. W. Paine, C. H. Graves and A. H. Viele. Some of these gentlemen are sojourning elsewhere at present, but all are believed to still claim Duluth as their place of residence, and all have been conspicuous either in business or official life during a good share of the twenty-four years in which they have been identified with the club.

Most readers will recognize the Ojibway Indian name for Lake Superior in the cognomen adopted by the club at its beginning, and by which it is widely known. During the period of its existence it has been the privilege of the organization to entertain many visitors to the city, among whom were some of the most distinguished men of the nation as well as a number of foreigners of note.

The membership of the Kitchi Gammi club includes four hundred of the most cultured people of the city, though a number of them no longer reside here. Its present officers are Thomas F. Cole, president; Ward Ames, vice president; F. W. Paine, secretary, and B. W. How, treasurer.

The Commercial Club.

One of the strongest organizations in Duluth of a social or semi-social character is the Commercial club, numbering one thousand members and exerting a powerful influence toward the upbuilding of many of the most vital interests of the city. It was incorporated March 1st, 1902, its mission being best expressed in the preamble adopted at that date, as follows: "The object and purpose of this club shall be the promotion of the commercial and manufacturing interests and the general welfare of the city of Duluth and St. Louis county, Minnesota.

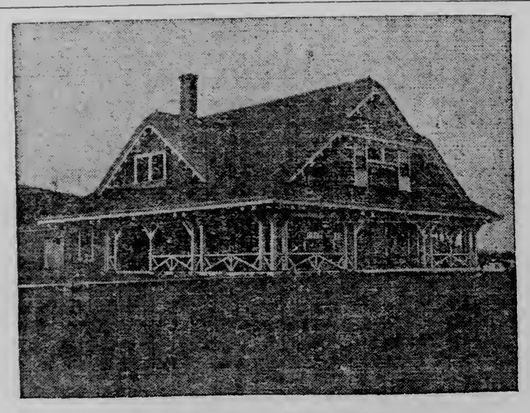
"To bring all loyal and progressive citizens into closer contact in their commercial and social relations, and to work unceasingly for the development of the natural resources of the city.

"To provide a common meeting place for all citizens interested in public work, a convenient and appropriate place of entertainment for strangers and an opportunity for business men to assimilate with the commercial world.

"To secure all worthy commercial industrial enterprises seeking a location, and to point out to the commercial interests of the Northwest that Duluth is their natural trading point.

"To secure the opening of public lands, development of our natural water-power and to encourage desirable immigration to this section.

"To make every consistent effort towards securing homes in our city for people in moderate circumstances, and to encourage the employment of the worthy poor.



"To announce to the world by renewed advertising our many magnificent natural advantages.

"To secure for Duluth and the territory tributary thereto, equitable freight rates and the general improvement of public service.

"To foster and build up manufacturing industries and by every consistent effort encourage the employment of skilled labor."

It may be truly said that these avowed purposes have not been lost sight of, and much of the progress made in the city and county in the last five years may be directly traced to the initiative taken by the club. Questions of public policy are fully and freely discussed and much general information promulgated through the organization and prominent speakers from a distance are often engaged to address the club on special topics.

The officers of the club are: President, Frank Crassweller; first vice president, W. E. Wagner; second vice president, J. W. Kreitter; treasurer, J. I. Thomas; secretary, Hubert V. Eva; additional members of the board of directors are: G. H. Crosby, E. R. Towne, B. W. How, W. I. Prince, J. I. Van Vliet and B. G. Segog. Officers of public affairs committee: T. W. Hugo, chairman; Alex McDougall, vice chairman; P. S. Anneke, treasurer, and C. B. Miller, secretary.

NORTHLAND COUNTRY CLUB.

Northland Country Club.

Duluth and its environs present multitudinous advantages for the pursuit of a great variety of outdoor sports suitable for both summer and winter recreation. There is probably no other city of its size in the United States where the business or professional man may leave his office and, at the end of a few minutes travel either by trolley, by horse or carriage or on foot, find himself in the midst of nature's deepest solitudes, amongst the haunts of the speckled trout and numerous denizens of the forest, not excepting the deer and the bear. The wilds have many attractions for those who are never tempted to disturb the peace of these innocent inhabitants of the woods and streams, and there are many calls in other directions which attract the pleasure-seeker, whether he be citizen or stranger and along whatsoever line his tastes may lead. These opportunities are fully appreciated by the people of the Zenith City, and numerous indeed are the societies, clubs and other organizations which exist for the promotion of various forms of sport and recreation.

One of the most conspicuous of these systematized efforts to banish care is found in the Northland Country club which was incorporated in 1899 and now comprises 375 members, including many of the foremost people of the city. Its grounds embrace more than one hundred acres delightfully located in the eastern part of the city and lying on both sides of the Lakeside car line, affording ample room for golf links, archery, tennis, trap shooting and other athletic amusements. There is a handsome and commodious club-house, in charge of a steward, which supplies in-door comforts, and the cafe is open at all seasons of the year. In winter the club-house is utilized by numerous dancing, sleighing and other parties and ski and toboggan slides are among the attractions which will be added to the grounds during the coming season.

The grounds and improvements of the club represent an investment of $75,000, and are now valued at one hundred thousand. The popularity of the place is growing rapidly each season, and its various appointments are exhibited to visitors in the city with as much pride as centers about any of the numerous attractions which have made Duluth famous as a pleasure resort. The officers of the club are: G. G. Hartley, president; W. W. Walker, vice president; E. P. Alexander, secretary, and Weiner Presentin, treasurer.

The grounds of the club extend along the foot of one of the rocky cliffs which rise for several hundred feet and help to make the "Zenith City" famous for its natural scenery; while on the other side the waters of the "Great Unsalted Sea" afford a variety of landscape which is rarely found in a single location.

Duluth Yacht Club.

Many people who have lived in Duluth for years fail to realize all the advantages which accrue to a city from being situated upon the shores of a great body of navigable water, complemented by the proximity of an ample harbor. While the facilities for commerce are recognized by everyone, the delightful opportunities for various forms of recreation and aquatic sports have been, in some degree, overlooked. Mere familiarity will sometimes cause the greatest beauties of nature to pall upon the senses. Happily, this is not the case with most of our citizens and there are few who do not at some season of the year indulge in one or more of the numerous phases of recreation made possible by this advantageous situation, and nothing more attracts the stranger from a distance then the sight of this big, blue expense of water and the thought of the pleasures which its presence involuntarily suggests.

While man is not, naturally an amphibious animal, his nature quickly and naturally adapts itself to his surroundings and, from the earliest ages, he has been accustomed to seek his livelihood to a great extent upon the seas, and years of familiarity with wind and wave have incorporated a trait in his being which is felt even by the veriest "land-lubber," and which exerts an irresistible influence over many people who find it impracticable, for one reason or another, to indulge this instinct by engaging in some nautical pursuit. To such as these, boating for pleasure has ever afforded a source of keen delight and there is scarcely a harbor in the world which does not float a fleet of pleasure craft, while every inland lake, of sufficient size to permit a course of a few miles in extent, boasts of one or more boat or yachting clubs.

The foundations for the Duluth Yacht club were begun as much as eighteen years ago by a few venturous spirits who saw and realized the immense possibilities for development of the sport at this location but, it was not until the spring of 1903 that the club came into existence as a distinct organization. Beginning with fifty members, the number rapidly increased until its membership now includes nearly or quite four hundred and will, doubtless, reach five hundred during the coming season, and the personnel of its members is such as to reflect credit upon the organization. Though yet in its infancy the club has developed rapidly and the club-house affords many social comforts as well as providing its members with housing for their boats and a work shop with complete outfit of tools for making repairs or for building new boats of every description. Many courtesies are extended to the owners of visiting yachts in these waters, and membership is open to launch owners and the lovers of ice-boating as well—an innovation in the history of yacht clubs. Another feature which distinguishes this from any other yacht club in the country is the accommodation for storing boats in winter; the building now devoted to this purpose is 120 feet in length and will be enlarged at an early date. The launch house furnishes the boat owner with safe and convenient anchorage and many conveniences not practicable to include in an individual boat house. Among these is a marine railway for hauling out or launching boats.

At least fifty sail boats and launches now fly the club colors and nearly every known style of boat is represented including one-design sloops of the "knockabout" type; one-design cat-boats of the "lark" type; one-design cat-boats of the "Grasser" Toledo type, and one-design sloops of the "sidewalk" type.

The officers of the club are: Commodore, Horace Johnson; vice commodore, H. S. Mahan; rear commodore, Frank Lyman; captain, Robert W. Marshall; treasurer, J. A. Roth; secretary, H. A. Earnshaw. The social life of the club is not neglected; for the coming season it will have the finest ball room in Duluth, 94 by 50 feet. The club house grounds on Minnesota Point have a frontage of 380 feet on the bay and an equal distance on land. When the contemplated improvements for this season are completed, the grounds and buildings will represent an investment of fully $45,000.

Among the improvements planned by the officers for this year is the opening of the sand-bar at the mouth of Lester river, so as to provide a harbor for small boats in that stream. There will also be a boat and club house at that location for the convenience of members of the club living in that locality.

LINCOLN PARK AND LAKE.

Duluth Boat Club.

The Duluth Boat club was incorporated in 1886 with eleven members. For sixteen years it maintained a club house on the old Northern Pacific slip near the Sixth avenue viaduct. With the growth of lake commerce this situation became dangerous for pleasure boats, and in 1902 it built its present quarters on Park Point.

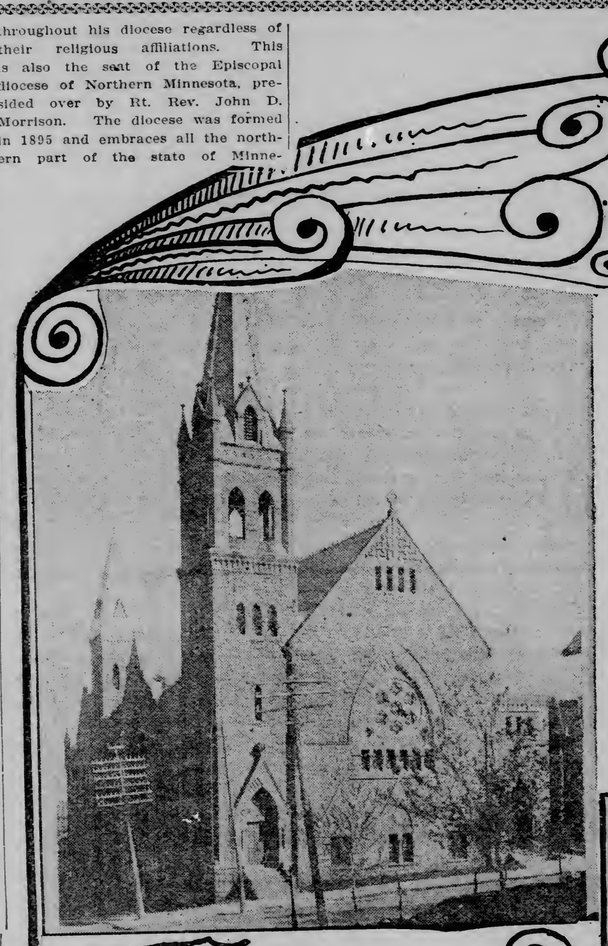
In 1906 the facilities of the main house on Park Point were greatly enlarged, building launch houses with a capacity of sixteen launches, and the cafe dining room which is unique in that it is open on four sides and conveys a splendid view of the harbor and the shipping.

The club also began in 1906 to put into effect a plan long considered of establishing branch stations for the convenience of its members, and the first of these was built at Oatka Beach. Here a stock of pleasure boats and canoes is maintained. There are accommodations for picnic parties, and dressing rooms for bathers.

"NORTH BUTTE."
FASTEST MOTOR BOAT IN THE NORTHWEST.

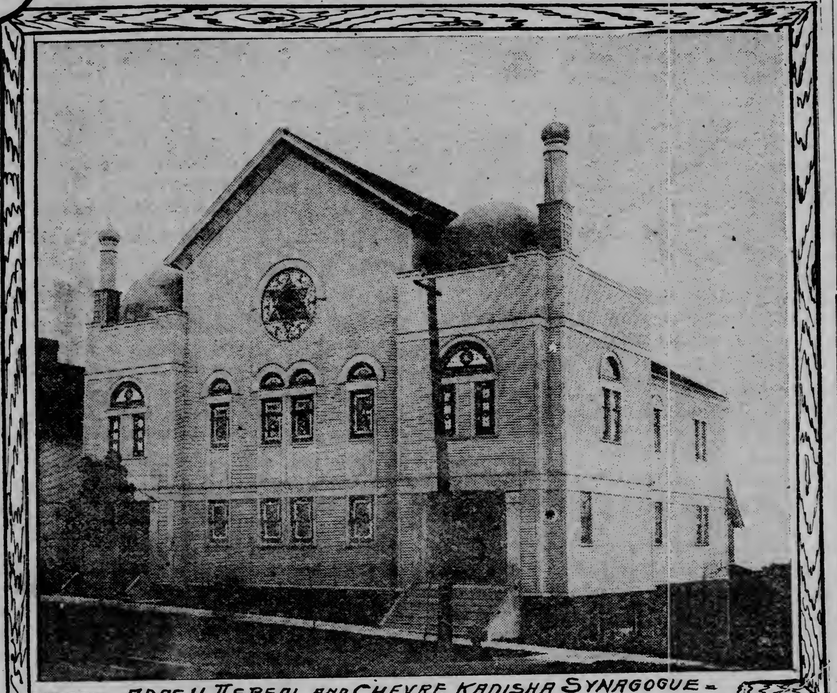
The club is now planning an important branch on St. Louis river, just above Spirit Lake. The plans now contemplate a pavilion on a high bluff overlooking the river, a kitchen and dining room, and cottages for use of its members. It will be possible for club members to spend the night at this branch, or to take their families and pass a week or a month there free from the necessity of providing either food or bedding. Canoes and pleasure boats will be stationed there and it is convenient of access by both train and river steamer. The club also plans to establish a launch ferry service to the car line at West Duluth when needed. In the warmer water of the river, bathing will be one of the attractions of this branch.

The Duluth Boat club, while primarily a pleasure club, has always taken great interest in the rowing sport and it has a good record in this line.



In 1906, after ten years of non-use, the Minnetonka regatta was revived and the rowing clubs of Winnipeg, St. Paul and Duluth pulled off a series of exciting races. Duluth sent entries in the junior four and the junior eight events and captured both of them. This was done with amateur coaching by one of the club members and not by hiring professional coaches as most rowing clubs do.

The club has demonstrated that it is possible to have an organization of young men of large membership and yet keep a club spirit that is commendable. It has endeavored to promote outdoor life of all kinds which would be healthful outdoor sport for office men.



This club's facilities now are probably the finest of any club on the Great Lakes. The club property today is worth $40,000, almost entirely free from incumbrances, and with 500 members all taking pride in the club, it can be made even more successful in the future than in the past.

The board of directors consists of the following gentlemen: Julius H. Barnes, president; A. W. Frick, vice president; Capt. Alex McDougall, second vice president; I. S. Moore, treasurer; J. D. Mahoney, captain; B. M. Peyton, W. S. Telford and George Spencer.

Many Religious Organizations.

From the arrival of the first Jesuit missionaries at the Head of the Lakes, soon after the middle of the seventeenth century, the members of that great organization zealously worked among the Indians, as long as this part of the country remained under the dominion of the French government. Their work was prosecuted with zeal and produced an effect upon the lives and characters of the aboriginies which has ever since been recognized.

The first recorded instance of this region being visited by a Protestant minister was in 1832, when Rev. W. T. Boutwell, a Presbyterian missionary then stationed at Mackinaw, Mich., came to Fond du Lac in company with an expedition sent out by the United States government in charge of Henry P. Schoolcraft, Indian agent at Sault Ste. Marie, and Lieut. Allen of the Fifth United States infantry, for the purpose of exploring the country about the Head of the Lakes and the Upper Mississippi, and to vaccinate the Indians who had been suffering for some years from the ravages of smallpox in this region. A year or two later Mr. Boutwell was joined by Rev. E. F. Ely, and among those engaged in subsequent teaching and missionary work at Fond du Lac may be mentioned George Copway, James Simpson and Rev. J. W. Holt.

After English-speaking people began to congregate within the present city of Duluth, the first instance known of a religious service being held here was a sermon delivered at Oneota in October, 1855, by Rev. J. G. Wilson, then located in Superior, to whom belongs the honor of having first suggested the name Duluth for the city which now proudly bears that cognomen.

The first building designated for religious worship was a frame structure at Oneota, built in 1856. It was open to the use of all denominations, and also served the purpose of a schoolhouse, having been erected by the proprietors of the townsite for these combined purposes. As in most other pioneer communities, religious services were conducted in various public buildings as well as in private houses at times, but the first known case of a building being erected expressly for religious worship was in 1869. About that time the population of the city began to expand quite rapidly, and the need of spiritual comfort and instruction seems to have been one of the earliest wants for which provision was made. Within a year or two from that date comfortable houses of worship, for those times, were erected by several denominations, including the Presbyterians, Methodists, Episcopalians and Roman Catholics. From that time the growth of religious feeling has been steady and rapid, until it is now represented by at least eighty congregations, nearly or quite all of them occupying buildings devoted exclusively to their use, and in many cases the church property includes other buildings. A noteworthy instance of the last mentioned fact is the case of the cathedral (Catholic) parish, the property of which, including grounds, cathedral, espicopal residence and school, amounts to fully $350,000. To the credit of the parish it should be added that this property is clear of indebtedness.

Ample Opportunities for Worship Are Afforded.

Every religious denomination or sect is represented in one or more of the eighty congregations of the city. Each of the leading denominations has several churches in different parts of the city so that the worshipper, of whatever faith, may find congenial opportunities for gratifying the needs of his spiritual nature and Duluth has come to be known as an important center of religious culture in which are frequently gathered conferences and conventions in the membership of which a number of states are represented. Since 1889, when the Catholic diocese of Northern Minnesota was formed, this has been the seat of the bishopric residence, occupied by Rt. Rev. James McGolrick, a scholarly, zealous and broadminded ecclesiastic who has distinguished himself as a citizen as well as a prelate and who commands the respect and admiration of people throughout his diocese regardless of their religious affiliations. This is also the seat of the Episcopal diocese of Northern Minnesota, presided over by Rt. Rev. John D. Morrison. The diocese was formed in 1895 and embraces all the northern part of the state of Minnesota. Bishop Morrison is a fervent and eloquent speaker whose influences is felt far beyond the confines of the diocese. His fearless and determined advocacy of the rights of the Indians of Northern Minnesota have won for him a lasting renown among all whose sympathies go out in behalf of the weak and the oppressed. Duluth is likewise the home of Rev. E. C. Clemens, presiding elder of the Duluth district of the Methodist Episcopal church. Beside these eminent men, there are a number of eloquent divines located in this city whose abilities are known far beyond its confines and people are frequently attracted by the regular services from points in various parts of the Northwest.

In church architecture significant progress has been made since the first modest structures were built by the pioneers and the Duluth of today presents numerous stately and commodious edifices which would do credit, from an architectural point of view, to many an older city of more metropolitan pretensions.

Though one of the latest of the Protestant denominations to begin work in this field, the Lutherans have not been idle, the different divisions of the Lutheran church now number seventeen congregations and boast some of the most imposing church edifices to be found in the city. Several parochial schools are also sustained by this denomination as well as a number of beneficial, and philanthropic institutions.

Church congregations are apportioned among other denominations as follows: Methodists, 14; Presbyterians, 9; Catholic, 9; Baptist, 8; Episcopalian, 6; Evangelical, 3; Congregational, 2; Christian, Unitarian, Christian Science and Mission 1 each.

There are four congregations of Hebrews in Duluth, three of which are Orthodox. The oldest and most conspicuous being Adash Israel and Chevre Kadisha, which comprises 110 families of about 500 members. The synagogue of this congregation, which was built five years ago at an expense of $20,000, is located on Third street at Third avenue east. Rabbi Joseph Toplitz, is the present pastor.

Temple Eman-u-e-l was organized twelve years ago by the members of the Reformed Hebrew church. The synagogue was erected in 1899 at Second street and Seventh avenue east, and thirty-five families worship there. All services are conducted in the English language and Christians as well as Jews are invited to attend. Dr. M. Lefkowitz, lately of Las Vegas, New Mexico, was recently installed as rabbi of this congregation, and is an eloquent speaker of modern ideas.

Koleret Israel synagogue is located at 323 East Fifth street. And Adash Benai Israel congregation was organized in January, 1906, at 1516 West Michigan street, where the erection of a synagogue is contemplated in the near future. Neither of these congregations has a settled rabbi at present.

These vast organizations are steadily exerting a mighty influence for the uplifting of humanity, immeasurable in its extent, but felt, unconsciously at times, by each and every individual in the community. Differences may arise between these several organizations concerning matters of creed or discipline, and sometimes over moral questions as well, but, as between right and wrong in the abstract, there is always one opinion here as elsewhere and no great city could afford to be for a single day or hour without these great moral forces.

The religious and charitable work carried on by the Salvation Army should not be lost sight of. In its unpretentious way, this band of zealous workers constantly carries on its mission of comforting the distressed and relieving the physical sufferings of unfortunate humanity. There are two corps of the army in this city: Duluth Corps, No. 1, in charge of Adjt. Charles Mason, assisted by Capt. Nellas, has thirty-two members and the Swedish corps of fifty members, which owns comfortable quarters in the West end. Corps No. 1 conducts a hall and workingmen's hotel as well as a store for the disposition of second-hand clothing and furniture. One thousand five hundred and seventy-six pieces of these goods were collected and distributed among the poor of the city during the four months ending Feb. 1, 1907. Lodgings were furnished to 1,365 men during the same period. The income from these sources amounting to $720.15. This industrial work is in charge of Ensign Peter James. Five hundred toys, shoes and other Christmas presents for children were distributed, and Christmas dinners were given away to 5,000 people and about 600 other meals are given away in the course of a year. In accordance with the policy of the Army, which prevails everywhere, it is aimed to make the industrial department self-sustaining by making a slight charge for the goods but, in cases of absolute destitution, many articles are furnished gratis. The religious influence of this organization also reaches many people who would derive no benefit from other church services.

Young Men's Christian Association.

The Young Men's Christian association is one of the aggressive, benevolent organizations of Duluth which has accomplished a great work tending to the mental and moral elevation of the young men and boys of the city. It is a progressive force combining practical, religious, educational and philanthropic influences which was organized in this city in 1882 and at the beginning of the present year had a membership of 1,205 in the men's department. Hon. John Miller is president and Philip Bevis, general secretary. The latter whose whole time and heart and soul is engrossed in the work, has filled that position since June, 1901. The character of the work carried on by the association is too well known to require explanation in detail even if the limits of this notice would permit. Suffice it to say that the organization has been highly successful here and its progress is still making rapid strides.

Realizing the urgent need of more suitable and commodious quarters, about a year since the association began a vigorous campaign to secure the funds for erecting a new building which should be especially adapted to its purposes; as a result of this united and determined effort, the building is now in course of construction on Third avenue west at the corner of Second street and will be ready for occupancy within a few months. It will be a handsome and substantial building of brick and concrete, 100x140 feet, consisting of four stories and basement as shown in the accompanying cut. The total cost will amount to $200,000, which is already provided for, $181,000 having been subscribed and the equity in the building now occupied will provide the balance. The assembly hall will seat 350 people and there will be ample room for various features of the association's work. There will be a large gymnasium and swimming pool and one whole floor will be devoted to educational facilities; the night school, which now includes 212 students who receive instruction for six months of each year, will be considerably increased and, probably, extended throughout the year. Specialists are employed to conduct these classes which cover nearly every branch of instruction, some of which could not be acquired elsewhere outside of a special or technical school. There is an excellent reference library and proximity to the public library, only two blocks distant, will be an added advantage. The two upper floors will be used as dormitories, the need of which accommodation has been long felt by the association.

The boys' department of the association is an important feature which should not be overlooked. This is located at Sixth avenue east and Third street and will continue to be housed separately from the men's department. Four hundred and thirty-five boys are members (Jan. 1, 1907), and the influence exerted upon their lives and habits has attracted frequent comment from parents and others interested in their welfare.

Young Women's Christian Association.

This organization serves a noble purpose which will meet with the hearty approval and co-operation of every earnest and broad-minded person. It fulfills a mission on behalf of young women and girls which is met by no other organized influence in this city and accomplishes practical results so apparent as to require little comment other than a plain statement of the facts in the case.

The association was organized in April, 1902, with over 200 charter members. The membership rapidly increased so that for three years past it has fluctuated between nine and twelve hundred. It is managed by a board of directors comprised of about a score of the leading ladies of the city, and there is an advisory board of prominent business men. Religious services are held regularly and the rooms of the association afford all the comforts and advantages of a downtown home for girls whose employment keeps them away from home advantages and influences through the day or evening. A

PILGRIM CONGREGATIONAL CHURCH.

prominent feature of the institution is the lunch room in which clean, substantial, well-cooked food is served on the cafetera plan both noon and evening at a moderate cost, amounting, on an average, to 16 cents per meal. During the year 1906, 66,423 meals were served, an increase of 12,000 over the previous year. There are also rest and reading rooms and a gymnasium. The educational department provides instruction in English to foreigners as well as teaching other languages and a number of domestic arts such as cooking, dressmaking, millinery, embroidery and plain sewing. Many social advantages are also afforded and the same help and courtesy is shown to all women and girls whether members of the association or not.

Soon after the association was formed it installed a matron at the Union passenger station who has been able to render valuable assistance and advice to many women who are traveling and to girls who arrive here as strangers, as a result of which service, there is a marked change in conditions at that place. Another important and useful feature is the employment bureau and boarding house directory by means of which over 600 have been directed to respectable boarding and rooming houses and more than 100 girls have secured positions.

The treasurer's report for the year 1906, shows disbursements to the amount of $17,217.48, of which $2,590.32 was received from donations. There remained in the building fund, $1,629.88. The present accommodations are totally inadequate to the growing work of the organization and plans have recently been completed for a new building exclusively for its use. It is hoped to raise the necessary funds ($150,000) so as to complete the building within the next year.

Duluth's Charitable and Benevolent Organizations.

The humanitarian spirit is strongly manifested in Duluth people. Busily engrossed in their daily business affairs, men sometimes appear to be forgetful of the distress of their less fortunate brethren. This has been true in all climes and all ages, but deep down in the hearts of most people, lies a bond of fraternal instinct which, when once aroused readily responds to the cry of anguish and flies to the relief of silent suffering as well. But true philanthropy does not stop with the temporary alleviation of physical suffering, aiming rather to assist and encourage the unfortunate and the distressed to strive for the betterment of their own condition, not only as to physical comfort, but by the attainment of higher and broader intellectual and spiritual ideals.

For the most part the people of Duluth are prosperous and there is, doubtless, as small a percentage of actual physical suffering here as can be found in any city of equal population in the world. Owing to the fact that ours is a mixed population and that many different nationalities are represented, and many of the people came from parts of the world in which there was little opportunity for education or enlightenment, there is, perhaps, more need here than in other localities of the same number of people, for organized effort in behalf of the betterment and cultivation of these numerous classes of citizens.

This need is fully realized by those whose attention has been directed to these conditions and numerous are the organizations which have been formed to relieve the various wants of the needy and suffering as well as for the better care of many whose circumstances would permit them to obtain every desired comfort if such accommodations could be obtained elsewhere. Our citizens have generously responded to the calls made upon them by those who have taken in hand the work of providing the wants enumerated. In speaking of the different institutions of this character it is sometimes difficult to classify them properly as they frequently partake of a religious or educational character while classed as charitable institutions. Besides the organized work spoken of herein, it should be borne in mind that an immeasurable amount of work is continually being done along similar lines by individuals as well as by the various churches, fraternities and other societies of the city.

One needs only to look about the city to be convinced that the citizens of Duluth are making generous provision for housing the homeless as well as for according some comfort not practicable to combine in the best of homes. Our eleemosynary institutions already form an important part in the architecture of the city.

St. Luke's Hospital.

This is the oldest charitable institution in the city, having been established for twenty years or more. It is situated upon a sightly location at the corner of First street and Ninth avenue east, where the present building was erected in, 1903 at a cost of $110,000 and the hospital removed from its former location on Fourth street. The building is fireproof and equipped with operating rooms of the most approved sanitary design, and is up-to-date in all its appointments. Seventy-five patients can be provided for at once and the most skillful trained nurses are employed, some of whom are on duty at all times, day or night.

The institution is under the control of a board of managers, which is an auxiliary of the Episcopal church, but many people of other denominations, or of no church affiliation, contributed toward the building. A. W. Ryan, D. C. L. is president of the board and Miss Lydia Bevan is superintendent of the hospital. It is the aim to make the institution self-supporting and reasonable charges are made considering the service rendered. All the marine work of this port has always received attention here and considerable charitable work is also attended to.

One of the greatest needs of the institution is more room, the present building could be doubled in size without exceding the demands of the work.

CHILDREN'S HOME.

The Children's Home.

A monument to the warm hearted philanthropy of Duluth ladies is the Children's Home at Fifteenth avenue east and Fifth street, an ideal location overlooking Chester park and Lake Superior. The home was founded a number of years since by Mrs. Sarah Stearns, wife of one of the pioneer judges of the city. The present building was erected in 1903 and is modern and well suited for its purpose which is to afford a temporary home for orphan, half-orphan and other children who, for any reason cannot be properly cared for in their homes. It is a nonsectarian institution and is managed by a board of twenty-two ladies. The matron, Miss Louise Wheeler, has had eighteen years' experience in similar institutions in the East and elsewhere. From thirty-five to seventy inmates are accommodated, the present number being sixty-four, of whom nearly one-half are under three years of age.

St. Mary's Hospital.

This is, no doubt, the most widely known of the many philanthropic undertakings conducted in Duluth and Northern Minnesota by the Sisters of St. Benedict, an order whose members are ever to be found at the bedside of suffering humanity ministering to the physical wants of the distressed as well as affording cheer and comfort to the mind.

The hospital was first opened in February, 1888, at what is known as the West end, since which time 22,691 patients have been treated, representing nearly every nationality and religious affiliation; only about 8,000 having been professed Catholics. Of this total number 3,404 were charity cases. So generous was the patronage accorded to the hospital by the physicians and people of Duluth and surrounding country that, in a few years, it became apparent that it would be necessary to erect a building on a more central location. In order to be able to give proper attention to the sick, the halt and the maimed of a large city, it is necessary not only to be adequately fitted for caring for the patients who come from the city proper, but to be able to attend to those who are sent in from adjacent places that do not have hospital accommodations, and sometimes it is necessary to care for the afflicted who are cast upon the world at large by far-off towns and who have no claim of residence upon the hospitality of this community.

The present home of the hospital was opened Feb. 5, 1898. It is an imposing building of four floors, 138 by 90 feet, with a two-story addition for laundry and boiler rooms, centrally located on Third street at Fifth avenue east, yet sufficiently removed from the noise and confusion of the business part of the city and commands a magnificent view over the waters of the lake. The original cost was $80,000, but, with natural appreciation and the improvements that have since been made in building and equipment, the property is now valued at $113,000. A second operating room has recently been fitted up in first-class style, in addition to which there is a thoroughly equipped pathological and bacteriological laboratory, a pharmacy and a static and X-ray department. Among other modern conveniences are a hot-water heating plant, an electric plant which furnishes both light and power, and an electric push-button elevator for the use of patients and attendants as well as visitors. There are fifteen wards and many private rooms, affording accommodations in all for 160 patients. During the past year 2,014 cases were treated, of which only a small percentage terminated fatally. No regular staff of physicians is employed, but the hospital is open to all reputable physicians, and enjoys an excellent patronage and reputation among the members of the profession. All the nurses are sisters, but several male assistants are employed.

St. James Orphans' Home.

This is another branch of the beneficent work carried on by the self-sacrificing Benedictine Sisters in Duluth and Northern Minnesota. It is located at Twenty-third avenue west and Third street, in the building formerly occupied by St. Mary's hospital. This building was presented to the order for this purpose, July 1, 1901, by Mrs. P. M. Kerst of Duluth, a benevolent lady several of whose daughters are identified with the Benedictine order. It is a four-story, red brick building, admirably adapted to the purpose, and has accommodations for 150 inmates, but only 90 are being cared for at present. It is open to orphan children from any part of the diocese without regard to the religious affiliations of themselves or their relatives. Besides being a home, a school is conducted for the inmates, and industrial instruction is given as soon as the children reach a suitable age. When old enough to become self-supporting, positions are secured for them, and the order continues to exercise a paternal care over them, and these cordial relations are often continued indefinitely.

Duluth Humane Society.

This association was incorporated under the general laws of the state of Minnesota, Nov. 17, 1892. It is composed of citizens of Duluth and St. Louis county and is managed by a board of twelve directors of which Rev. A. W. Ryan is the president and Henry Taylor, secretary. The purpose and object of the society, as expressed in its articles of incorporation, is to inculcate humane principles, to prevent and punish cruelty, especially to children and animals of whatever name, throughout St. Louis county; to secure the strict enforcement of all laws of the state relating to the prevention of cruelty to children and animals and the protection of birds, and to labor earnestly to secure the passage and enforcement of such other laws as shall be dictated by a high, enlightened and humane civilization to shield the helpless from wrong and oppression of every kind and nature.

The agent of the society is H. C. Withrow, who combines with this duty that of truant officer and probation officer, the duties of the three positions being closely allied and frequently combined in the treatment of a single case. He has shown himself to be admirably fitted for this line of work in which he is ably assisted by Mrs. D. F. Forgy. There is nothing that touches the heart of the average man more than the sight of helpless or abused childhood or infirm old age. Hence, the work of this society should and does receive the sympathy and commendation of nearly every one. Mr. Withrow's report for the year ending Sept. 20, 1906, shows that 306 cases were investigated of which 182 were in the interest of very old ladies, feeble men, babes and other children; and 124 cases were in the interest of abused or neglected animals. Homes were provided for 102 children and eighty were placed in the different institutions provided by the state and city, including the state school for dependent children, state school for the deaf, state school for the blind, state school for the feeble minded, state hospital, Children's Home society and Duluth children's home.

The total disbursements of the society amounted to $1,447, and the total annual expense to city and county for the three positions filled by Mr. Withrow and his assistants does not exceed $2,700. It is doubtful if an equal amount is expended to as useful an end by the people of the city and county for any other purpose or combination of purposes. In a few cases the work was extended outside the county upon the request of citizens or officers of adjacent counties. Every citizen of St. Louis county should take pride in the work of this organization.

The Duluth Bethel Society.

This organization was incorporated in 1873, its object being to promote the temporal and spiritual welfare of seamen, lumbermen, railroad men, miners, etc., and their families, and the needy and destitute in this city and surrounding territory. The present board of directors comprises the following well-known citizens: W. D. Edson, president; E. C. Little, vice president; James T. Hale, secretary; George Wilson, treasurer; F. E. House, Page Morris, H. M. Peyton, W. S. Moore, Ward Ames, L. Mendenhall, and W. J. McCabe. Rev. J. T. Moody is chaplain and general superintendent.

The work of the society is carried on through three institutions located at different points in the city. The Lake avenue Bethel was built twenty years ago through the philanthropic efforts of Rev. Charles C. Salter, now deceased, who contributed largely of his own means and secured contributions from other charitable persons. Afterwards the Bethel Branch was established at 508 West Superior street and has grown to exceed the original establishment as regards the number of people affected. The Bethel Home for women is located at 420-432 Sixth avenue east. These combined philanthropies merit the support and commendation of all right-minded people in their noble efforts to alleviate the distress of unfortunate, neglected and tempted people to whose necessities they minister by supplying free reading rooms, coffee rooms, rescue home, furnished rooms, Boys' club, sewing school, Sunday schools and gospel meetings.

At the Lake Avenue Bethel and the Bethel Branch, gospel meetings are conducted every evening. Located as they are in the heart of the localities most frequented by the neglected classes, they are able to attract many to these meetings who would receive nowhere else the comforts of the gospel and numerous instances are known of men who were on the verge of committing suicide or other serious crimes, who have been diverted from their purposes by the influences exerted at these meetings and have gone forth with lighter hearts and new and worthier aspirations. Sunday schools are also conducted in which the characters of hundreds of our future citizens are molded to a marked extent and their minds drawn from the contaminations of the gutters and directed to higher and better thoughts. The avowed object of the Bethel Home for Women is: "To seek those who have gone astray and wish to forsake a life of sin; to save them by ministries of loving help, and to fit them to fill honorable positions in the community." The work is in charge of noble-minded women and is worthy of the confidence and support of all who would lend a hand toward the rescue of a class of girls and women who are too often spurned and neglected by well-meaning people. The system which prevails is not an enouragement to immorality and the inmates, when discharged, usually return to lives of respectability.

Considerable evangelistic and charitable work is done outside of the institutions mentioned, especially in the summer months when tent meetings are held in different parts of the city. Only a small percentage of those who professed conversion at the gospel meetings asked for material aid. It is the aim to furnish clean, wholesome physical comforts at moderate cost, so that self-supporting, laboring men may patronize the institutions without coming in contact with the demoralizing influences which often pertain to the cheap lodging house. During the year ending Nov. 6, 1906, 800 meals and as many more lodgings were given to homeless men at the two Bethels. Besides this a considerable quantity of provisions was sent out to poor and destitute families, and 2,234 articles of clothing and shoes were distributed. Through the cooperation of A. C. Pearson, circulation manager of The Evening Herald, an annual Thanksgiving dinner has been given for the last sixteen years to the newsboys of the city at which about 600 are bountifully fed. The total expenses of the society in its different branches of work for the year amounted to $48,560.83, a considerable portion of which was met by donations from people some of whom live at a distance from this city.

Fraternal Associations.

Fraternal organizations are well represented in Duluth, their growth having commenced with that of the city and fully kept pace with its progress along other lines. Today it would be hard to find a man throughout the length and breadth of the city who is not identified with some one or more institution of a fraternal or semi-fraternal character, while a large majority of the ladies will be found holding membership in some of the numerous auxiliary associations or the various clubs and other societies whose membership is limited exclusively to their sex.

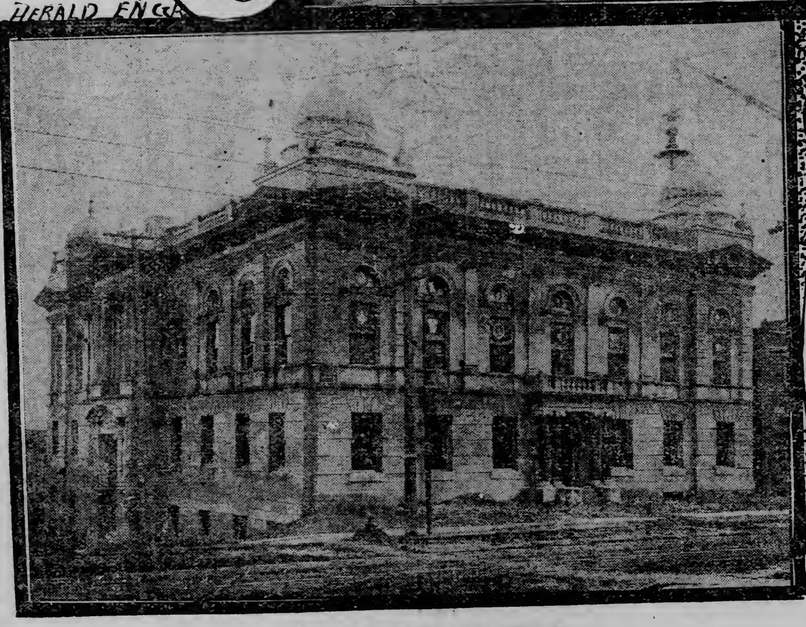
Masonry had its birth in Duluth with the institution of Palestine lodge, Feb. 22, 1870. Though it met with some vicissitudes in the early days, this lodge has made commendable progress and now numbers about 650 members, forming, with a single exception, the strongest lodge of the order in Minnesota and ranking thirteenth in the United States. There are now two other Blue lodges in the city, making the total membership 1,150. The various intermediate Masonic bodies are well represented up to and including Duluth consistory. The Order of the Eastern Star is also in a flourishing condition. The new Masonic temple, erected by the Scottish Rite in 1904, at an expense of $85,000, provides a luxurious home for all the Masonic bodies located in the main part of the city and is an acquisition to the architectural beauty of the city inspiring pride in every citizen.

Seven hundred people in Duluth proudly claim identification with the Independent Order of Odd Fellows, numerically the strongest fraternity in the world. There are four flourishing subordinate lodges and one encampment, the strongest in the state. Also one Canton, Patriarchs Militant and two properous lodges of the Daughters of Rebekah. The first lodge of this order in the city was instituted in 1871. Through prosperous financially, none of these organizations owns any real property at present, but the purchase of one or more buildings is liable to occur in the near future should the hopes and plans of some of the members prevail.

The Knights of Pythias have 700 members distributed among four lodges in different parts of the city. There are also two companies of the uniform rank and two temples of the Rathbone Sisters including about 250 ladies. All these bodies are prospering and negotiations are in progress for the purchase of a building by the order.

The Benevolent Protective Order of Elks has a flourishing organization established here in August, 1899. There are nearly 700 members and a very desirable building site was purchased about a year ago on First street adjoining the Board of Trade upon which the erection of a suitable building for the use of the order is contemplated.

Fraternal Insurance and Beneficiary Orders.



Most of the numerous organizations in existence which may be classed under this head are well represented in Duluth. The earliest of these orders to perfect an organization here, as well as in this state, was the Ancient Order of United Workmen established in 1870, which now has five lodges here with a total membership of 2,000. It would be impracticable, within the limits of this article, to make separate mention of all the different orders and societies which might be classed in this category. Among those most thoroughly organized in different parts of the city, are the Modern Woodmen, Woodmen of the World, Knights of the Maccabees, Order of Modern Maccabees, Independent Order of Foresters, Catholic Order of Foresters, Order of Hibernians, United Order of Foresters, Royal League and Royal Arcanum.

An organization entitled to special notice on account of its being distinctively a Duluth institution, as well as for other reasons, is the Modern Samaritans which was originally organized in this city in 1897 and this has always been the location of its main office and imperial council. This order is well established in all the larger cities and towns throughout the state of Minnesota and flourishes in parts of several adjacent states. Though comparatively still in its infancy, the order has accumulated funds to the amount of $76,000, most of which is invested in city of Duluth water and light bonds or deposited in local banks. Three councils in this city have a combined membership of 2,000 and there are 8,000 members in the order, the object of which is to combine sociability with fraternal insurance on the most approved up-to-date plan. The officers of the Imperial Council are George H. Crosby, imperial good samaritan; Charles E. Lovett, past imperial, good samaritan; John Christie, vice imperial good samaritan; W. A. Hicken, imperial scribe; O. F. Collier, imperial treasurer; W. H. Salter, imperial medical director; A. E. McManus, imperial counselor; John Christie and H. J. Achenbach, imperial auditors.

DULUTH PUBLIC SCHOOL SYSTEM AND COLLEGES ARE EXCELLED BY NONE

Importance of Education.

The greatness of a community may not be properly measured by its material progress alone. The city or state which neglects to cultivate the morals and intellects of its people is guilty of overlooking one of its most vital intersts, and, no matter how prosperous in a business sense, cannot be a success in the full significance of the term.

The importance of training the minds of the rising generation was realized by the pioneers of Duluth and steps taken for supplying the need of such instruction, even while the means was lacking to supply the physical needs of the people. And equal care and forethought have been shown by their successors not only in providing for the instruction of youth, but in affording the means for cultivating the finer instincts of the adult population. Confirmation of the above statements may be readily found in the numerous religious organizations, public schools and higher institutions of learning, as well as hospitals, libraries, charitable and benevolent institutions and a multitude of fraternal, social, literary and other societies.

First Schools at the Head of the Lakes.

The first known record of any movement in the cause of education within the present city of Duluth was the building of a school at Fond du Lac by Rev. E. F. Ely, who was sent to Northern Minnesota by the American Board of Foreign Missions in 1833. He spent about one year at Sandy Lake, where a school for Indian children had previously been established, and then removed to Fond du Lac, where he performed the combined duties of teacher and missionary for several years. In the former capacity he was assisted by his wife and other teachers, and was subsequently stationed at La Pointe, Pokegema Lake and elsewhere in this region. About 1849 the school at Fond du Lac was abandoned owing, doubtless, to the fact that the Indian families had removed from that location. Mr. Ely afterwards became a conspicuous citizen among the pioneers of Superior and Oneota.

The next instance of a school within the present city of Duluth was in 1856, when Miss Nancy C. Barnett opened a school at Oneota, where schools have since been maintained without interruption save for the usual vacations. The first school on Minnesota Point (or Duluth proper, as it was then known) was taught in 1865 by Miss Emma Clark. At that date the total enrollment of children of school age in St. Louis county was 87. (An interesting comparison may be made by noting that the total enrollment of the county for 1906, including the city of Duluth, amounted to 20,682.)

The following statistics taken from the superintendent's annual report for the school year of 1905-06 will afford some idea of the development which the schools of the city have attained:

Number of school rooms in use	281
Total number of teachers and principals	298
Average monthly wages of teachers—male	$105.09
Average monthly wages of teachers—female	63.01
Money expended for text books	$5,515.58
Number of pupils enrolled	11,574
Average attendance	9,430
Total cost per pupil on average attendance	$40.36
Total disbursements (including repairs and improvements)	$374,297.31

Great Progress Shown at This Date.

The progress of the public school system of the city has fully kept pace with the growth of population; no city in the country has better reason to be proud of its substantial and commodious school buildings which have been constructed in accordance with the most modern and approved ideas of school architecture and the apparatus and equipment is up-to-date in every particular. Free text books are furnished, a system of fines being arranged for careless handling or destruction of books by the pupils, so that books last on a average from six to eight years each, much longer than when owned by the pupils. This plan has been found to be economical, satisfactory and efficacious in every way. A corps of capable and experienced principals and teachers are in charge of the work under the direction of Superintendent R. E. Denfield, who has filled that position since 1882. The administration of the city schools is placed in the hands of a board of education of eight members besides the superintendent and clerk. As membership in this body is a purely honorary position, affording no pecuniary advantage, but requiring a great sacrifice of time and personal interests, the gentlemen who compose the board as well as their predecessors, are entitled to much credit for the high standards which have been established and rigorously maintained.

Especial pride is felt by the people of Duluth in the excellent high school, which the city maintains, affording a free course of instruction superior to that of many colleges. In this institution a corps of twenty-seven teachers were employed during 1906, and 811 pupils were enrolled of which number seventy-four were graduated. The high school building, one of the finest and largest as to architecture, in the United States, was completed in 1892 at a cost, including the grounds, of $500,000. It is centrally located on Second street and Lake avenue and commands the admiration of every visitor to the city, being visible from long distances and especially noticeable to those approaching the shores of Lake Superior. The total cost of school buildings and equipment for the city of Duluth amounts to nearly $2,000,000.

Following are the names of the present members of the board of education: C. L. Codding, president; J. J. Le Tourneau, E. R. Cobb, N. C. Hendricks, J. J. Moe, J. L. Washburn, F. A. Brewer, D. E. Stevens, R. E. Denfeld, superintendent, and C. A. Bronson, clerk.

A Center of Intellectual Culture.

A noted savant once said: "Sow a dollar in the ground of education and reap fourfold in the field of progress." In no city of its age has the truth of this aphorism been more fully realized than in Duluth. In no other city of its size has greater care been taken to lay the foundations of the lives of present and future generations upon the substantial rock of intelligence. So rapidly have the different phases of public life been unfolding in this city that many of our own citizens do not fully comprehend the manifold influences which have made, and are continuously making for the progress of mental, social and civil culture. For the development of educational forces has not been confined to children. Numerous clubs, literary and musical societies betoken the awakened senses of both sexes which are grasping after newer and higher ideals. These circumstances are already realized by many people at a distance who are looking forward to rapid developments in this metropolis of the Northland and the congenial surroundings assured by these conditions, doubtless, vied with our ideal summer climate in securing for this city, a few years since, the annual convention of the National Educational association. The material benefits accruing from the reputation which our city enjoys as a Mecca for those seeking to gratify social intellectual or spiritual desires, should not be overlooked. Many individuals and families are attracted by one or more of these influences to become permanent citizens, of the most desirable class for the upbuilding of Duluth.

Business Colleges.

There is no branch of Duluth's educational make up that is farther advanced than her business colleges where young men and women are trained for actual business life. The Duluth Business University has attained a high position in the past fourteen years, having graduated many hundreds of the best equipped men and women with a practical education. The success of this institution is owing to its thorough equipment and the high grade of teachers employed in all its departments pertaining to a practical business education. Its master-mind, W. C. McCarter, principal, has attained a wide reputation as an educator, having the faculty of imparting his great knowledge to those under him in the true way of how best to obtain a practical business training and is ably assisted by W. J. Gray, first teacher in the commercial department, and Miss Emma Koltz, first teacher in short-hand department, together with a corps of other able teachers. The course of instructions cover: the commercial course, which comprises bookkeeping, commercial arithmetic, commercial law, grammar and composition, business penmanship, actual business practice, business correspondence, rapid calculation and spelling, while short-hand and typewriting may be included in the course. Then there are special short-hand and typewriting courses, English course, penmanship and expert accountant courses. The demand for graduates from the Duluth Business University exceeds the supply by five to one. Those who are interested in a business college education will find it time profitably spent in looking over this institution.

State Normal School.

One of the most important educational institutions in Duluth is the State Normal school—one of six schools maintained by Minnesota at different points within its borders, which form an important factor in the great free, educational system of the state, their especial province being the fitting and training of teachers. The first official action was taken toward the establishment of one of these schools in Duluth in 1895, but, owing to delays from various causes, the school was not opened until 1902. A site of six acres of ground was donated by the city in one of its most attractive locations surrounded by sylvan scenes and overlooking the waters of Lake Superior from a height of more than three hundred feet. Appropriations aggregating $80,000 were made by the state and the building was nearly completed in Feburary, 1901, when a fire broke out and destroyed the entire structure. This disaster delayed the opening of the school for about one year, but, as it was well insured, it was rebuilt without farther expense to the state. The laboratories were equipped at an expense of $7,500 and all the apparatus of the institution is new and in accordance with modern methods of teaching. The library comprises nearly four thousand volumes in charge of a competent librarian. Important features are the manual training and domestic science departments. The latter was established at the solicitation of the women's clubs of the city, the members of which offered to furnish the equipment on condition that the state should employ a teacher. This arrangement was made in 1903 and has since been maintained with very gratifying results. The enrollment of the school has nearly doubled since it was first opened, the whole number for the year ending in June, 1906, being 353. Of these 202 were in the normal department and 156 in the training department. Hon. J. L. Washburn, resident director of the state normal board, has labored early and late for the success of the institution and the faculty consists of the president, Eugene V. Bohanon, A. M., and sixteen other professors and teachers all of whom have been especialy trained for this line of work. There are six courses of study in the normal department requiring from one to five years of study each and the training department constitutes a complete model school.

University School.

The University School of Duluth, which opened about four years since, is ably conducted by Albert George Heppert, L. B., assisted by a faculty of competent teachers and is doing effective work. It is a private institution which prepares students, beginning at any grade, for college or university. More personal attention is received by each pupil than would be practicable in many schools and those deficient in any one or more branches are enabled to acquire a better balanced education than they would be likely to receive in the public schools.

Finnish National College.

The Finnish National college is located at Spirit Lake, one of the suburbs of the city. It was opened in 1903 and is doing some excellent work, its students being gathered from all over the Northwest. The college affords a medium by which students of Finnish nationality acquire a knowledge of English as well as receiving instruction in various courses of study.

Parochial Schools.

In addition to the public schools, there are fourteen parochial schools conducted by various religious denominations and affording instructions to an average of 4,000 pupils. Most important among these institutions may be mentioned the Catholic Cathedral school, which was built in 1904 at a cost of $80,000, and accommodates 850 pupils. It is a valuable acquisition to the architectural development of the city as well as to its intellectual growth and is a source of pride to every citizen.

Sacred Heart Institute.

The Sacred Heart Institute is a select school conducted by the Sisters of St. Benedict, one of those orders of consecrated women whose members are found in all parts of the world fulfilling their chosen mission—to instruct the young, heal the sick, comfort the aged and relieve the distressed of all classes. The institute was founded fourteen years ago amid humble circumstances but has made excellent progress and is recognized as a valuable addition to the higher educational forces of the city. Its curriculum includes courses in scientific, literary and commercial instruction as well as in music and art. A new building will soon be completed which will afford greatly improved accommodations and facilities of every kind and add much to the usefulness of the institution.

Villa Sancta Scholastica.

This is a collegiate institute which will soon become an important addition to the educational institutions of Duluth, superseding the present Sacred Heart Institute. One hundred and twenty acres of land was purchased in the outskirts of the city some time ago and the building is now in course of construction thereon. Forty acres of this tract has been subdivided and is being sold for residence lots, while the balance will be retained as a farm and park for the use of the school. A large natural spring will supply an abundance of pure water and an artificial lake is being formed which will further enhance the beauty of the spot. The building will have a frontage of 400 feet and be 130 feet in depth so arranged as to enclose four open courts and provide ample light and ventilation. It will be three stories in height, built of native granite and trimmed with Indiana Bedford stone. Its present cost will amount to $90,000 and additions will be made for a gymnasium and other features. The edifice will be surmounted by a tower 160 feet high, overlooking Lake Superior, in which chimes will be mounted.

The institution will accommodate 250 students and will be conducted as the "Mother House" or home for all the Benedictine sisters of the Duluth diocese. The location and surroundings are ideal for the purposes contemplated and every friend of the order will rejoice at its acquisition.

Magnificent Public Library.

One of the most conspicuous of the many public buildings in the city and one in which all citizens feel a commendable pride, is the Carnegie public library, situated on Second street at the corner of First avenue west, which was opened to the public April 19, 1902. The grounds were purchased by the city at an expense of $15,000, and include a space of 150 by 140 feet permitting the building to be entirely detached so that light can enter freely from all sides. The total expense of building, grounds and equipment amounted to $92,935. The building is 108 by 104 feet and covers two floors. The main entrance opens directly to any part of the building which is conveniently arranged in all respects and admirable provision has been made for lighting every department. The rotunda is thirty-two feet square from which reading and reference rooms radiate in all directions. A magnificent dome rises to the height of thirty-three feet above the rotunda. The reading rooms will seat 200 people and are open every day in the year.

The library comprised at the close of the year 1906, 47,679 volumes of which 3,212 were added during the year; 156 newspapers and periodicals are kept on file, and 117,529 books were loaned for home use during the year which betokens the high appreciation which the people have for the opportunities afforded by this institution. The expenses for the year amounted to $12,000. Every branch of literature is covered, and many volumes and periodicals are included in other languages than English. The reference library is very complete and the special juvenile department is a feature highly appreciated by adults as well as children. The department of Americana is a noteworthy and valuable adjunct of the library which has been collected at great pains and contains 2,208 volumes some of which are very rare and valuable. The librarian, Miss Lydia Porrier, has filled that position for four years, and was connected with the establishment for several years previously. The library board consists of the following members: Dr. C. L. Codding, Dr. W. H. Salter, Frank Adams, M. M. Clark, Frank Crassweller, R. B. Knox, G. A. Tomlinson, D. G. Cash and Rev. J. C. Fairies. These gentlemen serve gratuitously and their work with that of their coadjutors in promoting and maintaining this institution cannot fail to have an inestimable influence as a means for the propagation and dissemination of public intelligence.

Duluth Has the Greatest Harbor Upon this Continent, if Not in the Entire World. A Most Attractive Lake Port

BIRD'S-EYE VIEW OF DULUTH CITY AND HARBOR.

VIEW OF DULUTH CANAL, PIERS AND U. S. LIGHT HOUSE.

Dame Nature, ever bountiful of her blessings, was especially considerate of the future welfare of her human subjects when she formed the head of Lake Superior a natural harbor destined to become the greatest commercial port upon the globe. Some of the most tremendous of her mighty forces were employed in working out this Titanic scheme, compared with which, the greatest undertakings ever conceived by human minds seem puny and insignificant. Nor did she forget, while making provision for the future needs of humankind, to call attention to these opulent gifts by surrounding them with scenes of beauty and grandeur which could not fail to charm the eye and delight the soul of every visitor who might wander within these favored precincts. And, as a part of the omnipotent scheme, she formed a mammoth basin, filled with the purest liquid of her creation, whose shape has been likened to that of the Hand of Destiny with extended forefinger indicating the spot where her greatest riches had been stored.

The natural beauty of this location, as well as its practical utility, must have been impressed upon the mind of Daniel Greysolon Du Lhut when, from the harbor entrance at the foot of Minnesota Point, he first beheld this sublime work of nature nearly two and one-third centuries ago. And it may be safely said that no subsequent visitor has viewed these scenes with indifference. Yet it is less than forty years since the government of the United States began to awake to the expediency of supplementing the work of nature and passed the first small appropriation bill for the purpose of deepening the channel and otherwise improving this harbor. Since that time (1867), nearly five million dollars have been expended thereon, a figure which impresses one as a very liberal donation toward the promotion of the maritime commerce of a single port until compared with the value of the commerce which has ridden in and out of that port during the same period when it is discovered that the improvements have cost less than one-fifth of 1 per cent of the value of the freight loaded and unloaded at this harbor.

The Duluth-Superior harbor comprises the Bay of Superior, the Bay of Allouez, Bay of St. Louis and the lower reaches of the St. Louis river, all completely land-locked by nature with the exception of the Superior entry, an ample passageway to permit the entrance and departure of all sizes of vessels and to allow the water discharged by the St. Louis and Nemadji rivers to flow into the lake. In order to shorten the route of vessels bound to and from Duluth docks, the canal was cut across Minnesota Point by the people of this city and subsequently taken in charge by the government engineers in common with the other portions of the harbor.

Unlimited Dock Sites On This Harbor.

The land-locked sub-divisions enumerated above present a harbor frontage aggregating forty-nine miles which, if utilized for the building of docks and slips would provide sufficient room to tie up all the navies of the world. The dusky aborigines in their canoes and French-Canadian "Voyageurs" with their batteaux found no difficulty in navigating any part of this great harbor and pushed their barques on up the river to the foot of the rapids, making Fond du Lac the final point of debarkation for their wares, whence trails and portages radiated to more remote points. The routes of modern commerce likewise follow the lines of least resistance, but the merchandise handled has grown to such bulky proportions as to entirely revolutionize the primitive methods of the savage and the fur trader. The advent of the steamship disclosed the necessity of deeper channels at many harbors on the Great Lakes, and the first improvements planned for this harbor contemplated the establishment of 10-foot channels, that depth being considered adequate for all future needs. The fallacy of this theory was demonstrated before many years, however, and all the dredging recently done has been carried to a depth of twenty feet or more, which is none too deep for the modern freighter of thirteen thousand tons capacity. There are now seventeen miles of dredged channel from 120 to 600 feet in width and basins aggregating 360 acres all having a depth of twenty feet or more.

Besides the dredging and other improvements made within the harbor, large sums have been expended within the past few years in the construction of immense concrete piers for the protection of the harbor entries. In 1905, $20,000 was expended in the erection of an engineer's office and watchman's house near the Duluth canal. The appropriation by the Fifty-ninth congress adds three-fourths of a million dollars for further improvements to this harbor.

The commerce of this harbor, expressed in approximate figures, has increased from three million tons in 1890 to twenty-nine million tons in 1906. It is estimated that the saving in freight charges on the commerce of the past year, accomplished by transporting the same by water rather than by rail for the same distance, would amount to over fifty millions of dollars. As a large portion of the people of the United States have shared, directly or indirectly, in this saving, the comparative trifle expended by the government in the improvement of this harbor would seem to have been an excellent investment.

Included among the myriad craft which float in and out of this labyrinthian harbor, is the largest fleet of exclusive freight carrying vessels in the world—that of the Pittsburg Steamship company, whose offices are in Duluth. This fleet comprises one hundred and five vessels and during the season of 1906 it transported twelve million tons of iron ore besides much other freight. Four of these ships have a capacity of twelve thousand tons each and are the largest freighters afloat in the world.

Lining the shores of this harbor are miles upon miles of docks in the construction of which millions of dollars of private and corporate wealth has been invested and in the operation of which thousands of men are given employment. The grain elevators upon this harbor have a combined capacity of thirty-four and one-half million bushels.

Tonnage of Duluth-Superior Harbor Ranks Third In the World.

Incredible as it may seem to those who have not investigated the subject, it is a fact that the freight brought to and carried from this harbor is exceeded in tonnage only by two ports in the world. According to the most authentic figures accessible, the combined foreign and coastwise shipping of New York harbor for the year 1905 exceeded that of this port for 1906 by a little over one million tons. At the rate of increase which prevailed during the past year, the tonnage of New York bids fair to be far outstripped before the close of the present season. Considering this an accomplished fact, the Duluth-Superior harbor would rank as first on the Western continent and be surpassed only by that of London, hailed for ages past as the center of the world's maritime commerce.

Manufacture of Lumber and Flour Immense.

The manufacture of lumber upon this harbor reached its greatest volume in 1902, when enough of that product was sawed to furnish each family in the city of Boston with four thousand feet, sufficient to build a small cottage, while the flour made upon these shores in a single season would supply each inhabitant of that city with nearly two barrels. And the flour shipped from this harbor in 1906 would have furnished a barrel to every person in the city of London, while the combined shipments of wheat and flour from this harbor would have provided a barrel for every three persons in the whole of the British Isles. The total shipments of grain and flax were equal to more than one and one-half bushels for each inhabitant of the British Isles, or about one bushel for each person in the United States. The increase over 1905 in the shipments of grain and flax was over 32 per cent.

"Where Rails and Water Meet."

In modern as well as in ancient times, the largest cities have usually been built upon the shores of navigable waters and the nations which have attained political or commercial supremacy have been those whose people acquired the mastery of the sea; in ancient times this fact was demonstrated by the Phoenicians, whose situation at the head of the greatest inland sea of the Eastern hemisphere made them masters alike of the overland trade and of the maritime commerce of the civilized world. Later this supremacy upon the sea was successively held by the Romans, the Norsemen and the Spaniards, each of whom gained great prowess among nations through their daring and hardihood as navigators; and the present ascendency of England is due more to her geographical situation which naturally led a large percentage of her population to adopt a sea-faring life, than to any other influence. In spite of the wondrous development of overland transportation facilities, mankind still depends upon the great natural, free highways of the earth for floating from place to place much of the bulky commodities which are necessary to modern, complex existence. There was no "fiat" or strained, unnatural condition connected with the founding of a great city at the Head of Lake Superior; it was inevitable as soon as the great empire contiguous to this location began to be inhabited and developed by civilized people, and the future growth of that city and the development of the commerce of this harbor is as certain as the peopling of that vast region lying to the north and west of a line drawn from the Sault Ste. Marie to the head of the Gulf of California. The shortest and most natural route of the produce of this immense extent of territory in its journey to the markets of Europe and the Eastern States lies through this harbor.

A feature connected with this harbor which attracts the attention of every visitor in recent years and has helped immensely to spread the fame of Duluth is the aerial bridge, which was constructed by the city to span the canal and connect Minnesota Point with the main part of the city. It is the only bridge of this type in America, there being but one other in the world, and was adopted on account of its being the one least likely to obstruct the navigation of the canal or the transportation of passengers by land. The span of the bridge is one hundred and thirty-five feet above the highest water ever recorded and affords free passage for any vessel on the Great Lakes.

DULUTH-SUPERIOR HARBOR SHIPMENTS FOR 1906.

Total tonnage	23,023,507
Iron ore	19,368,186
Bushels of wheat	32,152,541
Bushels of flax	21,949,110
Bushels of grain	83,623,242
Barrels of flour	5,653,835
Feet of lumber	450,000,000
Total value of shipments	$165,832,390

DULUTH-SUPERIOR HARBOR RECEIPTS FOR 1906.

Total tonnage	6,147,714
Tonnage of coal	5,324,540
Feet of logs (b. m.)	26,900,000
Value of logs	$403,500
Total value	$86,470,954
Tonnage received and shipped	29,171,221
Value receipts and shipments	$251,899,844

SOME STRIKING FIGURES FOR 1906.

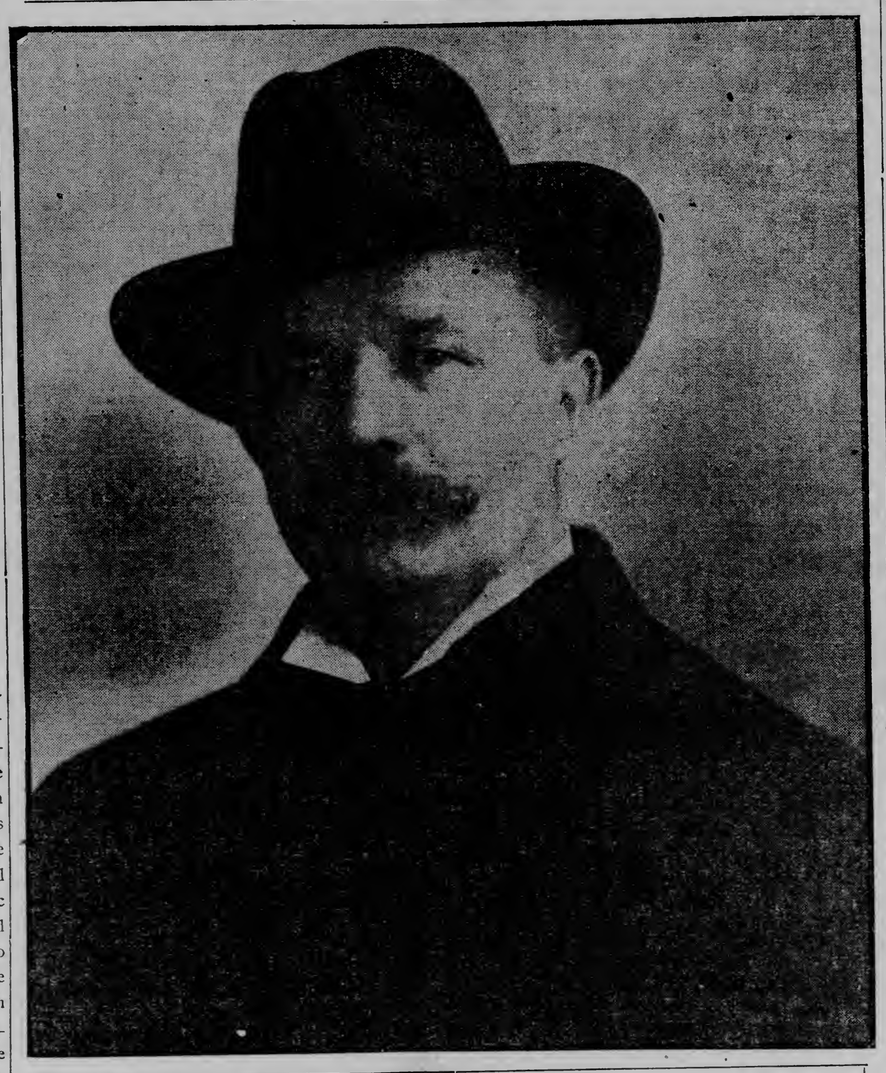
Passengers arriving and departing	96,964
Vessels arriving and departing	14,854
Average tons shipped per day	92,464
Season of navigation (days)	253
Increase tonnage over 1905 (per cent)	28.64
Largest single cargo ever shipped, taken from Duluth, Missabe & Northern docks, Oct. 9th, 1906—Steamer N. B. Ream—iron ore (tons)	11,553
Largest cargo flax, Steamer Laughlin, Oct. 27, 1906, (bus.)	385,140
Largest cargo wheat, Steamer B. F. Jones, (bus.)	380,000
Iron ore, Two Harbors—sub-port of Duluth—(tons)	8,204,992
Total receipts and shipments, 1867 to 1906	$2,592,732,106

The Great White Light, Acetylene, Newest and Most Beautiful Illuminant

The World's Best Discovery

THERE has been no other discovery in the world's history of so great importance to the human race as the invention of carbolite from which acetylene gas is produced, making a soft, white light superior to that of the sun's rays, being without heat or glare. If some other genius will only devise a method of producing heat without the use of raw material, during the next generation, the twentieth century will go down in history as the greatest of all ages. Three of the great essentials of existence are light, heat and water. With a perpetual supply of these provided for, the human family would have no need of taking thought for the welfare of future generations. It is the fear of being deprived of these three life-sustaining requisites that brings us to a realization of our utter helplessness as finite beings. In past ages even the temporary or partial suspension of nature's light, which occurs at times in midday, resulted in great annoyance, inconvenience and financial loss, while the fact that for a consirable part of each twenty-four hours the light of day is regularly withdrawn, has been a perpetual inspiration to man's inventive skill, to contrive some means for controverting the effect of this seeming neglect on the part of Dame Nature. Many make-shifts have been resorted to from time to time, but it remained for the present generation to reach the acme of discovery in the way of artificial light. The light question has been settled for all time by the introduction of carbolite, from which acetylene gas is manufactured, which for quality, reliability, economy and safety, is far in advance of electricity and gasoline as an illuminant without the annoyance and danger of smoke and heated rooms nor the expense of mantels and chimneys. The discovery of carbolite was a great boon to humanity for it brings light, which is but another word for happiness into millions of homes, that formerly enjoyed only the illumination of the smoking tallow dip or the foul smelling, explosive, kerosene lamp.

This has been made possible by the inventive skill of Herman L. Hartenstein, who discovered the secret of making from limestone and coke, calcium carbide, the trade name for which is "Carbolite." At no time in the world's history has there been such an advancement made along new lines of science and invention as that made by the Hartenstein process of making calcium carbide, a secret that had been so zealously guarded by nature for ages, but which was at last unfolded to the inhabitants of the world, who had waited for ages in partial darkness, watching and longing for the day, when chemists and inventors should unravel the mystery of producing a soft, white light, more beautiful and intense than the sunlight, yet free from glare, heat or odor. It was left for Herman L. Hartenstein to reveal this new lighting process to an awaiting world. This inventor is a native of West Virginia, in which state he learned his first lessons in practical chemistry under the guidance of his father, who was superintendent of a steel mill. It was this early laboratory education, combined with a natural sense of observation and contrivance that led young Hartenstein to begin a series of experiments for the purpose of devising some method of utilizing the slag piles or refuse of the smelters and blast furnaces, which finally crystallized in the world's greatest discovery, the art of making calcium carbide from limestone and coke. This remarkable disclosure stamps the inventor as a man of the highest mental genius, and places him in the class with Benjamin Franklin and Thomas A. Edison, who gave us the use of electricity as a means of producing light.



Constantine Carbolite Factory

In 1904 a company was organized and a factory built at Constantine, Michigan, for the manufacture of carbolite. The article found a waiting market and from that hour to this the inventor's name has been written on the scroll of fame as a recognized chemist, metallurgist, mechanic and explorer. He had succeeded in turning the slag piles into heaps of gold as if by magic. He had discovered a process by which slag could be converted into carbolite, the sequel of which is the generation of acetylene gas, which gives the purest and whitest of light. This great discovery was not the work of an idle day, but represented ten years of profound study and research in order to find a means of producing calcium carbide on a scale large enough to make it a world product. This was finally accomplished, the result being that carbolite is one of the commercial commodities of the present day. The Constantine carbolite factory has been operated on a 24-hour schedule from that day to this, and has never been able to keep up with the ever growing demand. It was to fill this overflow of orders that the building of a new plant on more advanced lines was determined upon, and after investigating the advantages offered by Chicago, St. Louis, Cleveland and Buffalo, it was decided that Duluth was the ideal location, as to trade possibilities and as a distributing point by rail and water, while the Great Northern Power company offered such exceptional opportunity of securing the needed electrical energy, 10,000 horse-power.

World's Largest Carbolite Plant

Duluth enjoys the distinction among cities of being the largest shipper of iron ore in the world; of having the largest grain elevator in the world; of having the greatest coal docks in the world; the second largest jobbing hardware house in the world, and the second greatest water power in the United States; while the American Carbolite company's factory is not only the largest of its kind in the world, but its electrical equipment is not out-classed by any manufacturing plant in America. This magnificent plant consists of twelve expansive buildings, covering a ground floor space of nine acres. The main storage building, 600 feet long, has a capacity of 25,000 tons of raw material. The electric furnace building, 400 feet long, contains twenty-one electric transformers, and twenty-one electric furnaces. The preheating building contains two immense furnaces, 7 feet in diameter and 100 feet long which, with the other machinery and equipment, make the American Carbolite company's giant plant a world beater, covering nineteen acres, buildings and yards. This is where 200,000 pounds of carbolite are produced daily, that will produce acetylene gas equivalent to 12,000,000 cubic feet of coal-water illuminating gas. It is a full half-day's journey to walk over the factory and grounds and make but a passing tour of inspection of the various processes that are required in the manufacture of carbolite.

HERMAN L. HARTENSTEIN.

PRESIDENT OF THE AMERICAN CARBOLITE COMPANY AND INVENTOR OF CARBOLITE FOR MANUFACTURING THE WORLD'S BEST ILLUMINANT.

How Carbolite Is Produced

"Calcium carbonate, in the form of limestone, is ground in a great crusher to a fineness which makes it practicable to handle, and is then conveyed to the preheating furnace. These furnaces are about six feet in diameter and 100 feet in length, and they are revolved at a speed of about one revolution a minute and so inclined that the calcium carbonate, introduced at the upper end, will move gradually towards the lower end. At the lower end of the furnace the carbonate is subjected to the intense heat of a jet of a variety of water gas termed 'producer gas,' and is raised to a white heat. At this point it drops out of the furnace, and after being weighed, is mixed with coke, which is nearest the pure form of carbon which it is practicable to use, and then dropped into steel cars and carried to the electric furnaces where the process is completed.

"This first heating drives off carbonic acid gas, leaving a combination of calcium and oxygen, and when this compound is mixed with carbon in the form of coke and final atom of oxygen combines with the carbon to form carbon dioxide, and its place is taken by an atom of carbon, forming the desired compound of calcium carbide, or carbolite."

The Factory In Operation

The nineteen acres covered by the factory buildings and yards has a perfect railroad system for handling the transportation of the raw material and shipping out the manufactured product. The limestone, on being received at the factory, is carried by great chain-belt conveyors into a storage house, 600 feet long, having a capacity of 25,000 tons, and the coke supply is handled in the same way. The limestone that is put to immediate use is taken from the conveyor automatically and put through mighty crushing machines, and again transferred by the same conveyor system to the pre-heating furnaces, which with the gas producers, occupies a building of steel and reinforced concrete. Turning slowly it permits the material that is fed to it to proceed by gravity through its length. The limestone is fused by the fierce heat of the producer gas, automatically weighed, mixed with coke that has been crushed, and sent in steel cars over a tramway to the electrical furnace building. One of the very fascinating features of the plant is the powerful battery of furnaces. There are twenty-one of the electric furnaces, each run by a 300-kilowatt transformer. As each of the furnaces requires 400-horse power, the current supplied to the battery will use 8,400 continuous horse-power, and ultimately there will be two batteries. All of the machinery is operated by electricity. In the electric furnaces the product is subject to intense heat, discharged by wonderful electrodes, so nicely adjusted over the hearths that the heat is equably diffused, and consequently no loss of material ensues by cooling on the hearth, the product being carried away from the furnace on a tramway system, after which it is molded into ingots. These ingots are carried to a crusher and broken up ready for packing in the steel drums and smaller cartons, in which they are supplied to the trade or the consumer. Drums contain 1,000 and 100 pounds of the carbolite, and are used in large installations. The smaller packages of two and ten pounds each go to the smaller consumers or portable lamp trade. There is a well-equipped electrical and chemical laboratory, which has a full corps of chemists constantly at work.

The business offices are located in a separate brick building where the clerical force is employed. The American Carbolite company gives employment to 300 men and has a capital of $1,500,000.

Acetylene Gas From Carbolite

It requires no expert knowledge to produce acetylene gas from the carbolite, and any one can take care of a plant with as much ease as the chauffeur cares for his lights. The carbide is put up into a receptacle containing water and permitting room for the storage of a quantity of the gas which is generated at once. The gas may be applied to a burner attached to the generator or piped for any distance, as ordinary gas is, the size of the generator being proportioned to the supply of gas required. The whole field of illumination, from the single light on a vehicle to the illumination of a town, is covered by the same simple process and its amplification. Acetylene is the purest and safest of all illuminating gases. It consists, approximately, of 93 per cent of carbon and 7 per cent of hydrogen. In the ordinary gas there is present carbon monoxide in quantities ranging from 13 to 15 per cent, while acetylene gas contains no carbon monoxide. A pound of the carbolite will produce over five cubic feet of acetylene, each foot of which equals in illuminating power twelve feet of ordinary gas. A burner consuming one-half a foot of acetylene per hour will give a twenty-five candle-power light, while it would take about six feet of ordinary gas of commerce to produce the same result. Roughly speaking, acetylene gas, at the present market price of carbide, costs about the same as Duluth gas—75 cents per 1,000 feet. The light produced is, of course, infinitely superior.

Men of Millions Own Stock

You who would like to know something of the financial backing of the American Carbolite Company of Duluth, Minnesota, can gain the information by glancing over the following list of stockholders' names:

MR. THOMAS F. COLE, President of all the iron mining companies of the United States Steel Corporation; Director American Exchange Bank of Duluth; Director, North Butte Mining Company; President, Greene-Cananea Copper Co.

MR. CHARLES A. DUNCAN, Vice President AMERICAN CARBOLITE COMPANY; President, Great Northern Power Co.; Director, American Exchange Bank of Duluth; Treasurer, North Butte Mining Co., and Greene-Cananea Copper Co., and Member of firm of Duncan, Brewer & Co.

MR. CHESTER A. CONGDON, Director American Exchange Bank of Duluth; Director of a number of large mining companies, and member of the law firm of Billson & Congdon.

MR. A. M. MARSHALL, Director in the AMERICAN CARBOLITE COMPANY; President, Marshall-Wells Hardware Co., the second largest hardware house in the world; Director, First National Bank of Duluth.

MR. WILLIAM J. OLCOTT, Vice President, Oliver Iron Mining Co.

MR. FRANK A. BREWER, member of the lumber firm of Duncan, Brewer & Co.

MR. MARSHALL H. ALWORTH, President, Union Match Co.; President, Consolidated Abstract Co.

MR. L. B. MANLEY, Secretary and Treasurer Manley-McLennan Insurance Agency of Chicago and Duluth.

MR. W. L. McLENNAN, Vice President Manley-McLennan Insurance Agency.

DULUTH HAS THE LARGEST CARBOLITE PLANT IN THE WORLD

An Interesting Story.

THE BEST LIGHT.

EVER since primitive man first used his torch of resinous wood in an endeavor to prolong daylight, the question of artificial light has been an all important one and both literally and figuratively a burning question.

Calcium carbide and Acetylene have been know as laboratory products for upwards of thirty years, and while not entirely new to the commercial world, the latest and purest, the safest, whitest, and most beautiful light yet discovered is Acetylene and the last, but not least of its virtues is, that it is also the cheapest of all artificial illuminants.

Acetylene produces a light more nearly approaching sunlight than any other form of illumination known to science.

The quality of a light as regards intensity, diffusion, uniformity and restfulness to the eyes is of course the first consideration, but safety, cleanliness, and lack of odor are of vital import. In all these virtues does Acetylene easily excel.

QUALITY AND EFFECT UPON THE EYES.

That a clearer understanding may be had of its virtues, let us briefly make the following comparisons.

Coal Oil and Gasoline are not modern lights, and because of their great danger, the ever present dread of fire, the filthy lamps, to smoke and discolor, the disagreeable odor and poor light place them as old-fashioned things of the past.

Coal Gas produces a weak light with yellow rays. It destroys colors, heats the air, has strong toxic qualities and is also weak in diffusive power.

Electric Arc Light has pale, sickly violet rays, but is very intense. It is, however, the least diffusive of all lights and is therefore being rapidly supplanted by others having greater spreading qualities.

Incandescent Electric Light has reddish rays mixed with yellow and is fatiguing to the retina, but it gives out little heat.

Incandescent Gas Light generates much heat and is too often overly rich in greenish rays which are antagonistic to the eye, while **ACETYLENE produces pure, white rays of intense brilliancy and does not change colors. It is most restful to the retina, has but slight toxic qualities, produces the least heat, and being the most diffusive of all known illuminating lights, is the nearest approach to sunlight.**

INTENSITY AND UNIFORMITY.

Firstly—If strength or intensity of a light was the principal virtue, Acetylene would stand head and shoulders above all others, because it has fifteen times the illuminating power of coal gas.

Secondly—In uniformity of power it easily leads.

A 16-candlepower incandescent electric light will diminish in all power to 12, 10 and 8-candlepower.

A 30-candlepower gas (mantle) light reduces in time to only twenty and even 16-candlepower.

A 25-candlepower ACETYLENE light will retain its 25-candlepower just as long as it burns, clearly demonstrating that ACETYLENE, unlike either gas or electricity, produces a clear, steady and uniform light, never flickering or diminishing while ignited.

AS TO SAFETY.

Acetylene also differs from coal gas in that asphyxiation is almost impossible. Its odor, in case of leak, immediately leads to its detection, and requiring but a fifteenth part as much gas (for a given amount of light) as city gas, the quantity of acetylene which might escape from an open burner, is so very small that it would not be sufficient to cause either explosion, or suffocation within twenty-four hours even in a very small room.

Experiments on dogs have proven that a mixture of 20 per cent Acetylene with air, inhaled for thirty-five minutes did not appear to trouble the animals, but while breathing a similar mixture of illuminating coal gas, containing only 1 per cent, suffocation resulted in about ten minutes.

Acetylene cannot be compared with the electric current either, because it has no deadly currents.

CLEAN AND CONVENIENT.

In the question of cleanliness and convenience there can be also no comparison with other lights as there is absolutely no dust or dirt, no smoked or burned ceilings, no crushed mantle dust, or cracked globes, (as with city gas) —no over-heated, dingy or burned out incandescent light bulbs and —(with your own Acetylene plant).

No "poor gas," winking lights or a complete "shut off" at the power house. Your light is bright, it's clean—doesn't burn out, and is always ready.

CHEAPER THAN OTHER LIGHT.

Acetylene is a commercial success and what seemed a paradox is now an accomplished fact—a light superior to all other illuminants and actually cheaper than Kerosene Oil, to say nothing of eliminating the cost of patent burners, new mantels, or fresh ceilings, as with Gas Lights or new bulbs and worn out sockets with the incandescent lights.

Glance at the following table and note the Actual Saving by **Acetylene** over other lights and based on minimum charges.

Kind of Light—	Costs per Hour
	25-Candlepower
Electric Light	1½c
Common Gas	1c
Coal Oil	6-7c
Common Gas with mantle	½c
Acetylene	3-8c

Conservative figures these, and in some localities the showing is even more favorable to **Acetylene.**

BY WHOM AND WHERE USED?

Over 300 towns and cities are now lighted exclusively by **Acetylene** and it is in general use by more than 2,000,000 people in the United States, in thousands of homes, hotels and club houses, stores and factories, in automobiles, bicycles, railroads and street cars, in fact, in all kinds of places, public or private, where artificial lights are used to dispel darkness.

WHAT IT IS.

Acetylene is a gas formed by the combination of Carbolite and water.

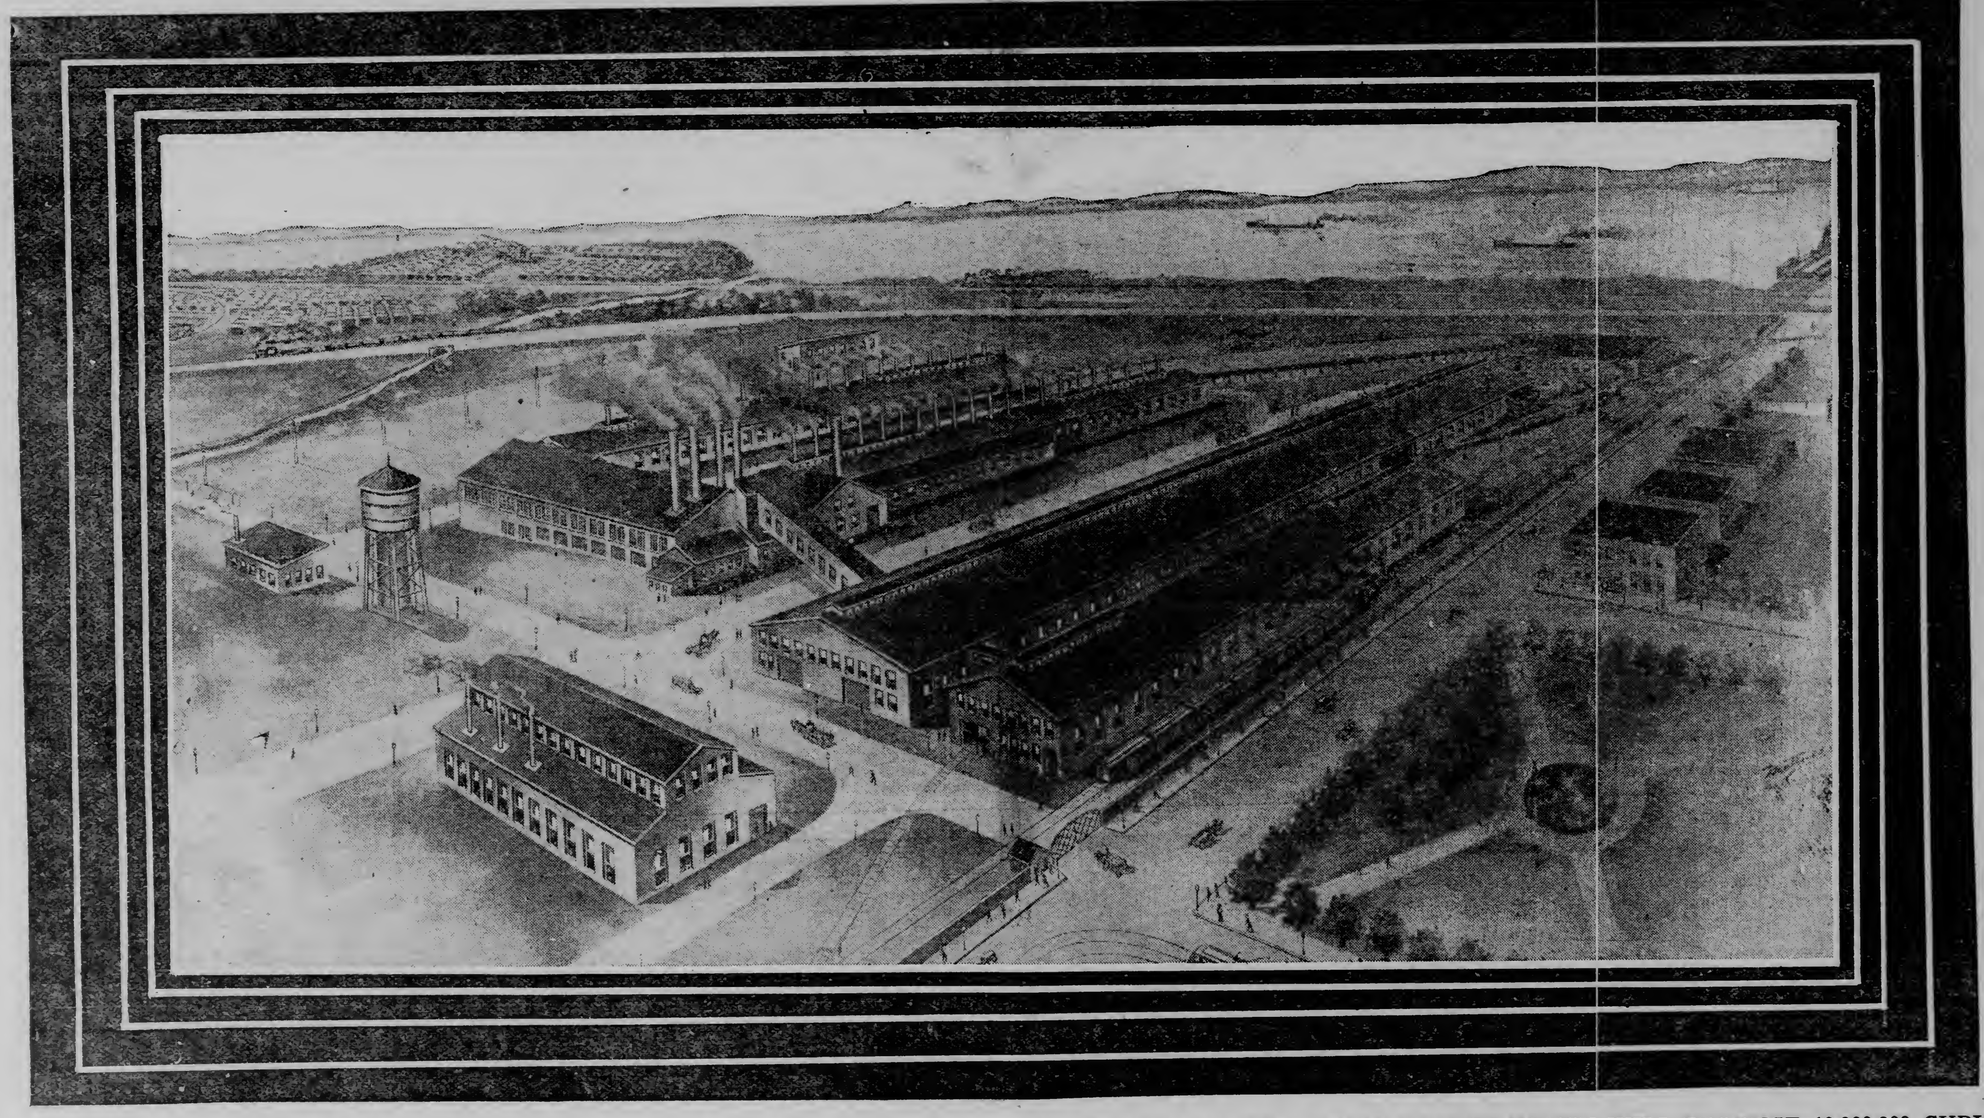
It is generated in a simple machine designed especially for this purpose.

Carbolite is a grayish, rock-like substance and is made by the fusion of limestone and coke in an electric furnace. It is readily obtained from dealers in all the principal cities of the United States.

It costs on an average of 3½ cents per pound and is shipped in air tight steel drums. Each pound of carbide will produce five cubic feet of **Acetylene** which will supply a **25-candlepower light for ten hours at the small cost of 3-8c per hour.**

FACTS WORTH KNOWING.

Think of it—a light as far superior in every respect to other modern lights as a tallow candle is inferior to an ordinary gas light. It is cheaper to operate and maintain.

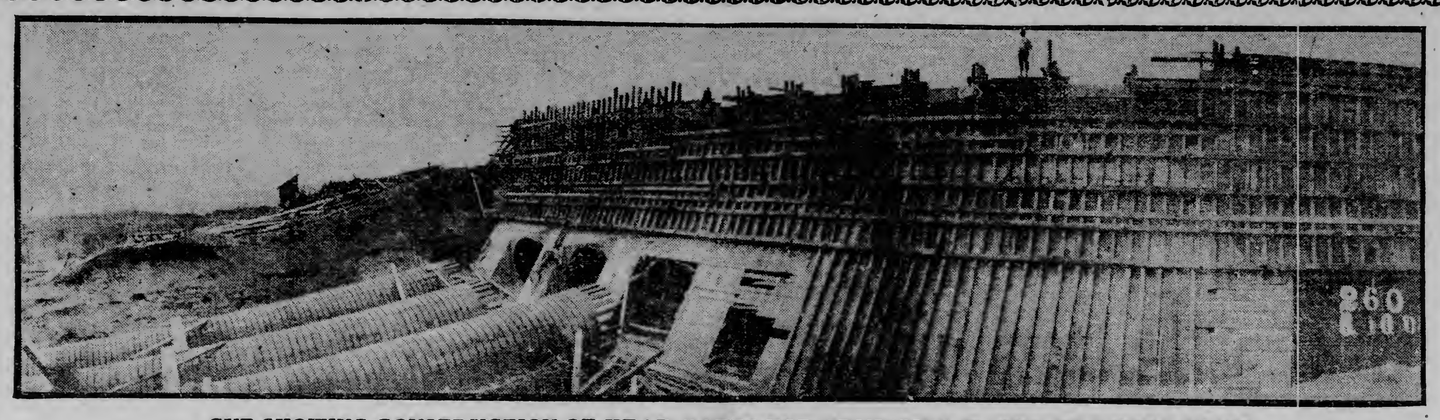


Is there any other necessity in your household or business where the quality is put up and the price put down? It is generally the other way. Higher quality and higher price.

Now all you have to do if your house is already piped for gas is to put in a **Gas Generator,** take out your meter and connect direct with the generator. Then simply change your regular gas tips for the Acetylene tips and presto—you have a flood of beautiful, brilliant, soft, white light that spreads all over the room and into the darkest corners, giving a sparkle to every polished article, a gleam and glisten to white table linen and a genial, cheery glow to everything. Just like putting varnish over a faded picture.

No more soot, smell or danger, no filthy kerosene lamps to clean and fill, no wicks to trim, chimneys to wipe, no lamps for anyone to tip over. No more mantles, or incandescent bulbs to buy, no diminishing light as they gradually wear out.

No faint light at supper time "when everybody is on the line"—no "frozen" lights in cold weather —or total darkness when a main breaks, or the current is turned off because of a fire in your circuit or an accident at the power house.



But supposing your house is not piped. In two days an eight or ten-room house can be completely fitted from cellar to garret and no pipes will show nor will a thread of carpet be cut or soiled while being installed.

BIRDSEYE VIEW OF THE AMERICAN CARBOLITE COMPANY'S PLANT. The St. Louis River Now Generating 30,000 Electrical Horse Power

CUT SHOWING CONSTRUCTION OF HEAD GATES FOR ADMITTING WATER TO 7-FOOT PIPES.

Remarkable Industrial Revolutions.

Among all the elements of creation combined in the formation of this wonderful planet none is more irresistible than water; the force of this mighty element, its constant tendency to conform to the law of gravity by seeking its lowest level, has never been successfully withstood by any human power or agency. No other element has claimed so many human victims, or compassed such vast destruction of property. Yet no other element is more essential to the existence, comfort and happiness of man, and while its force cannot be permanently stayed, the genius of man has found ways of diverting this mysterious power to his use, and when intelligently handled, it becomes one of the most faithful and docile of servants.

In the early stages of civilization, men began to make use of this great force of nature, and it continued to be utilized and devloped until the introduction of the steam engine provided a means of generating power, which was, in many respects, more practicable and, for a time, superceded the use of water power in many of the industries to which it had formerly been devoted, and many saw and flouring mills, in different parts of the United States, once operated entirely by the natural power of water, either fell into disuse, or came to be driven by the artificial force engendered by steam.

But revolutions rapidly succeed each other in this great industrial era, and the steam age is, in turn, being largely superceded by the age of electricity. The unprecedented development of this miraculous force, and the diverse uses which it is being made to serve, have been potent influences in reviving interest in one of the great natural forces, much of whose energy has been wasted for centuries. It is little more than a decade since the power of Niagara Falls was diverted to set in motion an electrical force which has wrought an industrial revolution in the territory contiguous to that marvelous cataract which has been a source of wonder and admiration to successive generations since its first discovery. The consummation of this feat inaugurated an epoch of electrical development, as applied to great industrial enterprises, which is still in its infancy. Since that time some of the greatest engineering skill in the world has been directed toward the utilization of other great water powers. The world, which has scoffed for ages at the folly of Xerxes in attempting to restrain this all-powerful element, now bows in reverence to the intellectual monarchs, whose ingenuity has harnessed this most magnificent of nature's forces, and has been instrumental in recruiting vast industrial armies, devoted to peaceful conquests. This same majestic power, which interposed a formidable barrier to the career of destruction projected by the notorious Persian ruler, provides the vital energy, by the aid of which are accomplished these modern triumphs redounding to the benefit of all nations.

A Tremendous Achievement.

At an expense of $5,000,000 one of the greatest dams in the world has been built and one of the greatest electrical power plants in the world has been installed here at Duluth. This means that a marvelous industrial era has been inaugurated in this city, one which is unprecedented in the annals of the great Northwest, and which confirms beyond the possibility of successful disputation Duluth's title as the future commercial metropolis of that magnificent empire which extends from the Sault Ste. Marie to the Rocky mountains and from the head waters of the Rio Grande to the mouth of the Mackenzie river, an empire equal in extent to the "world" which was conquered by Alexander the Great, and capable of sustaining a population fully as great when once fully developed. The commercial and industrial transactions of this vast modern empire already exceed by far those which have ever been attained by the dominions once ruled by the celebrated Grecian monarch.

Until recently comparatively few people in the Northwest have been aware of the gigantic water power afforded by the St. Louis river and its tributaries, where millions upon millions of dollars worth of energy have been wasted for ages simply because the power had never been developed. One of the principal reasons why this matter had been neglected so long was that the entire attention of investors and moneyed men in this region had been directed to the logging and manufacturing of the millions of dollars worth of timber found along the streams tributary to Lake Superior and to the exploitation of the enormous mineral deposits which abound in this territory.

GREAT MAIN DAM ACROSS THE ST. LOUIS RIVER, OVER ONE-FIFTH OF A MILE LONG.

RESERVOIR AT THOMSON, ½ MILE WIDE BY 1½ MILES LONG.

Fire and Smoke Problems Settled.

The introduction of electricity generated by water power settles at once two of the great questions which have been agitated for years in the principal manufacturing cities of the world, the question of fuel supply and the abolition of the smoke nuisance. These questions have been attracting the attention of economists and civic reformers for at least a generation and many theories have been advanced and systems suggested for their solution. Considerable legislation has been enacted in different cities looking to the reformation of the smoke evil, but, for the most part, these measures have been futile and unavailing. Like many other problems which perplex the mind of man for prolonged periods, the solution is at last furnished indirectly by agencies whose chief object had to do with questions of an entirely different nature.

Duluth, which seems destined to become the "Pittsburg of the Northwest," will differ from its famous Eastern namesake in at least one very noteworthy particular, while the latter is known as the smokiest city in America, Duluth is to be smokeless, instead of its atmosphere being perpetually clogged with soot and the magnificent scenery with which it is surrounded being obscured by dense, black clouds belching from hundreds of smokestacks, it will continue to be celebrated for its clear, blue skies and atmospheric brightness. Duluth is to be a city of chimneyless factories. The advent of electricity as the predominating power, means much for the Zenith City. This is to be a clean manufacturing city, free from the grime and dirt which are a continual source of annoyance to other manufacturing communities.

Enormous Power Available.

With 30,000 electrical horsepower available for present use and 50,000 additional available upon the installation of the added machinery and equipment necessary, Duluth is prepared to attract manufacturing enterprises of any magnitude. The extraordinary facilities for shipping either by rail or water combined with an abundance of cheap power, make this an especially desirable location for almost any line of manufacturing. This has been made possible by the tremendous undertakings carried out by the Great Northern Power company and the subsidary corporations through which its work is extended to its various ramifications.

It is little more than two years since the actual construction work of this stupendous enterprise was commenced, but the engineering plans had been thoroughly and accurately worked out, and the men who took charge of the execution of the different features of the project were experienced, practical and energetic and each one an adept in his special department or profession. The work was pushed to completion without any serious delay and the various departments moved in harmony and remarkable accord. The immense dam at Thomson, the two and three-fourths miles of canal and the erection of the great power houses and the installation of the ponderous machinery therein, were each in itself, a prodigious undertaking, to say nothing of many minor matters which had to be planned and carried out with careful precision and expeditious foresight. Much credit is due to the management of the enterprise and to all the lieutenants to whom were committed the task of carrying out the many details of the work. This vast work was accomplished only at an enormous expense of wealth and mental and physical labor almost incomprehensible to the ordinary reader.

ROCK SECTION OF CANAL. CANAL 2½ MILES LONG. CAPACITY, 80,000 HORSE POWER.

Some Fundamental Calculations.

The mathematical computations by which the available power was arrived at were based on the following fundamental facts:

The drainage area of the St. Louis river basin approximates 3,700 square miles.

The average annual rainfall of this basin for the last thirty-four years, as determined by the government weather bureau gauge, is 30 inches, and the mean annual run-off is 12 inches.

One inch of water on 3,700 square miles equals 16,344 cubic feet continuous flow per minute for one year.

With the proper combination of pipe line, water wheels and generators, and a fall of 375 feet, two cubic feet of water flow per minute, is equivalent to one electrical horse power.

The immense service reservoir at Thomson, and several storage reservoirs at points above that place, make it practicable to conserve and utilize the entire rule-off of the river.

Construction of Main Dam.

The first great work undertaken towards the execution of this stupendous scheme was the construction of the main dam at the village of Thomson, fourteen miles above the main part of the city of Duluth, and about four miles from the city limits. The erection of this structure, which was accomplished in about one year, was an enormous undertaking in itself; it is built of concrete, and is 38 feet high and 42 feet thick at the base and the crest of the dam is 485 feet above Lake Superior. The overfall section is 356 feet long, and with the retaining wall at either end, the total length of the structure is 1,120 feet, or more than one-fifth of a mile. It is built upon a foundation of solid rock, and connects the natural walls of rock which flank the river on both sides at that point, forming an impregnable barrier to the current, which, when pursuing its natural course, in the next few miles plunges over a series of precipices, until it descends to the level of Lake Superior. There are three sulice gates, each 7 by 9 feet in the main dam in the construction of which, together with a number of smaller dams built by the company, 60,000 barrels of Portland cement were used. The service reservoir formed by the construction of this dam constitutes a beautiful artificial lake, with an area of several hundred acres. The available water stored in this reservoir is sufficient to operate the power house for twenty-four hours without receiving any water from the river.

One of the Great Engineering Feats of the Twentieth Century

MAIN POWER HOUSE ON ST. LOUIS RIVER, WHERE 30,000 ELECTRICAL HORSE POWER IS GENERATED.

Canal, Forebay and Penstocks.

Near the eastern extremity of the service reservoir is the head of the canal, or race, which conducts the water to the top of the bluff, near the foot of the rapids, a distance of two and three-fourths miles, though by following the natural course of the river, the distance would be considerably more.

The canal has a minimum depth of 15 feet and is 36 feet wide at the bottom. Where excavated in earth the sides are sloped two to one but, for 3,500 feet of its length, it was excavated through slate rock at a uniform width of 36 feet. The total excavation was 310,000 cubic yards of earth and 72,000 yards of rock. The water which passes through this channel is equal to 2,900 cubic feet per second. At the foot of the canal is a forebay 40 acres in extent with an available depth of 12 feet from which the water is drawn through pipes directly to the power house at the foot of the bluff, nearly 400 feet below. The head gates through which the water is drawn from the service reservoir and from the forebay are placed several feet below the surface to provide against clogging by ice. Provision is made at the head gates at the foot of the forebay for eight 7-foot pipes but only three of these have been installed at present. The pipes are each one mile in length, the first 4,000 feet being made of California redwood the staves being built with interlacing joints and banded by steel hoops and the pipes are buried in trenches. The lower 1,000 feet of each pipe is built of riveted steel. Five hundred feet above the power house each of the pipes is connected with a standpipe surmounted by a tank thirty feet in diameter the function of which is to regulate the pressure and flow of water when loads are suddenly thrown on or off at the power house.

The thirty foot tank has sufficient capacity between elevations 426 and 472 to supply water to the wheels to meet a sudden demand for power up to 10,000 horse power, and maintain the head required by the water wheel governors for good regulation while the water in the penstocks is accelerating, to the speed required to meet the added demand.

The standpipe and tank will be kept from freezing by allowing warm air to rise in the air space between the pipe and the lagging. The heat will be supplied by steam from the heating plant in the power station 500 feet distant.

RETAINING DAM FILLING GAP TO COMPLETE SERVICE RESERVOIR.

A Modern Power House.

Here at the end of the pipe line, the water, after a fall of 378 feet since leaving the service reservoir, enters, with tremendous force, the power house. The latter is set down in the valley of the St. Louis and one comes upon it very unexpectedly in going up the river. From out of the timbered bank of the stream it breaks suddenly upon the view—a really fine structure from the architectural standpoint. Here, with almost no perceptible influence upon the river, the flood that was taken from the stream three miles above is poured out from the power house, undiminished in volume, having served its purpose of producing 30,000-horse power of energy. The building in which the hydraulic and electric apparatus is housed is built upon massive concrete foundations, a brick and steel superstructure with trimmings of concrete that add beauty to its lines. It is said to be one of the finest power houses in the country in its appointments and it is so economically adjusted to the requirements of its function that in it will be produced more power per square foot than in any similar structure in the world.

Thus far the building has been completed for four 10,000 horse power units and two exciters, but the plans provide for an extension up to eight units of the same capacity. The present building is 188 feet long, 85 feet wide and about 50 feet high, and it is beautifully finished within with tiling; the great generators lined up on one side and the transformers in the center. The transformer compartments are fitted with steel doors and overhead, traveling on steel girders, there is a 60-ton crane, by means of which the 7,500-kilowatt machines may be rolled out upon the floor.

The penstocks enter the power house from the end of the pipe line and are reduced for coupling with 72-inch hydraulic valves, each of which connects with a 13,000 horse power water wheel with vertical shaft, with a speed capacity of 375 revolutions a minute. This shaft, in each case, is twenty-eight feet in length, and its upper end carries the internal revolving field of a generator. In this mechanism is involved the entire process by which the water, running at terrific speed from its recent descent of 378 feet, is transformed into hydraulic power to be presently converted by the electrical apparatus into electric power for transmission. The center of each water wheel is eleven feet above low water level in the river and the draught tubes discharge directly into the stream.

Largest Transformers In the World.

Attached to the housing of each of the water wheels are two relief valves which can be operated either by direct pressure or from the governors, and these governors, which were designed by the Escher-Wyss company of Zurich, Switzerland, are similar to those used at Niagara Falls. The relief valves are set to discharge at a pressure equivalent to a head which will not overtop the standpipe. In case they are used in connection with the governors they reduce the waste of water. Pipe connections for the exciter wheels are made directly from the penstocks and the two water wheels for the exciters are similar to the main generators and each designed to drive a 250-kilowatt, 125-volt exciter at 500 revolutions per minute. The main generators are wound for 6,600 volts—3 phase, 25 cycles per second—and the water-cooled oil transformers are furnished with taps so that the voltage can be varied between 30,000 and 60,000 volts.

The transformers, which are the largest ever built, embody several new and—to electrical engineers—interesting features of design and are technically held to be the realization of the work of the advance school of electrical science. Each transformer is about twenty feet in height. The general scheme of wiring for the station is in the most modern practice. All main alternating-current switches are of the General Electric oil type, arranged to be electrically controlled from a distance. The utmost care has been taken in providing fireproof barriers and the isolation is so complete that nothing but a widespread catastrophe will put all the plant out of commission. Accident is almost absolutely provided against. The switching apparatus is elaborate and extensive, the whole equipment being operated by remote control from a bench board. The entire switchboard is so compact that the control of 80,000 horse power will be centered in a board less than nineteen feet in length.

Double Circuit Transmission.

The power will be taken out of the power house at a voltage of 60,000 for transmission to Duluth. There are two circuits provided for, either of which will carry the whole load in case of accident to the other. The wires are strung upon steel towers erected about 500 feet apart, which also carry a steel lightning arrester wire. Throughout the whole distance of fourteen miles the Great Northern Power company has acquired a right of way 100 feet wide, from which the trees have been cleared and every possible provision made to prevent loss of power in transmission. The transmission line comes over the bluff at Duluth, and is brought down to the sub-station at Fifteenth avenue west. In this building, which is of the same design as the power house and fitted with similar elaborate care, transformers of the same design and capacity as those in the power station are used. Here the high voltage will be stepped down to 13,200 volts for distribution. Here also are installed two 1,500 kilowatt motor-generator sets to supply power to the street railway system. In the Superior power station, one 1,500 kilowatt rotary will be used. The current will be transmitted across the Duluth-Superior harbor by means of submarine cables.

This is the plant that has been established, and everywhere in the construction allowance has been made for the amplification of the physical mechanism to utilize the entire resources of the service reservoir capacity to make use of the power as soon as it was made available and others will be established for the express purpose of taking advantage of this great volume of concentrated energy. The next few years are destined to witness some remarkable transformations in Duluth and its vicinity as a result of this ponderous achievement. Every industry in the city already feels the impetus accruing from this installation and this impetus is reflected in the range towns and other adjacent places.

Ample Water Reserve.

This entire development is based upon ultimately utilizing 30 per cent of the mean annual rainfall on the drainage area of 2,300 square miles below the Duluth Heights system. The remainder of the drainage area (1,325 square miles) is reserved for the Duluth Heights development, the plans for which have been made—or rather, it should be remembered, they were the first made. This water that is reserved will be ultimately brought down from the Heights with a fall of 740 feet and will develop about 110,000 horse power. As an engineering proposition this scheme is more desirable than to utilize the entire drainage area at Thomson, as twenty-five per cent more power, in the aggregate, can be developed this way than by using all the water to generate power at Thomson—and this aside from the important fact that it will permit the generation of this additional power in the heart of the district that will consume it.

How Power Will Be Utilized.

Previous to the construction of the plant a number of contracts for furnishing power had been entered into. Among the uses thus anticipated were the operation of the street cars of both the cities of Duluth and Superior as well as the electric lighting and pumping the city water of both cities. Besides these public utilities, a number of manufacturing establishments were

The Men Who Did It.

All of the construction work on the plant was taken on by the National Railway Construction company, of Boston, and under contracts with this company, the General Electric company has furnished the electrical equipment; the Allis-Chalmers company, the hydraulic machinery; the Excelsior Wooden Pipe company of San Francisco, the stave pipe; the Riter-Conley company of Pittsburg, the standpipe; the Chicago Bridge company, the transmission towers; Roebling Bros., the underground cables, and the American Wire & Steel company, the submarine cables. Porter Bros. of Duluth did a part of the excavating, but most of it was done by the National Railway Construction company itself—which is a subsidiary company of the Great Northern Power company.

The buildings were designed by A. H. Albertson, of New York, and V. M. Holder of Duluth was the resident architect. J. W. Hillard was the supervising contractor.

All of the work has been under the general charge of Frank A. Cokefair, chief engineer of the company, but the plans have been carried out by an engineering staff, which includes several engineers.

D. A. Reed of Duluth has been interested in the work from its very early stages. He is first assistant to the chief engineer, and on the construction has been in charge, generally, of all work above the power house. Of his staff H. C. Ash has been resident engineer in charge about the work at Thomson, and James Lawson, engineer in the field. Thomas Pettigrew has been in charge of the work of the National Railway Construction company; C. E. Bacot has been in charge of the electrical work. W. B. Rittenhouse has directed the mechanical engineering, and O. A. Wait designed and supervised the steel work.

Of the consulting staff, F. O. Blackwell of New York city is the chief. W. A. Brackenridge has been on the consulting staff, and J. T. Fanning of Minneapolis has been in consultation on the hydraulic equipment. The consulting board of engineers consists of Messrs. Blackwell, Cokefair and Pettigrew.

The officers of the company are: President, Charles A. Duncan of Duluth, Minn.; vice president, Thomas Pettigrew, engineer in charge of all of the construction for the National Railway Construction company; treasurer, William A. Tucker of Tucker, Anthony & Co., of Boston, Mass.; secretary, Oscar Mitchell of Washburn, Bailey & Mitchell, Duluth, Minn.

The present board of directors is composed of the following named gentlemen: M. H. Alworth, Henry E. Butler, Jay Cooke, 3rd., Charles A. Duncan, S. Read Anthony, A. M. Marshall, F. A. Patrick, F. A. Cokefair, Thomas F. Cole, Charles B. Coxe, Chauncey Eldredge, J. Horace Harding, Alexander McDougall, Thomas Pettigrew and John C. Rice.

The legal department of the company has been in charge of the firm of Gaston, Snow & Saltonstall of Boston, Mass., as general counsel, and of the firm of Washburn, Bailey & Mitchell of Duluth, Minn., as local counsel, who have direct charge of the legal matters connected with the company.

The executive committee of the board of directors were Messrs. McDougall, Duncan and Marshall, who exercised a general supervision of the entire project. The Northern Power company is the name of the Wisconsin corporation which conducts the company's business in Superior. Its officers are: Alexander McDougall, president; A. M. Marshall, vice president; Charles A. Duncan and Oscar Mitchell, secretary and treasurer. The three first named form the board of directors.

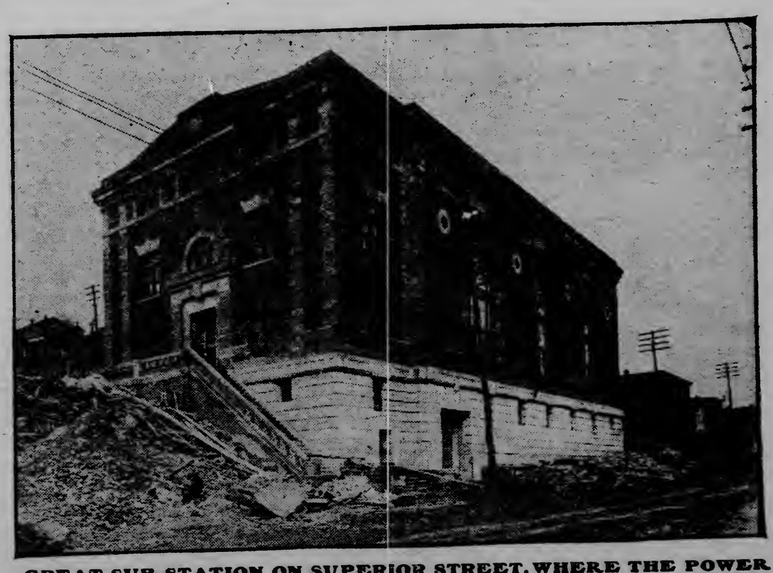
The capital stock of the Great Northern Power company is $10,000,000, of which $5,000,000 has been converted into the treasury from the sale of bonds, leaving $5,000,000 available for future development.

Some Figures About the Great Northern Power Company's Plant.

The cost to date of the improvements is $5,000,000.

It has 30,000 electrical horse power developed, while plans have been laid for 200,000 horse power.

It is now furnishing power for operating street cars, electric lighting and industrial plants, for Duluth and Superior, and will eventually furnish power for the iron ranges.

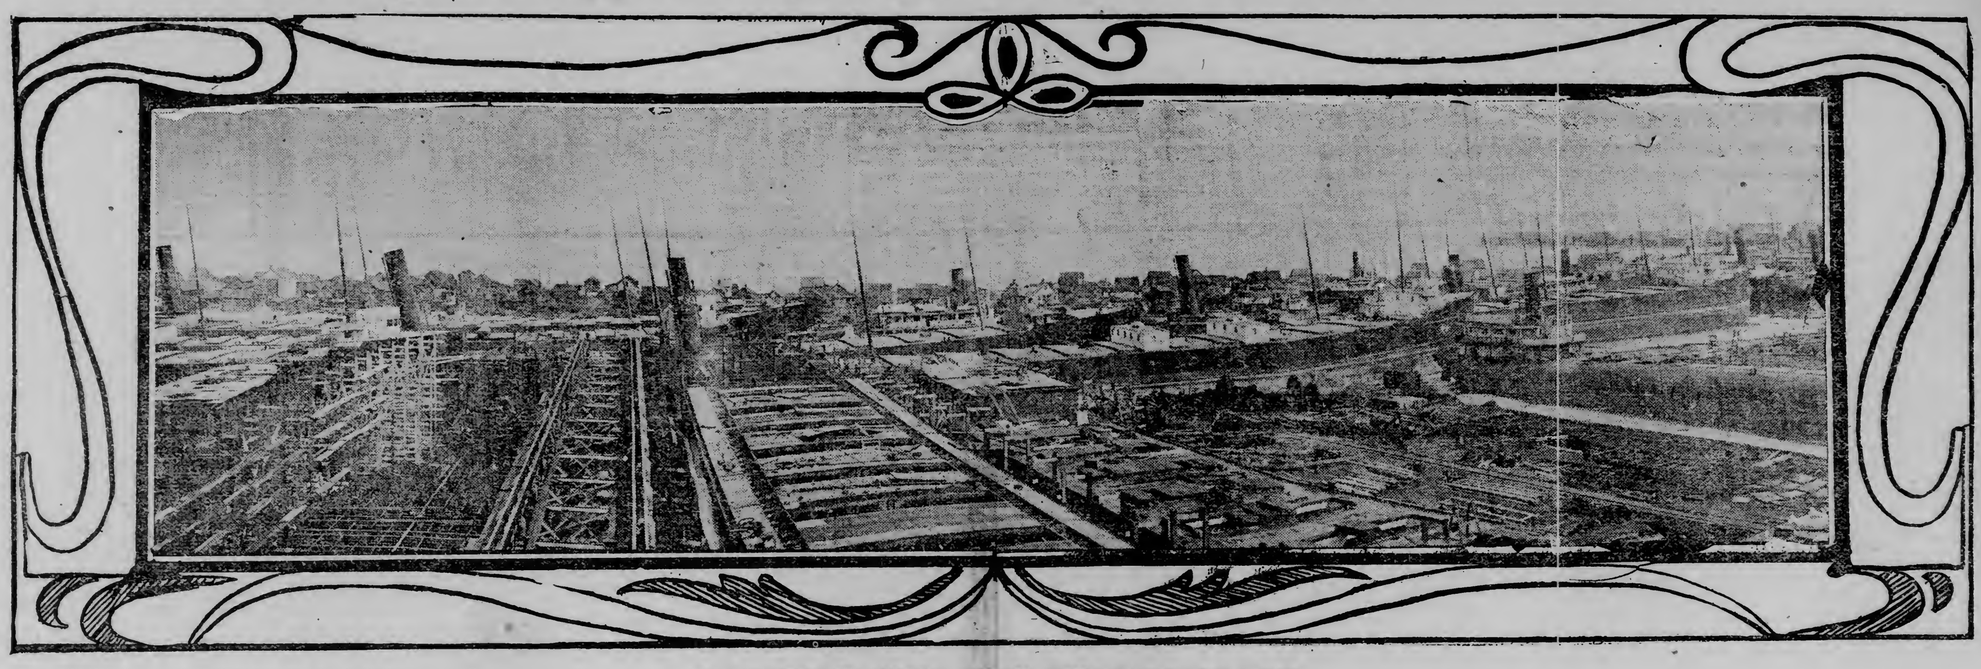


The length of the main dam is 1,120 feet or more than 1-5 of a mile. Its height is 38 feet, width at bottom, 42 feet.

The dam stretches across the St. Louis river at the Head of the Rapids at Thomson, 4 miles from Duluth.

The canal that carries the water from the reservoir to the power house is 2¾ miles long.

The excavation of this canal removed 310,000 yards of earth and 72,000 yards of rock.



The dam, canal and power house was two years in building, and is classed as the greatest engineering feat west of Niagara Falls.

GREAT SUB-STATION ON SUPERIOR STREET, WHERE THE POWER IS TRANSMITTED.

SUPERIOR SHIP BUILDING COMPANY

Where Freight Carrying Boats of the Largest Tonnage Are Built and Dry Docks Capable of Docking the Biggest Ships That Navigate Lake Superior Are Located.

SUPERIOR SHIP BUILDING COMPANY.

IT MAY not be generally known that the greatest shipbuilding concern in the world is located on the Great Lakes, and many marine men would be astonished to learn that some of the largest freighters afloat are constructed near the center of the continent of North America, fourteen hundred miles from the nearest salt water. Yet it is a fact that the American Ship Building company, with its eleven plants located at nine different ports on the Great Lakes, turns out by far the greatest tonnage of boats of any institution of the kind upon the globe; and it is likewise true that a number of its largest vessels, carrying cargoes of from twelve to thirteen thousand tons each, have been built and are now being built right here at the Head of the Lakes.

So great has been the increase of lake commerce during the last score of years that there has come about a complete revolution in the business of constructing vessels for its transportation; and this is especially true regarding the boats required for handling the freight which originates in the Duluth-Superior harbor the tonnage of which is now fully eight times as great as it was at the beginning of that period, having exceeded twenty-nine million tons during the season of 1906. It is a well known law of transportation that commerce naturally seeks the shortest route for its commodities from the point of production to the point of manufacture or consumption While this principle is sometimes temporarily subverted, owing to artificial conditions, it holds good in the main and it was a natural consequence that, with the building of great trans-continental lines of railroad and the rapid settlement of the immense grain growing regions of the West and Northwest, there should be dumped into the elevators and docks of this harbor a steadily growing stream of grain demanding cheap transportation to Eastern markets and taxing the ingenuity of boat builders and ship masters to provide the same.

Invention of the Whaleback By Capt. McDougall.

Numerous attempts were made to accommodate this growing demand, the most noteworthy of which was the device of Capt. Alexander McDougall of Duluth, who invented the famous "Whaleback," a new style of vessel, which, for a time, attracted the attention of marine men throughout the world and threatened to revolutionize the shipbuilding business. This led to the organization of the American Steel Barge company, which purchased a tract of about twenty acres on the water front in Superior and began the construction of the new style of ships upon an extensive scale. The launching of the first of these boats attracted people from all over the United States, as well as many from Europe. A number of the new style of vessels were built during the next few years, some of them being loaded at this port for European markets, but, so rapid was the development of marine commerce upon the lakes, that the whaleback soon proved to be inadequate to supply the demand for large cargoes, and it was superceded by other and more modern types of vessels. Few, if any, of these peculiar boats are now in commission.

The shipment of grain and flaxseed from the Head of the Lakes continued to rapidly increase until, in 1898, it reached the enormous total of nearly eighty-six million bushels. At about the same time, the shipments of iron ore from this port began to take on such huge proportions, together with the movement of lumber and other commodities, that the demand for new and more commodious vessels seemed to present a never ending problem. Nor did this demand call alone for boats of greater capacity, but, owing to the immensity of the cargoes to be loaded and discharged, and the fact that the season of navigation in these waters is usually limited to less than eight months of the year, it became necessary to devise a style of vessel which could be quickly loaded and unloaded. In order to accomplish this feat, it was necessary to construct an entirely new type of hull, one which would permit the use of modern machinery in handling the cargo and minimize the amount of time and human labor required in the same. To what extent this has been accomplished, may be judged from the fact that the largest cargo of grain ever loaded at the Head of the Lakes, consisting of nearly four hundred thousand bushels, was placed in the hold of the boat in exactly four hours.

American Ship Building Company Takes Control.

In 1899 the Superior Ship Building company was organized as a branch of the American Ship Building company. This concern acquired the plant of the American Steel Barge works, which have been considerably enlarged and equipped with modern facilities so that it is thoroughly prepared for building the largest and latest designs of ships. For a number of years past these shipyards have been a scene of great activity, employing nearly two thousand men during the greater part of the season, in the various trades and crafts which are comprised in the scope of work necessary to the complete building of a modern ship. Nearly every branch of mechanical art is employed before a giant freighter can be completed ready to go into commission and start upon its maiden trip; for, when a ship is turned out at the Superior yards, there is generally a cargo awaiting her at some one of the nearby docks. The shipbuilding industry has become one of the most important institutions on this harbor and has attracted skilled artizans from all over the United States as well as from foreign countries. For the great revolution in the size and pattern of the vessels built is not the only change demanded by modern methods. The new style of steel construction has entirely displaced the old-fashioned wooden bottoms so that a shipwright of fifty years ago, or of even a much later date, no matter how thoroughly versed in his vocation, would find little use for his services at the present day. Yet, so great is the amount of wood work used in the interior finishing of these vessels, that a complete joiners' and woodworkers' establishment of no inconsiderable proportions forms an important part of this gigantic plant.

The president of this concern is Capt. A. B. Wolvin, to whose enterprise and ability much of the success of the business is due. In his honor, one of the first of the large freighters built here was christened the Augustus B. Wolvin. This monster, which was 560 feet in length, was built at the Superior shipyards in 1903, and was supposed to represent the climax in point of size and availability for the rapid handling of her cargo being open throughout the length of her hold with immense hatchways permitting the introduction of steam machinery for unloading which is done in much the same manner that steam shovels are operated in an open pit or mine. Great as was the size of this monster, however, she has been superceded more recently by vessels of still greater size, one of those launched in the last year, the E. Y. Townsend, being six hundred feet in length and having a carrying capacity of thirteen thousand tons. Several others of equal capacity have been recently built in other plants of the American Ship Building company, but no other exclusive freight carrying vessel in the world exceeds the Townsend in point of capacity or facility for loading and unloading of cargo. So great has been the progress made in handling ore, grain and other commodities by machinery that, while the tonnage of freight received and shipped at this harbor has increased four-fold in the last ten years, no more help is employed at the docks now than at the beginning of that period and the rates for carrying freight are no greater, if as great, as they were twenty years ago, when the average wages paid were much smaller than at present.

During the seven years of its existence the Superior Ship Building company has produced twenty-two vessels with a total carrying capacity of about one hundred and sixty thousand tons, and is now turning out boats of the most modern type at the rate of four per year. The launching of one of these marine giants always attracts an immense concourse of people, some of whom come from great distances to view the event even when, as is sometimes the case, it occurs in midwinter. The latest of these attractions occurred on the 22nd of December, 1906, when the Sheldon Park took the great plunge into the waves upon whose bosom it was destined to float for the balance of its existence, and the most prophetic mind would be puzzled to foretell how soon these immense products of man's skill and ingenuity will have outlived their usefulness and be superceded by others representing a still later phase of industrial and commercial development.

Ship Architecture.

There is just as much diversity in style and carrying capacity in shipbuilding as there is in other lines of architecture. Every man that has the price to order a ship for his own particular business has notions of his own and asserts his individual ideas by ordering ships that come up to his standard. The up-to-date ship is built for carrying capacity. Everything else but durability is sacrificed, therefore the enormous size of the boats, each succeeding ship having more carrying capacity than its predecessor. In putting this question to Louis Williams, the superintendent of the Superior Ship Building company's yards: "When will the limit of size of the freight carriers be reached," he answered. "Not until the carrying trade demanded something smaller."

Capacious Dry Docks.

An important department of this stupendous plant is its dry docks, in which many vessels annually undergo repairs and, in some cases, are almost created anew. There are now in operation two enormous slips and the capacity of the stablishment will soon be increased by the completion of another of sufficient size to accommodate any vessel afloat on the lakes, or that is likely to be built thereon, for many years to come. Since the disastrous gale of November, 1905, which resulted in surpassing all previous records for destruction and disabling of vessels on the Great Lakes, the dry docks have been taxed to their fullest capacity in repairing and refitting ships which were among the victims of the storm's unrelenting fury.

Many of the boats plying between this harbor and lower lake ports are accustomed to spend the winters here and a view of those sometimes congregated in a single slip or pocket forms an interesting spectacle. It is during the closed season for navigation that the dry docks are usually kept the busiest.

Some Interesting Comparisons.

While contemplating the capacity of vessels built on this harbor and the extent of the commerce originating or terminating at the Head of the Lakes, it may be of interest to the reader to note how the same compares with similar transactions at other prominent ports. So far as the statistics are available, London is the only port upon the globe where the tonnage loaded and discharged in the past year equalled that of the Duluth-Superior harbor. The annual tonnage of the famous Suez canal is less than that which passes in and out beneath the Duluth aerial bridge. No other drawbridge in the word is swung to permit the passage of so great a tonnage of freight as that which passes the interstate bridge between Duluth and Superior, and when that bridge was wrecked during the past summer and the channel thereby obstructed for a few days, more tonnage was anchored within this harbor than that of all the vessels which hailed from New Bedford a half century ago when that port was famed throughout the maritime world for its whaling and other sea-going industries. Any vessel upon the sea at that period, together with its cargo and crew, might easily have been placed within the hold of one of the modern ships built at the Superior shipyards and there would still be an abundance of room to spare. About two-thirds of all the tonnage passing through the Soo canals is bound to or from this port.

It may also be interesting to note that the capacity of the ships built by this establishment in the last seven years is sufficient to have carried all the freight taken in and out of this harbor twenty-five years ago. The following list shows the names together with the tonnage and carrying capacity of these twenty-one vessels, that number not including the Sheldon Park which was recently launched.

	Tonnage.	Carrying Capacity Tons.
Barge John Smeaton	5,049	8,000
Str. Charles R. Van Heise	5,117	7,000

Totals	91,697	148,900

Besides its immense plant at Superior, the American Ship Building company operates two similar establishments at Chicago and two others at Cleveland in addition to which there is one in each of the following cities: Buffalo, Detroit, Bay City, Loraine, Wyandotte and Milwaukee. The immensity of this business may be judged from the fact that during the year ending with June 30, 1906, thirty vessels were built in all these yards with an average capacity of 8,700 tons each or an aggregate of 261,000 tons. This fleet in ten round trips would be capable of carrying away more than the eighty-three and one-half million bushels of grain and flax which were shipped from the Head of the Lakes last year, as well as bringing, on the return trips, more than one-half of the five million tons of coal which were received at this port during the same period.

It is greatly to the credit of this concern, which practically monopolizes the building of boats upon the Great Lakes, that its construction of freight carriers has kept pace with the enormously increasing demand for transportation coincident with the increased production of iron ore, grain, lumber and other commodities which form the bulk of the cargoes loaded at the Head of the Lakes. As this has a marked effect in regulating the rates charged for tonnage on the lakes and, incidentally, upon freight rates everywhere, it may readily be conceived that the benefits resulting from the business conducted by this vast concern are shared by nearly every interest in the commercial world. The extent of this benefit upon the consumers of the three great stable commodities, lumber, grain and iron and steel it would be impossible to even estimate, while the incidental benefits resulting from the enterprise in the number of people furnished with employment, materials consumed, etc., it would be equally futile to undertake to describe. The Head of the Lakes has certainly enjoyed a good share of these benefits.

The business of the Superior Ship Building company is managed from its office in the Wolvin building in Duluth. This building, one of the most modern in this or any other city, is appropriately named in honor of the president of the company, who is interested in a number of other important industries centering in this harbor.

No other shipbuilding concern in the world produces more than a fraction of the tonnage turned out by the American Ship Building company. The influence and example of this concern is felt throughout the maritime world both as regards the type and capacity of the vessels which it constructs and the transportation rates which it is enabled to establish, or which naturally result from its policies in boat building.

Capt. Joseph Sellwood, One of Duluth's Most Successful Mining Magnates

MINING AN ANCIENT INDUSTRY.

Noteworthy human achievements are seldom the result of chance; while the direct cause may not always be apparent to the casual observer, investigation will disclose the fact that every important accomplishment has come about in consequence of special preparation of the individual for that particular purpose or something closely akin thereto. This preparation is sometimes involuntary in a considerable degree, or the result of inherent instinct; and it is often the case that the influence of environment, unconsciously exerted, fits certain persons in a measure to play important parts in the great drama of human endeavor whose continuous performance has held the attention and elicited the applause of their fellow beings since the world began.

The little promontory of Cornwall, in the southwest of England, occupies but an insignificant place on the map of the world and its importance in the commercial and industrial world is often overlooked by people in the Western hemisphere, but no portion of Europe of equal area has been more productive of wealth than this diminutive shire whose mineral products contributed to the riches of ancient cities and nations, and continues at the present day to yield the world's chief supply of some of the metals which have become household necessities everywhere. It is a natural consequence that a race of people whose chief endeavors for countless generations have been directed to wresting from the earth her hidden treasues should have been foremost in the practical development of the great mineral resources of the United States.

A REPRESENTATIVE CORNISH MINING MAN.

A representative of the most progressive type of this industrious people is Capt. Joseph Sellwood of Duluth, one of the most prominent figures in the marvelous development of the Mesaba iron range. Mr. Sellwood has been all his life identified with mining industries, and is familiar with every detail of that line of business. Beginning as an apprentice boy in the Cornish mines, he has worked his way through the successive stages of the business until he stands today among the foremost business men of Minnesota, and his judgment on any subject pertaining to mining, is recognized as an authority.

After coming to this country, Mr. Sellwood was identified, with iron mining on the Michigan ranges for a number of years, becoming by practical experience and observation, familiar with whatever features of the industry he had not previously mastered. At the suggestion of the Minnesota Iron company in February, 1892, he came to Minnesota for the purpose of investigating the Mesaba range, concerning which, there was at that time much speculation and many conflicting rumors. So great was the confidence in his judgment that he was clothed with authority to negotiate for the purchase or control of any iron lands which, in his opinion, might justify such a venture. He reached the range by means of a tiresome journey over a desolate and unpromising route and examined the pits which had been operated by the Merritt Brothers and their associates. Though these were not as promising as some of the locations subsequently opened, his investigations convinced him that there was an abundance of merchantable ore on the range, and his declarations to that effect, being the first to come from a man of influence and experience, greatly encouraged the hopes of those who were interested in the prospecting which was being prosecuted on the range, as well as inspiring the confidence of capitalists and investors who were interested in iron production. Capt. Sellwood received a number of flattering propositions from mining companies who wished to avail themselves of his knowledge of iron mining and of the Mesaba range, but the Minnesota Iron company had too high an appreciation of his abilities to consent to any dissolution of the relations which existed between him and that corporation. A new proposition was made to him, which he accepted, allowing him an increased salary, together with an interest of 5 per cent in the profits of any mines which he might see fit to buy on behalf of the company.

FIRST IMPORTANT INVESTMENTS OF THE MESABA RANGE.

Capt. Sellwood always has the courage of his convictions and loses no time in carrying out a line of proceedings when once satisfied in his own mind of its expediency. This is illustrated in the fact that on the first of January, 1893, he offered the Merritt Brothers the sum of five million dollars for their holdings—and this before a successful furnace test of the ore had been made. As is pretty well known, the first of these tests were far from satisfactory to furnacemen, and only one year subsequent to this prodigious offer, control of the same properties was offered for $1,100,000. The excellence of Capt. Sellwood's judgment has since been amply demonstrated, however. Among the properties which he did buy for the Minnesota Iron company were the Fayal, Genoa, Norman and Auburn mines, the combined product of which already exceeds fifteen million tons of iron ore. He made some very advantageous deals for the company and for himself. These transactions were based upon his judgment of the possibilities of development in these properties, not upon what was positively known by anyone concerning their extent or future value, but the sequel proved the infallibility of his foresight. The Minnesota Iron company has realized immense profits from the mines which he secured for them, and have had no occasion to complain of the investments which he made for them nor of the commissions paid to him therefor—enough in themselves to make him a very wealthy man.

CAPT. JOSEPH SELLWOOD.

SOME IMPORTANT ESTIMATES AND PREDICTIONS.

Capt. Sellwood's investments for himself and others on the Mesaba range, doubtless, exceed those made by any other individual. The capacity of the mines which he has handled is estimated at fully 150,000,000 tons, and it will be many years before their products are exhausted. He is probably the best informed on all kinds of topics pertaining to the Mesaba range of any man here or elsewhere, and is quite optimistic as to the future possibilities of the range. He predicts that the annual production of ore from this range will keep on increasing until it reaches forty million tons per year. He is not as sanguine as to the amount of merchantable ore on the range as some people who are not as well informed as he, but is confident, however, that a billion tons will eventually be taken out and estimates that one-half of that amount lies within a radius of six miles from Hibbing.

The compactness of these immense deposits naturally tends to facilitate their rapid depletion, or as he expresses it, "When ore was packed in that way by nature, it was intended that it should be exhausted as fast as man could take it out—and it will be."

The estimates made by this great captain of industry are always conservative and he has never been accused of being extravagant in his statements so that prognostications coming from his lips may always be depended on to keep within the bounds of actual facts. Bearing these facts in mind, it is interesting to note the following statement recently made by him: "Taking one charge with another, it will be necessary to spend, on the range and here, over a billion dollars to get the ore to the docks, and it will cost $750,000,000 more to land it in Lake Erie. Most of this enormous sum will go into the hands of people on the range and at Duluth."

STILL ACTIVE AND WELL PRESERVED.

A man of remarkable vitality and physical vigor, Capt. Sellwood is still, at the age of 60 years, actively engaged in the business of mining. Among the mines which he is operating are the Adriatic at Mesaba, the Cass at Biwabik, and the Bedford and Cyprus mines at Hibbing, the combined annual product of which is a half million tons. He also operates the mines of the International Harvester Co., including the Agnew, Hawkins and Illinois mines, which are producing an aggregate of a million tons each year. Most men would be broken down in health ere this by the nervous strain of the fabulous transactions which he has carried on but, like most men of his nationality, he is not readily excited, has kept a sound mind in a sound body, and bears the weight of his years with as much tranquillity as that other great captain of finance whom he is said to greatly resemble in physical appearance, J. Pierpont Morgan.

Besides his extensive mining interests, Capt. Sellwood has, in recent years been an active promoter of a number of business enterprises in Duluth and elsewhere. His financial interests are extensive and he is identified with several important banking institutions, including the City National Bank of Duluth, of which he is president. He is considered one of the most influential and public-spirited among Duluth's many financiers and is a liberal patron of worthy philanthropic and benevolent undertakings.

REMARKABLE PROGRESS MADE DURING HIS LIFE TIME.

During the lifetime of this progressive and enterprising man, many changes have been wrought in the industrial world, but none more marked than the revolution in the production, manufacture and use of iron and steel. When, as a boy, he labored as a miner's apprentice in Cornwall, steel was too expensive to be used to any great extent, but was utilized to point the iron drill used by the miners. When we reflect upon the enormous use of steel in this "iron age," we can form some conception of the changes which have transpired in this one industry alone.

His sincerity impresses itself strongly upon every one with whom he comes in contact, and this characteristic, together with the force and determination which is stamped upon his features, explains the confidence reposed in him by the officers of the Minnesota Iron company when he was commissioned, fifteen years ago, to go forth and inspect the Mesaba range and to exercise his judgment in the selection and purchase of such properties as he saw fit. Few, indeed, are the men, who are ever charged with such grave responsibilities involving the investment of millions of dollars in property at a time when the wisest and most experienced men are troubled with doubts and conflicting emotions as to what will be the ultimate outcome. In such crises, it is the man of mature judgment, stability of purpose and confidence in his own powers who is able to meet the emergency. Such men are not met with every day, and Duluth is highly honored in being able to count among its respected citizens the name of Capt. Joseph Sellwood.

HOW IRON MINING IS SIMPLIFIED BY STRIPPING

The Drake & Stratton Method

The rapid strides made in recent years along the line of industrial development have been made possible only by a corresponding briskness and elongation in the steps taken in the mechanical world. Notwithstanding the wonderful progress made in the invention of labor saving machinery, the demand for labor was never greater than it is at the present time and the inventive genius of mankind is constantly taxed to devise means by which more work may be automatically accomplished.

In no line of human exertion has a greater revolution been wrought than in the process of mining as conducted today on the Mesaba Iron Range, compared with the system which prevailed before the opening of that marvelous field of mineral deposits and which is still in vogue in many parts of the world. The discovery of these rich ore beds presented to those interested in their development some new and well nigh inscrutable problems. While this ore was known to be of exceeding richness and the deposits were in many cases but a short distance beneath the surface and extended in some cases for miles and were many feet in thickness, yet the only route by which the range could be reached or the product transported to the nearest navigable water lay through a dense forest almost impenetrable for man or beast. The only furnaces in existence or likely to be for some years to come, capable of handling the immense quantities of ore which the mines could produce, were located at far distant points and cheap transportation of the ore was one of the first things which had to be assured. This problem was solved, in a measure at least, by the construction of the Duluth, Missabe & Northern railroad and branches of the Duluth & Iron Range and the Great Northern railways, providing three routes by which ore is now conveyed to the docks whence its transportation by water was conceded to be a comparatively simple matter.

Introduction of Stripping Process

Next in importance to the transportation problem, if not an even more serious one, was the matter of rapid and inexpensive mining and loading of the ore. It was perceived at the start that the antiquated system of mining with pick and shovel must be superceded by some more practicable method of extracting the ore from the ground and loading it on cars. With the rapidly increasing demand for labor and advancing prices of timber and shafting of mines was also an expensive, laborious and time consuming process. As a solution of this great problem, it was suggested that it might be more practicable to "strip" or remove the surface of the ground, or overburden, provided that the same could be accomplished without too much expense and sufficient depth of ore was assured to justify the undertaking. It was assured at the start that it would be practicable to remove but one foot of surface for each two feet in depth of ore.

The practicability of "stripping" the mines was demonstrated in 1893 by the contracting firm of Drake & Stratton, of which Senator E. B. Hawkins was and is the manager and chief representative in Minnesota. This firm has been engaged for the last thirty years in filling large contracts for railroad grading and other work and bought to the solution of the question on the range the advantage of broad experience backed by ample capital and an organized force of skilled and capable workmen. One of the first contracts taken for stripping by this concern was on the Biwabik mine and 300,000 cubic yards of earth were removed the first season by means of a steam shovel, operated on a regular railroad track laid for that purpose. In addition to its many other contracts in different parts of the country, this firm has since filled many enormous contracts for "stripping" on the Mesaba range and has removed approximately twenty million yards of earth, portions of which had to be transported two miles before a convenient dumping ground could be secured. The amount of earth handled in this gigantic enterprise exceeds that moved in the grading of a transcontinental railroad. With the advanced methods resulting from the ingenuity and enterprise of men like Senator Hawkins and the practical engineers with whom he is associated, stripping is now carried on to a depth as great as 145 feet, uncovering beds of ore which will also be removed and loaded into cars by means of a steam shovel. The average weight of a cubic yard of earth is a ton and a quarter, and the expense of handling it has been reduced from forty cents per yard, at the beginning, to thirty cents at the present time. It is roughly estimated that the total cost of stripping, mining and loading on the cars averages about fifty-five cents per ton. The operations carried on by the Drake & Stratton company on the Mesaba range alone give employment to 1,200 men; four steam shovels are operated, some of which weigh as much as seventy tons each. The stripping done by this concern amounts to about 60 per cent of all the contracts filled in that line on the Mesaba range, besides which it has filled some large contracts for moving ore. Among the mines stripped by the firm are: The Great Fayal, the Oliver, the Sharon at Buhl, the Lone Jack, the Stevenson, the Morris, the Leonard and the Commodore.

Senator E. B. Hawkins

The second vice president and general manager of the firm of Drake & Stratton in its operations in this region is Senator Hawkins, who is well known to the people of Duluth and throughout the state of Minnesota. He was born in 1864 at Ogdensburg, N. Y., and has been connected with contracting work on a large scale from the age of sixteen years. Since 1885, he has been identified with the one firm, whose original incorporators, from which its name was taken, are no longer connected with it. Besides himself, the other officers are: Jonathan Wainwright, president; and G. T. Richards, first vice president.

NOW READY FOR BUSINESS

Magnificent Electrical Plant of the

Great Northern Power Company,

DULUTH, - - - MINNESOTA.

Owners and Operators of the St. Louis River 30,000 Electrical Horse Power.

To Users of Electrical Power: We are ready to make contracts to furnish Electrical Energy for large or small consumers covering the whole Head of the Lakes Territory, for immediate delivery from our Hydro-Electric Plant.

We are ready to make figures and give terms of exceptional value to users of Electrical Power in any quantity on Twelve or Twenty-four Hour Circuits to meet the requirements of users. We invite correspondence from all Commercial and Industrial Houses which desire to take up the matter of adopting Electricity as their Motive Power.

For Information Call or Address:

GREAT NORTHERN POWER CO.,

316 Providence Building, - - - - - DULUTH, MINN.

MANY COPPER MINING ENTERPRISES

Capitalized for $104,500,000 and Financed By Duluth Millionaires

Duluth's supremacy as a commercial and industrial center has long been recognized, and now it has reached a point in its career of expansion as one of the great financial marts of the United States, as the one item of the capitalization of the many copper mining companies that are largely financed by Duluth's millionaires, reaching the fabulous figures of $104,500,000. There is no longer any doubt but that in another decade this city will be the third copper market for listed and curb stock in the world. We have the men of brains and money to make it so, while our geographical position, just half way between New York and San Francisco makes Duluth the pivotal trading center for stock trading in the United States.

RAPID DEVELOPMENT OF COPPER INTERESTS.

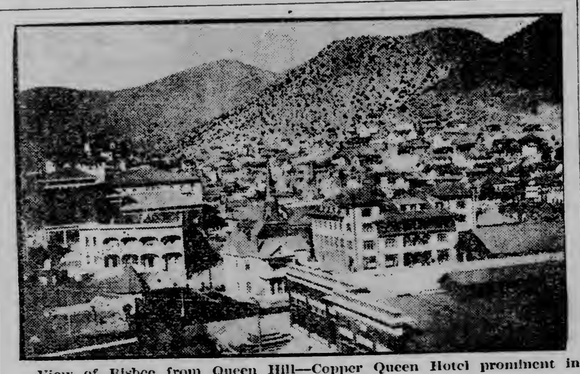
The elements of success, of grand achievement in industrial pursuits lie in the sagacity of the men who form the foundation plans and in the energy and skill with which they are carried to the point of culmination. Among the most important of recent industrial undertakings in the United States may be classed the colossal mining enterprises which have developed within a few years past; corporations which have come into existence, not to make gain by merely changing the forms of wealth, but to extract riches from the crust of the earth.

It is a significant fact that Duluth men were among the first to anticipate the unprecedented demand for copper which has arisen within a comparatively recent period; a demand which is still far in advance of the supply, notwithstanding the fact that the production of this useful metal far exceeds in value that of any metalic product in the world. This phenomenal demand is due, primarily to the rapid increase in the uses to which the metal is put under the swiftly changing conditions of life and the rapid advance of civilization at the vestibule of the twentieth century. Not least among the causes of this increased demand is the remarkable extension of telegraph and telephone service, an extension which is rapidly reaching every portion of the civilized world, which is being carried to the most isolated localities, stretching lines across continents and under ocean depths; the building and operation of which, with attendant industries, have created new trades and professions and called into employment hundreds of thousands of people.

Rapid Development of Copper Interests.

The elements of success, of grand achievement in industrial pursuits lie in the sagacity of the men who form the foundation plans and in the energy and skill with which they are carried to the point of culmination. Among the most important of recent industrial undertakings in the United States may be classed the colossal mining enterprises which have developed within a few years past; corporations which have come into existence, not to make gain by merely changing the forms of wealth, but to extract riches from the crust of the earth.

It is a significant fact that Duluth men were among the first to anticipate the unprecedented demand for copper which has arisen within a comparatively recent period; a demand which is still far in advance of the supply, notwithstanding the fact that the production of this useful metal far exceeds in value that of any other metallic product in the world. This phenomenal demand is due, primarily, to the rapid increase in the uses to which the metal is put under the swiftly changing conditions of life and the rapid advance of civilazation at the vestibule of the



Duluth Men Interested in Copper Mines.

It is characteristic of Duluth people that nothing is ever done by them in a desultory or half-hearted fashion. Enterprises undertaken by a thoroughgoing citizens of this city are pushed to a climax with a vim and promptitude that astonishes people accustomed to the deliberate manner in which every business proposition is formally considered in some slow going communities and conservatism which accompanies the execution of a project when once definitely decided upon by many people. Investments involving millions of dollars are conceived, discussed, settled and carried out by Duluth capitalists during the time that would be devoted to the purchase of a piece of furniture or a suit of clothes by the staid and tranquil business men of some Eastern and Southern cities. The life and bustle which is everywhere manifest is one of the first things which impresses the stranger in Duluth.

It is due to the vigorous determination with which Duluth men consumate their ventures that this city has become the chief center of interest in the development of copper mining enterprises on this continent. Only a few years since it would have been difficult to find a dozen men in this city who had ever given a serious thought to the subject of copper mining outside the Lake Superior district, but so rapid has been the dissemination of information on this important topic that it would be equally difficult, at the present time, to find a man who is not more or less of a connoisseur on this complicated subject, and so rapid has been the accumulation of capital at this center that millions are now invested in the development of mines in the principal copper bearing districts of the United States and Mexico; and so alert are the men interested in this matter that many new mining and development companies have been organized in this city, and an important portion of the world's supply of copper is now being produced at mines managed and operated by Duluth men of dollars. These mines are now shipping thousands of tons of copper, besides large quantities of gold, silver and lead, which are usually extracted from the same veins, but in most cases are classed as by-products in comparison with the great volume of copper ores. Mines managed chiefly by Duluth people may be found in the principal copper producing districts of Montana, Arizona, Michigan, Idaho, Nevada, Utah and Mexico.

Modern Methods in Mining.

Mining today is no longer the haphazard undertaking that it once was. In this age the location of rich ore veins is seldom the result of chance discovery by some random prospector. While it is true that some of the richest mining properties in the world have been stumbled upon by men who were proceeding along no definite line of research, or, in some cases, engaged in exploration work with some entirely different purpose in view, yet such instances are comparatively rare, and the world hears little of the lifetimes spent in prospecting by men who never uncovered ore enough to pay them day wages, nor of the fortunes spent to "Grub-stake" itinerant miners and prospectors whose hopes were never realized. In modern mining procedure, veins of ore are often located far beneath the surface by scientific calculation and development work, involving the expenditure of thousands of dollars, and the transportation and use of machinery, weighing hundreds of tons is carried on with a nicety and exactness which seldom fails to produce satisfactory results. Undertakings of such magnitude, however, usually require considerable time to reach their culmination, and much may be heard in the future of mining enterprises now in their infancy.

North Butte Mining Co.

This concern is one of the most conspicuous of the Duluth Copper companies and has been the means of inaugurating, incidentally, a "boom" which is unsurpassed in the history of that famous mining city, Butte, Montana. Early in the year 1905, this concern purchased the Speculator mine at Butte for $5,000,000. It was not considered worth the price by most dealers in mining property, but the promoters of this company became convinced that it was a safe investment and, under their energetic management it proved to be far more valuable than they anticipated. In three months it began paying dividends and has kept them up at regular intervals since, having paid a total of $2,600,000. Its capacity has been recently increased and is now capable of hoisting 1,500 tons of ore per day. The phenomenal success of this mine has caused the formation of many new companies and millions of dollars have flowed into Butte as a consequence.

North Butte Mining company is capitalized for 400,000 $15 shares, for which cash was paid in full, and its officers and directors are as follows: President, James Hoatson; first vice president and treasurer, C. A. Duncan; second vice president and solicitor, Joseph B. Cotton; directors, these and W. J. Olcott, J. U. Sebenius, C. A. Congdon, James Gayley, T. F. Cole, D. M Clemson. Its secretary is F. R. Kennedy, and its head office is at Duluth.

This company, though its original purchase at Butte was a claim of but four acres and an option on two larger ones, now holds one of the largest areas of the camp, owning the following claims, all in a group on the north side of what was not long ago considered the northern limit of the mineralized area: Speculator, Adirondac, Edith May, Miners' Union, Jessie, Gem, Croesus, Snowball, Millview, Emily, John Emmett, Berlin, Lynchburg, Leaf, Gustavus, Eva and Margaretha.

The general feeling in the copper markets of the East is of great friendliness toward the North Butte and that its value will be far greater before it is less. The company's ore is all smelted at the reduction works of the Washoe company at Anaconda.

Greene Cananea Copper Company.

The Greene-Cananea Copper company is organized under the mining laws of Minnesota, with an authorized capital of $60,000,000, divided into 3,000,000 shares of a par value of $20 each. The company was organized to acquire the outstanding capital stock of the Greene Consolidated Copper company, and the Cananea Central Copper company. These allied properties constitute one of fabulous wealth as producers of copper ore in their meager state of development, and what the production will be when fully developed is a guess that no mining expert would care to risk his reputation on. This mining property is conceded to be one of the richest in copper ore deposits in Mexico, and as the properties contain many thousand acres, it is reasonable to assume that the Greene Consolidated Copper company will make millions in dividends for its stockholders. It is pleasing to note that the leading and aggressive spirits of this company are Duluth men, who are backing up their faith with their dollars as to the fabulous wealth in copper-bearing rock in the Greene Cananea Copper company's mines in the state of Sonora, Mexico. The officers and directors are: President, Thomas F. Cole; first vice president, William C. Greene; second vice president, Charles A. Duncan; third vice president, Charles D. Fraser; fourth vice president, Joseph B. Cotton; treasurer, Charles A. Duncan; secretary, Frederick R. Kennedy; first assistant secretary, Joseph W. Allen; second assistant secretary, Daniel R. Smith; general solicitor, A. L. Agatin. Directors: William C. Greene, Thomas F. Cole, John D. Ryan, James Hoatson, Chester A. Congdon, Charles d'Autremont, Jr., Myron M. Parker, Cleveland E. Dodge, Charles A. Duncan.

Denn-Arizona Copper Company.

There is no one new property that has been given such public endorsement as the Denn-Arizona during the year 1906. The stock steadily advancing from $10 par to $100 in the first six months, from the time development work commenced. There has been a slump in prices, but no slump in the development of the mine. The property consists of 200 acres adjoining the Junction mine. The Denn-Arizona was diamond drilled and rich copper ore bodies were located, then a 1,200-foot shaft was pushed down vertically and laid bare rich copper ore veins, while a long drift on the 1,000-foot level to connect with the American-Saginaw ground to the east has been made. The development work on the Denn-Arizona will be vigorously pushed until it is put on the shipping lists of mines of the Bisbee camp. The president, Mr. Martin Pattison, is one of the best posted mining men in the country, as his long and successful mining career well attests. There is no mining property that is in better hands than the Denn-Arizona with Byron Pattison as chief mining engineer, a graduate of the Michigan School of Mines, and who won his spurs in the mining world by making a shipper of the Shattuck-Arizona. The officers of the company are: Martin Pattison, president; A. Guthrie, vice president; John G. Williams, secretary; L. C. Shattuck, treasurer; directors, these and Thomas Bardon, A. M. Chisholm, Maurice Denn, Byron Pattison.

Cliff Mining Company.

This corporation is capitalized at $3,000,000 and owns 1,100 acres at Ophir, Toole county, Utah, including the old Buckhorn group of silver-lead mines and the properties formerly owned by the Ophir Tunnel company. The Ophir Hill property of W. A. Clark adjoins the Buckhorn property which comprises 400 acres. These tunnels have been driven into the property, one above another, running parallel 220 feet apart and varying in length from 1,400 to 2,200 feet. The various ore bodies have been opened from the lower to the upper tunnel proving them to be continuous for distances of 600 feet. Fifty tons per day are being mined and shipped to smelters at Salt Lake, and this will be increased to 100 tons per day as soon as contemplated improvements in transportation facilities can be accomplished. This will bring the earnings to about $250,000 per year, and it is the hope of the management to begin paying dividends during the present year. The silver-lead ore is found in the fissures, and about 60,000 tons have been proven thus far. These ores run 10 to 20 per cent lead, ten to twenty ounces of silver and carry low copper and gold values.

Officers and directors of the Cliff Mining company are as follows: A. D. Thomson, Duluth, president; W. T. Snyder, Salt Lake City, vice president; A. L. Kern, Milwaukee, secretary and treasurer; directors, these and H. McVicker, Milwaukee; R. M. Atwater, Jr., Helena; George D. Swift and F. D. Adams, Duluth.

Globe Consolidated Copper Company.

This corporation was recently organized by Duluth people and is capitalized at $1,500,000 in $10 shares. It owns more than 1,100 acres in the Globe copper district of Arizona, one of the richest in the Southwest. This district contains the famous Old Dominion Copper Mining & Smelting company's property, which is making copper at the rate of 30,000,000 pounds per year. There has been great activity in the copper properties of this district within the last year, and the aggressive management of the Globe Consolidated assures important development in its properties. A shaft is being sunk which will extend at least 1,000 feet, although it is expected that valuable veins of copper will be reached long before that depth is attained, considerable having been take out.

The Globe ore bodies are about as follows: First, ore bodies lie contiguous to fault planes between diabase as a foot wall and the sedimentary series of quartzite, overlain by limestone and underlain by diabase. These run as irregular bodies into the limestone. Second, ores occur in the shattered quartzite. Third, ore occurs as distinct lode deposits in the underlying diabase. These ore deposits may be said to be similar in part, to the Butte veins, and in part to the Bisbee replacements, and in part dissimilar from either. They are neither distinct lodes, as at one place, nor replacement, as at the other, but partake of each and connect the two systems of mineralization.

Officers and directors of the Globe Consolidated Copper company are as follows: H. B. Hovland, president; R. B. Whiteside, vice president; J. U. Sebenius, secretary; T. T. Hudson, assistant secretary and treasurer; directors, these and Louis Roucheleau, Hoval A. Smith.

Shattuck-Arizona Copper Company.

This corporation was organized in 1904, with a capital of $3,500,000, most of the stockholders being residents of Duluth and this vicinity. The company has been developing claims at Bisbee, Ariz., and proceeded with a vigor and execution seldom witnessed in that region, beginning the shipment of ore in August, 1906, two years from the organization of the company. The mine lies at a considerable elevation above the railroad tracks, making it practicable to construct an aerial tramway, over which the ore is transported to the cars. This tramway has a capacity for carrying 1,000 tons per day, and 300 tons are already being sent over it daily. Although the development is yet in its initial state, large reserves of rich ore have been shown on the 500, 600, 700 and 800-foot levels, with connections that show them to be practically continuous. It is expected that 15,000,000 pounds of fine copper will be produced during the present year, and that the first dividend will be paid before its close. Much credit is due the management for the fine rapid showing made by this mine, which is fitted out with all equipment necessary for the prosecution of the work in an expeditious and economic manner. This company owns 120 acres of land, and is now building smelters, each with capacity of 250 to 300 tons daily; they are being constructed in units, and can be increased to meet the demands of increasing production of the mines. The installation of these smelters is in line with the company's economic policy, as the by-products will pay a good share of the expense of smelting. As soon as the smelters are in operation, the production of the mines will be increased to 500 tons per day. Officers and directors of the Shattuck-Arizona are as follows: Thomas Bardon, president; A. Guthrie, vice president; A. M. Chisholm, secretary and treasurer; directors, these and Martin Pattison and L. C. Shattuck. Byron Pattison is superintendent of the mine.

Calumet & Sonora Mining Company.

The mines are located in the very richest copper mining district in the state of Sonora, Mex. The properties consist of 900 acres of which 183½ acres consists of two double-compartment shafts, Norton No. 1 and the Underhill. The former is down to the 200-foot level and has three drifts in ore running from 11 to 64.33 per cent copper. Native copper was struck in the Underhill shaft at the 35-foot level. The Ronquillo mine is the latest addition to the Calumet & Sonora Mining company's properties. The "Duluth" consists of 230 acres and is located about a mile and a half southwest of the 183½ acres. The new properties consist of about 500 acres of land just north of Greene-Cananea Copper company's concentrator. There are two shafts in ore on these properties. Ore from the shaft on the Catalina claim asays 51 per cent mineral besides 11 ounces of silver. The company is capitalized at $600,000, of which $400,000 is outstanding. The shares are $10 par value. The officers of the company are Jerome E. Cooley, president; Marcus L. Fay, vice president; Charles W. Ericson, treasurer; Hubert V. Eva, secretary, and James W. Norton, president of the Mexican corporation and manager of the properties.

Superior & Pittsburg Mining Company.

This is a property that is being rapidly developed and bids fair to equal any as an ore producer in the Bisbee district, and is now shipping 300 tons per day of ore to the smelters. The Superior & Pittsburg is paying 7 per cent dividend on a capitalization of $15,000,000 all paid in. There are six working shafts down 1,000 feet each in rich copper ore. The one and only drawback that has held back the more rapid development of the Superior & Pittsburg, was the immense flood of water encountered, which tested the engineering skill and pumping capacity of the largest pumps to conquer. The officers and directors of the company are: Charles Briggs, president; James Hoatson, first vice president; Thomas Hoatson, second vice president; L. W. Powell, third vice president and general manager; Peter Ruppe, treasurer; Gordon R. Campbell, secretary; directors, these and T. F. Cole, Charles A. Congdon, George E. Tener, Charles d'Autremont.

Butte & Superior Copper Company, Limited.

This is one of the recently organized companies whose main office is 705 Wolvin building, Duluth. An active start has already been made in development work and the personnel of the officials of the company is ample assurance that it will be pushed to completion with energy and dispatch. Following is a synopsis of the progress made to date: Organized under the laws of Arizona, Oct. 2, 1906. Authorized capital, $6,000,000. Where located—Butte, Mont. Acreage—Approximately, 225 acres. Development being pushed as rapidly as possible. Present equipment in use includes three boilers, each 50-horse power, one Sullivan six drill compressor, one Ottumwa hoist, capacity, 1,200 feet depth, with necessary pumps and other appliances. A 20x60 Fraser & Chalmers hoist, capacity of 2,200 feet

Cananea & Sonora Mining Co. Strikes a Large Ore Body.

Cananea Dispatch to Duluth Evening Herald, March 23, 1907:

Forbes McRae, assistant manager of Calumet & Sonora Mining company, says:

"We have struck it rich, yes, very rich. In the Norton shaft at the 100-foot level, only a little distance from the shaft we struck an ore body of black sulphide which assays 20.3 per cent copper. This drift is running southeast toward the copper stained rock on the Buena Vista claim. At the 175-foot level in the same shaft we struck black sulphide in the drift ninety feet from the shaft. This drift runs nearly southwest. The strike at the 175-foot level was expected as the drift is exactly under the old drift running in the same direction where black sulphide was found 200 feet from the shaft, which ran 64.33 per cent copper. In my opinion, the strike at the 175-foot level will run in copper better than 30 per cent.

"At the Underhill, work is going forward at a rapid gait. The ore found in this shaft is high grade. Quite a large deposit of native copper was struck at the 35-foot level and continued down to the 70-foot level.

"All the work done since I became assistant manager on Dec. 1 last has counted for the company and no mistakes have been made. I will, however, give my friend J. W. Norton, of Duluth, the credit of selecting the location of the Underhill shaft. He spent a whole week looking at every foot of ground on the three claims on which we are working. All the ore deposits so far have been high grade."

Mr. McRae was asked when he would begin working on the new properties. His reply was: "I have just received a wire from Mr. Norton of Duluth, who said he would arrive in Cananea on April 6, and work must be begun immediately thereafter on the new properties. These strikes make the San Antonio, Buena Vista and San Juan claims a mine. I will soon be shipping ore."

MANY COPPER MINING ENTERPRISES

Capitalized for $104,500,000 and Financed By Duluth Millionaires

Duluth's supremacy as a commercial and industrial center has long been recognized, and now it has reached a point in its career of expansion as one of the great financial marts of the United States, as the one item of the capitalization of the many copper mining companies that are largely financed by Duluth's millionaires, reaching the fabulous figures of $104,500,000. There is no longer any doubt but that in another decade this city will be the third copper market for listed and curb stock in the world. We have the men of brains and money to make it so, while our geographical position, just half way between New York and San Francisco makes Duluth the pivotal trading center for stock trading in the United States.

RAPID DEVELOPMENT OF COPPER INTERESTS.

The elements of success, of grand achievement in industrial pursuits lie in the sagacity of the men who form the foundation plans and in the energy and skill with which they are carried to the point of culmination. Among the most important of recent industrial undertakings in the United States may be classed the colossal mining enterprises which have developed within a few years past; corporations which have come into existence, not to make gain by merely changing the forms of wealth, but to extract riches from the crust of the earth.

It is a significant fact that Duluth men were among the first to anticipate the unprecedented demand for copper which has arisen within a comparatively recent period; a demand which is still far in advance of the supply, notwithstanding the fact that the production of this useful metal far exceeds in value that of any metalic product in the world. This phenomenal demand is due, primarily to the rapid increase in the uses to which the metal is put under the swiftly changing conditions of life and the rapid advance of civilization at the vestibule of the twentieth century. Not least among the causes of this increased demand is the remarkable extension of telegraph and telephone service, an extension which is rapidly reaching every portion of the civilized world, which is being carried to the most isolated localities, stretching lines across continents and under ocean depths; the building and operation of which, with attendant industries, have created new trades and professions and called into employment hundreds of thousands of people.

Duluth Men Interested in Copper Mines.

It is characteristic of Duluth people that nothing is ever done by them in a desultory or half-hearted fashion. Enterprises undertaken by a thoroughgoing citizens of this city are pushed to a climax with a vim and promptitude that astonishes people accustomed to the deliberate manner in which every business proposition is formally considered in some slow going communities and conservatism which accompanies the execution of a project when once definitely decided upon by many people. Investments involving millions of dollars are conceived, discussed, settled and carried out by Duluth capitalists during the time that would be devoted to the purchase of a piece of furniture or a suit of clothes by the staid and tranquil business men of some Eastern and Southern cities. The life and bustle which is everywhere manifest is one of the first things which impresses the stranger in Duluth.

It is due to the vigorous determination with which Duluth men consumate their ventures that this city has become the chief center of interest in the development of copper mining enterprises on this continent. Only a few years since it would have been difficult to find a dozen men in this city who had ever given a serious thought to the subject of copper mining outside the Lake Superior district, but so rapid has been the dissemination of information on this important topic that it would be equally difficult, at the present time, to find a man who is not more or less of a connoisseur on this complicated subject, and so rapid has been the accumulation of capital at this center that millions are now invested in the development of mines in the principal copper bearing districts of the United States and Mexico; and so alert are the men interested in this matter that many new mining and development companies have been organized in this city, and an important portion of the world's supply of copper is now being produced at mines managed and operated by Duluth men of dollars. These mines are now shipping thousands of tons of copper, besides large quantities of gold, silver and lead, which are usually extracted from the same veins, but in most cases are classed as by-products in comparison with the great volume of copper ores. Mines managed chiefly by Duluth people may be found in the principal copper producing districts of Montana, Arizona, Michigan, Idaho, Nevada, Utah and Mexico.

Modern Methods in Mining.

Mining today is no longer the haphazard undertaking that it once was. In this age the location of rich ore veins is seldom the result of chance discovery by some random prospector. While it is true that some of the richest mining properties in the world have been stumbled upon by men who were proceeding along no definite line of research, or, in some cases, engaged in exploration work with some entirely different purpose in view, yet such instances are comparatively rare, and the world hears little of the lifetimes spent in prospecting by men who never uncovered ore enough to pay them day wages, nor of the fortunes spent to "Grubstake" itinerant miners and prospectors whose hopes were never realized. In modern mining procedure, veins of ore are often located far beneath the surface by scientific calculation and development work, involving the expenditure of thousands of dollars, and the transportation and use of machinery, weighing hundreds of tons is carried on with a nicety and exactness which seldom fails to produce satisfactory results. Undertakings of such magnitude, however, usually require considerable time to reach their culmination, and much may be heard in the future of mining enterprises now in their infancy.

Greene Cananea Copper Company.

The Greene-Cananea Copper company is organized under the mining laws of Minnesota, with an authorized capital of $60,000,000, divided into 3,000,000 shares of a par value of $20 each. The company was organized to acquire the outstanding capital stock of the Greene Consolidated Copper company, and the Cananea Central Copper company. These allied properties constitute one of fabulous wealth as producers of copper ore in their meager state of development, and what the production will be when fully developed is a guess that no mining expert would care to risk his reputation on. This mining property is conceded to be one of the richest in copper ore deposits in Mexico, and as the properties contain many thousand acres, it is reasonable to assume that the Greene Consolidated Copper company will make millions in dividends for its stockholders. It is pleasing to note that the leading and aggressive spirits of this company are Duluth men, who are backing up their faith with their dollars as to the fabulous wealth in copper-bearing rock in the Greene Cananea Copper company's mines in the state of Sonora, Mexico. The officers and directors are: President, Thomas F. Cole; first vice president, William C. Greene; second vice president, Charles A. Duncan; third vice president, Charles D. Fraser; fourth vice president, Joseph B. Cotton; treasurer, Charles A. Duncan; secretary, Frederick R. Kennedy; first assistant secretary, Joseph W. Allen; second assistant secretary, Daniel R. Smith; general solicitor, A. L. Agatin. Directors: William C. Greene, Thomas F. Cole, John D. Ryan, James Hoatson, Chester A. Congdon, Charles d'Autremont, Jr., Myron M. Parker, Cleveland E. Dodge, Charles A. Duncan.

Denn-Arizona Copper Company.

There is no one new property that has been given such public endorsement as the Denn-Arizona during the year 1906. The stock steadily advancing from $10 par to $100 in the first six months, from the time development work commenced. There has been a slump in prices, but no slump in the development of the mine. The property consists of 200 acres adjoining the Junction mine. The Denn-Arizona was diamond drilled and rich copper ore bodies were located, then a 1,200-foot shaft was pushed down vertically and laid bare rich copper ore veins, while a long drift on the 1,000-foot level to connect with the American-Saginaw ground to the east has been made. The development work on the Denn-Arizona will be vigorously pushed until it is put on the shipping lists of mines of the Bisbee camp. The president, Mr. Martin Pattison, is one of the best posted mining men in the country, as his long and successful mining career well attests. There is no mining property that is in better hands than the Denn-Arizona with Byron Pattison as chief mining engineer, a graduate of the Michigan School of Mines, and who won his spurs in the mining world by making a shipper of the Shattuck-Arizona. The officers of the company are: Martin Pattison, president; A. Guthrie, vice president; John G. Williams, secretary; L. C. Shattuck, treasurer; directors, these and Thomas Bardon, A. M. Chisholm, Maurice Denn, Byron Pattison.

Cliff Mining Company.

This corporation is capitalized at $3,000,000 and owns 1,100 acres at Ophir, Toole county, Utah, including the old Buckhorn group of silver-lead mines and the properties formerly owned by the Ophir Tunnel company. The Ophir Hill property of W. A. Clark adjoins the Buckhorn property which comprises 400 acres. These tunnels have been driven into the property, one above another, running parallel 220 feet apart and varying in length from 1,400 to 2,200 feet. The various ore bodies have been opened from the lower to the upper tunnel proving them to be continuous for distances of 600 feet. Fifty tons per day are being mined and shipped to smelters at Salt Lake, and this will be increased to 100 tons per day as soon as contemplated improvements in transportation facilities can be accomplished. This will bring the earnings to about $250,000 per year, and it is the hope of the management to begin paying dividends during the present year. The silver-lead ore is found in the fissures, and about 60,000 tons have been proven thus far. These ores run 10 to 20 per cent lead, ten to twenty ounces of silver and carry low copper and gold values.

Officers and directors of the Cliff Mining company are as follows: A. D. Thomson, Duluth, president; W. T. Snyder, Salt Lake City, vice president; A. L. Kern, Milwaukee, secretary and treasurer; directors, these and H. McVicker, Milwaukee; R. M. Atwater, Jr., Helena; George D. Swift and F. D. Adams, Duluth.

Globe Consolidated Copper Company.

This corporation was recently organized by Duluth people and is capitalized at $1,500,000 in $10 shares. It owns more than 1,100 acres in the Globe copper district of Arizona, one of the richest in the Southwest. This district contains the famous Old Dominion Copper Mining & Smelting company's property, which is making copper at the rate of 30,000,000 pounds per year. There has been great activity in the copper properties of this district within the last year, and the aggressive management of the Globe Consolidated assures important development in its properties. A shaft is being sunk which will extend at least 1,000 feet, although it is expected that valuable veins of copper will be reached long before that depth is attained, considerable having been take out.

The Globe ore bodies are about as follows: First, ore bodies lie contiguous to fault planes between diabase as a foot wall and the sedimentary series of quartzite, overlain by limestone and underlain by diabase. These run as irregular bodies into the limestone. Second, ores occur in the shattered quartzite. Third, ore occurs as distinct lode deposits in the underlying diabase. These ore deposits may be said to be similar in part, to the Butte veins, and in part to the Bisbee replacements, and in part dissimilar from either. They are neither distinct lodes, as at one place, nor replacement, as at the other, but partake of each and connect the two systems of mineralization.

Officers and directors of the Globe Consolidated Copper company are as follows: H. B. Hovland, president; R. B. Whiteside, vice president; J. U. Sebenius, secretary; T. T. Hudson, assistant secretary and treasurer; directors, these and Louis Roucheleau, Hoval A. Smith.

Shattuck-Arizona Copper Company.

This corporation was organized in 1904, with a capital of $3,500,000, most of the stockholders being residents of Duluth and this vicinity. The company has been developing claims at Bisbee, Ariz., and proceeded with a vigor and execution seldom witnessed in that region, beginning the shipment of ore in August, 1906, two years from the organization of the company. The mine lies at a considerable elevation above the railroad tracks, making it practicable to construct an aerial tramway, over which the ore is transported to the cars. This tramway has a capacity for carrying 1,000 tons per day, and 300 tons are already being sent over it daily. Although the development is yet in its initial state, large reserves of rich ore have been shown on the 500, 600, 700 and 800-foot levels, with connections that show them to be practically continuous. It is expected that 15,000,000 pounds of fine copper will be produced during the present year, and that the first dividend will be paid before its close. Much credit is due the management for the fine rapid showing made by this mine, which is fitted out with all equipment necessary for the prosecution of the work in an expeditious and economic manner. This company owns 120 acres of land, and is now building smelters, each with capacity of 250 to 300 tons daily; they are being constructed in units, and can be increased to meet the demands of increasing production of the mines. The installation of these smelters is in line with the company's economic policy, as the by-products will pay a good share of the expense of smelting. As soon as the smelters are in operation, the production of the mines will be increased to 500 tons per day. Officers and directors of the Shattuck-Arizona are as follows: Thomas Bardon, president; A. Guthrie, vice president; A. M. Chisholm, secretary and treasurer; directors, these and Martin Pattison and L. C. Shattuck. Byron Pattison is superintendent of the mine.

Calumet & Sonora Mining Company.

The mines are located in the very richest copper mining district in the state of Sonora, Mex. The properties consist of 900 acres of which 183½ acres consists of two double-compartment shafts, Norton No. 1 and the Underhill. The former is down to the 200-foot level and has three drifts in ore running from 11 to 64.33 per cent copper. Native copper was struck in the Underhill shaft at the 35-foot level. The Ronquillo mine is the latest addition to the Calumet & Sonora Mining company's properties. The "Duluth" consists of 230 acres and is located about a mile and a half southwest of the 183½ acres. The new properties consist of about 500 acres of land just north of Greene-Cananea Copper company's concentrator. There are two shafts in ore on these properties. Ore from the shaft on the Catalina claim asays 51 per cent mineral besides 11 ounces of silver. The company is capitalized at $600,000, of which $400,000 is outstanding. The shares are $10 par value. The officers of the company are Jerome E. Cooley, president; Marcus L. Fay, vice president; Charles W. Ericson, treasurer; Hubert V. Eva, secretary, and James W. Norton, president of the Mexican corporation and manager of the properties.

Superior & Pittsburg Mining Company.

This is a property that is being rapidly developed and bids fair to equal any as an ore producer in the Bisbee district, and is now shipping 300 tons per day of ore to the smelters. The Superior & Pittsburg is paying 7 per cent dividend on a capitalization of $15,000,000 all paid in. There are six working shafts down 1,000 feet each in rich copper ore. The one and only drawback that has held back the more rapid development of the Superior & Pittsburg, was the immense flood of water encountered, which tested the engineering skill and pumping capacity of the largest pumps to conquer. The officers and directors of the company are: Charles Briggs, president; James Hoatson, first vice president; Thomas Hoatson, second vice president; L. W. Powell, third vice president and general manager; Peter Ruppe, treasurer; Gordon R. Campbell, secretary; directors, these and T. F. Cole, Charles A. Congdon, George E. Tener, Charles d'Autremont.

Butte & Superior Copper Company, Limited.

This is one of the recently organized companies whose main office is 705 Wolvin building, Duluth. An active start has already been made in development work and the personnel of the officials of the company is ample assurance that it will be pushed to completion with energy and dispatch. Following is a synopsis of the progress made to date: Organized under the laws of Arizona, Oct. 2, 1906. Authorized capital, $6,000,000. Where located—Butte, Mont. Acreage—Approximately, 225 acres. Development being pushed as rapidly as possible. Present equipment in use includes three boilers, each 50-horse power, one Sullivan six drill compressor, one Ottumwa hoist, capacity, 1,200 feet depth, with necessary pumps and other appliances. A 20x60 Fraser & Chalmers hoist, capacity of 2,200 feet

Cananea & Sonora Mining Co. Strikes a Large Ore Body.

Cananea Dispatch to Duluth Evening Herald, March 23, 1907:

Forbes McRae, assistant manager of Calumet & Sonora Mining company, says:

"We have struck it rich, yes, very rich. In the Norton shaft at the 100-foot level, only a little distance from the shaft we struck an ore body of black sulphide which assays 20.3 per cent copper. This drift is running southeast toward the copper stained rock on the Buena Vista claim. At the 175-foot level in the same shaft we struck black sulphide in the drift ninety feet from the shaft. This drift runs nearly southwest. The strike at the 175-foot level was expected as the drift is exactly under the old drift running in the same direction where black sulphide was found 200 feet from the shaft, which ran 64.33 per cent copper. In my opinion, the strike at the 175-foot level will run in copper better than 30 per cent.

"At the Underhill, work is going forward at a rapid gait. The ore found in this shaft is high grade. Quite a large deposit of native copper was struck at the 35-foot level and continued down to the 70-foot level.

"All the work done since I became assistant manager on Dec. 1 last has counted for the company and no mistakes have been made. I will, however, give my friend J. W. Norton, of Duluth, the credit of selecting the location of the Underhill shaft. He spent a whole week looking at every foot of ground on the three claims on which we are working. All the ore deposits so far have been high grade."

Mr. McRae was asked when he would begin working on the new properties. His reply was: "I have just received a wire from Mr. Norton of Duluth, who said he would arrive in Cananea on April 6, and work must be begun immediately thereafter on the new properties. These strikes make the San Antonio, Buena Vista and San Juan claims a mine. I will soon be shipping ore."

depth, rope speed 1,600 feet per minute, just delivered on the ground and now being installed. Three Springfield internally fired boilers, each 100-horse power, bought and are to be delivered on ground April 20. Orders have been placed for adidtional mine cars, cages and other equipment. Directors: A. B. Wolvin, Duluth; W. L. Brown, Chicago; A. H. Wethy, Butte; J. F. Killorin, Duluth; A. M. Chisholm, Duluth; P. H. Nelson, Hibbing.

Copper Queen Mining & Smelting Company.

This corporation, which is controlled largely by Duluth capital, owns a number of claims in Lehmi county, Idaho, including the Copper Queen, Gold Flint, Blue Bird, Copper Matte, Narcissus, Speculator, Eldorado, No Name and Copper Queen No. 2. The nearest station to this property is Red Rock, on the Oregon Short Line, fifty-two miles south of Butte, Mont. From Red Rock a stage line runs past the property to Salmon City, Mont. Two shafts are being sunk by this company, one on the Copper Queen claim and the other on the Blue Bird. Both have disclosed good ore, and considerable drifting has been done from the Copper Queen shaft. The ore taken out has been shipped to the Washoe smelter at Anaconda at a gross cost of $7.50 per ton. Some of the ore averages 45 per cent and the company contemplates putting in a mill of 100-tons capacity or greater. The Blue Birl mine is equipped with a modern steam hoist capable of sinking the shaft 600 feet, an Ingersoll-Rand air compressor, a stamp mill and concentrator sufficient to treat the present output of ores.

The capitalization of the company is $500,000, divided into 500,000 shares with a par value of $1 each. The officers and directors are as follows: President, T. G. Lynch; vice president, B. F. White, president of the First National bank of Dillon; secretary and treasurer, A. J. McLennon; general manager, George H. Crosby; directors, these and A. K. McDaniels, Denver; C. J. McFadden, Butte, and C. W. McFadden, Duluth.

Calumet & Arizona Mining Company.

This is the oldest and most prosperous of what may be termed the Duluth copper properties. The company was organized in March, 1901, Thomas F. Cole of Duluth being a leading spirit in the enterprise which succeeded the Lake Superior & Western Development company. The latter company owned the Irish May claim at Bisbee, Ariz., and had been engaged for a year in working the same and established the certainty of a valuable mine on that location. The Calumet & Arizona started with an issued capital of $2,000,000, which was oversubscribed in one day and the development work was pushed with energy and dispatch. The first furnace of its smelting works was blown in in November, 1902, and a second furnace soon after, since which the two have been in continual operation. The first dividend was paid to stockholders in December, 1903, and dividends which have been paid at regular intervals since amount in the aggregate to $6,100,000. Additional sums nearly equal to the dividends have been spent in additional equipment and a surplus accumulated in the meantime. It is the policy of the company to work its low grade ores while the present price of copper continues, keeping the high grade ores in reserve.

The officers and directors of this company are: Charles Briggs, president; James Hoatson, first vice president; Thomas Hoatson, second vice president; L. W. Powell, third vice president and general manager; Peter Ruppe, treasurer; Gordon R. Campbell, secretary; directors, these and T. F. Cole, Chester A. Congdon, George E. Toner, Charles d'Autremont.

American-Saginaw Development Company.

This corporation was formed by stockholders of the other so-called "Cole properties" at Bisbee, Ariz., who believed that the copper values of the district extended farther to the southeast than they had been traced and developments seem to have justified their faith. The company has acquired a considerable area of ground adjoining the Junction mine and the Denn-Arizona property on the southeast. A large shaft with numerous cross-cuts has been sunk on the American-Saginaw property and has shown up much of the leached ore and broken ground which have characterized the Bisbee formation in almost all the workings of that district. Confidence in the success of this company is greatly increased by the fact that it is under the capable management of Mr. L. W. Powell of Bisbee under whose management the Calumet & Arizona has been made such a grand success. Mr. Powell is also manager of the Superior & Pittsburg company and advisory manager of the Cananea-Central Copper company.

The capital of the American-Saginaw Development company is $1,000,000. The officers and directors of the company are as follows: Thomas H. Collins, Calumet, president; C. d'Autremont, Jr., Duluth, vice president; F. R. Kennedy, Duluth, secretary; W. G. Hegardt, Duluth, treasurer; the directors are Messrs. T. F. Cole, C. d'Autremont, Jr., and H. B. Hovland of Duluth; T. H. Collins of Calumet, W. B. Mershon and W. S. Humphrey of Saginaw and L. W. Powell of Bisbee.

Duluth-Rimini Mining Company.

The property of this company is situated on the Northern Pacific railroad, seventeen miles from Helena, Mont., and one-half mile from Rimini, a flourishing mining town. The property is a tunnel proposition, situated on Red Mountain, one of the richest mining districts in the United States. The Valley Forge and Lee Mountain mines, active shippers, are on the same location of the Duluth-Rimini. Ores from these mines are shipped to East Helena smelters. It is Galena ore, lead, silver and a percentage of gold, running from $4 to $8 per ton. The Duluth-Rimini property was originally known as the Comet and Montana lodes. The James J. Hill interests own a one-half interest in the Comet Lode, and also have $160,000 invested in adjoining lodes. F. Augustus Heinze, the copper king, has millions of dollars invested near this property, as shown by the following clipping from the Helena Independent, Feb. 4, 1907:

"The biggest deal in Rimini district was made last summer when F. Augustus Heinze and James Breen secured the Phorphry Dyke, paying $500,000 for the half interest of McClure of St. Louis, Mo. They already owned the other half. Last summer the ground was thoroughly sampled by diamond drills, with such results that the Dyke will be opened up on a large scale this spring. Mr. Heinze has let a contract for a 500-ton stamp mill, which will be erected at once, and then an addition built of 500 more stamps. Development work will be energetically pushed, and this group promises to be one of the leading gold producers of the country."

The Comet and Montana Lodes were on the shipping list of 1895-6, being worked on a royalty, and from the weekly reports of the United Smelting & Refining company, E. Helena, Mont., the ore ran very rich in values, ranging from $20 to $40 per ton; while an analysis recently made by the Des Moines Refining & Assay company, ran $55.83 per ton in silver and lead.

The home office of this company is in Duluth, and its officers are: J. H. Huber, president; S. A. Beecher, vice president; E. M. Dahlby, secretary, and F. F. Murray, treasurer. J. A. Monger is sole fiscal agent for the sale of 200,000 shares of this stock, par value $1, the proceeds of which will be used for scientific development of the mine, and within six months of the time active work is commenced it will be put on the shipping list and will, doubtless, pay a dividend of not less than $1 per share of capitalization, which is $500,000.

Warren Development Co.

Though not primarily, a mining company, this corporation is closely allied with the numerous companies engaged in mining development in and about Bisbee, Ariz., and was organized and promoted by Duluth people. The object of this organization was to provide clean, healthful, comfortable and sanitary homes for the people interested in the mining industries of that region. To this end a suitable tract of ground was secured about three miles from Bisbee and plans for a model residence city were laid out on an elaborate scale. The need of such a place was apparent to every man who ever visited Bisbee, which is but a mining camp occupying a narrow gulch crowded with mines on all sides and affording no opportunity for expansion or the establishment of the most essential sanitary provisions. The site of Warren was selected as the nearest available location for the erection of a city of homes which would accommodate 10,000 or 12,000 inhabitants and afford all the conveniences and accessories of the highest type of modern progress and civilization. One of the first provisions was the construction of an electric railroad to connect Warren with Bisbee passing all the big mines, the employes of which were the first to become citizens of this ideal city. An ample water system was laid out which will supply an abundance of purest water from the mountains, and a system of sewers was constructed which carries the sewerage two miles beyond the city limits where it is destroyed. An electric lighting system is established, and the town was laid out on a plan which much resembles that of the city of Washington, D. C., the center of the city is occupied by a parkway, 700 feet in width, from which radiate the four main thoroughfares which conform to the natural contour and greatly facilitate the matter of drainage. Lots in the residence district are roomy and well proportioned, and everything has been planned to promote the comfort and attractiveness of the place. Experiments on an extended scale have been made to ascertain what varieties of plants and trees are best suited to cultivation in this climate in order to provide for the beautification of plaza, parks and streets. All these matters were carefully planned and established before any lots were offered for sale in the future city which was less than six months since. Building is now in rapid progress there, and Warren already begins to present the appearance of a well developed city.

The capital stock of Warren is $900,000, in $15 shares, fully paid up. Its officers are: H. B. Hovland, president; T. F. Cole, vice president and treasurer; W. G. Hegardt, assistant treasurer and F. R. Kennedy, secretary.

CALUMET & ARIZONA SMELTER.

Many Other Duluth Interests.

Aside from the copper companies of which we have spoken, there are a number of others in which Duluth people have extensive interests, but the main offices of which are located elsewhere. Some of these are producing properties and others afford very promising prospects as far as the development work has proceeded. Among these organizations are several engaged in reviving abandoned mines and developing new ones in the Michigan "Coper Country." There has been much activity in that region within the past year or two. At Hancock, the mine of that name belonging to the Ryan estate, which has been idle since the "boom" days, is being revived and will be put on a paying basis. The mine lies beneath the streets of the town. There has been noteworthy activity on the end of Keweenaw point, where a number of old mining companies have been consolidated including the Mandan, Medora, Empire and others, embracing about 30,000 acres of land. These lands are being developed by diamond drill work and shaft, and show a rich copper bearing conglomerate. The Keweenaw Central railroad is being built northward from Calumet to open this mineral region, and will be completed this year. Among these companies in which Duluth people are stockholders and, in some cases, officials, are the Hancock Consolidated Mining company, the Keweenaw Copper company and the Ojibway Copper company, which is not yet fully organized.

The Black Mountain is another concern in which Duluth people are interested. It owns extensive properties in Senora, Mex., among the Black mountains or Cerro Prieto. It has large ore deposits of remarkably even grade, running from $5 to $6 to the ton. This company has a capital stock of $2,500,000, and has spent large sums in its equipment which is now very complete and include stamp mills and cyanide mills. Good showings have been made in the last few months and this promises to become one of the most profitable investments in that celebrated mining region.

DULUTH'S UNLISTED STOCK MARKET

Everything at the Head of the Lakes grows by leaps and bounds, and the unlisted stock market is no exception to this rule. Two short years ago there did not exist a market for unlisted stocks, while today the magnitude of the transactions of our brokers ranks first in the United States. The stocks listed comprise some of the choicest of the profit sharing and dividend producing copper stocks on the American market, and in a few years more, it is a safe prediction, that this will be the leading stock market supplanting Boston in copper stocks while to the list will be added all that is desirable in lead, silver and gold stocks. So important have these transactions grown that a stock exchange has all but been organized, as every detail of the plan has been worked out and the exchange will be in full working order in a few months. This has been found necessary to shut out the wild cat stocks and to make this a stable, reliable market for all mining stocks of value. The promoters of this stock exchange are: Walter W. Carr, M. W. Lee, Martin Rosendahl, Holman Brothers, N. S. Mitchell, Crandall, Pierce & Co., William Kaiser, Smith, Oldham & Co., O. A. Nafe, Vern P. Culbertson, Charles B. Aske and others we could mention.

Martin Rosendahl's Brokerage House.

The above gentleman is one of the younger type of Duluth business men who have made a phenomenal success as a stock broker in unlisted curb stocks. Having one of the best located office suites on the ground floor of 101 to 102 Manhattan building, where he conducted a $3,000,000 brokerage business in 1906, and from present outlook, that will reach $6,000,000 in 1907. This is the bee-hive of activity in copper stocks, as everything is carried on the board that are active on the curb. It has always been a hobby, and we think a good one, of this brokerage firm to handle none but approved stocks that held out a promise of profit sharing and dividend paying, stocks that would increase in value as the mines were developed. Mr. Martin Rosendahl, Duluth's most progressive broker, is a native of this state, having been born in Minneapolis in 1878 coming from sturdy Norwegian stock. He was reared and educated at Stoughton, Wis., in the public schools, after which he came to Duluth and soon filled the responsible position of deputy collector of United States internal revenue for two years, and later on, went into the railroad ticket brokerage business. In all these positions Mr. Rosendahl was in the storm center of activity as we find him today in the brokerage business. He is reliable and pushing, taking every care of the interests of his patrons which has been the corner stone on which his great success has been achieved. Under the head of mines and brokers will be found a page ad. devoted to a full list of the stocks carried and the business methods pursued by the brokerage house of Martin Rosendahl of Duluth Minn.

Walter W. Carr, Stocks.

One of the most popular and reliable brokers dealing in unlisted copper stocks in Duluth is Mr. Walter W. Carr, whose offices are located in the Manhattan building. He is a gentleman of many years experience in business transactions and his patrons have the full benefit of his ripe knowledge. Success in the brokerage business can only be attained by securing and retaining the confidence of the investing public. This Mr. Carr has certainly done to a noteworthy degree and his most enthusiastic patrons are those whose investments he has been handling for the longest periods. He has always made it a point to list only such stocks as investigation showed to be reliable and based on actual mining propositions. He was one of the first men to realize the possibilities for making fortunes in copper and through his advice many people who had neither the experience nor knowledge of stock investments nor time or opportunity to acquire the same, have realized handsome profits from the rapid appreciation in properties of this description. Mr. Carr makes it a point to make no extravagant representations to would-be customers, but treats every investment entrusted to him with the same impartial consideration and is ever on the alert to keep informed concerning the new developments which are transpiring in the copper market. His responsibility is well established and is well known to many people at a distance from this city who are among his regular and most enthusiastic patrons. In Duluth, where he is known to nearly every business man, and especially to investors in unlisted copper stocks, there is no question regarding his integrity and financial standing. His success has been quite phenomenal and is a natural result of careful and persistent adherence to fixed business principles.

Gay & Sturgis, Bankers and Brokers.

One of the reliable, busy brokerage firms is that of Gay & Sturgis, No. 50 Congress street, Boston, members of the Boston Stock exchange, and with branch offices at 328 West Superior street, this city, with R. G. Hubbell as resident manager. The business of this house is carried on with the same integrity as that of a bank or any other large and responsible institution. Indeed the business transactions foot up to many millions of dollars annually, stock orders coming in by wire and mail from all directions tributary to Duluth. The stocks handled are listed on the regular stock exchanges of New York & Boston and the daily quotations are received over their special wire together with special information as to the state of the stock market. Among the listed stocks handled by Gay & Sturgis, we would name the following:

Amalgamated.	Anaconda.
North Butte.	Calumet & Ariz.
Butte Coalition.	Superior & Pitts.
Greene-Cananea.	Copper Range.
Shannon.	Black Mountain.
Wolvin.	Quincy.
Osceola.	Amer. Saginaw.
Globe Con.	Tamarack.
East Butte.	Old Dominion.
Ariz. Commercial.	Tecumseh.
Trinity.	Pneumatic Service.
Pneumatic Pfd.	Mohawk.
Mass.	Michigan.
Isle Royale.	Centennial.
Allouez.	Cumb. & Ely.
Nevada Con.	Boston Con.
Bingham.	Keweenaw.
Hancock.	Ahmeek.
United Copper.	Utah Copper.
Utah Consolidated.	

It will be seen from this list of stocks that they are the best on the copper market. They are stocks that have proved good investments, and should improve as time passes. The local manager of the Duluth branch of Messrs. Gay & Sturgis is R. G. Hubbell, a young man of the highest character, who is known far and wide by the buyers of stocks, as a man whose word is reliable at all times and under all circumstances pertaining to the stock market, which, in part, may account for the large and growing business of this popular brokerage firm.

Copper Queen Mining & Smelting Company.

This corporation, which is controlled largely by Duluth capital, owns a number of claims in Lehmi county, Idaho, including the Copper Queen, Gold Flint, Blue Bird, Copper Matte, Narcissus, Speculator, Eldorado, No Name and Copper Queen No. 2. The nearest station to this property is Red Rock, on the Oregon Short Line, fifty-two miles south of Butte, Mont. From Red Rock a stage line runs past the property to Salmon City, Mont. Two shafts are being sunk by this company, one on the Copper Queen claim and the other on the Blue Bird. Both have disclosed good ore, and considerable drifting has been done from the Copper Queen shaft. The ore taken out has been shipped to the Washoe smelter at Anaconda at a gross cost of $7.50 per ton. Some of the ore averages 45 per cent and the company contemplates putting in a mill of 100-tons capacity or greater. The Blue Birl mine is equipped with a modern steam hoist capable of sinking the shaft 600 feet, an Ingersoll-Rand air compressor, a stamp mill and concentrater sufficient to treat the present output of ores.

The capitalization of the company is $500,000, divided into 500,000 shares with a par value of $1 each. The officers and directors are as follows: President, T. G. Lynch; vice president, B. F. White, president of the First National bank of Dillon; secretary and treasurer, A. J. McLennon; general manager, George H. Crosby; directors, these and A. K. McDaniels, Denver; C. J. McFadden, Butte, and C. W. McFadden, Duluth.

Calumet & Arizona Mining Company.

This is the oldest and most prosperous of what may be termed the Duluth copper properties. The company was organized in March, 1901, Thomas F. Cole of Duluth being a leading spirit in the enterprise which succeeded the Lake Superior & Western Development company. The latter company owned the Irish May claim at Bisbee, Ariz., and had been engaged for a year in working the same and established the certainty of a valuable mine on that location. The Calumet & Arizona started with an issued capital of $2,000,000, which was oversubscribed in one day and the development work was pushed with energy and dispatch. The first furnace of its smelting works was blown in in November, 1902, and a second furnace soon after, since which the two have been in continual operation. The first dividend was paid to stockholders in December, 1903, and dividends which have been paid at regular intervals since amount in the aggregate to $6,100,000. Additional sums nearly equal to the dividends have been spent in additional equipment and a surplus accumulated in the meantime. It is the policy of the company to work its low grade ores while the present price of copper continues, keeping the high grade ores in reserve.

The officers and directors of this company are: Charles Briggs, president; James Hoatson, first vice president; Thomas Hoatson, second vice president; L. W. Powell, third vice president and general manager; Peter Ruppe, treasurer; Gordon R. Campbell, secretary; directors, these and T. F. Cole, Chester A. Congdon, George E. Tener, Charles d'Autremont.

American-Saginaw Development Company.

This corporation was formed by stockholders of the other so-called "Cole properties" at Bisbee, Ariz., who believed that the copper values of the district extended farther to the southeast than they had been traced and developments seem to have justified their faith. The company has acquired a considerable area of ground adjoining the Junction mine and the Denn-Arizona property on the southeast. A large shaft with numerous cross-cuts has been sunk on the American-Saginaw property and has shown up much of the leached ore and broken ground which have characterized the Bisbee formation in almost all the workings of that district. Confidence in the success of this company is greatly increased by the fact that it is under the capable management of Mr. L. W. Powell of Bisbee under whose management the Calumet & Arizona has been made such a grand success. Mr. Powell is also manager of the Superior & Pittsburg company and advisory manager of the Cananea-Central Copper company.

The capital of the American-Saginaw Development company is $1,000,000. The officers and directors of the company are as follows: Thomas H. Collins, Calumet, president; C. d'Autremont, Jr., Duluth, vice president; F. R. Kennedy, Duluth, secretary; W. G. Hegardt, Duluth, treasurer; the directors are Messrs. T. F. Cole, C. d'Autremont, Jr., and H. B. Hovland of Duluth; T. H. Collins of Calumet, W. B. Mershon and W. S. Humphrey of Saginaw and L. W. Powell of Bisbee.

Duluth-Rimini Mining Company.

The property of this company is situated on the Northern Pacific railroad, seventeen miles from Helena, Mont., and one-half mile from Rimini, a flourishing mining town. The property is a tunnel proposition, situated on Red Mountain, one of the richest mining districts in the United States. The Valley Forge and Lee Mountain mines, active shippers, are on the same location of the Duluth-Rimini. Ores from these mines are shipped to East Helena smelters. It is Galena ore, lead, silver and a percentage of gold, running from $4 to $8 per ton. The Duluth-Rimini property was originally known as the Comet and Montana lodes. The James J. Hill interests own a one-half interest in the Comet Lode, and also have $160,000 invested in adjoining lodes. F. Augustus Heinze, the copper king, has millions of dollars invested near this property, as shown by the following clipping from the Helena Independent, Feb. 4, 1907:

"The biggest deal in Rimini district was made last summer when F. Augustus Heinze and James Breen secured the Phorphry Dyke, paying $500,000 for the half interest of McClure of St. Louis, Mo. They already owned the other half. Last summer the ground was thoroughly sampled by diamond drills, with such results that the Dyke will be opened up on a large scale this spring. Mr. Heinze has let a contract for a 500-ton stamp mill, which will be erected at once, and then an addition built of 500 more stamps. Development work will be energetically pushed, and this group promises to be one of the leading gold producers of the country."

The Comet and Montana Lodes were on the shipping list of 1895-6, being worked on a royalty, and from the weekly reports of the United Smelting & Refining company, E. Helena, Mont., the ore ran very rich in values, ranging from $20 to $40 per ton; while an analysts recently made by the Des Moines Refining & Assay company, ran $55.88 per ton in silver and lead.

The home office of this company is in Duluth, and its officers are: J. H. Huber, president; S. A. Beecher, vice president; E. M. Dahlby, secretary, and F. F. Murray, treasurer. J. A. Monger is sole fiscal agent for the sale of 200,000 shares of this stock, par value $1, the proceeds of which will be used for scientific development of the mine, and within six months of the time active work is commenced it will be put on the shipping list and will, doubtless, pay a dividend of not less than $1 per share of capitaliaztion, which is $500,000.

Warren Development Co.

Though not primarily, a mining company, this corporation is closely allied with the numerous companies engaged in mining development in and about Bisbee, Ariz., and was organized and promoted by Duluth people. The object of this organization was to provide clean, healthful, comfortable and sanitary homes for the people interested in the mining industries of that region. To this end a suitable tract of ground was secured about three miles from Bisbee and plans for a model residence city were laid out on an elaborate scale. The need of such a place was apparent to every man who ever visited Bisbee, which is but a mining camp occupying a narrow gulch crowded with mines on all sides and affording no opportunity for expansion or the establishment of the most essential sanitary provisions. The site of Warren was selected as the nearest available location for the erection of a city of homes which would accommodate 10,000 or 12,000 inhabitants and afford all the conveniences and accessories of the highest type of modern progress and civilization. One of the first provisions was the construction of an electric railroad to connect Warren with Bisbee passing all the big mines, the employes of which were the first to become citizens of this ideal city. An ample water system was laid out which will supply an abundance of purest water from the mountains, and a system of sewers was constructed which carries the sewerage two miles beyond the city limits where it is destroyed. An electric lighting system is established, and the town was laid out on a plan which much resembles that of the city of Washington, D. C., the center of the city is occupied by a parkway, 700 feet in width, from which radiate the four main thoroughfares which conform to the natural contour and greatly facilitate the matter of drainage. Lots in the residence district are roomy and well proportioned, and everything has been planned to promote the comfort and attractiveness of the place. Experiments on an extended scale have been made to ascertain what varieties of plants and trees are best suited to cultivation in this climate in order to provide for the beautification of plaza, parks and streets. All these matters were carefully planned and established before any lots were offered for sale in the future city which was less than six months since. Building is now in rapid progress there, and Warren already begins to present the appearance of a well developed city.

The capital stock of Warren is $900,000, in $15 shares, fully paid up. Its officers are: H. B. Hovland, president; T. F. Cole, vice president and treasurer; W. G. Hegardt, assistant treasurer and F. R. Kennedy, secretary.

CALUMET & ARIZONA SMELTER.

Many Other Duluth Interests.

Aside from the copper companies of which we have spoken, there are a number of others in which Duluth people have extensive interests, but the main offices of which are located elsewhere. Some of these are producing properties and others afford very promising prospects as far as the development work has proceeded. Among these organizations are several engaged in reviving abandoned mines and developing new ones in the Michigan "Coper Country." There has been much activity in that region within the past year or two. At Hancock, the mine of that name belonging to the Ryan estate, which has been idle since the "boom" days, is being revived and will be put on a paying basis. The mine lies beneath the streets of the town. There has been noteworthy activity on the end of Keweenaw point, where a number of old mining companies have been consolidated including the Mandan, Medora, Empire and others, embracing about 30,000 acres of land. These lands are being developed by diamond drill work and shaft, and show a rich copper bearing conglomerate. The Keweenaw Central railroad is being built northward from Calumet to open this mineral region, and will be completed this year. Among these companies in which Duluth people are stockholders and, in some cases, officials, are the Hancock Consolidated Mining company, the Keweenaw Copper company and the Ojibway Copper company, which is not yet fully organized.

The Black Mountain is another concern in which Duluth people are interested. It owns extensive properties in Senora, Mex., among the Black mountains or Cerro Prieto. It has large ore deposits of remarkably even grade, running from $5 to $6 to the ton. This company has a capital stock of $2,500,000, and has spent large sums in its equipment which is now very complete and include stamp mills and cyanide mills. Good showings have been made in the last few months and this promises to become one of the most profitable investments in that celebrated mining region.

DULUTH'S UNLISTED STOCK MARKET

Everything at the Head of the Lakes grows by leaps and bounds, and the unlisted stock market is no exception to this rule. Two short years ago there did not exist a market for unlisted stocks, while today the magnitude of the transactions of our brokers ranks first in the United States. The stocks listed comprise some of the choicest of the profit sharing and dividend producing copper stocks on the American market, and in a few years more, it is a safe prediction, that this will be the leading stock market supplanting Boston in copper stocks while to the list will be added all that is desirable in lead, silver and gold stocks. So important have these transactions grown that a stock exchange has all but been organized, as every detail of the plan has been worked out and the exchange will be in full working order in a few months. This has been found necessary to shut out the wild cat stocks and to make this a stable, reliable market for all mining stocks of value. The promoters of this stock exchange are: Walter W. Carr, M. W. Lee, Martin Rosendahl, Holman Brothers, N. S. Mitchell, Crandall, Pierce & Co., William Kaiser, Smith, Oldham & Co., O. A. Nafe, Vern P. Culbertson, Charles B. Aske and others we could mention.

Martin Rosendahl's Brokerage House.

The above gentleman is one of the younger type of Duluth business men who have made a phenomenal success as a stock broker in unlisted curb stocks. Having one of the best located office suites on the ground floor of 101 to 102 Manhattan building, where he conducted a $3,000,000 brokerage business in 1906, and from present outlook, that will reach $6,000,000 in 1907. This is the bee-hive of activity in copper stocks, as everything is carried on the board that are active on the curb. It has always been a hobby, and we think a good one, of this brokerage firm to handle none but approved stocks that held out a promise of profit sharing and dividend paying, stocks that would increase in value as the mines were developed. Mr. Martin Rosendahl, Duluth's most progressive broker, is a native of this state, having been born in Minneapolis in 1878 coming from sturdy Norwegian stock. He was reared and educated at Stoughton, Wis., in the public schools, after which he came to Duluth and soon filled the responsible position of deputy collector of United States internal revenue for two years, and later on, went into the railroad ticket brokerage business. In all these positions Mr. Rosendahl was in the storm center of activity as we find him today in the brokerage business. He is reliable and pushing, taking every care of the interests of his patrons which has been the corner stone on which his great success has been achieved. Under the head of mines and brokers will be found a page ad. devoted to a full list of the stocks carried and the business methods pursued by the brokerage house of Martin Rosendahl of Duluth Minn.

Walter W. Carr, Stocks.

One of the most popular and reliable brokers dealing in unlisted copper stocks in Duluth is Mr. Walter W. Carr, whose offices are located in the Manhattan building. He is a gentleman of many years experience in business transactions and his patrons have the full benefit of his ripe knowledge. Success in the brokerage business can only be attained by securing and retaining the confidence of the investing public. This Mr. Carr has certainly done to a noteworthy degree and his most enthusiastic patrons are those whose investments he has been handling for the longest periods. He has always made it a point to list only such stocks as investigation showed to be reliable and based on actual mining propositions. He was one of the first men to realize the possibilities for making fortunes in copper and through his advice many people who had neither the experience nor knowledge of stock investments nor time or opportunity to acquire the same, have realized handsome profits from the rapid appreciation in properties of this description. Mr. Carr makes it a point to make no extravagant representations to would-be customers, but treats every investment entrusted to him with the same impartial consideration and is ever on the alert to keep informed concerning the new developments which are transpiring in the copper market. His responsibility is well established and is well known to many people at a distance from this city who are among his regular and most enthusiastic patrons. In Duluth, where he is known to nearly every business man, and especially to investors in unlisted copper stocks, there is no question regarding his integrity and financial standing. His success has been quite phenomenal and is a natural result of careful and persistent adherence to fixed business principles.

Gay & Sturgis, Bankers and Brokers.

One of the reliable, busy brokerage firms is that of Gay & Sturgis, No. 50 Congress street, Boston, members of the Boston Stock exchange, and with branch offices at 328 West Superior street, this city, with R. G. Hubbell as resident manager. The business of this house is carried on with the same integrity as that of a bank or any other large and responsible institution. Indeed the business transactions foot up to many millions of dollars annually, stock orders coming in by wire and mail from all directions tributary to Duluth. The stocks handled are listed on the regular stock exchanges of New York & Boston and the daily quotations are received over their special wire together with special information as to the state of the stock market. Among the listed stocks handled by Gay & Sturgis, we would name the following:

Amalgamated.	Anaconda.
North Butte.	Calumet & Ariz.
Butte Coalition.	Superior & Pitts.
Greene-Cananea.	Copper Range.
Shannon.	Black Mountain.
Wolvin.	Quincy.
Osceola.	Amer. Saginaw.
Globe Con.	Tamarack.
East Butte.	Old Dominion.
Ariz. Commercial.	Tecumseh.
Trinity.	Pneumatic Service.
Pneumatic Pfd.	Mohawk.
Mass.	Michigan.
Isle Royale.	Centennial.
Allouez.	Cumb. & Ely.
Nevada Con.	Boston Con.
Bingham.	Keweenaw.
Hancock.	Ahmeek.
United Copper.	Utah Copper.
Utah Consolidated.	

It will be seen from this list of stocks that they are the best on the copper market. They are stocks that have proved good investments, and should improve as time passes. The local manager of the Duluth branch of Messrs. Gay & Sturgis is R. G. Hubbell, a young man of the highest character, who is known far and wide by the buyers of stocks, as a man whose word is reliable at all times and under all circumstances pertaining to the stock market, which, in part, may account for the large and growing business of this popular brokerage firm.

How to Make Fortunes in Copper Mining Investments

Vital Mining Secrets Are Yours for the Asking!

MEN are sweating blood and spending fortunes to gain inside copper mining information as to what stocks to buy, when to buy, and what stocks not to buy, which could have been found out by simply consulting us for the information. All our clients get the best and most crystallized knowledge and experience without price, whether desiring to invest in stocks or not. Do not be content to plod and blunder along or spoil opportunities and waste chances through ignorance of the state of the stock markets, when practical help, such as we can give, will oftentimes put you on the road to fortune.

Let us tell you frankly, that there is a system in buying stocks, that reaches away down into the inner circle of every deal, which most successful stock buyers understand, and so reap the harvest of dollars on nearly all their investments with us. There is no such thing as luck or chance in the deal—away with the myth! It is knowing how to invest. When you master this knowledge, then all your stock buys will roll into profit money, giving you prestige that comes with created profits. This education makes it possible for every man to buy and sell stocks at a profit-making basis.

In 1906 we sold *three million dollars in stocks*—we calculate that we made *millions of dollars in profits* for our customers. We can and will make *millions of dollars* for those who place their stock investments with us for 1907. To you doubting Thomases, let us remind you that there is a high and low tide in the market value of Copper stocks, just as there is in bank, oil, sugar, and railroad stocks, or in real estate values, the only difference being that it takes but a few hundred dollars invested in copper stocks to make one a reasonable fortune, if on the right side of the market, while in the other stocks, one must have a small fortune to play the markets, while the investment is no more certain of successful winnings than in copper stocks. This is the true reason why so many successful business men prefer copper stock investments and why so many wage-earners invest their surplus earnings in the smaller and surer investments. You that are looking for the best and safest investments will find the stocks mentioned here a good buy at present ruling prices.

Many of our patrons earned a handsome profit on these stocks, and in our best judgment, those who buy now will, in many cases, make ten dollars for every one dollar invested in these stocks before the close of 1907.

MARTIN ROSENDAHL, The Broker.

NOW, in our opinion, is the **GOLDEN OPPORTUNITY TO BUY STOCKS AS A MONEY-MAKING INVESTMENT,** to hold until prices take an upward shoot. The wait will not be long. READ THE LIST CAREFULLY AND THEN CONSULT US AS TO PRICES—

Duluth is headquarters for Unlisted Stocks in the United States. It has grown to this important position in the past two years and at this writing every step has been taken to organize a **Stock Exchange,** where none but approved stocks can be listed or sold. This will make it impossible to float **WILD CAT STOCKS.** No stock will be listed by members of the Exchange until the properties have been investigated. This will be a great protection to the buying public and make every share of stock offered for sale, reasonably good, having been first investigated. **It has been our rule never to list any properties unless there was merit and absolute value in the mining property back of the stock. By this businesslike method we have protected the dollars of our clients, making every dollar invested in the stock listed on Our Exchange a reasonable profit-maker to the investor.** It is this straightforward way of doing business that has built up my THREE-MILLION DOLLAR BROKERAGE EXCHANGE. Nearly every mail brings orders to buy this or that stock, while many letters read:

"MARTIN ROSENDAHL, Broker, Duluth, Minn.:

Dear Sir: Please find.....dollars enclosed, for which buy as many shares as the money will pay for in any stock listed by your firm. I know nothing about stocks, so will trust to your honesty to give me a fair deal."

In all such cases we use our best judgment, that our patron's money may be invested in profit-making and dividend-paying stocks. This is the only way to build up and maintain a brokerage house. Mail and telegraph orders have prompt attention. Please remember that **MARTIN ROSENDAHL, BROKER, MAKES A SPECIALTY OF PROFIT-SHARING AND DIVIDEND-PAYING STOCKS. NONE OTHERS LISTED OR OFFERED FOR SALE.**

Progressive Prosperity of Duluth's Board of Trade.

Grain, Flour and Elevator Interests. The Largest Wheat and Flax Seed Market in the World.

By Charles F. MacDonald,
Secretary Duluth Board of Trade.

GRAIN—ONE OF DULUTH'S BIG INTERESTS.

The handling of grain must be numbered as one of the greatest industries of Duluth and one that has brought to this city much of the renown it has attained. The grain movement has unquestionably attracted to Duluth as much notice in commercial circles as any other one line of endeavor, and much of the very best advertising the city has ever received has come through this trade. Thousands of people find employment in the various lines that are necessary to the handling of a great volume of grain such as finds its outlet at Duluth to the consuming markets of the East and foreign countries. The railroads give employment to a great force in the hauling of grain to market, and the elevators use hundreds in caring for it after it arrives. Besides this, there are track men, samplers, inspectors, weighmen, all essential and running into large numbers. Then there is the marine side of it, the great vessel capacity employed in carrying grain, and the large number of men that find employment through this branch of transportation.

All this is aside from the Board of Trade, where the grain is bought and sold and its movement directed and which is in itself a great institution, bringing to Duluth a great volume of money, adding immensely to its importance as a banking center, besides giving to the city's population a fine class of business men and citizens.

The three states, Minnesota, North Dakota and South Dakota produced in the year 1906, according to the figures of the department of agriculture, about 547,000,000 bushels of wheat, corn, oats, rye, barley and flaxseed. More than a half billion bushels of grain. The government estimates the value of this grain at the farm at about $240,000,000. It takes some reflection to appreciate the magnitude of these figures, and realizing what they mean, one can readily see why upon the prosperity of the farmer depends in large measure the general prosperity of the country.

In spite of the great quantity of grain raised in the Northwest, the proportion that flows to the terminal markets seems to be growing smaller. The Northwest is steadily growing in population and the proportion consumed at home of what it raises is steadily growing.

THE 1906 GRAIN MOVEMENT.

The year 1906 saw the greatest receipts of all grains at the Head of the Lakes ever recorded in the history of the market here with but one exception. The year 1898, with its bumper crop of wheat brought total receipts about 4,000,000 bushels in excess of those of this year. That the year 1906 did not make a new record was not due to the fact that the Northwest did not raise sufficient grain, but because the railroads could not bring to market the grain offered them. Had the railroads been able to handle the grain traffic in the year 1906 as they did in 1898, the record year, the receipts might have approached one hundred millions of bushels. When winter descended upon the Northwest—and a winter that brought an exceptional amount of snow—thousands of cars were loaded and waiting upon sidetracks to be moved to market and in many cases they lay there from December to February when the first thaw came. The so-called branch lines in North Dakota were practically blockaded for much of the winter and the great volume of grain raised in the fertile acres of the northern part of North Dakota could gain no admittance to the markets.

The receipts and shipments for the year 1906, with comparisons with 1905, are as follows:

RECEIPTS.	1906.	1905.
Wheat	41,558,151	31,186,725
Corn	163,122	242.983
Oats	7,983,389	9,470,088
Barley	9,705,792	9,868,367
Rye	589,412	549,188
Flax	21,784,625	10,751,790
Total	81,784,491	62,069,141

SHIPMENTS.	1906.	1905.
Wheat	39,152,541	28,126,623
Corn	164.480	241,625
Oats	11,541,934	8,861,808
Barley	10,206,776	9,598,048
Rye	608,401	584,955
Flax	21,949,110	15,807,363
Total	83,623,242	63,220,422

Duluth's figures of receipts and shipments as compiled by the Duluth Board of Trade, are for net bushels and in making comparisons with the figures of other markets this should be borne in mind, for Duluth is practically the only place in the country where the net bushels are given. In other cities the gross weights of cars as they arrive are given as the receipts, but in Duluth only the weight of the grain after it has been cleaned and all dirt and foreign matter eliminated, is given as the receipts.

Another thing that should be mentioned is that in the shipments of wheat from Duluth no account is taken of the consumption by local flouring mills. In the year 1906, the mills at the Head of the Lakes used 4,233,822 bushels of wheat.

THE FLOUR MOVEMENT.

The movement of flour from the Head of the Lakes also showed a very good increase in the year 1906, the shipments passing those of the local mills aggregated 908,175 barrels against 793,145 in the year previous. The railroads received 4,743,900 barrels against 4,332,300 barrels in 1905. The total shipments were 5,654,035 barrels against 5,143,810 barrels in 1905.

The year has not been a very good one in the flour milling trade. Duluth mills are to a considerable extent dependent upon the export demand, and there has been practically none this year. In the entire twelve months not 25,000 barrels of flour was exported direct from here. The mills have therefore been dependent entirely upon domestic trade.

FLAX MARKET OF COUNTRY.

A study of the figures for the banner year, 1898, and the year 1906, which crowded the record so closely, shows plainly the fine growth of the Duluth market in the coarse grain and flax seed trade. While last year was only about four million bushels behind in total receipts, the receipts of wheat were 25,000,000 bushels less. Receipts of oats, doubled, and barley and flax trebled.

Duluth is today the flax market of the country and its pre-eminence is not disputed. Flax prices in all markets are based upon Duluth price and nearly all of the great crushing houses and oil making concerns buy in this market, and a number of them are personally represented here or own memberships in the Duluth Board of Trade.

The department of agriculture in its December report estimating the crops of the United States put the yield of flax at 25,576,146 bushels. By most of those conversant with the production of the Northwest and principal flax states, this is considered too low and the amount is put at more than 30,000,000 bushels, but even at the larger figure Duluth has already received half of it, for during the first seven months of the crop year which began August 1 last, this market has received but slightly less than 15,000,000 bushels of seed.

Flax was one of the most profitable crops the Northwestern farmer raised last year, the yield per acre being good, the quality of the crop excellent and prices generally favorable.

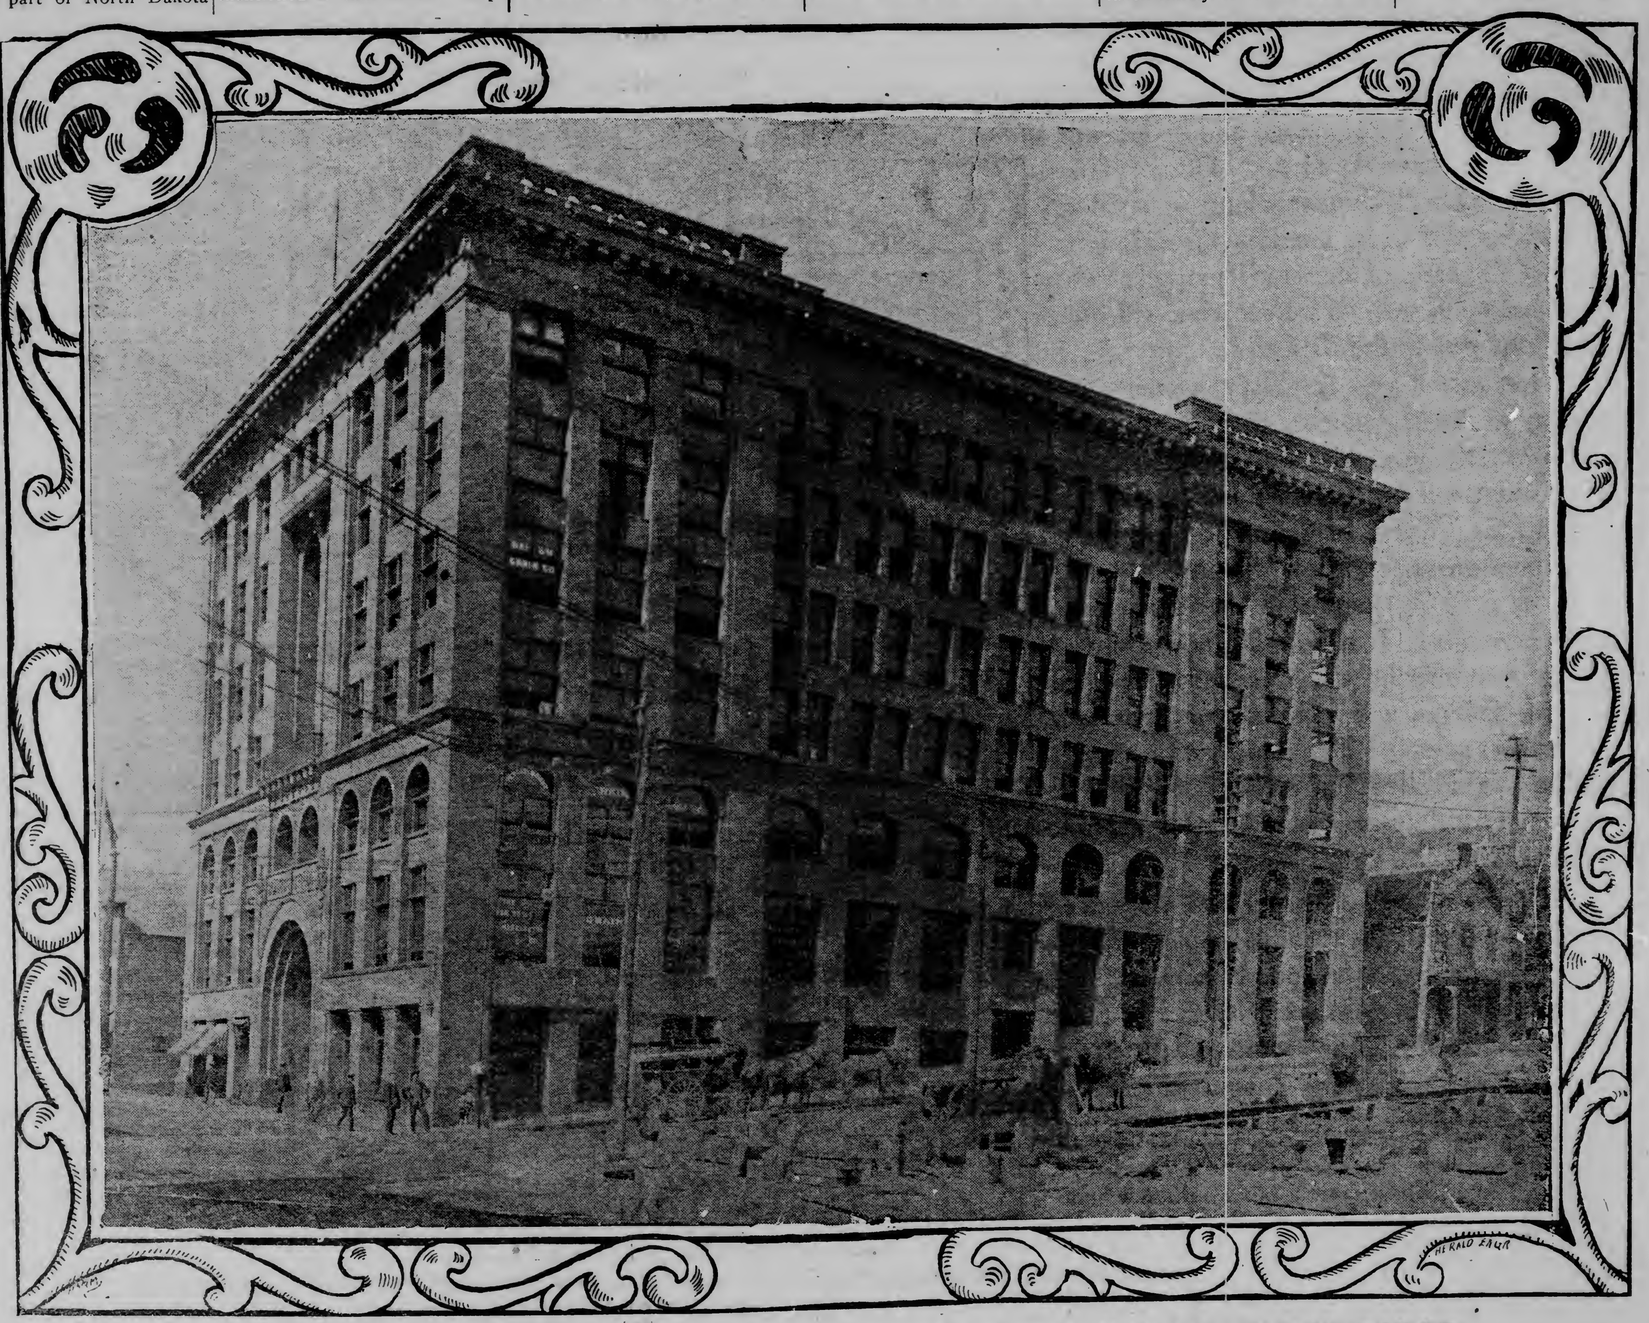
Barley is becoming every year a more important part of the Northwestern farmer's crop. The demand for it is always good and at the present time is very sharp, so much so, in fact, that prices are getting close to record figures.

The Northwest, too, is raising oats on a large scale and a fair share of this flows to the Duluth market for sale to the East and shipment down the lakes.

DURUM WHEAT MOVEMENT.

The movement of durum wheat is the thing of chief interest in the Duluth market at this time, in fact, it may be said to present a keener interest to the trade in the Northwest at this time than any other feature of the grain business. This wheat is better known to many by the title "macaroni," but the inspection departments and the trade have adopted the term durum. It first made its appearance in the Northwest in quantity sufficient to attract any notice in 1903. Its introduction was due to the department of agriculture at Washington, which brought it from Russia, and after experimenting with it, recommended its use upon the semi-arid lands of the Northwest. Farmers began to try it and found that it grew well on such lands and yielded in much greater abundance than ordinary spring wheat. The following year saw a larger production.

Its better yield and the fairly good prices that it was obtaining made it an attractive proposition, and in 1905 the Northwest went into it on a much larger scale. The receipts of durum wheat at Duluth during the crop year of 1905-06 were 24.60 per cent of the total of all wheat.



This was the great trial year of durum wheat and fortune favored it. The American miller had never taken kindly to it and even now has no more liking for it than he did originally. In some places in this country it is used, but only sparingly. The great volume of the yield must find its market abroad, and with the year of greatly increased production in America, came most fortunately for the American grower, a shortage in the countries of Europe and Africa, that ordinarily raised the wheat of that character consumed abroad. That gave America its opportunity and the exporter on this side was quick to see and act upon it. The American durum wheat was introduced to the trade in the French, Italian and nearly all of the Mediterranean ports in Europe and most of those in Africa. It soon came into strong demand and prices rose until it was actually possible at some times to sell durum wheat to Mediterranean ports at a higher price than No. 1 northern wheat was bringing in Europe. The whole crop of durum wheat raised in the Northwest was disposed of and at fine prices.

There could be but one result, a greatly increased yield of durum wheat in 1906. There was considerable fear in the grain trade that the foreign demand might not continue, and that the buying of a year ago was but temporary and would subside when the durum raising countries of the other side resumed their normal production. These misgivings have not been borne out, however, for the foreigner is again a good buyer and even now, though 49 per cent of the marketings of wheat at Duluth on the crop have been durum wheat, the exporter can hardly get enough to satisfy the demands of the buyers abroad.

Durum wheat has come to stay, and the trade and the American miller must reckon with it. It is hardly to be believed that he will not find some way to make use of this cheaper wheat. Small millers in the interior are already beginning to use it and say that it makes excellent flour. From a purely selfish standpoint the grain trade at Duluth might well wish that the miller in this country would leave it alone, for if it must continue to find practically its whole market abroad it is this market which will benefit, for it is at Duluth that the Northwestern grain finds its water outlet and hence the durum wheat would flow this way and be handled by the trade here.

THE ELEVATORS.

The capacity of terminal elevators at the Head of the Lakes at the present time is 33,350,000 bushels. There are a few other houses of small capacity, but as they are not adjacent to water frontage they are not considered as terminal houses. The houses number twenty-seven and range from about 3,500,000 bushels in

DULUTH BOARD OF TRADE—LARGEST WHEAT AND FLAX SEED MARKET IN THE WORLD.

capacity down to 200,000 bushels. All are equipped for the rapid, economical and efficient handling of grain. The terminal elevators and mills at the Head of the Lakes can easily handle 1,200 cars a day during the busy season. This allows ten hours as the working day, and is not given as the maximum figure, but the one that can be maintained with ease.

The past twelve months has seen the completion of one of the most modern and interesting elevators in the country, the new working house of the Globe Elevator company's Peavey terminal in Duluth. The wooden working house burned in February of last year and soon after a contract was let for a new house and one that could not be wiped out in the same way. It was completed in February of this year by the Barnett & Record company. Reinforced concrete, tile and steel were used entirely in its construction and not a stick of timber is to be found in the house from top to bottom.

The basement floor of the new house is eighteen inches higher than that of the old. It was built so to place it at the highest water mark known. In the great storm of November, 1905, eighteen inches of water stood of a time in the basement of the old wooden house. The floor of the new house was therefore placed eighteen inches higher and is of solid concrete over railroad iron. It is in fact a huge concrete box, for the walls for a distance of six feet above are a part of the floor so far as the conrete construction is concerned. A storm such as the great one of November could rage for a week and no water would enter this house.

The entire floor is of concrete and steel construction, and above this splendid foundation are built the tile bins and superstructure. These bins are about thirteen feet in diameter and the house is five bins wide. Above the bins are the different floors required in working houses, containing the scales, garners, etc.

All of the machinery in the building is built of steel, wood not entering into their construction in any part, however small.

The same engines and boilers drive the new house that were used for the burned one, but there has been a complete change in the engine house. All of the wooden parts in the construction have given way to oncrete and steel, and there is positively nothing about it that can burn.

REMARKABLE FIGURES ON FLOUR AND MILL PRODUCTS.

FLOUR AND MILL STATISTICS.

Bulletin No. 34, which has just been issued by the bureau of the census, presents statistics for 1905 relating to the flour and grist mill products and starch, which was prepared under the supervision of Mr. William M. Staurt, chief statistician for manufacturers:

The statistics of flour and grist mill products include only the returns of establishments engaged in merchant milling; thus data for mills engaged solely in custom grinding do not appear in the census report. At the census of 1905 there were 10,051 of the merchant flour and grist mills in the United States. Their total capital was $625,117,434; they employed 9,110 wage earners, paid $19,822,196 in wages, consumed $619,971,161 worth of materials, and manufactured products to the value of $713,033,395. These figures represent an increase, as compared with 1900, the data of the preceding census, of 6.1 per cent in number of establishments, 10.1 per cent in capital, 21.4 per cent in wage earners, 21.7 per cent in wages, 44.8 per cent in cost of materials, and 42.2 per cent in value of products.

GEOGRAPHIC DISTRIBUTION.

Of the different geographic divisions of the country, the North Central states had by far the largest share of all the items of the industry at the census of 1905. There were reported from this division 13.6 per cent of the establishments, 52.5 per cent of the capital, 54.2 per cent of the wage earners, 56.3 per cent of the wages, 58.1 per cent of the cost of materials, and 57.7 per cent of the value of products reported for the whole United States.

MINNESOTA LEADS ALL STATES.

The three leading states in the industry ranked by value of products of 1905 were Minnesota with $122,059,123, or 17.1 per cent of the total for the United States; New York, with $54,546,435, or 7.6 per cent of the total; and Kansas with $42,034,019, or 5.9 per cent of the total.

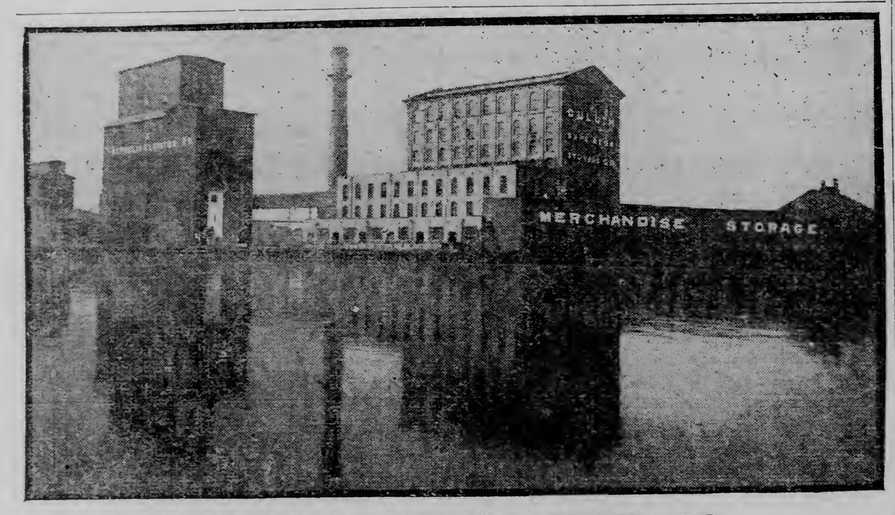
Minneapolis was the leading city in the industry. At the census of 1905, there were twelve mills in operation in that city and the total value of products amounted to $62,754,446, an average per establishment of over $5,000,000. The value of products for Minneapolis was over five and one-half times that of the next most prominent city and greater than the combined output of the eleven cities next in importance. New York city ranked next to Minneapolis, with eight establishments and products valued at $11,058,674, Buffalo was third, Milwaukee fourth, and Kansas City fifth. These are the only cities that reported more than $5,000,000 worth of flour and grist mill products in 1905.

At the census of 1905 the grain reported as used by the merchant flour and grist mills of the country amounted to 754,945,729 bushels, and cost $585,056,067. Wheat formed 65.4 per cent of the total quantity and 78 per cent of the total cost of grain. Thus the quantity of wheat was nearly twice and its cost more than three times that of all the other kinds of grain used. Corn represented 23.6 per cent of the total quantity of grain used and 15.7 per cent of the total cost; oats 6 per cent of the total quantity and 2.8 per cent of the total cost; and barley, rye and buckwheat combined constituted 4.8 per cent of the total quantity and 3.5 per cent of the total cost.

The quantities of wheat, rye, buckwheat and barley used were greater in 1905 than in 1900, and the quantities of corn and oats were less.

The total value of the products reported for the industry at the census of 1905 was $713,033,395. The principal products named in order of the percentage which they formed of the total were: Wheat flour, 67.4 per cent; offal, the principal part of which is a by-product of the manufacture of wheat flour, 10.7 per cent; feed, 10.7 per cent; corn meal and flour, 7.9 per cent; hominy and grits, 1.2 per cent; rye and buckwheat flour and barley meal, 1.6 per cent.

The qualities of wheat, rye and buckwheat flour, offal and hominy and grits manufactured in 1905 show small increases as compared with 1900, and the quantities of barley meal, corn meal, and flour and feed show small decreases.



The imports of flour have increased considerably during the past five years, from 642 barrels, valued at $3,430 in 1901, to 46,851 barrels, valued at $164,100 in 1904, and 40,801 barrels, valued at $176,513 in 1905.

The exports of flour and grist mill products for 1905 were valued at $72,918,834. During the five years the fluctuations in exports were very great. In 1903 the value reached the maximum, $76,096,402, and in 1905 the minimum, $42,013,631.

The imports for 1905 were valued at less than one-tenth of 1 per cent of the domestic products and the exports of 5.9 per cent.

There were 131 establishments that reported the manufacture of starch as their principal business in 1905. Their total capital amounted to $7,007,695; they employed 1803 wage earners, paid $866,479 in wages; used $5,260,854 worth of materials, and manufactured products to the value of $8,082,904.

The industry shows a great decline as compared with 1900. Capital has decreased 40 per cent;

number of wage earners, 32.1 per cent; wages, 21.2 per cent; cost of materials, 9.4 per cent; and value of products, 12.5 per cent. This general decline is attributed to a falling off in the export trade in American starch, due to a large increase in the manufacture of potato starch in Europe, particularly in Germany and Russia.

There was a constant decline in the export of starch—from 102,800,225 pounds in 1901 to 27,759,599 pounds in 1903. Since that date exports have revived somewhat and reached a total of 61,450,144 pounds in 1905.

Including the output of establishments in which starch was manufactured as a minor product the total quantity of starch made in the United States in 1905 was 358,005,026 pounds, valued at $10,975,597. There was a decrease in the quantity reported at the present census as compared with 1900 of 185,053,113 pounds, or 34.1 per cent, but the value shows an increase of $86,744, or less than 1 per cent.

The varieties reported were corn, potato, cassava and wheat starch. The total output of corn starch reported for 1905 was 312,450,505 pounds less than the total quantity, and $57,380 less than the total value of this variety of starch in 1900. The quantity of potato starch reported was 27,709,400 pounds, valued at $924,476, and of cassava and wheat starch 17,584,121 pounds, valued at $1,124,612. The quantity of potato starch was 6,232,426 pounds less and the value $204,653 less than in 1900. The quantity of cassava and wheat starch increased 1,035,552 pounds and the value increased $348,777, as compared with 1900.

The three principal starch manufacturing states, named in order of value of products reported in 1905, were, Indiana with $2,048,072, New York with $1,561,913 and Iowa with $1,063,055. The same states led in the production of corn starch, Indiana with 68,694,922 pounds, valued at $1,733,419; New York with 31,815,436 pounds, valued at $1,366,084; and Iowa with 28,131,080 pounds, valued at $852,050.

The leading states in the production of potato starch were Maine with 15,454,787 pounds, valued at $523,200; Minnesota, with 6,627,638 pounds, valued at $221,355; and Wisconsin with 4,925,858 pounds, valued at $154,797.

Wheat starch was made in California, Connecticut, Massachusetts, Michigan, New York and Pennsylvania, and cassava or root starch was made in Florida.

MINNESOTA'S STATE GRAIN DEPARTMENT

The Most Perfect System of Inspecting and Weighing Grain In the World.

HOW GRAIN IS HANDLED.

When the Minnesota legislature early in March made answer to the charges against Minnesota inspection and the conduct of the grain business in Minnesota, made by the legislature of North Dakota, there was attached to the resolution an exhibit, prepared by the state inspection deparment, which set forth in detail and in a very comprehensive way the system of inspection and weighing grain in the state of Minnesota. Minnesota inspection ranks with the first in the world and, in spite of the criticisms that have been made by interests having selfish purposes to serve, it has never been discredited with the buying trade. At a meeting of the importers of Europe a few months ago every system of inspection on the American continent was attacked but two and those two were Minnesota and Winnipeg. The statement showing how the work is done will therefore be of much interest and is as follows:

"As long as grain will be in demand by the world at large, and as long as humanity depends upon grain for its bread, a deep interest must center in all that pertains to the cereals in general that contribute the supply that fills the enormous demand. Agriculture must be recognized as the prime sustaining principle throughout the world, and especially does Minnesota and her sister states enter into the scheme of furnishing to the world's garners the tremendous supply required.

"One of the most extensive branches of the state service in the state of Minnesota is the state grain department that determines the grades and weighs the grain that is shipped to the terminal markets. Notwithstanding the fact that the state has been doing this work for more than twenty-one years, there is yet much that the general public, many of whom are directly and vitally interested, do not understand or comprehend about this very important service.

"We have received many letters asking for information as to the methods of the department, and many enquiries have been of the most ridiculous nature; for instance, it has been asked if we weighed grain in car loads by running a train of cars all coupled together over a track scale in the railroad yards. Also the question has been asked if the empty car is actually weighed to determine the tare weight, or if it is the stencil weight on side of car that is taken.

"This article has been written with the end in view of telling in detail, step by step, how the work is performed from the time a car load of grain reaches the terminal inspection track until it has been weighed under supervision of the state.

THE INSPECTION.

"When a carload of grain reaches the terminal market it is placed by the railroad company upon special tracks called 'inspection tracks,' which are provided in each railroad yard.

"A state sampler is on hand in the morning as soon as it is light enough to see, and he first takes a record of the car number and initials, and also records the number of the seal that he breaks in order to enter the car. He then takes a hollow brass tube, called

GRAIN COMMISSION

BOARD OF TRADE.

Board of Trade, Duluth.
Chamber of Commerce, Minneapolis.

We solicit shipments from Farmers, Elevators and Independent Shippers generally. The Grain Producers Elevator Company is strictly a farmers' organization and a North Dakota institution, the stockholders and officers being Nelson, Ramsey and Grand Forks county men. We are the only farmers' concern handling their own grain at terminal points and owning their own terminal house. We wish to call particular attention to the fact that we have special facilities for the handling of dirty and mixed grains. We have recently installed in our terminal house a complete set of cleaning and separating mills manufactured especially for our own use. We have the only set of mills at the Head of the Lakes that will separate oats from wheat in a satisfactory manner. All shipments given personal attention and all grain cleaned out will be accounted for. Liberal advances made on shipments.

HIGH JUMP AT SEA.

"The most stupendous of all leapers of the sea," says a writer in Outing, "is the whale. I have seen a monster weighing hundreds of tons, possibly eighty feet in length, rise slowly and deliberately out of the water until it appeared to be dancing on the surface, entirely clear of it, then sink slowly back.

"Such a leap is on record in the annals of the British navy. A large whale cleared a boat, going completely over it, an estimated leap of twenty feet in the air—how many in a lateral direction was not known.

"Exactly how high a tuna can leap it is difficult to say. I have seen the water beaten into foam by them four miles distant, and have a photograph showing a fish—a black streak at least a mile distant high in air—a jump of certainly ten or fifteen feet; and it is my opinion, based on what I have seen, that it is possible for a lusty tuna at full speed to project itself twenty feet into the air and thirty or forty feet in a horizontal direction.

"I judge the latter possible from the leap of a big tuna which cleared the kelp and landed high on the rocks at Santa Catalina. I have often stood in the center of a school of leaping tunas and watched them, but the situation is not one suggestive of repose or peace of mind."

Address all correspondence to and make all drafts on our Duluth office.

a 'probe,' and by plunging this probe down through the grain to the bottom of the car in several places, he secures a fair sample of the grain throughout the whole load. The sampler then re-seals the car and keeps a record of the state seal applied.

"A sample of the grain is also taken by a chamber of commerce or board of trade sampler, which sample is given to the consignee of the car. A complete seal record is also kept by the chamber of commerce sampler.

"The sample that has been thus obtained by the state sampler is placed in a sample sack together with a ticket on which has been placed the car number and initial. The sample is then taken to the state inspection office, where under a proper light it is carefully inspected by expert inspectors, who have made a special study of the particular kind of grain which they inspect. The grade and dockage, if there is any dockage, is then determined by means of apparatus adapted to the work consisting of finely adjusted scales and sieves of different kinds.

"If the shipper or the consignee is not satised with either grade or dockage on the car in question, it is his privilege to call for a re-inspection. The case is then carefully reviewed by the chief deputy inspector or the assistant chief deputies. In case the parties interested are still dissatisfied, an appeal can be called for, which means that the merits of the case would then be considered by the state board of appeals, a board of three members. The grade and dockage as determined by them is final.

"The rules that govern the grading and dockage of grain are established at the beginning of each grain year by the members of the boards of appeas, consisting of six members, three at Minneapolis and three at Duluth.

"Another particular duty of the inspection department during their work in the railroad yards is to make an examination of each car of grain for any leaky conditions that might exist, making a record of same in their record books.

"When the grade and dockage has been finally determined, a certificate of inspection is issued by the state inspection department. After the inspection has been completed and the car load of grain is sold it is set to mill or elevator for unloading.

THE WEIGHING.

"Again the car load of grain comes under the direct supervision of the state department, for the state weigher at once makes a careful examination of the car to detect any bad order condition, and a most complete record is made of any such condition found.

"This inspection of the car for leaky conditions having been thoroughly done, he then takes a complete seal record of the car before the seals are broken by the unloading concern. In case the mill or elevator company, to which the car has been set for unloading, should break the seals for private inspection before the car has been placed on the unloading track, they also keep a record of the seals broken and applied.

"At the larger elevators in the system where the weighing is done on hopper scales in the cupola, two men are employed, one being stationed upstairs where the weighing is done, and the other man supervises the handling of the grain downstairs. This downstairs man, called a supervising weigher, sees that the cars are swept properly; sees that all the grain has been elevated from the unloading pit before the signal is given to weigh the grain, and he must also know that each car is placed at the particular elevating leg corresponding with the number of the scale upstairs, on which scale the weigher has been advised the car is to be weighed on. It is this downstairs man who also keeps the seal record.

"After the examination of the car has been completed and the seal record secured, the car is placed at the unloading pit, where by means of powerful steam shovels the grain is unloaded. It is elevated directly to the garner which is the large receiving hopper located just above the scale hopper. After the scale has been properly balanced and closed, the grain is drawn down from the garner into the scale hopper.

"The grain is then carefully weighed by the state weigher, and the original entry of weight is made according to law in the record book provided for the purpose. He then takes a specially arranged ticket, and by means of the type-registering device with which all scales are equipped on which state weights are given, he obtains a type-printed record. He then checks this type-printed record with the figures that he first recorded in the weight record book, and if they do not agree, it is evident that his attention would be immediately called to the fact, and it is his duty to at once go over the work before the grain has been dropped from the scale, to account for the apparent difference in the records.

"Since an incorrect record cannot be obtained from the type-register, provided it is not actually out of order, it is practically impossible for error to enter into the work of weighing under the present system. However, no man would assert that mistakes cannot possibly be made in some part of the operation, for as long as man is fallible an error will occasionally occur.

"Another check upon the work is the fact that all through the weighing operation the state weigher has not been alone in the work, for the mill or elevator weigher has been present all the time and as a result the two men are enabled to compare their work and figures as an extra precaution against mistakes.

"When the shipper of a car load of grain obeys the law by placing a card in the car giving the shipping weight, an immediate investigation is made if there is an apparent discrepancy between the state weght and shipping weight, and it is very plain that such an investigation made while the grain is still held in the scale hopper is of more value than when made a few days or weeks after the weighing has been completed and all the circumstances surrounding the case may have been forgotten.

"When there is no shipping weight ticket placed in the car, the state weigher has no means of knowing the amount of grain the shipper has loaded into the car, and consequently he does not know if a shortage or overage should actually exist.

"Where track scales are used instead of hopper scales, the loaded car is uncoupled from all other cars, placed upon the scale platform and weighed. Then when the grain has been unloaded, the empty car is weighed to obtain the tare weight. This tare weight is deducted from the gross weight to determine the net weight. A complete record of the work is kept the same as in hopper scale weighing, and the work checked by the type-registering device previously mentioned.

"The state weighing department thoroughly investigates all claims that arise in the work, and no effort is considered too great if in the end a just settlement can be obtained. When a claim is presented alleging a shortage, it is at once placed on file. The records are then carefully checked over to see if an error has been made in transposition of numbers, addition of drafts or by actual mistake in recording a wrong figure or set of figures. Then this type-registered ticket which has been carefully preserved for reference is examined and compared with the figures as given in the written record.

"The record of the work at the unloading station is thoroughly gone over for the time covered by the date that the car was weighed, involving a study of the condition that surrounded the weighing. The seal records are also completely checked up to find if such a condition should exist as a broken seal, no seal or faulty record.

"Special work has been done involving travel of several hundred miles to test scales or check up the work of unloading, when some especially serious case has demanded.

"A close supervision is kept over all the scales on which state weights are given, and this work does not mean ordinary care in the use of the scales, but means a complete and severe test up to full capacity of every scale in the system. Scale experts are employed, whose sole duties are to test the scales and keep them adjusted to the government standard of weights. Nor does the state supervision cease at the testing of scales, but takes up the details of proper scale construction, elevating machinery and all apparatus that enters into the handling of the grain before it is weighed.

"When the state weigher closes his report for the day it is mailed at once to the state weighmaster's office, where it is necessary that the report be on hand by 7 o'clock a. m. on the day following the weighing.

"At this office a busy scene is witnessed each day as the representatives of the many commission firms check over the daily report sheets to learn the weight of their cars as ascertained by the state weighing department on the day previous.

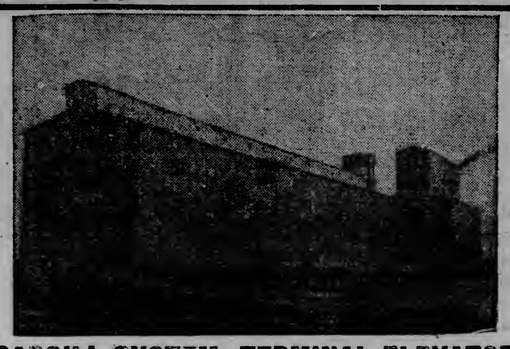
"The records being clear and perfect, an official certificate is issued bearing upon its face the car number, initial, contents and state weight, together with the time and place of weighing. This certificate is stamped with the seal of the office of the state weighmaster and forms the basis of settlement between seller and buyer in the matter of weight. To obtain a state certificate of weight, it is necessary to present a request in writing. Should any bad order conditions be found in the records it is also written in the remark column of the certificate of weight.

"Another very important branch of the state weighing service of watching or patrol, whereby the cars loaded with grain are continually watched while going through the terminal yards, to detect any leaking conditions that might exist as well as to guard against pilferage. The terminal railroad yards are usually located in outlying districts where the vigilance of watchmen is especially needed. Many times leaking cars are found and reported by these special watchmen that would not show to be in leaky condition except when in motion, for cars often leak in the yards when being switched about and do not show evidence of leakage when set for unloading.

"Much has also been accomplished in the way of protecting the property of shippers from pilferage, a loss against which the country shipper of grain would be powerless if it were allowed to exist. Since these special watchmen cover the whole terminal system wherever cars are properly swept at the unloading stations by which they are continually passing during their yard work. These special watchmen are regular deputy weighers assigned to this patrol service, and they are empowered with police authority.

"It is amazing to consider the enormous bulk of grain that is handled in the Minneapolis terminal alone, for during the grain year ending August 31, 1905, there were 259,996 cars weighed. If these cars were made up into a solid train, allowing forty feet as the length of each car, the train would extend from New York city to a point 232 miles west of Bismarck, N. D., and each car would conatin 1,018 bushels, or more than is produced by the ordinary Minnesota farm.

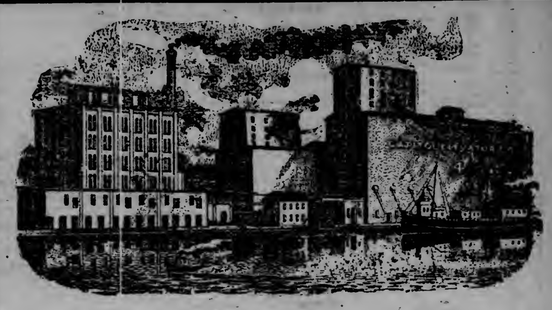
"The state stands as an arbitrator between the seller and buyer; it treats both with equal fairness; it is disinterested as to the financial interest involved, its only care being to see that justice is done.



"The state weighing department does not hold the very unsatisfactory position of being a mere figure-head in the handling and weighing of the immense volume of grain that pours into the terminal market, but, supported by law, it aims to be an active and energetic factor in the work of securing correct weights, making constant effort toward the improvement of the service by the adoption of the most modern equipment and by the applications of the experience that years in the development of the work has given.

"The state weighers who do the weighing are each under a substantial security bond of $5,000, and while they are thus held liable for the results of their work, still they are wholly independent, not knowing to whom a single car of grain belongs which they weigh, and they also know that the tenure of their office is not dependent upon the good or ill-will of mill or elevator people at whose industries they might be stationed."

ITASCA ELEVATOR COMPANY,



Capacity, 1,300,000 bushels, while 7,500,000 bushels were handled in 1906. This elevator is operated by the Itasca Elevator Company for the C., St. P., M. & O. Ry., at Itasca, Wis. The company's offices are located at 709 Board of Trade Building, Duluth. The officers are: J. M. Jenks, president; Frank Fowler, vice president, and M. L. Jenks, secretary and treasurer.

The United States Steel Corporation

Its Operation, Policy

BY W. B. HENNESSY.

THE WRITER has been studying the United States Steel corporation, its works, policy and accomplishments, at close quarters. He has talked to some of the men who stand at the head of its physical activities and to those other men who are more humble instruments for carrying out the ideas framed by this mighty organized intelligence. He has seen the processes whereby it removes the iron ore out of its earthy bed and transports it to the furnace. He has sought information from the men who explored the range and from those who exploited it and has observed the Steel corporation in its dealings with the individual and with society, which takes its expression in the state. And from this observation and the information gained he is compelled to the conclusion—which must be reached by anyone who can read recorded facts—that this tremendous assemblage of brains, capital and physical force is wholly benign in its influence upon the life and progress of the people among whom it operates and from whom it takes its corporate existence.

Before entering upon the record that compels this conclusion it might be well to consider the attitude of the public mind toward this gigantic agency for transmuting the crude riches of the iron ranges into merchantable iron and steel. And it may as well be admitted now that this attitude is antagonistic among those persons who are most remotely affected by the Steel corporation, and that this antagonism decreases exactly in proportion to the diminished distance separating the individual from the scene of the corporation's activities. The remote bucolic agitator, whose eloquence is expended in denunciation of the corporation as an institution, has bred in the minds of an agricultural audience that feels but the remotest waves of the industrial sea disturbed by corporate activity, the idea that the Steel corporation is a monster of evil-seeming, which requires constant watching to the end that it may not get more than its share of the wealth of the world.

The man who buys iron and steel products feels no antagonism to the corporation for he knows that the exercise of its power and intelligence has prevented the demoralization of his market and business—that it is the safeguard of the greatest business enterprise of the world today—the iron and steel trade in its various branches. Here in Duluth and in the section of Minnesota where the initial activity of the corporation is exercised, there is no other sentiment felt or expressed but that which declares the United States corporation to be conducted with a profound regard for the rights of the individual and of the body politic. It is rigorously just in its dealings with the state as with the individual and instances innumerable are cited where justice to the individual has been tempered by that quality of mercy which is the highest form of humane expression.

It is true that its merciful attributes are based upon purely intellectual and unemotional promptings, but it is nevertheless a fine thing to find in a corporation of almost unlimited wealth and power an unanswerable adherence to the theory that the exercise of humane consideration is not, in the long run, detrimental to the dividend paying power of a corporation that is conducted for profit. No wrecks of human hopes mark the pathway pursued by this tremendous industrial machine; no bleaching bones attest the callous indifference usually imputed to corporate greed and its incidental disregard of the individual.

The outstanding and universally obvious distinctive feature of the United States Steel corporation—aside from its wonderful efficiency—is its evident assumption that the greatest good for the corporation is to be had by binding the interests of the people whom it necessarily employs, or does business with, to its own interests. The tremendous strength inherent in a vast coalition of wealth and unified intelligence has been made entirely impregnable by a policy that is conciliatory but purposeful. It is a giant that gains its ends by constraining individuals to its assistance through showing that the gaint is willing to exert its strength for mutual benefit.

* * *

There is nothing haphazard about all this. There are no sporadic outbreaks of generosity indulged with a view to meeting an exigency and currying favor for the moment. The United States Steel corporation is most assuredly not a philanthropic institution. Its mission is to make money for its stockholders, of which it is said to have upward of 150,000. There is no manner of doubt that it could effectually accomplish that purpose by methods which have made other great corporate institutions to be treated as enemies of the public. It has resources in capital and power that would make it a fearful engine of oppression—operating quite within its legal rights—if its managing forces had not been directed to putting it upon the higher levels of economic endeavor.

It would not be profitable nor conclusive to inquire into the subject of corporate morality or immorality so far as the Steel corporation is concerned. As a corporation it must be soulless, but there are many upright men, whose lives are conducted upon the higher levels of a refined morality, who decline to subscribe to the doctrine of the soul as something susceptible of taking reward or punishment. Perhaps the morals of the Steel corporation—and they are pretty sound—are not formed upon spiritual ground. Morality with the corporation is simply a business proposition. There is nothing Pecksniffian about its code of morals. It does not make believe. It treats the individual, with a soul and body, squarely. A man who knows more about its operation than any other individual not in its employ or a part of its organization said to me:

"The chiefs of the Steel corporation do not ask their executive men how much money they are making. They know that will take care of itself. They ask: 'How do you stand with the people? Are you giving them a square deal?'"

And there never has been a time in the history of the corporation when the chiefs have been obliged to confess that the company had lost public favor. There has been no time when it had to be confessed that labor was dissatisfied. There has been no report showing that the state was compelled to exert its power to get from the corporation all that it claimed as its due in taxes.

On the other hand, the people who know the corporation by its work have abandoned their attitude of suspicious apprehension, assumed when the formation of the corporation was announced. And it is notable among corporations for the fact that it has not only not resisted increases in its assessed valuation, but has several times voluntarily increased it own return of valuation—and this in no trifling fashion, but by adding tens of millions to the tale of its showing. The writer has found no similar evidence of a disposition to share the public burden displayed by other corporations or individuals in Minnesota.

And this is a state of affairs that is not to be met by the proposition that the Steel corporation's tax is an insignificant morsel as compared to the huge bites it is taking. Which latter is not true. Under no conceivable circumstances is the sum of $2,500,000 or more to be regarded as insignificant, and that is about the amount which will be paid by the corporation in taxes in this state on this year's assessment. Two and a half millions would represent the value of the entire industrial resources of the state a little more than a generation ago. It is not so many years since it would have sufficed for all the expenses of government in Minnesota. All the expenses of the state government proper are but twice that sum. If Minnesota had twelve other taxpayers paying as much money as the Steel corporation, the entire burden of taxation would be lifted from the shoulders of the rest of the state.

* * *

These attributes are not accidental. They constitute the evidences of a carefully formulated policy of operation. They are as much a part of the plan of procedure of the Steel corportion as are the processes whereby the ore is taken out of the ground by methods reduced to the last degree of economic practice. They are part of the general policy which anticipates the claims of workmen and keeps the employes not only satisfied, but thoroughly in sympathy with the big machine of which they are made to feel that they are necessary and important parts. The same spirit of fairness has been so demonstrated in the dealings of the company with the men who explored the range that there is nowhere a complaint that any man has been treated with any but the greatest liberality in his traffic with the company. In Duluth and on the range every original discoverer or fee owner who has had dealings with the Steel corporation will tell you outright that he got or is getting more for his discoveries or his ore than he hoped to get a few years ago; or that he could possibly have got prior to the entrance into the operating field of the United States Steel corporation.

The present writer was once profoundly impressed by the delicacy of the mechanism operating a 100-ton hammer, which was so carefully adjusted that, a watch being placed upon the bed, the enormous weight was dropped and its career checked just as it reached and rested upon, without crushing the case of the timepiece. That delicate mechanism was a clumsy makeshift compared to the delicacy of this ponderous machine known as the United States Steel corporation, which is so finely adjusted that it operates the tremendous industrial engine necessary to mining upward of 15,000,000 tons of ore in the Minnesota field every year, transports that ore to the furnaces—utilizing the labor of thousands of workmen, taking care of a dependent population of 40,000 persons, requiring the services of scores of locomotives, thousands of cars, literally hundreds of great ships and thousands of sailors—and doing all this without so much as disturbing the interests of its neighbors. The adjustment of this machine is a miracle of nicety; it has reduced friction in operation to so insignificant a factor that it may fairly be said to have disappeared altogether.

* * *

The United States Steel corporation is simply an organized and capitalized intelligence. It owns not a dollar's worth of property in Minnesota. As a corporation it does no business in the state. Its aims are realized through the operations of its executive arms—corporations carrying on specialized branches of the work of the whole body. Each of these arms—any one of which might stand alone as a mighty power—has an independent executive organization and chief. Each chief is responsible for the operation of his own company, and it is his business to produce results. He has the widest discretionary powers as to ways and means, and is not only an executive, but is necessarily a diplomat, and it is part of his business to see to it that the primary object of the central intelligence is realized in all of its essentials. He is in close working touch with each of the other chiefs. He has power to initiate as well as to execute. All he is asked for is results that are obtained by methods laid down within the recognized lines of policy. As all great works are accomplished with a degree of success proportioned to the lessening of friction it is the primal business of these chiefs to so operate their various machines that each shall be the complement of the other and one to all. And they see to it that in the dovetailing of their interests no outside interest is adversely affected by the operation of the mechanism they guide. The system of procedure is the elaboration of simplicity in methods.

* * *

Untold ages were consumed by nature working in her secret laboratory and piling up wealth for the enrichment of man in that day, when, in the fullness of time, his needs should carry him past the age of stone, wood and iron and bring him to a condition when steel in vast quantity and varied form became necessary to the realization of his broader ambitions. In the darkness of earth's dawn there was stored by the glacial drift coming down with the dissolving ice cap from the North, a great body of iron ore, which lodged along the scrap of the hilly range north of the head of Lake Superior. Having completed her work, nature was at little pains to conceal the barely hidden riches and the designing hand of a providential dispensation is apparent in the fact that this great body of ore—above eighty-five miles long and from one-half to three miles wide and of varying depth—remained with its riches unrecognized until the world had proceeded so far in its progress as to make this deposit a commercial necessity. If the Mesaba range had been discovered at an earlier period of man's development, it would have been unavailable. Its discovery came at the psychological moment.

For forty years the iron and steel masters of the world had been developing, inventing and improving processes necessary to the fruition of man's ambitions. The work of Jones, Scott, Carnegie, Phipps, Frick and the giants of the iron and steel industry had gone far toward precipitating this golden age of steel when the Minnesota ranges were explored and their wealth recognized. In 1884 the hematite ore of the Vermilion range was first used by the steelmakers. In the following ten years there was a tremendous expansion of the American steel market. The stupendous trade genius of Carnegie—who was not a steelmaker, but the lord of the steel trade—had carried the steel industry to what was thought to be the pinnacle of success. Money begged for opportunity to get into the trade. Immense as was the development of the capacity of the blast furnaces, and the rolling and plate mills, it never really caught up to the demand that was fostered with a profound knowledge of the state of the world by Carnegie and his associates. But up to the time of the discovery of the Mesaba range in the early '90's the steel men were concerning themselves with turning out and selling the finished product rather than with the sources of supply. These latter appear to have been taken for granted. So that it transpired when the Merritts, Chases, David T. Adams and the other men who explored the Mesaba range came upon the certain knowledge that they had found an enormous ore deposit, the steel world was not disturbed in proportion to the importance of the discovery. Duluth was shaken to the depth of its foundations in the rock; Pittsburg paid no attention. During a period of two years after the discovery of what the explorers were convinced was merchantable ore the furnace men held aloof from the range. The men who had the money to develop the mines did not manifest any keen anxiety to help the prospectors realize their dreams of wealth. And some of the explorers were afraid to tell of the extent of their discoveries, even when it had been shown by Capt. Barrows, in his trials made at the Shenango furnace that the Mesaba ore could be successfully treated. D. T. Adams said to the writer the other day:

"We were actually afraid that we had found too much ore; that the vast extent of the deposits that are being found would so cheapen iron ore that it would lose its commercial value. But I don't think that any one of us stopped working on that account and we were all certain that the ore was merchantable."

With the assurance that mines only need be discovered to be sold, exploration was carried on at a rate that very soon made the range limitations well known. Companies and individuals engaged in the exploration for no great amount of capital was necessary. At various periods representatives of large interests were ready to buy for the big companies. If a man found a deposit worth while it was certain to bring him from two and a half to five cents per ton of ore for discovery alone. A deposit worth while would be pretty certain to show up a million tons and fifty thousand dollars was the price paid. With this sort of stimulus exploration did not halt and a very large percentage of the total deposit on the range, of what is now held to be merchantable ore was located within the first few years—though the fact that the resources of the deposit are not exhausted has been proved during the past few months, D. T. Adams having located an ore body containing perhaps twenty million tons and M. C. Fay one of five million tons this fall.

* * *

Carnegie, the heart and soul of steel enterprise in those days, is said to have been adverse to going into the Minnesota range. He was interested by Henry W. Oliver with whom he was associated and who came into control of a big group of mines on the Mesaba.

Oliver was an enthusiast. Whatever he went into he went into vigorously. When he concluded that the Mesaba was one of the great ore fields of the world, he proceeded to convince the Scotchman of the fact. Carnegie would not listen. He was fairly beset by Oliver. When he did get in he did not stand for half measures. His advent is more important now than it was then for it ultimately had a great deal to do with the consolidation of the interests that went to make up the United States Steel corporation. There was then plenty of competition in the buying of mines, in the working of mines and in the manipulation of the product. All of this is financial and industrial history. But the contending interests did not help the mining industry. The market was unstable. Carnegie was making millions at the rate that staggered the world and threatened disaster to those who were opposed to him. His general attitude was that the sources of supply would take care of themselves and that there was money enough to be had by manufacturing and selling the steel.

"Oliver is an enthusiast," said the cannie Scotchman, who could be as enthusiastic as ever a man that lived, when it was a matter of making a trade. But the enthusiasm of Oliver was infectious. Moreover he had been tremendously successful with his own steel company and in his operations on the older ranges—a success which he was in a fair way to duplicate on the Mesaba. The cables were burned with messages to Carnegie and he capitulated. When he came in, he came in as a great factor. He bought right and left, through and with Oliver.

The advent of the big interests had brought about vast improvements in the methods of mining and transportation. Capt. Sellwood had invented the milling process of mining, whereby the ore was taken out from beneath the deposit, and loaded directly into cars by gravity. The stripping process had been put into use in the great deposits lying close to the surface, where the earthy covering could be taken off and the cars run into the open pit. Specially constructed ore cars were put on the Iron Range and Missabe roads and the grade permitted the loaded cars to be run down hill practically all of the distance to the tops of the great docks, where it was loaded into ships again by gravity and at a speed which minimized the loss of time—an essential consideration with the short working season. The production of the ranges ran into the tens of millions in the nineties and still the demand for the ore was not caught up with.

* * *

The contending interests did not make for the best conditions on the range. There was too much friction in the feverish activity of the operating corporations to permit of the best results being obtained. The rivalry of the big concerns which had come into possession of large interests did not help the independent mine owner and operator. There was an irregularity in the production that made the markets variable. Carnegie was not at peace with the industrial world. He was at open war with some of the biggest steel makers and was threatening to build competing mills. The range had been pretty fully explored and opened up to a large extent and it was apparent to the big men of broad judgment that the assemblage of the contending interests into a body that might be directed by a combined and reciprocal inelligence was necessary to the economical administration of the vast resources that were available.

Peace came to the steel world when in 1901 the United States Steel corporation was formed. Of the processes of its formation the writer knows nothing. There has been much written and printed about it by persons who wove a fabric of more or less fictional reading matter with a woof garnished with figures that ran far into the hundreds of millions. Men who judged of the possibilities of the new born corporation from what they had been told of the prices that were put upon the properties taken in were not slow to declare that the corporation would fall of its own weight; that it would lack the cohesive qualities necessary to the success of a great corporate institution. They did not know the resources of men of brains nor appreciate the practical homogeneity of the interests assembled. Putting aside the attractions of the magnitude of the enterprise that held the attention of the world and going to the purposes of the corporation it may be said that it was, after all, but the unifying of a number of concerns engaged in practically the same

STEEL CORPORATION and Achievements

usiness. The intelligence that was being sed in devising means for successfully com- eting with other ore-producing, transport- g and manufacturing interests was, by the ganization of the new company, freed for e task of doing away with friction in the orking of those interests.

* * *

And the most important aspect of the new rporation so far as Minnesota and the on range was concerned was that pre- ed by the assurance that the United tes Steel corporation was big enough in domination of the iron and steel world to er upon a carefully worked out scheme the conservation of the resources of the nge. These resources would have been sted by the struggle that had been going to get the ore out of the ground and get to any sort of a market. The steel cor- ation did not build for today or tomor- w. It was practically the master of the oducing, transporting and manufacturing ements in the production of steel. Its ecutives and agents knew very nearly the ount of ore in sight. It knew approxi- ately the capacity of the world to absorb el. Its immediate business was to in- ease steel consumption and conserve ore el for those purposes of construction hich had been, hitherto, supplied by the mbermen. it made provision to show the ilders that steel was more economical an lumber.

"If the Steel corporation had showed the me disposition as the lumbermen to get all could out of the market," said a man who s very closely observed the proceedings the corporation, to the writer, "the prog- ss made by the United States in increasing permanent evidences of wealth during e past five years would have been insig- icant. I know of no better proof of the neficent influence of this corporation than is exhibited in the business methods it fol- wed in cheapening steel for the use of the er—and that in the face of the fact that might make its own price for its product. do not mean that steel is literally cheaper n it was, but that its price has been kept within the limit marked for its eco- ic use. And this is in contrast with the icy of the lumbermen to take all the toll traffic would bear."

Engineers, architects and practical build- were put to work to design steel build- material that would fit all uses. Now architect does not make his design to steel manufacturer to have it produced great expense by special machinery but rather, provided with forms that are made great quantities at a minimum of expen- ure.

n this matter of increasing the demand structural material the Steel corporation well its great efficiency. Of course that apparently remote from its work on the ge but it was closely related to its rk. The system that was directed to in- sing the steel market for products de- ned on new standards and for new uses rked here in other directions.

The advice given by an ancient and hon- ble practitioner of medicine to the indi- ual man: "Trust in God and keep your wels open," was made to apply to the nagers of the Steel corporation in this nonition: "Pay a just price for every- g and keep out of politics."

s a result of a steady adherence to the of this behest the United States Steel poration is in a fine state of physical lth and its prosperity is made part and el of the prosperity of the community hich it operates in Minnesota.

went immediately about the work of mously increasing the production and porting capacity of its properties. But as not done without regard to the fu- . The continued success of the corpora- must depend upon the preservation of ore reserves. In the ore of the Mesaba re there are many grades and varieties e technicalities descriptive of these need be here set down. One grade of ore is complement of another. The exhaus- of one grade might put its owner at the cy of another company which could e its own price for the ore that could be worked profitably in combination its products. Under the old striving reserves were being decimated with- regard to the future and ore was being for purposes which did not take out all its values. Chemists and engineers, mining captains and captains of transportation worked together in adjusting the operation of the corporation to the husbanding of all its resources, whether in ore, power or con- sumption. Certain mines that may be more profitably worked when other deposits that are in more immediate demand are exhaust- ed were allowed to lie and the men were moved into fields where they were more use- ful. The extent of the deposit was closely investigated, exploration promoted and ex- tensive buying for future use was gone into. The amount of ore in sight was approxi- mately fixed and the ultimate possibilities of the range worked out. Ore that was not regarded as merchantable was experimented with and vast quantities of it brought to the uses of the iron master. It is in this enor- mous increase in the ore assets of the range that the Steel corporation has been signally efficient.

From the first there was an increase in the output of the properties operated by the companies. It was as though every man as- sociated in this vast and complex machine had felt a sudden inspiration to put more en- ergy into his work. As a matter of fact the work of the individual was lightened by the intelligent conservation of energy. Un- heard of records were made in the taking out of ore. Five thousand tons of ore taken out of a single mine in a day was at first a start- ling performance, now it goes unmarked. The year after the formation of the United States Steel corporation the Mesaba range produced about 12,000,000 tons of ore. This year the output will be about 25,000,000 tons —and still there is no room for doubt of the fact that the range is richer in potential wealth than it was five years ago. The para- doxical statement may be explained by ref- erence to the Steel corporation's method of providing for reserves.

The price paid for ore in new discoveries is higher than before the advent of the Steel corporation and higher bonuses are paid on leases. The policy of the big company to- ward the independent shipper has been that of fostering interest. The price paid is just, so fairly just that a complaint about the price or the charges made for rail or lake transportation is unheard of. Comparative prices would mean nothing to the average reader and they are not quoted.

The face of the earth on the Mesaba range bears some frightful scars. The open pit mining which required the stripping off of the surface down to the ore bed; the milling process which leaves immense chasms from which the ore has been taken out through railroad; all the impedimenta of a vast and ceaseless activity which in its every manifes- tation changes the aspect of nature—all these have brought about a condition almost inconceivable to one who saw the Mesaba range a dozen years or so ago, when it was a wooded wilderness with scarcely an evi- dence of the presence of man. The woods have disappeared from the vicinity of the active workings. Towns have sprung up in the wilderness. The silence of the ages has been hunted hence by the screaming of the steam whistle, the groaning of giant steam shovels, the snorting of innumerable loco- motives and the incessant discharges of dy- namite in the blasting out of the ores in the mines—discharges that are echoed the length and breadth of the range by the rat- tling fire of the explorers firing charges in drill holes. The extent of the work that is going on rather overcomes one's ideas of measurement and utterly dissipates the pro- found respect in which the average man is apt to hold that unit of weight, the ton. You must talk of millions of tons on the range to get a hearing. I asked an operator what he thought might be the extent of a new mine that had been recently found.

"Oh, it is certain to be a small affair," he said. "Not more than 4,000,000 or 5,000,000 tons, I should judge."

Capt. Sellwood was standing on a heap of debris that formed an artificial mountain be- side a ragged chasm with a companion when the latter asked how far the iron formation reached.

"See those buildings over yonder?" said the captain, pointing to a group of houses two miles and a half away.

"Yes."

"Well, everything between here and there is iron ore."

The intervening space was gashed and furrowed as though torn up by some madly propelled, gigantic plow. In the furrows, regularly laid rails made paths for locomo- tives and cars and permitted steam shovels —iron monsters with far-reaching, powerful, prehensile arms—to reach out and tear from its bed the red ore that had lain for ages waiting to serve the uses of man. Ceaseless activity is everywhere, but the least obtru- sive of the evidences of life in the scene is man, whose hand guides the massive ma- chines his genius has created. Not but that there are plenty of men engaged in the work, for they are numerous enough. But they are lost sight of in the immensity of the opera- tions they direct. A decent crowd of men might readily stow themselves away about one of the ponderous steam shovels without being conspicuously noticeable.

Machinery has been created capable of do- ing incredible things that were once by way of being done by hand. If science and the mechanic arts had not been compelled to the service of the Steel corporation, the profitable exploitation of the ore beds of Minnesota would be impossible. Nothing is left to man- ual labor but the control of the machines. And the vastness of the machine equipment of the Oliver Iron Mining company—which is the mining arm of the Steel corporation—is but weakly estimated by the contemplation of the fact that there are in the employ of the company upward of 12,000 men.

* * *

To keep these men employed at all seasons of the year in occupations profitable to the company and to the individuals was a prob- lem to be met by the Steel corporation. Like every other problem set before its executives, it has been solved and so effectually solved that there is no better paid, more prosperous or contented mining population in the world than that which finds employment in the iron mines of Minnesota.

The most convincing evidence of the fact that the United States Steel corporation is something more than a mere money-getting machine; that it accepts those responsibilities that fall to the conscientious individual em- ployer of labor, is the condition of the people it carries on its payroll and those dependent on them. Nowhere in the Steel corporation's sphere of influence on the range is there any of that sordid poverty, ignorance and vice which we have been led to believe is inevit- able in a mining country. The shocking con- ditions that have been depicted as normal in the coal countries of the East and of Europe, the tales of vice and misery that are told of the mining centers, where iron is the quest of capital elsewhere in the United States and abroad, have no counterpart here on the range. Here there are none of the evidences of sordid poverty. Child labor is absolutely unknown. The Steel corporation makes no pretense at carrying on a moral or education- al propaganda. It interferes not at all with the liberty of the individual, but it knows that, as a business proposition, the best re- sults can only be got from a well-paid, well- nourished, cleanly people, and it encourages its people indirectly in the cultivation of those virtues which are not easily practicable when poverty is the portion of the man who toils.

The most elaborate and painstaking effort is made to house the people, not only decently, but comfortably. From this the cor- poration takes no direct profit. In the in- crease of self-respect and the development of the civic and social virtues among its people it profits greatly.

* * *

The term "model city" is not calculated to appeal to the looker-on, who judges of the possibilities of the model city from results ob- tained in communal enterprises. The model city of today can come only from individual effort wisely inspired. It can scarcely be realized by the adoption of the theories of the public ownership propagandists. The public ownership of utilities does not mean the mod- el city by any means. Glasgow, Scotland, which has gone a long way on the road to municipal ownership of the public utilities, is far from being a model city, socially, morally, or so far as it appeals to the eye. The model city is one in which every family has a stake in the soil as well as in the household gear. There is no one element that contributes to the making of the model city so much as a self-respecting people, and there is nothing that will make for the begetting of self-re- spect as will the sense of ownership. This condition of the human mind was considered by the executives of the Steel corporation in their latest and most formal attempt to im- prove the condition of their employes. Out of the consideration given to the subject grew the plan of building Coleraine, a new town on the Western Mesaba, in which there will be no landlords, which will be wholly self-gov- erning, and which is laid out upon a scale that cannot but make it at once good to look at and to live in. And it is simply a part of a development which proves the general effi- ciency of the corporation.

* * *

It has been known for years that there were vast deposits of ore on the Western Me- saba, but it had been thought that it was not a merchantable commodity, because of its mixture with silica. It would require washing to permit of its concentration. Two years and a half ago the chiefs of the operating companies went into the western range and made a close investigation of the deposits. They concluded that the ore, which could not be successfully handled by individual owners was merchantable. That decision being ar- rived at there was no hesitancy about develop- ing the mines and the railroad was at once extended into the new development and the town of Coleraine located at the end of the extension. About the new town are located several mines of great promise and develop- ment and which required a large number of laborers for their operation.

For some time the corporation executives had been contemplating the establishment of a model mining community and here was the opportunity. It was argued that if the wife of a miner were given the opportunity to live on her own bit of land, in a house that might easily be paid for, the miner would soon be living in just those surroundings. Out of the desire to give its employes this chance to get a stake in the soil and live under better con- ditions than usually obtain, and to thereby further its own object of securing labor that might be prosperous and contented, came Col- eraine, the model city of the range.

In the heart of the new mining district lies Trout lake, a beautiful body of water several miles long. The Steel corporation bought two miles of frontage along the lake. The site is admirably located for a city of consid- erable size. The water supply is unfailing and pure; the drainage is excellent naturally and, supplemented by sewerage, will leave nothing to be desired. This site was laid out on ideal lines for the city beautiful. Parks, public squares and parkways were provided. Wide avenues and streets were platted and on each side of a business section two plats for residences were located. The residence lots were made with a frontage of 75 feet and a depth of 125 feet. Plenty of elbow room was regarded as one of the essentials of fami- ly comfort.

The site for a city being provided, the peo- ple were invited to inhabit it. Within easy distance of Coleraine there are several mines whose employes might reside in the city. To these the lots were offered, as well as to out- siders who might wish to engage in business. The company put a price on the lots that was proportioned to the original investment and agreed to turn over to the authorities, when constituted, whatever money was paid in ex- cess of the actual cost of the land.

There was no assertion of any right on the part of the Steel corporation to dictate to the people and there was but one qualifying clause in the contract for the deed, which pro- vided for payments for the lots on easy terms, proportioned to the earning capacity of the buyer. The qualification required the pur- chaser to relinquish his right to sell liquor on the lot.

This reservation was not made by the cor- poration with a view to making a prohibition town. The company is desirous of promot- ing temperance habits among its people, but does not interfere with what the individual may conceive to be his private rights. Ex- perience in the mining towns has taught the officers of the mining company that the sa- loon is a particular menace when it is badly conducted. In some of the range towns there is a sharp competition in the saloon business. The men engaged in the business have to bid for the trade. The consequence is the all- night saloon, whiskey that is deadly, and un- restricted sale.

There may be saloons in Coleraine when there is a demand for them, but their number will be restricted by the form of the land con- tract and the men who run them will be curbed by fixed limitations altogether aside from the legal restrictions.

The government of the community will be according to the will of the people. The Steel corporation never interferes in politics and it will make no exception to this rule in Coleraine. The only function of the corpora- tion regarding the town will be that of a site owner, selling lots at the lowest cost, without profit, and providing model conditions for city life.

The proposition has appealed to the mine people. The population at the mines is mixed, Scandinavians dominating, and they are a thrifty lot. The place is settling rapid- ly; sixty lots have been sold for business purposes, and when the people are ready to organize a city government there will be a fund on hand for the conduct of its business.

Coleraine is simply a model city started on a business basis and free from the handicaps that are inseparable from experiments that have a socialistic or communistic basis. It is already a success and it is likely to be the forerunner of other like communities.

* * *

The Steel corporation does not hold that it has discharged its entire obligation to society by paying its just share of taxes—this is shown in the Coleraine establishment and in its general policy in taking thought for the welfare of its employes. But its contribution to the expenses of the state and local govern- ment assumes magnificent proportions.

The total contributions of the Steel corpor- ation, through its operating companies, to the public exchequer in the state of Minnesota this year will be approximately $2,750,000, $1,750,000 in general taxes and $1,000,000 in the tax on the gross earnings of its railroads. In the distribution of the money paid in by the corporations of a million and a quarter will find its way into the local treasuries of the communities, on the range, giving them tremendous resources to draw upon for the construction and maintenance of public in- stitutions and works. This means municipal opulence in a country that had no population whatever 15 years ago and which is now dot- ted with cities and towns in which the educa- tional and other public equipment is of the highest character. St. Louis county will bene- fit directly to the extent of nearly $200,000 in its tax receipts and the balance goes into the state treasury for general purposes.

The railroad companies which are the transportation branches of the United States Steel corporation and which will pay a mil- lion dollars on their gross earnings contrib- ute one-fifth of the gross amount paid as gross earnings tax by the railroads of the state. The money is paid without cavil or protest and this in spite of the fact that the earnings upon which the tax is paid do not come out of the tillers of the soil or the merchant class, altogether, as in the case of the other rail- roads. These earnings are largely contribut- ed by the United States Steel corporation for the carriage of the commodity which it cre- ates by the operation of its mining industry. And the extent to which the development of the country in which the auxiliary companies of the United States Steel corporation exer- cise their activities is indicated by the re- markable fact that while the Duluth & Iron Range and the Duluth, Missabe & Northern railroads own and operate but one-tenth of the railroad mileage of the state those two roads pay one-fifth of the sum paid as a tax on gross earnings.

* * *

These things the United States Steel cor- poration has accomplished:

It has developed the resources of the iron ranges.

It has increased the efficiency and compen- sation of labor.

It has enormously expanded the steel and iron market and has made that trade stable.

It has found means for the utilization of vast quantities of ore that was thought to be unmerchantable and has thereby added im- mensely to the riches of the Mesaba range.

It has added to the health and comfort of 40,000 citizens of Minnesota directly, and in- directly of every individual of the state, and it carries a large share of the burden of taxa- tion for the whole state.

It has demonstrated that a great corpora- tion can be conducted on such lines that its influence in all things beneficent and in nothing inimical to the interests of the people among whom it operates. It presents to the people of Minnesota in particular, and of the country in general, an object lesson which should go far in pointing a line of business policy that, if generally adopted, would make all great corporations servants of the people in proportion to the strength they derive from the resources they control.

DEFECTIVE PAGE

NORTHERN MINNESOTA FURNISHES

Some day a historian with a mind for facts and statistics, and a novelist with an inspired pen, will grasp the opportunity awaiting them in the great North Country of Minnesota, and give to the world a history of the birth and growth of the mining industry of a nation, and a novel that will rank among the classics of American literature.

The material for the history lies in the pages of statistics scattered through countless reports of the mining companies, and in the records of the growth of the marvelous little cities that have sprung up like mushrooms around the shafts and pits of the mines.

The material for the novel lies in the lives of the men whose names are connected with the growth of the industry, from the explorer who went out into the wilds of an unknown country with all his worldly possessions in a pack on his back, determined to stake all on the chance of finding a fortune under the trackless woods of the iron country, to the keen, progressive capitalists who financed the work of opening this great region to the world, by the agency of the railroads.

It is a wonderful country, this great North Land—a land of vast resources, vast possibilities, and vast difficulties, were made of stern stuff. They were the kind of men who do things, and the stories of their lives are worthy of the pen of a Bret Harte.

It was not for any love of country or for glory that these men strapped their packs on their backs, and set their faces to the North. Iron was what they sought—iron and all that it meant to them—fortune, ease, comfort and luxury. Some of them found it. They are living in Duluth or on the ranges today. A few of them have taken their wealth elsewhere, but they are not many. The lure of the North country is too strong for such men. Their heirs may seek other climes to enjoy the luxuries which their wealth offers them, but the men who tramped the woods of Northern Minnesota with a compass and packsack are never happy for long, away from the hardy climate of the North. Many a man living in Duluth today who counts his wealth by the hundreds of thousands, will confess that the happiest days of his life were those he spent fighting to wrest the secret of a fortune from the heart of the wilderness.

It was no child's game, this struggle for fortune in the early days. The hardships of the wilderness were frequently but the first round of the battle. There followed months and perhaps years of legal warfare, or of struggles against "hard times" when men held to their claims in face of actual want and starvation, rather than let slip for a paltry sum what they knew to be worth millions. Many lost out in this struggle, and the fortunate purchasers are enjoying the fruits of their labors. Others held on like grim death and can look back to a good fight well won.

Such is the material offered the novelist, and who can say that it is not equal to the days of '49 in California, or the later material offered in the Klondike gold fields.

Today the results of their efforts are seen in the great ore docks at Duluth, Superior and Two Harbors, in the three great systems of railroads which tap the iron country, in the countless shaft houses which dot the surface of the ranges, in the great gaping pits which scar the land, and in the prosperous towns and cities which are springing up like magic.

The followers of these pioneers have taken 125,000,000 tons of iron ore from beneath the surface of the ground, and countless millions of tons are left.

Prospects of Steel Plant.

For years the people of Duluth have watched with envious eyes the great freighters carrying their loads of ore to the lower lake ports to add to the greatness of Pittsburg and other great centers of population in the East. The raw material furnished by the mines of Northern Minnesota went 1,000 miles East to come back as steel rails or manufactured iron for the great country to the West, and Eastern cities reaped the benefits of its manufacture.

Duluth people have felt that the manufactured products of iron which were shipped West of this city would easily be enough in themselves to call for a great steel plant in Duluth. They would have been content to see the iron products used in the East manufactured there, if all that was required for the West were manufactured in Duluth.

And now there seems to be every prospect that their hopes will be realized. The Steel corporation officials at the Head of the Lakes have made the Eastern heads of the great company see the light, and have demonstrated to them that the time is ripe for the establishment of such a plant in Duluth.

The "boomers" of the early days of the mining craze in Duluth had their dreams. They saw a great iron center springing up at the head of Lake Superior, which would one day eclipse Pittsburg and perhaps Chicago in the volume of its trade and manufacturing industries. They made the mistake of believing that it would come in a year or perhaps five years. Their dreams were not so visionary after all, but cities are not built in a night. Boom towns may spring up beside a railroad in a few days, but a great city cannot be built in a month or a year, or ten years. Duluth has benefited hugely from the mining industry. It has been largely responsible for making the city what it is, but the benefit derived in he past has not been a tithe of what the future holds in store for the city, once the manufacture of a country's supply of iron ore is begun here. The manufacture of the product will take thousands of men, where the mere mining and shipping takes hundreds.

Birth of Industry.

The shipping of ore from the Lake Superior district dates back to 1850. In that year the first shipment, consisting of about ten tons of ore, was taken from the Northern peninsula of Michigan and conveyed through the St. Mary's rapids on a small steamer.

In the same year J. G. Norwood, a scientist, gave out the information that he had discovered traces of iron ore on the shore of Gunflint lake, which is on the edge of the Mesaba range. Little attention was paid to this, and as a matter of fact the ore discovered by Mr. Norwood has never yet been utilized. It gave little hint of the real wealth hidden under the pine forests of Minnesota.

It was not until 1864-5 that ore in paying quantities and of high grade was located. H. H. Eames, an official geologist, located what later became the Soudan mine, one of the Oliver group. This discovery is said to have been what first interested Charlemagne Tower, one of the pioneers of the range, and now ambassador to Germany. He decided to investigate, but it was not until 1875 that he sent a geologist, Prof. A. H. Chester of Hamilton college, to investigate. One of the men who accompanied him, fortunately, was George H. Stuntz, one of the pioneers of Duluth, who died but a few years ago. The geologist was not very favorably impressed with the situation, but at the urgent request of Mr. Stuntz he went over to the Vermilion range and made an examination of some lands pointed out by Mr. Stuntz. The result was a favorable report to his employer, and Mr. Tower undertook to organize the old Minnesota Iron company. Mr. Tower and associates put $4,000,000 into the venture, and the Duluth & Iron Range road was built, the state aiding with a grant of swamp lands.

Vermilion Range Opened.

In 1884 the first shipments of ore were made from the Vermilion range, and about 62,000 tons were brought down in that year.

The district tapped by the road proved one of vast richness. The Soudan mine was but one of six deposits of great value located within one square mile of the Ely district. The Chandler mine was discovered in 1883, and it was followed by the Pioneer, Zenith and Sibley mines. These mines with the Soudan, constitute the Vermilion group, and it is doubtful if any place in the world there is a richer square mile of ground than that in the vicinity of Ely.

The wealth shown up by Mr. Tower and his associates attracted the attention of the great capitalists of the country. Their holdings were disposed of at an enormous profit to a group of Chicago and Cleveland men who later sold them to the Federal Steel company. They ultimately passed into the hands of the United States Steel corporation, every person who touched them taking a fortune from them, both in earnings and in the increased price secured.

Greater Finds Follow

But the finding of the Vermilion range and its development was but a hint of what was to come.

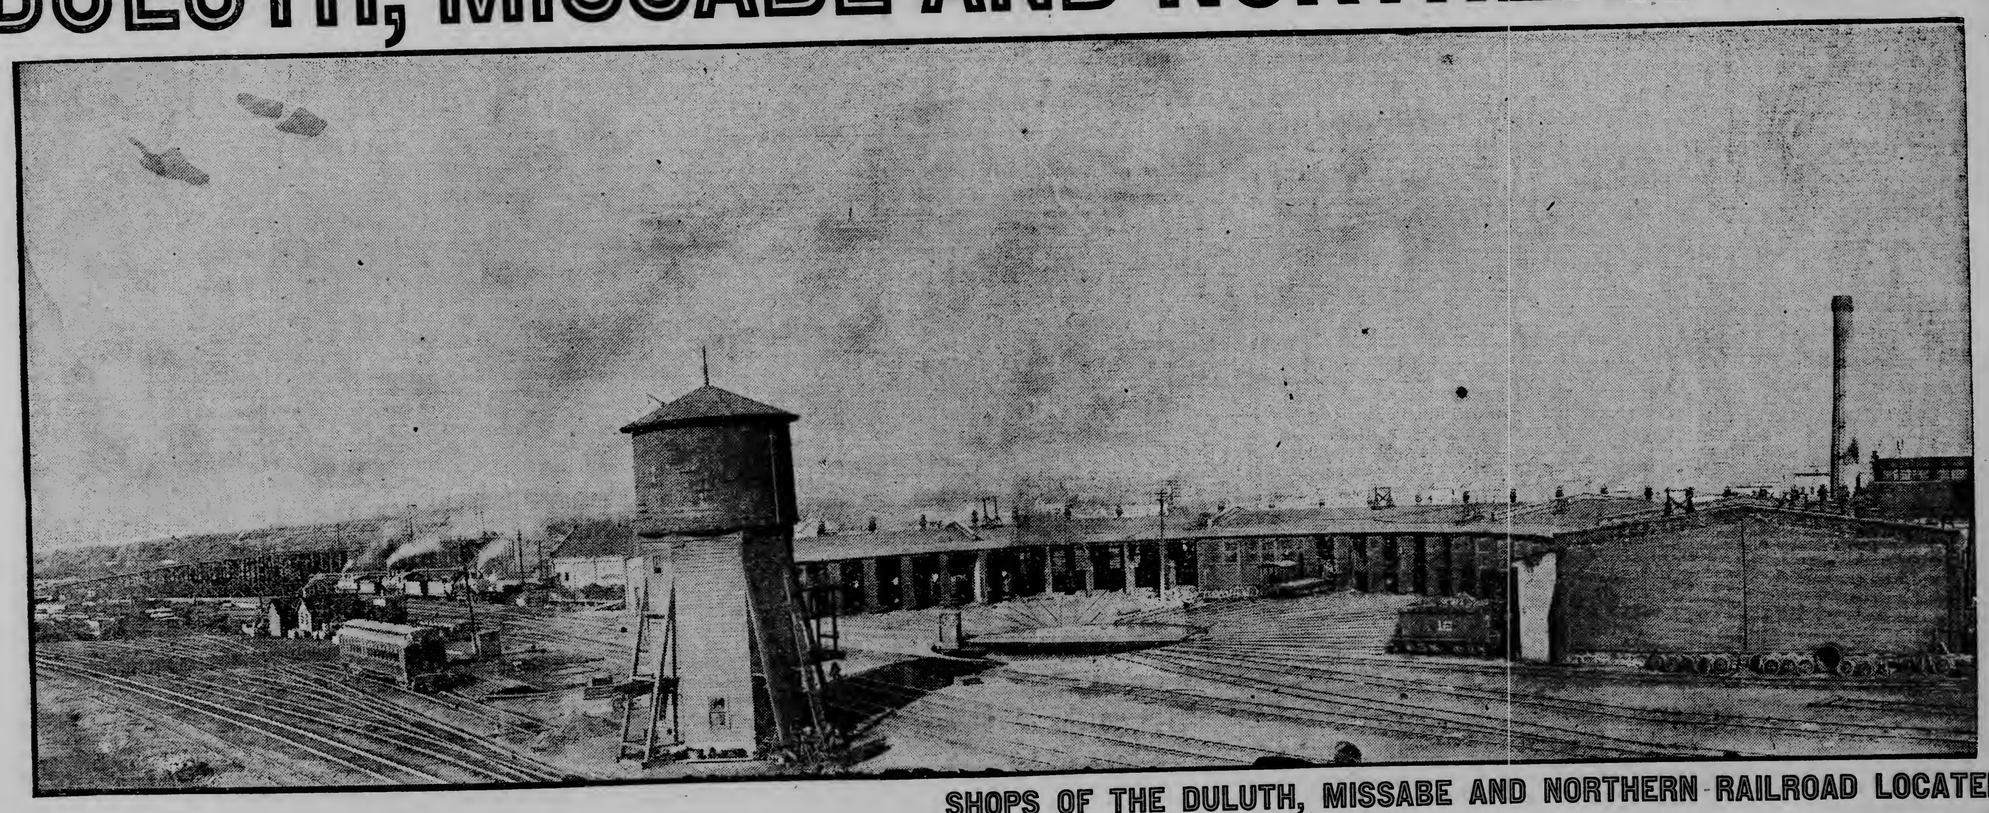
Meanwhile explorers had been working westward from the Vermilion range. Such men as the Merritts and David T. Adams, and many other woodsmen and explorers were convinced that but a small proportion of the wealth of the Northern wilderness had been discovered. In the face of tremendous difficulties they continued their task of locating the wealth contained beneath the surface, and of proving to the world the value of their claims.

It was not until 1890 that the real boom in the iron industry took place. Gradually it had been spread about that the iron deposits of the Northern woods had been merely scratched, and then suddenly in 1890 the Mesaba range burst forth into full bloom. Duluth was iron crazy. The lure of sudden wealth turned the hardest heads, and all kinds of prospects were staked out and floated. The hotels were crowded day and night with speculators, and men made paper fortunes in a few hours or minutes.

Mining Craze in Duluth.

In the first flush of the craze nothing was too wild or too impractical to attract the greedy investors. Even the most conservative men were caught by the craze and invested their savings in all kinds of wild schemes. The mere mention of iron was sufficient to throw a rosy halo about the most suspicious scheme.

The woods were full of prospectors for the precious metal, and it is difficult to ascertain who really found the first beds of merchantable ore.



Along in the middle '80's Capt. Griffith, a mining man from St. Paul, located what was later the Diamond mine.

David T. Adams began his explorations on the Mesaba in 1886. He found many evidences of mineral wealth, but for many years his discoveries were of minor importance.

First Big Discoveries.

In 1890 came the first big discoveries. Capt. Nichols, employed by the Merritts, was working in the vicinity of the present town of Mountain Iron, when he located low grade ore in paying quantities, and his discovery was developed into the great Mountain Iron mine. Almost at the same time the present Biwabik mine was located by Capt. Kehoe, and the Cincinnati by D. T. Adams. Kehoe and Adams made their discoveries on the same day, and it is told that Capt. Kehoe was on his way to tell Mr. Adams

DULUTH, MISSABE AND NORTHERN ROAD

SHOPS OF THE DULUTH, MISSABE AND NORTHERN RAILROAD LOCATED

THE Duluth, Missabe & Northern Railway company brought to Duluth during the past year close to 12,000,000 tons of iron ore. It is probable that for its mileage, it is the heaviest freight traffic road in the world. For the season's work last year it moved enough ore alone to fill above 230,000 cars, which would make a train long enough to cover its whole trackage several times over.

The position of the Missabe road is unique among railroads of the country by reason of the immense tonnage of freight produced in the country in which it operates. Built primarily for the purpose of bringing the ore down from the Mesaba range to the docks, it has been extended only upon lines justified by the opening up of new mines and its equipment has been added to proportionately. There has been nothing speculative about it or its development. It was not built with a view of supplying transportation for future development, but found immediate demand for its equipment as soon as it was installed. The one thing that the road has had to reckon with has been to adjust its administration that it would have the means of handling the freight and had increased in such huge proportions from year to year. And the operation of the railroad has not been the most important concern of its chiefs, for a part of its terminal equipment are the great Missabe ore docks—the largest in the world, with storage capacity for 326,000 tons or ore.

The rapidity with which the development of the Missabe equipment has been forced to its present tremendous capacity may be indicated by the fact that a couple of years ago it was said that there was a prospect that within a year or two the road would be able to take care of 6,000,000 tons of ore. That same season that record was reached and in 1905 it was able to handle 8,000,000 tons. Last year the total tonnage moved reached the immense total of 11,600,000 tons and now there is none so daring as to put a limit on the possibilities of further development. It can only be said that it will certainly be proportionate to the demand made on the resources of the railroad and its docks by the development of the new mines that are being opened up in the country into which the line has been extended in the past year and which contains magnificent potentialities in mines of known and unknown magnitude.

Road's History Opens With That of Range

The Duluth, Missabe & Northern road came into being during the first year of shipping operations on the Mesaba range. The Merritts had found ore and they wanted to get it to market. There was no railroad to permit of its transportation to Duluth and they built the first installment of the Missabe. That was fourteen years ago, and the first shipment was that famous 4,000 tons which was taken down to the Allouez Bay docks and shipped East—and which came very near putting the range out of business temporarily because the iron masters did not know how to handle the ore. The difficulty which overtook the Merritts in their extensive operations did not interfere with the development of the road in other hands. The present Missabe ore docks were started to handle ore from the railroad and the entire plant fell into the hands of the Rockefeller interests when John D. Rockefeller came into the field. Since that time there has been no halt made in the progressive development of the road in its extension, equipment and terminal docks.

The Rockefeller interests, which were represented in the handling of the properties by W. J. Olcott—who was one of the first to recognize the magnificent possibilities of the range as a feeder to the transportation company—found that the way to make the property pay was to develop the mines as fast as possible. But, though the mining interests of the connection were extensive—the owners were more ambitious of carrying ore than of mining it. Closely allied to the Missabe was the Bessemer Steamship company, then controlled by Rockefeller, and it was with a view to the development of the uttermost of this transportation system that the Consolidated Mines company turned over its mining interests and left its representatives free to devote their time to the railroad administration. In 1900 the road with its docks and equipment passed under the control of the United States Steel corporation and became one of the operating companies of that corporation.

Vast Sums Spent on Dock Building

Since the first ore dock of the Missabe was built in 1893 an immense amount of money has been spent upon dock construction and equipment. Always the consideration in view by the engineers and managers of the company was the installation of equipment that would save time in the handling of cars

THE IRON ORE SUPPLY FOR A NATION

that he had finally struck ore beyond all doubt, when he met the latter coming with the message that he had also located a bed of mineral.

Meanwhile Capt. Hibbing had been at work, and in 1892 he proved beyond all question that there were great beds of ore in the vicinity of the present town of Hibbing, which was named for him.

All of these early explorations were made with the most primitive equipment. Wherever surface indications were discovered, test pits were sunk by means of a windlass and a bucket, and as soon as taconite was struck the explorations had to cease, as there were no drills available to pierce this formation, under which many of the most valuable finds have been located.

Development of Mesaba.

Some method of reaching these great beds of ore had to be found. It was impossible to market the wealth that had been discovered without a railroad, and the plans for the building of the Duluth, Missabe & Northern railroad were launched. The story of building this road by the Merritts, the long struggle for its control, and its final passing into the hands of the Rockefeller interests is a romance in itself. The main facts of this great struggle are known to the majority of Duluthians, but the story is too lengthy to be recounted here.

With the construction of the Duluth, Missabe & Northern road the real development of the Mesaba range began. In 1892 the first shipments were made, 4,245 tons of ore being sent to Duluth from the Mountain Iron mine. The shipments jumped to 613,620 tons in 1893 in spite of the panic, and the following year saw them tripled once more. Year by year they have grown in leaps and bounds, only two years showing a decrease over the preceding years. These were the seasons of 1903 and 1904, when there was a slight falling off from the heavy shipments of 1902.

The Oliver Company

Not all of the offices of the Wolvin building, Duluth, are lettered with the name, the Oliver Iron Mining company, but when you get right down to it, the concern is responsible for almost all of the industry on the seven floors of that large structure.

The Oliver Iron Mining company produces more ore from the Minnesota iron ranges than does any other concern, and it is mostly the steamers of the Pittsburg Steamship company, which offices on the seventh floor, that take the ore to market, and it is altogether the cars and engines of the Duluth, Missabe & Northern and Duluth & Iron Range roads, located on the fourth and fifth floors, that bring the ore from the mines to the docks.

The Pittsburg steamers sometimes haul ore that it not owned by the Oliver Iron Mining company and the two railroads mentioned haul much ore and other things not owned by the Oliver company, but when one considers that the Oliver company produces something more than 62 per cent of the iron mined in this state, it is not overstepping the bounds of conservatism to state that it is pretty much the Oliver Iron Mining company that makes the Minnesota ranges the industrious localities they are and revolves the engine wheels on lake and land in this part of the country.

The mining arm of one of the most perfect organizations in the world—the United States Steel corporation—the work of the Oliver company has been so perfected and pushed that more dirt has been moved on our own Mesaba range than will be turned in digging the entire Panama canal.

Perfection of organization is a feature of any enterprise the United States Steel corporation is interested in, and it is particularly significant in the organization of the Oliver company, at the head of which is Thomas F. Cole, whose good judgment and sound business sense have made him well known as a factor in the copper mining world as well as that which pertains only to iron.

Indeed, the director generals of the United States Steel corporation watch as closely the organization of some auxiliary concern as they do that of their own immediate executive board.

But the Oliver company is not so much auxiliary. It is largely principal, for the iron it mines is what makes the United Steel corporation rich. But the men behind the enterprise are not the only ones to reap the rewards, as one may see by visiting any of the towns on the Minnesota ranges. The prosperity of the Oliver Iron Mining company has meant, to a large extent, the prosperity of the ranges, too, for while it takes the most, it gives the most too.

The company mines more ore in Minnesota than any other concern and it therefore contributes more money to the public treasury, in the way of taxes, than all of the other mining interests.

It expects to pay for all it gets and it expects to be paid for all it does, if not in one way in another. That is sound business sense and it has not been noticeable that the Oliver Iron Mining company or any other large successful business was ever operated to advantage by any other system.

So if the Oliver Iron Mining company mines the most ore, it is willing to pay most of the taxes, and if it employs more men it is willing to look after the welfare of a greater number. And it does look after the welfare of the men in more ways than one.

The company scorns the methods of some mining corporations, in that it does not maintain "company stores," where employes are expected to trade and it deals with the individual rather than with a body. The men are well paid—and probably will be so long as the Mesaba range continues to yield such rich returns.

During the ore shipping season of 1906, the Mesaba range in Minnesota produced more ore than all of the mines in the Lake Superior district—and more than half of this enormous quantity of mineral wealth was mined by this well drilled, ably officered arm of the Steel corporation. The Mesaba mines shipped an aggregate amount of 23,792,882 tons last year, the biggest season in the history of the range.

And there is every indication that the present season will eclipse it in every way. Mining men say so, vessel men say so, and everybody in this part of the state says so. This part of the state may not now have as many mortgage-sprinkled farms as others, but there is no denying the wealth of the soil.

The mine shipments have grown steadily every year and now that the Coleraine branch of the Duluth, Missabe & Northern has been completed and permits of the shipment of ore from the mines on the Western Mesaba that are so wonderfully full of promise, the production will be considerably greater.

When the Oliver Iron Mining company first began operations in Minnesota, as much ore had not been shown up nor were the methods of mining as improved. But the Oliver company advanced things for itself. It prospected for more ore and sought out means of securing that which was in sight by easier methods. The open pit process is a comparatively new one and it has been fostered by the Oliver company on the Mesaba. The Mahoning mine at Hibbing, operated by the Oliver people, is the largest open pit mine in the world.

This process of mining has been most successful on the Mesaba range and by it, it is possible to greatly increase the yearly production of a mine. But whether the open pit method is used or the ore is extracted by means of shafts, the Minnesota ore ranges are great producers. No less than eight mines on the Mesaba range shipped more than 1,000,000 tons of ore during the season of 1906.

The working out of the tasks of the Oliver Iron Mining company are worthy of mention. Its engineers have accomplished things which others have declared to be impossible, and there is always that striving to go forward—to perfect things some more which invigorates the work.

The environment is invigorating anyway. The men in charge are vigorous, clever fellows who take good care to select as their subordinates those who will carry out the ideas in a satisfactory manner. And the men employed by the company are the best type of citizens. They must be, or they would not long last in the Oliver order of things.

The general offices of the company are located in this city and this is the port from which more iron ore is shipped than any other on the lakes. All of the officers make their homes in the city—and they like Duluth, as everyone does.

As has been stated, Mr. Cole is president of the company; W. J. Olcott is vice president; Pentecost Mitchell is general manager, and J. H. McLean, assistant general manager.

The Attitude Toward State.

And what of this great corporation which controls such a large percentage of the mines of Minnesota? What is its attitude toward the people of the state, and the attitude of the people of the state toward it?

Its attitude toward the people of the state can best be shown through the medium of dollars and cents. It is turning over to the treasuries of the county and state, something like $2,500,000 a year in taxes. It is by long odds the heaviest taxpayer in the state, and this does not carry with it the usual corollary that it is the heaviest tax dodger in the state. Not once, but several times it has voluntarily added to its assessment, and has never showed a disposition to shirk its fair share of the cost of running the state, county or municipal governments.

The schools of the range towns speak for themselves. They practically owe their existence to the taxes derived from the mines, and no place in the state, nor in the entire country can any better school buildings or equipment be found than in the rough mining towns of the iron ranges, where under ordinary circumstances the schools are usually the most neglected institutions of the municipality.

Attitude Toward Labor.

What is its attitude toward labor? The answer is best found in its record. In spite of the class of common laborers with which it has had to deal, the corporation has had but few and these unimportant strikes. Child labor is an unknown evil in the mining towns, and nowhere is found that sordidness, vice and squalor which are too frequently typical of a great mining country.

Something of the aims of the Steel corporation are to be seen in the new model town of Coleraine, which is being built on the Western Mesaba. There the Steel corporation officials are working out their own plans for a city. The other cities they had to take as they found them, but Coleraine is their city.

The town will not be a mining camp, but an attractive, orderly, well-governed little community. It has a beautiful location on the shore of a pretty little lake, and the hand of man will not be allowed to destroy the natural advantages. The buildings must be substantial, and attractive. The residence and business sections will be separated, and the saloons and gambling houses will not be allowed to monopolize the choice sites. In fact, the city will be as near to a prohibition town as it is possible to make a mining community. Saloons there will be, but they will be strictly limited as to numbers, and ruled with a rod of iron. Pavements, water mains, sewers, lights, and all other adjuncts of a modern city will be found there within a year or two, and the little community will start as a model city, run on strict business principles, without being compelled to go through the early stages of being a rough mining camp.

This shows the attitude of the Steel corporation toward the people dependent upon it. It is not a philanthropic society, but its influence is always found on the side of anything that is for the betterment of the community or of the conditions of the people in it.

Like all great corporations it has been cursed and reviled. Politicians have ranted against its influence on the people of Northern Minnesota. The claim is made that the entire northern half of the state is under the thumb of a giant monopoly, and the people of the southern counties hold the belief that politically at least, the northern counties are ground under the heel of a harsh taskmaster.

These sentiments are properly scoffed at by those in a position to know most of the Steel corporation and its workings. It has its interests to protect, and takes the proper steps to do so, when the occasion demands, but its officers are too busy mining ore to spare the time and effort to build up political machines if their inclinations did turn that way.

Those who know it best know that it is not a colossus standing as a menace to the people of the state, nor is it a philanthropic or charitable society. It is simply a great business run on business principles, and where the men who furnish the brains and energy to run this great machine can throw their influence on the side of justice or even philanthropy, it is done. The same officers have also always been found on the side of the state of Minnesota in any efforts made by its citizens to develop the industries and resources, and the best evidence of that fact is found in the steel plant now contemplated for this city.

HAULS MORE THAN 11,600,000 TONS ORE

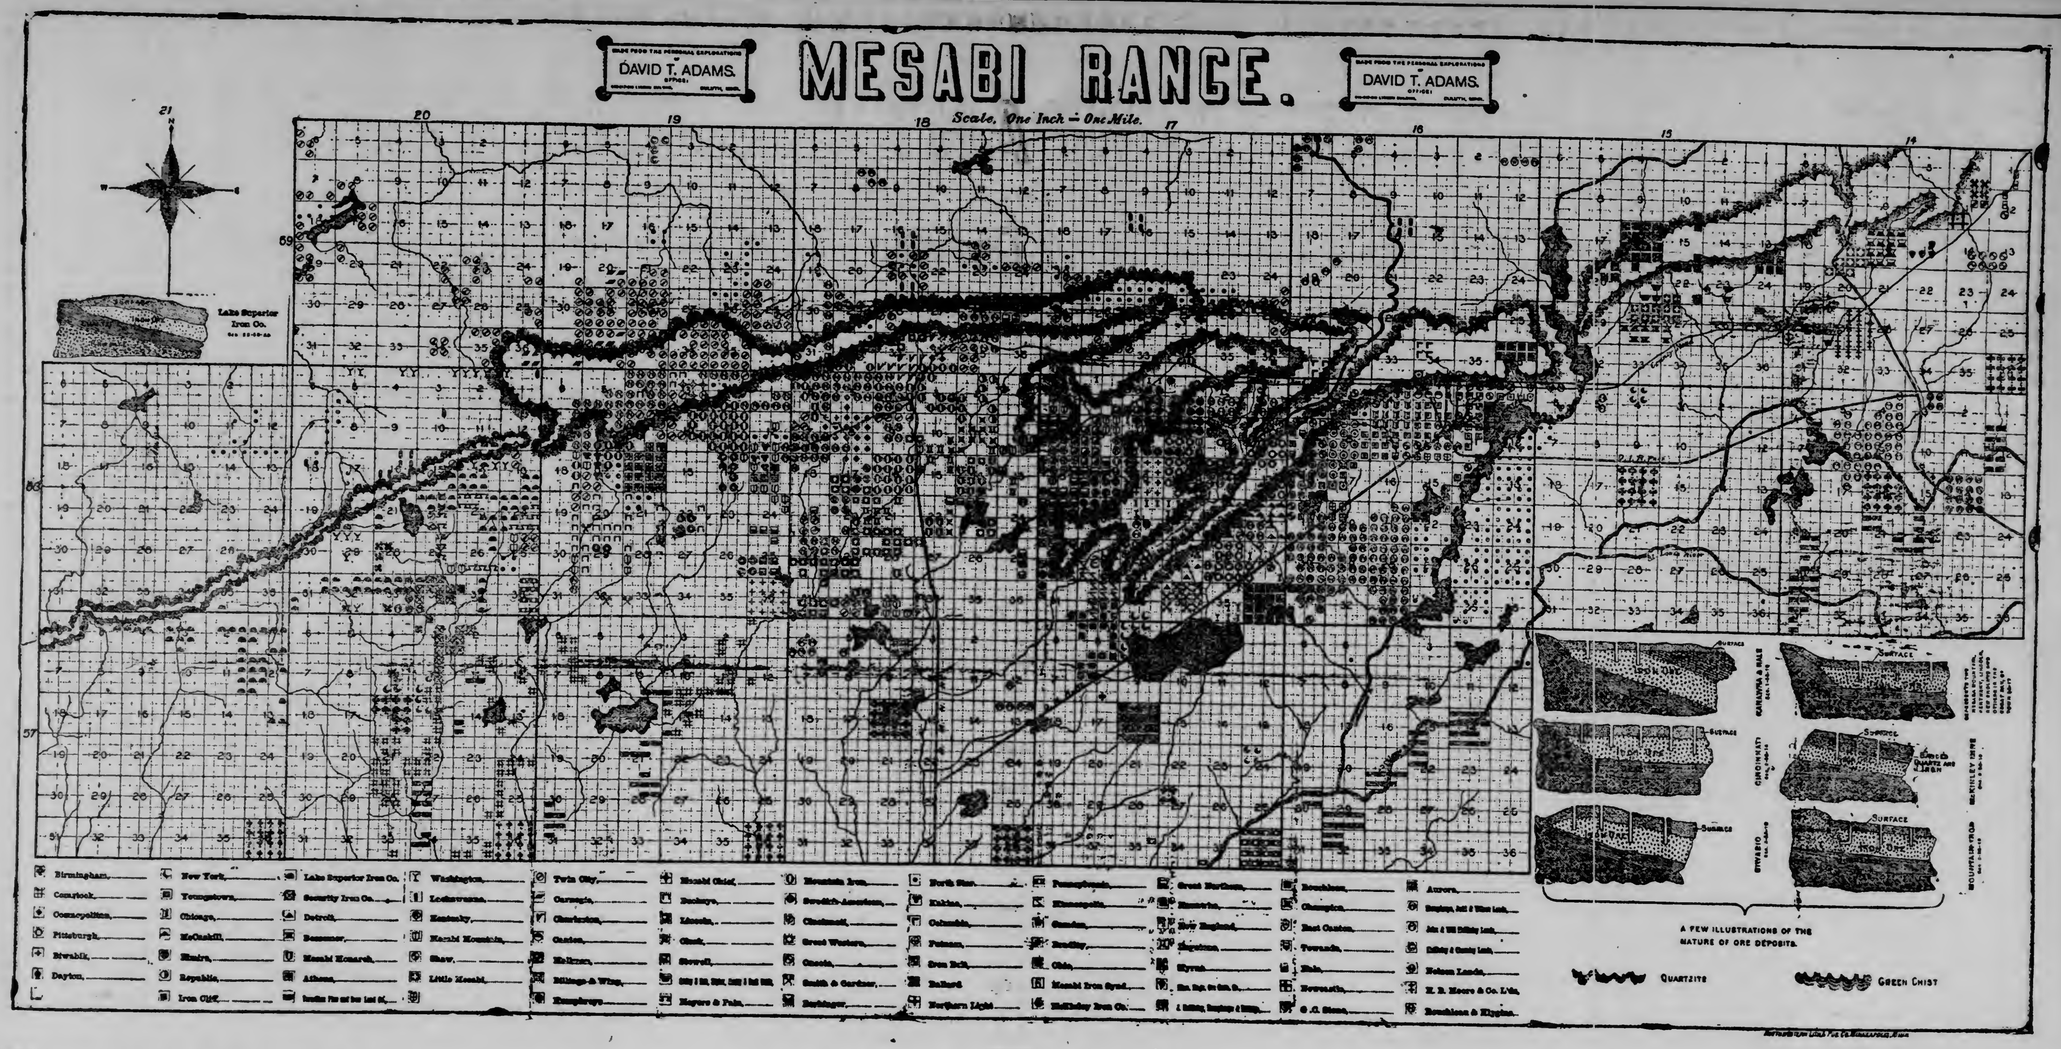
AT PROCTOR, WHERE A GREAT FORCE OF MEN ARE EMPLOYED.

on the docks and in putting the ore into the vessels. Always there has been the pressure of the ore and the need of improving the capacity of the company for getting it to market. And upon the building and equipment of the docks the energy and resources of the road were expended freely. It was no great matter to get rolling stock for the road, to improve grades and provide trackage, if the terminals could be made to handle the traffic. And, by the concentration of energy, ingenuity and intelligence and the expenditure of great sums of money in perfecting machinery for the speedy handling of the traffic at the docks, the great shipping plant has now been brought to a state of efficiency where it may be fairly said to be able to cope with the stream of ore that is poured through it, from the cars of the company into the ships that are to convey it to the lower lake ports.

The first of the ore docks at the foot of Thirty-fourth avenue west was built in 1893 to meet a condition brought about by the impossibility of carrying out the original plan for shipping the ore through the Allouez Bay docks, on account of the failure of the old Duluth & Winipeg road to finance its undertakings. The first dock was well enough for the times but its equipment was primitive compared to the present plant. It has been improved and greatly enlarged and where there was but one dock there are now four. Dock No 3 was enlarged two years ago and brought into service in the season of 1905 with a capacity for storage of 80,000 tons. Dock No. 4 is now in use with a capacity of 119,274 tons. The Missabe docks and their capacity now are:

	Length.	No. of P'k'ts.	Storage Cap. Tons
Dock No. 1	2,336	384	57,600
Dock No. 2	2,336	384	69,120
Dock No. 3	2,304	384	80,640
Dock No. 4	2,304	384	119,274
Total	9,280	1,536	326,634

Modern Equipment on Missabe Road



The Missabe railroad has about 300 miles of track in main line and branches, having this year completed an extension from Coleraine Junction to the model town of Coleraine. It owns and operates seventy-two locomotives, 4,700 ore cars and has a superb passenger equipment, being in this respect as well furnished as most of the great lines in the country. There is no sacrifice of the general function of a well managed railroad in the pursuit of the prime business of the company in carrying ore. The package freight business developed by the building up of the numerous towns that now mark the path that the Missabe blazed into the wilderness has now attained respectable proportions and is increasing in measurable proportions to the increase of the ore coming from new mines.

But the equipment of the road and its administration are devoted to facilitating the handling of ore. And speed in the transportation of this freight is carried to such an extent that the ore is weighed on 100-ton scales, automatically, without stopping the trains. At Proctor the company has its shops, where it carries on the work of building and repairing its equipment.

The most important recent development of the road is the extension of the line to Coleraine, which is now completed. The extension brings to the road the production of some great mines near Coleraine, the Canisteo, the Holman, the Arcturus, the Diamond, and others, shipments from which will probably begin in 1907.

In this extension new towns have been built and an extremely valuable section of the range opened up. The extension—known as the Alborn branch—runs from Coleraine Junction through Meadowlands, Elmer, Tlovola, Silica, Calyx, Pengilly and Cort to Coleraine. At the present terminus the United States Steel corporation is making an experiment in sociology in the establishment of a model town—or, rather, not so much a model town, but a town established under model conditions which the people may make without very much effort an ideal civic community. It is told about at length elsewhere in this edition of The Herald.

The Duluth, Missabe & Northern Railway company is a Minnesota corporation, W. J. Olcott, who has been identified with the development of the Mesaba range since he first came here as the representative of the Rockefeller interests in 1893, is president of the company; W. A. McGonagle is vice president and general manager, and has done much to improve the physical condition of the road and docks, having brought to his work on this system wide experience gained during his many years of service with the D. & I. R. road; Edward B. Ryan is secretary; Edward S. Kempton, treasurer; Charles D. Fraser, assistant treasurer; C. E. Schiede, assistant secretary; and W. J. Olcott, W. A. McGonagle, E. S. Kempton, H. L. Dresser, J. B. Hanson, George D. Swift, and A. B. Wolvin, directors.

David T. Adams, One of Duluth's Active and Busy Men of Affairs.

Importance of Missabe Range Discovery.

Doubtless, every citizen of St. Louis county, to say nothing of multitudes elsewhere, has shared to some extent in the immense benefits accruing from the discovery of iron ore on the great Mesaba range. Among these legions of people there are, probably, some who never heard of this remarkable discovery and it may be safely asserted that only a small portion of the number have any conception of the manner and means by which this conquest of one of nature's hidden secrets was accomplished—a conquest which, measured by its effects upon the welfare of mankind, transcends many of the military achievements with which the pages of history are filled. And it is equally true that comparatively few of the people who now reside in this county realize or appreciate the trials, hardships and vicissitudes endured by the men who brought to light and demonstrated the existence of these marvelous mineral deposits.

Hardships Endured By Prospectors.

Those who have never penetrated the vast expanse of forest wildness which until a few years since, comprised the greater portion of Northern Minnesota as well as considerable portions of adjacent states and the Dominion of Canada, can form no adequate understanding of the life and experiences of the "cruiser" or explorer who goes forth from the haunts of men, often with but a single companion, to pass weeks and often months in the solitude of the woods. So rapid has been the development of this region in recent years, that it is now almost impossible to get more than a few miles away from some of the evidences of the proximity of civilization. But it was quite different a quarter of a century ago, or at even later dates, when very little was known of this country away from the navigable streams which had been explored to some extent by venturesome hunters and woodsmen. In those days the individual who sallied out to cruise in these native wilds either for the purpose of locating and estimating valuable timber or to search for the invisible wealth which was vaguely believed by some people to lie concealed somewhere beneath the surface of the earth in remote portions of this northland wilderness, was obliged to carry in the pack upon his back whatever supplies, provisions, weapons or tools he was likely to need before his return to the nearest settlement of civilized men. One of the essentials of the journey was a small hand-axe, the chief use of which was to clear his way through the tangled forest, but which might serve on occasion as a means of defense or offence in case of coming in contact with wild beasts and at other times to prepare fuel for warming his body or cooking his food. If his pack included a gun or fishing tackle, he might at times be able to vary his regular diet of pork and beans, but the cruiser was usually too much absorbed in the object of his journey to pay much heed to the opportunities for sport which were everywhere in evidence about him. His shelter at night or in stormy weather consisted only of a small piece of canvas sufficient to form a miniature tent and his journeying took him across streams, over rocks and bluffs and through almost impenetrable thickets. In the case of the mining prospector, these trips were often devoid of results as far as furnishing any tangible evidence of his proximity to merchantable ore.

First Prospecting On the Mesaba Range.

In the early '80s it had been demonstrated that iron existed on the Vermillion range in sufficient quantities and of a quality to justify considerable investments of capital in its production and the building of a railroad for the express purpose of its transportation to the shore of Lake Superior. Evidences of iron ore had also been found on the Mesaba range, but no one had as yet, been able to locate a sufficient body of the metal to encourage any large investment of capital in that field. However, there were a number of sanguinary individuals who had become convinced that there would ultimately be found in this locality some of the richest deposits of the Lake Superior basin and a number of years were spent in exploratory work before anyone had succeeded in unearthing a deposit of merchantable ore sufficient in extent to arouse the interest of capitalists and justify the great work of development which must be undertaken and carried out before any commercial returns could be hoped for. To whom belongs the honor of having perfected this important discovery, is a question, concerning which considerable discussion and disputation has been indulged in. As a matter of fact, several of the most important strikes were made almost simultaneously and it is acknowledged by most of those who were intimately concerned in these startling disclosures that the credit cannot be justly monopolized by any one individual. Certain it is that the glory resulting from the events which culminated in the fall of 1891 is sufficient to crown several heads with permanent haloes and perpetuate the names of a number of daring investigators for ages to come.

David T. Adams, a Pioneer In Locating Mines.

One of the first of these pioneer prospectors, and probably the first of all to actually penetrate a solid bed of high grade ore was David T. Adams, one of the best and most favorably known of Duluth's citizens. Most certain it is that the different mines opened up by him have collectively produced more ore by far than those discovered by any other individual and no one is entitled to greater credit for the introduction to the world of one of nature's greatest gifts to mankind from which is being taken annually more than fifty per cent of the ore produced in the whole United States and more than the entire output of any other single nation.

Mr. Adams is one of Duluth's self-made citizens, whose success has been achieved by sheer force of industry, determination and stability of purpose supplemented by well-balanced judgment and the wisdom which comes as a result of ripe experience and practical observation. Born in 1861, at Rockford, Illinois, his early life was passed among the groves and undulating prairies of that state and of Southern Wisconsin. The executive instinct or the desire to be doing things was strongly developed in his character from early youth and it was quite natural that he should seek an opportunity for exercising this instinct in a new and undeveloped part of the world. Before he was fairly grown to manhood he was engaged in exploring the Gogebic range in Wisconsin and Michigan, sometimes in pursuit of timber locations and sometimes tracing the evidences of ore which abound in that region. He learned to readily detect signs of mineral and became familiar with the geological formations which are known to exist in proximity to iron as well as many other of the arts of woodcraft.

DAVID T. ADAMS.

Discovers the Cincinnati.

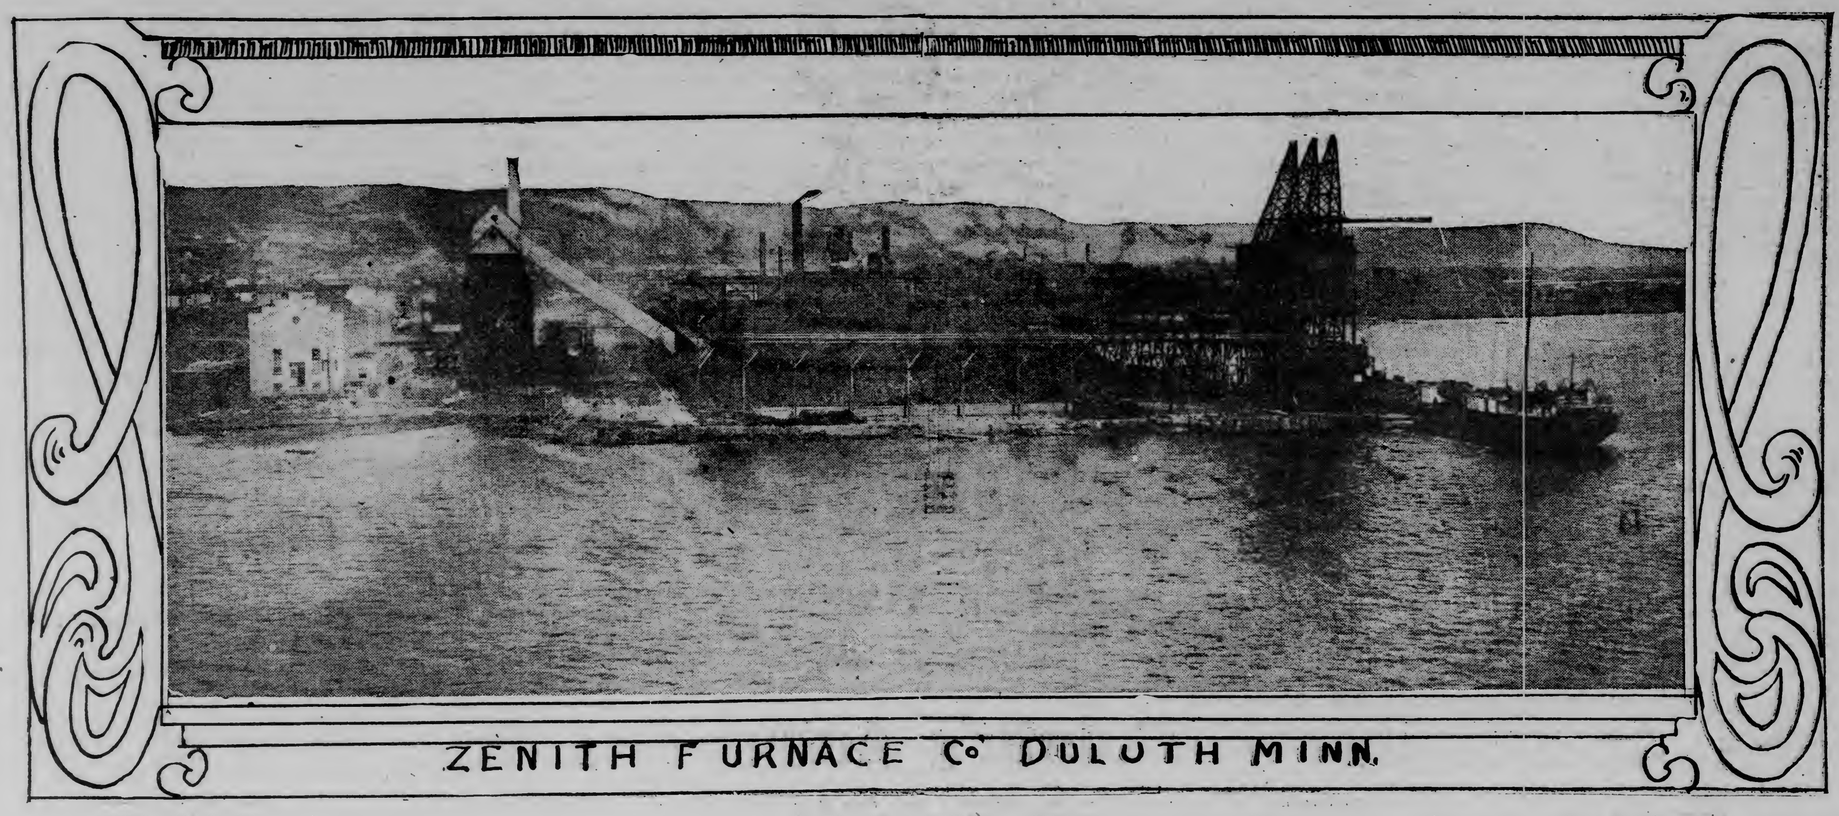
Equipped with the knowledge and experience gained on the Gogebic range and elsewhere, David T. Adams first arrived in Duluth on the 20th day of June, 1883, and the following fall found him engaged in exploration work on the Vermilion range, to which mining men were then being attracted from all quarters of the globe. It was not until 1886 that he turned his attention to the Mesaba range as a field which would be likely to yield profitable returns for an outlay of labor and investigaton. He spent that season working for the Myers Bros., who were among the first prospectors on the Mesaba range, in the Prairie river country. No discovery of importance was made that year though he was very close to valuable beds of ore, as afterwards developed in Section 35, Township 56, Range 25. He persevered in the work, however, following it up systematically though the work was much impeded by the lack of transportation facilities for tools or other supplies and wherever it was decided to sink a test pit, it was necessary to precede the contemplated work with clearing of timber and other labor. There were abundant signs of mineral and more or less low grade ore was unearthed, but the object for which he was seeking continued to elude the grasp. Other explorers began to make renewed efforts to find the rich deposits which all felt certain must exist not far from their respective fields of investigation, though these were spread over a considerable tract of country with its extremes many miles apart. Capt. Griffith was one of the first in the field, having explored the site of the Diamond mine as early as 1886, and among others were George C. Stone, the Merritt Bros., in conjunction with whom were Captains Kehoe and Nichols, and Capt. Frank Hibbing, all of whom eventually shared in the valuable discoveries made in their respective locations.

In the fall of 1890, Mr. Adams found some low grade ores in Section 3, Township 58, Range 16, and became convinced that he was not far from the valuable deposits for which he had sought so long. The process of test pitting was carried on by means of a windlass and bucket, operated by two men in the most primitive fashion, but the method, doubtless, which was best adapted to frequent removals through the wilderness from place to place. In many instances after a few bucketsful of promising ore had been extracted, the taconite rock would be encountered and the testing outfit would be removed to some other location. Many locations were passed over on this account which, by the use of the diamond drill, were afterwards proven to be among the richest deposits. Gradually working down from the crest of the ridge which marked the formation, in the fall of 1891, Mr. Adams was working the location since known as the Cincinnati mine, when he made the strike which was destined to make his name famous in the annals of iron mining. Having tested the location until he was thoroughly convinced of the quality of the ore and likewise of its existence in abundant quantities, Mr. Adams hastened over to the Biwabik mine to inform his neighbor, Capt. Kehoe, of his good fortune. Capt. Kehoe had been working on the Biwabik location for some time, and on the same day that Mr. Adams made his wonderful discovery, he had likewise uncovered a large body of merchantable ore, so that the matter was never definitely settled between them as to which had made the earliest discovery. It is probable that of Mr. Adams preceded the other by a few hours, but both gentlemen were too much elated over the event to take note of the exact hour or, indeed, to give any thought to a matter so comparatively trifling. The two locations eventually proved to be parts of the same deposit from which nearly eight million tons of ore have already been shipped.

"Many a Slip 'Twixt the Cup and the Lip."

Fortunes, which seem to be already within the grasp sometimes prove to be elusive and fate decreed that Mr. Adams should meet with a great and unforeseen disappointment in this case—one which would have entirely discouraged a man of less resolution and tenacity of purpose. It transpired that there had been an error in the original survey, so that most of the property, which had been included in the Cincinnati location, proved to be a part of the Biwabik mine, when the lines were resurveyed and about one and a half million tons of the ore included in the original boundaries of the Cincinnati were transferred to the Biwabik.

David T. Adams was not the man to give way to disappointment while there remained abundant opportunities for further discoveries and he only pursued his explorations with renewed vigor now that the fact had been definitely established that the Mesaba range was rich in merchantable ores. During the next few years he made many important explorations and located a number of valuable properties, including several which are comprehended in the great Fayal mine, all of which except the eastermost eighty were located by him. The product of this mine to date is in the neighborhood of thirteen million tons. The list of his discoveries includes the Cincinnati, the Kanawha, the New England (now the Commodore), the Lincoln, Lone Jack, Moose, Iron King, (Auburn), Victoria, Bessemer, Alpena, Adams, Cloquet, Fowler (South Fayal), North Fowler (North Fayal), Spruce, the Republic in 25-58-17, the last part of the Alba in 18-58-16, the Tener, the Weed, the Shenango Furnace (58-20), and the Meadow (58-15). The resources of the mines explored by Mr. Adams far exceed those explored by any other man on the Mesaba range.



Also a Founder of Cities.

But it is not alone as a locater of mines that Mr. Adams has been conspicuous. Foreseeing that the development of extensive mining properties would attract many people to the Mesaba range and that a large portion of them would become permanent citizens, he began at an early date to lay out townsites upon or contiguous to the principal mining locations. Among the towns which he promoted are the flourishing cities of Virginia and Eveleth. His activities have been almost altogether directed to iron properties and whatever interest he has taken in other enterprises has been done chiefly for the purpose of helping or benefiting his friends.

It should not be overlooked that Mr. Adams made and published the first map of the Mesaba range in 1893, showing that he was already familiar with the character and extent of the range at that early date. Developments since that time have made very little material change in the map of the region.

ZENITH FURNACE COMPANY'S GREAT INDUSTRY

An Enterprise of Vast Importance to Duluth---Coal Distributors and Manufacturers of Gas, Tar, Ammonia, Coke and Pig Iron.

GREAT EVENTS are often foreseen or foretold long before the march of progress has reached the point where their consummation becomes practicable. Certain industrial and economic conditions, peculiar to its success, must exist before any great enterprise can be successfully undertaken and whoever attempts to carry out any important enterprise, without taking these facts into consideration, is foredoomed to disappointment. This principle has been repeatedly demonstrated during succeeding ages of the world's progress and ample proofs of its existence may be found in the history of the Head of the Lakes. This rule, which seems to control all phases of human endeavor, has renewed confirmation in the numerous attempts which have been made, from time to time, to establish the manufacture of iron and steel at this point.

Even before the existence of iron ore in any considerable quantity in this locality was positively known, some of the advantages of this location for extensive manufacturing plants were realized. As early as 1872, an attempt was made to establish a blast furnace in Duluth but, as the capital behind the effort was limited, and neither ore, fuel nor a market for the product was readily available, the failure of the scheme was inevitable. Later, when the Mesaba range was opened up and it became certain that practically unlimited quantities of high grade ore were right at hand, it seemed as if the manufacture of iron and steel upon this harbor was bound to follow without delay. Several attempts to built up these industries on an extensive scale were made in Duluth and Superior, but various causes conspired to defeat the aims of the projectors and disappoint the investors.

However, changes are constantly taking place in the industrial as well as the terrestrial world. Time and natural laws accomplish many transitions which no human agency can control, but which produce marked and lasting effects upon the affairs and destinies of mankind. While the lessons of experience, always dearly learned, had tended to discourage those who had been optimists regarding the practicability of blasting and refining iron at this place, there still remained all the natural advantages of location which needed only to be supplemented by favorable artificial conditions combined with sound judgment and busines ability, to make the consummation of this cherished scheme an accomplished fact.

CAPT. A. B. WOLVIN PROVES TO BE THE MAN OF THE HOUR.

It was not until 1904, that Capt. A. B. Wolvin, who has been identified with a number of important business developments at the Head of the Lakes, decided that the auspicious time had arrived for beginning the great undertaking which must be the first step towards the ultimate revolution of the iron industry by bringing the furnaces to the mines instead of carrying the ore to the furnaces. Numerous obstacles were still to be overcome and Mr. Wolvin and his associates in the venture fully realized this fact and sought to profit by the experience of those who had preceded them in this field. A number of important interests were enlisted in the venture, some of them closely akin to this undertaking; among the capitalists who took an interest in the enterprise were men interested in iron mining; others were large stockholders in the transportation companies which would naturally share in the success of the undertaking by carrying much of the product as well as the raw material necessary to carry on the work. Owing to the great increase in the volume of bulk freights loaded at this harbor, vessels sometimes return empty to this port for lack of available cargoes bound in this direction. This condition has caused the rates for carrying coal to the Head of the Lakes to be reduced to a minimum figure thereby making it cheaper to carry the coal required for blasting to the ore than it is to transport the ore to the coal. These facts together with the development of markets for pig iron in the West and the gradually changing conditions of the labor market at this port were all carefully considered by the promoters of this enterprise. Another important consideration was the matter of securing a ready market for the various by-products which must be made to share the burden of expense necessary to found this business upon a substantial and lasting basis.

Having secured the co-operation of ample capital for pushing the work to ultimate success, Mr. Wolvin sought a desirable and advantageous location for the plan which was secured by acquiring the grounds, buildings and furnace which had been built at West Duluth a number of years previous by parties who had attempted to found a similar plant. This location afforded many desirable features, including convenient transportation by both rail and water, and much of the old plant was still in good condition and sufficiently modern to be useful as a part of the new establishment. One million dollars was expended in additions, changes and improvements so that the original plant would hardly now be recognized as forming any part of the concern. One of the first innovations was the construction of an immense, modern coal dock upon the bay front adjacent to the furnace. This dock has a frontage of 6,800 feet upon the water and is readily accessible to the largest vessels on the lakes. It is built in the most substantial manner and equipped with up-to-date machinery for loading and unloading coal and for transferring the cargo to cars when desired. It is fitted with four sets of Mead hoists for unloading coal. A traveling truss, steel bridge covers the entire dock structure at a height of forty feet and a belt cable railway surmounts the structure at the same height. By automatic action loaded cars of this cableway are made to trip over any of the pockets—and the bridge is under similar control for halting at any of the switches.

The capacity of the dock is a quarter of a million tons of coal and limestone, the latter commodity, which enters largely into the process of blasting, being obtained near at hand. Much of the coal handled is sold and shipped for railroad use, but the bulk of it is converted into coke for the use of the furnace, though a considerable quantity is used for other purposes which require this kind of fuel. Four million feet of Oregon timber were used in the construction of the dock.

COKE OVENS AN IMPORTANT ADJUNCT TO THE PLANT.

Simultaneous with the building of the coal dock was the construction of fifty coke ovens of the most modern type. In fact the former was really incidental to the installation of the latter and docks, ovens and furnace are only parts of one stupendous plant. It was understood at the start that the success of the venture would depend in great measure upon it ability to manufacture the coke required for the furnace as well as upon the profitable disposition of the gas and other by-products which must be saved and utilized in order to conduct the business on an economic basis. The fifty coking ovens form a solid structure of masonry and concrete, 36 by 200 feet and 40 feet in height, so arranged as to include the retorts, the regenerative chambers and the gas and liquor mains. The retorts are fired once in twenty-four hours and 250 tons of coal are required for one loading, which is converted into about 225 tons of coke. Before being transferred to the ovens the coal runs through a crusher located on the docks which reduces it to small pieces, but little larger than a pea, and it is then elevated into a huge bunker eighty feet in height and situated above the coking battery.

The entire plant is arranged with a view to economy in handling and every known practical device for the elimination of manual labor is utilized. No shoveling of coal in the old fashioned way is necessary at any stage of the process, the vessels being unloaded by machinery, which enables a few men to accomplish more in a short time than hundreds could have done by the system in vogue a few years ago.

From the docks the coal is conveyed by carriers to crusher, bunker and ovens, the charge of eight tons for each retort being automatically weighed and evenly distributed. So completely has every detail been worked out and provided for that a visit to the plant would be necessary before the average reader could realize how much is accomplished by an establishment which has practically eliminated the element of human labor. Labor also shares in the benefits of this evolution, for while less men are employed in proportion to results obtained, the work is less arduous and better paid, a higher standard of skill being required.

EXTENSIVE GAS PLANT IN CONNECTION.

From the refuse of the coke ovens the gas is extracted by a system of screens, while in the process of cooling, approximately 15,000,000 cubic feet of gas being produced each month. One of the first provisions made by the company for the disposal of its products was an arrangement to furnish the cities of Duluth and Superior with gas for fuel and lighting. This contract was mutually advantageous to all concerned so that for about two years past the city has been able to furnish the gas to consumers at the rate of seventy-five cents per thousand, a figure which will compare favorably with the price paid by people in almost any other city. Tar and ammonia are two other important by-products for which there is a ready market.

After cooling the coke is conveyed automatically to the furnace stack, which is seventy feet in height. Here the coke, ore and limestone are mixed together and the blasting process goes on. Great improvements have been made in the equipment of the original furnace plant and everything is carried on in accordance with modern methods. The present output is about two hundred tons of pig iron per day, or 60,000 tons per year. A ready market is found for this product, most of it being disposed of within comparatively short distances.

It is contemplated to supplement this establishment as soon as it may be expedient with a steel plant in order that the pig iron may be still further utilized before leaving this port. The demand for these products is steadily growing throughout the West and, no doubt, the day will soon come when many articles representing finished iron and steel products will be made and sold here, thereby avoiding the long transportation both ways, which has heretofore been necessary before the product of the mines reached the consumer in the West and Northwest.

The highest state of efficiency is maintained throughout this institution and every circumstance or condition which might make for the improvement of its service or economy of time, labor or expense is carefully utilized. This has been accomplished only by the exercise of rare foresight and excellent judgment such as are displayed by Capt. Wolvin and his coadjutors in this undertaking as well as by securing the services and co-operation of men of long years of experience in the practical operation of the various lines of business which are here combined in one establishment. A number of men who are residents of Duluth have interests in this concern and all its promoters have greater or less interests here.

Among the stockholders in the concern is the firm of Pickards, Brown & Co., of this city, which takes charge of the sales of pig iron and has always shown a keen interest in the undertaking. Among other concerns, which are interested may be mentioned the Pittsburg Steamship company, the Provident Steamship company and other transportation lines. Almost unlimited resources might be drawn upon by the Zenith Furnace company should it find it necessary or expedient to expand its business along kindred or other lines. Its various connections enables the concern to command facilities for reaching any market in the world it might desire to supply as well as for creating markets for its own products whenever occasion might require. Altogether there is every reason to believe that the confidence which has been displayed by the investors in this venture is fully justified by the results so far obtained and that the day is not far distant when a much larger portion of the ore shipped from this harbor will leave its shore in the form of finished products.

BENEFITS SHARED BY MANY PEOPLE.

This institution represents a large investment of capital, much of the machinery in use being of special design and very costly and its establishment at this place is of far reaching effect. As we have already seen, every consumer of gas at the Head of the Lakes is sharing in the benefits derived from this establishment in our midst. But this is not the only advantage accruing therefrom! Owing to the low price at which this product can be produced, arrangements are being made to furnish gas for heating some large plants whose location or continuance in our midst may be largely influenced by this circumstance. The American Carbolite company, which recently located its extensive plant in close proximity to the plant of the Zenith Furnace company was largely influenced in deciding upon a location by the fact that an abundance of coke could be obtained for its use right at its doors. The tar extracted in the process of manufacturing coke is also utilized in a nearby factory, which turns out large quantities of tarred paper and other goods. It may be said without fear of contradiction that every citizen of Duluth has a vital interest in the maintainance of this great industry whose importance is coming to be more and better realized from day to day.

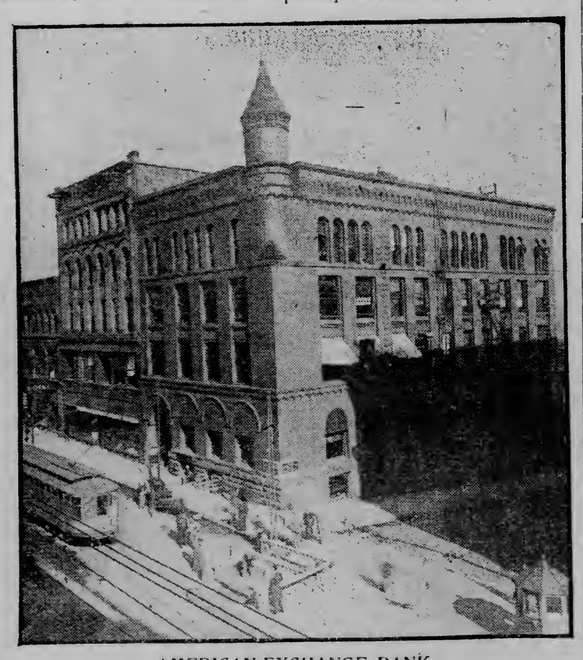
DEFECTIVE PAGE

DULUTH'S BANK DEPOSITS AGGREGATE $19,000,000 AND ARE STILL CLIMBING

THIS IS $237.50 FOR EVERY MAN, WOMAN AND CHILD OF OUR 80,000 POPULATION

Reliable Index of Business Conditions.

The banking transactions of a city are universally recognized as an index to the prosperity of its people. Measured by this criterion, the financial condition of Duluth is certainly very flattering. The deposits in the seven banking institutions of the city already approximate $19,000,000, and are steadily growing year by year and month by month. Duluth has ceased to be a borrowing community and has, instead, assumed the position of lender to other localities. While the large transactions in iron ore, grain, lumber, coal and commodities handled by our jobbing and manufacturing houses represent enormous sums of money and require the handling of great quantities of cash. Duluth bankers no longer depend upon Eastern financial institutions to supply the funds by which the wheels of commerce are greased and the capital represented in these seven institutions, amounting to $1,685,000, is held almost entirely by residents of this city—men whose combined investments in other enterprises mount into stupendous figures, and it may be safely said that the banks of few, if any, other cities in the country, of equal population, can show backing by men who represent as great individual aggregations of capital. Duluth's capitalists are, for the most part, men who are still young in years though ripe in business sagacity and experience in handling enormous commercial transactions. The bank directors of this city are representative of the unparalleled business development of the great Northwest which centers at the Head of the Lakes and are uniformly recognized as conservative, far-seeing men.



The banking business in Duluth for the year 1906 was highly satisfactory. The area of territory which contributes in such large measure to the business of this city enjoyed an unprecedented prosperity during the twelve months of that year, its ore, lumber, crops and other products representing a greater aggregate than ever before. This has been reflected in every line of business in the city. The volume of trade has been large and the growth in the business of the banks has been all that could be expected. The banks are conspicuous because of their financial strength and the conservative manner in which their affairs are managed and they all entered upon the year 1907, in good condition, well equipped to take good care of all that large, legitimate business which the year bids fair to bring to them.

A noteworthy feature of the banking business of Duluth is the marked increase in savings deposits of all the banks which maintain savings departments, the aggregate of which forms a most important item in the financial make-up of Duluth's prosperity. This indicates an increasing frugality among the people proportionate to the general prosperity that is shared by every class of citizens.

AMERICAN EXCHANGE BANK.

This is the oldest financial institution in the city, being a direct successor of the Duluth Savings Bank, organized by John C. Hunter in 1872. The business was carried on under that name until 1879, when it was reorganized under its present title, its paid up capital at that time amounting to $25,000. It is one of the comparatively few banks which can show an unbroken record of dividend paying since that date, and it now ranks as the largest state bank in Minnesota, with a single exception.

From its inception this institution has been handled by men of integrity and rare business discernment. Its business has steadily and rapidly increased for a number of years past, until its deposits as shown by the latest official report, January 26, 1907, were $8,674,446.44, the largest of any bank in the city, while its paid in capital stock is $500,000. The wealth represented by its directors is exceeded by that assembled in the directorate of few banking houses in the United States. The safety deposit vaults are an important adjunct of the business and are equipped with every modern convenience and facility for safeguarding their contents. The absolute safety provided and the reasonable rentals make this a very popular feature of the bank's business.

AMERICAN EXCHANGE BANK.

This institution was one of the first large banks of the city to establish a savings department and has been largely instrumental in educating the public in the expediency and wisdom of laying aside a portion of the income of the present to provide for future needs, or prepare for subsequent investments. Influenced by the knowledge that his humble savings were as carefully safeguarded as the larger deposits, many a laboring man has been led to start a savings account, and now has a snug sum to his credit, who might, otherwise, have never made a beginning toward the purchase of a home or other provision for the future needs of himself and family.

At the close of business on the 26th of January, 1907, the total liabilities of the American Exchange bank were $9,778,741.48.

The officers of the bank are: Hamilton M. Peyton, president; Chester A. Congdon, vice president; William G. Hegardt, cashier; Isaac S. Moore, assistant cashier, and Colin Thompson, second assistant cashier. Besides the three first named officials, the directors include: Thomas F. Cole, president Oliver Mining company and Minnesota Iron company; G. A. Tomlinson, vessel owner; W. C. Agnew, manager Mahoning mine; C. A. Duncan, timber lands; A. Gowan, president Gowan-Peyton-Twohy company; S. G. Knox, timber lands; A. H. Crassweller, attorney-at-law, and Kenneth Clark, president Merchants National bank, St. Paul.

FIRST NATIONAL BANK OF DULUTH.

This is recognized as one of the most stable and reliable financial institutions of the Northwest. Its equipment for the transaction of business pertaining to any branch of banking are the very best, and it affords facilities and conveniences to its patrons which are excelled by no similar establishment anywhere.

The directorate of this bank includes representatives of many of the most important business corporations of the West, which places the institution upon a rock foundation as regards responsibility. This bank has been established in Duluth for many years and has always enjoyed the fullest confidence of its depositors, and of the public and business world. With a capital of $500,000 and surplus and profits amounting to over $1,000,000 in addition, it is prepared to finance any undertaking which is justified by the rules of conservative banking institutions. It has always been managed by wise, discreet and accommodating business men, and its success has been the result of adhering strictly to legitimate lines of banking. It has withstood some of the severe financial crises which were ruinous to many of the banking houses of the country, and for a number of years past has prospered steadily and rapidly.

The First National was years ago appointed as a depositary of the United States government, and counts among its correspondents many of the leading banking institutions of the East, as well as a number in Europe. At the close of business, January 26, 1907, deposits were $7,077,651.54, and the total liabilities on the same date aggregated $9,205,046.54.

Following are the names of the officers of this bank: A. L. Ordean, president; J. H. Dight, cashier; W. S. Bishop, assistant cashier, and W. J. Johnson, second assistant cashier. The president represents the great wholesale grocery and jobbing house of Stone, Ordean, Wells company, and the other directors are as follows: A. M. Marshall, president Marshall-Wells Hardware company; A. D. Thomson, grain dealer; L. Mendenhall, investments and insurance; A. B. Wolvin, vessel owner; Frederick Weyerhauser, lumber, St. Paul; John H. Barker, president Hasfell, Barker Car company, Michigan City, Ind.; A. C. Jones, Northwestern Fuel company; F. A. Patrick, president F. A. Patrick & Co., wholesale dry goods; Louis W. Hill, vice president Great Northern railway, St. Paul, and W. F. Fitch, president Duluth, South Shore & Atlantic railway, Marquette, Mich.

CITY NATIONAL BANK.

While a comparatively new institution, the City National Bank of Duluth was founded by men who have long been identified with the business and commercial interests of the city, and whose intergity and responsibility were so well established that it enjoyed the fullest measure of confidence from the start. All the directors of the institution are men of affairs in the city accustomed to large business transactions, whose personal accounts and those of the establishment with which they are identified aggregate a volume of business to which many banks would be well content to cater. During the five years of its existence, the deposits of the bank have shown a steady and satisfactory increase which has fully kept pace with the growing prosperity of the city and of the territory contiguous thereto. Starting with a paid up capital of $500,000, this bank was equipped at the start for handling an extensive business in all departments. It established very desirable connections in other cities and in foreign countries, and its resources were extended in many directions. A savings department was made an important feature of the business at once, and attracted the deposits of many people of small means which have attained important dimensions in the aggregate. These accounts are so amply secured and yield such sure returns to the investors, that their number and the amounts of their savings are steadily increasing.

The City National bank is a United States depositary, as well as a depositary for the state of Minnesota, for St. Louis county and for the city of Duluth. Its report at the close of business on the 26th of January last, showed its resources and liabilities to aggregate $2,677,253.71, of which the deposits represented the snug sum of $1,824,493.79.

The officers of the bank are: Joseph Sellwood, president; A. H. Comstock, vice president; W. I. Prince, cashier, and H. S. MacGregor, assistant cashier. The president, vice president and cashier are also members of the board of directors, which includes the following gentlemen: A. M. Chisholm, John Panton, Alexander McDougall, John F. Killorin, Michael H. Kelley, Henry Turrish, Richard M. Sellwood and R. J. McLeod. These names are sufficient guarantee to the people of Duluth of the stability of an institution in the upbuilding of which their interests and efforts are united.

DULUTH SAVINGS BANK.

This flourishing institution was organized under the laws of the state of Minnesota and under the supervision of the state banking department. It opened for business October 30, 1902, and has done a prosperous and growing business from the outset. It transacts a general banking business and allows interest on all savings and time deposits. Its officials and trustees are well known business and professional men, and a strictly legitimate and conservative banking business is carried on.

FIRST NATIONAL BANK.

Like the other banking concerns of the city, this institution has been built up by local capital and local men—men who have made their money here in the natural development of the varied lines of business which center at the Head of the Lakes. Very little, comparatively speaking, of the funds invested in banking in Duluth have been brought here by people whose capital was accumulated in other places. The establishment of the Duluth Savings bank was a natural result of the increasing prosperity of the people and of the surplus capital which was beginning to seek desirable opportunities for investment.

This concern owes its success in no inconsiderable measure to the careful and conservative management of its officials. It has always been in charge of men of experience and ability, who have devoted their energies to building up a banking institution which should take first rank for stability and honorable and just treatment of its depositors and all other patrons. The funds in its vaults are very carefully protected, both by ingenious mechanical contrivances and the fullest extent of humaan vigilance. The capital stock of the bank is $100,000, and the deposits exceed a half million dollars and are rapidly increasing from month to month.

Following is a list of the officials of the bank:

J. L. Washburn, president; John G. Williams, vice president; J. W. Lyder, Jr., cashier; Joseph E. Horak, assistant cashier. Trustees, John G. Williams, attorney; J. L. Washburn, attorney; James H. Pearce, mining lands; John R. Mitchell, president Capital National bank, St. Paul; Dr. J. J. Eklund, physician and surgeon; Francis W. Sullivan, attorney; Louis S. Loeb, L. S. Loeb & Co., J. W. Lyder, Jr., cashier.

CITY NATIONAL BANK.

THE ALDRICH CURRENCY BILL

This was the only currency measure enacted by congress for the aid of the monetary and national banking institutions of the country. The full text of the bill is too extended to permit of publication. The three important changes are as follows:

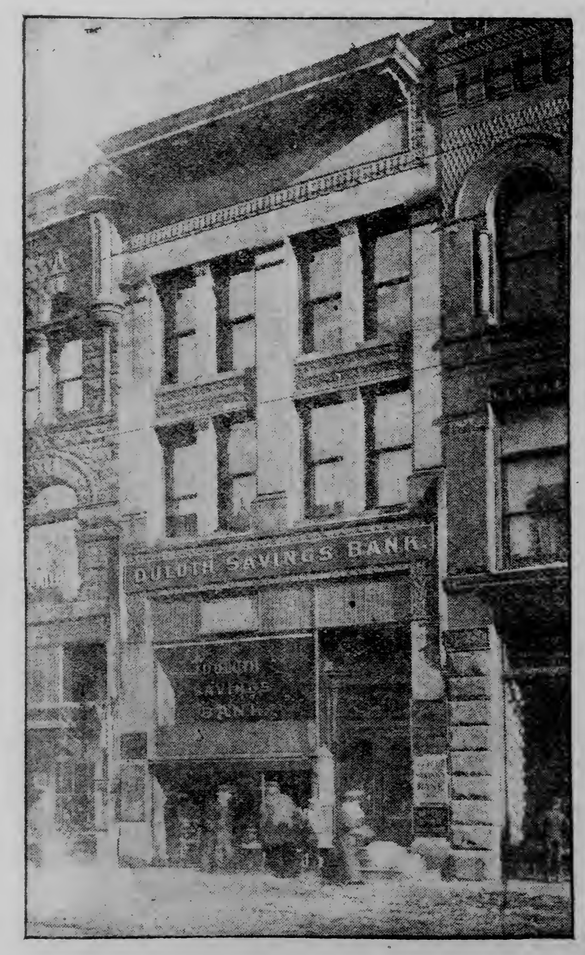
1. To end the necessarily disturbing influences of the treasury in money market affairs by permitting the secretary of the treasury to deposit customs receipts as well as internal revenue in national banks designated as national depositories. Security may consist of United States bonds and such other securities as are designated by the secretary of the treasury on or before Jan. 1, of each year.

2. To render more elastic national bank circulation by increasing the limit of retirement of bank notes from $3,000,000, as at present, to $9,000,000 per month.

3. To adjust the classes of currency in circulation, namely, United States notes, treasury notes, bank notes, gold certificates and silver certificates, by the following changes in their denominations of issues.

(a) By lowering the denomination of gold certificates from $20 as at present to $10.

(b) By gradually reducing United States notes (greenbacks) of denominations greater than $5 with United States notes of denominations of $1, $2 and $5.



By this latter amendment the $338,000,000 United States notes now of a denomination of $10 or over will become largely of the denomination of, or less than $5; that is, merely subsidiary currency supplementing the present silver certificates. The vacuum thus produced in denominations above $5 will be filled by gold certificates and national bank notes. Of these denominations there are outstanding $652,600,000 gold certificates and $494,200,000 bank notes.

In so far as additions to bank notes, now approximately $600,000,000, shall fill in this vacuum, and expansion of the amount of bank notes is possible, ranging eventually from probably 20 per cent to possibly 40 per cent increase. An increase in bank notes naturally suggests a larger demand for government bonds as security therefor. At the same time the possible speedy retirement, through the operation of the $9,000,000 per month clause, will doubtless produce from time to time a greater supply of government bonds.

Regarding the actual significance of the bill so far as Western banks are concerned a Twin City banker said this week:

Broadly speaking one most important point connected with the passage of the Aldrich bill lies, not in the changes which it effects in the national banking law, but in the fact that it demonstrates that it is possible today to secure moderate and conservative currency legislation. The popular attitude toward banks and banking institutions becoming more reasonable than was that which prevailed for a good many years. People are beginning to appreciate more and more that a bank is an essential and indispensable part of business machinery, prospering when the rest of the community is prosperous and not something with interests separate and apart. For a good many years the fact that bankers as a class were behind any piece of financial legislation was sufficient to create opposition in some quarters. With increased information concerning the functions and positions of the banks, it seems to me that this attitude is passing. It is to be hoped that this is the case, for there are several changes in our currency system which could be made to general advantage.

Solicits the accounts of Banks, Bankers, Merchants, and Individuals in Duluth and the territory tributary.

LIBERAL TREATMENT—CAREFUL ATTENTION TO ALL FINANCIAL MATTERS.

Northern Shoe Company's Factory and Jobbing House.

An Eight Story Model Building, 100x115 Feet, Costing $125,000. Capacity 1,500 Pairs a Day.

There is no manufacturing plant or wholesale house that has made greater strides in trade building than has the Northern Shoe company of Duluth, having more than doubled their business since 1905, which has made it necessary to build a new factory and sales house, doubling their present floor space. The Northern Shoe company is building a $125,000 new factory, eight stories high, size 100 by 115 feet, located just north of Marshall-Wells Hardware company's great mercantile house. The new building will have every modern device known to builders and manufacturers, whether in the matter of heating, lighting, ventilating or machinery used in the manufacture of boots and shoes; each of the eight floors connected with two elevators, with toilet and cloak rooms on each floor, and the whole building equipped with automatic sprinkling, so that when completed, the entire plant will represent one of the largest of its kind operated under one roof in the Northwest. On the first floor will be the splendidly furnished offices and sample rooms, that will equal for equipment, any in the boot and shoe line. One of the leading features of the new factory is the ease with which freight is loaded and unloaded inside of the building, besides the trackage and dock facilities for receiving and shipping goods from their own railroad platforms by rail and by lake freighters from their own docks just in the rear. To give a passing idea of what the growth of the business has been since 1905, it is only necessary to state that the factory only turned out 600 pairs of shoes a day and gave employment to only 200, while the new factory will turn out 1,500 pairs a day and give employment to 400 skilled boot and shoe makers. This is not all, for the business has trebled in the wholesale department. This is a wonderful growth of business. The reasons for this trade expansion are many, but the leading one is the superior quality of their shoes, making it a business necessity for every live merchant in the territory worked to handle the Northern Shoe company's specialties: "Independent District School" shoes; "Moose Hide" shoes; "Muleskin" shoes; "Phillips' Pride" shoes and "Zenith" shoes, the sales of which have more than doubled in the last two years, while 1907 will show a gain over 1906 of 30 per cent. This showing speaks well for M. J. McMahon, the superintendent of the factory.

The Northern Shoe company are Northwestern distributors of Wales' Goodyear rubbers, Connecticut rubbers, Woonsocket and Rhode Island rubbers. The territory covered by the expert salesmen of the Northern Shoe company are: L. A. Kent, Michigan; J. W. Hoehle, Wisconsin; J. T. LaLonde, Wisconsin and Minnesota; R. C. Little, Central Minnesota; W. N. Donaldson, Northwestern Minnesota; Clarence La Marchrie, Northeastern Minnesota; G. F. Lantz, Western Minnesota; G. B. Stickles, Twin Cities and Southern Minnesota; F. M. Watts, South Dakota; Benjamin Rud, Southern North Dakota; C. L. Haxton, Northern North Dakota; Otto Ternes, Montana, Idaho and Washington; J. H. Murray, Duluth and Superior; Silas Schieren, house salesman.

The sales of this company run over the million dollar mark in 1906 and is still climbing up. The shoes of the Northern Shoe company's factory have a value which in other words means quality, workmanship, durability, fit, shape, design and general satisfaction. Is the best shoe made for men, women, boys and girls. It is a shoe that will back up the dealer who sells them but, what is more, the Northern Shoe company is back of the shoe. The officers of the Northern Shoe company, manufacturers and wholesalers of all kinds of footwear are: A. W. Hartman, president; O. C. Hartman, vice president; George L. Hargraves, secretary; L. D. Stickles, treasurer and general manager, and J. R. Bell, assistant treasurer, who with J. L. Washburn, constitute the board of directors.

Gogebic Steam Boiler Works.

A PROSPEROUS and growing industry is the enterprise conducted by J. F. Dacey & Son, known as the Gogebic Steam Boiler works. The firm is now engaged in the construction of a new and substantial plant for the accommodation of its rapidly increasing business, which is due chiefly to the demand for the hot water heating boilers recently patented by J. E. Dacey, senior member of the firm. These boilers are far superior to any other designed for this purpose, a fact which has been fully and satisfactorily demonstrated through their installation in many of the best buildings in Duluth during the last year. From 33 to 50 per cent of the fuel used in other boilers is saved by the use of this all steel invention which is suited for the use of other residences or business blocks and the device has already become so popular that the firm found its former plant entirely inadequate to meet the demand. The new establishment at 409-411-413-415 Lake avenue south is very advantageously situated. It will have a frontage of 160 feet on Lake avenue and will be 100 feet in depth, extending to the docks and railroad tracks in the rear, thereby assuring the best shipping advantages. The structure will be of brick and steel, upon a concrete foundation, and will be of the most durable and substantial character. All the machinery in the plant will be operated by electric power supplied by the Great Northern Power company and from thirty-five to fifty men will be given employment, varying somewhat, according to the season. Everything about the establishment will be strictly modern and it will be a credit to the city, and the equal of any plant in this line in the northwest.

The firm has recently closed a contract for installing a boiler of 900-horse power capacity in the new sawmill of the Virginia Lumber company at Virginia, Minn. The manufacture of boilers occupies the chief attention of the firm, but it also makes tanks and sheet iron work of other descriptions and gives especial attention to repair work for which there is a perpetual demand at this location. Industry, skill and integrity have been the causes of the remarkable success of this firm which is capitalized at $75,000, while the cost of the new plant will be $50,000.

Minnesota Cigar Box Company

This growing industry was established in 1902, being incorporated with $20,000 capital. It occupies an entire floor of the building at 118-120 West Michigan street, which is 50 x 100 feet, where high grade skilled laborers are employed to the number of twenty, and where 1,000 cigar boxes are the daily output, varying somewhat according to the demands of the trade. The very best quality of Spanish cedar lumber is used, the logs being shipped whole to New York and there sawed in box lumber. The cigar boxes made in this establishment find a market all over the Northwest including the Iron and Copper ranges, and points as far away as Winnipeg. Officers of the company are: P. J. Van Vick, president; H. Hovde, vice president; H. B. Detwieler, secretary.

42,000,000 MATCHES A DAY

DULUTH is proud of the distinction of being the home of the largest independent match factory in the United States, where the Union Match company daily manufactures 42,000,000 "Tip-Toe," "Noiseless," "Firelight" and "Staylit" matches. They have a magnificently equipped plant, covering seven acres of ground space, where 3,000,000 feet of white pine is manufactured into matches annually, giving employment to 160 wage-earners. The Union Match factory, has a complete match factory under one roof, where are manufactured the match blocks from the best white pine logs that grows. When received they are scaled, sawed, planed and cut into 4-foot lengths. Then the sawyers saw them up into the regulated sizes. The blocks are now carried to the assorters, where they are assorted and inspected, to make sure that there are no defects in the blocks, then the blocks are ready for re-sawing into matches. The making of matches is a most interesting process, from the white pine log to the delicate, artistically shaped match with its crown of illuminate that only requires a light touch to ignite it into a beautiful white light. The Union Match company's matches are of superior quality, as every match is a sure light producer, non-explosive, free from odor, the most perfect match of the twentieth century. The popularity and great sale of the Union Match company's "Tip-Toe," "Noiseless," "Firelight" and "Staylit" matches extends all over the United States, and gives employment to thirty-eight traveling salesmen. There are match factories in and out of the trust, but there are none that outstrip the Union Match company, Duluth, Minn., for the quality of the matches manufactured or the equipment of plant. The officers of the company are: M. H. Alworth, president; F. W. Heimick, vice president and treasurer; John B. Heimick, secretary.

THE CLYDE IRON WORKS.

AN important acquisition to Duluth's industrial development will be the extensive new plant now in course of construction by the Clyde Iron works. The plant will cover several blocks in the vicinity of Thirteenth avenue west, on the bay front, an unexcelled location as regards the shipping facilities by both rail and water which it will command.

The Clyde Iron works has been rapidly expanding since its establishment in this city in 1899, though it was formerly known as the Northwestern Manufacturing company, but that name gave place to the present title several years ago, though its management continues to be practically the same. The present location on Lake avenue has been outgrown for some time, but the new establishment will afford ample room for expanding the different departments of the business, and will be a complete, modern equipped, manufacturing plant, unequalled in its line anywhere in the Northwest.

The Clyde Iron works makes a specialty of manufacturing logging machinery, such as logging sleighs, skidders, steam log loaders and smaller tools used in that line of business. Its output of this class of manufactures exceeds that of any other concern in the United States, and its products find a market wherever logging is carried on to any noteworthy extent. Among the other products of this factory are structural iron, gray iron and brass castings and concrete mixers. Many of the castings made at these works have been marketed in Canada, while others have been shipped as far as Mexico. The superior quality of the work done, and the great diversity of products which it is adapted to turning out, causes an increasing demand, and its reputation for doing first-class work is constantly being extended into new territory. Upon the completion of the new plant, the company's facilities for producing all kinds of castings will compare favorably with those of any foundry in the United States. A large force of men are employed in the company's present undertakings, but many more will be needed when the new plant is occupied. The nature of the work in this establishment requires numbers of skilled workmen, and the company's pay rolls represent sums which, in the course of ultimate distribution by its employes, is a stimulus to many lines of trade.

The officers of the Clyde Iron works are: C. A. Luster, president and treasurer; G. C. Stone, vice president, and J. R. McGiffert, secretary.

PINE RIVER MAN JUMPS FROM WINDOW OF WALKER HOTEL WHILE SLEEPING

Breaks His Leg and Fractures Several of His Ribs.

John Leef, Township Assessor, the Victim of Somnambulism.

No Knowledge of His Movements Until He Struck Pavement.

Walker, Minn., April 26.—(Special to The Herald.)—John Leef, a resident of Pine River, this county, jumped from a second story window of the Lake Shore hotel, here, while in a somnambulistic state, to the cement walk below, suffering a compound fracture of his right leg, breaking several ribs and receiving other internal injuries.

Leef is the assessor of Pine River township, and had come to Walker to get the assessor's books. He was never known to walk in his sleep before, and had no knowledge of this accident until he found himself on the pavement suffering great agony.

The accident occurred at 3 o'clock in the morning, and Leef laid on the sidewalk for several minutes before his groans attracted attention. He is not a drinking man.

REV. JOHN WATSON,
(Ian Maclaren)
Prominent Divine, Who Is Suffering From a Severe Attack of Tonsilitis.

ASKS ARREST OF ATTORNEY HENEY

Judge Hebbard Charges Attorney With Criminal Libel.

San Francisco, April 26.—Superior Judge Hebbard of this city, who was denounced by Assistant District Attorney Francis J. Heney last night in an address to the students of Stanford university, appeared before Police Judge Weller today and swore to a complaint asking for Heney's arrest on the ground of criminal libel.

Heney is quoted as saying that Hebbard had been repeatedly characterized as unfit and stigmatized as a disgrace to the legal profession.

YOUNG MAN DROWNED.

Clinton, Iowa, April 26.—Harry McClay, aged 20, was drowned yesterday by the accidental overturning of his canoe in the Mississippi. His body has not been found.

HUSBAND IS ANGRY

Because Conductor on Street Car Winked at Wife.

Holds Up All Traffic to Discover the Miscreant.

Atlanta, Ga., April 26.—Armed with a heavy club, Oscar Huggard, a husband of two months, held up a dozen trolley cars here and demoralized the entire system in an effort to find a conductor who winked at his bride.

Huggard stationed himself early in the day on Whitehall street, a main thoroughfare, and, as a car appeared, he leaped aboard, rushed to the conductor, and, brandishing his club, cried:

"Are you the man who winked at my wife?"

"Winked at your wife?" the conductor said aghast. "Why I never saw you or her either before in all my life."

After an argument of ten minutes, which brought all the men in the car to the platform, the motorman was allowed to go on. But the husband resumed his watch, waiting for the next car.

Five cars were held up in this manner without finding the winker, and then Huggard brought Mrs. Huggard into action. Together they held up seven more cars.

By this time traffic on the Whitehall street line was demoralized. The police took a hand and arrested Huggard. He is a business man and promptly gave bonds.

According to Mrs. Huggard, as she left a car about 2 o'clock she had been winked at by one of the conductors. When she got home she began thinking of that wink. At last she broke down and cried. She was still crying when her husband found her and that was why he got his bludgeon and held up the system.

At the car barn, when the conductors told the story, a man off duty whispered:

"I am the man, but I wasn't winking at her. I just got a grain of sand in my eye."

THE ESKIMO IS DOOMED

White Men Ruining Race With Wines and Vices.

Polar Expeditions Do Much More Harm Than Good.

New York, April 26.—"There won't be an Eskimo living in a few years unless Arctic expeditions cease. It is not the white man's burden. I can prove that exploring parties commit awful sins against the Northern natives.

"The Eskimo, as a race is doomed. The white man is killing him with liquor and vices. The Eskimos, who went to Buffalo and Chicago, to the fairs of the white man, returned to Hebron with disease.

"Look at the picture given in stereopticon views at explorers' lectures and you will recognize Eskimos, so-called, that are almost white. That is one of the white man's sins.

"There is no necessity for Polar explorations. I am satisfied that there is nothing at the pole except an open sea, which freezes over. There is no land there. One might just as well go out in the broad Atlantic from Coney Island on a cake of ice to prove something, as to drift across the North Pole."

In such plain language Dr. Wilfred T. Greenfell, known the world over for his missionary work among the Labrador natives, gave his views yesterday on affairs of the Arctic region. Dr. Greenfell started for England on the White Star line steamer Oceanic to spend a few weeks with his mother in Chester, England, preparatory to returning by way of St. Johns, N. F., to his Labrador field.

The doctor's opinion as to the Eskimo and his returns with the white explorer was brought out by a question as to the future of the native. He replied:

"The Eskimo is not wise in trading. The Eskimo woman is unwise in other ways. The white trader, with a few tin whistles, will take the furs from the Eskimo every time. Every time that an exploring party has gone to a new part of Eskimo land the immorality of the women there was always marked thereafter."

"What, in your opinion, is to be found at the North Pole?"

"Nothing but ice or an open sea. The Arctic zone, to my mind, is a great plain of ice, and no living man is sure in what direction the ice sea will flow. The explorer may find the pole, so-called, but it will be by chance and by drifting."

LEOPARD GETS AWAY FROM ZOO

Fire in Lincoln Park Causes Trouble Among the Animals.

Chicago, April 26.—Fire attacked the animal house in Lincoln park today, and in the hurry to save the dumb inmates a young leopard escaped, but was afterwards recaptured. The fire started between the double roofs of the house, and while firemen were extinguishing the flames the animals were run from their indoor cages into the outer ones, which they inhabit during the summer months. The outer door of the leopard's outer cage had been unfastened during the winter, and the young leopard promptly sprang through the opening and into the park, with Keeper Devry in close pursuit. The fugitive ran a few steps, stopped and shivered in the cold air, and then allowed the keeper to chase him back into the cage. The fire loss was inconsiderable.

WESTON IS FIRST HERE

Big Steamer Gets in Before Noon After Fast Trip.

Is Followed Closely by the Bransford and Kerr.

After a race of thirty-six hours up Lake Superior from the Sault canal, the vanguard of the big fleet of freighters arrived outside Duluth this morning at 11 o'clock. The steamer Charles Weston, one of the first boats to arrive at Detour over three weeks ago, was first to pass through the Duluth canal piers.

She arrived in the harbor at 11:20, and as she steamed in through the canal she was greetedb yt he sonorous whistling of the few boats which were in the harbor. The canal piers were lined with people anxious to view the winner of the great race, and the first boat to enter the Duluth harbor from the lower lakes.

Only a few miles behind the Weston the steamer Bransford was sighted, followed closely by the William B. Kerr, on her maiden trip up the lakes. The Bransford came through the canal at noon, and the Kerr five minutes later.

The Charles Weston and the William B. Kerr are boats of the Tonawanda Steamship company, while the Bransford is of the Hawgood fleet. The Weston and Bransford were loaded with coal, the former going to the St. Paul and Western coal docks to unload. The Kerr came up the lakes light to load grain.

The Kerr is the largest carrier on the lakes this season and is due to load grain at this port. It is predicted that she will take on 425,000 bushels of wheat which will surpass any former record by over 25,000 bushels. The Weston and Bransford will load grain for the return trip down the lakes.

The steamer Weston made an excellent trip up the lake, having locked through the Sault at 11:20 Thursday night and arrived in Duluth at 11:20 this morning making the trip in just thirty-six hours. This is considered excellent time by vesselmen, considering the fact that she was loaded.

Other boats of the fleet were expected to be pulling into the harbor at any time this afternoon.

RENT IS $14,000 A YEAR.

Chicago Millionaire Pays Enormous Price for Apartments in New York.

New York, April 26.—In a suit for rent it was revealed that Arthur B. Prout, the millionaire Chicago gas man, paid $14,000 a year for his apartments on the fourth floor of Sherry's, and the gas man and Sherry fell out because Prout refused to give up his fine apartments to Prince Henry.

Prout, after a summer tour through Europe, decided to buy a house in West Fifty-second street and decided not to occupy Sherry's apartments. Suit was brought for six months' rent, and Justice Truax gave judgment for the full amount, $7,000.

THE TER-CENTENNIAL EXPOSITION FORMALLY OPENS AT JAMESTOWN

SOME OF THE PRINCIPAL BUILDINGS OF JAMESTOWN EXPOSITION.

Mines & Metallurgical Bldg | Pure Food Bldg

Palace of Commerce | Virginia State Bldg.

Event is Attended With Usual Pomp and Ceremony.

President of United States and Foreign Diplomats Present.

Grand Naval Display One of Most Interesting Events.

Norfolk, Va., April 26.—The Jamestown ter-centennial exposition—a land and water display such as never was attempted in this country or on foreign shores, was opened today with that pomp and ceremony which always attends an event whenever the president of the United States is a center and diplomats of foreign nations, governors of states and like dignitaries are honored guests and participants.

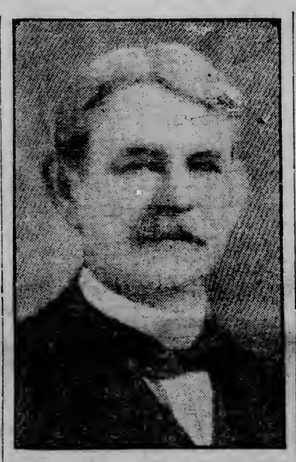
Incidents to the opening President Roosevelt reviewed from the deck of the Mayflower, the war vessels anchored in Hampton Roads. He reached Discovery landing, having been transferred in a naval launch from his yacht, shortly before noon and amid applause from the thousands, gathered to voice their welcome, he was received by the exposition management. Then followed the program for opening to the public the enterprise commemorating the three hundredth anniversary of the first English settlement in America which program included an address by Harry St. George Tucker, president of the exposition, and one by President Roosevelt; singing by the exposition chorus of 700 trained voices, the pressing of the gold button by President Roosevelt which marked the formal opening and a review by the president of the assembled military forces.

At sunrise the ceremonies were begun by the United States artillery firing a salute of 300 guns to usher in the day.

This was a signal for the trend of humanity to railroad trains, street cars and boatlines, which from that moment, poured people into the grounds.

A distinguished gathering received the president and his party at Discovery Landing. It included President Tucker and all of the general officers of the exposition, Rear Admiral P. F. Harrington in charge of the naval program and Maj. Gen. Fred D. Grant, who arranged the military attractions. After an exchange of greetings during which the bands

(Continued on page 9, first column.)



MASSIVE WARSHIPS

Of United States and Foreign Nations Form Grand Spectacle.

Fleet Reviewed by President Roosevelt on Mayflower.

Norfolk, Va., April 26.—The deep throated guns of five great nations today voiced a salute in unison to the American flag and to the president of the United States. The reverberating boom of the cannon sped thundering and echoing over the waters of the far famed Hampton Roads, where nearly half a century ago the Monitor and the Merrimac met in the memorable conflict which brought into being the armored craft of war. From the "little

(Continued on page 9, third column.)

HENRY ST. GEORGE TUCKER, President of the Jamestown Exposition.

GENERAL WELCOME

To the Jamestown Exposition Extended by the President.

Makes a Characteristic Speech on Duties of Nation.

Norfolk, Va., April 26.—The center of attraction at the opening of the Jamestown exposition today was the president of the United States, who spoke to the thousands who had assembled in honor of the event. Henry St. George Tucker, president of the exposition, introduced the president in the following words:

"Ladies and gentlemen: I stand before you today a living monument to the self control of the president of the United States. Had he possessed less of this virtue than he does, I should long since have been numbered with those whose history is finally written, for, in season and out of season, by day and by night, and at all hours beginning with May and ending with the close of April, hav I, without conscience bombarded him with requests, invoked his aid, and sought his counsel in the interest of the Jamestown exposition, until I doubt not that in the quiet hours of his seclusion (if he has any), he has often asked himself

(Continued on page 4, first column.)

PLEA OF GUILTY BY W. A. BREWER

Withdrawn When Prospects of a Fine Only Vanish.

New York, April 26.—William A. Brewer, former president of the Washington Life Insurance company, who is under two indictments on charges of perjury and one of making a false statement concerning his company's affairs to the state insurance department, appeared in the supreme court today and tentatively offered a plea of guilty to the latter charge. It was understood that the plea of guilty was offered with the idea that only a fine would be imposed. Assistant District Attorney Nott said he had no objection to a plea of guilty being accepted, but that he would oppose a fine as the penalty. He declared that prison sentence was deserved and should be imposed. The tentative plea was withdrawn, when the case was put over until Tuesday.

WILL IMPLICATE A THIRD PARTY

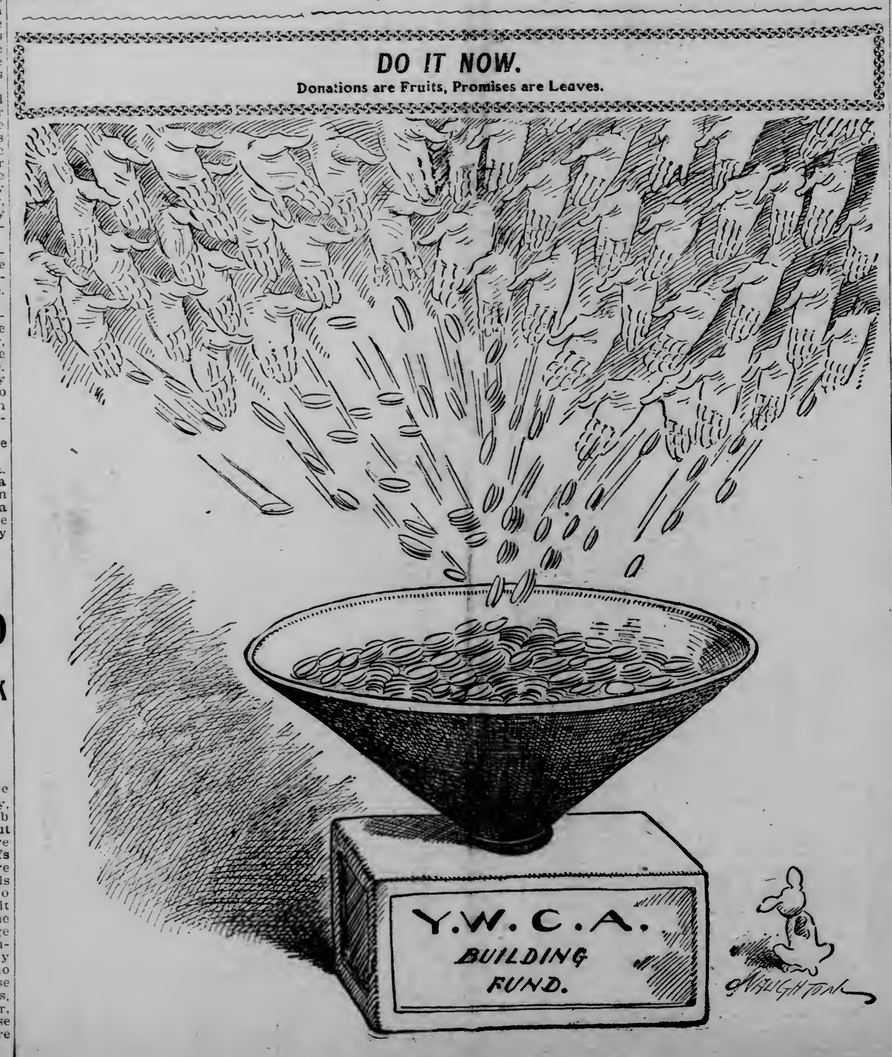
Rumors to That Effect Persistent in Douglas Case.

New York, April 26.—That the district attorney's office will make a determined effort to connect a third man with the stealing of several hundred thousand dollars' worth of bonds from the Trust Company of America was the persisten rumor today. There was a long conference in the district attorney's office today between Assistant District Attorney Murphy, who has the investigation in hand; Oakleigh Thorne, president of the Trust Company of America; Robertson Henry, counsel for Douglas, and Forbes J. Hennessy, counsel for Dennett. It is believed that this conference was in connection with the attempt which the district attorney's office is making to get from Dennett and Douglass the name of another man who may have been connected with them.

Mr. Thorne declined to say anything about the conference or its results. He said all of the missing bonds have been found and added "so far as the trust company is concerned, the incident is closed."

CANTILLION SUSPENDED BY PRESIDENT O'BRIEN.

Milwaukee, Wis., April 26.—President J. D. O'Brien of the American Association of Baseball Clubs, today announced the suspension of M. E. Cantillion of the Minneapolis club for three days for umpire baiting and refusing to leave the field at Louisville, April 24, when ordered to do so by Umpire Korin.



STRACCIARI IS ROBBED

Conried Opera Singer Loses Money and Jewelry in Minneapolis.

Police Say Valuables Were Stolen While Couple Shopped.

Minneapolis, April 26.—(Special to The Herald.)—While at dinner in the West hotel, Signor Stracciari of the Conreid Opera company, was relieved of $595 in cash and about $1,000 worth of jewels, yesterday afternoon. He vehemently insists that while he was sitting at the table with his wife, she put a handbag on a nearby chair. The handbag had the money and jewels in it, and when she desired to pay the hotel bill, she found her money, the bag and jewels missing. The excitement of the Italians was so intense that everyone in the room at the time, including the negro waiters, was searched by the house detectives.

Minneapolis detectives, however, do not agree with the signor's version of the story. They say that the money was stolen by a wily thief while the couple was shopping in one of the department stores on Nicollet avenue. They are still on the case.

WEATHER FORECAST—Increasing cloudiness with lowest temperature about 30 degs.

Buy Your Suit Here and Expert Tailors Will Keep it Pressed Free of Charge

Uncommon Suits at a Common Price,

$15.00

It isn't much of a trick to name such a price for a suit—any store can do that—the difficult part comes in selling a suit for $15.00 that is different from the ordinary run of $15.00 suits. The difference that separates the superior from the ordinary is what places our $15.00 suits.

IN A CLASS BY THEMSELVES.

No store in Duluth does or can give you so much value—such a variety—such excellent tailoring—so much style effect and such perfect fitting clothes for $15.00 as does this store. Why? Well ours are

PARTICULAR CUSTOMERS WHO WANT TO LOOK RIGHT

They come back every season and usually send their friends here—they know that we labor unceasingly for the betterment of our popular priced clothes and that any suit they get here will stand out prominently when subjected to critical inspection.

3 Points in Favor of Our $15 Suits

FIT—Many a merchant tailor does worse and calls it good.
VALUE—Many a store offers you clothes "worth up to so-and-so" that are not nearly so good.
ASSORTMENT—Many a store shows you a third—perhaps a half—of the variety and calls it large.

PUTS BLAME ON HIS WIFE

Ellis Walsh Says Wife's Actions Drove Him to Drink.

Claims Home Life Happy Till She Started the Trouble.

Ellis Walsh was on the witness stand all the morning under cross-examination by C. E. Adams, counsel for Mrs. Walsh, concerning his testimony of yesterday afternoon.

Mr. Walsh admitted that he has been under the influence of liquor, and that on one occasion he gave his wife a severe beating, but claimed that she brought it all on herself by her actions, and that until she started to run the streets with other men he kept away from saloons and spent his leisure hours with his own family and treated his wife with the utmost consideration. He claimed that Mrs. Walsh's actions had so aggravated him that at times he hardly knew what he did; that he had put up with more than most men would in order to avoid publicity of their family troubles.

The witness was examined closely concerning the events of July 4, 1905, and of Feb. 10 last, at which dates there appear to have been climaxes in the domestic storm in the Walsh household. He was positive that when he took some friends home with him on the evening of Feb. 10, and entered through the back door by reason of the front door being locked, that Ole Berg was in the house with Mrs. Walsh, and made his escape through a window and over the porch. He claimed that when he found Berg in the house, Mrs. Walsh turned pale, but that she covered Berg's retreat as best she could.

Mr. Walsh claimed that after Berg got away he, the witness, set chairs about the table for his friends and went out to the kitchen to persuade Mrs. Walsh to go in and help entertain his friends, telling her that he had done the best he could to cover up the matter. The witness testified that Mrs. Walsh refused to go and that she said she would not entertain his —— —— Irish friends.

The witness further testified that before the trouble, July 4, 1905, he got an envelope addressed to his wife from Nashwauk, that he knew it was the handwriting of Killincan. Mr. Walsh said he opened it, but there was no letter inclosed, simply the words "write soon" written on the inside of the flap of the envelope. He claimed he did not know what it meant, but supposed Mrs. Walsh did "as she was on the game."

Mr. Walsh, in testifying to the final arrangements for Mrs. Walsh to leave him, said she promised she would go away and leave the children with him if he would give her $100 to get away with.

His testimony throughout showed his bitter feeling toward his wife on account of her alleged actions with other men, which the witness claimed was responsible for breaking up the home ties.

MIDDIES IN THE MAKING.

It is probably not generally known how the United States government trains the youth upon whose shoulders will rest the responsibility of maintaining the high standard of the navy. His apprenticeship, according to Leslie's Weekly, is not unlike that of any other young man learning a trade; the fundamental principle being the proper kind of tools—when and how to use them.

A midshipman's tools, so to speak, are ships, thus rendering a thorough knowledge of seamanship an essential part of the training. This begins with lessons in splicing hemp and wire rope, after which the young men are given practice in handling sails on the indoor mast in the seamanship building, which is an exact counterpart of the mizzenmast of the training ship Severn and is seventy-two feet in height.

The midshipmen go aloft, furl, reef and set sails, etc.—in fact go through the entire seamanship drill. A net is spread at the foot of the mast for protection, as a fall on the concrete floor would be far more serious than on the deck of a ship. Accidents, however, are infrequent.

Drills on the Severn begin early in the spring and continue throughout the cruise, which lasts from June until September. The midshipman thus becomes accustomed to ship life. The work is hard and the discipline severe during these drills. There is little tendency to shirk duty, and the future admirals do everything on shipboard, on deck and aloft, even to clearing up the deck and stowing away the ropes.

From a picturesque point of view seamanship practice on the Severn surpasses all other similar exercises. It seems that on shipboard the sense of the reality of the thing is ever present, and one accustomed to witnessing these drills notices that on the deck of the old Severn the middies are more active, more in earnest, and the manner in which they climb and swing around the rigging does credit to an old sailor.

Each man starts in with a practical seaman's duties, and as he continues his course is advanced to the duties of the petty officers and later to those of the junior commissioned officers.

MUST TUNE IN THEATER.

Boston Herald: People who go to theaters often wonder why the orchestra always "tunes up" its instruments after it comes out from beneath the stage and is seated.

"Why don't the musicians tune up before they come out in view of the audience?" was asked of a musical director.

"Because the instruments have to be attuned to the atmosphere of the theater," he answered. "If we tuned the instruments in the basement we might find a different temperature when we got into the teater and that might make a difference of a half-note."

Hat Pins, La Falliers, Combs, Brooches, Veil Pins, Gold or Silver Purses and other very new things—at especially attractive prices tomorrow.

Superior Street and 1st Avenue West.

RAILROADS

CHANGES IN THE RATES

First of May Will See a General Shaking Up.

Theatrical Party Rates Will be Withdrawn First of Month.

Theatrical party rates for points within Minnesota will be withdrawn May 1, but they probably will not be withdrawn for interstate travel until the interstate rates are lined up to suit the reductions in the different states. Interstate party rates are likely to be affected with other kinds of rates, as announced in a circular just issued, reading in part as follows:

"To stations in other states the existing interstate rates from Minnesota stations will remain unchanged until receipt of new rates, which will be made as soon as the rate situation will enable stable interstate rates to be made and the necessary tariffs can be prepared and furnished. Reduced interstate rates account clergy, charity and for inmates of soldiers' home, will remain as per current regulations applied to existing interstate fares in effect May 1, 1907, until further advice."

It is understood that the ruling of the interstate commerce commission that the granting of special rates to theatrical parties and similar organizations which is illegal under the Hepburn act will not be questioned by the railroads in a test in the courts. Because of the reduction of fares in the different states the general public will enjoy the same rates now granted theatrical parties, on the basis of 2 cents a mile, under which conditions no special rates will be granted.

For theatrical and similar parties of ten to nineteen, inclusive, the roads have a tariff which provides a special rate on a 2½-cent basis, and 2 cents for parties of more than twenty. This applies to all points within the Western Passenger association territory. There is one road, however, which has made this tariff applicable to all parties of the required number, on the ruling of the attorneys of the road that the granting of such a rate to theatrical parties was discriminatory.

Party rates come out in Minnesota on May 1 on all lines. It is expected that all the roads will follow the lead of one line which has issued a circular making a definite statement to the effect that "Organized party rates between stations are superseded by the new one-way fares." The policy of living up strictly to the 2-cent fare law is shown further by the fact that mileage ticket rates are cancelled and no mileage tickets will be sold in Minnesota after April 30. Mileage tickets sold previous to May 1 will be honored in Minnesota as heretofore, detaching proper mileage according to the distance traveled, regardless of money value of coupons, which under conditions of sale prior to May 1 are good only on a basis of one coupon for each mile. Mileage tickets sold in other states after April 30 will not be good and are not to be honored locally between stations in Minnesota, but may be honored for continuous passage for interstate trips and for checking of baggage between stations in Minnesota and stations in other states in which the mileage is good.

Duluth is the Best.

When interviewed today by a Herald representative, regarding the progress of the Fitwell store, Mr. Charles D. Jacobs of the firm stated: "The amount of business we have done certainly gives evidence that Duluth is one of the most prosperous cities in America today." Mr. Jacobs says, "That the Duluth store, 112 West Superior street, leads in volume of business any of the other sixty stores operated by the Fitwell Clothing company, throughout the United States."

This enterprising firm is certainly deserving of their success, having given Duluth one of the most beautiful stores in the city and a line of clothing probably the finest ever shown at popular prices.

ARBOR DAY EXERCISES

Were Held in Schools, But No Trees Planted.

Simple exercises were held in all the schools of the city today, the intent and spirit of Arbor day being properly explained. The more typical observation of the day, the planting of trees, was of necessity postponed until the weather of the North is such that nature will help along in every way the newly planted tree. This ceremony has been planned in many instances for a few weeks later.

There is one department of the Women's Council whose work is to to rouse interest among citizens in this day which often passes without the ceremonies which should mark it. There is a committee of the Council devoting its energies to the preservation of natural beauty in the city and the committee has done good work. In another year probably a committee of the council will be formed with the purpose of interesting the citizens of Duluth in their duties along the line of tree planting.

NOTED VIENNA SURGEON JUMPS INTO THE DANUBE.

Vienna, April 26.—Prof. Albert Ritter von Mosetig-Moorhof, the famous surgeon and introducer of iodoform, threw himself into the Danuhe today while suffering from mental trouble, and was drowned.

Blue serge double breasted suits at $15 at the "Fitwell."

FLYING IRON CAUSES KICK

Lumbermen Want Wreckers on Bridge to be More Careful.

Several Men Working on Booms Report Narrow Escapes.

A complaint was registered with the police today by John W. Bayly, assistant manager for the Alger-Smith Lumber company, in regard to carelessness on the part of the men engaged in blasting out the twisted and useless iron work on the interstate bridge. According to Mr. Bayly's statements, the wreckers are proceeding very carelessly in placing and covering their blasts and several narrow escapes have occurred at the mill. Two weeks ago a complaint was registered with the police on a similar occasion and it had no effect as the police did not see how they could very well interfere. There is an ordinance prohibiting blasting without suitable covering within the city, but in the under water work it is hard to determine what is a suitable covering.

This morning Bayly thought that he would make an impresson and brought down one of the pieces of steel that came hurling through the air for a distance of 200 feet after a blast and just missed striking a group of six men at work on one of the log booms. This piece of metal was nearly four pounds in weight and struck the logs upon which the men were working with such force that fibres of the wood were imbedded immovably in the crevices of the iron.

"The men have got so that they are afraid to work on the booms in that vicinity for fear of being struck by flying chunks of iron. We have had no accidents as yet, but there have been some mighty narrow escapes and I would like to see it stopped," said Mr. Bayly.

The matter has been taken up with City Attorney Fesler by the police department.

MEMBERS ARE NAMED

Chairman Patterson Announces Appointments on Two Commissions.

County Inspector Act is Probably a Dead Letter.

Chairman E. M. Patterson, of the county board named today the personnel of the courthouse commission and the board of poor commissioners. The appointments are made under the new law delegating the authority to the chairman and following a recent supreme court decision that held the appointment of commissions by the judiciary to be illegal.

Nell McInnis, John Sundeen, P. J. Ryan of the county board and John Miller and W. C. Agnew, are named as courthouse commissioners.

As was expected there was practically no change in the board with the exception of the appointment of Mr. Ryan of Hibbing in place of E. Morcom of Tower, the latter not now being a member of the county board.

The members of the poor commission were reappointed. These are J. H. Heard-ing, Ward Ames and John Jenswold, Jr.

The members of both commissions will qualify for office by taking the oath before the judges of the district court.

The outcome of the appointments on the courthouse commission will be watched with interest for there have been rumors that Mr. Agnew would not accept the office again, that he would consider the present opportunity of withdrawing from any further responsibility in connection with the building of the new courthouse.

* * *

It is feared that the act passed by the legislature providing for an inspector or auditor to examine the accounts of town and school officers is a dead letter. There was no opposition to it in the legislature, to speak of, but so far as can be learned the act was passed with the provision that the inspector be appointed by the judges of the district court and the supreme court recently held that the judiciary has not the appointive power. The act further provided that the inspector should be paid a salary of $2,500 per year.

If the act has been killed by reason of a mistake in its provisions for the appointment of the inspector, it will be considered very unfortunate for the reason there was a strong sentiment in favor of some check on the financial affairs of towns and school districts.

Italian Grand Opera Records.

Talking machine enthusiasts have now an opportunity of hearing, for the first time an American record of the famous Societa Italiana de Fonotipia, an organization composed of forty of the greatest Italian grand opera singers. The records themselves are a novelty, in that each one is a reproduction of two numbers, one on each side, a 10¾ inch disc only being used. The Columbia Graphophone company alone have the American rights to these magnificent records, which can be heard at their store, 18 Third avenue west.

No Better at any Price

CALUMET
BAKING POWDER

Makes Wholesome Food

The wholesomeness of bread, rolls, biscuits and cakes depends on the kind of baking powder used. Chemists have proven that some baking powders leave residues of Alum or Rochelle Salts in the baking; others leave Ammonia or Phosphatic Acid. To always avoid these use

CALUMET BAKING POWDER

Calumet is a pure, wholesome baking powder. $1,000.00 is offered for any substance injurious to health found in it.

Calumet Baking Powder is prepared from the finest materials possible to select under the supervision of competent chemists.

Calumet Baking Powder complies with the Pure Food Laws of all states.

All grocers are authorized to guarantee Calumet Baking Powder in every respect.

HIBBING LIBRARY BOARD.

Mrs. F. C. Jewett, C. M. Atkinson and E. D. McEachin Appointed Members.

Hibbing, Minn., April 26.—Mayor Welrick has appointed Mrs. F. C. Jewett, C. M. Atkinson and E. D. McEachin to membership on the library board. Thomas Falminen, who served last year, declined to be reappointed.

Pending the laying of pipes to the shaft of the Penobscot mine, which is about one and a half mile from the city, the council has decided to extend surface pipes to the shaft of the Buffalo and Schenectady mine, which is only 2,000 feet from the center of the town. By this means the city will be afforded necessary fire protection until the original plans can be realized upon.

The North Star house one of the leading second class hotels of this city, was sold yesterday by its owner, Adam Schneider, to August Falls, who took immediate possession. The consideration is said to have been $15,000. The new owners will make extensive repairs to the building.

TRAINS COLLIDE.

Hanley Falls, Minn., April 26.—Two freight trains collided at the station owing to slippery tracks caused by the snowstorm. One engine was badly damaged, several cars of lumber were telescoped and several immigrants were slightly bruised.

CHURCH IS TO BE DEDICATED

Sunday's Exercises at Scandinavian Evangelical Church at Virginia.

Virginia, Minn., April 26.—(Special to The Herald.)—The Scandinavian Evangelical church recently erected here will be dedicated next Sunday. The exercises will begin Saturday evening at 7:45. Revs. C. V. Bowman of Minneapolis and F. O. Kleng of Duluth will be present and deliver addresses. Services will begin Sunday morning at 10:45. Another meeting will be held in the afternoon at 2:30 which will be conducted in the English language and addresses will be made by several of the pastors of the local churches. The dedicatory address will be delivered Sunday evening by Rev. C. V. Bowman of Minneapolis.

Rev. J. P. Ohleen of Minneapolis, traveling missionary for the society, commenced the work of raising funds for the erection of this new church in October last, assisted by local members, and a handsome building at the corner of Wyoming avenue and Locust street that cost in the neighborhood of $2,500 is the result of their efforts. Rev. Ohleen will be present at the dedication and will make addresses.

The church starts off with a membership of about thirty. A pastor for the society has not been selected, but two have been asked to come and deliver trial sermons and a selection will be made in the near future.

MARRIAGE AT BEMIDJI

Of Miss Clara E. Loud and Clarence D. Lucas.

Bemidji, Minn., April 26.—(Special to The Herald.)—The marriage of Miss Clara E. Loud to Clarence D. Lucas took place Wednesday forenoon at the home of the bride, the ceremony being performed by the Rev. Parschall of the Episcopal church. The young couple left on the noon train for a short trip to Duluth. The bride is the only daughter of Attorney H. J. Loud, and is well and favorably known here, where she has been a teacher in the public schools for the past three years. The groom is a bookkeeper for the Crookston Lumber company. They will make their home here, having rented the J. J. Conger residence on Dewey avenue.

TWO BILLS VETOED.

Governor Johnson Declines to Approve Two Legislative Measures.

St. Paul, April 26.—Governor Johnson yesterday vetoed the Robertson bill, referring to the food department and providing for the prosecution of the wholesaler or his agent, instead of the retailer, in case of violations of the pure food law.

He also vetoed the Morse bill, permitting counties to appropriate money for exhibits at the proposed semi-centennial exhibition, to be held in 1908, but as there is to be no semi-centennial exhibition, Governor Johnson said he saw no reason to burden the books with the law.

NEW SUPERINTENDENT.

Thomas Downs Will be at Head of the Capitol Employes.

St. Paul, April 26.—Thomas Downs of Minneapolis has been appointed superintendent of the new capitol, Governor Johnson announcing his selection yesterday.

Cass Gilbert, architect of the capitol, yesterday refused to accept four bronzes which were ordered with a view to being placed at the main entrance of the building. Mr. Gilbert said they were not up to the standard of workmanship. The tablets were ordered by the commission, and are inscribed with the names of the governors who were in office during the building of the capitol and with the names of the capitol commissioners.

Martin Lund of Wabasha county, was yesterday appointed clerk of the department of surveys in the secretary of state's office. The appointment was made by the secretary, Julius Schmahl. This office was created by the recent legislature. Mr. Lund was formerly deputy county auditor and surveyor of Wabasha county.

LODGE NOTES

NEW LODGE TO INSTALL

Knights of Khorasson Will Hold First Ceremony Soon.

Special Trains Will Come From Twin Cities and Range.

The first installation of the new lodge, Dramatic Order of the Knights of Khorassan, which was organized last Tuesday evening, will be held at the Armory two weeks from tomorrow night, May 11.

Members of the D. O. K. K. are taken from the ranks of the Knights of Pythias, and in order to become a member it is necessary to be in good standing as a member of the Knights of Pythias.

Those in charge of the affair are making great preparations for the ceremony, and special trains will be run from the Twin Cities and the range towns. Minneapolis will send a degree team to properly initiate the big class of 275 candidates into the mysteries of the order. A banquet will be part of the entertainment of the evening, and speeches and toasts will be delivered. The general committee on arrangements consists of W. E. McEwen, Duluth; D. O. Anderson of Virginia, William Roleff of Two Harbors, A. M. Fenton of St. Paul and F. L. Young of Duluth.

The newly organized temple has not yet been named, but one of the following will probably be selected: Al-Sirat, Alhambra, El Hara, Medina or Harun. As the names of temples already organized are not known to the local members, the above list has been sent to the general secretary, and he will select one of the names. No two temples can have the same name. The temple will be numbered 125.

The officers who will be installed are as follows:

Royal vizier, R. I. Tipton, Superior, Wis.; grand emir, James A. Wharton, Duluth; sheik, W. S. McCormick, Duluth; mahedi, B. F. Fowler, Two Harbors; mokanna, Louis Dworshak, Duluth; doc, George E. Duren, Grand Marais; master of ceremonies, J. L. Cromwell, Duluth; secretary, George M. Cruickshank, Duluth; treasurer, John J. Lumm, Duluth; satrap, S. L. Pierce, Duluth; sahib, H. Jones, West Duluth; nawab or imperial prince, J. H. Davis, Duluth; princes, Iver Amundson, Two Harbors; L. A. Barnes, West Duluth, and F. L. Young, Duluth.

PLANS FOR ENTERTAINMENT

Meeting of General Fraternal Congress Committee is Called.

Chairman George R. Laybourn and Secretary B. P. Neff have issued a call for a meeting this evening of delegates appointed by the several fraternal organizations of Northern Minnesota and Wisconsin to look after the entertainment of the delegates to the convention of the National Fraternal congress in Duluth next August. Senator Laybourn and Mr. Neff are at the head of this committee to look after the preliminary arrangements.

Plans for raising entertainment funds, and for arranging everything so that the convention will be an assured success, will be talked over tonight, and probably different sub-committees to look after the work will be appointed. The meeting will be held at the Commercial club at 8 o'clock. One matter that will be taken up will be the appointment of a committee of ladies to look after the entertainment of the ladies who will visit the city at the time of the convention.

Madam, can you make light, crisp, palatable hot biscuits and muffins? Use Hunt's Perfect Baking Powder and make them still better.

LAIRD IS NEW COMMANDER.

One Hundred Knights Templar Attend Annual Conclave at Austin.

Austin, Minn., April 26.—The Grand Commandery of Minnesota, Knights Templar, held its annual conclave in this city Wednesday afternoon. About 100 delegates from the outside commanderies were present. St. Bernard commandery of this city acted as escort from the train to the asylum. The afternoon was spent in the business session. The following officers were elected and installed:

Grand commander, William Hayes Laird, Winona; deputy, C. E. Overshire, Minneapolis; generalissimo, John Fishel, St. Paul; captain general, James R. Smith, Faribault; senior warden, James C Burchard, Marshall; junior warden; John T. Black, Duluth; prelate, J. B. Hingeley, Minneapolis; treasurer, Charles W Drew, Minneapolis; recorder, Thomas Montgomery, St. Paul; standard bearer, George M. Stowe, Wadena; warden, N. C. Pike, Lake City.

The Minneapolis and St. Paul commanderies were largely represented. At 7:30 a fine banquet was served at the auditorium, at which over 150 sat down. This was followed by speeches and responses to toasts by distinguished visitors. The meetings here were in charge of Col. Charles L. West, the retiring grand commander. The business houses were decorated for the occasion.

MISS EVANS RE-ELECTED.

Minnesota Board of Missions Closes Its Annual Meeting.

Northfield, Minn., April 26.—The annual state meeting of the Women's Board of Missions of the Interior was brought to a close here yesterday. Miss Margaret J. Evans of Northfield was re-elected president. The names of the officers are:

Corresponding secretary—Mrs. S. W. Dickinson, St. Cloud; assistant corresponding secretary, Mrs. Harlow Gale, Minneapolis; recording secretary, Mrs. A. B. Upham, St. Paul; assistant recording secretary, Mrs. J. A. A. Burnquist, St. Paul; treasurer, Mrs. E. R. Williams, Minneapolis; auditor, Mrs. W. W. Morse, Minneapolis.

After dinner coffee was served at Gridley hall, where the delegates were the guests of Miss Evans and the Carleton college girls.

Devotional exercises at the afternoon session yesterday were led by Mrs. H. K. Painter of Minneapolis and were followed by addresses by Miss Patterson of China and Miss Webb of Turkey on "Evangelistic and Native Laborers in the Field."

SEWER SYSTEM AT BIWABIK.

Pastoret & Lunz of Two Harbors Are the Lowest Bidders.

Biwabik, Minn., April 26.—(Special to The Herald.)—The village council on Tuesday evening opened the bids for construction of the proposed new sewer system and enlargement of the water plant. There were eight bids offered and although they have not been figured out yet it is thought that Pastoret & Lunz of Two Harbors made the lowest bid. It is said that there is but two or three dollars difference in their bid and that of Alex Lang of Duluth. The lowest bid will be somewhere in the neighborhood of $45,000. C. C. Butler of Virginia, offered another bid which was nearly $9,000 higher than his proposal of last year and some $4,000 higher than that of the lowest bidder. The contract will be let at a meeting to be held on May 2. Bids were made by the following firms: M. Fitzgerald & Co., Hugh Steele, W. D. Lovell, Pastoret & Lunz, Thomas & McCoy, C. C. Butler & N. B. Thayer, P. McDonnell and Alex Lang.

Silberstein & Bondy Company.

We Sell "Onyx" Hose—

The graceful arches of a bridge are a thing of beauty, but its massive piers are what give you confidence in its strength. All the goodness of Onyx Hosiery can't be seen on the surface, but the knowledge that it is there inspires you with confidence. The Onyx Brand is the favorite of well drest women everywhere. That's why we sell it! 35c to $2.50.

Merode Hand-finisht Underwear—

Has more commercial value and intrinsic worth than any other brand in the market today. It is easy to sell because recognized as satisfactory and therefore "Best." That's why we sell it! 50c to $3.00.

The Corset Demonstration—

Madamoiselle Rosenthal is kept busy demonstrating the special fitness of the American Lady Corsets to American women—a shape for every figure. She will fit the Corset and instruct you in the proper mode of lacing and adjusting. Complete line of American Lady Corsets— $1.00 to $5.00.

"Fashioned for the Fashionable."

GENERAL WELCOME

(Continued from page 1.)

the question whether life was really worth living.

"When the history of the exposition is written there will be many whose friends will claim that each of them has done more than any one else for its development, and these conflicting claims may have to be referred to the jury of awards for final determination. The names of Fitz Lee, Daniel and Maynard; of Johnston, Myers and Cottrell; of Wool, Ellison and Shepper; of Sherwood, Southgate and Martin; of Thatcheler, Harrington and Grant, will each find many advocates and justly so, for this high honor. These men of valor, by their patriotic devotion to, and defense of, this work, have each undoubtedly slain their thousands; but the president, or David, unhelmeted, and unarmed, has slain his tens of thousands.

"And so with pleasure, I will now satisfy your waiting hearts by presenting to you the one man in the United States who has had greater opportunities than any other for advancing this enterprise, the best friend the Jamestown exposition has ever had, the best friend any enterprise has ever had, the president of the United States."

President Roosevelt opened his speech with a word of special greeting to the representatives of the foreign government, and then gave a general welcome to all present. He touched upon the early settlements in America and the iron word involved in the conquest of a new continent. Continuing he said: We can not afford to forget the maxim upon which Washington listed, that the surest way to avert war is to be prepared to meet it. Nevertheless the duties that most concern us of this generation are not military, but social and industrial. Each community must always dread the evils which spring up as attendant upon the very qualities which give it success. We of this mighty western republic have to grapple with the dangers that spring from popular self-government tried on a scale incomparably vaster than ever before in the history of mankind, and from an abounding material prosperity greater also than anything which the world has hitherto seen.

As regards the first set of dangers, it behooves us to remember that men can never escape being governed. Either they must govern themselves or they must subuit to being governed by others. If from lawlessness or fickleness, from folly or self-indulgence, they refuse to govern themselves, then most assuredly in the end they will have to be governed from the outside. They can prevent the need of government from without only by showing that they possess the power of government from within. A sovereign can not make excuses for his failures; a sovereign must accept the responsibility for the exercise of the power that inheres in him; and where, as is true in our republic, the people are sovereign, then the people must show a sober understanding and a sane and steadfast purpose if they are to preserve that orderly liberty upon which as a foundation every republic must rest.

> In industrial matters our enormous prosperity has brought with it certain grave evils.

It is our duty to try to cut out these evils without at the same time destroying our well-being itself. This is an era of combination alike in the world of capital and in the world of labor. Each kind of combination can do good, and yet each, however powerful, must be opposed when it does ill. At the moment the greatest problem before us is how to exercise such control over the business use of vast wealth, individual, but especially corporate, as will insure its not being used against the interest of the public, while yet permitting such ample legitimate profits as will encourage individual initiative. It is our business to put a stop to abuses and to prevent their recurrence, without showing a spirit of mere vindictiveness for what has been done in the past. In John Morley's brilliant sketch of Burke he lays especial stress upon the fact that Burke more than almost any other thinker or politician of his time realized the profound lesson that in politics we are concerned not with barren rights but with duties; not with abstract truth, but with practical morality. He especially eulogizes the way in which in his efforts for economic reform, Burke combined unshakable resolution in pressing the reform with a profound temperateness of spirit which made him, while bent on the extirpation of the evil system, refuse to cherish an unreasoning and vindictive ill will toward the men who had benefited by it. Said Burke, "If I cannot reform with equity, I will not reform at all. * * * (There is) a state to preserve as well as a state to reform."

This is the exact spirit in which this country should move to the reform of abuses of corporate wealth.

> The wrongdoer, the man who swindles and cheats, whether on a big scale or a little one, shall receive at our hands mercy as scant as if he committed crimes of violence or brutality.

We are unalterably determined to prevent wrongdoing in the future; we have no intention of trying to wreak such an indiscriminate vengeance for wrongs done in the past as would confound the innocent with the guilty. Our purpose is to build up rather than to tear down. We show ourselves the truest friends of property when we make it evident that we will not tolerate the abuses of property. We are steadily bent on preserving the institution of private property; we combat every tendency toward reducing the people to economic servitude; and we care not whether the tendency is due to a sinister agitation directed against all property, or whether it is due to the actions of those members of the predatory classes whose anti-social power is immeasurably increased because of the very fact that they possess wealth.

Above all, we insist that while facing changed conditions and new problems, we must face them in the spirit which our forefathers showed when they founded and preserved this republic. The cornerstone of the republic lies in our treating each man on his worth as a man, paying no heed to his creed, his birthplace, or his occupation, asking not whether he is rich or poor, whether he labors with head or hand; asking only whether he acts decently and honorably in the various relations of his life, whether he behaves well to his family, to his neighbors, to the state. We base our regard for each man on the essentials and not the accidents. We judge him not by his profession, but by his deeds; by his conduct, not by what he has acquired of this world's goods. Other republics have fallen, because the citizens gradually grew to consider the interests of a class before the interests of the whole; for when such was the case it mattered little whether it was the poor who plundered the rich or the rich who exploited the poor; in either event the end of the republic was at hand. We are in our purpose not to fall into such a pit.

> This great republic of ours shall never become the government of a plutocracy, and it shall never become the government of a mob.

God willing, it shall remain what our fathers who founded it meant it to be—a government in which each man stands on his worth as a man, where each is given the largest personal liberty consistent with securing the well-being of the whole, and where, so far as in us lies, we strive continually to secure for each man such equality of opportunity that in the strife of life he may have a fair chance to show the stuff that is in him. We are proud of our schools and of the trained intelligence they give our children the opportunity to acquire. But what we care for most is the character of the average man; for we believe that if the average of character in the individual citizen is sufficiently high, if he possesses those qualities which make him worthy of respect in his family life and in his work outside, as well as the qualities which fit him for success in the hard struggle of actual existence—that if such is the character of our individual citizenship, there is literally no height of triumph unattainable in this vast experiment of government by, of, and for a free people.

WAS NOT STATE MONEY.

St. Peter, Minn., April 26.—Otto Walter, chief of the St. Peter fire department, has written a letter to Public Examiner Anton Schaefer replying to the charges recently lodged against the department. He denies that the firemen have made any improper use of money furnished by the state, and declares that the fund which was divided among the members was derived from other sources.

TOOK CARBOLIC ACID.

Butte, Mont., April 26.—Half an hour after receiving a letter from the woman he loved, telling him that she loved another, James Arthur Cobb, a miner employed at the High Ore mine, drank the contents of a small phial of carbolic acid and died soon afterwards.

GIRL DECIDED NOT TO MARRY

Burlington, Iowa, April 26.—Arriving here with the expectation of being married to Miss Nellie Bonar, daughter of a wealthy farmer living near Middletown, Ura Miller, a young Milwaukee artist, found the home of his fiancee barred against him.

Miller returned to Burlington and sought the advice of Chief of Police Hiltz, who accompanied him to the Bonar home. After a long parley with the irate father Miller was permitted to have an interview with his love. The result of the interview, however, was unsatisfactory to Miller, the girl informing him she could not marry him.

STRONG PROTEST

Against Having Wisconsin-Syracuse Regatta at Madison on Memorial Day.

Madison, Wis., April 26.—The state assembly today by unanimous vote adopted a resolution protesting against Memorial day as the time for holding the Wisconsin-Syracuse regatta here.

Mail Orders

Are promptly and carefully filled when entrusted to us. Depend upon getting satisfaction.

This Will Be a Busy Store Saturday

TOMORROW is bound to be one of the biggest Saturdays this store ever saw! The selling will be tremendous on account of the great inducements offered. The opening of French and American Millinery will draw its biggest crowd tomorrow. The Bargain Counter offers a veritable feast in Ladies' Handkerchiefs; thousands will attend the Notion Sale—it's third day; the Furniture clearance will be at its best—as news of its great bargains circulates today and tonight. The regular stocks all over the house are contributing splendid values for Saturday's buyers. Be with the crowds of money savers at the Big Store. Come early and avoid the afternoon and evening crowds, as first comers usually have the pick of the bargains.

Women's Handkerchiefs—

Worth 12½c and 15c each; yours tomorrow at 9c

This is the bargain that's held such a crowd at the bargain counter today—and continues tomorrow. The ladies have all wondered that such splendid handkerchiefs were procurable at such a price. It certainly is your chance to provide a goodly supply for the summer—dressy, neat linen and Swiss kerchiefs.

Some are plain, hemstitched; others are plaided, checked and crossbarred—or with white polka dots; some are fine drawnwork; some are embroidered; others lace trimmed; one lot has embroidered scallops.

All are handkerchiefs selling regularly at 12½c to 15c—offered for one more day only, on the bargain counter—choice for **9c each.**

Toilet Soap 7c

Armour & Co.'s finest 10c toilet soaps—at this price Saturday.

Don't miss this—for the children's sake.

PRAISE FOR BIG ISSUE

Duluth People Express Approval of Herald's Industrial Edition.

A Few of the Bouquets Which Have Been Thrown.

The Herald's 92-page Industrial edition, issued yesterday, was received with words of commendation on every hand. As soon as the newsboys appeared on the streets the papers were eagerly snapped up. Much of the data given was new to the majority of the citizens of Duluth and as a medium of instruction in the developments of the past, the prosperity of the present, and the wonderful prospects and possibilities of the future, in Duluth, the edition was a complete success.

The issuing of the Industrial edition of such magnitude was entailed with a great volume of extra work on the part of the force on The Herald. The data was carefully collected and compiled, the photographs in many cases were secured at considerable trouble and expense, but that the work was not in vain is proved by the enthusiastic reception with which the paper met. Both in excellence of composition, compilation, and typographical workmanship, it was pronounced a notable achievement.

Although instructed to charge no more than 2 cents for the papers, the newsboys took advantage of the opportunity for making a little extra money, and in good many cases, they charged 5 cents for the paper, thus reaping a harvest. People cheerfully paid the extra price, however, and there were but few homes in Duluth which the big paper did not enter last night.

The edition consisted of 50,000 copies and it was nearly sold out last evening. There are still a number of copies on hand, however, and people have been calling all day to secure them. Thousands of the papers were sent out of the city by citizens of Duluth, and the city, its prosperity and resources, will be well advertised in many parts of the country through it. The opportunity for Duluth people to let their friends in other parts of the country know in what manner of city they live, will not come in such attractive form for some time to came, and none should fail to have a copy in their homes and send one to any friend who may be interested.

Following are a few of the expressions of approval heard today:

G. S. Richards of the National Employment company—It is one of the finest special editions I ever saw, and would do credit to a city five times the size of Duluth. The ground is thoroughly covered. I shall send a number of copies to friends outside the city.

Cassius H. Bagley, president and treasurer of F. A. Day & Co.—The Herald special edition is a work of art, and is a further indication of the progressive and patriotic spirit always displayed by The Herald. The paper is deserving of the thanks of the entire city, and cannot be complimented too highly on the manner in which it is putting the manifold advantages of Duluth before the world at large.

W. T. Wilkie, city passenger and ticket agent of the Duluth, South Shore & Atlantic road—The edition is comprehensive and complete. It should be given a wide circulation. It is a notable piece of work from every viewpoint, and The Herald may well be proud of it.

Whitney Wall, real estate agent—It is an edition that any person may be proud to send to his friends outside the city. The past, present and future of Duluth is told of in an interesting and comprehensive fashion.

H. V. Eva, secretary of the Commercial club—A fine piece of work and a great advertisement for the city. Its completeness of detail is surprising.

O. N. Lundberg of Lundberg & Stone—The industrial edition of The Evening Herald, was certainly a marvel. We think it one of the greatest newspapers published and the management is to be congratulated on having facilities to publish such an edition.

M. Stack of Stack & Co.—The Herald and indeed the entire city, should feel proud of the magnificent edition of yesterday. It was splendid in every way.

H. Brearley, Bayha & Co.—Very fine. The good such an edition will do Duluth cannot be overestimated.

Fred W. Edwards—The Herald is open for hearty congratulations. It is a splendid monument of the city's growth and prospects.

William Ferguson, advertising manager Freimuth's—Typographically and every other way, The Herald's industrial edition is a record breaker.

Charles W. Erickson—There can be but one opinion—The Herald's industrial edition is great from every point of view.

P. B. Tague—The industrial edition of The Herald was certainly a dandy. It is a great advertisement for the paper, for Duluth and all this part of the country.

Walter W. Carr—The Herald has issued a special number that is a credit to the city and itself.

H. A. Neuser—Last night's Herald was one of the beggest boosts Duluth has had since the Steel corporation decided to give us the steel plant. Already I have mailed a number of copies to out of town friends.

Walter Hall—The special number of The Herald will do this city lots of good. It contains plenty of matter interesting to out of town men, investors and the like, as well as to our own people.

F. S. Kelly of F. S. Kelly & Co.—It was an excellent edition and fully in keeping with the progressive and energetic policy of The Herald.

A. P. Hepworth of the Clark-Hepworth company—It was a most excellent edition, and reflects great credit upon the management of The Herald.

Health Commissioner Murray — It would have been a credit to a city four times the size of Duluth.

J. H. Thomasson of the F. S. Kelly company—It was a big, bright, breezy and exhaustive statement of the resources of the city, most attractively published.

George A. French—Congratulations to The Herald. The special edition is interesting, from the first page to the last, and was cleverly prepared. Duluth's advantages were set forth in a most attractive and interesting manner.

Simon Clark—A wonderful paper, full of good things.

Henry Abraham—It was a fine paper, issued at just the right time, when the eyes of the world are on Duluth.

W. S. Bishop—Would be a credit to any newspaper office in the world.

W. G. Hegardt—It will take me two or three days to go through it. It was a great number in every sense of the word.

J. M. Gidding—It was the most interesting big paper I have seen in many a day.

J. S. Moore, American Exchange bank—Great credit is due The Herald.

J. W. Lyder, Jr.—Best special edition I ever saw.

A. H. Comstock—Splendid number and will do Duluth a world of good. The Commercial club will give it a wide circulation.

O. F. Collier—The illustrations were fine. The paper in its entirety was great.

A. B. Kenney—Wonderful how you can get up such a big paper. It will be read everywhere.

D. E. H., April 26, 1907.

SINCERITY CLOTHES

Sincerity Clothes at $15

We aim to give the man of limited means the kind of a square deal that will merit his trade and his lasting friendship.

$15 is a fair price for a suit of clothes or an overcoat. But it will not buy dependable clothes at every store, especially not at the stores with the ten-per-cent-rebate-to-some habit. Then you must understand that differences exist—big ones—in quality and workmanship, and the latter is by far the most important determining the life of a suit.

We make a specialty of SINCERITY SUITS at $15 because we know that in them we are offering perfect styles, perfect workmanship and quality. More than that there is the guarantee of the makers besides our own. These suits are worth $15, and are equal in every respect to many suits sold in Duluth at $20.00.

Our Gray Club Check is very popular this season. It's here both in the ultra-stylish two-button, long lapel "Belmont" sack and the more conservative three-button "Saville" sack. An exceptionally fine assortment of double breasted Suits at $15 can also be found here.

WARSAW THREATENED WITH TYPHOID FEVER.

Warsaw, Russian Poland, April 26.—The city of Warsaw is threatened with a serious epidemic of typhoid fever. The outbreak occurred in the overcrowded prisons, where thousands of political suspects have been shut up for months awaiting trial under the most unsanitary conditions. Typhoid is now rapidly spreading throughout the city, more than 200 cases already have been reported.

FIRE IN JAMESTOWN EXPOSITION HOTELS.

Norfolk, Va., April 26.—Fire resulting from a leaking gasoline tank destroyed several frame buildings on 104th street at Pine Beach, just outside of the Jamestown exposition grounds, today, among the burned buildings being three two-story hotels. These were filled with people, but the guests had arisen early and there was no fatalities or serious accidents.

Jeweler and Optomatrist,

Opposite the Bijou.

11 East Superior Street.

GREEN BAY COUNCIL

Of Federated Trades Send Their Endorsement to the President.

Milwaukee, Wis., April 26.—An Evening Wisconsin special from Green Bay, Wis., says: Resolutions were passed last night by the federated trades council night by the federated trades council to President Roosevelt, informing him that the labor organizations of this part of Wisconsin place their undivided confidence in him as a friend of labor and justice. The action is taken because of a recent controversy between the Chicago labor union and the president.

TWO CASES OF PETTY LARCENY

Teamster and Domestic Are Arraigned in Municipal Court.

Charged with having appropriated to his own use $7.25 which he had collected for the Northwestern Coal company on a C. O. D. order, John Wilson was this morning found guilty of petty larceny by Judge Cutting in municipal court and sentenced to pay a fine of $25 and costs or to spend thirty days at hard labor in the county jail.

Wilson admitted getting the money and not turning it over, but said that he had lost it before getting back and that he intended to pay it as soon as he had earned it. Inasmuch as the collection was made on April 2 and over three weeks had elapsed prior to his arrest without the payment of the sum, the court decided that it was a clear case of larceny.

"I shouldn't wonder if it was sort of forced loan," said the judge in imposing the sentence. "He probably would have paid up if asked to before being arrested. As it is I will make the fine a light one for the offense."

* * *

Josephine Lettle, a domestic in the home of Theodore Nusbaum of the Schmidt Brewing company, was arrested today on a warrant sworn out by her employer charging her with having appropriated to her own use and benefit certain articles of clothing belonging to Mrs. Nusbaum and worth between $5 and $6.

She pleaded not guilty when arraigned this morning in municipal court and her examination was set for 2:30 this afternoon.

THOSE WHO HAVE PASSED BEYOND

Philadelphia, April 26.—John Bigelow, son of William Bigelow, vice president of the First National Bank of Milwaukee, died last night at the Pennsylvania hospital here of appendicitis. Mr. Bigelow was recently elected second assistant manager of the Harvard football team. He was also known as a golfer and athlete, his specialty being track work. He was 21 years old.

Lincoln, Neb., April 26.—Gilbert L. Laws, former secretary of state and representative in congress from the old Second Nebraska district, died here last night after an illness of several weeks. He was 69 years old.

Cincinnati, April 26.—J. A. Avery, manager of the Lyceum theater of this city, died at his home here last night of heart disease. Mr. Avery was born at Avon, Ill., 59 years ago. He was well known in theatrical circles throughout the country.

ENGINEER IS KILLED IN HEAD-ON COLLISION.

Salisbury, Md., April 26.—Engineer John Phillips of Delmar, Del., was killed in a head-on collision between the southbound local passenger train and a northbound freight on the New York, Philadelphia & Norfolk railroad at Eden, Md., today. No passengers were injured. The accident is said to have been caused by Engineer Phillips disregarding orders, to take a siding at Eden.

The Jamestown exposition "flyer" passed through Eden about an hour before the wreck occurred.

STILL DIVIDED.

But Little Change in Ballot for Senator From Wisconsin.

Madison, Wis., April 26.—The seventh joint ballot for United States senator today showed no material change from the previous vote. The leading Republican candidates received votes as follows:

Cooper, 18; Esch, 17; Stephenson, 18; Lenroot, 17; Hatten, 15. There were twenty absentees today.

BONI CASE SET FOR MAY.

Paris, April 26.—The appeal of Count Boni Castellane against the decision of the court, which on Nov. 14 granted a divorce to the Countess de Castellane formerly Anna Gould of New York, has been listed for May 1.

The ferry boats of the Independent Ferry Line will commence running Saturday morning. First boat 7:15 a. m., and last boat 6:15 p. m.

THE PROBLEM OF UNLOADING CARS

For Lake Steamers Discussed by American Railway Association.

Chicago, April 26.—The problem of reducing the time for unloading cars at lake ports, loaded with freight for steamship lines, was under discussion yesterday at the meeting of the American Railway association. The representatives of the marine lines were invited to participate in the discussion, and responded to the number of forty.

It was estimated that 75,000 cars arrived at the lake ports with freight for steamers during the season of navigation, and the average delay in unloading the cars is six working days. At some ports the lack of facilities caused the delay, and at others the non-arrival of the vessels to which the cargo was consigned. It was generally conceded that an improvement could be made in the handling of the cars, and even if the average was reduced but one day, it would mean the use of 75,000 cars for that time, an additional income to the railroads of approximately $750,000.

Clothes Pressed Free.

Good bought at the Fitwell Clothing Parlors kept pressed and repaired two years free of charge.

SKYSCRAPERS AND WELLS.

A crowd stood in a downtown street looking at the block on the other side of the way, from which all the old buildings had been cleared and where many men are now at work preparing for the foundation of a great business building, says the New York Sun.

The workmen were sinking a caisson within which earth would be excavated down to the solid rock on which to build up finally one of the supporting piers of the building. Cylindrical in shape, this caisson had rising out of the top of it a smaller cylinder, the air lock, through which the excavated material would be hoisted out, for the work in the caisson would be done under compressed air.

The thing that had attracted the people standing along the curb just now, was the loading at the top of the caisson to facilitate its sinking. Standing in the street near by was a stack of oblong shaped blocks of cast iron, each with a staple in it, ingots of iron weighing each about a ton. A man running a noiseless derrick with a boom about forty feet long would swing that boom around over the pile of iron blocks, doing this apparently as easily as he might have swung his lifted forefinger around there, and a man standing on the pile of blocks would hook the tackle into one of those blockston weight iron ingots and then the derrick man would pick it up and swing it over to precisely where it wanted to go on the top of the caisson and lower it there, and a man would cast off the hook.

And so they kept swinging over those heavy iron blocks to load the cassion and it was an interesting operation, which the people standing about watched intently; but one man in the crowd had something else in his mind. Looking at the caisson:

"The use of compressed air in such work," he said to his neighbor, "is new; but the idea of sinking things and then digging out inside of them is old; wells have been dug in that way in this country for 150 years at least. They used to dig them in my part of the country when I was a boy.

"Of course you could sink a well in that way in sandy soil only; but with the ground right for it they levelled off the spot where they were going to put the well down and then they laid on the ground a flat ring shaped platform made of planking, this ring shaped platform being, around its inner edge, of the circumference that the inside of the well's wall would be; and around its outer edge, of the circumference that the outside of the wall would be.

"And then on this circular platform lying on the ground they began building up above ground the wall of the well they were going to dig, a brick wall, three bricks thick, around on the platform, building so until they had got it up two or three feet in height. And then they began inside the wall to dig the well, the wall sinking gradually as they dug the earth away.

"This platform on which the masonry was laid was designed to equalize the strain on it as it went down. The digging was done carefully, of course, and as uniformly as possible all around so as to have the wall settle uniformly; but if the earth was dug away too much at one point the platform supported the wall there.

"And so they kept on digging below and sending up the earth, and so gradually dropping the wall lower and lower, while men were all the time building on at the top, until they got down to water. Like sinking a modern caisson, you see, in a way, only they didn't use compressed air."

Cook's Delicatessen Store

Closing Out.

The end is near—ony a few days remain in which you can buy these good things to eat at about HALF THEIR REGULAR PRICE. You should not lose this opportunity to stock up for your future needs. Here are a few of the good things at cost price:

Teas.

THE FUTURE OF CHEESE

American Product Will be a Combination of Three Kinds.

Government Looks for Its Appearaance in Near Future.

Washington, April 26.—It is not only the great American novel that is coming. The epicure may look forward to the enjoyment in the near future of the great American cheese, according to Dr. Charles Thom of the bureau of animal industry of the agricultural department. The cheese will be a combination of Roquefort, Stilton and Gorgonzola.

"It is quite possible," says Dr. Thom, "to utilize suggestions offered by the manufacture of these esteemed cheeses and thereby produce an improved cow's milk cheese combining their best qualities."

Dr. Thom has just completed a personal investigation of European cheese-making.

"Some of the makers of Roquefort," he says, "are absolutely meditating an attempt to transplant their industry to this country, and there is no reason to doubt their success in such an undertaking."

The move would mean a revolution in one of the most ancient, probably the most ancient, of existing industries. The antiquity of Roquefort cheese, or rather its manufacture, may pe judged from the fact that there are records of its having been famous not only during medevial times, but the latter years of the Roman empire as well. And in those days it was made in the same place and practically in the same way as today.

The industry of cheesemaking at the little French village has now passed from the hands of the peasants into those of big concerns which virtually control the entire output.

The methods of making the cheese remain the same, although the natural lime caverns, which have been regarded as imparting peculiar excellence to the cheese during the process of ripening, have been supplemented by enormous cellars excavated in the mountainside.

Although the notion seems to prevail that Roquefort is made from goat's milk, it is, in reality, made exclusively from the milk of sheep. There is an impression also that the blue mold that is formed in ripening consists of fine herbs.

This mold, as Dr. Thom explains, is characteristic of highly ripened cheeses like the English Stilton and the Italian Gorgonzola. In an early stage of the cheese's career it is punctured with needlelike spikes to facilitate the operation of this blue mold.

Lovers of Roquefort will recall the characteristic yellowish or reddish slime that is always found in the genuine cheese. The epicure will, however, not be discouraged, in all probability, by Dr. Thom's theory regarding this slime, which is, that it is bacteria.

"So abundant," says Dr. Thom, "is this greasy slime in the rock caverns that everything one touches is sticky, beginning at the doorknob of the outer door. No development of other surface molds, however, is allowed."

The problem to be solved in transporting the Roquefort cheese industry to the United States will be to supply the natural conditions of the restricted region in Southern France, to which it has been confined all these centuries. According to the agricultural department expert this problem is sure to be solved successfully.

"There does not appear to be any reason," he says, "to believe that the production of the same cheese as Roquefort would be impossible in any region where the sheeps' milk could be had, and the conditions of ripening found or artificially supplied. There is no reason for saying, as the Roquefort people have at times attempted to do, that Gorgonzola and Stilton, as well as other cheeses ripened by the agency of the same mold, are imitations of Roquefort.

"This is only another instance of the production in widely separated regions of very similar articles, because the same natural conditions were supplied. In this way cheeses of the same type have arisen in several European countries under different names, and in many cases are described as entirely different cheeses, while there is in reality no essential difference in their production or flavor.

"It is a question, to my mind, of exercising a selection among the numerous common molds. I believe that by means of intelligent experimentation the results now achieved in such products as Stilton and Roquefort may not only be equaled, but excelled."

Dr. Thom has found upon extensive investigation that the general taste in cheese has altered materially within the last few years.

"Formerly," he says, "well ripened, high flavored cheeses were in constant demand. Now most cheese is sold and eaten almost fresh.

"Low flavored cheese is constantly demanded. Camembert, if eaten at all, is eaten unripe. Gorgonzola is preferred to Roquefort, and even Stilton finds a smaller demand than formerly.

"Immense quantities of fresh Canadian Cheddar are handled at small prices, and much English hard cheese is eaten in the same condition. In the average French hotel or restaurant your order of cheese will bring forth Brie, Camembert, Neufchatel, Port du Salut or Livarot usually less than half ripened through.

"Immense quantities of sour milk cheese are consumed. Roquefort is always a well ripened cheese. The English or American types of hard cheese are scarcely found on the French market. Swiss (Gruyere or Emmenthaler) is on sale everywhere.

"What is rather surprising is that, even in the German market, milk cheeses are now constantly offered. Gouda and Edam seems to be gradually ousting the odoriferous Limburger.

"There is unquestionably a good opportunity in this country for making a soft, finely flavored cheese, for in this product it is most certainly true that there is no profit in an inferior article. Cheese belongs to the class of foods in which the first question asked refers to the flavor, the quality; the price is a secondary consideration so long as it is within reason.

"It is difficult to justify the production of a poor quality of cheese. Indeed, if nine-tenths of the 250 or more varieties of soft cheese now on the market were most carefully forgotten and half the remainder properly made, both producer and consumer would benefit by the change.

"It is my belief that our most valued cheeses, including the famed Roquefort, actually suffer from the persistence of old practices which are handed down from generation to generation without being really understood. This is what makes possible the current belief that there are unexplained mysteries about the production of this article.

"It is often stated that cheese can be made on one farm and not on another, that the air, or the soil, or the kind of cow, or the feed, or something else, or all combined make one factory succeed and another fail. I am in favor of testing these supposed factors and giving weight to such influences as are really active in the process.

"The equipment for making a soft, rich cheese such as will appeal to the palate of the epicure is simple and cheap, the labor does not involve complex machinery or special methods calling for technical knowledge. You see the costly European cheeses made with equal success in great factories and in small places where old buildings erected for other purposes were thus adapted at a trifling expense. So long as the same conditions are obtained they get the same results."

BRIGHT'S DISEASE

of Many Years' Standing, Causing Much Suffering Entirely Cured With Six Bottles of

WARNER'S SAFE CURE

A TRIAL BOTTLE OF THE WORLD'S GREATEST KIDNEY CURE SENT ABSOLUTELY FREE TO EVERY READER OF THE DULUTH EVENING HERALD, WHO SUFFERS FROM KIDNEY, LIVER, BLADDER OR BLOOD DISEASES.

Mr. C. M. Dow, The Dalles, Ore., in a letter dated December 25, 1905, commenting on his recent remarkable recovery from death's door, due to kidney disease, says: "During the latter part of October I got over a severe case of typhoid fever which left my kidneys in very bad shape. I had no appetite or ambition and began to lose flesh rapidly. I was thirsty, feverish and weak. My brother-in-law advised me to take Warner's Safe Cure, which I did. I did not feel any radical change until I had taken the second bottle, when I found I was not compelled to get up so often during the night. I have now finished my fourth bottle and weigh 185 pounds, good, solid flesh. I feel and look better than I have for years and have no further trouble from my kidneys, thanks to your valuable medicine."

Mrs. Sarah E. Banghart of Des Moines, Ia., adds her testimony. She says: "I had been a sufferer of Bright's disease for about fifteen years and had been growing worse and worse, until about six weeks ago I commenced taking Warner's Safe Cure, and I am now able to do my own housework. The doctor who had been attending me for several years previous told my husband that I would die within a week and that there was nothing that could restore my health, as I was in the worst stages of Bright's disease. My husband talked with me and said he believed he knew of a remedy that might help cure me and so he went and got a bottle of Warner's Safe Cure, and I noticed after taking one bottle a very decided change for the better. I have now taken six bottles, and can't say enough words of praise for your wonderful remedy. It is certainly the only remedy that ever helped me. I hope that these words may be of benefit to some one afflicted the same as I have been."

CURES KIDNEY DISEASE.

When the kidneys are diseased the uric acid is not carried off and this causes gout, lumbago, rheumatism of the joints, rheumatism of the muscles, rheumatism of the heart, rheumatism everywhere.

In Bright's disease the bowels are often constipated and the liver torpid. Warner's Safe Pills quickly relieve this condition, and no ill after effect is experienced.

WARNER'S SAFE CURE is put up in two sizes and is sold by all druggists, or direct at 50 cents and $1.00 a bottle. Refuse substitutes containing HARMFUL drugs which injure the system.

TRIAL BOTTLE FREE! To convince every sufferer from diseases of the kidneys, liver, bladder and blood that WARNER'S SAFE CURE will cure them, a trial bottle will be sent ABSOLUTELY FREE, postpaid, to any one who will write WARNER'S SAFE CURE CO., Rochester, N. Y., and mention having seen this liberal offer in the Duluth Evening Herald. The genuineness of this offer is fully guaranteed. Our doctors will also send medical booklet containing descriptions of symptoms and treatment of each disease, and many convincing testimonials, free, to every one.

CHALLENGE FOR SLEEPLESSNESS

Man Claims He Has Not Slept for Thirty Years.

Great Barrington, Mass., April 26.—William Warren, Great Barrington's "sleepless wonder," has been challenged. His contention that he is the simon-pure champion of all non-soporific champions is doubted, and by a man from New Jersey.

Warren claims that he has not slept a wink for thirty years. There are none of his neighbors who can gainsay this statement. He certainly gives every evidence of being wide awake, or he is one of the best farmers in this section of the state. He knows the soil all the ways from the deuce, and can do more things with turnips, potatoes and other ground fruit than a professor of agriculture. So that when he can't sleep, people let it go at that.

But Albert G. Herpin, although he lives at Trenton, N. J., indicates that in so far as Warren's claim is concerned, he is from Missouri. Mr. Herpin wrote Mr. Warren a letter suggesting a contest.

As a matter of fact there was a veiled doubt, which could be read between the lines, that Mr. Warren could not produce "the goods" when it came to the thirty-year, anti-Rip Van Winkle act.

Mr. Herpin's record, according to the communication, was not quite as good as that of the Bay state man. He had not slept for fourteen years, but for the ten years immediately preceding he had just dozed off "the least little bit."

"Therefore," says the challenge, "let us settle the matter of sleep defying. Let us have a sleepless contest and for fun, money or marbles, whichever will suit you."

None of the terms of the contest were suggested. Mr. Warren, being the challenged party, has the choice of weapons. He will furnish the finest of soft beds, if necessary, and everything else that can be suggested by the man from Jersey.

He only bars "dope." He fears that the Trenton men has had more opportunities to test the strength of the poppy juice than he has and, therefore, would have a slight advantage of him.

There is one other trouble in the mind of Mr. Warren. He has doubts of securing competent judges. To his mind, it would seem necessary for a judge to be a "sleepless wonder" also, and if so, he would be competent to enter the contest.

The fame as a winner of such a struggle would be far more lasting and remunerative than that of a simple judge, so that it would seem that all the referees and umpires would be contestants by preference.

Mr. Warren's sleeplessness is due to an accident. When a young man, he was felled by a tree which he was cutting down. While he retired every night as usual, he does not rest his mind, simply his body. He spends most of the evening hours in reading, so that he is a bookworm as well as a practical farmer.

Herpin does not give his profession or occupation in his letter, but that he lives in Trenton seems sufficient warrant here for his being unable to sleep. The date of the contest has not as yet been set.

Mandy—Hives and other blotches are supposed to be caused by an acid stomach. A simple remedy, and one that is very effective, is Hollister's Rocky Mountain Tea. 35 cents, Tea or Tablets. Ask your druggist.

LEVY TRIBUTE AT MARRIAGE

Thugs Demand Pay and Then Attack the Couple.

Seattle, Wash., April 26.—Tribute was levied by a crowd of hoodlums at the wedding of Mr. and Mrs. J. J. Sutherland, the pledge being given that if money was paid the crowd that surrounded the home of Mrs. G. A. Moomaw at Green Lake, no disturbance would interfere with the wedding.

After the money had been paid over, Mrs. Moomaw and a party of friends told the police, the crowd stayed about the house, and when the bridal couple appeared, attacked them viciously. The bride's dress was nearly torn off, stones were thrown through the windows and one struck the bride on the head and rendered her unconscious.

The police department was told that a number of young women joined the mercenary crowd at the wedding and incited the men to attack the home of Mrs. Moomaw. When the bride's dress was torn and she was beaten by hoodlums, the young women cheered the ringleaders.

DOGGIE "IN" $12, FOR $12 WAS IN THE DOGGIE.

Paterson N. J., April 26.—A remarkable tale of how his little dog was in $12, or rather, how the $12 was in the doggie, is told by Col. Christopher Columbus Shelby. The colonel says that he got a $10 and a $2 bill the other day, and on returning home he placed them on a table in the dining room while he went to look after his canine friends. While he was away one of the little puppies got upon the table and just as the colonel was coming back into the room the last corner of the $2 bill was disappearing in the pup's mouth.

The colonel tried to make the doggie "cough up," but could not, and then he was at a loss to know what to do. He hated to dissect the doggie to get the $12, but did not want to lose the money. Finally he appealed to Justice of the Peace Keys, and the latter wrote to Uncle Sam of the incident, with a request that new bills be sent him. The justice dictated a long statement of the facts and an order for $12 was received by the colonel from Washington. The doggie also keeps his $12.

NAMES "BEST MAN" IN SUIT

Remarkable Story is Revealed in a Claim for $50,000.

Chicago, April 26.—A story unusual even in Chicago marital annals is told in a bill filed in the circuit court by Henry Swanson of Geneva to recover from his former boon companion and best man at his wedding, W. M. Lawson, $50,000 for the alleged alienation of his wife's affections.

This bill follows one for divorce filed in the superior court a week ago. The plaintiff is a partner in the Anchor Brand Snuff company, while Lawson is auditor of the Frankfort Marine Plate Glass company, 159 LaSalle street.

Eighteen months ago, according to Swanson, while convalescing from injuries received in a railway accident, a pretty nurse bent over his bedside and kissed him. Swanson, although a confirmed bachelor, couldn't resist the temptation to get married. He sent for his friend Lawson, who, he declares, promptly fell in love with the bride.

As Swanson was thought to be dying, the marriage ceremony was performed, and, he alleges, it was agreed between the bride and the best man that as soon as the husband was out of the way another knot should be tied for them.

Swanson, on being married, improved in health, until within a few weeks after the accident he was as robust as anybody. Then he took his wife to Geneva, where, he says, Lawson followed.

"Good for everything a salve is used for and especially recommended for Piles." That is what we say about DeWitt's Carbolized Witch Hazel Salve. Get the original. All druggists.

LOST $1,300 BY MAKING A GARDEN HIS BANK.

Kokomo, Ind., April 26.—Leonidas Pickett, a well-to-do Howard county farmer, admits a loss of $1,300 in gold through a practice of burying his savings in the ground on his farm. Doubting the safety of banks, he put his money away in a sheet-iron box in a corner of his garden. The last time he made a deposit his cash on hand amounted to exactly $1,300.

Not having occasion to use any of the money, he did not visit the place where it was buried for several weeks. One day he desired to make another deposit. Taking a spade, he went confidently to work to uncover the sheet-iron box. He failed to find it.

At first he thought he might have missed the location of the buried treasure, and he made several other excavations. His search was in vain; the money was gone.

Pickett was so chagrined over his loss that he did not tell any one of it for several weeks. Recently, however, he employed detectives to try to recover the missing money. Through them the fact of Pickett's loss became known to some of his neighbors. The story was so remarkable that some of them questioned him regarding it, and he admitted it was true.

LEAVES THE BONES OF A SAINT AS A LEGACY.

Detroit, Mich., April 26.—By the will of the late Carlos Libert, who died April 11, a portion of the bones of St. Philomena, encased in a reliquary, are bequeathed to Rev. Peter Grand of this city.

The document goes on to state that the bones were found in the catacombs of St. Priscilla at Rome, ninety-five years ago, and that their authenticity is vouched for by a written statement made by the cardinal in charge of relics, at Rome, the original of which is given to the priest.

Rev. Grand is also left a statue of the saint whose bones he gets. This is described as being from four to five feet high and is made of paper and plaster. With this goes two 5-branch candelabra, to be placed on either side.

The will is also somewhat peculiar in that it cuts off a nephew, Joseph L. Remiatte of Salina, Kas., and a niece, Juliette Remiatte of Joliet, Mo., with $1 each, but gives the latter all the family letters, portraits, souvenirs, books and papers.

On the other hand, a sister, Juliette Libert, is given $2,620 in cash and another niece, Gabrielle Colnard, gets the residue of the $4,000 estate, with the exception of $50 that is given Mrs. Emilie Declaire "for her good services as nurse."

"My child was burned terribly about the face, neck and chest. I applied Dr. Thomas' Eclectric Oil. The pain ceased and the child sank into a restful sleep."—Mrs. Nancy M. Hanson, Hamburg, N. Y.

TURNS CAT FUR INTO FUR HATS

Ohio Man Getting Rich by Keeping Farm for Animals.

Cleveland, Ohio, April 26.—Burtis McConolog is coining money out of a cat farm. Owning some barren land along the shores of the lake, Mr. McConolog erected a few buildings and stocked the place with white cats, his object being to palm off the skins of the kittens as ermine. This was not much of a success, but he found a ready market for the fur of the old cats, hatters declaring it was the very thing they were looking for.

Discarded fish from the lake, scraps of meat and cornmeal are used for feeding, and since cats are light eaters the cost of maintaining them is not heavy. Three crops of kittens are raised each year, and when they are half grown the animals are killed by gas, and the skins sent to the hat factories. By a careful system Mr. McConolog hopes to rear a cat that will yield half a pound of fur, and thus double his profit.

NATIONAL BISCUIT COMPANY

CONCERNING WOMEN.

The soprano soloist for the oratorios to be sung next month by the Duluth Oratorio club has been engaged, and those in touch with the musical world will be delightful in hearing that Shanna Cummings probably the finest oratorio soprano solist in the country will sing here with the local organization in the first May festival ever held at the Head of the Lakes. Shanna Cummings is the highest priced church soloist in New York and she has sung with great success throughout the country. She is in great demand as soloist in oratorio productions. The success of the festival in a musical way is assured with the splendid trio of soloists and fine orchestra that have been engaged, and the chorus work promises to be splendid, for the singers under the direction of Horace W. Reyner of this city are doing faithful work.

Miss Cummings has sung with Mr. Reyner in oratorios of which he was leader, produced at Montreal and he speaks most highly of her artistic worth and is delighted and having secured her for the first Duluth festival.

Outing Club.

The Outing club of the Young Women's Christian association will leave the rooms tomorrow afternoon at 2:30 o'clock and will go for a walk along London Road. Any interested in the outing are invited to meet at the rooms at the appointed hour and go with the members.

Annual Meeting.

The annual meeting of the Saturday club will be held tomorrow afternoon at the club room of the library. The election of officers will take place at that time and the business for the year completed.

Birthday Dinner.

Mr. and Mrs. J. G. Ketcham entertained at dinner last evening at their home in St. Elmo flats in honor of the birthday anniversary of their son, Gilbert. The table decorations were yellow jonquils, and the guests were:

Misses—
Charity Jones, Dale Montgomery,
Lelia Sparks, Emma Western,
Helen Majo, Pearl Hector.

Messrs.—
Robert Johnson, Frank Salt,
Ruben Ettlenan, Robert Ketcham.
Philip Holgate,

Personal Mention.

Mr. and Mrs. Fred Reynolds left yesterday to attend grand opera at Minneapolis.

* * *

Miss Mae Wylie has been attending grand opera at St. Paul this week where she was the guest of Miss Potter. She will also attend the season at Minneapolis where she will be the guest of Mrs. Frank Suffel.

* * *

George Suffel is visiting Minneapolis, a guest at the Phi Chi house of which fraternity he is a member. He will attend the fraternity banquet there tomorrow evening.

* * *

Mr. and Mrs. J. L. Mullin of 2115 East Superior street have gone to West Baden, Ind., for a visit.

What Retail Markets Offer.

Strawberries, 20 cents a box.
Green onions.
No green peas.
Tomatoes.
Oyster plant.
Radishes.
Chicken, 20 cents a lb.
Broilers, 40 cents a lb.

There is no growing weather. This statement, which is not only sad, but also true, causes all the little green and fresh vegetables in the market to be presented at a price prohibitive to most people. The shippers at Chicago realize perfectly the scarcity of these green things which people are rightfully expecting at this time of year, and the prices they attach to the vegetables that they send on gives the market man at this end fits of despondency over the slight profit which he will enjoy.

But—presently it will be shortcake time. Of course the bills of fare in public eating places have announced shortcake for some time, but the great common people have not yet taken to the most ecstatic form of luscious delight that cooks have yet invented. When the quart boxes of berries get at that popular, two for a quarter condition, then will strawberry shortcake again come into its own. Squabs may be good, and lobster salad passable, and shrimp wiggle a pleasant change, and a rarebit tasty, and soft shell crabs high living, but for pure unadulterated delight we would recommend a tender cake of brevity, a couple of stories in height, with the juice of tenderly crushed and sweetened berries oozing out, and a few examples of the whole fruit lying about. Then, if you want to enter a heaven of delight, pour over it that thick, yellow Jersey cream.

ACCOMPLISHING A REFORMATION

By Lulu Linton.

(Copyright, 1907, by Joseph B. Bowles.)

"Here, you boy! Don't hold that suit case under the drip. You're likely to get it all soaked and spoil my silk dress. I just can't abide such carelessness."

The tall college boy, who was earning his next year's tuition by assisting the matron of the fresh air mission, shifted the pasteboard box to the other shoulder, and smiled down at the querulous old lady as he helped her up the steps.

The five old ladies who occupied rocking chairs on the broad veranda seemed suddenly stricken dumb by this outburst of the new arrival. The intimation that the suit case contained a silk dress, and that the owner of it had the impudence to talk "sassy" to Mr. Chester, who was always so kind and helpful, made it impossible for them to extend the welcome they had prepared.

Mrs. Birch, the matron, came bustling out, saying: "And here you are at last. We are glad to welcome you to Maplewood, Mrs. Vandegriff, and we hope to make up to you the loss of those three days. Come right up to the room and let me help you get ready for supper."

"I should think I'd need help, after tramping through that wet grass, all the way from the car. I should think you might keep a conveyance," was the ungracious reply.

The five old ladies on the veranda fairly shivered at such a speech addressed to the matron, and almost wished that the late arrival had come even later.

Maplewood Cottage could only accommodate six old ladies at one time, as they were sent out for their ten days' outing, and this time one of the number selected as deserving had been unable to come with the others, and the five fortunate ones had been filled with pity for her.

They could hear Mrs. Vandegriff now, for conversation could be easily heard through the thin partitions of the summer cottage, and she was saying, in complaining tones, "And this is the place that has been bragged up so in the newspapers. Ain't none of the rooms plastered? I never stayed in such a place."

Mrs. Vandegriff partook of her supper in silence, and instead of joining the group in the little parlor after the meal, she went at once to the room she had appropriated and retired for the night. Her expression of general disapproval had cast a gloom over the other guests, so the lights were all out long before the regulation hour that night.

The morning dawned gloriously, and the old earth seemed to have taken on new life after his bath. The spirits of the guests rose accordingly as they gathered on the veranda, some with their knitting, others with quilt pieces, and all ready to enjoy the beautiful day to the utmost.

Mrs. Vandegriff took possession of the one hammock and prepared to spoil their pleasure.

After Grandma Wilkins had told of some happening of the previous summer at Maplewood, Mrs. Vandegriff asked: "Do you mean to tell me that you had been here before and came again of your own free will? I'd never waste any tears over coming to such a place as this. I've seen real summer resorts in my time."

And so it went on through the day. Little biting remarks that caused the sun to grow dim for a moment, and kept the matron bustling in and out for fear of an outburst of some kind.

Even the excellent dinner of roast, brown gravy and potatoes failed to put Mrs. Vandegriff in a good humor.

The next morning at breakfast time a telegram came to the cottage, bidding Mrs. Birch to hurry to the home of her son, who had been suddenly taken ill. Mr. Chester and Mrs. Barton helped the bewildered woman make her hasty preparations for leaving, and the management of the cottage was left in the hands of Mr. Chester, with Mrs. Barton as overseer of the girl in the kitchen.

Just before supper time Mrs. Barton was called from her duties in the kitchen out to the front veranda, where she found the other old ladies in a high state of excitement over the disappearance of Mrs. Vandegriff. She had come down stairs just after noon, saying that she intended to take a little walk. She had not returned, and they were anxious about her.

"Well, I can't leave that girl with no one to oversee the supper," said Mrs. Barton. "But if Mrs. Jones feels like walking a piece in search of her she may go, and for pity's sake try to get her back in time for supper while it is warm, or I don't know what she will do to us."

Half an hour later Mrs. Jones, breathless and excited, came back to make a report of her research.

"And guess, if you can, where I found our lady!" she exclaimed, dropping down exhausted from her hurried walk. No one volunteered a guess. "I found her down on the veranda of that summer hotel by the street car line, a-rocking and a-talking to an old lady who sat near her. They were just around a corner from me, and I heard her telling what an awful place this cottage is, with nothing fittin' to eat. She said she had been sent down here to be company for the matron, who was awful lonesome with only poor, low-down trash in the cottage. She said we were all ignorant working folks, and she was the only lady down here besides the matron. She said the place might do very well for poor folks, but she was used to better living as she did in a fine home on College avenoo. She said if her folks knew what she was having to put up with down here they would sue the committee that persuaded her to come. She said the newspaper had better call this a 'Hot Air' mission, and—and—oh, I don't know what she didn't say."

"There she comes now, and don't be too hard on her," pleaded Grandma Wilkins. "You know we promised Mrs. Birch to try to keep peace."

She and Grandma Wilkins retired early, and the remaining four held an indignation meeting.

"She's just going to ruin our whole ten days," groaned Mrs. Bernstein.

"Such carrying on! She ought to be rid on a rail!" snorted Mrs. Jones.

"Why not try that?" giggled little Mrs. Barton, and, lowering her voice, she presented a plan that caused much muffled laughter among the other ladies.

The next morning found Mrs. Vandegriff ready with a fresh supply of sarcastic speeches, flinging a cloud over everything, until at last even Mr. Chester lost patience and beat a retreat, hunting up his fishing tackle, preparatory to spending the afternoon on the creek.

Just at noon a letter came from Mrs. Birch, stating that her son's illness had been only temporary, and that she would arrive on the 6 o'clock car. Mr. Chester and Mrs. Barton breathed sighs of relief at the prospect of shifting their responsibilities to her competent hands. After dinner, when Mr. Chester had gone away, grandma taking her usual nap, and the other four rocking on the veranda, the stair-door opened and Mrs. Vandegriff, clad in her antiquated silk, came across the veranda. "I'm going over to the hotel to call on a friend," she announced.

"It's against the rules to go without a permit from the matron," said Mrs. Barton.

"Well, I guess I have to have some fresh air and exercise, and I can't wait around here for the matron to come back and give a permit."

"We'll help you to take some fresh air and exercise," said Mrs. Jones, with a meaning glance at the other three. They arose in a body, Mrs. Wharton and Mrs. Bernstein taking hold of Mrs. Vandegriff's right arm, while Mrs. Barton and Mrs. Jones took possession of the left, starting in the opposite direction from the hotel.

In vain did Mrs. Vandegriff pull back and expostulate. They reached the knoll where the large tent had been pitched for the children, who had been sent out by the fresh air mission earlier in the season. Nearby stood the home-made merry-go-round, which was a huge stump cut down at the top to form a pivot for the hole in the center of a piece of timber, which extended out five feet on either side of the stump, to which riders might cling in the dizzy whirling motion caused by the human motor power.

By one united effort the four old ladies gave Mrs. Vandegriff a boost which landed her between two of the pegs, and she clung to them to keep from falling as they started the machine to revolving swiftly.

"What are you going to do?" she screamed. "Are you trying to kill me?"

"Oh, no," panted Mrs. Jones, plodding around a bit faster. "We want you to have fresh air and exercise."

Mrs. Vandegriff stormed and pleaded, but when Mrs. Jones dropped down exhausted, Mrs. Bernstein started on the path, keeping the merry-go-round in rapid motion, until at last Mrs. Vandegriff sobbed out, "If you'll only let me down I'll promise to do anything you want me to do while I'm down here."

"Do you think we are all low-down trash?" queried Mrs. Jones.

"N-n-no," was the quavering answer.

"Do you live on College avenoo?" asked Mrs. Bernstein, giving the merry-go-round an extra turn.

"No; live in Factory Row," Mrs. Vandegriff groaned.

"What kind of a mission is this, fresh air or hot air?" asked Mrs. Barton, as the machine gave a creak, dipping toward the ground for lack of ballast on the other end. Mrs. Vandegriff clutched desperately at the peg from which her hand had slipped, while she gasped, "F-fresh air."

"Well, how many ladies are there staying at the cottage?" Mrs. Barton asked. "And do you intend to ever mention this occurrence, or ever give Mrs. Birch any more trouble?"

"Six, six," sobbed Mrs. Vandegriff, humbly. "And if you'll only let me down I'll never say or do another hateful thing while I'm here. I never meant no harm; I was just making believe I was above you all. Can't you understand that I was playing a little game, and just trying to imagine myself some grand lady? If you knew what a good time I have been having all to myself you wouldn't begrudge it. Anyway, I tell you I didn't mean any harm."

They stopped the whirring machine and helped Mrs. Vandegriff to her feet, but she tumbled down at their feet in an abject pile, for her poor old head was whirling so that she could not stand.

When Mrs. Vandegriff could stand up, her companion brushed the dust from her silk dress, helped her tenderly down the hill and put her in the hammock. Mrs. Bernstein brought her a cup of cool water, and the others chatted away as if nothing had ever disturbed their afternoon rest. It was a restored and rejuvenated Mrs. Vangegriff who finally emerged from the chaotic state into which she had been thrown by her companions.

When Grandma Wilkins awoke from her nap and came down-stairs, the five were taking away like old friends, and Mrs. Vandegriff arose from the hammock, insisting graciously upon letting the older woman occupy it, and grandma wondered mildly what had brought about such a change in the atmosphere, but beamed contentedly upon the group. It was sufficient to know that the clouds had been dispelled, and that peace and good-will permeated the entire place, with a promise of the good times coming.

New Satin Striped Chiffons in Polka Dot Design

POLKA DOT DRESSES ARE SMART
PHOTO BY JOEL FEDER

A charming use of one of those new satin striped chiffons in polka dot design in the much favored combination of marine blue and white is effectively illustrated in this afternoon toilet. The satin stripes of the chiffon are used as the trimming motif.

In the skirt the material is pleated into the waist band so that the upper part shows only the satin stripes. From the knees down are applied two very wide simulated tucks on the cross of the material and including two of the satin stripes. These are finished with a fine pleating, half of the chiffon and satin stripe. The skirt is posed over a foundation of white taffeta, and the dressy but artistic little bodice is built over a tight-fitting taffeta lining carefully boned to the figure.

Over a drapery of white repousse lace, which falls to the top of the folded satin girdle, the chiffon, cut on the cross, is pleated into the popular Japanese lines, and suspender straps of the satin stripes are tacked to the top of the girdle. The sleeves are of plain blue accordion pleated chiffon, finished with fine pleatings like those on the skirt. Little featherbone caps are adjusted to the inside of the sleeve lining to give a broad rather than a sloping shoulder.

We Were Never So Busy in Our Garment Dept.

FOR the past two weeks we've been breaking all selling records in our Suits, Skirts and Jackets. We don't often deal with past performances in our advertising—they may be gratifying to us but they are usually uninteresting to our readers. However, today we feel in duty bound to speak of our past performance that dates up to the present and should interest you. **During the past two weeks we've sold nearly twice as many Suits, Skirts and Jackets as ever before in an equal period.** There are three good reasons which accounts for this fact.

We—or any other store—never assembled garments of such superb style, such superior workmanship and such thorough, all-around goodness.

Better assortments —a more diverse assemblage of styles or a greater garment stock was never displayed for sale in this store.

Last—but not least, **our low prices.** We compared our prices with what other stores are charging and found our prices, invariably several dollars less in equal values.

If you will investigate these "three reasons" **YOU** will help us to swell our garment sales record and especially tomorrow, we will show ready for sale the **ENTIRE SAMPLE LINE OF LADIES' AND MISSES' SUITS from one of the leading manufacturers,** also including "Ones and Twos" from our regular stock, at a big saving of **ONE-THIRD DISCOUNT.**

This places you in a position to buy your Spring Suits at less than regular wholesale price.

COURTHOUSE OF FORTY STORIES

Plans Impress County Commissioners and Judges at Pittsburg.

Pittsburg, Pa., April 26.—A solid steel and granite building rising 700 feet above the ground level and containing forty floors—a structure that will be the architectural and structural wonder of the world, towering far above the tallest skyscraper ever erected will be built in Pittsburg, if the county commissioners adopt plans presented for the extension and enlargement of the courthouse.

The plans for this wonderful structure, which would be 120 feet higher than the highest building previously designed, the Metropolitan Life skyscraper in New York, are the conception and creation of three of the most noted architects of the United States. So impressed were the commissioners, county controller and court judges as they examined the plans and heard them explained by Henry Hornbostel, the famous New York architect, and R. Maurice Trimble, the noted Pittsburger, that it seems probable they will be approved, unless shown to be impractical, which the designers say is impossible.

For several months Allegheny county officials have been confronted by the necessity of providing more space for courts and offices. Many plans have been suggested, including one for the erection of a four-story structure in the big areaway in the center of the present building. This plan was finally abandoned, making way for a plan to spend about $1,500,000 for the purchase of land on Diamond street, across from the courthouse, on which to erect a new structure, to cost about $2,000,000.

The plan offered by Palmer & Hornbostel of New York and R. Maurice Trimble of Pittsburg carries out the original proposition for utilizing the large area way of the present courthouse and the authors of the plan declare the 40-story steel and granite structure can be erected at a cost not to exceed $2,000,000, this being $1,500,000 less than the estimated cost of the proposed site and building on Diamond street.

NO MURDER, SAYS CORONER

Tragic Death of McCaffrey of Fort Dodge Is Investigated.

Fort Dodge, Iowa, April 26.—Owen H. McCaffrey, an insurance man, for many years sheriff and one of the leading politicians of Jackson county, was found dead on a vacant lot near the Crawford hotel, under circumstances which gave rise to the rumor that a murder had been committed.

At the coroner's inquest witnesses were examined and a verdict of "asphyxiation while in an unconscious condition" returned by the jury. Coroner Lowery says: "While we brought in rather an open verdict, I do not consider the evidence is sufficient for me to issue warrants for the arrest of any of the men in the drinking party. There is no reason for the murder theory rumored on the streets."

JAMESTOWN EXPOSITION

(Continued from page 1.)

played patriotic selections, the party proceeded in carriages to the grand stand. The cheering crowd pressed the outsider and surged after the line of carriages which took the most direct route around the main auditorium building to the scene of the inaugural. The procession was a triumphal one for the president but it was equalled later by the welcome given him as he entered the reviewing stand. Bowing to the right and to the left his acknowledgements of the great public acclaim spurred the crowd to renewed efforts. The gathering in front of the grand stand had started as soon as the choice vantage points had become occupied at the water front and when the ceremonies opened the audience extended over the parade ground far beyond the reach of the speaker's voices.

The formal program opened with an overture by the bands—"Jamestown Dixie," which was especially composed for the occasion—followed by a selection by the exposition chorus and prayer by the Right Rev. Alfred Magill Randolph, bishop of the diocese of Southern Virginia.

After the chorus had sung the official opening hymn—a beautiful and appropriate work by Wilberforce G. Owst—President Tucker faced the multitude. A spontaneous outburst of cheering greeted him as a testimonial of approval by the people to the gigantic work that had been done in celebration of one of the most important events in the history of the nation as well as of Virginia. Mr. Tucker's address was of a historical character and at its conclusion, he introduced President Roosevelt.

When the president of the exposition concluded, it was some minutes before President Roosevelt could proceed with his address. The people again and again gave vent to their enthusiasm. As he pressed the gold button which formally opened the exposition, it was the signal for the unfurling of a thousand or more flags on the buildings. At the same time a signal was given to the United States and foreign warships and to the garrison at Fort Monroe and all fired a salute to the Union. When the echoes of the last gun died away, all of the bands on the exposition grounds played the "Star Spangled Banner" and the troops saluted the national anthem by presenting arms and all persons present bared heads.

After this impressive ceremony, the president of the United States, his cabinet, members of the diplomatic corps, committees from both branches of congress, governors of states and official guests of the exposition, were served luncheon in the Auditorium Annex. During the luncheon the parade grounds were cleared and the great crowd sough places around the walks to witness the military pageant. On the reviewing stand, besides the net and other official visitors, as well as several hundred especially invited guests.

While the military feature was not large it was of a splendid character. It was commanded by Maj. Gen. Fred Grant, as grand marshal, who was attended by his entire staff. In addition he had about a score of honorary aides, chosen largely from Union and Confederate societies and historical associations. In the parade in the order named there were detachments of marines and seamen from the foreign warships, the Twenty-third regiment of United States Infantry, a battalion of United States coast artillery, six battalions of the naval brigade from the United States Atlantic fleet, the Third battery of United States field artillery, the Second squadron of the United States Twelfth cavalry, the Seventy-first of Virginia volunteers and batteries C and D, First battalion of artillery, Virginia volunteers.

Full dress uniform was worn. The foot organizations were formed in double rank and passed in review in company front while the cavalry and artillery passed in columns of platoons. No honors were paid along the line of march except the salute to the president. After the review the United States and foreign naval detachments returned to their vessels and the army detachments went to Camp Captain John Smith, which is the name given in an order by Gen. Grant to the post at the exposition grounds. A reception was tendered the president in the rotunda of the auditorium this afternoon by officers and directors of the exposition. All of the distinguished guests who occupied positions in the grand stand were invited. It is not planned that the president shall visit any of the exhibition buildings, as he intends to pay a visit to the exposition on Georgia day, in June. Immediately after the reception the president will proceed to Norfolk on either the Mayflower or the Sylph. In the evening he will be the guest of Mr. Tucker and Barton Myers, of the exposition management at a dinner given at Mr. Myers' home.

The pressing of the proverbial gold button invariably used in connection with the opening of an exposition was also an important function in itself as had been expected. On account of the unreadiness of the buildings and the grounds there was little machinery to set in motion and many of the buildings had not been supplied with flags to be unfurled. The coldest and most backward spring in the annals of Virginia, marked by severe rainstorms in the past month is responsible for the opening ceremonies being marred by incompleted structures and uninstalled machinery. Although the exposition management displayed marked energy in meeting a situation that for several weeks has been overwhelming they were powerless to bring anything like order from the chaotic condition. Contractors were unable to complete many of the buildings in time for the installation of exhibits and as for the removal of the debris with which the grounds are strewn and the scaffolding that encloses a large part of the buildings, the effect must be likened unto ants trying to move a mountain. Freight congestion on the railway and steamship lines vextiously delayed the arrival of shipments and it was utterly impossible to unload, unpack and install the thousands of consignments of exhibits. Labor famine contributed largely to these misfortunes.

Realizing that the exposition is far from ready many of the officials have ceased to dissemble and are taking the situation courageously. They believe that visitors will be willing to concede that within a short time the management can offer an attraction that will reflect credit and of which the nation will be proud to acknowledge the sponsorship proclaimed today by President Roosevelt. At the same time they have been brought to see that the impressions of these early visitors will not be favorable and therefore some heroic measures must be taken to counteract them. Therefore it has been announced that some of the buildings are unready and must be closed to the public. May 15 has been fixed as the day when the directors of the exposition hope to be able to open all features of the show. There seems ample ground for the belief that most of the buildings and streets will be ready in a few weeks. Some of the exposition officials advised several weeks ago that the inaugural date be postponed to May 13, the 300th anniversary of the settlement of Jamestown instead of having it today, the ter-centennial of the landing of the English at Cape Henry, but the contracts with concessionaries prohibited the change. It is agreed in these contracts that the exposition should be opened from April 26 until November 30. This does not interfere, however, with the closing of the main buildings provided the gates remain open to the public. The United States government building forming undoubtedly one of the most interesting features of the exposition, is all ready and will, of course, be opened today. The state's exhibit palace is also complete in every detail of construction and installation.

MASSIVE WARSHIPS

(Continued from page 1.)

Yankee cheesebox set upon a raft" and the rectangular mass of iron which carried the Confederate flag in 1862 to the modern fighting machines typified by the flower of the American navy gathered in holiday assemblage today, is a far cry. Yet many of those who stood on the shore and witnessed the naval pageant in the roadstead vividly recalled the historic time when the wind rippled waters which formed the setting of this greatest international rendezvous of war vessels of recent years were splashing with the shot and shell of the first great battle of steel clad ships.

President Roosevelt from the bridge of the trim little yacht Mayflower, whose decks were the meeting place of the peace plenipotentiaries of Russia and Japan less than two years ago, reviewed the great assemblage of flag draped fighters gathered from the corners of the world to make a notable opening day of the Jamestown Ter-centennial Exposition commemorating the 300th anniversary of the first English settlement in America.

Steaming down the long column of dark hulled foreigners the president was greeted by each vessel in turn with a salute of 21 guns. The Mayflower then turned down the lane of American battleships and cruisers and again the roar of saluting cannon swept across the waters. The new American navy was in its infancy fourteen years ago when the brilliant international rendezvous of 1893 was held in Hampton Roads. Today the magnificent Atlantic fleet, under command of Rear Admiral Robley D. Evans presented a picture of impressive fighting strength notable in the naval annals of the world.

The foreign vessels were given the positions of honor in a line stretching nearest and parallel to the shores of the exposition grounds. Frowning and formidable in their dark drab coloring, with funnels as black as the smoke which poured from their tops, the squadrons sent by Great Britain, by Austria, by Germany, and the Argentine Republic, loomed in deep shaded relief against the dazzling background of American vessels whose glistening white sides sparkled in the light rays reflected from the water and whose light buff superstructure and stacks lent a harmonious setting to the many hued flags floating from mastheads and peaks from fighting tops and flying trucks. The foreign vessels were suggestive of the American ships during the days of the war with Spain when the traditional and exclusive dressing of white gave way to the sombre gray hue of war apparel.

American vessels at naval gatherings abroad have always been an attractive center of interest because of their graceful lines and clean cut appearance. Today, assembled in the full strength of a home protecting fleet, they made an impression which will be long in the memory of those who looked with the president, as commander-in-chief, doffed his hat in acknowledgment of each thunderous salute which marked the progress of the review.

Not the least impressed of those who witnessed this inaugural ceremony of the opening of the exposition were the military and naval officers of thirty-seven of the nations of the world. The ambassadors and ministers of all these nations were also among those who gazed upon the beautiful naval show. The foreign diplomatists and officers were on board the steamer Newport News, which brought them down from Washington last night and which was given a position of vantage over the hundreds of excursion steamers and pleasure craft of every imaginable description which formed a frame about the anchorage ground of the assembled fleets. None of the excursion or pleasure craft were allowed to cruise between the war vessels and the shore, thus ensuring those on the exposition grounds an unobstructed view of the impressive ceremonies pictured almost as in miniature several thousands of yards away in the blue waters of the roadstead.

Back of the first line of foreign vessels was ranged the mightiest column of American battleships the history of the nation has ever known. Stretching away in a curving line up the broad channel way from the government pier off Old Point Comfort, sixteen mighty fortresses of the sea, wide hulled, squat and heavy, the backbone of the American navy, fittingly formed the center of the fleet arranged for the day's review. In a third line—and all but hidden from the shore by the bulk of the heavy battleships—were the cruisers and spectre like torpedo craft attached to the American squadrons. Clustered far inshore, toward the exposition waterfront were the several naval vessels which have been assigned as station ships and will remain here until the close of the fair the last of November.

There was thirty-eight American ships in today's review. The foreign ships numbered twelve tpyical modern fighting craft and furnished a picturesque and striking contrast as between the foreign built cruiser and the products of American ship and navy yards.

All of the vessels of the combined fleets were "dressed" in the fluttering flags of the nations and the brilliant hued pennants and bits of bunting which form the international signal code. During the salutes to the president the white puffs of powder smoke floated away like tiny flecks of summer clouds amid the fluttering flags of the decorated ships, the effect being one of unexpected beauty.

As representative of the greatest naval power of the world, the British cruiser squadron commanded by Admiral Sir George Neville and consisting of the armored cruisers Good Hope, Argyll, Hampshire and Roxburgh, attracted a large share of attention. The Good Hope, a vessel with the strength and striking power of a battleship combined with a speed of twenty-three knots, and of horse power a score of thousands, serves as Admiral Neville's flagship. Her tonnage, 14,000, is equal to that of more than one-half of the American ships, but is not so great as that of the new type of American armored cruiser represented by the Washington and the Tennessee in today's fleet, each registering 14,500 tons. The Good Hope, together with the German imperial flagship Roon, and armored cruiser, lighter than the British boats but built much along the same lines, four funnels and two military masts being the striking features of similarity, were assigned berths to the right and left of the Connecticut, the big 16,000 ton battleship to which Rear Admiral Evans recently transferred his flag of command. These three flagships formed a triangle, where the Mayflower at the end of the review, dropped anchor. The Roon has on board Commodore Carlo Von Hoff, commanding the German south Atlantic squadron. Capt. Von Rebeur Paswitch, adjutant of Emperor William, is also aboard as special representative of the emperor. The flag officer of the Austrian squadron is Commodore Hermann Plescott. The Austrian flagship Sankt Georg, is 2,000 tons lighter than the Roon. Dark of hull and funnels, she and most of the other foreigners might have been considered today as one fleet, but for the variance of the flags at truck and stern. The great assemblage of ships seemed to be divided only in two classes; the immaculate white of the American vessels being in opposition to the murky, gloomy darkness of the visitors from across the seas.

In the American fleet was represented almost every type of vessel known to the navy of the country. The stalwart 16,000 tonners, the Connecticut, Louisiana and Virginia, had to share honors with the almost forgotten monitor, Canonicus—a cheesebox herself and slightly improved over her famous prototype. A relic of Civil war days, the old Canonicus has just been fitted out at the Norfolk navy at a cost of $10,000 to enable her to take a place alongside the proudest vessels of the navy, in which she at one time was such a formidable unit. Heavy coats of black paint do not altogether hide the scars of the antiquated ship which will remain a permanent feature of the exposition.

The Mayflower, bearing the president and Mrs. Roosevelt, Secretary Loeb and a few invited guests, approaching from the eastward, arrived at the head of the column of war vessels this morning almost an hour before the usual call for quarters is sounded aboard a man of war. As the Mayflower approached with rainbow flags aflutter, the American flagship boomed out the first guns of the presidential salute. In a flash the other American ships and the foreign vessels had manned their cannon and a roar of twenty-one guns fired from each vessel of the fleet sounded almost simultaneously.

The Mayflower pointed her way up to the roads toward Norfolk, passing along the outer line of foreign ships, "close aboard." As she cleared the first of these, the visiting vessels opened fire with a new series of salutes repeated in turn by every battleship and cruiser of the big fleet. The Mayflower's way had been kept clear for her since early morning by the little steam guard launches sent out from the ships to do picket duty. Darting here and there like little flashes of lightning, with shrill whistles screeching a warning to trespassing craft, the little policemen of the roads were unique and interesting feature of the pageant. Each foreign and American ship manned the rails as the president passed in review. The crews were drawn up in close order along the forward and quarter decks and elevations of the superstructure and stood at attention as the Mayflower skirted each line.

The first of the British ships encountered was the Roxburgh, then the Hampshire and next the Argyll. All three are sister ships, the four piped flyers forming with their flagship, the Good Hope, one of the many brilliant cruiser squadrons for English navy. President Roosevelt was especially interested in the Good Hope and as she passed the big cruiser, he exchanged salutes with Admiral Neville, who stood on the bridge.

Leaving the British ships astern the Mayflower was greeted with the booming cannon of the German squadron, and President Roosevelt was treated to a genuine surprise. The Roon and the Bremen came into American waters wearing the dark gray coats of the German squadrons. As a mark of respect to the American ships, both cruisers appeared today in brand new coats of white paint as spick and span as the United States vessels themselves.

The Roon fired the first of her twenty-one guns in honor of the president just as the echoes of the Good Hope's saluting cannon had died away.

The Austrian ships, the Sankt Georg and the Aspern, were the next of the foreign vessels to greet the president. Then came the Argentine cruiser Sarmiente. At the end of the foreign line were grouped several American cruisers, and still further along were the Brooklyn and the Texas, the Miantonomah and the Canonicus, all of which will serve as station ships during the exposition. Turning down the long line of heavy American battleships, President Roosevelt was again greeted with a deafening roar of cannon fire, the volume of smoke being so dense at times as to almost obscure the Mayflower. The Indiana was the first of the battleships to salute, and far away down the line the last of the cannonading came from the battleship Georgia. Completing the circuit of the ships, the Mayflower turned again toward Norfolk and, steaming this time between the battleships and the foreign vessels, came to her anchorage within the group of flagships. Immediately upon anchoring, the president received on board his yacht the flag officers of the Atlantic fleet.

The foreign flag and commanding officers were received on board from 9:30 to 10 o'clock, and they and the flag officers of the Atlantic fleet then proceeded to the landing at the exposition grounds. The president, in a small launch which danced and bobbed over the waves, followed them in a few minutes, his boat being guarded off either bow by two launches especially assigned for the honor and service by Admiral Evans.

Tonight the fleets will be illuminated with thousands of incandescent bulbs.

The officers of the visiting ships, especially those of the German cruisers Roon and Bremen, which have been here for several days, were frank today in expressing their appreciation of the hospitality shown to them by the American officers. Capt. Von Rebeur Paschwitz, adjutant of Emperor William on board the Roon, was especially sent over to attend the naval review and opening ceremonies of the exposition, and his presence is taken as an expression of the cordial feeling of the emperor for President Roosevelt. On his return he will submit to Emperor William a detailed report of the reception of the German fleet, which will cover all features of an international character connected with the inauguration of the Jamestown exposition.

A reception will be given on board the Roon on Sunday afternoon in honor of the American naval and army officers and their families. The German commodore, Kalau Von Hoff, and officers of the German ships will leave for Washington Sunday night to accept an invitation of the American naval officers to visit the capital city. While in Washington the German officers will be received by President Roosevelt, probably on Tuesday next.

The British and German ships expect to remain in the roads until May 5.

Have you seen those splendid Saratoga Bath Rugs?

Once they were a luxury — now they are a necessity to a comfortable bath.

A Wilton weave— of finest cotton—in soft blue and white effects—in dainty little designs — of course, they're pretty!

And they wash — colors guaranteed—and they stay soft and velvety—do not mat down. The ends are buttonholed for wear.

Some of our customers are buying them for their bed chambers, too—and they're sensible in doing so.

Our prices are reasonable—you'll not be urged to buy when you come to see them in our brand new Rug and Drapery Department on the Third floor.

TO SUBSCRIBERS:

It is important when desiring the address of your paper changed to give both old and new addresses.

THE JAMESTOWN EXPOSITION.

Amid the salutes of a great fleet of ultra-modern warships and the cheers of assembled thousands from all parts of the country and from Europe as well, President Roosevelt opened today the last of the great expositions, commemorating historic events in the history of this country, to be held for some years if the Alaskan fair be excepted.

This world's fair, as it may justly be called, celebrates the three hundredth anniversary of the founding of the historic old town of Jamestown, Va., the first settlement by English-speaking people in the New World. While almost minute as compared with the colossal Chicago and St. Louis expositions, it is, nevertheless, a complete and imposing display of the industrial and commercial progress of the nation in the last three hundred years and it includes also creditable exhibits from abroad, notably England.

The most marked feature—one that was prevented by the location of the cities in which previous expositions have been held—is, and will continue to be, the naval display. In this, the greater portion of the huge warships of America as well as squadrons of crack cruisers of England, Germany, France and especially Japan will participate during the progress of the fair. A scarcely less imposing feature will be the gathering of the military of the nation.

The extreme prominence that has been given to these two warlike features, rather than to the industrial, mechanical and commercial displays, aroused considerable feeling among the more ardent advocates of peace. It would, however, have been decidedly hypocritical for America, the second naval power in the world today, to have refused to avail itself of the great opportunity to make a naval display of the highest class, especially because, as President Roosevelt well says, America's battleships are primarily to insure peace and only secondarily for war. There is no question that this exhibition of men-of-war will attract far more attention from the vast majority of the visitors than will the displays of the works of peace of which they have had a surfeit.

Of course, this exposition cannot hope to even approach the records of the Columbian and Louisiana Purchase world's fairs but it should be the Mecca for the summer of tens or hundreds of thousands of good Americans who are proud of the achievements of their great country in the three hundred years of its life.

GEORGE J. GOULD OPTIMISTIC.

So confident is George J. Gould, head of the Missouri Pacific, Iron Mountain, Wabash and Rio Grande systems of railroad and now building the Western Pacific line to San Francisco, that there will be nothing in the immediate future at least to mar the prosperity of the country, that he has departed for Europe for a prolonged vacation—a thing that he most assuredly would not have done had he felt the slightest promonition of impending trouble.

In his declaration on the eve of his departure: "I have no fears as to the future. The country was never so prosperous nor the outlook so bright as at the present time," Mr. Gould only emphasizes the recent optimistic expressions of such other leaders of practical, and not "high," finance as B. F. Yoakum and B. L. Winchell of the great Rock Island system, President Finley of the Southern, President Hughitt of the Northwestern and E. H. Gary and Charles M. Schwab of the greatest of iron and steel corporations.

Against the opinions of such men as these who are in far closer touch with the real, solid business interests of the country than are such other men as August Belmont, Jacob Schiff, E. H. Harriman and H. H. Rogers whose financial vision extends little, if any, beyond Wall street, there can be no cavilling. When to these opinions are added those of the leading men in business and trade and manufacturing in Chicago, St. Louis, Cleveland and other large cities of the Central West, there can be no doubt that the tide of prosperity is in no present danger of ebbing.

For Duluth and the Northwest, the prospects certainly could not be any more roseate. The impending construction of many colossal plants and the completion of others assure this section against the possibility of even a temporary halt in the progress of prosperity elsewhere. The people of Duluth welcome all expressions of confidence from the leaders of the nation, but they really do not need their declarations to encourage them in their brilliant optimism.

SAVAGERIES IN RUSSIA.

That savagery, such as would put to shame the most barbarous of races and beside which the atrocities of the Apaches and South Sea Islanders sink into comparative insignificance, should be a common practice in the prisons of Russia, which calls itself a Christian and a civilized nation, would seem incredible were it not that it is officially affirmed by a commission of the duma.

When George Kennan and other visitors to Russia first gave to the world their stories of atrocities in the realm of the czar, they were denounced viciously as sensational prevaricators and the czar even went so far as to invite foreigners of note to make inspection tours of his prisons. These were, however, received publicly and notices of their coming to the dungeons and to the prison camps of Siberia were sent out well in advance. The brutal officials were thus enabled to conceal the worst and the visitors gave discredit to what are confessed now to have been facts that did not really tell half the story.

If death without trials had been the worst punishment inflicted on the unfortunate wretches consigned to the prisons, it would not have caused so great a shock because such punishments have not been unusual in irresponsible autocracies and are sometimes really more merciful than years of imprisonment in vile dungeons. But that men calling themselves Christians and always conscientious in church services should inflict such tortures as tearing out finger and toe nails, whipping prisoners, some of them women, until the flesh hung in strips and then rubbing salt in the wounds, breaking backs by barbarous acts and flogging small children to death is savagery unparalleled in the world's history.

It may be that the czar was utterly ignorant of the horrors perpetrated in his name and the world cannot but hope that he was but he can never make Russia again respected among the nations until he shall order the meting out of the severest punishment to the savages who have made his realm a disgrace to humanity. Certainly the sympathy of the world will go out to the revolutionaries who have been forced to "fight the devil with fire."

THE DEATH OF A MISER.

Even while life was barely extinct in the body of John Tenhoff, a notorious old miser of Milwaukee who had lived for years in squalor in a miserable apology of a hut and had subsisted almost wholly on what he could pick up, relatives and seekers for a share in his wealth began an eager, wildly avaricious search for hidden gold. Some even roughly moved the corpse in order to see whether any of the money was hidden in the wretched pallet. The remains were hustled away to the potter's field.

Yet Tenhoff, by denying himself the actual necessities of life unless he could get them for nothing, left $15,000 in money all of which he had hidden cunningly but none of which escaped the searchers for the spoils. No one but a miser himself can even imagine what the wretched old fellow, to whom his gold and bank notes were more than life or even his soul, had endured in order to rake and scrape together such an amount of money, that meant more to him than Rockefeller's or Carnegie's hundreds of millions.

The miserable old miser, who had literally sold himself to Mammon, proved in his death amid his money, not even one penny of which was his a moment after the breath of life had departed from his body, that the man who dies a victim of sordid avarice is an even more pitiable fool than a dead spendthrift. The one does no good to any one while living, starves body and soul to get and can take nothing with him. The other may foolishly squander his all but he gets some pleasure out of life and his money goes to help others in a more or less ignoble way.

The having of money, even though its "love be the root of all evil," as the Apostle Paul most truly wrote to Timothy 1900 years ago, is a good thing, if it be rightly gained and rightly used. But common sense and the experience of millions prove that the humble wage-earner who knows nothing of the money hunting fever and the dying poor man whose last hours are soothed by loving, tender hands are immeasurably more to be envied than the miserable wretch who gives up all for gold.

What did it profit John Tenhoff and what does it profit any slave of Mammon to sell his life, his love, his faith, his very soul for gold, only to have it all slip from him when death ends his miserable existence, leaving every penny for others to quarrel over and then to squander?

AMERICA'S "DEMENTIA PECUNIAE."

Whether there is any such a malady as "dementia Americana" as was depicted by Attorney Delmas in his closing argument in the recent trial of Harry Thaw or not, may be an open question in view of the action of the jury but there is no doubt that there is another kind of madness, which may be called "dementia pecuniae," that afflicts many of the children of the rich of this country and plays sad havoc with them morally and physically and often leads to premature death.

This ailment does not affect all rich men's sons or daughters, as can be proved by young John D. Rockefeller, "Jack" Morgan, young Cornelius Vanderbilt, Stuyvesant Fish, Jr., J. G. Phelps-Stokes and scores of other most worthy sons of multi-millionaires, but it does unquestionably influence the lives of hundreds of others and, if it does not lead, as in Harry Thaw's case, to desperate homicide, it has, nevertheless, almost as bad a moral and physical effect on them.

The victim of "dementia pecuniae" is one who, being possessed of great inherited wealth of the value of which he knows nothing, gives himself up in idleness to the gratification of every desire that comes into his empty head. He lives in selfish luxury which is bad for any man, however strong. He despises education for that implies abhorred labor. He does not discipline his mind but allows it to wander wherever it may. He maltreats his senses and he destroys whatever conscience he may have had originally.

Such a man has virtually no reason and no will-power. He literally cannot resist any impulse, except through the operation of fear and, too often, he drives such fear away by the half-baked idea that all-powerful money will meet the results which that fear would teach him to expect. He is useless to himself, useless to his family and useless to humanity except in so far as he puts in circulation the money his father has slaved to garner up.

Fortunately, men thus afflicted are seldom interested enough in anything to commit serious crimes. Their lives of wretched idleness and dissipation should, however, prove warnings to other rich men and teach them to bring up their children to lives of usefulness.

THE PASSING SHOW.

Now comes a $500,000 cement plant as an addition to Duluth's new industries. Will fortune's cornucopia never cease showering out good things?

* * *

Of course, there will be many and severe criticisms of the late legislature but the fact remains that it was the busiest and most important in its work in years.

* * *

The new Minnesota tax commission will have an herculean job to accomplish but its members give excellent promise of being well fitted to perform the task acceptably.

* * *

Of course, Isaac Stephenson's action in surprising his employes with 10 per cent increases in wages has had nothing to do with his candidacy for Senator Spooner's abandoned job.

* * *

One million dollars of good honest Quaker money about which there is certainly no sign of "taint" ought to give Booker Washington a great boost toward realizing his dream of an educated negro race.

* * *

The authorities of Pennsylvania cannot begin too soon to make arrests of state capitol grafters. No such scandal has ever been developed in America and the ones responsible ought to get somewhere near life sentences.

TALKING ABOUT THE HERALD.

A Good Paper.

Fergus Falls Free Press: The Duluth Herald is gaining a reputation and circulation that are worthy of envy. There are two reasons for this: One is that The Herald is a first-class newspaper and the other is that its editorials have a moral tone possessed by no other daily in the Northwest. The Herald stands squarely for morality, cleanliness, social purity, good behavior and a general uplifting of the masses, and the people, regardless of political, religious or other affiliation, respect it, like it and patronize it.

Twenty-four, Not Twenty.

Minneapolis Tribune: The Duluth Herald is also twenty years of age and with the pride of approaching majority swells up and freely admits, what we are willing to concede, that it is a mighty good newspaper in a mighty promising field.

Enterprise Appreciated.

Akeley Tribune: The Duluth Herald is twenty-four years old. It has played a prominent part in the upbuilding of its home city and Northern Minnesota. It has a splendid circulation and merits it, all of which tends to show that the enterprising newspaper is appreciated.

Life of Useful Service.

Bemidji Pioneer: The Duluth Evening Herald entered upon its twenty-fifth year today, and commemorated its birthday with a sixteen-page edition and a circulation statement showing it to be the most widely circulated news medium in the Northwest outside of the Twin Cities. The life of The Herald has been one of useful service to the good people of Duluth—a service that has been unwaveringly and unselfishly devoted to the best interests and the upbuilding of its home and of all Northern Minnesota.

Most Widely Circulated.

Akeley Herald: The Duluth Evening Herald began its twenty-fifth year in the journalistic realm on Wednesday with a sixteen page edition and showing it to be the most widely circulated paper in the Northwest. The Herald has certainly earned its liberal support in the Northwest.

HOTEL GOSSIP.

"Northern Minnesota as a whole is much more friendly disposed toward Duluth than it is toward the Twin Cities," said C. I. Schiller of Bemidji, Minn., at the McKay, "and the people of the northern half of the state will favor Duluth whenever opportunity offers. This being true, the completion of the extensions of the Duluth, Rainy Lake & Winnipeg, the Minnesota & International and the Great Northern roads to the border would be of more material benefit to Duluth than to either St. Paul or Minneapolis, even if distances to the three points were the same. As a matter of fact, however, Duluth is the most easily reached from all of the Northern territory, and will therefore naturally get the lion's share of the benefits.

"There is a feeling through the northern section that Minneapolis and St. Paul are not so friendly to it as they are toward the southern section, while, on the other hand, Duluth has given every evidence that her relations with Northern Minnesota are the most friendly imaginable. She is always ready to fight the battles of the northern towns and counties, and puts in a good word for them whenever she gets a chance. Her every effort is devoted to booming Northern Minnesota, and she stands ready to fight the battles of the whole district. The impression has gone abroad that the Twin Cities are not always ready to do this, and that when they do put in a good word for the region, it is entirely from a selfish motive.

"The development of Northern Minnesota has been gratifyingly rapid during the last year, and it will continue so during the next year. The new lines of railroad are all that is needed to promote further development. There is more farming up through that district than most people imagine, and the land is well adapted to farming. Clearing it is not so difficult as some people seem to think, and along many of the creeks and rivers there are natural meadows that are being used to good advantage by the farmers. Up to the present time they have had no difficulty in disposing of the products of their land to the logging camps at good prices, but after the lumbering is a thing of the past, there will always be a good market for the farm products, because the railroads will make it so easy to get them out, and then all the new towns that are being started will afford a ready market."

* * *

"It seems to me a lot of unnecessary fuss is being made over those Western miners," said T. S. Lafayette of St. Paul at the St. Louis. "The labor agitators are working the sympathy racket, and when anybody reaches that stage of the game it usually is an indication that they know their side of the case is a very weak one, unable to stand on its own merits. Labor unions are a mighty fine thing, and no one appreciates their advantages more than I do myself, but there is no getting around the fact that labor agitators, walking delegates, etc., are allowed altogether too much sway.

"It often looks as if they did nothing but sit around and think up trouble. It seems as if they were afraid of losing their jobs unless they continue to agitate all the time, day and night, whether they have any reason for agitation or not. In the present instance, I think the miners will receive full justice, and that there is a lot of unnecessary talk concerning the matter going the rounds. President Roosevelt is entirely right in his position, and the big mass of people, laboring men and otherwise, will stand by him to the finish. I admire his courage in risking the displeasure of the unions by saying just what he thinks.

THE WEATHER.

Anything but spring-like in the usual acceptation of the word was the weather last night and early this morning. On the contrary, it was decidedly chilly and the few people who ventured out without their heavy wraps looked drearily uncomfortable. With stories of heavy snows in Kansas and other sections far south of here, the people of this region may congratulate themselves that they really are not so badly off after all. The sky was clear and the sun was unobstructed in its genial work and, in consequence, the temperature became somewhat more pleasant as the day progressed, but still it was not exactly warm. The streets were again alive with shoppers and the merchants generally had a busy day. Last night's lowest temperature was 22 degs., and yesterday's highest was 34 degs. The weather man says that there will be increasing cloudiness with possibly rain or snow tonight and tomorrow, and that tonight's temperature may not go below 30 degs.

The sun set at 7:11 o'clock this afternoon and will rise at 4.59 o'clock tomorrow morning. Today gained two minutes of sunlight in the morning and one minute in the afternoon.

A year ago today was windy with a strong breeze from the northeast, but it was clear, though not so warm as on several preceding days.

Says Mr. Richardson of conditions: "Low pressure areas over the Rocky mountain and Eastern states have caused rain or snow in the eastern and southern districts and the extreme Northwest. New Orleans reports the unusually heavy rainfall of 8.76 inches in twenty-four hours. The barometer is high in the lake region and north of Montana. Freezing temperatures continue in the lake region and as far south as Iowa, Kansas and Northern New Mexico. Cloudy weather, easterly winds and possibly rain or snow may be expected in this section during tonight and Saturday."

Following were last night's lowest temperatures, as recorded by the weather bureau:

Abilene	38	Medicine Hat	20
Asheville	50	Memphis	46
Atlanta	60	Miles City	30
Battleford	8	Milwaukee	30
Bismarck	22	Minnedosa	18
Boston	46	Modena	42
Buffalo	34	Montgomery	62
Cairo	42	Moorhead	28
Calgary	16	New Orleans	62

Department of Agriculture, Weather Bureau, Duluth, April 26.—Local forecast for twenty-four hours ending at 7 p. m. Saturday: Duluth, Superior and vicinity, including the Mesabi and Vermilion iron ranges—Increasing cloudiness with probably snow or rain tonight and Saturday. Warmer tonight with lowest temperature about 30 degs. Fresh easterly to northerly winds.

H. W. RICHARDSON, Local Forecaster.

Chicago, April 26.—Forecasts until 7 p. m. Saturday: Wisconsin—Fair tonight probably followed by rain in the north and west portions Saturday. Rising temperature.

Minnesota—Probably rain tonight and Saturday. Warmer tonight. Cooler in north portion Saturday.

North Dakota and South Dakota—Rain tonight and Saturday. Warmer tonight. Colder Saturday.

Upper Lakes—Light variable winds tonight, shifting to easterly on Superior and southeast on Michigan and Huron and becoming unsettled on Michigan and Superior Saturday.

An Old Adage Revised.

North Branch Review: Most men are born equal—but in Minnesota some are born with the surname of Johnson.

Just for Warming Purposes.

Atlanta Constitution: "Satan ain't never in de weather—not 'cordin' ter my notions," said Brother Dickey, "but, seein' dat de weather's so chilly, en coal's so high, en wood's so skace, I sorter wish he would give a flop down disaway, en sorter warm up de elements—perwidded I could see him comin' an' git out de way in time!"

Realism in the Pulpit.

New York Times: Rev. J. B. Hammill of Hanson Place Methodist Episcopal church, Brooklyn, filled the pulpit of the Methodist Episcopal church here on Sunday. He was earnestly preaching from the text "Look well to your foundation," and leaning heavily on the pulpit desk, when suddenly the desk went tumbling off the high platform over the altar rail, nearly hitting the devout laymen in the front seat and scattering the Bible and the preacher's notes among the holders of the pews.

Stuttering Women Unknown.

St. Louis Globe-Democrat: "Did you ever see a woman who stuttered?"

"No; now I come to think of. I never did."

"They are very rare," said the physician. "I think it is safe to say that the average person passes through life without ever meeting a stuttering woman.

"There are two reasons for this: First, women naturally—I don't know why—is less liable to the disease of stammering than man. Second, if she develops this disease, she sets out with the determination to cure herself, and she succeeds; whereas careless man, rather than take the trouble of a cure, will go stammering on to the end.'

Great and Good Friend.

Washington Herald: The supreme court of the United States is still our great and good friend. It has just decided that the Isle of Pines is not our property.

TWENTY YEARS AGO.

Taken From the Columns of The Herald of This Date, 1887.

***W. B. Banks of West Superior has gone to New York in answer to a telegram from Treasurer Belknap of the Northern Pacific road, stating that his presence was required in settling up the estate of his great aunt, Mrs. Lenox. Mr. Banks and Mr. Belknap will each get about $100,000.

***Frank L. Buell, who was in St. Paul and Minneapolis during the past week, has formed a syndicate, with $20,000, to handle Old Superior property.

***It is stated here that owing to the absence of Secretary Lamar, no action has been taken in Washington relative to the appointment of new officials of the Duluth land office, although the papers have been in the hands of the secretary for nearly a week. N. B. Thayer's name is mentioned, and C. C. Miller has sent in his application.

***Patrick Henry of Arkansaw, where he has a large plantation, but resides at Clarksville, Tenn., during the summer, bought in 1873 forty acres near Hibglund Park, through George W. Norton, now of Louisville. Mr. Henry is now in Duluth, and yesterday afternoon he went out to see the land, and concludes that it is worth $1,000 an acre. Mr. Norton, who bought the property for him, has sold during the past season $500,000 worth of Duluth real estate.

***The straits of Mackinaw are opened and the Duluth and West Superior ferries are running in the bay. Lake Superior will soon be cleared of ice, and the greatest season of navigation will be opened.

***Joe Davis, late overseer of the poor, has accepted a position in Johnson & Ole's grocery store.

***Miss Kate Finnert left yesterday on a visit to Chicago.

***Mrs. N. Campbell is in the city and will remain a week, visiting her husband, who is engaged in the real estate business at the Hotel La Perl.

***J. M. Whaling of Washington, D. C., is at the St. Louis. He is the fortunate owner of fifteen miles of territory, on the Vermilion range. He believes in cable lines for Duluth, and is willing to invest $10,000 or more in such projects.

***The West Duluth Land company is having the plans made for a number of cottages at Grassy Point, and expects soon to commence building. These cottages are for the workmen employed at the forge works.

***The bank clearings today were $235,879.

* * *

***Prof. Phelps is going to erect a private residence in the St. Louis tract out beyond Endion.

***Miss Helen Parkhurst has arrived in Duluth from Livingston, Mont., and will make this city her home.

MINNESOTA OPINIONS.

Princeton Union: There will be no kick over the increase of the governor's salary from $5,000 to $7,000. Col. O'Day's stipend should also have been boosted.

Mower County Transcript: Larger salaries is the cry by public officials high and low. If they are not satisfied with what they are now getting why do they not step down and out and make room for just as competent people who will be glad to work for present salaries?

Eveleth Star: Does Eveleth need a public awakening of some kind? Well, we should say it did.

Owatonna Journal-Chronicle: The Owatonna public library stands sixth in the state in circulation, with only the larger cities of Minneapolis, St. Paul, Duluth, Winona and Mankato ahead of it. In 1905 it ranked fifth, being ahead of Mankato at that time.

Sleepy Eye Dispatch: One country newspaper says it can't understand why its senator should vote against the semi-centennial bill. It is more of a wonder how any one could vote for the bill.

Norman County Herald: The creamery seems to be growing in favor in the northern part of the state. Among the counties in which several new creameries are being established are Otter Tail, Becker and Clearwater. There is no country more adaptable to dairying than Northern Minnesota.

Wadena Pioneer-Journal: We don't intend to do much railway traveling until after the first of May. Then we propose to "go some." The new 2-cent passenger rate law goes into effect upon that date.

Crookston Journal: Despite the high price of building material there will be general activity in the building line both in the business and residence sections of Crookston this year.

Richmond Standard: If the pulpits of the land would "go after" the fellows who refuse to pay their honest debts and to love their wives and their fellowmen—"go after" them as vigorously as they go after the fellows who "cuss and chew tobacco," the true reformation of the race might be nearer at hand.

Anoka Herald: The anti-treating measure was killed in the house. The man who loves free grog may loiter about as of yore unostentatiously ready to accept any and all invitations.

Martin County Sentinel: The Sentinel has been a pretty good friend of President Roosevelt, yet believes the Minnesota legislature might find more important business than helping launch a political boom for any man of any party.

The Present and the Past.

A valet helps him into bed;
She cannot dress without her maid;
In haunts by fashion tenanted
Her jewels nightly are displayed.

Their fathers both as pioneers
Drove oxen over lonely ways;
Their mothers toiled through trying years
And cooked their own meals all their days.

He has to have his morning tub,
An expert polishes her nails;
He sits and dozes at his club,
To Europe twice a year she sails.

Their fathers and their mothers through
The wilderness hewed out a path,
And ate things with their knives and knew
Not what it was to have a bath.
—Chicago Record-Herald.

Pointed Paragraphs.

Chicago News: Wise is he who profits by the foolishness of others.

It is sweet to suffer when we suffer for those we love.

Beware of the mining stocks lying around on the ground floor.

Work is a great institution—when we can induce others to do it.

Even the proprietor of a canning factory sometimes says, "I cannot."

Few photographers would care to take people for what they are worth.

Most women have a head for figures when it comes to looking out for No. 1.

Reflections of a Bachelor.

New York Press: A girl calls it a romance to see a man in the street who looks like a foreign count.

One great comfort to a widow is to pretend that mourning isn't becoming to her when it is.

If a man matches for the street car fares and loses he looks as if he'd been beaten running for office.

Half the time a man stays out late just to get the name of a gay rounder when he'd much rather be home in bed.

Largest Leather Belt.

Woodcraft: In the equipment of the Dempsey Lumber company's new sawmill, at Tacoma, Wash., is the largest single leather belt in the world. It is eighty-four inches in width, three-ply in thickness, and weighs just 2,300 pounds.

The belt is 114 feet long. It took the centers of the hides of 225 steers to make it, and each piece of this leather was separately stretched before being placed in the belt. In putting the belt together no pegs, rivets, or fastenings of any kind were used, except cement of the best quality, and the plies were cemented together under a hydraulic pressure of 250 tons.

Pointed Paragraphs.

Chicago News: The easiest way to interest a woman in a $1 article is to mark it down from $1.50 to $1.29.

A woman invariably tells a small boy to hurry back when she sends him on an errand—but what's the use?

No, Cordelia, a married woman isn't necessarily up to date because her husband happens to be the latest thing out.

It's an undisputed fact that some men do not have any more sense when they get married than they did when they were born.

It's an easy matter to induce the world to laugh with you; all you have to do is laught at yourself.

Happiness is merely the ability to realize that things are seldom half as bad as it is possible for them to be.

POINTED PLEASANTRIES.

Chicago Record-Herald: "I heard Mr. Beasly, the stock broker, pay you such a fine compliment the other day, Mr. Lambkin," said the innocent girl.

"Indeed?"

"Yes. He said you were a good thing. And he spoke as if he really meant it."

Philadelphia Ledger: Mrs. Crossway—How many lodges does your husband belong to?

Mrs. Kawler—Only one, I think, but it meets six nights in the week.

Washington Star: "You say your husband goes to the ball game for exercise?"

"Yes," answered young Mrs. Torkins, "vocal exercise."

Baltimore American: "I thought you told me Miss Screamer couldn't sing."

"So I did."

"But I have heard her at social gatherings myself a number of times."

"I said she can't sing; I never said she doesn't."

Philadelphia Press. "Pa," said little Willie, "the goose has a bigger bill than any other bird, hasn't it?"

"Well, my son," replied pa, who had just received a statement for his latest suit of clothes, "I guess the tailor's goose has."

Washington Herald: "Pat, are you in favor of this movement for world peace?"

"Sure, sor, if we have to lick all creation to get it."

Cleveland Plain Dealer: Patron—What is this "mollycoddle soup" you have on the bill of fare?

Waiter—It's a sort of a weak noodle, sah.

Chicago Tribune: Mr. Ferguson—That's the new girl singing in the kitchen, is it? She's a regular cuckoo.

Mrs. Ferguson—Yes, except that she can't cook.

Buffalo Express: "That was a queer statement you made a minute ago. You said you never had any trouble keeping your wife fashionably dressed."

"Well, that's the truth. My trouble comes when I don't keep her dressed that way."

Puck: Gabe Goshall (on the southeast corner of the drygoods box); It must be tur-ble t' be ketched out in a brainstorm.

Hi Hemlock (on the southwest corner of the drygoods box) W'y, all a feller'd hev t' do 'ud t' h'ist one o' them paranoias, an' he'd never know 'twuz rainin'.

Cleveland Leader: "The meanest fiend I ever knew," said a member of the Century club, "was a fellow who used to belong to this club. He used to bore us for hours telling of the smart sayings of his children. It was something fierce. Finally he left town and we discovered that he had no children—he was an old bachelor. He'd been springing that line of stuff for years just to watch us writhe."

Well! Well!

Oh, laugh! Why don't you laugh a bit
And let the world alone?
Don't trifle with the scheme of things,
Just breathe the fresh ozone
And swap a heartache for a song
That's worth it anywhere.
Oh, laugh! Why don't you laugh a bit
And say good-bye to care?
—Birmingham Age-Herald.

A Poet's Punctuality.

London Evening Standard: For many years now the people of Putney have been accustomed to see Mr. Swinburne leave his house, The Pines, at the same hour every day for his "constitutional." He returns from his walk the same time every day; so punctual is he in leaving his residence and returning to it that watches might be set by him. The poet's walk is always to the same spot on the heath.

TO BATTLE IN THE AIR

German War Office Plans to Have Maneuvers by Balloon.

Kaiser Designs Pottery for His Porcelain Plant at Cadinen.

Berlin, April 26.—Imperial Councillor Martin's recently published book on battles in mid air gives peculiar interest to some experiments which the German war office has decided to carry out.

Balloons and airships are to be made the targets of gun and rifle fire, tto throw light on the important question of the damage that may be done to them, and also on the effectiveness of balloons and airships to inflict destruction on fortifications and camps and troops on the march in time of war.

The experiments will be made in the vicinity of Danzig. Small balloons of the capacity of 2,500 cubic feet will be let loose, and after traveling a certain distance rifle fire and guns will be trained on them as long as practicable. Other balloons will be held captive by cables 3,000 feet in length attached to warships which will tow them within range of the coast batteries at ranges varying from three to nine miles.

The experiments will be witnessed by officers of the general staff, artillery officers, naval officers and officers of the balloon department.

* * *

The kaiser's industry in making propaganda for his porcelain factory at Cadinen has excited some amusement but it is probable that the average German is after all proud that the monarch has shown sound business sense though naturally some of those in the industries into which the kaiser has entered do not quite like the competition.

Cadinen, by the way, is a handsome property, worth about $2,000,000, which was left to the kaiser by one of his admirers, a wealthy Holsteiner who has no direct heirs. There was some criticism expressed at the time even because the kaiser accepted the gift, but the royal house of Prussia is none too wealthy, and has many claims on it. The kaiser has six sons to provide for and Cadinen has possibilities in it for one of them.

The Kromzliche palais has of course been handed over to the crown prince. Prince Eitel Fritz has been given the cabinet house at Potsdam, and Prince August Wilhelm is to be given the castle at Stettin. But there are still more sons to be provided for and the little Princess Victoria will also expect a residence as part of her dowry.

However, it should be remembered that there are limits to the number of castles and palaces at the emperor's disposal. He himself makes constant use of four—the Neues palais in Potsdam, his favorite residence, the royal castle in Berlin, Chateau d' Urville in Alsace and the castle of Wilhelmhohe near Cassel. Then of course he has Reminten and Hubertsotock, but they are used only during the shooting season, though the former is almost palatial in extent.

Many of the palaces are simply historic piles little suited for habitation, such as the Old Palace at Potsdam and the palace at Konigsberg, the Coronation Palace of Prussian Kings. The Palace of Charlottenburg could easily be adapted for residence (the Kaiser Friedrich lived there for a few weeks during his hundred-day reign), but it is too vast for a mere prince. Kiel castle is always given to the royal prince commanding the fleet, and it is at present in possession of Prince Henry, the kaiser's brother. It will probably be the future residence of Prince Adelbert, the kaiser's sailor son. The only two suitable residences are the castle at Wiesbaden, a handsome modernized residence, and the Castle of Cadinen.

The people of Cadinen have reason to be thankful that the former owner left it to the kaiser, for he takes the greatest interest in their welfare. The porcelain factory is a case in point. Cadinen ware has existed for a couple of centuries and resembles the porcelain of Delft. But in recent times its design has become of astonishing ugliness.

The kaiser some years ago took the matter in hand and invested $100,000 in the business. He himself designed a number of pieces of ware and got well known artists to provide others. The number of work people was doubled and then his majesty set out to make propaganda for his factory. At court balls and receptions he buttonholes wealthy bankers and merchants and books an order to two which he promptly inscribes on his shirt cuff, so as not to forget it. The custom on his part has formed the subject of an amusing cartoon in Ulk, the Berlin comic paper. It represents the counting house of the Cadinen factory and a bookkeeper telling the washerman that the cuffs are going to the safe and not to the laundry.

* * *

The Deutsch Zeitung says during the course of an interesting story regarding the movements of the British admiralty:

"The belief is general in German naval circles that unfavorable reports are being spread from England regarding the battleship Dreadnaught with the deliberate intention of misleading foreign admiralties. Not only was the British admiralty satisfied with the Dreadnaught but it is already arranging for battleships of still greater dimensions to be laid down."

After publishing the above statement the Zeitung adds the further information that in the circles above mentioned it is definitely understood that "not only Germany's new line of battleships, but also her new large new cruisers will have a displacement of 19,000 tons, and each will be equipped with sixteen 28-centimetre guns in eight double towers."

They act like Exercise.

LEADER OF SOCIETY GOES ON THE STAGE.

Cleveland, Ohio, April 26.—Mrs. Mark Squire, wife of a millionaire and a society leader, has gone on the stage. She left for St. Louis last week, where she joined a musical comedy company in the role of chorus girl. Her action caused a sensation in exclusive East end society circles when the announcement was made. Mrs. Squire's husband is a wealthy broker, and her uncle, Sylvester T. Everett, is a retired capitalist, whose home on Euclid avenue is the finest in the city.

Mrs. Squires was graduated from Harcourt seminary at Gambier, Ohio, and took musical instruction from the best teachers in New York, with the expectations of entering upon opera work. Her marriage cut short her stage ambitions. Mrs. Squire, it is said, will remain in the chorus until a society sketch now being written for her is completed, and then she will star in it. The Squires lived at Prospect avenue and Terrace road, in East Cleveland. Her father-in-law, W. Drew Squire, was an attorney and close friend of the late Senator Hanna.

WANTS HER MARRIAGE TO DIVORCED MAN ANNULLED.

White Plains, N. Y., April 26.—An odd suit for the annulment of marriage has been brought in the supreme court here before Judge Keogh by Mrs. Lula F. Dayton against Arthur W. Dayton of Peekskill. Mr. Dayton brings the suit on the ground that at the time of the marriage, which took place in Jersey City on Feb. 14, 1904, Dayton was a divorced man, his wife, Mincola Paulding, having secured a divorce from him in Westchester county on May 22, 1891, and that the first Mrs. Dayton was living when the second ceremony was performed. The decree of divorce provided, it is alleged, that the defendant could not marry again during the plaintiff's lifetime.

This is said to be the first time that such a question has come up in the Westchester county courts. It has always been contended, it is said, that in a case like that of Dayton's a person could marry again provided the ceremony was performed in another state.

"Pneumonia's Deadly Work

Had so seriously affected my right lung," writes Mrs. Fannie Connor, of Rural Route 1, Georgetown, Tenn., "that I coughed continuously night and day and the neighbors' prediction—consumption—seemed inevitable, until my husband brought home a bottle of Dr. King's New Discovery, which in my case proved to be the only real cough cure and restorer of weak, sore lungs." When all other remedies utterly fail, you may still win in the battle against lung and throat troubles with New Discovery, the real cure. Guaranteed by al druggists, 50c and $1.00. Trial bottle free.

DENUNCIATION OF WALL STREET

J. Pierpont Morgan's Pastor Scolds Financier in a Sermon.

New York, April 26.—A denunciation of Wall street as the "Black street," with its gamblers menacing the government and the scancity of the home, and a condemnation of the business methods of one of its leading exponents, were features of a sermon by the Rev. Hugh Brickhead, pastor of St. George's Episcopal church, Stuyvesant square, of which J. Pierpont Morgan is vestryman. Many in the congregation thought Dr. Birckhead had J. P. Morgan in mind when he referred to "one of the most potential financiers in America." Mr. Morgan is in Europe at present.

Mr. Birckhead told of a conversation the financier had with a high-salaried expert recently. The pastor was present at the interview.

"What I want to buy is your success. I have made my career by buying the success of other men,' said Morgan. 'As long as you succeed I will pay you aside and pension you. The pay is high; will you take it?"

Concerning Wall street, Rev. Mr. Brickhead said:

"The 'Street,' the market is enormously popular. Everybody is 'downtown.' It is the most recognized part of our life. How many of us understand what is down there? How many of us can go down into the black street and see what the inevitable effect must be in the long run? It ignores those things which encumber its success. It ignores the state, it ignores the government.

"I do not mean that it ignores the world of politics. Every now and then the government interferes and has to be dealt with. It has to be dealt with like many other claimants that interfere, and it has to be dealt with in the same way. The purpose of it all is business. The business man is driven to oppose legislation and to opose investigation and slowly is formed a strong bond of self-interested men to whom publicly means but more incumbrance. From time to time the government calls their attention to the fact that they are only allowed to conduct their busines because the public exists—because the government exists.

"This spirit of commercialism penetrates even the family, and with its golden fingers disintegrates the relation of husband and wife, the relation of puarent and child."

The Rev. Mr. Birckhead spoke of the millionaires who try to insure their memories after death by leaving generous legacies to educational institutions. He said this was one of the most damnable elements of American life. He concluded by saying: "Thank God, the market is not planning the future of the United States."

TO TRY HYPNOTISM

As Cure for Drunkards at Bowery Mission in New York.

New York, April 26.—Now hypnotism is to be used to cure drunkenness.

The experiment is to be used at the Bowery mission, 55 Bowery, by Dr. S. A. Gayer, with the consent and approval of Dr. Louis Klopsch, editor of the Christian Herald, and financial backer of the mission, and of J. S. Hallimond, the mission superintendent.

Dr. Klopsch explained the plan to an Evening Mail reporter.

"I am in favor of anything that will put a stop to drunkenness, the use of drugs, and other vicious practices," said he. "I have signified my willingness to have Dr. Gayer experiment with hypnotism in the mission. While I am not an expert on psychic suggestion myself, Dr. Gayer has assured me that he can cure any condition of drunkenness, and I am glad to give him the opportunity to prove his assertion.

"I understand that Dr. Gayer will begin operations at once. If he is successful in his primary experiments we will throw the mission oper to him, and he will treat all the cases of drunkenness which have been heretofore considered incurable. I see no reason why such treatment would not be successful. Hypnotism used to be associated with the dark arts years ago, but this scientific generation has cast all that foolishness aside, and realized that mental suggestion is a normal and reasonable science. I am awaiting expectantly for the results of Dr. Gayer's first experiments."

Dr. Klopsch said that he did not believe in associating hypnotism with the gospel, but that from a social standpoint he thought it would be a good thing to inaugurate classes in mental suggestion in the large churches, after the manner of those held in Emanuel church, Boston.

MARKET IS VERY BARE

All Green Stuff is Rather Slow in Arriving.

Condition Due to Backward Season—Advance in Prices.

Unless things change for the better very quickly the public, in the immediate future, looking for green vegetables and fresh fruits, will more than likely find the market in the condition of Mother Hubbard's cupboard. The market is almost bare now, in fact, and at the rate green stuff is arriving it will be entirely so in a few days.

This is because of the backward spring. Duluth is really better off than some of the larger markets of the country. A famine in green stuff exists in Chicago, according to a telegram received by a Michigan street house yesterday. Shipments are few and far between, and the supply is far below the demand. Where one car arrives there usually are ten at this season of the year in the Windy City, and the same holds true in Duluth, only on a much smaller scale. All this means an advance in prices all along the line, although there is a limit which cannot be passed, for the simple reason that stuff of this kind is not numbered among the necessities, and the people refuse to buy when the limit is passed.

Pie plant, for one thing, is commanding a price today that it is just twice what it was two weeks ago. The cold weather and prolonged rains in the growing sections are responsible for the existing state of affairs. The shipments of spring stuff were just getting nicely started when the season was set back a few weeks.

* * *

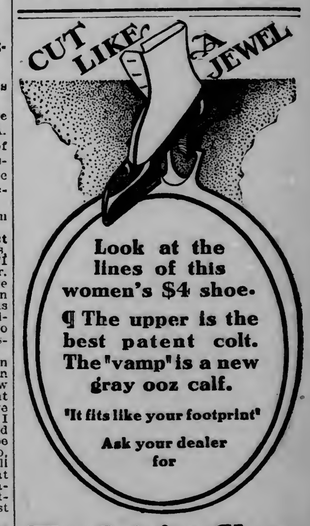
Potatoes are much firmer in price than they have been. They are wholesaling at 10 and 15 cents a bushel more than they were a week or two back. They are hard to get, and prompt shipments are unheard of. Both the old and new varieties are commanding a good figure.

* * *

Much the same may be said of butter. Receipts are light, and the supply is less than the demand, resulting in an increase in price. Eggs are none too plentiful, but there has been no recent advance in price.

* * *

There is more or less delay in getting oranges to market, but there has been no further advance in price during the past week. The same holds true in regard to the lemon market. There is plenty of the fruit in California, and at all points of shipment, but conditions on the railroads are such that shipments are very slow in arriving, and there is no danger of stocks accumulating. Bananas hold firm in price at a high figure, which is, however, usual for this season of the year. There has been a natural advance in the price of apples. The old apples are being pretty well cleaned up, and stocks are light. They are not so high as they were a year ago at this time. Then they commanded $2 a barrel more than at present.



* * *

No changes worthy of note have occurred this week in the prices of poultry and fish. Most of the poultry now offered for sale is cold storage stock. Strictly fresh poultry is not much in evidence. There is plenty of the other kind to supply all demands, at prices within the reach of the ordinary person.

The first shipments of lake fish are now being received in Duluth and placed on the market. Lake trout are coming forward freely, and some white fish and blue fins are arriving, although these latter varieties are not moving very freely from Lake Superior points. Practically all the pike sold in Duluth is brought forward from Canadian waters. This is the closed season up there, and shipments are of cold storage stock. The open season will begin in June. Not much pike comes from Lake Superior for the regular markets.

Doing Business Again.

"When my friends thought I was about to take leave of this world, on account of indigestion, nervousness and general debility," writes A. A. Chisholm, Treadwell, N. Y., "and when it looked as if there was no hope left, I was persuaded to use Electric Bitters, and I rejoice to say that they are curing me. I am now doing business again as of old, and am still gaining daily." Best tonic medicine on earth. Guaranteed by all druggists. 50c.

NEWS FROM THE WEST END.

DIES FROM HER BURNS

Woman Virtually Cremated in Front of Her Home.

Many West End People Witness a Horrible Accident.

Her body enveloped in flames and screeching at the top of her voice from the excruciating pain of fire, Mrs. Max Berger dashed down the steps from the second floor of the dwelling at 1932 West Michigan street, to virtually burn to death on the sidewalk in front of her home, yesterday afternoon at 4 o'clock.

Several pedestrians heard her terrified screams for assistance and rushed to her aid. John Lambert, Mel Brackett, William Boettiger and several others tore off their coats and tried to smother the flames which enveloped the woman's face, her hands and every part of her body. They tried with their bare hands to tear of the burning clothing and all of them were burned so painfully that they were obliged to have physicians attend to their burns.

But while they succeeded in wrenching the flaming garments from the hapless woman, it was too late to save her life. Physicians were sent for at once, but she died at 3 o'clock this morning at St. Luke's hospital.

The wild screams of Mrs. Berger, caused by the terrible pain of the burns startled the neighborhood and shocked the residents, many of whom had seen the accident.

Little children stopped their play and hurried to the safety in their own front porches, in awe. The poor little tots to whom Mrs. Berger was mother stood about, half-crazed by what they had seen, while the sobs of Mrs. Berger's relatives and neighbors could be heard at times against the walls of the dying woman.

As soon as possible, she was put under the influence of opiates, from which she did not awake until death relieved her terrible sufferings some ten hours after the accident occurred. Her life was despaired of from the first.

It is said that Mrs. Berger was making preparations for the evening meal and to stimulate the fire in the kitchen stove, applied a little kerosene. An explosion followed and Mrs. Berger's clothing caught fire.

In terror, she tried to kill the fire by striking her burning garments against objects in the room. Some of the kerosene was on her clothing and those parts igniting, the flames sprang up with renewed vigor.

Crying aloud for help, Mrs. Berger rushed to the outside stairway which led from her apartments to Michigan street. She half ran, half fell down the flight of steps and landed in a burning heap on the sidewalk at the bottom.

Max Berger, the husband of the burned woman, was at work when the accident occurred. He was notified at once and was overcome by grief.

WEST END TO HOLD PICNIC

Plans to Shut Up Shop and Have Celebration.

One Day Will be Given Up to a Good Time.

While the West End Commercial club, or the Business Men's league may be dead, the members of the defunct society are not and to furnish proof additional to that given by the business they do every day, they are planning to hold, at some favorable time during the summer, a big picnic and jollification.

It is proposed to name some suitable day, shut up shop, pack lunch baskets and go off to some nice place for a good time. Committees will be appointed to talk up the affair.

Agreements will be secured from all the business men to knock off work for a few hours on one of the dog days and give it up to pleasure. The different establishments along Superior street, for several blocks on both sides of Twentieth avenue west, will offer prizes to the winners in the different events which will be pulled off.

Some hot contests will be held. M. A. Fedje confidently expects to win the prize for putting the shot, while Joan Eckman is already boasting that he will be heard from in the sprinting contests, unless some "ringers" are introduced.

Not the least important athletic events talked of is a baseball game. It is said that without importing any professionals, two excellent teams can be corralled from among the workers in the different stores and offices along the "Great Wide Way."

They say that Edward Smith, the druggist, was once the most mysterious southpaw pitcher in Chippewa Falls, Wis., and it is well known that Drs. Coventry, Green and Osterberg know the difference between a hot liner to shorstop and a foul ball.

While the weather is still too chilly to make picnic arrangements, this big West end outing has been talked of and has found much favor.

West End Shortrails.

Miss Olson, eldest daughter of Rev. C. G. Olson, pastor of Bethany Lutheran church, will return to her studies at Wausau, Neb., May 1. She was called home by the death of her mother, a short time ago.

Mrs. A. Lofgren leaves shortly for Canada, where she will visit relatives for a few months.

Friends in the West end of Henry Volszk of Proctor will be interested in knowing that he has just returned to the little town over the hill from Foley, Minn., where he took unto himself a bride.

Will Cox of Pelican Rapids, Minn., is in the West end, the guest of Sergt. Gillen of 2629 West Third street. Mr. Cox expects to make his home in the West end and has rented a house at 111 Twenty-sixth avenue west. He will be joined by his family in a short time.

E. F. Nelson of Minneapolis is registered at the Esmond.

C. N. Hunt, the lawyer-evangelist, will speak at the Swedish Mission church this evening. He has been conducting revival services in Superior for the past three weeks.

The Altar Guild of St. Luke's Episcopal church will give its regular monthly social in the vestry rooms of the church this evening. Miss Ada MacClaren will give some recitations and there will be several musical numbers. Light refreshments will be served.

B. A. Martin of R. R. Forward & Co., who was obliged to go to Hudson, Wis., some time ago on account of a breakdown in health, has been ordered to take a six months' rest, by his physician. He will spend it in the West.

Why go uptown. Hats and prices can't be beat. Bring your old hats. We'll make them new. Pearson's, 1814 Piedmont avenue west.

The Young People's society of the First Swedish M. E. church held a social Wednesday evening at the home of Mr. and Mrs. Charles Johnson, 316 Twenty-first avenue west.

The Sans Facon Sewing circle was entertained yesterday afternoon by Mrs. Fred H. Zern of 2309 West Third street.

The St. Louis County bank is contemplating improvements on its building. A new front will be put in.

Miss Minnie Johnson of Twenty-fourth avenue west has gone to St. Paul, where she will visit with relatives.

D. E. McCarthy of Lake Nebagamon, Wis., is a guest at the Esmond.

E. Holmberg of Brainerd, Minn., is registered at the Esmond.

C. O. and Albert Johnson are planning to erect a $9,000 brick apartment house on West Third street, between Twenty-first and Twenty-second avenues west. It will be built this summer.

"For weak lungs or lingering cough nothing equals the Norwegian Cod Liver oil sold at the Lion Drug store."

Mrs. Anna Edeson, wife of Emil Edeson of 129 Twenty-eighth avenue west, died yesterday afternoon at her home. She had been ill for a long time and death was caused by tuberculosis. Funeral arrangements have not yet been made.

Mrs. C. R. Stai has gone to Cloquet for a visit.

Miss Irma Stahl of 1926 West Michigan street has returned from Chicago, where she has been visiting for a month.

Mrs. H. S. Jones of 2417 West Fifth street has returned from a visit to her old home, Marinette, Wis.

Charles, Combes, who collided with a delivery wagon while riding his bicycle Thursday evening, has sufficiently recovered from his injuries to be out again.

Your prescriptions will be properly filled at the Lion Drug store.

REV. A. F. ELMQUIST TALKS.

Gives Principal Address at the Bethany Lutheran Church.

Rev. A. F. Elmquist of Minneapolis, now pastor of St. John's English Lutheran church in that city but formerly in charge of the congregation of Bethany Lutheran church in the West end, gave the principal address at an entertainment at the last named house of worship last evening, under the auspices of the choir.

Rev. Mr. Elmquist's topic was "A Heroic Example." He is an interesting talker and a great favorite in the West end, which he never fails to visit every few months, despite the fact that his home is now in Minneapolis.

In addition to the talk by Mr. Elmquist, several numbers were given by the choir, under the direction of G. Nelson. Edwin Rolso gave a violin solo and Miss Nora Strandmark sang several pretty numbers.

We respectfully suggest that you

AN ATTEMPT TO ELOPE BALKED

Bride-Elect Only Fifteen and Bridegroom Aged Fifty.

Appleton, Wis., April 26.—Through being employed at the creamery of John Dengel, an acquaintance sprang up between the proprietor and 15-year-old Anna Margaret Schmid, which resulted in an attempt to elope to Menominee, Mich.

When the girl sought to conceal her age, a wire to the register of deeds of this county brought her birth record, and her companion, a man of over 50, was obliged to return her to this city, where the girl's parents are exerting all influence to keep her from Dengel, who swears he will make her his wife by fair means or foul.

The explosion of a bottle of beer, which had been interred a foot beneath the surface in his garden, dealt injury to Joseph Plank, foreman of the Appleton Screen Plate works, while he was working on spring flower beds. The spade struck the bottle, and there was an instantaneous explosion. Fragments of the glass cut Plank about the eyes. The beer was buried as a prank at a wedding festival years ago.

The official weather record at Lawrence university shows a greater precipitation of snow in April than during the entire winter. Fields throughout the county are impassable for teams, and unless there is a change soon the grain planters of Outagamie county will lose heavily.

BOTH HANDS CUT OFF.

Frightful Accident to Man Who Fell Against Saw.

Eau Claire, Wis., April 26.—While working near a circular saw, Hans Halvor slipped and fell against it and his right arm was cut off near the shoulder and his left at the wrist. His wounds were immediately bound up and a physician from this city summoned. His condition is critical, but the doctor thinks he will live.

Game Warden Stone yesterday arrested a restaurant keeper at Cameron for violating the laws by catching brook trout out of season. The Rod and Gun club of this city, and the club at Augusta, are carrying on an organized campaign against violators of the laws. Already five convictions have resulted.

Can't look well, eat well or feel well with impure blood feeding your body. Keep the blood pure with Burdock Blood Bitters. Eat simply, take exercise, keep clean and you will have long life.

WILL REMAIN ANOTHER WEEK

Rev. W. A. Dunnett at the First Baptist Church.

Rev. W. A. Dunnett, the evangelist conducting services at the First Baptist church, is attracting considerable attention and large congregations are hearing his sermons. Mr. Dunnett's subjects and line of thought are novel and his presentation of arguments is made with an originality, which appeals. Mr. Dunnett will remain at the First Baptist church all next week, speaking each evening, and Tuesday Wednesday and Thursday afternoons.

Sunday morning, at the 10:30 service at the Baptist church, Mr. Dunnett will preach on "Guilty, but Dismissed by the Judge." In the afternoon at 3:30 o'clock at the Y. M. C. A. hall, he will speak to men only on the subject, "Strapped." In the evening at 7:30 at the church, his subject will be "How God Keeps Our Record."

The afternoon meetings next week will be held at 3 o'clock and the subjects announced are as follows: Tuesday, "The Holy Ghost;" Wednesday, "A Text Turned Around;" Thursday, "Samuel's Tailor." The Thursday address will be for women only.

The evening services next week will be held at 7:45 o'clock and the subjects are as follows: Monday, Life—Light;" Tuesday, "Hell, Where Is It?" Wednesday, "The Message or the Messenger;" Thursday, "A Mistaken Champion;" Friday, "The Unpardonable Sin;" Sunday, May 5, 10:30 a. m., "My Mother's Sermon;" 7:30 p. m., "Choosing a Partner in Life."

A TOT STRANGLED.

Elkador, Iowa, April 26.—The 2-year-old son of Ole Olson was playing near the windmill tower and was using a small rope. A sudden gust of wind set the wheel in motion and the cord became fastened in it. In endeavoring to free it, the boy got the rope about his neck and the rapidly revolving wheel, twisted it so tight that he was strangled to death.

You like to find a bargain—and if you have one to offer you may be sure that the "want ads" readers" of The Herald will soon seek you out.

ROMANCE OF CHILDHOOD BLOOMS FORTH ANEW.

Pittsburg, Pa., April 26.—Childhood playmates, sweethearts in their college days, but the attachment severed and each marrying another; bereaved, he becoming a widower and she a widow, and finally a resumption of the former relations and marriage in Los Angeles, Cal., last week, is a brief outline of the remarkable life history of J. B. Hil, general freight agent of the Panhandle railroad, and Mrs. Stanley Bradley Ross, who will return to Pittsburg in a few days to live in Edgewood.

Mrs. Ross had been a widow about four or five years and Mr. Hill lost his wife some four years ago. Both being lonely the friendship of childhood was renewed and culminated in marriage. Mr. Hill is 65 years of age and his wife is not much younger.

Mr. Hill and his wife were born in Indianapolis, Mrs. Hill being a daughter of the late Judge Bradley, and the two were playmates and childhood sweethearts. Both attended DePauw university at Greencastle, Ind., and there young Hill was accepted as suitor of the beautiful Miss Bradley.

Stanley Ross appeared on the scene and succeeded in winning the affections of Hill's sweetheart and married her. Hill in a few years married another woman. The two had drifted through life, seeing litle of each other, until the bereavement of each. Then the old friendly relations were renewed, and the culmination was the wedding in Los Angeles last week.

Mr. Hill left Pittsburg April 3 and is expected to return with his wife on Saturday. He has a fine home in Edgewood, where he and his wife will reside.

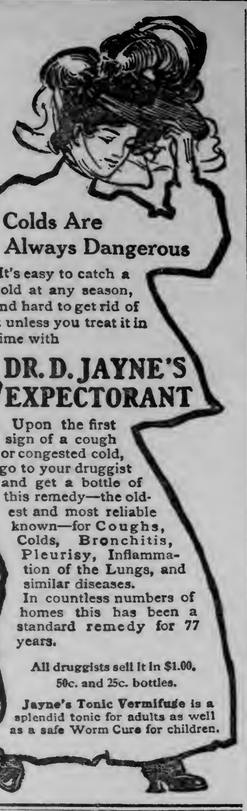
ARMLESS VAGS.

Two Men With Empty Sleeves Arrested by Police.

Two vags whose empty sleeves gave ample evidence that they were living in the city without any "visible means of support" were arraigned before Judge Windom late yesterday afternoon. They were both Finlanders and gave their names as Victor Maki and Isaac Hill. Maki had both his arms cut off at the shoulder and came into court holding his cap between his teeth and reeling slightly from the effects of liquor which he had consumed during the afternoon. His companion was even more under the influence of liquor and had one arm gone. Maki said that he had lost his arms in a railroad wreck on the Duluth South Shore & Atlantic and offered evidence that he was being supported by his brother in Virginia. The judge released him on condition that he get out of town immediately but he gave Hill a twenty-day sentence as the one armed man had neither means nor inclination to get out of the city.

DRANK RAW LIQUOR.

Warren, Minn., April 26.—A 5-year-old daughter of Fred Dargus, residing about six miles from town, found a bottle of raw liquor Tuesday evening, and swallowed a large portion of it. The next morning she was found dead.



LARGE HAYSHED BURNED.

Shell Lake, Wis., April 26.—(Special to The Herald.)—W. R. Bourne's large hayshed, on his farm south of town, was destroyed by fire. Loss, $2,000; no insurance. The origin of the fire is unknown.

DR. D. JAYNE'S EXPECTORANT

Upon the first sign of a cough or congested cold, go to your druggist and get a bottle of this remedy—the oldest and most reliable known—for Coughs, Colds, Bronchitis, Pleurisy, Inflammation of the Lungs, and similar diseases. In countless numbers of homes this has been a standard remedy for 77 years.

All druggists sell it in $1.00, 50c. and 25c. bottles.

Jayne's Tonic Vermifuge is a splendid tonic for adults as well as a safe Worm Cure for children.

MINNEAPOLIS HAS BAD FIRE

Wisconsin Freight Depot Burned, Entailing Loss of $400,000.

Minneapolis, April 26.—Fire totally destroyed the Wisconsin Central freight depot in this city yesterday, entailing a loss of $400,000. The flames broke out from an unknown origin and in an instant the entire building was a mass of flames. A strong northwest wind made the firemen's task a hard one, and the danger of buildings in the immediate vicinity was imminent. The firemen fought the flames from every point of vantage, but were time and again forced back by explosion of oil on the tracks and in storage which shook the ground for sixty feet.

At 4:10 a terrific explosion was heard and with a roar the walls on the west side fell in, tearing a large platform upon which the firemen had been stationed. Soon afterwards the east wall followed, covering up the passenger tracks entering the Union depot.

The employes were working in the building at the time and were forced to take a hurried exit to save their lives. About eighteen box cars containing freight of every description, valued at $100,000, were sidetracked under the shed and these proved fuel to the flames. The train crew worked heroically to save them, but were unsuccessful for a time. Finally they succeeded in pulling a string of cars out. Among these was a carload of automobiles which had just arrived. These were totally destroyed.

ODD JOB FOR THE FIREMEN.

Quenching Thirst of Locomotive Something New for Milburn Laddies.

Morristown, N. J., April 26.—When Engineer Mowery ran his engine into the Lackawanna station at Milburn a few nights ago, he found that there was not enough water in the boiler to take her to Morristown. In fact, there wasn't enough to make sufficient steam to pull the engine up Summit hill. Mowery was resourceful, however, and sent in a fire alarm. When the fire apparatus reached the station, with bells ringing wildly, the firemen yelled:

"Where's the fire?"

"This way," said Mowery. "My engine's very dry and there ain't no water near the tracks, so I thought maybe you could run a line of hose up and tank her."

The firemen were pretty much disgusted, but finally consented to help the engineer out of his predicament. A line of hose was attached to a hydrant and stretched to the railroad station, and water was pumped into the engine.

"Much obliged, fellows," called out Mowery as the steam came up and sputtered. Then Mowery blew the whistle and started up the hill.

Hay's Hair Health

Miss Grace Eichman.

RESTORES your HAIR to its NATURAL COLOR.

"Had been troubled with dandruff a long time. After using one bottle of Hair-health I found the dandruff gone and my hair, which was two-thirds gray (I am 48 years old), restored to its natural auburn color.—GRACE EICHMANN, La Crosse, Wis."

Guaranteed perfectly pure.

HIS SIDE OF THE STORY

Walsh Claims Wife's Fondness for Berg Caused Domestic Troubles.

Admits That He Burned Marriage Certificate and Wife's Dress.

Ellis Walsh, the defendant in the divorce action started by Mrs. Minnie Walsh and which has been on trial for the past several days in the district court, went on the witness stand yesterday afternoon and told his side of the story of domestic trouble.

Mr. Walsh claims that the trouble has arisen over Mrs. Walsh's alleged fondness for Ole Berg, a 19-year-old grocery clerk. Her husband says that she has refused to mend her ways or to keep away from Berg, that she has been in the habit of remaining out late at night, and has associated with persons of whom Mr. Walsh does not approve.

Mrs. W. H. Cook and Miss Mary Walsh, sisters of the defendant, testified of the alleged neglectful manner in which Mrs. Minnie Walsh treated her children and told, so far as they claimed have knowledge, of her relations with Ole Berg.

Ellis Walsh testified that he was married in 1891 and lived at stated times in Duluth, Virginia and in several camps north of Virginia on the Duluth, Winnipeg & Rainy Lake road.

He claimed that his wife had been out late at night continuously in July, 1905, and that on one occasion she came in the house at 11:30 o'clock, turned the hands of the clock back an hour and went to bed in the children's room.

Simulated Sleep.

He said he went to the room a few minutes afterward and found his wife simulating sleep by snoring. The witness said he shook her and accused her of "playing 'possum," when she got very angry and began calling him names. Mr. Walsh testified he started for her, when Mrs. Walsh yelled and jumped out of the window and went after a policeman, but that nothing came of it. The witness said he was so angry that he took a blue dress that his sister had given his wife and burned it in the stove. He admitted that he had burned their marriage certificate and claimed that he did so because he did not care to have his name associated any longer with that of his wife. The witness denied that he ever put his wife from the house, but admitted that he had threatened to do so.

Testifying about some trouble they had July 4, last, Mr. Walsh said his wife left him with the children in the afternoon, stating that she was going out with some girls "to have a time." He claimed that he did not see her again until 10 o'clock in the evening when he went home. The witness said they had intended going to a dance in the evening and that his wife was changing her dress. Mr. Walsh testified that he told her he would not go, that Mrs. Walsh said she would go anyway and ran out the back door, with the witness after her. Mr. Walsh claimed he caught hold of her waist, but that she jerked away leaving a piece of cloth in his hand. He testified that Mrs. Walsh remained away all night, that he saw her at the home of a friend the next day and told her that she had better get out of Virginia and not disgrace him any longer.

Testifying about a quarrel they had Feb. 10 last, Mr. Walsh said his wife came in at a late hour at night and he accused her of being out with Berg, when she called the witness bad names and said it was none of his —— business where she was or with whom she had been. Mr. Walsh testified that he started for his wife when she struck him on the side of the head, after which he struck her. He claimed he saw Berg sneaking around the house after he had left it and that his wife sometimes went out to see if the coast was clear for Berg.

Found Berg in House.

The witness claimed that he arrived at the house with a party of friends one night and went in at the back door, discovering Berg with his wife. He claimed that Mrs. Walsh attempted to hide Berg, but he, Walsh, pulled the curtains aside and saw Berg running away, having made his escape through the window. The witness testified that he advised his wife to put a bold face on and meet the guests, but that she refused and left the house, remaining away until 11:30 o'clock that same evening.

Mrs. W. H. Cook testified that Frank Walsh, the 8-year-old son of the parties to the action, has been staying at her home. She admitted that she would not permit the boy to go see his mother, but claimed that Mrs. Walsh had permission to come to the house and see her child. Mrs. Cook said that she had seen Mrs. Walsh strike her children, in anger, and recalled one occasion when she, the witness, visited the Walsh home and found Mrs. Walsh absent, an oil lamp burning on the table and one of the children standing on a rocking chair near it. Mrs. Cook said such carelessness was almost criminal.

House Caught Fire.

Mrs. Cook claimed that the Walsh house did catch fire once and that when Mrs. Walsh was remonstrated with about her custom of leaving the children with a lighted lamp, replied that "the children might as well die now as at any time."

The witness claimed that she was not prejudiced against Mrs. Walsh, that the latter was a good cook and a good housekeeper. Mrs. Cook said she was willing to take the Walsh children into her own home and care for them properly should the court award their custody to Mr. Walsh.

The witness claimed that she did not instruct her coachman to whip up the horses when Frank Walsh was in the carriage and his mother attempted to speak to him.

Mr. Walsh was to be called for cross-examination this morning.

BRIEF TELEGRAMS.

Judge Marshall Brown in the criminal court at Pittsburg stopped the trial of Isadore Cutler and Walter Davis, charged with highway robbery, Thursday, because he suspected some of the jurors had been approached by friends of the defendants.

The case of Maj. Francis P. Fremont, who has been on trial before a court-martial at Newport for several days on a charge of conduct unbecoming an officer and a gentleman as a result of certain financial transactions, was completed and submitted to the full court Thursday. The verdict of the court will be reported to Maj. Gen. F. D. Grant, after which it may be made public.

Miss Thelma Lundgren, 19 years of age, of 61 Central terrace, St. Paul, Minn., who was to have been married at Raleigh, N. C., Saturday to Capt. Hans Thorsen, one of the four victims of Tuesday's drowning accident at Buckhorn Falls, N. C., arrived there Thursday. When told of the accident Miss Lundgren collapsed. Telegrams sent her had failed of delivery. The bodies of the men drowned have not been found.

SELECTMEN OF GRANVILLE

Give $500 With Widow to Get Her Off Their Hands.

Granville, Mass., April 26.—The selectmen of this town made their first venture as matrimonial agents last week with distinctly gratifying success.

For several years Mrs. Mary A. Randall, a widow of about 50, has been a town charge, and as her health has been poor, the burden of her support has come heavily upon the town treasury. Looking about for some way to relieve the situation, it occurred to the selectmen that it would be a wise plan to induce a resident of some other town to wed the widow and take her off their hands.

Quietly it was made known that the wooer who could lead the widow Randall away as a bride would receive a wedding gift of $100 and a yearly allowance of $100 for the ensuing four years, and there was an immediate rush of suitors.

Bryon Moore, who lives just over the town line in Westfield, was the most ardent wooer, and the widow Randall, after carefully surveying the field of rivals, fell captive to his manly charms.

They were married at the Baptist parsonage by the Rev. W. S. Ayres, and as the bride's health forbade traveling on her part, the bridegroom went into Westfield alone with the $100 dowry to celebrate the honeymoon. He returned with some of the money and reported a bang-up time.

When the Westfield authorities heard the glad tidings they began an investigation of Mr. Moore's financial standing and his ability to support a wife. They found that Town Almoner Rich has had his name on his books years past, having assisted him to the extent of $70, but as this money was refunded to Westfield by the town of Southampton, where Moore has a settlement, the fears for the future were allayed.

REVELATIONS AFTER TRAGEDY

Show That Ross Apprehended Trouble at His Wedding.

Oil City, Pa., April 26.—The body of Miss Belle Stroup and that of Thaddeus E. Ross, her former sweetheart, whom she shot before committing suicide Wednesday, eight hours before the time fixed for Ross' marriage to another woman, were viewed by a coroner's jury yesterday, after which time they were removed from the undertaking rooms, where they had been prepared for burial. That of Miss Stroup was taken to the home of her sister, Mrs. Fred Eprot of Coal Hill, this county. Ross' body was taken to the home of his parents, next door to the house which he had prepared for himself and bride-to-be, Miss Edith Sampsell. The house had been thoroughly furnished and was to have been occupied by them last night, had not a jilted woman turned the wedding day into one of tragedy. A pathetic incident was brought to light yesterday when Mrs. Mary Mable, a sister of Miss Sampsell, viewed the remains of the murderess. Mrs. Mable recognized in the dead woman a fellow-traveler, who rode with her Wednesday from Titusville on the train to this city. One was coming to attend the wedding of her sister, while the mission of the other was to prevent the ceremony with bullets from a revolver which she carefully carried in a cigar box.

Miss Sampsell, the bride-elect, who was prostrated by the shock, is somewhat better. She was arranging the bride's table when notified that Ross had been shot and killed. She said:

"I did not know Miss Stroup. I was aware Mr. Ross kept company with her before he commenced calling on me four years ago, but I was under the impression he had stopped, and never dreamed of his corresponding with her. Had Miss Stroup come to me Wednesday when she arrived in Oil City, or at any time after she first learned of our proposed marriage, and told her story, which has every appearance of being true, I should never have permitted the marriage ceremony to have been performed. If Thad had promised to marry this girl, she should have been his wife."

Although ostensibly Ross lived with his parents, it is learned he had a furnished room in a business block in the heart of the city, where he sometimes slept and entertained guests. That he apprehended trouble at his wedding is shown by a request made of the Sampsell family that there should be plenty of light in front of the house, in order that he might see the guests as they entered the front door. Ross was warned by friends that he should be careful, but he appeared to consider the warning a joke.

COURT WIPES OUT A SOCIALISTIC COLONY.

Bellingham, Wash., April 26.—"Equality," a Socialistic colony established in 1897, and which for years was pointed to as a successful experiment in collective ownership and production, was wiped out of existence by a court order Wednesday, Judge Joyce of Skagit county directing that its property be sold to pay the colony's debts. The property consists of 600 acres of land, sawmill, printing plant and twenty dwellings. The colony was established by a national organization known as the Brotherhood of the Co-operative Commonwealth, of which many prominent Socialists were members. A portion of the colonists adopted the doctrine of free love, and disaster followed.

Use Kennedy's Laxative Cough Syrup. Children like its pleasant taste, and mothers give it hearty endorsement. Made in strict conformity to Pure Food and Drugs Law. Sold by all druggists.

Americans Abroad Have Complaints Against Diplomatic Service.

Pet Grievance is Failure of Introduction to Royalty.

Washington, April 26.—The activities Claussen, who came here all the way laussen, who came here all the way from Sweden to build a fire under Charles H. Graves, the United States minister to that country, because he declined to present her to King Oscar, helped along the general good humor down here for a few days, but that is about all. Mrs. Von Claussen established herself in a nice suite in a Washington hotel, donned her prettiest clothes and invited everybody connected with the newspaper business to come and visit her and listen to her grievance. She talked at great length and her conversation read very entertainingly in the local papers.

Then she made her announced visit of protest at the White House, but the great man there installed refused to see her. She was referred to the department of state. She saw somebody or other at the department of state and submitted a written complaint about Minister Graves. Then she returned to her hotel suite and conversed some more, and the incident was closed.

Nary a ripple did Mrs. Von Claussen leave on the surface of the state department, which is in truth a pretty deep pond. That department is thoroughly used to complaints about American ambassadors, ministers, plenipotentiary, counsuls general, and just consuls, penned or otherwise, presented by American citizens and citizenesses traveling abroad. If a serious ear were to be given to one of a thousand of these complaints, say, the United States simply could not be represented in foreign countries at all. Nobody in the diplomatic or consular service could possibly stick for more than two or three days at his post. They'd all have to be fired out of hand just about as soon as they'd reached their station.

It happens, however, that at the state department there is a vastly experienced and thoroughly seasoned, if somewhat crusty, official, Mr. Adee no less, who knows just how to handle cases of this kind. Mr. Adee, who has an encyclodepiac knowledge as to the habits and methods of thought of the American kicker abroad, also possesses a blunt, very much worn down green pencil. He looks over the queer kicks of traveling Americans who demand all sorts of impossible things, scribbles the word "file" on the back of the kicks with his little green pencil, has a certain form of letter sent to the kicker, and then settles down to real business.

It is, of course, wholly out of the bounds of possibility for our ambassadors and ministers over seas to present to the various emperors, kings and presidents of Europe all of the several hundred of thousands of Americans who take ship for the other side every year. Even if all of the touring Americans were distinguished and fine and witty persons, such a thing would be physically impossible, if not out of the question for some thousands of other reasons. Among these thousands of other reasons the main one, of course, is that the European rulers really do not want to meet and converse with hundreds of thousands of Americans.

It is a nice point as to just what sort of Americans are eligible for presentation at European courts, the premise being allowed that all of these courts have certain very well defined, if often peculiar and finical notions as to this matter. Our ambassadors and ministers, it may be as well to say at once, are thoroughly familiar with the presentation code, rarely or never lean to snobbishness in this respect, and, all things considered make marvelously few mistakes in handling this difficult part of their tasks.

But among many Americans traveling abroad the idea appears to prevail that it is only necessary that they be rich or exceedingly well-to-do, and that they make this fact sufficiently obvious to American representatives near the courts for them to be immediately taken in hand, together with the women folk, and led directly into the presence of Emperor William, King Edward, Emperor Francis Joseph, King Alfonso, or the French president, as the case may be. When they ascertain that the matter is by no means so simple, they often fume a great deal, accuse the sorely tried ambassador or minister of snobbishness and favoritism "right to his face," and then plump down and write the most vitriolic things about the offending ambassador or minister to the secretary of state of the United States, who never, by the least possible chance, sees any of these fulminations, because Mr. Adee sees 'em first. Upon their return to this country many of these wrathful ones come right smack to Washington and present themselves at the department of state in a really distressful lather of rage over the way they've been "insulted." They are invariably treated with the very greatest possible courtesy, indeed, and yet the department of state shows the most noteworthy and commendable sort of calmness and self-possession in refusing to become wrought up over any of these cases.

Not so long ago the son of a very rich brewer permitted himself to become needlessly peevish in his written language concerning the United States ambassador to Germany. He was in Berlin with his wife, and he wanted to meet up with Emperor William. His honest old dad had met the emperor and been most cordially treated by him, and, although the son was born in the United States, he felt a certain kindliness toward the Hohenzollern family, and so he wanted to meet the emperor, too.

He forgot cartain little matters with respect to his own personality and that of his wife, however. He had himself been divorced by two wives for cruel and inhuman treatment and general misconduct, and the wife that he had with him in Berlin, his third, had herself been divorced by her first husband. The American ambassador knew all about these things, and so the presentation of the couple to the German emperor and empress was manifestly out of the question. The ambassador was, of course, very nice about it, but ——

"What's the trouble, anyhow?" indignantly demanded the brewer's son. "My father talked with the emperor for half an hour a few years ago."

The ambassador couldn't out with it and point out the difference—that the young man's father was an honest old German, who'd raised his very large family of boys and girls without ever being mixed up in anything morally questionable in his life, and that, therefore, he was just the sort of old-fashioned American residing German that the emperor took particular delight in meeting. The ambassador did the best he could, however, but it wasn't any good. The brewer's son wrote some perfectly awful things to the secretary of state about the uppishness and snobbishness and the cheap aristocraticalness of the ambassador. He got a real nice letter back, too, but not from the secretary of state. The green pencil scrawl "file" went on the back of his letter, which will repose in the archives of the department forever and ever.

It wasn't such a very long time ago, either, that a certain very rich New England manufacturer, who had been divorced by no less than three unhappy ladies after they had borne his name for particularly short periods, became horribly riled up at the American ambassador to the court of St. James because that hard hearted diplomat declined to present him and his fourth wife—a former chorus lady with a tempestuous past—to King Edward and Queen Alexandra. He wrote a fearfully sarcastic letter to Mr. Root about it, too. Mr. Root, though, must have had his fingers crossed or something, for the letter never came under his vision. It was neatly put away in its proper place, with some brief green markings on one corner of the outside flap.

A few years ago a Colorado man who, while grub staking, had struck it rich at Cripple Creek, arrived in London with his wife and six daughters. They were all real nice substantial women folk, of course, the six girls being apple cheeked and dressed to kill everywhere they went, but there seemed to be no particular reason why the American ambassador should introduce the mother and six girls, all in a row, to the king and queen of England. When the family was informed that certain circumstances, over which the ambassador had no control, etc., he, too, was just as angry as he could be and so were his wife and the six apple cheeked girls, and he got a man he knew in London to write a very jolty letter indeed to the American secretary of state anent the groveling-before-the-throneness of the American ambassador. Pleasant, smoothing reply, and "file" in the customary green scribble.

The consul-generals and the consuls get in, too. Not more than a few months ago an American consul-general stationed in a city in the Far East, had the meanest kind of a letter written about him to the state department by the spokesman of a party of American tourists who had visited the Far Eastern city.

The consul-general, it appeared, had never so much as offered to take those tourists around the city and show them all of the points of interest, whereas, right while they were still in the city, he had taken another party of tourists around everywhere and and shown them everything to be seen. The people whom the consul-general had taken around happened to be people from his home town in this country, but the spokesman of the complaining tourists didn't know that, and it probably wouldn't have made the least difference if he had. Was the consul-general called sharply to account and requested by the consular bureau to explain this bit of "arrogant favoritism?" He was not. He never heard from the thing officially, although there's a chance that he might have been tipped off as to it privately.

About Spring Clothes

Let's Talk Over This Clothes Question Together.

You want the best clothes money will buy and we've got them here waiting for you. That's the whole story in a nutshell. We know what you want and we know what we have got, and you will say we've "made good" when you see the clothes. The prices indicate the force of our three store buying power, but they are less impressive than the values they represent — it's values that makes a price low—

COMPANIES LITIGATE

Dock Company Sues Dredge Company for $4,871 Damages.

Case Involves Some Interesting Features as to Liability.

A lawsuit instituted in the district court, which involves some very interesting features concerning the placing of the liability for filling up channels that have been dredged in the local harbor for the passage of the vessels to and from the various docks, was filed with the clerk of court yesterday.

The Boston Coal Dock & Wharf company, which owns the coal dock just west of the Missabe ore docks, known as the Boston dock, has sued the Lake Superior Contracting & Dredging company for $4,871.25 damages, claimed to grow out of the manner in which the dredging company fulfilled a contract for dredging trenches and filling in the dock company's property, and in so doing caused the channel authorized by the government, in front of the coal dock, to become so filled with sand and other material that it is no longer available for the passage of boats.

In its complaint, the Boston Coal Dock & Wharf company claims to be owner of the dock property known as Government lot 2, section 5, 49-15, that the company had partially improved the property and that it entered into contract with the Lake Superior Contracting & Dredging company, Sept. 15, 1904, to do the dredging and filling necessary for a dock extension to a point near the channel of the St. Louis river.

It is alleged that the chanel was 400 feet wide and about twenty feet deep, in front of the dock, and that when the dredging company had completed its contract by June, 1905, it had caused a large amount of sand, dirt and other material to be deposited in the channel so as to shoal it to such an extent that the boats could no longer use it.

The dock company alleges that it notified the government engineer in charge of the district, who has supervision of the harbor improvements, and was notified that the act of filling the channel was in violation of an act of congress, provided for the dredging, care and maintainance of channels in the local harbor and that the officers of the dock company were liable to arrest, prosecution and, on conviction, could be punished by imprisonment or a fine. It is alleged that the annoyance and threatened degradation brought on the company through the act of the dredge company was very great, that the dock company notified the dredge company of the situation and gave it a reasonable time within which to clean out the channel, but the dredge company refused to do it.

The dock company alleges that to avoid the threatened prosecution and punishment of its officers, it was then compelled to hire the work done at a cost of $4,871.25, for which amount it claims to have been damaged.

The dock company is represented by E. C. Kennedy of this city and Solon L. Perrin of Superior.

Kodol for Dyspepsia clears the stomach and makes the breath sweet as a rose. Sold by all druggists on a guarantee relief plan. Conforms to the National Pure Food and drugs Law. All druggists.

YALE SOPHS

Make Son of Vice President Fairbanks Their Baseball Captain.

New Haven, Conn., April 26.—Eight Yale sophs sat on the soft side of the campus fence.

"Fellows, we've got to have a baseball team," said one.

"Sure enough. Spring will be here some day," came in a full chorus.

"Who'll be captain?" asked the first.

"There's a quorum here; let's do the thing up right. It's a reputation we want. Let's see whose long on a father. Why, Bob Fairbanks, of course,"

The vice president's son was elected on the spot.

"It's up to you Cap," said a soph. "Teddy Roosevelt is in the game at Harvard. We won't do a thing."

Capt. Bob accepted.

It is whispered that Walbridge Taft, nephew of Secretary Taft, may organize a crew to counteract the effect of the Fairbanks' baseball team.

MISTAKE BRINGS FINE BEEFSTEAK IN PACKAGE.

Plainfield, N. J., April 26.—With a nice large steak in one Plainfield home, and the body of a deceased cat in the other home, two families are wondering who has the package which belongs to them, and one family is probably very angry at what seems like a joke.

A handsome pet cat belonging to L. M. Smith of this city, passed away suddenly, and the father, knowing how the children would feel if they knew it, decided to carry it to New York.

Absent-mindedly he carried the package to the office and back to the train, and then decided to leave it in the seat.

As he was getting out of the car here he was hailed by a trainman with the remark: "Here's your package." There was nothing to do but take it.

Arriving home he was asked by his wife what he had in the package, and he said: "Oh, that cat. I forgot to drop it on the ferry." His wife said: "That is not the bundle you took away."

On looking into it they found a nice large steak. Now Smith is wondering where the cat is, and some one else is probably having difficulty trying to explain why the dead cat came in place of the meat for dinner.

THREE BOYS HAD ECZEMA OF HEAD

One Mother's Trials—Little Ones Treated at Dispensary for Three Months—Did Not Seem to Improve—Suffered Five Months.

ALL WERE PERFECTLY CURED BY CUTICURA

"My three children had eczema for five months. A little sore would appear on the head and seemed very itchy, increasing day after day. The baby had had it about a week when the second boy took the disease and a few sores developed, then the third boy took it. For the first three months I took them to the N— Dispensary, and they told me that the children had ringworm, but they did not seem to improve. Then I heard of the Cuticura Remedies, and I thought I would write you about my case, and when I got the Cuticura Soap and Cuticura Ointment I bathed the children's heads with warm water and Cuticura Soap and then applied the Cuticura Ointment. In a few weeks they had improved, and when their heads were well you could see nothing of the sores. I should be very glad to let others know about the great Cuticura Remedies. Mrs. Kate Keim, 513 West 29th St., New York, N. Y., Nov. 1, 5, and 7, 1906."

CUTICURA GROWS HAIR

Removes Dandruff and Soothes Itching, Irritated Scalps.

Warm shampoos with Cuticura Soap, and light dressings with Cuticura, the purest and sweetest of emollients, stop falling hair, remove crusts, scales, and dandruff, destroy hair parasites, soothe irritated, itching surfaces, stimulate the hair follicles, loosen the scalp skin, supply the roots with energy and nourishment, and make the hair grow upon a sweet, wholesome, healthy scalp when all else fails. For all purposes of the toilet, bath, and nursery, Cuticura Soap, and Cuticura Ointment are priceless.

Complete External and Internal Treatment for Every Humor of Infants, Children, and Adults consists of Cuticura Soap (25c.) to Cleanse the Skin, Cuticura Ointment (50c.) to Heal the Skin, and Cuticura Resolvent (50c.), (or in the form of Chocolate Coated Pills, 25c. per vial of 60) to Purify the Blood. Sold throughout the world. Potter Drug & Chem. Corp., Sole Props., Boston, Mass. Mailed Free, Cuticura Book on Skin and Scalp Diseases.

REBUFFED CUPID MARS A WEDDING

Claims of Three Would-be Brides Annoy British Captain.

Los Angeles, Cal., April 26.—Three would-be brides where there should have been but one, complicated the marriage of Capt. Harbert Holford Brabant Holland, late of His Majesty's Seventh Colonial cavalry, and Dr. Margaret Crosz, niece of Judge Olcott of New York.

The captain and Dr. Crosz have been engaged for thre years, having met in Vienna, Austria, where Dr. Crosz was taking a post graduate course in medicine. The captain has followed her over land and water, and they met by chance in Beatty, Nev. Dr. Crosz dashed to Los Angeles in an automobile and Capt. Holland followed by train. They met at the Alexandria hotel and were married in the afternoon by a justice. When the pair was obtaining the marriage license the mother of Miss Wilhelmina Bartz shook her fist in the captain's face, saying he had been attentive to her daughter.

Later a friend of Miss Ella Woods of San Francisco, denounced him in the Alexandria, saying that he had promised to marry her friend. Capt. Holland denied ever having been engaged to any one but Dr. Crosz, and said he was the victim of a blackmailing scheme. He says he met Dr. Crosz in Vienna, and later visited her in Capri, Italy, where they quarreled. He determined to find her and make up the difference, and has travelled all over the West in search of her, having followed her out here from New York.

NO MORE THE POSTAL TITLE

"General" Doesn't Win Smiles Now—Just Plain "Mr."

Washington, April 26.—All the generals and others holding high titles in the postoffice department have been reduced to the ranks and will hereafter be regarded as privates only. Postmaster General Meyer has decreed that no titles shall remain in the postoffice department. Hereafter he and the four assistant postmasters general are to be addressed in conversation with the plain, everyday title of "Mr."

This decision followed the grave and long discussion of the best title for the postmaster general and his four assistants, Mr. Hitchcock, Mr. McCleary, Mr. Degraw and Mr. Lawshe. To address Mr. Meyer as "postmaster general" and each one of the assistants as "assistant postmaster general" was voted a waste of much government time. The title "general" now applied by everyone who has speech with officialdom at the postoffice department was voted to be a minomer. The plain, every day American title of "Mr." was then suggested and adopted. The "Mr." rule is to be strictly enforced.

The second assistant postmaster general, Mr. McCleary, was the first to obey the new order of things.

"General," began a caller.

"Mister, if you please," was Mr. McCleary's interruption. "That's the new order. We must correct everyone," and soon the title of general in the postal service will be a thing of the past.

SARAH TRUAX DIVORCES ACTOR GUY BATES POST.

New York, April 26.—The matrimonial difficulties of Sarah Truax and Guy Bates Post, which have been an interesting topic of discussion along Broadway for several months, were settled in court by the granting of a divorce asked for by the wife. The decree was signed by Supreme Court Justice Leaventritt on the recommendation of George Haas, referee.

Post and Miss Truax were married in San Francisco, April 18, 1897, and they were considered one of the most congenial couples in the theatrical profession. Therefore, their friends were doubly surprised a few months ago when it was learned that harmony no longer prevailed. Miss Truax is well known as a leading woman in stock companies, but has never made a great metropolitan success. Mr. Post is considered one of the most finished actors in America. He is at present being featured in Paul Armstrong's Western play, "The Heir to the Hoorah," under the management of the La Shelle estate.

NATURE PROVIDES FOR SICK WOMEN

LYDIA E. PINKHAM

a more potent remedy in the roots and herbs of the field than was ever produced from drugs.

In the good old-fashioned days of our grandmothers few drugs were used in medicines and Lydia E. Pinkham, of Lynn, Mass., in her study of roots and herbs and their power over disease discovered and gave to the women of the world a remedy for their peculiar ills more potent and efficacious than any combination of drugs.

Lydia E. Pinkham's Vegetable Compound

is an honest, tried and true remedy of unquestionable therapeutic value.

During its record of more than thirty years, its long list of actual cures of those serious ills peculiar to women, entitles Lydia E. Pinkham's Vegetable Compound to the respect and confidence of every fair minded person and every thinking woman.

When women are troubled with irregular or painful functions, weakness, displacements, ulceration or inflammation, backache, flatulency, general debility, indigestion or nervous prostration, they should remember there is one tried and true remedy, Lydia E. Pinkham's Vegetable Compound.

No other remedy in the country has such a record of cures of female ills, and thousands of women residing in every part of the United States bear willing testimony to the wonderful virtue of Lydia E. Pinkham's Vegetable compound and what it has done for them.

Mrs. Pinkham invites all sick women to write her for advice. She has guided thousands to health. For twenty-five years she has been advising sick women free of charge. She is the daughter-in-law of Lydia E. Pinkham and as her assistant for years before her decease advised under her immediate direction. Address, Lynn, Mass.

The Great Restorative

Non-Alcoholic TONIC

of the day, made entirely of native medicinal roots and without a drop of alcohol in its composition, is known as

DR. PIERCE'S GOLDEN MEDICAL DISCOVERY.

There are no secrets about its composition --- all its ingredients being printed on the bottle-wrappers.

The "Golden Medical Discovery" not only builds up the strength of the feeble, debilitated, languid, nervous and easily fatigued, whether young or aged, but it enriches and purifies the blood, thus making the improvement lasting.

It corrects and overcomes indigestion, dyspepsia, biliousness, torpid liver, chronic diarrhea and kindred derangements of the stomach, liver and bowels.

Bronchial, throat and laryngeal affections, attended with hoarseness, persistent cough, and all manner of catarrhal affections are cured by the "Golden Medical Discovery."

In Chronic Nasal Catarrh, it is well to cleanse the nasal passages out freely with Dr. Sage's Catarrh Remedy fluid while taking the "Golden Medical Discovery" as a constitutional treatment. Old obstinate cases of catarrh yield to this thorough *course* of treatment.

Through enriching and purifying the blood, the "Discovery" cures scrofulous affections, also blotches, pimples, eruptions, and other ugly affections of the skin. Old, open, running sores, or ulcers, are healed by taking the "Golden Medical Discovery" internally and applying Dr. Pierce's All-Healing Salve as a local dressing. The Salve can be had of druggists, or will be sent by return mail on receipt of 50 cents in stamps. Address Doctor Pierce as below for it.

In short "Golden Medical Discovery" regulates, purifies and invigorates *the whole system* and thus cures a very large range of diseases. The reason *Why* it cures such a varied list of diseases is made clear in a little booklet of extracts from the leading medical authorities, compiled by Dr. R. V. Pierce, of Buffalo, N. Y., and which he will be pleased to send post-paid and entirely *free* to any who send him their names and addresses.

You can't afford to accept a substitute of *unknown* composition for this non-secret MEDICINE OF KNOWN COMPOSITION.

Dr. Pierce's Pleasant Pellets cure constipation. Constipation is the cause of many diseases. Cure the cause and you cure the disease. One "Pellet" is a gentle laxative, and two a mild cathartic. Druggists sell them, and nothing is "just as good." They are the *original* Little Liver Pills first put up by old Dr. Pierce over 40 years ago. Much imitated, but never equaled. They are tiny sugar-coated granules—easy to take as candy.

Dr. Pierce's Medical Adviser (1000 pages) is sent *free* on receipt of 21 one-cent stamps (to cover cost of mailing) for paper-covered, or 31 stamps for cloth-bound copy. Address Dr. Pierce as above.

SPORTING NEWS OF THE DAY

EIGHTEEN NEW AUTOS

Have Been Registered by Citizens so Far This Season.

Seven Licenses Granted in One Day This Week.

Duluth is fast developing into an enthusiastic motor town and the growth of her automobile fraternity during the past week is something amazing. Seven new licenses in one day was the record established in the city clerk's office last Tuesday and licenses for eighteen new machines have already been taken out this season, to say nothing of a goodly number of others that are in prospect.

The hundred mark was passed last Tuesday, F. Freeman with his Rapid runabout taking number 100, while his Columbia car is number 99. The last license issued up to this morning was 103, A. W. Hepworth taking the last number with his Rambler touring car.

Those who have taken out licenses for new machines this spring are as follows:

Owner.	Make.	No.
C. E. Lum,	Electric	86
T. F. Cole,	Packard tourist	87
W. H. Brewer,	Success tourist	88
A. M. Miller,	Rambler tourist	89
W. C. McCarter,	Ford run-a-bout	90
J. M. Nash,	Winton	91
George H. Crosby,	White Steamer	92
C. H. Bagley,	Pope Waverly	93
E. M. Cole,	Reo tourist	94
E. J. Smith,	Maxwell run-a-bout	95
H. C. Hadfield,	Motor cycle	96
Harry Merritt,	Rambler tourist	97
V. C. Culbertson,	Franklin	98
F. Freeman,	Columbia tourist	99
F. Freeman,	Rapid run-a-bout	100
J. N. McKindley,	Ford run-a-bout	101
Will C. Brown,	Pope Waverly	102
A. W. Hepworth,	Rambler tourist	103

PENN'S BIG RELAY MEET

Famous Athletes Are for Events on Saturday.

Penn Strong in Miles and Michigan in Four Mile.

Philadelphia, April 26.—Pennsylvania's relay races take place tomorrow at Franklin field, and the wonderful list of entries assures an even better meet than that of last year. All the big colleges, both of the East and West, will be in the meet either in the relay races or in the special events. Yale, Princeton, Cornell, Columbia, Chicago, Michigan, Illinois, Ohio State, Dartmouth, Amherst and, in fact, every college of note, except Harvard, will be on hand. As usual, the championship events are the center of interest.

The entries this year are not so numerous as usual, due to two facts. In the first place, the great strength of "Penn" in the mile and Michigan in the four mile kept the entries down in those championships. The other fact that will keep the relay entries down is the general one that it has become known throughout the colleges that there is sure to be fierce competition at the relays, and that there is no use coming without a very fast team.

The latter is the reason why Cornell and Princeton have no relay teams in the meet, though all their best men will compete. Both of these colleges have good teams, but they know that the real thing in relay racing will be there, so they prefer not to take the chance. Though there will not be many teams in the one and four mile championships, these two races will really be the events of the day.

Chicago will face "Penn" in the one mile. Chicago is the Western relay champion, while "Penn" holds the American championship in this event. Chicago has three of her men from last year's team, while "Penn" retains all of her quartet. Merriam, Graves, Quigley and Barker or Taylor will be the Western team. The first two have done 50 seconds for the quarter, while Quigley has beaten 51 seconds. Either Barker or Taylor can do close to 51 seconds. This means that Stagg's team will be able to go close to the record. "Penn's" team is faster on paper, as Whitham, Cartmell and Bonsack have each done 50 seconds or better, while Haydock has done better than 51 seconds. This team is not running now in the form they were in last year. Cortmell and Whitham are both short of work for the distance, and it is probable that the latter will not be in the race, as Haydock is running very will. If the Chicago men are up to their best form, as is rather unlikely, due to the could weather, the "Penn" men will be in greater danger of losing. With fair weather, a new record should be made.

JOHNSON VS. GRINSTEAD.

Wrestling Match at the Metropolitan Tonight.

After the regular burlesque bill at the Metropolitan opera house this evening, there will be a wrestling match between Dick Johnson and George Grinstead. Johnson has been wrestling at the "Met" for several weeks and he has made a good showing on the mat. Grinstead is an unknown quantity publicly, but his friends say he has made a good showing in private bouts and he will be able to make it interesting for Johnson, perhaps throw him.

Madison Defeated Pirates.

The Interscholastic league team of the Madison school yesterday afternoon defeated the West Duluth Pirates, by a score of 10 to 2. The Madison boys got to Pillsbury, the Pirates' pitcher, for seventeen hits, which, coupled with seven errors by the West Duluth boys, gave them clear sailing.

MEETING OF ENDION CLUB

F. W. Paine Heads the Tennis Organization This Year.

Improvements to Club House and Grounds Are Planned.

The annual meeting of the Endion Tennis club was held last night at Room 312 Lyceum building, with an attendance of eighteen members. Officers were elected for the coming year as follows: President, F. W. Paine; vice president, H. L. Palmer; secretary and treasurer, W. A. Kingston. Applications were received from eight candidates for membership, and they were acted upon favorably.

Last evening plans were presented for the repairing and remodeling of the clubhouse, on the club's grounds, at Tenth avenue east and Superior street. Arrangements have been made for putting the courts in shape and it is expected considerable work will also be done on the building.

A vote of thanks was extended to W. H. Kitchll, the retiring secretary and treasurer, who held the office for four years and devoted his best efforts to the work of the club.

The championship events of the Endion club promise to be unusually interesting this coming year, because of the fact that, should Loren Kennedy, the Superior player, win the championship in the singles again, he will become permanent possessor of the cup, emblematic of the championship in tennis singles at the Head of the Lakes, Mr. Kennedy has won the cup two years in succession.

If Mr. Kennedy gains a victory this year, he will be forced to show his best form, as he will have the best team players in Duluth pitted against him. Ray Bissonette, the Duluth champion, who lost to Kennedy last year, will make a strong bid for the honors. Last night, Carroll, Graff, Powell, Grady and Sam Atkins were admitted to membership. They were former members of the club, and are well up in the ranks of the Duluth wielders of the racquet.

Messrs. Kennedy and Finch will again compete in the doubles, and should they win the trophy in that event it will also go to Wisconsin permanently. There will be some good Duluth competitors in the doubles events also, and both cups may be kept on this side of the bay this year.

Commensurate with its action in not sending a representative to the recent meeting of the Big Nine colleges, is that of the Minnesota board of athletic control at a meeting this week of going on record in favor of a seven-game-a-year rule for football. The faculty representative to the next Big Nine conference will be asked to work for the lengthened schedule.

Minnesota takes a safe and sane view of the situation and it is to be hoped that the Big Nine will submit to its mediation and through it keep Michigan in the West Five games a year are too small in number for the amount of work and worry necessary to get a team in shape for them. The colleges of the West have already begun football practice, high priced coaches are being paid to put the men in condition for the great college game and when fall comes, they will be allowed to play only five games with colleges recognized by the conference. The revisors of the rules of the conference certainly overstepped all bounds of common sense.

Why should a college not be allowed to play a reasonable number of games during a season? The faculty of each college will see that the men do not play too many for the physical and educational welfare and the regulation of the conference should apply to the games, not to their number. Minnesota certainly takes a sane view of the situation and the Gopher university shows a spirit of fairness and common sense, which will earn for it the commendation of lovers of college athletics.

SCHOOL LEAGUE GAMES.

Three Contests Pulled Off in the Second Series.

The second series of games in the schedule of the Duluth Interscholastic league was played yesterday afternoon, resulting in scores as follows: Longfellow 9, Lincoln 4; Washington 10, Endion 2; Jefferson 9, Emerson 4. The games were well played and every game drew a crowd of spectators from the schools interested. The third series will be played tomorrow. Jackson will meet Endion on Jackson field at 10 a. m.; Emerson will meet Longfellow on Longfellow field at 2:30 p. m.; and Washington will play Jefferson on Jefferson field at 3:30 p. m.

This evening at the boys' department of the Y. M. C. A., an informal reception will be held to the players on the different teams of the school league. The object of the reception is to bring the players in touch with each other and giving them an opportunity of becoming acquainted.

This evening at 5 o'clock, the Interscholastic field meet committee will meet at the boys' department. The date for the track meet, which is to be held some time in May, will be set and officers will be selected.

W. J. WEBB,
Secretary Duluth Gun Club.

DULUTH GUN CLUB PLANS

First Practice Shoot to be Held Next Sunday.

Dates Are Set for Special Contests of Season.

The members of the Duluth Central Gun club are preparing for an active season on the range, and next Sunday the first practice shoot will be held. All members of the club have been notified, and it is expected that a large representation will be out. Shooting will commence at 2 o'clock.

The schedule of events for the season of 1907 has been prepared by the officers of the club, and it presents a goodly number of attractions for the devotees of the gun. The trophies offered this year are especially attractive. Three very handsome steins, presented by F. E. Berry, are among the trophies to be contested for, and some very handsome merchandise prizes have also been secured. The prizes for the high average contest are presented by the Du Pont Powder company and the Peters Cartridge company has presented the prizes in the special distance handicap contest.

May 12, June 9, July 12 and Aug. 11 are the dates set for the high average and special distance contests. Competition in those events has always been keen, and some interesting contests between the star marksmen of the club are expected this year.

A great deal of interest is being developed in the series of shoots to be held between the Superior and Duluth clubs for the Interstate trophy, now in the possession of the Duluth Central Gun club. Last year the Duluth shots were forced to do some star work to gain possession of the trophy, and the Superior men can be depended upon to make things interesting this year as well.

The members of the club are showing healthy enthusiasm this year, and the officers are looking forward to the most successful season in the history of the organization.

H. BUCHANAN WILL LEAD BALL TEAM

Speedy Little Half, Captain of Blaine Organization.

Harvey Buchanan was unanimously chosen captain of the Bline High school baseball team for the coming season, yesterday afternoon at a meeting of the Athletic association. Joe Rooney will manage the Superior ball chasers and it is planned to start practice at once. The meeting was enthusiastically attended and the Superiorites are out with the old "Wallop Duluth" slogan.

Track practice started yesterday afternoon, under the direction of Coach Lehne, about thirty boys turning out for the first work out. The coach expressed himself as highly pleased with the initial showing of the boys and promises great things for the team.

Baseball practice is in full swing in Duluth already. Ed Cole has had a good bunch of ball chasers out every night since practice started, but track work is a little slow and individual training, which has been done by a few of the more enthusiastic of the track men, is all that has been done so far. It is expected that cross country work will be started in the near future, however, with some work on the weights.

Hueston Retains Title.

Greensburg, Pa., April 26.—Thomas Hueston of St. Louis retains the pool championship of the United States, having defeated W. H. Clearwater of Greensburg in a series of three games. Hueston's total for the three nights' play was 600 and Clearwater's 537.

Columbus-Kansas City, Toledo-Minneapolis and Indianapolis-Milwaukee games postponed on acount of rain.

WIFE KILLER MAKES PLEA OF SELF-DEFENSE.

South Bend, Ind., April 26.—Albin Ludwig of Mishawa, on trial here for wife murder, yesterday made a plea of self defense, claiming that after his wife had attempted to poison him she attacked him with a potatoe masher. During the fight he caught her by the throat, he says, and she suddenly collapsed overturning a table on which was a lamp. Her clothing caught fire. Ludwig states he could not put out the fire and after his wife had been burned to death he attempted suicide by cutting his arteries.

Bitten by a Spider.

Through blood poisoning caused by a spider bite, John Washington of Bosqueville, Tex., would have lost his leg, which became a mass of running sores, had he not been persuaded to try Bucklen's Arnica Salve. He writes: "The first application relieved, and four boxes healed all the sores." Heals every sore. 25c at all druggists.

Ignorance may be bliss, but it's not prosperity. To prosper you must read Herald ads.—and then you are no longer ignorant.

PEGS BEAT UNIVERSITY

Game Yesterday Results in Score of 6 to 5.

White Sox Will Clash With Madison This Afternoon.

Advices from Minneapolis are that Manager J. M. Lamb and Playing Manager Eddie Herr are delighted with the showing of the men under them. The nineteen candidates for the Maroons, trying out under Herr, are exhibiting fine ante-season form, and if they continue in the stride they have already struck, they will make things uncomfortably interesting for the White Sox, Giants and Aristocrats. Sunday afternoon the Peggers put it over the strong Tooze aggregation, to the tune of 8 to 2. The Toozes are the strongest semi-professionals in the Twin Cities, and a victory from them, even at this season of the year, is not to be looked upon lightly. Yesterday, the Maroons took the team of the University of Minnesota into camp by a score of 6 to 5. Meager reports from Minneapolis are to the effect that both teams played good ball, and the Peggers had no easy time pulling out a victory from the students.

Herr has not yet begun the weeding out process, nor is it likely that he will for some time yet. The Maroons have a long schedule of preseason games, and as the Maroons have good men trying for every position, the management intends to give every man a thorough try-out before handing him the blue ticket. Two of the six pitchers will undoubtedly be let out, but just who has not yet been decided by the powers that be, for all are flinging the ball in shape which marks them as fit for Grasshopper league company.

A. W. ZIMMERMAN,
Who Failed to Displace Tracey on First Base.

Reports from the White Sox camp at Madison are by no means as roseate. This afternoon Smith's men, or a few of them, will clash with Cassibone's Wisconsin State leaguers. With an outfield entirely made up of pitchers, and not an extra man for any position, the team representative of Duluth will present a sorry spectacle in comparison to Cassiboine's complete team. The fans will remember, however, that the game is only for practice, and the workout will be valuable for the men who are in it. When Leighty, McCormick, Tredway and Fagan report the team will be in much better shape and a more satisfactory showing can be expected.

The Houghton and Calumet teams will report during the coming week, and then the fans along the circuit will have an opportunity to compare the work of the four teams and make some deductions on the possible developments of the pennant race.

FLINGS AWAY HIS RICHES

Sudden Millionaire of Nevada Goes on a Gambling Spree.

Ely, Nev., April 26.—A. G. Myers, discoverer of Goldfield, contributed not less than $25,000 to the general prosperity of the gambling houses of Ely the other night.

Myers came to Ely a few days ago to transact some business in connection with its large local interests. This business having been disposed of, Myers turned his attention to the amusements of the camp.

The game started in the Northern hotel club rooms. Roulette was the first game in which Myers essayed to win. A number of players were placing small bets. As he took his seat at the table, Myers calmly ordered $1,000 in chips of the value of $5 each.

Fortune was fickle. Sometimes Myers lost, when he would double the bets. More frequently for a time he would win, and at one time there was $15,000 in chips before him. Then his luck changed and he was cleaned out. Another $1,000 was bought, and another until the crowd gasped in astonishment. It is said that Myers lost no less than $4,000 in this club room.

Myers lost repeatedly and finally pushed his chair away from the table and went to the Capitol club, where he is said to have dropped $20,000 in a game of 21.

From the Capitol Myers went to the Southern club. There he played $500 at every turn of the wheeel, losing on an average of three times out of four. Then he plunged and in less than five minutes had lost $3,000.

Leaving the roulette wheel he went to the dice table, and the dime and quarter players fled before him. Throwing two $20 bills to the dealer, Myers shot and the number was eight. He won the first point. "Let her ride," he said, and doubled his money on the next throw. Taking half from the table for a "stake," he played and lost. With a handful of silver before him, Myers played for a heap of silver dollars which he pushed to the center of the table. Again he lost, and, throwing the remaining handful handful of coins to the dealer for a tip, he left.

When you need a pill, take a pill, and be sure it's an Early Riser. DeWitt's Little Early Risers are safe, sure, satisfactory pills. They do not gripe or sicken. Sold here by all druggists.

WILD WEST FOR EVELYN THAW

No More Stage or Gay City for Her, She Says.

New York, April 26.—Evelyn Thaw has had enough of the stage. She is also tired of the fast, gay life of the great city, with its continual "dressing." She longs for the solitude of the wild West and thinks life on a ranch with her husband would be ideal.

"When Harry is acquitted," as she expresses it, she expects that they will go to some Western ranch to live. In a remarkable interview the young wife of Stanford White's slayer expresses her new aspirations.

"I will tell you what I like—broncho busting in the far West," she said. "I would love to live on a ranch and go around in a short skirt and sweater. I saw a good deal of the West on my honeymoon, and I would like to get back to it. There I could forget the everlasting dress, dress, that, that is necessary here."

In reply to a question, if she would go back on the stage if it ever became necessary for her to earn her living again, Evelyn replied with a smile: "No, indeed. I would do anything else first. Dan O'Reilley told me a manager almost wept on his neck and said, 'Think of all this notoriety going to waste.'"

Mrs. Thaw added that the stage had lost its attraction for her, and told of her early stage aspirations, saying: "In Pittsburg, even as a child, I had longed to be a great actress. I thought I was going to be Sarah Bernhardt No. 2. My first rehearsal, where I had any lines, cured me of that.

"Mr. Jerome told the jury I was a great actress. I wish he could have seen that rehearsal. I had one line to speak. It was something like 'Here comes the bride,' When I said it, Mr. Lederer looked up and laughed. I lisped a little then and I would say 'b—wide.' It took him all morning to teach me that one line."

Mrs. Thaw made a confession that she has been keeping a diary ever since the night of Stanford White's death. "I am sorry I said that," she added. "I suppose I will have to hide it, or the district attorney will be looking for it."

Evelyn resented recent criticism in which a writer said she did not cry enough on the stand.

S.S.S. REMOVES BLOOD HUMORS

When the blood is pure and healthy the skin will be soft, smooth and free from eruptions, but when the blood becomes infected with some unhealthy humor the effect is shown by rashes, eruptions, boils and pimples, or other disfiguring and annoying skin disease. The skin is provided with countless pores and glands which act as a drainage system to rid the body of impurities through the perspiration that is constantly passing through these little tubes. There are other glands that pour out on the skin an oily substance to keep it soft and pliable. When the blood becomes filled with humors and acids these are thrown off through the pores and glands, burning and irritating the skin and drying up the natural oils so that we have not only Acne, Eczema, Salt Rheum, etc., but such dry, scaly skin affections as Tetter, Psoriasis, and kindred troubles. The treatment of skin troubles with salves, washes, lotions, etc. is not along the right line. True, such treatment relieves some of the itching and discomfort and aids in keeping the skin clear, but it does not reach the real cause of the trouble, which are humors in the blood, and it can therefore have no real curative effect on these skin affections. S. S. S., a gentle acting and perfect blood purifier, is the best and quickest treatment. It goes down into the blood and removes the humors, fiery acids and poisons from the circulation, cools the overheated blood, and by sending a fresh stream of nourishing blood to the skin permanently cures skin diseases of every character. S. S. S. is made entirely of health producing roots, herbs and barks, and is an absolutely safe remedy for young or old. S. S. S. cures Eczema, Acne, Salt Rheum, Tetter, Psoriasis, and all other disagreeable and unsightly eruptions of the skin. Special book on Skin Diseases and any medical advice desired furnished free to all who write. THE SWIFT SPECIFIC CO., ATLANTA, GA.

NEW SOURCE OF REVENUE

The Mortgage Tax Law Will Become Effective Next Tuesday.

Registration Fee Will Exempt Mortgages From Personal Property Tax.

The new mortgage tax law, which will go into effect next Tuesday, April 30, contains many features which will be of a great deal of interest to Duluth attorneys, and others who hold or handle mortgages.

As the provisions of the new law are not yet generally understood for the reason that the laws have not yet been published, The Herald publishes herewith the mortgage tax law with an explanation of its salient features.

Beginning April 30, every mortgage to be recorded must first be presented to the county treasurer to whom a tax of ½ of 1 per cent, or 50 cents on the $100 will be paid. The treasurer's receipt will be stamped on the mortgage, to be countersigned by the county auditor, after which the instrument will be ready for recording with the register of deeds.

This tax on mortgages will be in lieu of a personal property tax on the mortgage, by reason of the value represented by the instrument. In other words, the mortgage bearing the treasurer's receipt will be free from taxation, whereas, they have heretofore been regarded as personal property, and taxed as such.

No mortgage will be valid unless it shows the exact amount of the obligation, in order that the treasurer may collect the full amount of the registration fee.

Fee Is Mandatory.

This registration fee or tax is mandatory, and, unless it is paid, the assignment of the mortgage or foreclosure proceedings will be invalidated.

With the new law all present owners of mortgages may, if they desire, exempt their mortgages from a personal property tax by paying a registration fee and presenting the receipt to the register of deeds, who will be required to make a notation on the margin of the records that the tax has been paid. It is quite probable that the register of deeds will charge a fee of 10 cents for making the notation, the same as he does in case of margin satisfactions.

The reason that the law goes into effect April 30 is because the assessors are supposed to begin May 1 to list all mortgages of record in the names of residents of the county for the purpose of personal property taxation.

Where mortgages already of record are presented to the treasurer for payment of the registration tax, they must be accompanied by an affidavit from the owner containing a description of the property, stating the amount still due on the mortgage. Owners will be required to pay a tax only on the unpaid portions of the mortgage. The affidavits are filed with the treasurer as a protection against fraud.

Those who have looked into the new mortgage tax law claim that it is one of the best passed at the recent session of the legislature, as it will tend to prevent the evasion of the law and will mean that a tax must be paid on every mortgage that is recorded in the county.

Complete Text of the Law.

The full text of the law follows:

Section 1. The words "real property," "real estate" and "lands," as used in this act, in addition to the definition thereof contained in the revised laws, 1905, shall include all property a conveyance whereof may be recorded or registered by a register of deeds under existing laws; and the word "mortgage," as so used, shall mean any instrument creating or evidencing a lien of any kind on such property, given or taken as security for a debt, notwithstanding such debt may also be secured in part by a lien upon personality. An executory contract for the sale of land, under which the vendee is entitled to or does take possession, shall be deemed, for the purpose of this act, a mortgage of said land for the unpaid balance of the purchase price. No instrument relating to real estate shall be valid as security for any debt unless the fact that it is so intended and the amounts of such debt are expressed therein. But mortgage given to correct a mis-description of the mortgaged property or to include additional security for the same indebtedness, shall not be subject to the tax imposed by this act nor shall a mortgage securing the same and other indebtedness, additional to that upon which such tax has been paid, be taxable hereunder, except for such added sum.

Sec. 2. A tax of 50 cents is hereby imposed upon each $100, or major fraction thereof, of the principal debt or obligation which is, or in any contingency may be, secured by any mortgage of real property situate within the state, which mortgage is recorded or registered on or after April 30, 1907. Provided, that if any such mortgage shall describe any real estate situate outside of the state, such tax shall be imposed upon such proportion of the whole debt secured thereby as the value of the real estate therein described situate in this state bears to the value of the whole real estate described therein, as such value shall be determined by the state auditor upon application of the mortgagee.

Sec. 3. All mortgages upon which such tax has been paid, with the debts or obligations secured thereby and the papers evidencing the same, shall be exempt from all other taxes; but nothing herein shall exempt such property from the operation of the laws relating to the taxation of gifts and inheritances, or those governing the taxation of banks, savings banks or trust companies. Provided, that this act shall not apply to mortgages taken in good faith by the persons or corporations whose personal property is expressly exempted from taxation by the law, or is taxed upon the basis of gross earnings, or other methods of commutation in lieu of all other taxes.

Sec. 4. If a mortgage is made to a mortgagee in trust, to secure the payment of bonds or other obligations to be issued thereafter, a statement may be incorporated therein of the amount of such obligations already issued or to be issued forthwith, and tax to be paid on filing such mortgage for record or registration shall be computed upon the amount so stated. Such statement shall be binding and conclusive upon all persons claiming through or under the mortgage, and no such obligation issued in excess of the aggregate so fixed shall be valid for any purpose unless the additional tax thereon be paid and the receipt of the proper county treasurer therefor be indorsed thereon.

Sec. 5. The tax imposed by this act shall be paid to the treasurer of the county in which the mortgaged land or some part thereof is situated, at or before the time of filing the mortgage for record or registration. The treasurer shall indorse his receipt on the mortgage, countersigned by the county auditor, who shall charge the amount to the treasurer, and such receipt shall be recorded with the mortgage, and such receipt or the record thereof shall be conclusive proof that the tax has been paid to the amount therein stated, and shall authorize any register of deeds to record the mortgage. Its form in substance shall be "Registration tax hereon of —— dollars paid." If the mortgage be exempt from taxation the indorsement shall be "Exempt from registration tax," to be signed in either case by the treasurer as such, and in case of payment to be countersigned by the auditor. In case the treasurer shall be unable to determine whether a claim of exemption should be allowed, the tax shall be paid to the clerk of the district court of the county to abide the order of such court made upon motion of the county attorney or of the claimant upon notice, as required by the court. When any such mortgage covers real property situate in more than one county in this state, the whole of such tax shall be paid to the county treasurer of the county where the mortgage is first presented for record or registration, and the payment shall be receipted and countersigned as above provided, and such tax shall be divided and paid over by the county treasurer receiving the same on or before the 10th day of each month after the receipt thereof to the county or counties entitled thereto in the ratio which the assessed value of the real property covered by the mortgage in each county bears to the assessed value of the real property described in the mortgage. In making such division and payments the county treasurer shall send therewith a statement, giving the description of the property described in the mortgage and the assessed value of the part thereof situate in each county. And for the purpose aforesaid the county treasurer of any county may require the county treasurer of any other county to certify to him the assessed valuation of any tract of land in any such mortgage.

Sec. 6. When any real estate situate in this state and described in any such mortgage is not taxed by direct tax upon the assessed valuation thereof, then the tax herein provided shall be paid to the state treasurer and credited to the general revenue fund. The receipt thereof shall be indorsed upon the mortgage by the state treasurer and countersigned by the state auditor, who shall charge the treasurer therewith and thereupon such mortgage shall be recorded or registered as to such real estate in any office in this state, and thereupon such mortgage may be recorded or registered, but as to all real property described in any mortgage tax upon an assessed valuation the registry tax shall be paid as provided in section 5 hereof.

Sec. 7 No such mortgage nor papers relating to its foreclosure, nor any assignment nor satisfaction thereof shall be recorded or registered after April 30, 1907, unless said tax shall have been paid; nor shall any such document or any record thereof be received in evidence in any court or have any validity as notice or otherwise.

Sec. 8. All mortgages of real estate recorded or registered prior to April 30, 1907, shall be taxable as provided by law under the provisions of law relating thereto prior to the enactment hereof. Provided, that the holder of any such mortgage may pay to the treasurer of the proper county, or the state treasurer, or both, the tax herein prescribed upon the amount of the debt secured by such mortgage at the time of such payment, as stated by the affidavit of the owner of such mortgage, to be filed with the county treasurer, and have the treasurer's receipt countersigned by the auditor indorsed thereon. The register of deeds or secretary of state, as the case may be, on presentation of such receipt shall note on the margin of the mortgage record the date and amount of such payment. Thereafter such mortgage debt shall not be otherwise taxable.

Sec. 9. All taxes paid in the county treasurer under the provisions of this act shall be apportioned and distributed in the same manner as real estate taxes paid upon the real estate described in the mortgage.

Sec. 10. This act shall take effect and be in force from and after April 30, 1907.

APPENDICITIS.

Not at All Necessary to Operate in Many Cases.

Automobiles and Appendicitis scare some people before they are hit.

Appendicitis is often caused by too much starch in the bowels. Starch is hard to digest and clogs up the digestive machinery—also tends to form cakes in the cecum. (That's the blind pouch at entrance to the appendix.

A N. H. girl had appendicitis, but lived on milk for awhile—then Grape-Nuts and got well without an operation.

She says: "Five years ago while at school, I suffered terribly with constipation and indigestion." (Too much starch, white bread, potatoes, etc., which she did not digest.)

"Soon after I left school I had an attack of appendicitis and for thirteen weeks lived on milk and water. When I recovered enough to eat solid food, there was nothing that would agree with me, until a friend recommended Grape-Nuts.

"When I began to eat Grape-Nuts I weighed 98 lbs., but I soon grew to 113 lbs. The distress after eating left me entirely and now I am like a new person."

(A little Grape-Nuts dissolved in hot water or milk would have been much better for this case than milk alone, for the starchy part of the wheat and barley is changed into a form of digestible sugar in making Grape-Nuts.) Name given by Postum Co., Battle Creek, Mich. Read the little book, "The Road to Wellville," in pkgs. "There's a Reason."

THE CRY OF SUIT SALES FILLS THE AIR

We would just like to say that when we advertise a sale we mean it. A sale means actual, not fictitious, reductions in prices. We reduced the prices on our Suits for this sale to such an extent that we do not expect to have one of them left by tomorrow night. Come early and choose. Do not hesitate. The choicest of the lot will be plucked early. Prices on the tickets remain as before. The blue penciled numbers on the reverse side show the sale price. All this spring goods—no old stocks. No approvals.

Just Three Lots, At Just Three Prices, $9.75, $14.75 and $19.75

LOT NO. 1—Popular Etons, Prince Chap and Semi-fitted Suits—35 of them on a separate rack—black, tan, brown and lighter shades, woolens, serges, French Panamas, etc.—all sizes in the lot—regular prices $15, $16.50, $18 and $22.50—to clear them out quick—your choice. **$9.75**

LOT NO. 2—25 Suits in the most popular shades of gray, tan, striped and novelty light mixtures; also plain black and blue—all nicely trimmed, beautifully tailored, up-to-the-minute garments—regular prices $19.98, $22.50, $25.00 and $27.50—to clean them out quick—your choice..... **$14.75**

LOT NO. 3—Beautiful lot of Suits, very pretty designs—they have not been in our store over a month—in all popular light and dark shades, fancy mixtures, black, blue and tan—regular prices $27.50, $31.50 and $35.00—your choice..... **$19.75**

Alterations extra.

They Will go Fast at These Prices. Once More We Say—COME EARLY.

WE ARE BUILDING OUR REPUTATION ON LOW PRICES. Our merchandise is as good, if not better, than shown anywhere in Duluth. Just for curiosity drop in here Saturday and see what we offer. If you have never been inside this store you will be surprised to see the same identical goods here at from 10 to 30 per cent lower than at the other stores. WE CAN AFFORD TO SELL CHEAPER simply because our expense is small and we pay spot cash for what we buy. This is not merely newspaper talk—you will convince yourself of the facts by pricing articles here and elsewhere.

MOTHER OF FOURTEEN

Divorced and Judge Prevented the Husband Remarrying.

Detroit, Mich., April 26.—Mrs. Jacob Schepke, mother of fourteen children, was given a decree of divorce by Judge Donovan on her cross bill against her husband, Jacob Schepke.

The woman does not speak English and her testimony was given through an interpreteer. Among other things she alleges that her husband had on one occasion chased her and her children out of doors and at another time chased one of the little children out in a nude condition with an axe. She said they were married thirty-one years ago in Germany and that at present only six children are alive, ranging in age from 29 to 9. She says that her husband has treated her cruelly all during their married life, and drank and always had whisky in the house.

"Did he want to marry some one else?" asked the judge.

"Yes," said the witness. "He said he could marry right away if he was divorced."

"Well," he won't, remarked the judge. "I'll put a stop to it. There is always something of that kind lurking somewhere in a divorce case, and I will not tolerate it."

The woman testified that she had her husband arrested on two occasions and that he was fined out in St. Clair Heights, where they reside. She says that her husband left her Aug. 13.

The judge said that he would give a decree in thirty days, and that he would include a clause forbidding either husband or wife remarrying for two years. The judge also decided that the woman should give the man $300 and take the house and lot and another lot in St. Clair Heights which the couple own.

MIES MAKER OF MEN'S FINE CLOTHES

ASK TO SEE OUR SUITS AT $30, $35 and $40

Wolvin Building

Don't use harsh physics. The reaction weakens the bowels, leads to chronic constipation. Get Doan's Regulets. They operate easily, tone the stomach, cure constipation.

WHEAT IS UP IN THE NORTHWEST

Minnesota and South Dakota Fields Are Showing Green.

Minneapolis, April 26.—The wheat has shoved its nose above the ground in Southern Minnesota and South Dakota. This illustrates the great extent and varied soil and climatic conditions of the Northwest, for while reports of delayed seeding are coming in from parts of North Dakota, travelers arriving in the city yesterday from the South report the green beginning to show where early seeding was done on the high land of Southern Minnesota.

The season has been considered backward, and the weather of yesterday is not favorable for the pushing of farm work, but that there will be any serious delay in the putting in of the crop seems unlikely.

The Van Dusen-Harrington summary of yesterday covers the situation in full, and reads as follows: "For two weeks we had weather which was too cold for seeding, as the ground froze every night. The last two days have been perfect for spring work, and today seeding is again in progress throughout Minnesot and both Dakotas, except in the northeast corner of North Dakota. In the lower end of the Red River valley conditions are more favorable than for a number of years, there being just the right amount of moisture in the soil and no water in the low places, so that the ground admits of straight work across the fields, which has not been possible for a long time.

"If the good weather holds for a week small grain seeding will be almost completed and would not then be much later than the average date.

"Some of the early-sown grain in Southern Minnesota and South Dakota is already up, seeding having been completed in the southern counties ten days ago.

"Nothing definite can be said today about acreage. If the weather should be favorable we expect a considerable increase in the small grain acreage, as there has been a very large amount of new ground prepared, but the weather will determine whether it shall be sown to wheat or to flax and barley.

COMMISSIONERS WILL DRAW LOTS

To Decide the Term of Office of Each One.

St. Paul, April 26.—(Special to The Herald.)—The terms of office of the three members of the tax commission appointed yesterday by Governor Johnson will be determined by lot. This arrangement Governor Johnson said today had been agreed upon.

The terms of office are two, three and four years, but Governor Johnson in naming the commissioners did not play any favorites. He said today that he thought the best plan would be to let them draw lots for the long term, and in a few days would summon them together for that purpose. The commission is to have a secretary whose salary to be $2,400 a year. Governor Johnson said he would not make public the name for the present, but it is rumored it will be Rukard Hurd of St. Paul.

There is a position of stenographer and a clerk yet to fill, and the woods in consequence are full of candidates.

EXPENSE MAY BE NECESSARY

Dredging May Require Further Protection for Park Point Mains.

It is possible that the expenditure of $1,600 or $1,800 will be necessary in the near future in order to suitably protect the water and gas mains across the ship canal from another accident from dragging anchors such as put them out of commission within a week after their installation last summer.

The cause of the present apprehension for the safety of the Park Point mains is the plan of the government engineers to dredge out a considerable area just outside of the canal piers in order to remove any danger of steamers striking bottom in heavy seas as the Mataafa did in the big storm of 1905. According to the present plans a big area just outside the end of the piers will be considerably deepened, until the bottom is a number of feet below the level of the canal bottom.

The engineers are afraid that the current from the river drawing through the canal bed will tend to wash away the loose sand in the canal and in lowering its bottom will lay bare those portions of the mains which are not already protected with rip-rap. In his work since the break caused by a dragging anchor last summer, Diver Wanless covered only those portions of the pipe which were exposed, or nearly exposed and did not cover the mains where they were already five feet under the sandy bottom of the canal. Any reduction of the bottom will therefore leave these sand-covered portions exposed to the risk of being broken by dragging anchors unless protected.

None of the engineers care to be quoted as to whether this will be necessary or not as yet, but the effect of the outside dredging upon the canal bed will be closely watched.

Walked Over 3000 Miles

In 1904 Van R. Wilcox, a well-known business man of Harrisburg, Pa., walked from New York to Santa Monica, California, on a diet of

Shredded Wheat

On the way he climbed to the top of Pike's Peak. You don't have to walk 3000 miles, but you need strength and health to attain success in the business of life. Shredded Wheat supplies both.

For breakfast heat the Biscuit in oven to restore crispness, pour hot milk over it, add a little cream and a little salt; or, sweeten to taste. Shredded Wheat is also delicious and wholesome for any meal in combination with fresh or preserved fruits. At your grocers.

MARINE NEWS

WILL BE ON NIGHT DUTY

Tug Office Will Now be Open Day and Night.

F. W. Pancoast is Night Dispatcher for This Season.

From today until the close of navigation next December the dispatcher's office of the Union Towing company will be open day and night. F. W. Pancoast, who has been appointed night dispatcher for this season, will take charge of the office at the foot of Seventh avenue west, for the first time tonight and thereafter the office will never be closed until ice forms in the bay again next fall.

Last year Mr. Pancoast was one of the dispatchers at the Sault and is thoroughly familiar with the work. The office will be kept open on Sundays and holidays as well as ordinary days and nights and tugs will be ready to do towing work at any time. Capt. Johnson is in charge of the office during the daytime.

The tug Buffalo, commanded by Capt. Brassaw, left the harbor last evening for Marquette, where she will be stationed this season. She has been equipped with a stand pipe and fire pump and will be used as a fire tug at Marquette in case of emergency.

This morning Capt. Cornwall arrived from Detroit to take charge of the tug Crosby. The Crosby will be taken to Ashland, where she was stationed last year. Capt. Byers, who will be in command of the tug Carrington this year, arrived yesterday from Cheboygan, Mich., where he spent the winter.

For the first time this season six tugs were placed in commission today. Another crew will take charge of a tug for night duty in the near future.

CARRYING CAPACITY

For the Season on Lakes Will be 1,200,000 Tons.

It is estimated that the carrying capacity of vessels on the upper lakes this season will be at least 1,200,000 tons over last year. This will be afforded by thirteen additional boats. Two more may be added before the end of the season; which would make the total increased bulk space about 1,300,000. The carrying capacity in 1906 was approximately 4,600,000 bushels. The addition of these vessels means that a small fleet will be placed in service between ports from Montreal and Buffalo to Port Arthur and Fort William.

It is a striking fact that so many boats should be put on in one season, but men interested in transportation enterprises evidently believe that there will be sufficient cargo offering to give a good share of business to all freighters that may be put on. The heavy grain traffic from Western Canada, increasing as it is year by year, is largely responsible for the rapidity with which new boats are being built for lake business.

ARE NOW IN LAKE HURON

Grain Fleet Fights Way Through Ice in the Sault.

Will Race to Buffalo for Choice for First Place.

Detour, April 26.—The first boats of the long delayed grain fleet from Duluth are now well on their way down the Soo river and were last night reported fighting their way through the ice at

Five big steel steamers—The Hoover and Mason, Ball Brothers, Venus, Augustus Wolvin and Steel King—are in the lead and a lively brush will ensue for the honor of delivering the first Lake Superior cargo at a lower lake port when they have left the ice fields behind. The tug J. F. Reid and ice breaker Algomah are assisting boats through the ice at this end of the Soo a point below Lime island. It is expect-

The following boats passed up the river yesterday: Rogers, Gary, Morgan, Harry Coulby, J. R. Reid, Edwards, Cort, Neilson, Strathcona, Davidson, Harvey Brown, Osborne, Donnacona, Heffelfinger, Simla and consort, James Laughlin, Schoolcraft, Viking, Shaughnessy.

WILL MARK SHOAL.

Mariners Will be Warned of Sand Bar at Superior.

Since the big steamer Thomas Cranage went on the shoal Wednesday evening, near the mouth of Nemadji river at the Superior entrance, investigations have been made by the government harbor officials and preparations are being made to mark the sand bar as soon as possible.

Later on the government engineers will probably have the channel dredged out and the shoal will be removed but until this is done the bar will be marked by a spar and light. Capt. Swenson yesterday made investigations and sent the information concerning the newly discovered shoal to the Washington hydrographic office and it will appear in the next notice to mariners published by the government.

Local vesselmen are of the opinion that the best route to follow by navigators at the Superior entrance is that nearest the mouth of the Nemadji river. Although no soundings were taken yesterday by the tugmen it is thought that there is plenty of water for the vessels near the mouth as the shoal is about in the center of the channel.

The range and channel lights about the harbor will be established for the season within a few days and when this is done the shoal at Nemadji river will be marked.

No Rush at Cleveland.

Cleveland, April 26.—Ore men are in the market for more season tonnage but on account of the late start most of the big vessel owners have about all the contract ore they want and there is no rush to get the business. Some chartering has been done during the past few days at the old figures. The steamer Langham was placed for corn, Manitowoc to Buffalo at 1¼ cents.

ARE FAST IN ICE.

No Down Bound Boats at the Sault Since Thursday.

Sault Ste. Marie, April 26.—No boats have arrived from Lake Superior since yesterday noon. Several are reported fast in the ice between Whitefish and Iroquois. Assistance will probably be sent to release them.

Vessels are moving slowly but steadily through Mud lake. It is thought at Detroit that some downbound steamers passed during the night. If this is true, they were doubtless the Hoover and Mason and Ball Brothers. Light easterly winds prevail today. The weather is calm and cool.

THE AMERICA RETURNS.

Great Fields of Ice Were Encountered Off Rock Harbor.

The steamer America of the Booth line returned this morning from her trip up the north shore and to Isle Royale. She carried a passenger list of about sixty or seventy-five and her captain reported a good trip.

The boat went around to Rock Harbor for the first time this season and it is reported that there is considerable ice at that point. It was necessary to land the fishermen onto the ice as the America was unable to get into the harbor. At that point there was nothing but ice as far as the eye would reach. No attempt was made to go to Port Arthur.

Among the passengers who came in on the America was United States Fish Commissioner Hopper who had taken a quantity of fish fry to Isle Royale from the hatchery at Lester Park.

WILL FLOAT CRANAGE.

About 25,000 Bushels Must be Lightered From Boat.

The work of floating the steamer Thomas Cranage, which went on the bar at the mouth of Nemadji river Wednesday evening, has been begun by Whitney Bros. It will be necessary to lighter about 25,000 bushels of grain before the vessel can be floated. The steamer was not damaged, as she grounded quite gently, and she will be ready to reload her cargo as soon as she is taken off the shoal.

Capt. Swenson of the local hydrographic office reports that the steamer stranded 150 feet from red spar buoy No. 2. A sand bar has been formed in the channel extending about 20 feet to the south and west of the buoy, according to the report, with the shoalest water at the buoy. At the present location of the buoy, steamer should pass at least 200 feet to the south of the same and by keeping the Superior side best aboard there is a channel of 300 feet wide with at least 18 feet of water. This depth can be found to within 10 feet of the island at the mouth of Nemadji river.

Capt. Swenson says that navigators should keep the Superior side and that boats can go within 75 or 100 feet of the island. They should be at least 200 feet to the south of the buoy.

Only One Boat Chartered.

Chicago, April 26.—The Armour was placed for wheat to Detroit but outside of this charter nothing was done. Rates were nominally unchanged at 1¼ cents on corn.

Broke Her Cylinder.

Amherstburg, April 26.—The steamer Sir Henry Bessemer upbound broke her cylinder when off Colchester last night and was towed to Bar point by the steamer Zenith City yesterday. The Bessemer will be towed back to Cleveland for repairs by a steamer of the same line. The steamer Castalia ran aground yesterday at the lower end of Fighting Island. The tug General and lighter Newman are working on her. It was snowing last night and the weather is very thick.

Ice in Chequamagon Bay.

Ashland, April 26.—The steamer Colonel while coming in yesterday for a cargo of iron ore ran into a heavy ice field in Chequamagon bay and was forced to put into Washburn. The steamer Mecosta is loaded with ore and ready to sail, but is awaiting a favorable opportunity to get out through the ice fields.

Had to Beach Tug.

Buffalo, April 26.—The tug John Killderhouse which left here for Duluth sprung a leak when six miles northeast of Dunkirk and had to be beached. The crew will return to Buffalo. The Killderhouse was recently sold by the Great Lakes Towing company to the Hockler Dredging company of Sault Ste. Marie.

Steamer Davock Launched.

St. Claire, Mich., April 26.—The steel freighter William B. Davock, 440 feet long and built for the Vulcan Steamship company of Cleveland was successfully launched here yesterday at the local shipyards of the Great Lakes Engineering works. Miss Grace E. Davock of Cleveland was sponsor.

Ice Holds 100 Boats.

Sault Ste. Marie, April 26.—The steamer Admiral, which arrived here last night reports about 100 boats fast in the ice in the Lower Soo river near Lime island. None of the downbound fleet has yet passed Detour. So far as known, all upbound steamers that have passed this point are going through into Lake Superior without experiencing much trouble with the ice on Whitefish bay. The weather is calm, but cold.

The Sault Passages.

Sault Ste. Marie, April 26.—(Special to The Herald.)—Up: Sierra, 9:30 Thursday morning; Hibbard, 10; Hart, 11; Dalton, midnight; Frank Peavey, Sinaloa, 2:30 Friday morning; W. L. Brown, Stearn, 4:30; George Peavey, 5:30; Marshall, (small), Mullen, 6:30; William Rogers, Joseph Gilchrist, 9:30.

Up yesterday: Sultana, noon; Holmes, 12:30 p. m.; Zimmerman, 1; Gayley, Duluth, 2:30; Goodyear, Walter Scranton, 4; Carter, 4:30; Hutchinson, Jenks, 5:30; Snyder, 6:30; Louisiana, Morrow, 7:30; Henry Hawgood, Spokane, 8; Hanna, 8:30. Down: Lake Shore, Walker, noon; Hecker, 1:30 p. m.; Steel King, Yale, 2; New Gratwick, 3:30; Socapa, Crerar, 4:30; Kensington, Beatty, 8:40.

Passed Detroit.

Detroit, April 26.—(Special to The Herald.)—Up: Cormorant, consort, 10 Thursday night; Nyanza, 11; Northern Light, 12; Miller, Egan, 1:50 Friday morning; Frontenac, 1:50; Stanton, 3:20; Minneapolis, 3:40; Panay, 4:20; Stephenson, 7:15. Boston—Arrived: Anglian, London.

Naples — Arrived: Frederich der Grosse, New York.

WIRE WASTE RECEPTACLES

Placed Throughout Wheeling, W. Va. by Women's Civic Club.

Wheeling, W. Va., April 26.—When the Women's Civic club of this city adopted the suggestion of one of its members, "Let us cease talking and do something," it began to accomplish things. Among the achievements to its credit is the placing throughout the city of 100 wire waste receptacles, which have been placed under the supervision of the board of public works. As the people of the city have become educated to the use of these receptacles the streets have become very much cleaner. The club has also been instrumental in having the anti-spitting ordinance enforced.

Another result of which the Civic club is very proud occurred when it succeeded in having enacted and enforced a pure milk ordinance. The observation of Arbor day and school garden work are other matters to which the club has given resultful attention.

BILLBOARDS CONDEMNED.

Realty Board of Los Angeles Has Adopted Resolutions.

Los Angeles, Cal., April 26.—The realty board of this city has passed resolutions against the hideous billboard displays—condemning the use of the smaller signs as well as the large ones.

A prominent real estate firm has decided to do away with all of its billboards, as they were found a hindrance to the transfer of property on which they were displayed.

CONDITION OF BRIDGES

City Engineer Will Submit Report on 131 Structures.

He Recommends Immediate Repairs on a Large Number.

The city engineer has completed his report on the conditions of the bridges throughout Duluth, and his examination has shown that the condition of the bridges was fully as bad as was pointed out in an article which appeared in The Herald before the inspection commenced. A number of the bridges have been labeled dangerous, and in need of immediate repairs, and one of the outlying structures is characterized by the report as very dangerous—beyond repair."

This condition might not be so serious in itself were it not for the disregard which has been shown in connection with this question by those upon whom the responsibility rests in the past. A good number of the bridges which are recommended for immediate repair by the engineers in their report this year were recommended for repairs years ago, and aside for a little superficial work, which has enabled the structures to hold together in a rather risky manner since that time, nothing has been done about it.

"I wish there could be special emphasis placed upon the need for painting on some of our bridges," said one of the engineers this morning. "We recommended the painting of the Lake avenue viaduct in 1899, and nothing was done. You know the way that was found last year."

There have been no serious, or at least no fatal accidents so far from this cause, but Duluth may consider herself especially fortunate in having avoided them under present conditions. The report which will be submitted to the council next Monday night outlines briefly the condition of 131 bridges in the city, from Lester Park to Fond du Lac, and including bridges on the roads to outlying towns which are within the city limits. This does not include every bridge in the city, as it is said that there are over 160 in all.

Among the structures which are recommended as "in need of immediate repairs," "dangerous," "just repaired, but still in bad shape," etc., are the following: Over Lester creek at London road; Grand avenue and Sixty-third avenue east; Woodland avenue and St. Marie street; Hulett road over Chester creek; St. Marie street over Chester creek; south approach to the Sixth avenue viaduct; bridge on the Howard and Gnesen road; Grand avenue and Thirty-seventh avenue west; Oneota street and Forty-ninth avenue; Grand avenue and Forty-ninth avenue west; bridges on Polk street at Fifty-sixth, Fifty-seventh, Fifty-eighth and Fifty-ninth avenues west; Grand avenue and Sixty-first avenue west; Grand avenue and Sixty-seventh avenue west; Seventy-first avenue west and Lavaque street; Rene street west of Forty-first avenue west; on the Cemetery road over Keene's creek; Fond du Lac road at One Hundred and Tenth avenue west; four bridges on One Hundred and Thirty-second avenue west.

Those of the bridges which are included in the above list which are in use by the street car company have in the majority of cases been rebuilt in the centers so as to be safe for car traffic, but are still in bad condition as regards the roadway on either side of the tracks.

The cemetery road bridge over Keene's creek is labeled as "dangerous and beyond repair" and the south approach to the Sixth avenue viaduct is also labeled "dangerous."

According to the report the aerial bridge will have to be given an entire new coat of paint next year.

Women have decided that in case they cannot vote, they will out out the "Stork" proposition. Perfectly proper. Take Hollister's Rocky Mountain Tea, it is good for most everything. 35 cents, Tea or Tablets. Ask your druggist.

MARINE NEWS

WILL BE ON NIGHT DUTY

Tug Office Will Now be Open Day and Night.

F. W. Pancoast is Night Dispatcher for This Season.

From today until the close of navigation next December the dispatcher's office of the Union Towing company will be open day and night. F. W. Pancoast, who has been appointed night dispatcher for this season, will take charge of the office at the foot of Seventh avenue west, for the first time tonight and thereafter the office will never be closed until ice forms in the bay again next fall.

Last year Mr. Pancoast was one of the dispatchers at the Sault and is thoroughly familiar with the work. The office will be kept open on Sundays and holidays as well as ordinary days and nights and tugs will be ready to do towing work at any time. Capt. Johnson is in charge of the office during the daytime.

The tug Buffalo, commanded by Capt. Brassaw, left the harbor last evening for Marquette, where she will be stationed this season. She has been equipped with a stand pipe and fire pump and will be used as a fire tug at Marquette in case of emergency.

This morning Capt. Cornwall arrived from Detroit to take charge of the tug Crosby. The Crosby will be taken to Ashland, where she was stationed last year. Capt. Byers, who will be in command of the tug Carrington this year, arrived yesterday from Cheboygan, Mich., where he spent the winter.

For the first time this season six tugs were placed in commission today. Another crew will take charge of a tug for night duty in the near future.

CARRYING CAPACITY

For the Season on Lakes Will be 1,200,000 Tons.

It is estimated that the carrying capacity of vessels on the upper lakes this season will be at least 1,200,000 tons over last year. This will be afforded by thirteen additional boats. Two more may be added before the end of the season, which would make the total increased bulk space about 1,300,000. The carrying capacity in 1906 was approximately 4,750,000 bushels. The addition of these vessels means that a small fleet will be placed in service between ports from Montreal and Buffalo to Port Arthur and Fort William.

It is a striking fact that so many boats should be put on in one season, but men interested in transportation enterprises evidently believe that there will be sufficient cargo offering to give a good share of business to all freighters that may be put on. The heavy grain traffic from Western Canada, increasing as it is year by year, is largely responsible for the rapidity with which new boats are being built for lake business.

ARE NOW IN LAKE HURON

Grain Fleet Fights Way Through Ice in the Sault.

Will Race to Buffalo for Choice for First Place.

Detour, April 26.—The first boats of the long delayed grain fleet from Duluth are now well on their way down the Soo river and were last night reported fighting their way through the ice at Five big steel steamers—The Hoover and Mason, Ball Brothers, Venus, Augustus Wolvin and Steel King—are in the lead and a lively brush will ensue for the honor of delivering the first Lake Superior cargo at a lower lake port when they have left the ice fields behind. The tug J. F. Reid and ice breaker Algomah are assisting boats through the ice at this end of the Soo a point below Lime Island. It is expected.

The following boats passed up the river yesterday: Rogers, Gary, Morgan, Harry Coulby, J. R. Reid, Edwards, Cort, Neilson, Strathcona, Davidson, Harvey Brown, Osborne, Donnacona, Heffelfinger, Simla and consort, James Laughlin, Schoolcraft, Viking, Shaughnessy.

WILL MARK SHOAL.

Mariners Will be Warned of Sand Bar at Superior.

Since the big steamer Thomas Cranage went on the shoal Wednesday evening, near the mouth of Nemadji river at the Superior entrance, investigations have been made by the government harbor officials and preparations are being made to mark the sand bar as soon as possible.

Later on the government engineers will probably have the channel dredged out and the shoal will be removed but until this is done the bar will be marked by a spar and light. Capt. Swenson yesterday made investigations and sent the information concerning the newly discovered shoal to the Washington hydrographic office and it will appear in the next notice to mariners published by the government.

Local vesselmen are of the opinion that the best route to follow by navigators at the Superior entrance is that nearest the mouth of the Nemadji river. Although no soundings were taken yesterday by the tugmen it is thought that there is plenty of water for the vessels near the mouth as the shoal is about in the center of the channel.

The range and channel lights about the harbor will be established for the season within a few days and when this is done the shoal at Nemadji river will be marked.

No Rush at Cleveland.

Cleveland, April 26.—Ore men are in the market for more season tonnage but on account of the late start most of the big vessel owners have about all the contract ore they want and there is no rush to get the business. Some chartering has been done during the past few days at the old figures. The steamer Langham was placed for corn, Manitowoc to Buffalo at 1¼ cents.

ARE FAST IN ICE.

No Down Bound Boats at the Sault Since Thursday.

Sault Ste. Marie, April 26.—No boats have arrived from Lake Superior since yesterday noon. Several are reported fast in the ice between Whitefish and Iroquois. Assistance will probably be sent to release them.

Vessels are moving slowly but steadily through Mud lake. It is thought at Detroit that some downbound steamers passed during the night. If this is true, they were doubtless the Hoover and Mason and Ball Brothers. Light easterly winds prevail today. The weather is calm and cool.

THE AMERICA RETURNS.

Great Fields of Ice Were Encountered Off Rock Harbor.

The steamer America of the Booth line returned this morning from her trip up the north shore and to Isle Royale. She carried a passenger list of about sixty or seventy-five and her captain reported a good trip.

The boat went around to Rock Harbor for the first time this season and it is reported that there is considerable ice at that point. It was necessary to land the fishermen onto the ice as the America was unable to get into the harbor. At that point there was nothing but ice as far as the eye would reach. No attempt was made to go to Port Arthur.

Among the passengers who came in on the America was United States Fish Commissioner Hopper who had taken a quantity of fish fry to Isle Royale from the hatchery at Lester Park.

WILL FLOAT CRANAGE.

About 25,000 Bushels Must be Lightered From Boat.

The work of floating the steamer Thomas Cranage, which went on the bar at the mouth of Nemadji river Wednesday evening, has been begun by Whitney Bros. It will be necessary to lighter about 25,000 bushels of grain before the vessel can be floated. The steamer was not damaged, as she grounded quite gently, and she will be ready to reload her cargo as soon as she is taken off the shoal.

Capt. Swenson of the local hydrographic office reports that the steamer stranded 12 feet from red spar buoy No. 2. A sand bar has been formed in the channel extending about 20 feet to the south and west of the buoy, according to the report, with the shoalest water at the buoy. At the present location of the buoy, steamer should pass at least 200 feet to the south of the same and by keeping the Superior side best aboard there is a channel of 200 feet wide with at least 18 feet of water. This depth can be found to within 10 feet of the island at the mouth of Nemadji river.

Capt. Swenson says that navigators should keep the Superior side and that boats can go within 75 or 100 feet of the island. They should be at least 200 feet to the south of the buoy.

Only One Boat Chartered.

Chicago, April 26.—The Armour was placed for wheat to Detroit but outside of this charter nothing was done. Rates were nominally unchanged at 1¼ cents on corn.

Broke Her Cylinder.

Amherstburg, April 26.—The steamer Sir Henry Bessemer upbound broke her cylinder when off Colchester last night and was towed to Bar point by the steamer Zenith City yesterday. The Bessemer will be towed back to Cleveland for repairs by a steamer of the same line. The steamer Castalia ran aground yesterday at the lower end of Pelee Island. The tug General and lighter Newman are working on her. It was snowing last night and the weather is very thick.

Ice in Chequamagon Bay.

Ashland, April 25.—The steamer Colonel while coming in yesterday for a cargo of iron ore ran into a heavy ice field in Chequamagon bay and was forced to put into Washburn. The steamer Mecosta is loaded with ore and ready to sail, but is awaiting a favorable opportunity to get out through the ice fields.

Had to Beach Tug.

Buffalo, April 26.—The tug John Kilderhouse which left here for Duluth sprung a leak when six miles northeast of Dunkirk and had to be beached. The crew will return to Buffalo. The Kilderhouse was recently sold by the Great Lakes Towing company to the Hockler Dredging company of Sault Ste. Marie.

Steamer Davock Launched.

St. Claire, Mich., April 26.—The steel freighter William B. Davock, 440 feet long and built for the Vulcan Steamship company of Cleveland was successfully launched here yesterday at the local shipyards of the Great Lakes Engineering works. Miss Grace E. Davock of Cleveland was sponsor.

Ice Holds 100 Boats.

Sault Ste. Marie, April 26.—The steamer Admiral, which arrived here last night reports about 100 boats fast in the ice in the Lower Soo river near Lime island. None of the downbound fleet has yet passed Detour. So far as known, all upbound steamers that have passed this point are going through into Lake Superior without experiencing much trouble with the ice on Whitefish bay. The weather is calm, but cold.

The Sault Passages.

Sault Ste. Marie, April 26.—(Special to The Herald.)—Up: Sierra, 9:20 Thursday morning; Hibbard, 10; Hart, 11; Dalton, midnight; Frank Peavey, Sinaloa, 2:20 Friday morning; W. L. Brown, Stearn, 4:30; George Peavey, 5:30; Marshall, (small), Mullen, 6:30; William Rogers, Joseph Gilchrist, 9:30.

Up yesterday: Sultana, noon; Holmes, 12:30 p. m.; Zimmerman, 1; Gayley, Duluth, 2:30; Goodyear, Walter Scranton, 4; Carter, 4:20; Hutchinson, Jenks, 5:30; Snyder, 9:30; Louisiana, Morrow, 7:30; Henry Hawgood, Spokane, 8; Hanna, 8:20. Down: Lake Shore, Walker, noon; Hecker, 1:30 p. m.; Steel King, Yale, 2; New Gratwick, 3:30; Socapa, Crerar, 7:20; Kensington, Beatty, 8:40.

Passed Detroit.

Detroit, April 25.—(Special to The Herald.)—Up: Cormorant, consort, 10 Thursday night; Nyanza, 11; Northern Light, 12; Miller, Egan, 1:30 Friday morning; Frontenac, 1:50; Stanton, 3:20; Minneapolis, 3:40; Panuky, 4:20; Stephenson, 7:15. Down: Street, consort, 9:15 Thursday night; Sill, 10; Rhoda Emily, 12; Fitzgerald, (old.)

Ladies' Suits.

We place on sale tomorrow a small lot of ladies' suits—tailored in the best manner. We formerly sold them at $12.50 and $14.98. But as the manufacturer notified us that duplicate orders could not be filled. Owing to shortage of the same materials, and as we have only one or two of a kind in sizes 34, 36 and 38, without being able to duplicate on them, we would rather sell them at a great reduction right now and give our customers the full benefit than to hold them for a later sale. Come tomorrow sure as they won't last long at this low price.

Your choice of the lot

FAKE CALLS NUMEROUS

Fire Department Gets Three False Alarms in Two Days.

Chief Black Threatens to Stop Answering Telephone Alarms.

The "Smart Alec" is evidently a spring development in this climate.

During the last two days three false alarms have been sent in to the fire department from various parts of the city over the 'phone. The first one was a call for a fire on Fifth street, the second for a reported blaze at the Beehive department store, and the last one came today just before 1 o'clock and sent the department poste haste to the Kelley-How-Thomson company's establishment.

It was thought that this special form of amusement had long ceased to be a joke among the inhabitants of civilized communities and this is the first occasion for some time when the case has been so aggravated as the present one. The usual false alarm is caused by some overwrought person imagining a need for the department and acting in perfect good faith, but in the present instances there has not been the slightest cause for the alarm as far as could be learned.

Chief Black has done everything he could to apprehend the offender but without success. The calls all came over the telephone and, of course, were not found to be fakes until long after all trace of the origin of the call had been lost.

"I am going to ask the telephone companies if they will not have the centrals register the numbers of all calls for No. 6 and then we can tell from what telephone the fake calls originate," said the chief today. "I think this could be done very effectively and would probably put a stop to the trouble at once. If we can't do this we will simply have to stop answering alarms which come in over the telephone."

Few people realize the danger that attends a run by the fire department, both to the men and to the citizens at large. The damage to the equipment is also no small item.

ARE COMING TOO SLOWLY

Y. W. C. A. Campaign Will Not Succeed at Present Rate.

One-Third of Amount Is Yet to be Raised.

Strange as it may seem there are still many people in Duluth who have not realized that the pledge to the subscription of the building fund of the Young Women's Christian association, may be paid in four installments, the last one due Feb. 1, 1908. All that the association members desires by May 1 of this year is the promise to pay, signed and delivered to one of the committees.

If the sume of $130,000 is to be raised by Wednesday of next week there will be need of many big subscriptions and there will also be need of the contributions of those who are able to give a much less amount. The board of directors and the general secretary of the association are especially desirous that no one refrain from contributing the sum which they can afford from a feeling that it is not large enough to make it worth while. The association work is especially planned for the young women of the city and their interest and help is greatly desired. If the sum set it to be realized however some large contributions will need to be subscribed during the last three days.

At 3 o'clock this afternoon the bulletin read as follows:

Red—Charlotte Robinson	$2,040.93
Blue—Carrie Russell	1,878.65
Yellow—Alice Drew	2,136.25
Pink—Elsie Look	1,369.16
Lavender—L. L. Garvin	1,517.00
Green—Augusta Ehling	937.95
Women's committees	9,799.40
Men's committees	65,263.00
Total	$84,882.36

Cut Glass

Of scintillating beauty, moderately priced at Gruesen's, 129 West Superior street.

GEN. BUBB RETIRES.

Washington, April 26.—Having reached the age of 64 years, Brig. Gen. John W. Bubb, recently in command of the department of the Dakotas at St. Paul, Minn., was placed on the retired list of the army today. He has been relieved of his command by Maj. Gen. William S. McCaskey, formerly in command of the department of Texas.

MINING SUIT IS SETTLED

Burrage Said to Have Substantially Paid Tri-Mountain Debt.

Boston, April 26.—The $3,000,000 suit in equity brought by Paine, Webber & Co. against Albert C. Burrage, Thomas W. Lawson and others to recover on a contract involving 70,000 shares of stock in the Copper Range Consolidated Mining company, was brought to a settlement out of court some time between court adjournment yesterday and the resumption of the case today.

George L. Mayberry of the counsel for the defense said: "The parties have adjusted their difficulties, and, pending the final agreements, the case stands continued. It will not be taken up again. This is all I can say at the present time."

Charles A. Snow, one of the attorneys for the plaintiff said: "The settlement of the case is very satisfactory to the plaintiffs. While no money has actually passed, the agreements have all been completed. At Mr. Burrage's request, counsel on both sides have agreed not to give out the terms of settlement."

Regarding the settlement of the suit, William A. Paine made the following statement: "The case was settled by A. C. Burrage paying substantially the Trimountain debt."

The amount of this debt was $540,000.

H. L. PHILLIPS NAMED

As Special Examiner to the State Insurance Department.

St. Paul, April 26.—(Special to The Herald.)—Insurance Commissioner T. D. O'Brien has announced the appointment of H. L. Phillips as special examiner for the department. The appointment is made under a law passed by the recent legislature and carries an annual salary of $2,000 a year.

Mr. Phillips at present is chief clerk under Mr. O'Brien and has been receiving a salary of $1,500 a year. He will be succeeded by J. D. O'Brien.

FOUR MEN ARE KILLED IN EXPLOSION IN MINE.

Seattle, Wash., April 26.—In an explosion today in the Morgan Slope mine at Black Diamond, four men were killed and five were fatally hurt. Fourteen others were seriously injured.

The only one of the dead thus far identified is Mike Bentley, recently from Colorado. Two cars were descending the mine when the explosion occurred on the sixth level, 1,500 feet below the surface. It is supposed that a cave-in occurred last night, causing an accumulation of gas.

The Morgan Slope mine is at Black Diamond, Wash., on the Columbia and Puget Sound railroad.

THREE MEN SAVED.

Were Adrift on a Scow Separated From Tug Pankrantz.

Sandusky, Ohio, April 26.—The Marblehead life-saving crew early today rescued three men adrift on a scow, which became separated from the tug Pankrantz yesterday afternoon during a heavy storm. The men spent a wild night on Lake Erie and suffered intensely from the cold. The scow finally drifted ashore and subsequently the three men were picked up by the life-saving crew.

Local Brevities.

"Fitwell" $15 suits and hand tailored throughout and guaranteed to retain their shape. 112 West Superior street.

JOHN D.

Who owns the pipes down in the ground,
That carry oil the country 'round
From Boston, Mass., to Puget Sound?
John D.

Who owns New Jersey, New York Bay,
And No. Twenty-six Broadway?
Who owns the air we breathe each day?
John D.

Who owns the great old Empire state
The P. R. R., the Nickle Plate,
The Santa Fe, the Golden Gate?
John D.

Who owns the Western Union, who
Owns all the ships that sail the blue,
Who owns, b'gosh, e'en me and you?
John D.

Who teaches how in Cleveland, Ohio,
Each Sabbath morn to save your dough
(It all goes back to him, you know)
John D.

Who put the coal down in the ground—
And then got men to dig around
Till Hazleton, Pa., was found?
John D.

Who's going to excommunicate
Missouri as a souvenir state
Because her folk don't hesitate?
John D.

Who owns the senators that we
Send down to Washington, D. C.,
To make the laws for us (oh! gee)?
John D.

Who owns the great untrammeled press
That on the truth lays mighty stress,
And never prints a lie (I guess)?
John D.

In fact, who is it, lank and tall,
Who has us at his beck and call,
That owns the earth, and owns it all?
John D.

—M. A. MATTHEWS in Stereotypers Journal.

IMMIGRATION INCREASES.

Orange Judd Farmer: The immigration records of the United States show that during the last year 1,166,000 aliens entered this country, an increase over the preceding year of nearly 106,690. The immigration from Austria-Hungary amounted to 265,000; from Italy, 273,000; from Russian empire, 215,000; from Japan, 13,800; from the West Indies, 13,600; from China, 1,500. It appears that the countries from which we formerly obtained the greater part of the foreign population, and whose people are nearly akin to our own, send us a smaller number of immigrants than heretofore. The decrease from 1905 of Ireland was 17,000; England, 15,000; Sweden, 3,000; Germany, 3,000; Denmark, 1,000; Scotland, 1,100. Our commissioner of immigration, Mr. Sargent, urges that drastic measures should be taken to check the sending of undesirable people from Southern and Eastern Europe. Agents of steamship companies scour the countries and urge to immigrate, large numbers of the lower laboring classes, who are physically, mentally and morally below the desired standard. Many of these steamship companies are in collusion with European government officials, who are perfectly willing to get rid of their paupers and criminals. The penalties imposed on transportation companies, for bringing aliens afflicted with dangerous diseases, should also be increased.

PRINTING LET TO LOCAL MEN

City Shops Yield to Demands and Cut Bids.

City Clerk H. W. Cheadle this morning placed the last of the disputed portions of the city printing with local printing establishments at the reduced rate demanded by the council. The result of Wednesday night's meeting evidently was a decision to yield to the demands of the city as to the 20 per cent reduction demanded rather than have the work go outside the city.

The amount of work, for which the council decided that the bids were too high, amounted to about $1,000.

Comes in Handy.

A genuine English cravenette raincoat or a nice top coat comes in hands these balmy spring days. The "Fitwell" has a beautiful assortment of either to chose from. The $15 kind are the popular sellers. 112 West Superior street.

TEACHER DROPS DEAD.

Florence Kelley, Gowan School Teacher' Victim of Heart Disease.

Gowan, Minn., April 26.—(Special to The Herald.)—Miss Florence Kelley, who has been teaching school here for the past year, dropped dead from heart disease shortly after eating a hearty breakfast yesterday morning. The remains were shipped to her home in Waverly, Minn., via Duluth.

Miss Kelley has two sisters teaching in school districts just outside of Duluth.

TAX COMMISSION TO MEET MONDAY.

St. Paul, April 26.—(Special to The Herald.) — Governor Johnson has called a meeting of the new tax commission for Monday afternoon, at which time the terms of the three members will be determined and the organization effected. At this time, too, the name of the secretary will be announced.

The commission will be provided with rooms in the new capitol. An office equipment will also be arranged for.

RARE ENGLISH ROMANCES.

The festivities at Burghley House, Northamptonshire, this week recall a romantic story of long ag oin which the beautiful mansion and the Earl of Exeter of that far off day played a part.

It concerns, says the London Daily Mail, the second marriage of Henry Cecil, who ultimately became Earl of Exeter.

Very unhappy in his first marriage, he disguised himself and determined that his next wife should wed him not for his title or estate but from disinterested love.

In a country cottage to which he retired was a beautiful girl, the landlord's daughter. Very naturally the young couple fell in love and were married.

It was just after his marriage to the rustic beauty that he succeeded to the title. His presence was necessary at his own residence and he and his girl wife started off.

The young countess, quite ignorant of her newly acquired rank, thought it was a mere pleasure trip and was overwhelmed with astonishment at the greeting accorded to her husband and herself at several houses at which they stopped.

At last they reached Burghley in Northamptonshire, and the girl was overwhelmed with wonder at the beauty of the place and at the greetings which again awaited her at the very gates.

"Would you like to live here?" asked her husband carelessly.

"Indeed I should; it is the loveliest place I have ever seen," his wife replied.

When told of her good fortune it was some time before the bewildered girl could believe it, so like a fairy tale it seemed to be.

Another romance of a great family concerns the marriage story of the two Misses Gordon, who married brothers and became successively countess of Kellie.

Their father lived at Ardoch Castle, situated on a high rock overlooking the sea. One evening he heard a gun fired, evidently a distress signal from a ship in danger. Procuring assistance, Mr. Gordon hurried to the beach, but unfortunately the vessel had gone down. The sole survivor was an infant girl, washed ashore in a kind of crib. Mr. Gordon brought the child up with his own daughters and years afterward, when she had grown up, another wreck took place on the same spot.

Among the saved was a gentleman who proved to be the uncle of the child rescued in former years, who was as a matter of fact a great heiress.

One of the Gordon girls accompanied the young heiress and her uncle to Gotheburg, met Thomas Erskine, and eventually married him, while a younger sister married Methven Erskine, his brother.

No fewer than seventeen lives intervened between the elder of these and the peerage, yet both the Misses Gordon lived to become in succession Countesses of Kellie.

SHEIK CAN BEND HALF DOLLARS

New York Times: Abou Hammed, a Sheik of one of the Arab tribes centering about Lebanon, called on Commissioner Shields in the Federal building Saturday, presenting a letter from the Ameer Sedaih Ramskoih, his uncle, whom the commissioner had met and favored while the latter was en route to the world's fair in St. Louis in 1903.

The Ameer wears a black mustache, turned up like Emperor William's, and stands nearly six feet in height. He speaks English with a pronounced French accent.

"Conditions in the Orient," he said, "are more or less unsettled at all times, but those of us interested in the Arabic people hope that before long political conditions will have so changed that the desert Arab will interest himself in agriculture, which, owing to the very fertile nature of the soil, offers him many inducements. I make a study of both educational and commercial conditions in the countries I visit. It is my ambition to be regarded as a progressive leader of my people. I hope to be remembered as one who lead them to better and more civilizd conditions, and, by travel about the world in this way, I get ideas of value to me."

The Ameer is a man of great strength. He bent a number of silver half dollars nearly double with his fingers, and gave them to Commissioner Shields.

Day after day The Herald want columns show a procession of opportunities—opportunities to buy, to sell, to lease, to hire, to find people to work for you, to find people to work for, to find boarders, lodgers, tenants, or partners. These want ad. opportunities touch almost all phases of life and living in this city.

NOTICE IS HEREBY GIVEN, That an application having been made by Eby G. Gridley under the provisions of Chapter 42 of the General Statutes of 1878, and Acts amendatory thereof, for a deed of so much of lots nineteen (19), twenty-six (26) and twenty-eight (28), on West McAdams Street, in that part of "Duluth formerly called Portland" as lies within the limits of lots one (1), two (2), three (3) and four (4), in block one hundred thirty-eight (138), Portland Division of Duluth, in St. Louis County, Minnesota, according to the recorded plat thereof;

SAID APPLICATION will be heard before this Court at the Court House in the City of Duluth, in said County, on the eighteenth day of May, 1907, at 9:30 o'clock A. M. of that day, at which time and place all persons claiming such portions of said lots, or any right, title or interest therein, are hereby summoned and required to attend to establish their right to receive a deed to the portions of said lots above described or to make any objection they may have to the granting of said application; and

IT IS ORDERED, that notice of such application and hearing be given to all persons in interest by publication hereof in the Duluth Evening Herald once in each week for three successive weeks before said day of hearing.

Dated at Duluth, Minn., April 25th, 1907.

J. D. ENSIGN,
Judge of the District Court,
Eleventh Judicial District.

Duluth Evening Herald—April 26, May 3-10, 1907.

TO WHOM IT MAY CONCERN:

Notice is hereby given that an application has been made to me by Augusta Lettau, under the provisions of Chapter 303 of the General Laws of Minnesota for 1895, for a deed of so much of Lots 2, 4 and 8, East Newton Street, in that part of Duluth formerly called Portland, that lies within the limits of Lots 4, 5 and 6, in block 22, Portland Division of Duluth.

Said application will be heard before me at the Court House, in the City of Duluth, Minnesota, on Saturday, the 18th day of May, 1907, at 9:30 o'clock a. m., and it is

Ordered, that notice of such application and hearing be given to all persons in interest by the publication of this notice in The Duluth Evening Herald of Duluth, Minnesota, once in each week for three successive weeks before the said day of hearing.

Dated April 25th, 1907.

HOMER B. DIBELL,
One of the Judges of the Eleventh Judicial District.
C. W. STILSON,
Attorney for Petitioner.
Duluth Evening Herald, April-26-May-3-10 1907.

FOREIGNERS NUMEROUS

Every Incoming Train Brings Immigrants From the East.

Most of Them Proceed to Ranges or the West.

The tide of immigration is at its high point. Every train into Duluth brings its crowd of new residents and prospective citizens of the United States, who have landed at Boston, New York or some other eastern point, and who have come West to join certain of their countrymen, who recommend to them the great industrial district of Northern Minnesota as the scene of their future labors.

Duluth draws its full share of the immigrants, but it doesn't hold them for long, at least not now. It may when other industries come in to furnish them with work. For the present, they make the iron range their destination, for there they can usually secure work in the mines. Few of the immigrants stop east of Duluth. Some of them go to the copper and iron mining districts of Michigan, but the mines there are pretty well supplied with laborers and the later arrivals are looking westward, to Minnesota, the Dakotas, Butte and the coast. By far the larger number go straight through to the West, and a goodly number stop off at Duluth as an experiment, with the intention of going farther west, if the conditions here do not suit them.

The greater number of the immigrants coming in now are Austrians and Finns, with a sprinkling of other nationalities. They usually come over here to make their home, with the intention of becoming citizens as soon as they are entitled to papers. They are willing to take any kind of work at first and, as a rule, they make good laborers.

Some of those arriving now are people, who have been in the United States before and are returning from a visit to their future home. Just before Christmas each year, there are large numbers of foreigners leaving for their native land to spend the holidays and in the spring they return to take up their residence again in their adopted country. They usually bring one or two of their relatives or friends with them and parties traveling together frequently number anywhere from ten to thirty.

Hives, eczema, itch or salt rheum sets you crazy. Can't bear the touch of your clothing. Doan's Ointment cures the most obstinate cases. Why suffer. All druggists sell it.

BLOSSOM BEDS AT EXCHANGES

Proved Success for the Nerves of Telephone Operators.

Chicago, April 26.—Flower gardens seem to have proved to be successful for the nerves of the operators of the Chicago Telephone company. They have been tried as an experiment, and other companies are now to follow the unique example of the Chicago company. St. Louis has already made a start. As one observer has put it: "Those who champion the uplift of society through the esthetic senses may wreathe themselves with blossoms to celebrate their vindication. The blossoms they can find at the telephone exchanges."

Such exchanges as had a plot of ground were given blossom beds. The operators were offered individual patches of ground, the rivalry helped to make the experiment a success. One planted mignonette and vied with another who chose verbena seeds; a third kept a clump of sweet peas as weedless as her neighbors, who had geraniums. The company furnished the seeds, the ground all spaded and ready, and the girls chose their plot and their seeds.

A real garden was new to many of the girls. At first they made many mistakes, pulling up many plants and carefully leaving sturdy weeds instead. They got down on their knees and dug in the dirt until they grew quite proficient gardeners, enjoying it all meanwhile more than had been expected.

Some of the operators, of a thrifty bent, grew lettuce, radishes and strawberries. Their crops more than once were picked by their owners to be served with the noon luncheon which the company furnishes free to its operators at all the exchanges. Roof gardens are said to be a possibility of the future at the exchanges where no ground is available. In the down town district of Chicago, it is obviously impossible to use any ground for growing flowers, although at the down town as well as the outlaying exchanges, window boxes of flowers are numerous and solicitously watched by young women employes. They have had help for all the heavy work, but the inherent love of women for flowers was given an opportunity to grow and to blossom.

The improved equipment and the various comforts the company has furnished to make the operators more alert and cheerful, has resulted in reducing the average time of handling calls to four seconds. It began by furnishing "rest rooms" at exchanges, comfortable rooms full of easy chairs and couches for the "rest periods" of operators. Later, book shelves were furnished and books from the Chicago public library. It was found that the young women were in better condition to work because of these provisions for their hours of leisure. Then came the lunches, pictures for the "rest room" walls and last the flower gardens.

The expenditure of money in this direction is a curious and very interesting recognition of the tangible value to the public of a telephone operator's contentment. As the operators deal directly with the public, the company must seek to bring us to as high a state of perfection as possible the human factor in the manipulation of highly developed mechanism.

MUSIC AND THE DRAMA

TONIGHT'S ATTRACTIONS.

LYCEUM—"Mrs. Warren's Profession," with Rose Coghlan starred.
METROPOLITAN—Burselque.
BIJOU—Vaudeville.

THE EYE WITNESS.

Melodrama Produced at the Lyceum is Typical Carter Show.

CAST OF CHARACTERS.

George Lamont ..Harry Preston Coffin
John Lamont ..... Percy Herbert
Silas Lamont ..... Chas. L. Mack
Ephraim Lamont Charles F. Lorraine
Biff Bass ..... Gordon Eldrid
Dolan McKinney .. Walter Fredericks
Bill ..... George F. Bird
Crooky ..... G. E. Periolat
Dave ..... Oby. Campbell
McFarley ..... Fred Napper
Ellen Wallace .... Miss Mina Manley
Lulu ..... Miss Viola May
Mrs. Hatchett .... Miss Emma Eldrid
Bridget ..... Miss S. George Hussey

"The Eye Witness," produced at the Lyceum last evening before an audience that seemed well pleased with the performance, is a melodrama of the sort that is filled with thrilling situations, hair breadth escapes, exciting rescues, etc. Of course, all melodramas have that sort of thing, but "The Eye Witness," is even more generously endowed than the majority of them.

The work of the several people in the cast was carried through satisfactorily, and the stage settings were satisfying. During the action of the play specialties were introduced by Miss St. George Husssey, Miss May, Gordon Eldrid and Charles F. Lorraine. All were generously applauded.

"MRS. WARREN'S PROFESSION."

Thus far Duluth knows nothing of "Mrs. Warren's Profession," except what has come out of New York, which is the most unreliable source of any news concerning respectability in this country. The original Shaw play as produced in New York, was forced to close, owing to police intereference. The piece was duly tried in the United States supreme court, and was found to be quite within the requirements of the law.

Judge Pollock, in rendering his decision between the city and the managers of "Mrs. Warren's Profession," said: "The court is called upon to decide whether the language of the prompt book as spoken on the stage, was a public nuisance, per se, because offensive to public decency. There is nothing in the words themselves, nor in any particular phrase or expression which can be said to be indecent. Shaw's suggestion that the clergyman in the play is the father of Mrs. Warren's daughter, with the situation which makes the clergyman's acknowledged son a suitor for the daughter's hand, is another of the dramatist's shock producers. But there is nothing in this untrue or offensive to public decency. If virture does not receive its usual reward in this play, vice at least is presented in an odious light, and its votaries are punished. The attack on social conditions is one which might result in effecting some needed reforms therein."

ROSE COGHLAN,
In "Mrs Warren's Profession" at the Lyceum Tonight.

WRESTLING TONIGHT.

The Imeprial Burlesquers will give three more performances at the Metropolitan, one this evening and two tomorrow. There will be a bargain matinee tomorrow afternoon. The matinee on Tuesday and the ladies' matinee on Thursday were very well attended. The regular performance this evening will be augmented by an interesting wrestling match.

FULGORA'S ACT GOOD.

Fulgora, the impersonator, and historical character protrayer, has one of the star acts at the Bijou this week. His wonderful transformations are mystifying, to say the least, and his characters are true to life. His rendition of Lee's farewell speech to his army and Robert Emmet's address to the court on being sentenced to death, are exceptionally fine bits of character portrayal. The crowds at the Bijou this week are large at every performance and the show is prounced one of the best the playhouse has offered this year.

Women say there is nothing to equal KIRK'S JAP ROSE transparent soap for WASHING THE HAIR. All druggists and grocers sell it.

To Whom It May Concern.

Contractors and others, take notice: That Dock and Ship Carpenters' scale of wages will be thirty-five cents per hour, and double time for Sunday, and time and one-half for overtime, on and after May 1st, 1907. John E. Nolan, recording secretary.

A. B. SIEWERT & CO.

See Saturday's Showing of the Newest Millinery!

Come and see the hats which are making our millinery department the most talked-about in Duluth!

You have noticed that we have not said much about our hats lately—we couldn't—our milliners wouldn't let us—for with all the turmoil of alteration in progress for two weeks past, we have had all we could do to keep up with orders.

But now—with the workmen out of the way on the second floor—we have caught up and will have the hat you want ready tomorrow! Just come and make your selections—the styles are the handsomest we have ever shown!

Warner's Rust Proof Corset No. 209, Price $1.50

Note the narrowing of the lines as they curve to the tip end of the clasp, also the split hip gore, which is divided to admit a narrow gore that, as it touches the waist, gives a spring to the corset and sharply accentuates the rounded waist.

A pleasing model—satisfactory in shape, with lasting wearing qualities and proof against rust from backbone to clasp. "Security" Broad Web Hose Supporters attached at the front.

Made of fine Coutille or Batiste, flatly trimmed with Nottingham lace. Nickel clasps.
The No. 209 Batiste Corset sells for $1.50 per pair.

65c Dot Embroidered Linen Waisting 50c
The highest class novelty of the season—a white linen warp waisting, with a mercerized cotton filling—it's made in Ireland—and embroidered with raised polka dots of red, blue, green or lavender—it's very swell—and so exclusive! Regular 65c—tomorrow 50c yard. 50c

New Checked Lansdownes
The new styles are especially pretty—we show shepherd checks, in blue, brown and black—a blue and green combination—a white ground, with a black bar, a Jasper and a block check—neat pretty styles that will be freely taken for shirt waist dresses, waists and misses' wear—you are acquainted with their goodness.

Many of our customers have been waiting for some of these styles to arrive—they are all in now—be early if you want them.

Superb Imported Voiles
You'll find the colored voiles that you want here—every piece is just the right shade—they are all imported cloths, too—so that you are sure that your gown will always keep its shape and retain that crisp touch which has given voiles the name of being one of the most practical of dress fabrics.

In the blacks we show 8 different qualities—they're the kinds that will make up most effectively—prices from $1.00 to $2.00 a yard.

$1 University Bags Here for 65c
Those smart little Soft Leather Bags—the pouch style—known as the Varsity Bag — top trimmed with leather fringe—in black and the wanted colors—here only—each... 65c
These bags usually sell for a dollar!

LATE DOINGS IN UPPER MICHIGAN

Prospects for Oil at Pickford Are Regarded as Bright.

Sault Ste. Marie.—The eastern end of the upper peninsula will learn whether the fluid that has made John D. Rockefeller the richest man in the world lies under this part of the country, for it is planned to sink several wells in different localities in quest of oil. Two companies are already in the field and several other organizations are talked of. It is estimated that about 100,000 acres have been leased for the work.

Work at the Pickford well, which was sunk at a depth of about 1,300 feet last fall, will be resumed in a few days, a gang of drillers now being on the ground to get the machinery in order. This well will go down 3,500 feet unless oil is found nearer the surface. Col. H. D. Van Campen of Akron, Ohio, who was one of the prime movers in the enterprise, is confident of the outcome.

Water and oil have been running from the well steadily and it is said the oil has been so thick at times that it was possible to set it on fire. Several oil men from Ohio and Pennsylvania have been here this spring and all profess to see "millions in it." As a result, the wise men of Pickford are sitting around the village grocery store stoves and discussing the price of corner lots and the possibilities of securing a railroad, refinery and electric lights.

The Pickford company has a rival, the Upper Peninsula Gas & Oil company which is made up mostly of upper peninsula capitalists. The company has secured a large acreage on Drummond island and other localities in the southern part of Chippewa county and drilling operations will commence in a few weeks.

All the land in question is in direct line with the Manitoulin oil fields, and the rock formation is the same. The state geological map, recently issued, says this territory is an oil bearing formation and the experiments at Pickford are being watched. The government receives samples of the earth and rock taken at various depths, and the results will be used in future consideration of the formation.

Bessemer.—John Nordquist, a saloonkeeper at Ramsey, while being taken to a satitorium for treatment, jumped from the train and escaped. After two days' search he was found dead under an old log, where he had evidently crawled for shelter.

Houghton—A brazen attempt at shoplifting was made in the department store of Gartner & Sons, when an entire family, consisting of husband, wife and three children, were detected in the act of purloining silk skirts, rubbers, lace, etc. The husband "lifted" a pair of shoes which he took to a clerk and asked to have the price refunded, as they did not suit. In the meantime he slipped a pair of rubbers under his coat. His wife signalled to him to "lift" a silk skirt, but he was detected in the act. Not until a policeman arrived, however, would the "shoplifters" admit their guilt.

Marquette—Disgruntled, it was said at the time, at the lack of attention paid them, the members of the Western Hay Fever association voted, a few years ago, to remvoe their headquarters from Marquette. Casting about for a suitable location, they hit upon St. Ignace as the ideal spot. There were no tears shed in Marquette at their departure, for as a rule they benefited the town but little in comparison with the actual summer resorters.

St. Ignace congratulated itself on its drawing of the big prize, and among other things in carrying out its pledges erected a pavilion at a cost of several thousand dollars, for use as the permanent headquarters of the association.

Now news comes from the city at the straits that J. M. Campbell, custodian of the pavilion, waited on the common council and asked as to what use, if any, the building could be devoted, now that it is altogether probable the hay fever association is defunct. It is understood a Cadillac man wants to open a roller skating rink in it. Thus it appears that St. Ignace has a white elephant on its hands, and that the grand prize has proved to be a gold brick.

LANDS WILL BE OPENED

Schedule of Indian Lands for Entry July 1.

Duluth District Has 2,666.87 Acres Assigned to It.

The officials of the United States land office here have received the schedule of lands in the Chippewa of the Mississippi, Red Lake, White Earth and Fond du Lac Indian reservations, to be opened for entry under the homestead act at the Cass Lake, Crookston and Duluth land offices, July 1. The bulk of the land is assigned to the Crookston district for entry, it having 219,943.25 out of a total of 229,297.41 acres. The Cass Lake district has 6,637.29 acres, and the Duluth district, 2,666.87 acres.

The schedule contains 229,297.41 acres of land in the former Chippewa of the Mississippi, Red Lake, White Earth and Fond du Lac Indian reservations, being Chippewa lands ceded under the act of Jan. 14, 1889, and classified as "agricultural," in accordance with said act, as amended by the act of June 27, 1902. The lands are to be disposed of to actual settlers only, under the provisions of the homestead law, as provided in section 6 of the act of Jan. 14, 1889, and under the laws applicable to townsites, as provided by act of Feb. 9, 1903. The hour of 9 a. m., July 1, 1907, has been fixed upon as the time on and after which these lands will be opened to settlement and entry.

Applications for these lands must possess the necessary qualifications required in the case of ordinary homestead entries. Each settler is required by the act of Jan. 14, 1889, to pay for the lands settled upon the sum of $1.25 for each acre, such payment to be made in five equal installments. The five annual payments to be made at the end of the first, second, third, fourth and fifth years, respectively, from the date of the homestead entry. The regular fees must also be paid and, in addition, entrymen will be required to pay a pro rata charge for the examination and investigation of the swampy and overflowed character of the land, as provided in the act of June 21, 1906, and for the draining and reclamation of such lands. The amount of these charges cannot now be determined. The lands to be opened for entry include the following:

CASS LAKE DISTRICT.

	Acres.
Chippewa of the Mississippi reservation	4,722.92
Deer Creek reservation	684.37
Red Lake reservation	1,280.00
Total	6,637.29

CROOKSTON DISTRICT.

Red Lake reservation	219,303.25
White Earth reservation	640.00
Total	219,943.25

DULUTH DISTRICT.

Fond du Lac reservation	2,666.87
Grand total	229,297.41

The Weather

Is just right now for spring clothing. "Fitwell" suits at $15 are just what you want. See their window display at 112 West Superior street.

SANFORD MISSING.

Left Holy Ghost Society and Has Not Been Heard From.

Portland, Me., April 26.—The Barkentine Kingdom, which sailed from Rockland, Me., Aug. 23, 1906, with seventy members of the Holy Ghost and United States society at Shiloh on board, for the Holy Land, arrived here today on her return from the Medeterranean sea. Those on board reported that Rev. Frank W. Sanford, the leader of the society, who sailed with the party, left them in Januaryk and they had not since heard from him. The Shilohs remained on board their vessel all the time.

TWO MEN CRUSHED TO DEATH.

Mattoon, Ill., April 26.—Charles Ansberry of Bement, Ill., and J. T. Hebala of Hannibal, Mo., were killed today at Strassburg, Ill. While they were moving the Wabash railway station the jacks gave away, allowing the building to fall, crushing them.

Fancy vests at the "Fitwell" $2 to $5$5.

Shoes and Oxfords

for every member of the family. A selection that will please you. Every good style and leather.

Ladies' Oxfords

A special large line in dull and bright tans, browns and white canvas—

We can save you money on shipping your goods to Western points. Call or write. Duluth Van & Storage company.

Begin Work May 15.

According to present plans the park board will commence work on the boulevard extension from Horseshoe Bend near Chester Creek to Twenty-fourth avenue east, about May 15. This extension, which is to cost between $1,200 and $1,500, was planned by the board and decided upon at their annual meeting last month with a view to establishing a boulevard approach with a lighter grade than that afforded by the present approach.

Forced to Clean Up.

Harry Poken of 414 East Eighth street was arrested yesterday morning on a warrant sworn out by the health authorities charging him with failing to comply with their order to remove quantities of filth which had collected about his residence until they were a menace to the health of the neighborhood. Poken said that things were frozen up too hard to clean up as yet, but the judge imposed a $15 fine which he said would be suspended if by next Wednesday the place was in condition satisfactory to the health department.

Buyer Goes East.

L. Traubmann of the Silberstein & Bondy Co. has gone to the East on a buying trip.

Temple Emanuel Services.

Temple Emanuel, Seventh avenue east and Second street, will hold Sabbath services tonight at 8 o'clock. This being Arbor day, the subject of the sermon will be, "The Life of the Tree and the Tree of Life." The services are open to members of all denominations, Jewish or otherwise.

Trial of Tax Cases Set.

The personal property and real estate tax cases which have been noted on the calendar of the May term of the district court have been moved for trial beginning with the court calendar. There are ten cases involving the collection of delinquent realty taxes and 33 personal property tax cases. These will be prosecuted by Assistant County Attorney W. J. Stevenson.

New Patented Evener.

A company has been organized to manufacture the invention of two Duluth men, Allan L. and Duncan McGregor. The invention is called the McGregor patent draft regulating and equalizing evener, and is considered by experts the most humane device yet invented for horses. It will be manufactured in Duluth.

Trades Assembly Meeting.

The Duluth Trades assembly will hold a regular meeting this evening at Labor World hall. The election of delegates to the annual meeting of the state federation in June will take place and the trouble among the barbers will be settled. This will be the last meeting in Labor World hall.

Juvenile Bostonians.

Something far removed for the ordinary line of theatrical attractions is promised in the engagement of the Juvenile Bostonians at the Lyceum next week. The company is a notable organization among the world's many and varied amusement attractions, as it is composed entirely of bright and gifted juveniles varying from 5 to 14 years of age. They are now making their third tour of the United States. The clever youngsters present their performances with all the snap and go of veteran professionals.

Assistant to Shaw.

George Wenzel, gunner's mate, U. S. N., has arrived in Duluth and reported as assistant to Chief Yeoman John A. Shaw, recruiting officer for the United States navy in Duluth. Mr. Wenzel was on recruiting duty at Kansas City, Mo., and was transferred from that station to Duluth.

Two Recruits for Navy.

Lieut. J. B. Gay and Dr. J. M. Moore, U. S. N., of Minneapolis, were in Duluth yesterday and passed two recruits for the United States naval service. They are Fred H. Belcher of Duluth, and Hiram W. Cudney of Mass City, Mich. The recruits left today for Norfolk, Va., to enter the naval training station at the Norfolk navy yards.

Patent Infringement Case.

Before Judge Morris in the United States circuit court today, the hearing in the case of the Clyde Iron Works vs. National Iron company, W. M. Evered and H. R. Armstrong was begun. The plaintiff claims damages for an alleged infringement of a patent on a log rolling machine by the defendants, and an injunction to prevent further infringement. J. B. Fay of Cleveland, and James H. Bryson of St. Louis, Mo., are appearing for the plaintiff, and James T. Watson represents the defendants.

"Fitwell" $15 suits are hand tailored throughout.

PERSONALS

Mr. and Mrs. A. Fitzjohn will leave for Portland, Or., tomorrow morning.

H. A. Kennedy, assistant general manager of the Great Northern, and H. A. Kimball, assistant general freight agent of the same road, are in the city today.

Thomas Owens of Two Harbors, is a guest at the Spalding.

Mrs. A. B. Coates of Virginia, Minn., is registered at the Spalding.

E. C. Kleffman of Hibbing, Minn., is a guest at the St. Louis.

Vivian Prince of Eveleth, is registered at the St. Louis.

DECISIONS BY SUPREME COURT

New Trial Granted in Appeal of Exploration Company.

St. Paul, April 26.—(Special to The Herald.)—The state supreme court filed opinions today as follows:

Buffalo Land & Exploration company, respondent, vs. Hugh P. Strong et al, defendants; William H. Adams et al, appellants, St. Louis county; order affirmed; new trial granted.

John Cassserly, Sr., respondent, vs. James J. Morrow et al, appellants. Redwood county; affirmed. An action to set aside a mortgage foreclosure.

E. Paterson vs. the Town of Edwardsville, appellant, from Red Lake county, involving care of a pauper. Order affirmed.

George Langguth vs. William Buermeister, appellant, action for damages because plaintiff left service of defendant on account of an assault committed. Scott county; affirmed.

The First National Bank of Wellington, Ohio, respondent, vs. Hakon Parson et al, appellants. Clay county; affirmed.

Tableware

The finest selection in the city at Gruesen's, 129 West Superior street.

ROOT TO VISIT BROTHER.

Washington, April 26.—Secretary Root left Washington today for Clinton, N. Y., where his brother, Prof. Root, is very ill.

THE MARKET IS WEAKER

At the Close of a Rather Quiet Session.

Considerable Trading in Some of Cheaper Unlisted Shares.

The copper stocks were quiet and closed weaker in the market today. As yesterday, there was considerable trading in some of the cheaper unlisted stocks, which have been dormant since the general depression of securities began.

North Butte opened at $86.50, advanced to $87 and closed at $86 bid and $86.50 asked. Amalgamated opened at $94.37½, went as high as $94.75, declined to $93 and closed at $93.12½ bid.

Anaconda opened at $62.87½, advanced to $63.12½, went off to $62.75 and closed at $62.75 bid. Butte Coalition opened at $26, advanced to $27.25 and closed at $26.87½ bid and $27 asked. Calumet & Arizona opened at $166, advanced to $170, declined to $168.50 and closed at $167 bid and $169 asked.

Greene-Cananea sold at $16.37½, went up to $16.62½ and closed at $16.50 bid and $16.75 asked.

Superior & Pittsburg sold at $18.12½, advanced to $18.50 and closed at $18.25 bid and $18.50 asked. Denn-Arizona sold at $10 and closed at $9.62½ bid and $9.87½ asked. Globe Consolidated sold at $13.75 and $13.50 and closed at $13.50 bid and $13.75 asked. Warren sold at $8 and closed at $7.75 bid and $8 asked.

Keweenaw sold at $10.25 and closed at $10 bid and $10.25 asked, Copper Queen of Idaho at $1.50 and $1.62½ and closed at $1.37½ bid and $1.50 asked. Butte & Superior sold at $3.25, advanced to $3.50, went off to $3.25 and closed at $3.25 bid and $3.75 asked. Calumet & Montana sold at $1 and closed at $1 bid and Cliff at $4 and closed at $3.75 bid and $4 asked.

ODD THINGS IN AMERICA.

Town Where Hot Water is on Tap—Toligates and Railroads.

Boise, Idaho, is the only place in the world where the streets are sprinkled with hot water. The city and county buildings are heated during cold weather without the use of a fire and subscribers to the city water works system get hot water all the time without the expense of stoves. This has been accomplished by harnessing an inexhaustible hot spring and the novel plan works perfectly.

Jackson county, Ky., is famed for family feuds, but it has other claims for mention. It has a population of 10,000, yet there is not a single negro voter, nor a citizen of foreign birth. It has no ex-Confederates within its borders, no saloons, no registered distilleries and no workhouses. Further than this, no citizen within its domains ever locks his house.

They do things on a wholesale scale out in California. The traveller down the coast from San Francisco to Los Angeles rides through thirty-five miles of growing beans. A tract of 3,000 acres is owned by one man. A "bean ranch" may sound rather odd, but that is what it amounts to. The annual bean crop of California amounts to 600 carloads.

The announcement that several railroads are extending their branches across South Dakota calls attention to the fact that it is the only state in the Union that has never had a state wide railroad. The Indians first objected to having them cross their reservations, and then when their consent was finally gained the promoters were dilatory about putting the lines through. The new roads will tap a fertile farm region that will greatly add to the wealth of the Northwest.

The most productive sulphur mine in the world is in Calcasieu parish, in the southwestern part of Louisiana, a few miles from the Sabine river. The sulphur is 99.8 per cent pure. The daily output is from 750 to 800 tons throughout the year. The cost of production is only $2.50 a ton, while the selling price is $28.50 per ton.

A few wagon roads in the United States still maintain tollgates. One of these is in the Shenandoah valley in Virginia. This pike runs for ninety-four miles through the heart of Western Virginia from Winchester to Staunton. It is operated by the Valley Turnpike company and has eighteen tollgates located at intervals of five miles. The toll for a wagon and ten is 10 cents at the full gates and 5 cents at the half gates. The Three Chop road is another old Virginia highway that is still operated under the tollgate system. This primitive highway was surveyed by Lafayette and got the name it now bears because the woodsmen were told to chop three times on trees in blazing the trail.

The railroad bridges at Pittsburg handle more traffic than those of any other city in this country. The structure over the Monongohelan in that city is the finest and largest on the continent. The entrance of the Wabash railroad into Pittsburg was so difficult that inside of sixty miles it had to build a string of twenty big bridges. The great $1,000,000 terminal at Pittsburg stands within the limits of old Fort Duquesne. It is also on the site of the old land office of Gov. Dunmore, who, in 1774, found much difficulty in disposing of hundred acre tracts in the locality at $50 each.

One of the sights which everywhere greets the traveler's eye in this country is thousands of sawmills, greedily chewing up our forest wealth. The number of these is so great that one can readily believe we are consuming 45,000,000,000 feet of lumber each year. This does not take into account the damage that is done to timber and undergrowth by forest fires. When this loss is added to that being cut for domestic use, for export, for telegraph and telephone poles, for cross ties and fuel, and for timbers to be used in mining operations, it is said that our national supply cannot last more than twenty years.

While the loss of life from railroad disasters in the United States is great, the statistics show that only one person out of every 2,000,000 who are carried is killed by accident. The Missouri, Kansas & Texas railway is said to hold the record for safety, it having never killed a passenger inside one of its coaches in thirty years. The United States already has nearly half of the railroad mileage in the world, and in six months of last year 2,298 miles of new track was laid. The fact that we used 84,000,000 railroad ties in twelve months shows where a large part of our timber supply is going. The first railroad in the United States of which there is indisputable record is that built by Thomas Delper at his stone quarry in Delaware county, Pa. This was in 1809, and it was possible that Silas Whitney's track on Beacon street in Boston was laid two years earlier than this.

The highest percentage of rented houses in the United States is found in Washington, D. C. Three-fourths of the private families in that city live in rented homes. Next to the District of Columbia the state with the largest percentage of rented homes is Rhode Island, and after that South Carolina. The Southern states all rank high as renters, because of the negroes. The smallest percentage of rented homes is found in North Dakota, South Dakota and Oklahoma.

For years past Americans have been "running over" to Europe to see mountains which, compared with the Rockies, are like a side show to a circus. In Colorado alone there are 155 mountain peaks that are more than 13,000 feet high, which is ten times more than there are in all of Europe. High peaks are so numerous in that state that there are seventy-two which have never been named.

Irrigation is doing wonders for the West. The farmer who irrigates doesn't have to wait or pray for rain—he simply turns on the moisture whenever he needs it. An authority, who is familar with the subject, estimates that there is enough unsettled land in what is known as the Pacific coast states, counting from Colorado west, to make homes for as many people as now live in the whole United States.

Although he is constantly disposing of large tracts of land, Uncle Sam still has much territory on his hands. Last year he disposed of nearly 20,000,000 acres at the rate of 39 cents an acre. Experts say that in the course of time he will begin to reclaim the swamps as well as desert sands, and when all these schemes for reclamation get under way no one can say how many more millions of people can be accommodated.

TOO LATE TO CLASSIFY

Harper Method Shampooing and care of the Scalp and Hair, at Miss Horrigan's.

THE SPALDING TOILET PARLORS. Manicuring, massage, shampooing. Room and 'phone 19.

REVOLVERS IN MUFFS.

Kansas City Star: It is the fashion for the modern business woman to carry a revolver. Not any toy affair, but a reckless six-shooter, and woe to the luckless man who attempts to molest her at night on the streets of Kansas City. The women are a little bit timid about talking of it, and the weapons are only exhibited among a small circle of friends, or to an admirer or two at the club.

Among those who carry revolvers are one or two well-known milliners, women who carry considerable sums of money at times, an employe or two of the city and a few professional women whose duties take them upon the streets at night, generally alone. The women who have adopted the latest fad usually carry their handbags in their left hands—notice them on the street—leaving the right hand free for the revolver, usually carried in a milady's muff, secure from prying eyes and ready for the least emergency.

Not a few school teachers carry these revolvers, particularly those whose schools are in the suburbs or whose homes lie along lonely places, where the holdup man is wont to lurk. One school teacher exhibited her gun to a bevy of women in the rooms of the board of education recently, and some one asked if she had a permit to carry the revolver.

"Why, no, of course not. Why should I have a permit?"

"Well, it might mean a fine of $300 if you were found out," was suggested.

"If the occasion ever arises where I am compelled to use it," said the schoolma'am, "and the police judge cares to impose a fine, I'll manage to scare the amount up among my friends, and consider it a good investment at that. Meantime I am not going to have my name registered as a gun toter."

"If the police were to raid a fashionable women's club along about dusk any evening, the number of revolvers they would find would be amusing," declared one prominent club woman recently.

"Why do they carry them?" was asked of this woman.

"For protection, of course," she replied. "You know there are holdup men who make a habit of robbing women."

Some of the more timid women use blank cartridges but the majority stick to the real bullet.

"What is the use of alarming the neighborhood in the case of a holdup and letting the man get away? No blanks for me," said one little milliner. "If ever I shoot, you may put it down that I mean business."

FEET BIG AS HAMS.

Chicago Inter-Ocean: "If people keep on dancing along present lines, the coming generation will have feet as big as hams," said Rev. A. C. Dixon, pastor of the Moody church.

"The pastime as now indulged in has become unhealthy, ungodly and most decidedly ungraceful.

"The cause of the downfall of more than 70 per cent of fallen women can be traced directly to dancing and its accompanying evils. Private dancing is bad enough, but the public dance hall, with its attendant bar, is the greatest agency for bad we have today in Chicago.

"Churches have to fight this. In doing so we are constantly met with the statement that the Episcopal church does not object to dancing. Principles of this old-established church are all right, but many of its bishops and rectors are doing everything they can to bring it to disgrace."

HADN'T BEEN DRUNK.

Denver Post: He evidently wasn't used to the ways of big hotels. He looked as though he might have been from some Kansas farm and was in a large city for the first time. Somehow he had heard that the next morning men who have been absorbing intoxicants drink lots of ice water.

"Say," he said to C. T. Newton behind the desk at the Shirley hotel about 8 o'clock in the morning. "The other clerk last night told me to ask fer things over that little telephone in my room when I wanted 'em.

"Yes," said Newton.

"Well, this morning, about a half an hour ago, I asked fer a glass of ice water. Some girl answered the telephone."

"Yes."

"Well, I don't like to be took fer a heavy drinker. I wasn't drunk last night."

"What do you mean?"

"Jes this—I didn't get no glass of ice water. That girl sent me up a whole pitcher. It looked mighty much to me like she thought I was full of liquor last night and would need a whole pitcher. A glass would a-been enough." And as he turned and strode away he wore one of those "Guess I didn't call him down, eh?" looks.

BUILDING LOTS!

$750 A full-sized lot, 50 by 140 feet. Lower side of **Jefferson street. Near Twentieth avenue east.** Water, sewer and gas.

$800 A lot 50 by 150 feet. Lower side of **London road. Near Twenty-third avenue east.**

SUMMONS IN APPLICATION FOR REGISTRATION OF LAND.

State of Minnesota, County of St. Louis. —ss. District Court, Eleventh Judicial District.

In the matter of the application of I. Freimuth to register the title to the following described real estate situated in St. Louis County, Minnesota, namely: Lots numbered Forty-nine (49), Fifty-one (51), and Fifty-three (53), East Fourth street, Duluth Proper, First Division, according to the plat thereof on file and of record in the office of the Register of Deeds for said St. Louis County.

Applicant.

vs.

Victor Kohn, Rosa Kohn, his wife; Libbie L. Upham and J. H. Upham, her husband, and all other persons or parties unknown, claiming any right, title, estate, lien or interest in the real estate described in the application herein. Defendants.

The State of Minnesota to the above named defendants:

You are hereby summoned and required to answer the application of the applicant in the above entitled proceeding and to file your answer to the said application in the office of the Clerk of said court, in said county, within twenty (20) days after the service of this summons upon you, exclusive of the day of such service, and, if you fail to answer the said application within the time aforesaid, the applicant in this proceeding will apply to the court for the relief demanded therein.

Witness, J. P. Johnson, clerk of said court, and the seal thereof, at Duluth, in said county, this 18th day of April, A. D. 1907.

J. P. JOHNSON, Clerk.
By V. A. DASH, Deputy.

(Seal, District Court, St. Louis County, Minnesota.)

BALDWIN, BALDWIN & DANCER, Attorneys for the Applicant.

(Duluth Evening Herald, April 19, 26, May 3.)

CERTIFICATE OF INCORPORATION —of— VERMILLION DIAMOND DRILL COMPANY.

KNOW ALL MEN BY THESE PRESENTS, That we, the undersigned, all being persons of full age, have agreed to and do hereby associate ourselves together, under the Constitution and General Laws of the State of Minnesota, and more particularly under the provisions of Chapter 58 of the Revised Laws of said State, of the year of 1905, as a Corporation, and to that end do hereby adopt the following:

ARTICLES OF INCORPORATION.

ARTICLE I.

The name of this Corporation shall be Vermillion Diamond Drill Company.

ARTICLE II.

The general nature of the business of this corporation shall be: To drill for and conduct general exploration work for the finding and discovery of iron, copper and other minerals for itself and for others;

To acquire by lease, option, purchase, gift, devise, grant, conveyance, agreement or otherwise, and to own, hold, possess, enjoy, develop and work, and to sell, lease, convey, or otherwise dispose of real estate, mines, mineral rights and mineral lands in any part of the world, and especially lands containing or believed to contain deposits of iron, coal, copper or other minerals, and any right, title or interest therein; and to develop, operate and work mines upon, in or under such lands, for the purpose of mining and producing iron, copper and other ores and minerals;

Any and all of said business to be carried on in the State of Minnesota or elsewhere, and the principal place of transacting the business of said Corporation shall be in the City of Duluth, in the County of St. Louis and State of Minnesota, with such branch offices at such other points or places as may from time to time be determined by the Board of Directors of said Corporation.

ARTICLE III.

The time of the commencement of this Corporation shall be the 27th day of April, 1907, and the period of its existence shall be thirty (30) years.

ARTICLE IV

The amount of the capital stock of this Corporation shall be Fifty Thousand Dollars ($50,000.00), and the same shall be sold only at par, either for cash or for property and things of value deemed by the Board of Directors to be equivalent thereto, such determination by the Board of Directors to be deemed final and binding upon all parties in interest.

Stock of this Corporation shall be paid for as called for by the Board of Directors, and no stock which has not been subscribed for and upon which the payments have not been made as required by the Board of Directors, shall be entitled to vote or representation in any of the proceedings of this Company.

ARTICLE V.

The highest amount of indebtedness to which this Corporation shall at any time be subjected is the sum of Twenty-five Thousand Dollars ($25,000.00).

ARTICLE VI.

The names and places of residence of the persons forming this Corporation are as follows: William T. McCarthy, Charles E. McIlhargey and M. H. McMahon, all of Duluth, Minnesota.

ARTICLE VII.

The government of this Corporation and the conduct and management of its affairs is hereby vested in a Board of three (3) Directors, who shall all be stockholders, and, except as herein provided, shall be elected by the stockholders at their annual meeting on the second Tuesday in January of each year, and who shall, within ten (10) days thereafter, elect from their own number the following officers, to-wit: President, Vice President, Secretary and Treasurer.

The first annual meeting of this Corporation shall be held on the 27th day of April, 1907, and until such time as such directors have been elected and qualified, the following persons shall be and constitute the Board of Directors of this Corporation: William T. McCarthy, Charles E. McIlhargey and M. H. McMahon, and until such annual meeting is held and the Directors thereat chosen, shall elect officers as hereinbefore provided, and until such officers shall have been duly elected and qualified, the general officers of this Corporation shall be as follows:

President, William T. McCarthy; Vice President, M. H. McMahon; Treasurer, Charles E. McIlhargey; Secretary, William T. McCarthy, all of Duluth, Minnesota.

The office of Treasurer may be held by any officer of this Corporation. The officers and directors of this Company, except those herein designated to act as such in the first instance, shall hold office for the period of one (1) year, or until their successors are elected and qualified, and in case any vacancy occurs in any of the offices or in the membership of the Board of Directors of this Corporation, the same shall be filled by the Board of Directors until the next annual meeting and until such vacancies shall be filled by election held in accordance with these Articles and such By-Laws as may be adopted providing for elections.

ARTICLE VIII.

The capital stock of this Corporation is divided into five thousand (5,000) shares of the par value of Ten Dollars ($10.00) each.

IN TESTIMONY WHEREOF, The parties hereto have hereunto set their hands and seals this 22nd day of April, 1907.

WILLIAM T. McCARTHY (Seal)
CHARLES E. McILLHARGEY. (Seal)
M. H. McMAHON. (Seal)

Signed and Sealed in Presence of:
FRANK E. SKARP.
S. F. WHITE.

State of Minnesota, County of St. Louis —ss.

BE IT KNOWN, That on this 22nd day of April, A. D. 1907, personally appeared before me, the undersigned, a Notary Public in and for said County of St. Louis, William T. McCarthy, Charles E. McIlhargey and M. H. McMahon, to me well known to be the persons named in and who executed the foregoing Certificate of Incorporation, and they severally acknowledged that they executed, signed and adopted the same as their free act and deed respectively.

FRANK E. SKARP,
Notary Public,
St. Louis County, Minn.

(Notarial Seal)

My commission expires Jan. 11, 1911.

State of Minnesota, Department of State.

I hereby certify that the within instrument was filed for record in this office on the 23rd day of April, A. D. 1907, at 2 o'clock P. M., and was duly recorded in Book 63 of Incorporations, on page —.

JULIUS A. SCHMAHL,
Secretary of State.

OFFICE OF REGISTER OF DEEDS.

State of Minnesota, County of St. Louis —ss.

I hereby certify that the within instrument was filed in this office for record April 25, 1907, at 9:15 A. M., and was duly recorded in Book 4 of Misc., page 357.

M. C. PALMER,
Register of Deeds.
By THOS. CLARK,
Deputy.

Duluth Evening Herald—April 25-26, 1907.

DEFAULT HAVING BEEN MADE IN the payment of the sum of Three Hundred Sixty-seven (367) Dollars, which is claimed to be due and is due at the date of this notice on that certain mortgage duly executed and delivered by Axel R. Peterson and Emma Peterson, his wife, to William N. Moulton, bearing date of February 6th, 1904, and duly recorded in the office of the Register of Deeds for St. Louis County, Minnesota, on the 9th day of February, 1904, at 10 o'clock a. m. in Book 141 of Mortgages on page 337, and which mortgage was on the 11th day of August, 1904, duly assigned to John Millen, which assignment was on the 12th day of August, 1904, at 8 o'clock a. m., duly recorded in the Office of the Register of Deeds for said St. Louis County, Minnesota, in Book 148 of Mortgages on page 450; and no action or proceeding at law or otherwise having been instituted to recover the debt secured by said mortgage or any part thereof.

NOW, THEREFORE, notice is hereby given, that by virtue of the power of sale contained in said mortgage, and pursuant to the statute in such case made and provided, the said mortgage will be foreclosed and the said premises therein described, viz: The South half (s. ½) of the South-west Quarter (S. W. ¼) and the West Half (W. ½) of the South-east Quarter (S. E. ¼) of Section Twenty-one (21) in Township Fifty-seven (57) North of Range Fourteen (14) West of the Fourth P. M., will be sold at public auction, to the highest bidder for cash, to pay the said debt and interest thereon and Twenty-five ($25) Dollars as attorney's fees as provided by said mortgage in case of foreclosure, and the disbursements allowed by law.

The said sale will be made by the Sheriff of said County of St. Louis at the front door of the Court House, in the City of Duluth, St. Louis County, Minnesota, on the 1st day of June, 1907, at 10 o'clock a. m., subject to redemption at any time within one year from the day of sale as provided by law.

Dated this 19th day of April, A. D., 1907.

JOHN MILLEN,
Assignee of Mortgagee.

L. C. HARRIS,
Attorney for Assignee.

Duluth Evening Herald, April 19-26; May 3-10-17-24.

Certificate of Incorporation OF CHEMUNG COPPER COMPANY.

The three persons hereinafter named, being desirous of forming a corporation for the purpose of carrying on the mechanical business of mining and reducing ores and minerals, do hereby subscribe and acknowledge the following certificate, under and pursuant to the appropriate provisions of Chapter Fifty-eight of the Revised Laws of Minnesota, 1905:

FIRST.

The name of this corporation shall be "CHEMUNG COPPER COMPANY." The general nature of the business of this corporation shall be that of mining, smelting, reducing, refining and working ores and minerals. The principal place of transacting business of this corporation shall be Duluth, Minnesota. There is hereby established an office of this corporation at Pittsburg, Pennsylvania.

SECOND.

The period of the duration of this corporation shall be thirty years from the date that it is organized.

THIRD.

The names and place of residence of the three incorporators are as follows: Arcadius L. Agatin, Fred L. Farmer and James Wanless, all of whom reside at Duluth, Minnesota.

FOURTH.

The management of its business shall be vested in a Board of seven Directors, who shall be elected at the annual meeting of the stockholders, which shall be held on the first Thursday after the first Monday of each April, at the office of the corporation in Duluth or in Pittsburg, upon such notice as the By-Laws shall order, and until such election the Board of Directors may fill any vacancy therein by a majority vote.

The names and addresses of those composing the first Board of Directors, who shall hold until the first election of Directors, are as follows:

Charles D. Fraser, residing at New York City, New York.

George E. Tener, residing at Pittsburg, Pennsylvania.

Thomas J. Crump, residing at Pittsburg, Pennsylvania.

James Hoatson, residing at Calumet, Michigan.

Thomas F. Cole, residing at Duluth, Minnesota.

Chester A. Congdon, residing at Duluth, Minnesota.

Isaac L. Merrill, residing at Los Angeles, California.

The first meeting of said Board of Directors shall be held without any notice thereof at 807 Lonsdale Building, Duluth, Minnesota, on the first day of June, A. D. 1907, at ten o'clock in the morning, and if at said meeting there shall be less than a majority of said Directors present, the minority present can adjourn said meeting from time to time until a majority of said directors are present.

FIFTH.

The amount of the Capital Stock of this corporation shall be Three Million Dollars, which shall be divided into three hundred thousand shares of the par value of Ten Dollars each. Said capital stock shall be paid in from time to time as called for by the Board of Directors, and such stock or any part thereof may be paid for by property of the actual value of not less than the par of the stock so paid for.

SIXTH.

The highest amount of indebtedness or liability to which this corporation shall at any time be subject shall be Five Million Dollars.

IN WITNESS WHEREOF, The parties hereto have executed this certificate this 17th day of April, A. D. Nineteen Hundred and Seven.

ARCADIUS L. AGATIN. (Seal)
FRED L. FARMER. (Seal)
JAMES WANLESS. (Seal)

HAPPENINGS IN THE DAKOTAS

Jacob Ponturi Smothered to Death While Hauling Wheat.

NORTH DAKOTA.

Grand Forks—Jacob Ponturi was smothered to death yesterday while hauling wheat to Brocket. He was intoxicated, and the hired man placed him on the load of wheat. Ponturi turned with his face downward, and when the hired man sought to take him from the load on arrival in Brocket, he was dead. The Ramsey county authorities investigated the case, and found death to be accidental.

Deputy Sheriff Olaf Ostlie raided the railway station in Northwood and seized eight cases of beer, one keg of beer and one case of whisky. The seizure was made under the provisions of the new law which provides that liquor may be confiscated when found in quantities indicating that it was to be sold illegally.

Thomas Olson was held in the sum of $300 for trial on a charge of selling liquor illegally in Northwood. He was accused of selling beer illegally from a case he had behind a barn. "Chet" Corkins, who is alleged to be a partner of Olson, escaped, and a search is being made for him.

At a meeting of the board of trustees of Grand Forks college, a Scandinavian educational institution, yesterday, Prof. B. K. Sayre of Glenwood, Minn., was elected principal, to succeed Rev. Lars A. Haatvedt, who finds his time taken up with his duties as pastor of the First Lutheran church. Miss Eva Olson was elected preceptress and teacher, and Mrs. Laura Simonson teacher of music. They were teachers in the school up to a year ago.

Through a watch found in the wreck of the Great Northern Oriental Limited at Bardlett, it was definitely established yesterday that Arne Rossland of Grand Forks was a victim. The watch has been identified as his property. His wife and children are in destitute circumstances.

Herman Hockmiller was arrested here yesterday by Chief Lowe on a charge of grand larceny made by Col. Creel of Devils Lake, who says the prisoner stole some goods from the Creel farm.

McVille—Just as the family of W. M. Short was about to sit down to dinner, the beams of the floor overhead gave way and 4,000 feet of maple flooring crashed down upon them. All were thrown to the floor, but fortunately the lumber rested upon the stove and table in such a manner that they were able to crawl out in safety.

Fargo.—Express rates in North Dakota and west are to be slashed as soon as the officials can arrange a schedule. This is in harmony with the recent reduction in Minnesota. The cut in North Dakota is less, but is expected to average from 30 to 35 per cent. It will be of great benefit for all western shipments.

The state livestock sanitary board has selected Dr. Dunham as assistant executive officer to have charge of the work in this part of the state.

SOUTH DAKOTA.

Watertown.—Worshippers who assembled at the Catholic church at the village of Henry, six miles from here, were shocked to find that a body had been removed from one of the graves in the church yard, and, that in their haste, the marauders had left the grave open. A careful examination was made by Father Twohig and a suspect located and brought back. At first he pleaded innocence, but later agreed to fill the grave if the prosecution was stopped. There appears to be a question as to the stranger's right to the body, and the matter is being investigated.

The South Dakota Central railroad probably will build into Watertown in the next six months. It has pledged itself, through President Sherman, to do so before May 1, 1908, and stated that in all probability it will be here before Jan. 1.

Bonesteel.—At an election held for the purpose of voting upon the proposition of bonding the town for $13,000 with which to install a new system of waterworks, the bonds carried by a unanimous vote. A company is being organized with a capital stock of $10,000 for the purpose of putting in a gas-light system, and the stock is nearly all subscribed. Contracts have been let for the building of twenty blocks of cement sidewalk.

Summit.—Mr. and Mrs. O. P. Brustuen and daughter, V. O. Brustuen of Appleton, Minn., and Rev. and Mrs. J. F. Svenson of Summit start for their European trip on April 29. They leave New York on May 4 and will make an extended tour through Norway, Sweden and Denmark.

Sioux Falls.—The telephone war at Yankton has been transferred to the United States court in this city. The plaintiff is the Northwestern Telephone company, which maintains an exchange at Yankton. The purpose of the suit is to secure an injunction restraining the municipal authorities of Yankton from interfering with contemplated improvements to the company's system and the extension of the system to portions of Yankton which now are without telephone facilities.

DR. RIESLAND IS HOME AGAIN

Returns After Two Months Absence on Important Business.

The hundreds of Duluthians who have been restored to health by Dr. D. W. Riestand will be delighted to hear that he has returned after two months' absence on important business. The doctor was again honored by the Association of American Advertisers as the best qualified and ablest chiropractor in the United States, to demonstrate the science to the members of the house and senate of Minnesota. Chiropractic is now recognized the world over as the greatest discovery of modern times in the cure of disease. It works with not against nature, relieving the pressure on nerves, due to the laxation of the spine, the cause of all disease.

Duluthians have reason to feel proud that the dean of the profession, as Dr. Reisland is admitted to be, is among them. The doctor has made the deaf hear, the lame walk, the blind see, and has cured hundreds of cases, hitherto regarded as incurable, including Bright's disease, cancer and tuberculosis.

Dr. Reisland will continue to perform his wonderful cures at his old location, 707 Palladio building. (Adv't.)

KIDNAP BRIDEGROOM TO STOP THE WEDDING.

Millville, N. J., April 26.—With Mr. and Mrs. Ralph Franklin Robbins safely started on their wedding tour, effort is being made by friends of the young couple to learn the identity of the men who kidnapped the bridegroom and caused the prospective bride, who was Miss Rena Dorothy Boardman, daughter of Frank Boardman, to wait several hours before Mr. Robbins appeared and caused considerable excitement among the assembled wedding guests.

It was planned that the wedding should take place at the home of the bride at 8 o'clock Saturday night. The friends had assembled and Mayor George W. Payne, an uncle of the bride, was ready to perform the ceremony. When the time arrived for the wedding march it was whispered among the guests that the bridegroom had not appeared.

The bride was nearly frantic, fearing that some misfortune had befallen Mr. Robbins, who was to have arrived in Millville on the early evening train from Salem, N. J.

Thinking that the bridegrom might have missed the train, the guests decided to wait until Sunday morning at eight minutes after 2, when another train would arrive. The train was late, but when Robbins alighted from a coach a large crowd greeted him with hearty cheers. He declared he had been kidnapped by some friends of the bride's rival at Salem and held until the last train had left.

After escaping from his abductors, he said, he hired a horse and buggy and raced across Salem county for eighteen miles and caught a train at Glassboro. After the ceremony a wedding breakfast was served and the couple left for an extended Western trip.

LAND CONVENTION CALLED

By Governor of Colorado to Meet in Denver in June.

Denver, Colo., April 26.—Colorado has taken the initiative in calling upon the states west of the Mississippi river to send representatives to this city in June to discuss the government attitude in regard to the public lands in the West. Governor Buchtel recently sent letters to the governors of fifteen states asking them to join with him in calling such a conference. This conference was suggested by joint resolution of the last legislature and is for the purpose of having the Western states present a united front at Washington as regards public lands.

As tsated in the letter of Governor Buchtel of this state, the purpose of the convention is to, "if possible, agree upon some general government that will look toward a more rapid development of the resources and active settlement by citizens under the homestead act." The dates suggested for this convention are June 18, 19 and 20. Assurances already received show that this gathering will be one of the largest and most important conventions ever held in the West at which the policy of the government towards any one section of the country will be discussed.

There is no want ad. printed in The Herald to-day which does not strongly interest at least ten people—and there are some that will strongly interest thousands.

WEST DULUTH

LOANS FOR BUILDING

Are in Great Demand by Citizens of West Duluth.

People Must Have Money to Erect Their Homes.

At the present time there is an unusually heavy demand for building loans in West Duluth. The condition is the same all over Duluth, but especially in West Duluth, where most of the citizens are of the working class.

The scarcity of suitable tenements at this end of the city has induced many citizens to borrow money and build their own residences, and the demand for building loans is the result. The loans are being asked for mostly by people who wish to build private residences, although some are for tenement buildings.

At the West Duluth bank the demands for building loans are coming in faster than they can be taken care of. If this end of the city is to grow, as it should, as a result of the coming of the steel plant, the people out here think that citizens of the city who have money should come forward with it and make up for the scarcity of building loans.

BIG REAL ESTATE DEAL.

Property of C. M. Bailey at West Duluth Transferred.

A big real estate deal was closed, or practically closed, this morning, when about fifty-three acres of land in West Duluth, formerly owned by C. M. Bailey of Winthrop, Me., was transferred to West Duluth parties.

Those concerned in the transfer at West Duluth were Fred O. Harris, J. A. Scott, E. G. Wallinder and L. A. Barnes, who were all associated together to represent the seller. The property is being transferred to E. G. Wallinder, and the consideration is $16,000.

The land was purchased about seventeen years ago by Mr. Bailey. There was a larger tract at first, but it has been gradually sold since that time.

WANTS INFORMATION.

Letter Asking About Norwegian Societies Received From Consul.

Thomas Olafson received a communication this morning from the Norwegian consul at St. Paul, Carsten Hansen, asking for information concerning the Norwegian societies in Duluth. The letter stated that the orlgial request for this information came from Norway.

Information concerning the number of Norwegian societies in Duluth and their character and number of members. The names and objects of societies are also asked for in the communication.

Mr. Olafson has decided to turn the request over to the secretary of one of the Norwegian societies and the information asked for will probably be gladly furnished by the members of the societies.

WELL RECEIVED.

Herald's Special Edition Met With Warm Approval.

Many expressions of approval of The Herald's big special edition were heard in West Duluth. The West Duluth industries were given their full share of attention and the three following statements about express the sentiment of the West Duluth people:

J. A. Scott, West Duluth—"Last night's paper was without question the greatest edition of a daily paper ever issued in Duluth and I think it will compare very favorably with any ever published in the United States."

Thomas Olafson, real estate, West Duluth—"The Herald has always been a great paper, but last night's historical and industrial edition was an extraordinary accomplishment in the line of newspaper work. It was one of the greatest editions I ever saw. The supply brought to West Duluth by the carriers was soon exhausted."

Alderman M. J. Filiatrault, West Duluth—"I think it a splendid edition, one of the best I have ever seen. It will doubtless be of material benefit in advertising out great, growing city, as thousands of copies will be sent all over the country by Duluth citizens. I intend to send out a number of copies, and one will even go as far away as Paris, France."

Walking About Barefooted.

The West Duluth police took a man named John Ninei, a Finlander, in charge this morning. They think he is either crazy or suffering from the effects of a prolonged spree. He was found near Spirit Lake and at the time was barefooted, with no coat or hat. He can speak no English and talks only Finnish. The police will take him to the central station this afternoon where the authorities will decide as tohis disposal.

Pleasant Card Party.

The ladies of St. James church entertained a large number of West Duluthians last evening at a card party given at Gilley's hall. Several prizes were awarded and an informal program of music and recitations was rendered. Refreshments were served by the ladies.

West Duluthian Gets Prize.

Word has been received in West Duluth that Donald B. Rockwell, who is attending Queen's university at Kingston, Ont., has won the first prize for the highest standings for the third year's work in the mining course at that institution. The prize consists of the Brice Carruthers scholarship and is valued by the students at $100. Mr. Rockwell has one more year at the school before he will receive his degree. He already has several excellent government jobs in view for the coming summer. He is a son of Mrs. A. F. Rockwell of West Duluth and was brought up here, graduating from the Central high school.

KELLEY-HARDWARE CO. DULUTH-MINN.

Church Repairs Started.

Workmen are now engaged in making the various improvements on the Third Swedish Baptist church, Fifty-ninth avenue west and Ramsey street. The building has been raised several feet and when completed the basement will be used for a church parlor and Sunday school room. A heating plant will also be installed. The main auditorium will be handsomely redecorated and new seats will be added. A pipe organ will be installed, donated by the choir. It is expected to have the improvements completed before the arrival of the new pastor, Rev. Gideon Nylander in June. The total cost of the improvements will be about $3,500.

West Duluth Briefs.

Frank Cervent returned last night from St. Cloud, where he has spent the past year.

A business meeting of the Young Ladies' Sewing circle of the Swedish Mission church, was held last evening at the home of Mrs. Peter Gilluson, 620 North Fifty-sixth avenue west. A social session was afterwards held and refreshments were served.

Miss Laura Hogstad returned yesterday to her home at Fond du Lac after having geen visiting friends in West Duluth for several days.

Watch and jewelry repairing. Hurst.

A special meeting of Morning Star Lodge, No. 17, I. O. G. T., will be held this evening at Victor hall.

E. S. Woolfin of Hibbing was in West Duluth attending to business matters yesterday.

Harold Woland, civil engineer for the Great Northern road, is building a $3,500 residence at Norton and Fifty-sixth avenue west. The foundation was begun yesterday.

J. B. Gibson returned yesterday from Two Harbors, where he has been spending a few days on business.

CHILDREN RECOVERED.

Kidnaped From Minneapolis Two Weeks Ago by Their Mother.

Davenport, Iowa, April 26.—The Davenport police

WHEAT HAS BIG BULGE

May Option is Two Cents Up in Duluth Today.

Flax Shows a Good Advance in the Local Market.

Duluth Board of Trade, April 26.—The American wheat markets took on a bullish tone at the opening today and prices advanced heavily during the day, the closing prices showing a big bulge over yesterday. Not only the domestic markets, but the foreign markets in response to the bulge here, had a better tone. Duluth showed the biggest advance of all the American markets. Bullish news from all sides was responsible for the advance. There is a great need of rain in Kansas and some of the other states in the winter wheat belt and the experts are increasing their estimates of the damage done by the green bug to the crop. Seeding is away late in the Northwest. Early spring wheat in some parts of South Dakota is badly frozen and is being sown over again. Liverpool colsed ⅝d to ⅞d higher, Berlin ¼c higher and Budapest 1⅝c higher than Wednesday.

The Modern Miller says:

"The outlook is unfavorable and the weather impairs winter wheat prospects. The plant is backward and warm rains are needed to start seasonable growth. Freezing temperatures damaged the crop in localities where the plant had jointed. The Tennessee state board of agriculture reports serious injury to wheat from frosts. Complaints of green bugs damage are less numerous and none are received outside of the Southwest."

The May option closed 2c higher in Duluth, 1⅝-¾c in Chicago and St. Louis, 1⅞-2c in Minneapolis, 1⅞c in New York, 1¾c in Kansas City and 1¼c in Winnipeg. The July option closed 1¾c higher in Duluth, 1⅝-2c in Chicago, 1⅝-¾c in Minneapolis and St. Louis, 1⅞c in New York, 2c in Kansas City and 1⅜c in Winnipeg.

May corn closed ½c higher in Chicago and was ¼d to ⅜d higher in Liverpool. May oats closed ⅝c higher in Chicago.

Car receipts at Duluth were 187 against 43 last year, and at Minneapolis 341 against 176 last year, making a total for the Northwest of 530 against 219 last year. Chicago received 23 against last year.

Primary receipts of wheat were 790,000 bus., last year 355,000 bus. Shipments 229,000 bus., last year 223,000 bus. Clearances of wheat and flour aggregated 175,180 bus.

Argentine shipments of wheat were 4,475,000 bus., against 5,192,000 bus., last week and 2,468,000 bus. a year ago.

Primary receipts of corn were 420,000 bus., last year 340,00 bus. Shipments 866,00 bus., last year 606,000 bus. Clearances of corn were 253,000 bus.

Argentine shipments of corn were 204,000 bus., against 41,000 bus., last week and 1,471,000 bus., a year ago.

There was good trading in wheat throughout the string session in the Duluth market. May wheat opened ½c higher at 83¾c, advanced to 85c by 10:50, went off to 84⅞c by 11:20, rallied to 85¼c by 1 and closed at that price, a gain of 2c over yesterday. July wheat opened ½c higher at 80¼c, advanced to 86¼c went off to 86⅛c, rallied to 86½-⅝, declined to 86⅜c and closed at that price, a gain of 1⅞ over yesterday. September wheat opened 1¼c higher at 86c advanced to 86¾c and closed at that price, a gain of 1⅞c over yesterday.

Durum wheat closed ⅞c higher and cash spring wheat was selling on a basis of ½c over May for No. 1 northern.

It is estimated that the stock of wheat in store at Duluth will decrease 1,300,000 bus., this week.

Flax was active and prices were up. May flax opened ½c higher at $1.17½, advanced to $1.18, declined to $1.17⅝, rallied to $1.18 and closed at that price, a gain of ⅝c over yesterday. July flax opened ½c higher at $1.19½, advanced to $1.20, declined to $1.19¾, rallied to $1.20 and closed at that price, a gain of ⅝c over yesterday. October flax opened ½c higher at $1.20, advanced to $1.20½, went off to $1.20⅜ and rallied by the close to $1.20⅝, a gain of ⅝c over yesterday.

Argentine shipments of flax were 1,200,000 bus against 1,696,000 bus last week and 560,000 bus a year ago.

It is estimated that the stock of flax in store at Duluth will increase 60,000 bus this week.

April oats and oats on track closed 1c higher, rye was 1c higher and barley unchanged.

Following were the closing prices:

Wheat—No. 1 hard, on track, 86¾c; to arrive, No. 1 northern, 85¾c; No. 2 northern, 84¼c; on track, No. 1 northern, 85¾c; No. 2 northern, 84¼c; May, 85¼c; July, 86⅝-½c; September, 86¾c; May durum, No. 1, 72¾c; No. 2, 70c; July durum, No. 1, 73¼c; No. 2, 70½c; durum on track, No. 1, 72¾c; No. 2, 70. THE CHICAGO MARKET.

Absence of Rain in Kansas Causes Price of Wheat to Rise.

Chicago, April 26.—The continued absence of rain in Kansas exerted a marked influence on the wheat market today. July opened ½ to ¾c higher at 83⅜c to 83¾c and sold at 83¼@83⅝c with the trading very active and the tone strong. Further green bug damage claims from Kansas were a contributary influence in the strength. Minneapolis, Duluth and Chicago reported receipts of 553 cars against 46 cars last week and 323 cars one year ago.

The market quickly became active and very strong, and although there was a considerable realizing on the advance July bounded up to 83⅝@83¾c and closed excited and strong, 1⅞@2c over yesterday at 83¼@83¾c.

There was a large general trade in corn but improved weather conditions for seeding partially offset the strength of wheat. July opened a shade to ⅛c higher at 48⅝@⅜c to 49⅜c and sold at 49¼c. Local receipts were 118 cars with 11 of contract grade.

The wheat strength was but little reflected in corn and the close was comparatively easy with July ⅛@⅜c up at 49⅜@49⅝c.

The oats market was active and strong in sympathy with other grains and on small receipts from the Southwest. July opened a shade to ⅛@¼c higher at 41½c to 41⅝@⅝c and advanced early to 41⅝@⅔c. Local receipts were 165 cars.

Provisions were dull but the tone was firm in sympathy with corn and hogs. July pork opened 12½c higher at $15.97½. Lard was 7½c higher at $8.77½ and ribs were 10c improved at $8.75.

Close: Wheat—May, 86⅝c; July, 83¼@83¾c. Corn—May, 50¼c; July, 49⅜@49⅝c. Oats—May, 44¾c; July, 41⅞c. Pork—May, $15.75; July, $16.02½. Lard—May, $8.07½; July, $8.82½@8.85. Ribs—May, $8.57½@8.60; July, $8.75@8.77½. Rye—Cash, 62c. Barley—Cash, 66@74c. Cash wheat—No. 2 red, 80¼@81½c; No. 3 red, 77@80¾c; No. 2 hard, 79¼@81¼c; No. 3 hard, 76@78c; No. 1 northern, 84@85½c; No. 2 northern, 83@85¾c. No. 3 spring, 79@85¼c. Corn—No. 2, 49@49½c. Oats—No. 2, 42c; No. 3, 41½c.

Patents were un 10c a barrel and there will be a further advance all around if the wheat market holds. Shipments 38,270 barrels. First patents, $4.40@4.50; second patents, $4.25@4.35; first clears, $3.20@3.50; second clears, $2.40@2.50.

Grain Gossip.

Logan & Bryan, Chicago, to Paine, Webber & Co.: There can be no mistaking the character of today's market. It was in every sense an old-fashioned bull affair, giving every indication of the public having awakened at last to the possibilities existing on the bull side of wheat this year. There was profit-taking on a large scale, but this only momentarily checked the advance. The character of the news shows absolutely no change for the better. Until conditions change, would stick to the buying side of wheat on moderate reactions.

Corn—This market played second fiddle to wheat today, but withal, exhibited an excellent tone, on whole market acts well. We still feel the market can be put higher.

Oats—Enjoyed a good broad trade. Shorts were covering oats sold on action of market a day or two ago when it seemed as if the bulge had reached its limit. As in wheat, possibilities seem on the bull side.

Provisions—Cash trade good and we may see better feeling and improved prices after May stuff is out of the way.

Broomhall, Liverpool, on wheat, April 26: "Steady opening to wheat although values showed a decline of ¼c. The fact of heavier Argentine shipments than were expected offset for a time the effect of the firmer American cables. Later, however, a sharp advance occurred, prices gaining ½d to ⅝d, the principal advance being in September, which was ½d higher. Offerings were extremely light and sellers were prompted by yesterday's heavy sales of cargoes, good spot demand and the continued generally bullish feeling with shorts active."

• • •

Secretary Toppid of the Oklahoma Miller association continues to increase his estimate on crop damage in Oklahoma. A week ago it was 30 per cent. Now it is 50 per cent on wheat and 75 per cent on oats, if not a total failure on the latter.

• • •

Weather forecast for grain belt: Illinois and Missouri—Fair tonight; probably becoming unsettled by Saturday night.

Indiana—Fair tonight and Saturday; rising temperatures.

Lower Michigan—Fair tonight and probably Saturday; slowly rising temperature; easterly shifting to southeast winds.

Upper Michigan—Fair tonight, followed by rain or snow in west Saturday; rising temperature.

Wisconsin—Fair tonight, probably followed by showers in north and west Saturday; rising temperatures.

Minnesota—Probably showers tonight and Saturday; warmer tonight; cooler in north Saturday.

Iowa—Fair tonight, possibly followed by showers Saturday afternoon or night; warmer tonight and in east and central Saturday.

North Dakota—Snow and colder tonight and Saturday; brisk to high northerly winds.

South Dakota—Showers tonight, probably turning to snow and colder Saturday; warmer in southeast tonight.

Nebraska—Partly cloudy tonight and Saturday; warmer tonight.

Kansas—Generally fair tonight and Saturday; warmer tonight and in east Saturday.

REMARKS.

Rain or snow has fallen over portions of most districts. West of the Mississippi river freezing weather prevailed last night.

H. W. RICHARDSON,
Local Forecaster.

T indicates inappreciable rainfall. • For yesterday. •• For twenty-four ending at 8 a. m., 75th meridian time.

NOTE—The average maximum and minimum temperatures and the average rainfall are made up at each center from the actual number of reports received. The state of weather is that prevailing at time of observation.

The Cotton Market.

New York, April 26.—The cotton market opened steady at a decline of 2 to 3 points in response to lower cables. Notices representing about 75,000 bales were estimated to be out against May contracts and during the early session trading was active with the market acting very nervous and unsettled, although fluctuating comparatively narrow. The notices were heavier than some o fthe small bulls had looked for and caused considerable liquidation, but while May was relatively easy, the difference between May and July did not broaden to anything like a carrying charge, which led to the opinion that bulls were gradually taking up the cgotton. Prices during the middle of the morning were about 5 to 9 points net lower and the tone was still unsettled.

Cotton, spot closed steady; middling uplands, 11.30; middling gulf 11.55; sales, 741 bales. Futures closed steady. Closing bids: April, 9.83; May, 9.88; July, 9.94; August, 9.94; September, 9.93; October, 10.12; November, 10.15; December, 10.20; January, 10.36; February, 10.42; March 10.40.

PROTEST AGAINST ADVANCE IN RATES.

Chicago, April 26.—A protest against the proposed advance of 20 per cent on the freight rate on lumber by Eastern trunk lines was voted by the freight commission of the Northern Pine Manufacturers' association at a meeting here today. Their action was indorsed by representatives of the National Lumber Dealers' association. The action of the committee, which is final will be submitted to the interstate commerce commission.

SPECIAL NOTICE.

We are pleased to announce that we now have a first-class wire direct to Boston, New York, Chicago and Pittsburg, connecting with Miller & Co., 29 Broadway, New York, who are members of the New York Stock Exchange, New York Produce Exchange, Chicago Board of Trade, Boston Exchanges and New Orleans Cotton Exchange. The high standing of our Eastern connection is in itself a guarantee that our service and facilities for handling Boston coppers, New York coppers and industrials are as good, if not better, than any at the Head of the Lakes. Through our connections we expect to broaden the Duluth curb market so as to give it a better outside support than it has received in the past. We have faith in Duluth curb stocks. We believe they possess more real merit than any other flotations in the country, and while we solicit New York trade, we will continue to give special attention to the Duluth curb stocks.

DULLNESS IN STOCKS

Little Feature to the Market and Trading Very Slow.

At the Close Stocks Were Dragging About the Bottom.

New York, April 26.—There were hardly sufficient operations in the first five minutes in the dealings in stocks to define the tone of the market. Prices drifted sluggishly in either direction on nominal transactions.

An inquiry for a half a dozen stocks attracted the attention of the room element, and developed a following which put the list up considerably. Reading, Union Pacific and Smelting were in the best demand. Business was fitful in character and restricted to the few speculative favorites. Reading and Smelting gained 1⅜, Union Pacific and Brooklyn Transit 1¼ and Northern Pacific and Northwestern 1. Prices fell back before the hour expired.

The trading was extremely apathetic, but prices were held near the top level. Of usually inactive stocks Northwestern preferred sold at an advance of 8, Lake Erie & Western preferred 2½, American Ice 1½ and Republic Steel preferred 1. Bonds were firm.

A slow recession in prices occurred, but the market hardened again before the forenoon advances were entirely wiped out. Reading and Union Pacific gave way a point from the highest, but improved readily when selling stopped. Erie first preferred sold a point higher and Detroit United Railway ⅝ lower.

Business became progressively smaller later, until at intervals the ticker was silent for minutes at a stretch. Many of the traders quit business for the day and went to the races. Consolidated Gas and Minneapolis, St. Paul & Sault Ste. Marie preferred advanced 1 and 2 points respectively, while General Electric and Pressed Steel Car fell 1 and American Can preferred 1½.

Stock Gossip.

New York Logan & Bryan to Paine, Webber & Co.: There was little feature to the market today. Early trade was mixed. Gradually the list weakened, until at the close stocks were dragging around the bottom. Should crop damage reports continue to pour in as they have recently, the stock market is apt to work lower. At present it is nothing more than a scalping affair.

• • •

New York to Gay & Sturgis: There was no movement one way or another worthy of notice in yesterday's practically professional market with about as little business as there was on Tuesday. London was again a seller of 115,000 shares by balance. This brings it up to about 125,000 shares during the last four days. Despite easy money both here and abroad, foreign market responded only feebly. Soon after the opening, bear pressure sent the list off a point all around and from this level prices see-sawed back and forth.

The heaviness in United States Steel common during most of the day gave the impression there would be no increase in the dividend at this time. Further selling pressure sent Great Western off a point and a half. Short covering in the last half hour caused the active list to close fairly strong, fractionally above the opening. Call money was 2 to 2½ per cent.

Copper Gossip.

Boston to Paine, Webber & Co.: A rise in copper in London and the settlement of the Copper Range suit caused a little rally in the whole list this morning, but there was no general speculation, and after the first hour the market settled down to its old dullness. We believe that between now and June 1 we shall have higher prices, but we would take advantage of every opportunity to take profits and reduce lines of stocks. Money is very easy in New York, and we hear of various pools which are about to start up there to make a market in their specialties. Union Pacific and Southern Pacific will both sell higher.

• • •

Boston to Gay & Sturgis: Great interest, of course, attaches to the amount involved in the settlement of the Copper Range suit. Regarding this question, William A. Paine makes the following important statement: "The case was settled by A. C. Burrage paying substantially the Tri-Mountain debt." The amount of this debt was $540,000.

• • •

Boston to Gay & Sturgis: The market has the same old story today, a little interest taken at the opening and then left entirely in the hands of the professional traders who sold the market down. Of news there was hardly any, except reports of damage to winter wheat crop. Doubtless this crop has been damaged, but of the crops this is the one that can be replaced.

In early dealings there was a little demand for the coppers, but it soon subsided. It is a narrow trading market and can be sold on rallies and bought on weak spots, which is about all we can expect until something occurs to change sentiment.

• • •

Boston to Gay & Sturgis: The situation is such that interest centers largely on the future. We are between hay and grass, so to speak. Much depends as to the outlook for crops and the position of money. It is too early to talk crops. The late season, and the absence of abundant moisture in certain sections, have combined to create uncertainty as to winter wheat, but what adverse reports are circulated are without doubt chiefly for speculative consumption in that wheat pit.

The money market is a much more important consideration at the moment. Leading bankers confess that they never saw such a radical change from money tension to ease. One wants to remember that for nearly two years money has been more valuable than securities. Investors, trustees and banking institutions that formerly invested their money in high grade securities found it to their greater advantage to hold liquid capital for loan. This is the reason why the bond market has been so disappointing. But one extreme has finally generated the other. There has been a radical liquidation of speculative accounts and a consequent enormous reduction of speculative indebtedness. Now money seems to be in larger supply than demand. Short time money is declining in sympathy with call funds, and indications are that long time rates will follow into line.

Good judges believe that the result of all this will be that capital will shortly seek the normal avenues for investment, and that the situation will therefore naturally correct itself.

The fact that the security market does not at once reflect the real improvement is not to be considered. It is a trading market at present, pure and simple. Small interests that were extremely optimistic at the top are now intensely bearish. It is a poor reason to buy a market simply because the short interest is large, but when real capital becomes the buying power a short interest materially influences market prices.

THE COPPER STOCKS.

The following are the closing quotations of copper stocks at Boston today, reported by Paine, Webber & Co., Room A, Torrey building:

Stocks—	Bid.	Asked.

COMFORT ON $75 A YEAR.

Life Easy and Pleasant in Tide Water Maryland.

New York Sun: One of the cheapest places on the American continent to live is tidewater Maryland. This phrase includes all of the Eastern shore and the western shore, almost to the foothills of the Blue Ridge.

It has been estimated that a negro family of say six persons, whose provider earns $75 a year in actual cash, can live in reasonable comfort as to shelter, food and clothing. Such a family can rent a cabin and a garden patch for $25 or $30 a year, perhaps for less, and after that the problem of food is simple enough, while what remains of the cash, together with the surplus of the garden produce, will clothe the family.

Just at the cabin door the father and older boys may take out of the water most of the food of the family. The garden and the pigpen will furnish the rest, and if luxuries are occasionally demanded, a fowling-piece will procure them at almost any season of the year.

An unusually severe winter, when the inlets are frozen, may subject such a family to hardships, but if the head of the house is really thrifty, he can weather in comfort even the worst of winters. Fuel costs little. Along parts of the coast a watchful family may catch enough driftwood during the year to heat the house and boil the pot all winter long.

The opportunities of a really industrious and ingenious family in these parts are remarkable. There is always a breakfast to be had with hook and line or trap.

Every family can raise chickens, and there is a sure market at the nearest village store for eggs and fowls. Prices, indeed, especially for fowls, seem ruinously cheap to the Northerner, but the cost of production is low.

Part of the year there are rabbits to be trapped for fresh meat and for the fur. The negro family can cure its own bacon, and thus make sure of enough meat all winter long for ordinary occasions.

Corn meal furishes bread. You can get enough corn meal in this country to last a family the year through for a small part of what a well to do urban family pays for breakfast foods with tempting names and extravagant pretensions. Most families have a supply of hominy, also, which in this country usually means cracked corn.

The hominy is cooked many hours, and in families that keep the kitchen fire going all night there is the pleasant ceremony about bedtime of taking a fine large spoonful of the nearly cooked hominy out of the pot in order to taste its quality. A little butter and salt mingled with the hominy at this stage makes it an excellent thing to go to bed on.

Trap or gun will yield fresh meats and peltries to the negro family. The muskrat is the most valuable fur bearing animal in these parts, and its meat is eaten by all the blacks and many of the whites. The euphemism marsh rabbit is employed by the whites to make the creature seem more palatable.

As a matter of fact, the flesh of the muskrat is delicious, as the animal is notoriously of clean habits there seems no reason why anyone should apologize for eating it. Muskrat flesh is openly sold by the wagon load in Cambridge.

The possum and the coon are trapped for food, and both are prime delicacies with the colored people, as they should be with the whites, for the flesh of both animals is delicious when properly cooked. The esteem in which it is held by the colored people is illustrated by a local story:

Two negroes are represented as riding home from the field on their plow horses when the talk falls upon gastronomy. One delicacy after another is proposed back and forth with mutual nods of approval, and other signs of satisfaction, until at length, one says:

"What you say to dis? Take a fat possum an' roast 'im."

"Yes."

"Hol' on, nigga. Wif sweet potatoes in the pan?"

"Yes."

"Den se've him hot?"

"Yes."

"I ain't done yit—wif coon gravey?" leaning back triumphantly.

"Shet up, nigga, I fall right off'n dis hoss."

The thrifty negro family dwelling on the shore owns a boat, usually a small canoe, easily driven with oars, but also carrying a triangular sail. In such a boat the owner can cruise all about his inlet and out into the bay.

If he chooses to pay a small sum for a license he can catch oysters from it for the greater part of the year. The little boat is the one vehicle of the family. In it man and wife sail far across the inlet to visit neighboring families and if either is to indulge in the luxury of a trip of Baltimore, the little boat is used to reach the nearest steamboat landing, usually within half an hour's sail.

Sometimes you will see a whole negro family with a varied assortment of bundles approaching the steamboat wharf in one of these little canoes, the father at the helm, if the craft be under sail, or perhaps sculling rapidly with an oar that by some miracle of deftness is made to keep its place on the sharp stern of the boat.

Spring brings vegetable luxuries to the negroes of thrift and energy. They have peas, lettuce, radishes and string beans weeks before these vegetables are within reach of the New York poor.

Sweet potatoes are so cheap here in the autumn that $1—or $2 at the most—will go far toward obtaining a negroe family a winter's supply. Buried in sand under the earth the store of sweet potatoes will keep sound for several months.

Perhaps few negro families live under these idyllic conditions. Public opinion is a hard thing to stand up against, particularly when it is strongly seconded by personal inclination.

The colored people, propery enough; love pleasure. The temptation is ever present to run off to Baltimore to visit friends. Water travel is cheap, and the attraction of the city are seductive.

Once there, the temptation is strong to spend all one has saved, in buying finery. Many a colored man or woman, indeed, goes to Baltimore by steamer with just enough money in pocket to pay the fare.

Local pleasures are also tempting and expensive. Many of them are the more easily indulged in that they are associated with the church. There are camp meetings, picnics, quartely meetings, which latter seem to come at almost any time.

The "big quarterly," up at Wilmington in August, used to attract thousands of colored people from Delaware and the Eastern shore, and for that day's pleasure it was necessary to pay railway fares both ways. The actual cost of a bare living is so little in this country that it seems ridiculous to hesitate about spending $4 or $5 on a pleasure jaunt.

Practically, indeed, colored families tend less and less to live upon the land in the sense of getting their food out of the garden patch, the woodlands and the tidal waters. The father of the family can hire out as an oysterman at good wages; even the mother and the grown girls, if any stay at home unmarried, which they do not for long, can earn high wages with the oyster packers, and in summer the men are profitably employed in catching selftshell crabs.

Some old men, whose rheumatism prevents them from living the hard life of the oysterman, stick by their little home patch, and do a bit of hunting and fishing. Now and then a young man with a fondness for the relatively free life of self-employment entirely possible here will chose to hunt, fish and trap and cultivate bit of garden rather than earn regular wages as some other man's employe.

Market Basket

Green Vegetables.

A fine variety fresh from the garden.

CALL $2 BILLS UNLUCKY.

People All Over Country Clipping Off Corners to Break Hoodoo.

New York Sun: Large numbers of clipped $2 bills have reached the treasury department at Washington for redemption in the last three years. These bills are all cornerless. That is, all four corners have either been torn off or neatly cut off with scissors or knife.

The officials who interest themselves in tracing such things quickly ascertained that a superstition of racing people lay back of the cornerless $2 bills. It was found that some years ago the pikers in the racing game developed an antipathy to the $2 notes, considering them unlucky.

Their method of exorcising the devil of ill luck clinging to the $2 bills was to tear or cut off the corners before putting it into play. The idea spread. It infected the bookmakers, and some bookmakers who received large numbers of $2 bills in the course of a day's operations fell into the habit of clipping with scissors the corners of such notes as they couldn't unload upon their associates.

Now it is reported that the distrust of the $2 note is becoming general and that the cornerless notes are appearing in many different places. Very lately they became especially marked at Atlantic City.

"Which shows," said a player who makes book in the cheap fields of the New York tracks, "how a little seedlet will grow into something that casts a big shade. I believe I was present at the birth of that $2 note superstition.

"Three years ago, at Sheepshead Bay, there was a talky roughneck of a Mulligan waiter from some Beefsteak Jack's on the Bowery who made all of his pikes in my cheap field book. He never had more than a couple of bones when he hit the grounds, and these couple of acerinos were usually in the form of a $2 note.

"For a long spell he had to stand for the daily nudge out. Nothing whatever doing for him.

"He'd make an ein bone bet on the first race he liked, slipping me his two spot and getting a buck in change, and the horse would run for Brian Boru. Then he'd poke me the other ace and stand for the shred of that, too. This went on for weeks.

"One day he showed up with a souse. It was long before the first race when he got over in the neighborhood of my stool. His bun was a good natured one and his chaw amused the crowd. He had his usual grimy $2 note in his mitt.

"I ain't never had no luck with these boys,' he was telling the bunch. 'I haven't got nothing with one of 'em since the Big Wind. They're gosher kale, and they run for the books. Reg'lar layers' stuff. I'm going to fix one of 'em and see if I can't make him run f'r me.'

"Then, to the further amusement of the bunch listening to him and watching him, he deliberately tore the four corners off the bill. Then he swayed up to my stool and handed me the cornerless two bucker, naming a 20 to 1 shot on my slate.

"'What, 'the hull two on that one?' I said to him.

"'The hull two,' he replied recklessly. 'It's going to hop f'r me this time, bo. I've put the squeedoozle on it, and it's going to fetch a hatful of its pardners home.'

"And it did. The 20 to 1 shot copped something easy.

"'I knowed it,' howled the roughneck, tossing his battered lid into the air. 'I gotta system now all right. It's to take the pizen out o' them two spots. That's what's been hanging the can on me—them hoodoo doubles aces. Now I gotta scheme to take the sting out of 'em.'

"There were five two dollar bills in the $40 winnings paid out to him by my cashier, and he tore the corners off all these, a grinning but decidedly impressed crowd of pikers looking on while he did it, and then he slouched up to my stool again with the five cornerless two dollar bills in his hand. He named a 10 to 1 thing on my slate as his pick and shoved in the five clipped two dollar bills on that one.

"It came home alone. The gang in the ring who had been watching the moves of the waiter took the hunch. The waiter put an $1,100 dent in me that day and graduated then and there to the big ring, where he continued to do well till the end of the season, when he disappeared and didn't show up again at the beginning of the next racing season.

"And that's what started the clipped $2 thing. The pikers in the cheap field who had noticed the luck of the waiter with his corner torn $2 bills instantly went to the gag themselves, and luck fellowing most of them at the outset the thing became a habit.

"It quickly spread to the main ring, and it wasn't long before a lot of the layers hated to see the cornerless $2 notes flitting along. Some of the hunchy bookies fell for the superstition themselves as soon as they found out about it, and they took to cutting the corners of all the $2 notes that came their way.

"It wasn't long before, in all sorts of places, I began to hear about the unluckiness of $2 bills. For instance, a few months later I was with a friend who was buying a hat. He got a $2 bill as part of his change from the salesman and he gasped when he saw it and refused to put his hands on it.

"'None of those boys, if you please,' he said to the salesman, pointing out the $2 bill. 'A couple of ones, or silver, if it's only dimes, or even a hatful of the copper junk—but none of that stuff. I'd break a leg before going a block if I had one of those Jonah slips in my kick.'

"And the knock against the two spots is everywhere now. A great many fellows refuse to take them in change at all and those who consent to take them promptly tear or clip the corners off before sticking them into their nankeens with the rest of the bank wad.

"A while ago I went with a pal to a hazard dump. He passed a $100 bill over to the marble spinner and asked for $50 worth of blues.

"The spinner in giving him change from the drawer handed my pal back four tens and five $2 notes. My friend looked fallen around the chops when he saw the stack of $2 things.

"'Changed my mind,' he said to the spinner, with whom he was well acquainted. 'Guess I'll cash,' and he passed over his $50 worth of blues and got his $100 bill back. Then he went out.

"'Kind o' fine ladyish, that stuff of yours, hey?' I said to him. 'It's a wonder you don't pack around a fan and some smelling salts.'

"'Why, didn't you pipe those five two deckers he handed me?' He said to me, apparently surprised at my thickness.

"'Yes, I saw 'em,' I replied, 'but you didn't have to take 'em, and you hadn't put a mitt to one of them.'

"'Doesn't make any difference about that,' he replied solemnly. 'The Jonahdoo works out the same way if a $2 bill is even offered to you. I've found that out.'

"'Got so that clipping 'em doesn't work any more, then?' I said to him.

"'Not with me,' he answered. 'All anybody's got to do is even offer me a $2 note and I'll step on a third rail or fall down an elevator shaft or something before night. I know, because I've watched it.'

"Even the women have got it. My wife and I occasionally chub off an evening at the flat of a friend playing nickel ante poker with ten cent limit. Another couple make the game six handed.

"The wife of my friend is always banker. The man who is the worser one-eighth of the other couple handed over a $2 note with which to buy chips for himself and his wife at our last meeting. The banker turned almost pale.

"'Take it away, pul-lease,' she moaned, pointing to the $2 ante on the baize. 'Take it out of the flat at once or something awful will happen.'

"The man stuck the $2 thing back into his pocket and bought chips with a pair of acers but that wouldn't do. He had to go out and get rid of the $2 by having it changed.

"Plenty of racing people, including bookmakers, develop individual superstitious kinks with regard to money, but none of these has spread like the almost universal bug about the $2 bills.

"I know one layer in the cheap field—he's a Timmy, as we call the timid, conservative lawyers who are afraid ever to take a chance—who will shut down for the day, without transacting a nickel's worth of business, if the first bill handed to him at the opening of slates on the first race is a yellow boy."

GAMEST MAN IN ARKANSAS.

How Commissioner Tucker Gained the Name and Held to It.

Kansas City Star: Among the new state officials of Arkansas, chosen at the last election, is one whose only claim to fame previous to his election was that he was the central figure in one of the most bloody family feuds ever known in Arkansas or in the South. This official is Guy B. Tucker, state commissioner of mines and agriculture.

He has not only killed his man, but he has been directly or indirectly responsible for the death of at least five men who have fallen as victims of the Tucker-Parnell feud during the past five years. Tucker himself has twice been near death as the result of the desperate encounters in which he has taken part. In one battle he was shot six separate times, and a shot fired at him from ambush less than a year ago carried away his left arm.

The notoriety which attached to these exploits of Tucker made his name known throughout the state. Tucker, as he readily admits, owes his election to this notoriety, although the fact that he was a Jeff Davis man—an important question in Arkansas—aided him materially in his canvass. Tucker was a personal friend of Governor Davis, as well as a number of other state officials whom he met during his visits to Little Rock.

Guy Tucker is known as the "gamest and steadiest man in Arkansas," in the face of personal danger, and he has been the hero of a dozen incidents which have made his name a household word throughout the state.

As if to belie his reputation, he has such a quiet and almost bashful manner that it is almost impossble to associate him with the thrilling battles and desperate encounters which have marked the progress of the feud. Soft-spoken and mild-mannered as a woman in his ordinary daily life, only the eye-witnesses of the events of the past four years have seen the transformation that is wrought when he is brought face to face with death.

The history of the Tucker-Parnell feud dates back to Dec. 31, 1900, when Robert W. Mullins shot and killed John Bussel, a prominent young business man at Junction City, in Union county. While this tragedy had no direct connection with the subsequent troubles between Tucker and Parnells, it is regarded as the beginning of the feud. Mullins subsequently engaged in business at Eldorado, and a few months later he again came into public notice by attempting to prevent the marriage of a young woman who was in his employ. He was arrested dby City Marshal Tucker and Constable H. L. Dearing. Later Mullins met Dearing on the street in Eldorado and slapped the constable in the face. Dearing pulled his revolver and shot Mullins dead. The subsequent events were directly traceable to this killing. The members of the Parnell family, of whom there were a dozen men, were warm friends of Mullins, and they denounced his slayer as a murderer. Dearing also had strong friends, among whom were City Marshal Tucker and Frank Newton, a merchant. Both factions went armed and the feeling between the men became more bitter each day.

The dispute culminated Oct. 9, 1902, in the bloody street battle in which three of the participants lost their lives. The immediate cause of the battle was an order given by Tucker, as city marshal, in regard to a building which the Parnells were erecting. Tucker met Tom and Walter Parnell as he was leaving the courthouse and an altercation arose over the order given by Tucker.

A minute later the bloody battle had begun. Dearing and Newton were near at hand and they went to the assistance of Tucker. At least 40 shots were fired, the men standing so close to each other that their clothing was burned by the powder.

The first bullet that struck Tucker sent him to the ground, and the next shattered his arm. Lying on the ground he rested his revolver upon his shattered arm and fired the remaining shots in his pistol with as steady an aim as if he had been at target practice.

When the smoke of battle had cleared away, Walter Parnell and Constable Dearing were found lying across each other, their bodies literally shot to pieces. A few feet from them was the dead body of John Parnell. Tucker was lying unconscious with six bullet wounds in his body. Newton was the only man who escaped uninjured. Will and Matt Parnell arrived on the scene during the affray and one of them was slightly wounded. The town was thrown into wild excitement by the tragedy, and the militia was called out to prevent further trouble. For a week the militia guarded the courthouse, where the surviving Parnells were kept. Jim and Matt were indicted for murder, but a compromise was effected by which the prosecution agreed to hold the cases in abeyance if the Parnells would leave the state. They were given permission to return once a year until their business affairs in this state were settled.

July 6, 1903, W. H. Lee, a close friend of Tucker, was assassinated at his home near Eldorado. The mystery surrounding this crime has never been cleared up. A month later Tucker met John P. Parnell on the street in Eldorado. Tucker shot Parnell, killing him instantly. Parnell did not fire a shot, but Tucker claimed that Parnell was about to draw his revolver when he opened fire on him. Tucker was indicted for murder, but was acquitted.

The killing of John Parnell was the last fatality resulting from the feud. Most of the Parnells had left the state and Tucker spends little of his time in Eldorado.

A short time after his trial on a charge of killing John Parnell Tucker was riding through the country near Eldorado when he was shot from ambush. The shot took effect in his left arm and it was found necessary to amputate that member. No clew was ever found to the identity of the person who fired this last shot in the feud.

But a short time ago Tucker's bravery was given another test and he emerged from the experience with his reputation as the "gamest" man in Arkansas still further enhanced. Single-handed he held at bay an armed mob of 100 men which was endeavoring to seize Houston Hooker, a negro, who had shot and killed a conductor on an Iron Mountain train. An attempt was made by the officers to spirit Hooker out of the penitentiary in the city and place him in the county jail at Benton. Tucker volunteered to assist the officers, and with an officer of the penitentiary he started across an open field with his prisoner. They were discovered by the mob, which had been lying in wait near the prison. "Take the man back," Tucker told the officer who was with him. "I'll hold off the mob until you reach the gates." With drawn revolver he held off the angry mob of 100 men until the prisoner was safe within the prison walls.

MAKES RECORD FAST.

New York Herald: Very few people have any idea of how long swine can live without food, although much has been said about the quantity they can consume. But, believe me, piggie is a record-breaker when it comes to living without any thing at all to eat.

The incident that I am about to relate very well illustrates what I have stated.

A farmer who had driven a large number of hogs into a settlement to sell, after reaching his destination missed a fine black sow. Search was made in every conceivable place without discovering anything of the missing porker.

Weeks passed by and the farmer had given up all hope of ever recovering his lost or stolen property when, to his surprise, it was found in the cellar of an old abandoned house.

As the house was situated at the edge of the road over which he had driven the hogs it is supposed that she fell through the rotten flooring upon which she had stepped at some moment when the farmer's eye had wandered in another direction.

When brought up she was a pitiable sight. The skin hung in folds on her poor, unpadded bones. Food was given her in small quantities at first, and it was not long before she entirely recovered from her long fast. On referring to the books recording the sale of the rest of the stock it was learned that three months lacking five days had elapsed, showing that she had sustained life without nourishment for as long a period as the accredited hibernating animals.

IF YOU ARE UNDECIDED NOW IS THE TIME TO POP THE QUESTION

Recipe No. 3. **Universal Pop-Overs** Can't Beat It.

Beat 1 egg light with egg beater, then add 1 cup milk, then 1 cup **DULUTH UNIVERSAL FLOUR** sifted, and a little salt; beat hard, put in HOT gem pans and bake SLOWLY about 45 minutes.

In choosing a brand of flour that will produce perfect results, don't overlook

DULUTH UNIVERSAL

Absolute purity—makes bread of an **appetizing taste, delicious flavor** and produces **perfect cooking. ONCE TRIED ALWAYS USED.**
MADE IN DULUTH. "THE PITTSBURG OF THE WEST."

MINNESOTA HISTORICAL

PRESIDENT MAKES TRIP UP JAMES RIVER TO VISIT OLD COLONIAL MANSIONS

Family and a Few Invited Guests Comprise the Party.

Trip Taken as Recreation After Strenuous Day at Norfolk.

Calls Will be Made at Few of Historic Estates.

Norfolk, Va., April 27.—President Roosevelt and his family with several invited guests are today inspecting old colonial architecture along the James river, Virginia. They are making the trip on the naval yacht Sylph, and if the program arranged for them is carried out they will visit Brandon, the estate of the Harrisons, on which is a fine mansion, said to be the oldest colonial architecture in Virginia; Westover, the estate of the Byrds, and Shirley, the estate of the Carters. The party also will inspect the old church tower at Jamestown, which is all that stands to mark the spot selected by the first English settlers to build their homes.

The trip up the river is entirely informal and is intended to give the president needed recreation after a strenuous day yesterday at the Jamestown exposition inaugural ceremonies. The day is far from being pleasant. The sky was entirely overcast with clouds at daybreak and there were several drizzling showers during the morning. Inclement weather, however, had no effect upon those on board the yacht as they insisted upon carrying out their program. There has been no communication with the Sylph at her anchorage in Hampton Roads since yesterday. In order to make the river trip as much of a holiday as possible the president insisted that his stops should be entirely informal and it was announced that if it appeared that these plans were in danger of being miscarried he would

MGR. KENNEDY,
Who May Be Made Papal Secretary of State, Succeeding Cardinal Merry del Val.

ENTHUSIASM BOTTLED UP

Western Yale Men Not Allowed to Welcome Taft.

Later Demonstration is Made Up for Political Check.

Cincinnati, Ohio, April 27.—Secretary of War Taft, who is to make several public addresses in this city and in Dayton, Ohio, within the next three days, arrived here today. He declined to discuss political questions in any way and declared that he will not have, during his Western trip, anything whatever to say bearing on the presidential question.

"The engagements which I have come to fill," he said, "were made long ago, and politics has never entered into them. I shall have nothing whatever to say of a political character."

There was no committee to meet the secretary at the depot, and no demonstration of any kind. His brother, Charles P. Taft, was there alone to meet him and they were

TRIAL OF RUEF OVER TO MONDAY

Five Jurors Secured and But Six Remain in Last Venire.

San Francisco, April 27.—The trial of Abraham Ruef on the charge of extortion has been postponed until Monday morning, when the examination of a new jury venire will continue. Five jurors were passed yesterday, subject to peremptory challenge and only six names now remain in the box out of the seventy-five men on the last venire.

The grand jury yesterday afternoon delved further into the slot machine and theater graft. But two witnesses were examined—Tax Collector Nichola and President George Duffey of the board of public works. The end sought by the inquisitorial body was the determination of the amounts of money alleged to have been collected by Ruef, Schmitz and Chief Dinan, and who were their agents.

The investigation of the Home Telephone company has not been completed by the graft prosecutors. An expert in the employ of the prosecution has been in Los Angeles for more than a month looking over the accounts of the company. This expert will return to San Francisco next Tuesday to make a report to Detective Burns.

MAY DAY WILL BE MORE QUIET

Little Disturbance by Labor Organizations Expected in Germany.

Berlin, April 27.—All appearances indicate that May day this year will be observed less generally than ever in Germany. Many municipalities have forbidden street parades or other public demonstrations, and the employers' organizations, as a rule, have taken strict measures to prevent the working men from celebrating the day, using the threat of a week's dismissal, without pay, if they absent themselves. This was the means which last year brought the Hamburg stevedores to terms. The Social Democratic national committee has issued the usual proclamation, calling on the Socialists to observe the day, but the appeal is less aggressive than usual. It urges the local organizations to study the situation for themselves, and then only celebrate the day if they can do so without getting into trouble with their employers. The proclamation has been the subject of criticism on the part of the Stalwart Socialists, but the leaders in the speeches demand the moderate recommendations as being the only wise course in view of the organization's position and firm attitude of the municipalities.

THOUSANDS IN DISTRESS

Crucial Moment in the Russian Famine Has Arrived.

Scurvy and Ergotism Spreading Rapidly in Many Districts.

St. Petersburg, April 27.—Prince Lvoff, head of the zemstvo organization for famine relief, who returned here today from the famine districts, reports that the crucial moment has arrived. Scurvy is spreading widely and rapidly in Ufa province, and has appeared in the provinces of Samara, Saratov, Kazan and Tambow. Ergotism (poisoning from ergotised grain), also is widely prevalent, the inhabitants of whole villages being affected by the convulsions characteristic of the disease. The free kitchens cost $750,000 monthly, and an extension of this work is deemed necessary everywhere. In spite of the activity of the zemstvos, Red Cross and Free Economic societies, the reports show that over 100,000 persons in Samar; 236,000 in Ufa, and 78,000 in Kazan province are still in need of assistance, while the scope of the work in Saratov province should be doubled.

Prince Lvoff appeals for the speediest possible forwarding of the money collected in America, as the government crop reports present a discouraging picture of the prospects in the central famine region, where the spring sowing is restricted by the lack of seed grain. American wheat is being purchased for seed, as it is considered to be of better quality than Russian wheat.

The winter crops, except in the south of Russia, are backward, owing to the cold weather and late spring.

THREE MINERS KILLED.

One by Premature Explosion, Others by Fall of Ground.

Marquette, Mich., April 27.—(Special to The Herald.)—Three men, all Finns, were killed in Marquette county mines yesterday, one by a premature explosion, and the others by a fall of ground. The victims are: Oscar Mattson, aged 27; William Makki, aged 22; Gust Luoma, aged 33.

TWO KILLED IN WRECK.

Carmi, Ill., April 27.—The breaking of the trucks on an engine pulling a Big Four freight train caused a wreck south of here today, killing Charles Weston, brakeman, and C. A. Curran, fireman. The engineer and conductor were badly injured.

RUSSIANS MUST BATHE.

Hamburg, April 27.—The Hamburg-American Packet company issued a circular today announcing that the Prussian government had abolished the requirement that Russian immigrants be bathed and disinfected at sanitary stations after passing the frontier.

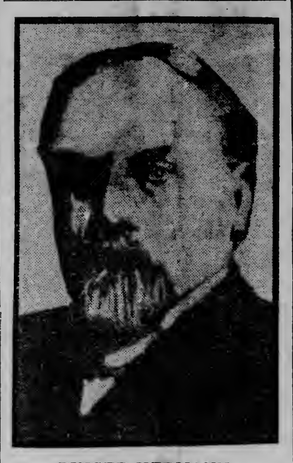
FRISCO CARMEN MAY YET STRIKE

Conference With Railroads Productive of No Results.

San Francisco, April 27.—Following the failure of a conference last night between the executive committee of the carmen's union and President Calhoun of the United Railroads over the demands presented by the carmen for an eight-hour day and $3 a day, which Calhoun refused to entertain, the labor council last night endorsed the carmen's demands and agreed to stand by them in any action the union might take. During the day the officers of the local union received the endorsement to their demands of the executive committee of the international organization, of which W. F. Mahon is president. This is taken to mean that the international body will support the local carmen in the event of a strike. The hopes of averting a strike have not yet been given up.

ROCKEFELLER TO GIVE AWAY HIS REAL ESTATE.

New York, April 27.—The World today publishes, in connection with the announcement of gifts by John D. Rockefeller of land in Chicago and Cleveland, the statement, credited to a friend of Mr. Rockefeller, that the gifts are part of a plan which Mr. Rockefeller has formed of giving away all of his real estate. These holdings, it is stated, have always worried him and his idea is to turn over nearly all of his real estate to his son and have the latter assume responsibilities of the ownership.



GOULD WINS AT TENNIS.

London, April 27.—Jay Gould won in three straight over E. B. Noel in the second round of the international lawn tennis tournament here today. Score: 6-4, 6-2, 6-3. The young American entirely outclassed his opponent.

VOLCANOES ALIVE.

Lima, Peru, April 27.—News is received from Puerto Mont, a seaport in the extreme south of Chile that the the volcanoes of Calbuco and Huque are in a state of eruption.

JURY IN HERMANN CASE BRINGS IN A VERDICT OF NOT GUILTY OF CHARGES

BINGER HERMANN,
Former Commissioner of the Land Office, Pronounced Not Guilty of Destroying Public Records, After a Long Trial.

Hard Fought Trial Comes to an End at Last.

Former Commissioner Charged With Destroying Public Records.

The Closing Arguments Between Counsel Very Strenuous.

Washington, April 27.—The jury in the case of Bingham Hermann, former commissioner of the land office, on trial for the destruction of public records, returned a verdict of not guilty shortly after 1 o'clock this afternoon.

The case went to the jury yesterday afternoon at the conclusion of the twelfth week of the trial.

The argument which was begun last week culminated in the lie being passed between opposing counsel at the close of United States District Attorney Baker's summing up yesterday. Justice Stafford administered immediately a severe reprimand, saying he should regard any further colloquy between counsel as contempt of court. The court then allowed the jury to go to luncheon, cautioning them against discussing the case, particularly because of the "brainstorm" which had been raging. He told the jury that "a calm statement of the case" would be submitted to them by the court. This charge was completed at 3:27 o'clock.

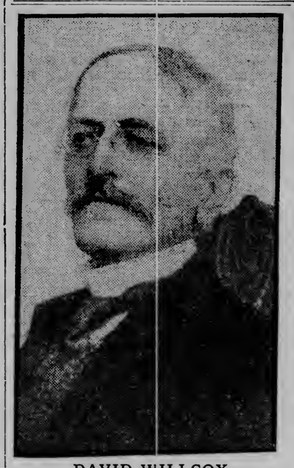
TO SUBDUE HINDOOS

Rifles and Ball Cartridges Are Served to Volunteers.

Agitators Are Fomenting Rioting Among the Natives.

La Hore, British India, April 27.—Rifles and twenty rounds of ball cartridges have been served out to the local volunteers in consequence of signs of marked unrest among the Hindoo student elements. The publication of inflammatory and seditious articles in the native newspapers, inciting race hatred against the Europeans, and demanding native control of the government of India by means of an elected parliament, has been followed recently by riots

(Continued on page 4, fourth column.)



TIED TO TRACK AND RUN OVER BY TRAIN.

Pittsburg, Pa., April 27.—Beaten into unconsciousness and laid on a railroad track where a locomotive ran over him, cutting off both legs and one arm, Frank Driska, 42 years old, an employe of the Pressed Steel Car company, is dying at the Allegheny General hospital. Driska regained consciousness long enough to tell his story of the assault after reaching the hospital. He said he had been set upon by three negroes and knew nothing more until the locomotive crushed his limbs.

BIG GOLD SHIPMENT.

London, April 27.—The British steamer Armadale Castle, which arrived at Southhampton today from Capetown, landed $5,503,350 in Cape gold, the largest consignment ever brought in a single shipment to England. The gold was transferred to London.

SPECTACULAR FIRE ON LOWER LAKE AVENUE IS VIEWED BY THOUSANDS

DAVID WILLCOX,
Former President of the Delaware & Hudson Railroad, Who Committed Suicide While Crossing the Atlantic Ocean.

Two Warehouses on Harbor Front Destroyed by Flames.

Hundreds of Tons of Hay Cause Dense Black Smoke.

Probably Started by Spark From Pipe of Workman.

Thirty-six cars of hay, nearly $2,000 worth of lubricating oil and various other kinds of merchandise contributed to make one of Duluth's most spectacular fires this morning, when both "A" and "B," Singer warehouses on Lower Lake avenue, were completely consumed, with most of their contents.

Starting from an uncertain cause, in the northeast corner of Warehouse "B," the easterly one of the pair, the blaze spread with startling rapidity, and in spite of one of the best runs in the history of the fire department, and the concerted efforts of headquarters and Nos. 2, 3 and 4, the flames were soon beyond all control, and before 1 o'clock the big storage sheds were blackened ruins.

The combination of hay and oil in Warehouse "B" produced great volumes of smoke, which rolled heavily upward, increasing as the streams of water were turned upon the blazing mass. Coming as it did just before the noon hour, the big fire caused a great deal of excitement, and over 15,000 people lined the docks and both sides of Lake avenue, and perched on every point of vantage from which the blaze could be witnessed.

There is much speculation as to the cause of the fire, but one of the men said this afternoon that he had no doubt but that it resulted from a spark from the pipe of one of the men who had been working in the hay in the building during the morning. The intensely inflammable nature of the contents strongly supports this theory, and as far as could be learned this afternoon no other had been advanced.

Warehouse "A" was burning very soon after the first big shed caught fire, the flames swirling across the narrow space between them making the nearest wall a sheet of flames. Four empty

(Continued on page 4, fifth column.)

TO TRAVEL BY BALLOON

Aeronauts to Start on Trip From St. Louis to Washington.

Expect to Reach the Capitol on Monday Morning.

St. Louis, April 27.—Two balloons, the America and the Orient, are being inflated today and, weather conditions being favorable, ascensions will be made tonight by Aeronaut J. C. McCoy of the Aero club of New York city, and Capt. Charles de F. Chandler, United States signal corps, in the America's basket, and Aeronauts Allan B. Hawley and Leo Stevens of New York in the Orient's basket.

It is the intention of Aeronaut McCoy and Capt. Chandler to ascend at 7 o'clock this evening and undertake a trip to Washington, D. C., in an endeavor to win the Lahm cup, offered by Capt. Frank Lahm, U. S. A., to the aeronaut who makes a continuous voyage covering the greatest number of miles.

Hawley and Stevens will ascend at midnight to test the air conditions in this vicinity in the interest of the balloon tournament, to be held here in October by the Aero club of America.

The America has a gas bag, fifty-three feet in diameter, and a displacement of 78,000 cubic feet. With its car and equipment the balloon weighs 2,200 pounds.

Aeronaut McCoy stated today that he expects to remain in the air tonight, Sunday and Sunday night. Under ideal conditions he expects the balloon to sail about twenty-five miles an hour. The ascension is made at this time in the month, and at night, in order to get the benefit of the full moon for the night voyage.

The Orient is a much smaller balloon than the America, and would be incapable of a long distance flight. Today is hazy and cool.

PUTTY USED FOR RIVETS

Charges That Private Concerns Do Bad Work on Warships.

Boston, April 27. — George W. Waldo of New York, the principal speaker at a mass meeting held last evening in Faneuil hall under the auspices of the National League of Employes of Navy Yards, asserted that warships built under contract by private concerns contain serious defects. He said:

"Warships built under contract by private concerns and almost immediately after their completion sent to the Brooklyn navy yard for repairs, have been found to have rivet holes plugged with wood, putty and soap, instead of iron rivets being inserted. In one instance I know of several hundred rivets supposed to have been in warships built by contractors whose workmen filled the rivet holes with putty and wood."

SATISFACTORY AGREEMENT.

Tokio April 27.—The Russo-Japanese negotiations on the fisheries question are reported to have resulted in a satisfactory agreement.

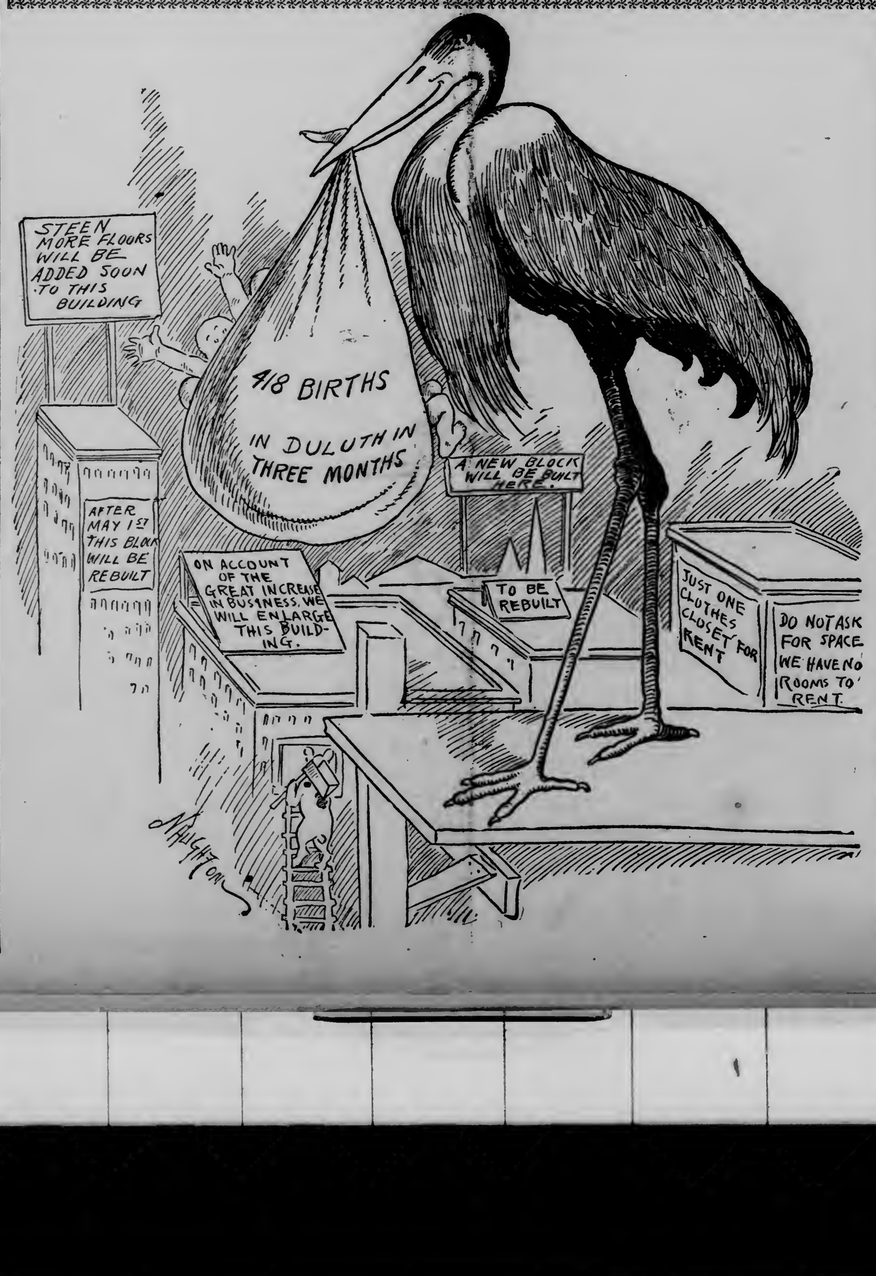
TO BUILD ELEVATOR

Dakota Men Decide to Establish a Terminal at Superior.

Would Have It Independent of Any Commission Houses.

Grand Forks, N. D., April 27.—(Special to The Herald.)—At a meeting of a joint committee of the North Dakota Bankers' association and the North Dakota branch of the American Society of Equity here, it was decided to build a terminal elevator at Superior, in order to better the grain conditions at Duluth and Minneapolis.

The same committees of the bankers' society and the equity society were continued and work was mapped out for each of them. A joint meeting of the committees will be held in Grand Forks, June 25, to report progress, and a further report will be made at the convention of the American Society of Equity in Devils Lake, June 26.



The meeting was harmonious and the members of the committees were all in favor of the building of a terminal elevator. Several plans to attain the object desired were proposed. Delegates were in favor of building a large elevator, which will be absolutely independent of commission houses and elevator companies. Matters are not yet in shape to announce all the details of the proposition.

It was stated last night that the committee members believe it advisable to keep some of the facts from the public for a time.

The following were the committee representing the bankers' association: W. F. McFadden, president of the North Dakota Bankers' association; Senator J. L. Cassell of Grafton; F. W. Cathro of Bottineau, and M. F. Murphy of Grand Forks. The Society of Equity was represented by Theodore G. Nelson of Mayville, state organizer of the order; J. W. Scott of Gilby; George N. Smith of Amenia, and M. S. Blair of Ojata. The joint committee organized by the election of Mr. Scott as president and W. C. MacFadden as secretary.

NO WONDER WE ARE HAVING A BUILDING BOOM.

NEW TARIFF SHEET OUT

Fare From Duluth to the Twin Cities Will be $3.04.

Under the new law the railroad fare between Duluth and the Twin Cities will be $3.04, instead of $4.30, as formerly. While it has been known in a general way just about what the rate would be after the end of the present month, there has been nothing definite announced as to the exact figure, up to the present time, and much curiosity has been manifested locally on this point.

The Omaha road is the first of the several entering Duluth to get out its new passenger tariff sheet, effective May 1. According to this tariff the Duluth-Twin City rate, one way, will be $3.04, with the round-trip rate just twice that amount, or $6.08. The present rate is $4.30 one way and $8 for the round trip. The new rate becomes effective "under protest," acording to the Omaha circular. The Northern Pacific and Great Northern will have the same rates to the Twin Cities as the Omaha.

The latter road could charge more than this, because its line between the two points is long enough to warrant it, on a straight 2 cents a mile basis, but competition of the other lines, which will have the lower rate, makes it necessary to have the $3.04 rate effective. The same rate applies to Clear Lake and all points between Clear Lake and the Twin Cities. Clear Lake is 63 miles this side of Minneapolis.

OFFICIALS IN THE CITY

Party Looking Into Local Needs of Northern Pacific.

A party of Northern Pacific officials, headed by General Manager H. J. Horn, is in the city today looking over the local terminals, and investigating the needs of Duluth in the improvement line. They were in Superior yesterday, and may remain at the Head of the Lakes until tomorrow, for the Northern Pacific has much new work in prospect for the two cities this year.

"Yes, we expect to make extensive improvements at the Head of the Lakes this summer," said Mr. Horn. "Business has increased to such an extent that yard facilities in Duluth and Superior are entirely inadequate to meet the demands made upon them, and in order to meet the increasing demands we will have to expand. We have nothing definite to say regarding contemplated improvements as yet, but the details will be settled shortly."

The party, which came to the Head of the Lakes in two special cars, is made up as follows: General Manager H. J. Horn, General Superintendent F. W. Gilbert, Assistant General Superintendent Newton Cline, and Engineer of Maintenance of Way W. C. Smith, all of St. Paul. Supt. E. C. Blanchard of Duluth is also with the party on its tour of inspection of Head of the Lakes properties. Most of the day was spent in the Rice's Point yards, where some improvements are now under way.

It has been understood all along that the Northern Pacific would expend hundreds of thousands of dollars in improvements in Duluth and Superior this year. The main yards of the road at the Head of the Lakes are in Duluth, and most of the money spent in improvements will be expended on this side of the bay. The road was greatly cramped for room in the local yards last winter and fall, and the need of better facilities for handling cars at this terminal is very urgent, and will receive immediate attention.

One of the most extensive improvements contemplated, which The Herald has previously referred to, is the reconstruction of the Northern Pacific bridge, between Rice's Point and Superior. The bridge will be double tracked, and the draws, both on the Wisconsin and Minnesota side of the harbor, will be widened.

PRESIDENT OF N. P.

Rumored That J. F. Stevens Will Succeed Howard Elliott.

New York, April 27.—An apparently well authenticated rumor on Wall street today is that John F. Stevens, for nearly two years chief engineer of the Panama canal, is to become president of the Northern Pacific railway, succeeding Howard Elliott. Eastern newspaper railroad gossip has agreed that Mr. Stevens would soon return to railroad work, but it has been generally supposed and accepted that he was to go with the Pennsylvania system.

It now appears that he cast his lot with the New Haven & Hartford railroad for the next ninety days, when he will come to the Twin Cities to take charge of the Northern Pacific. It is to be presumed that this story will be vigorously denied, but the source of information is such that considerable credit is given it on the street today.

John F. Stevens was assistant engineer of the city of Minneapolis from 1874 to 1876. He then entered the railroad world as chief engineer of the Sabine Pass & Northwestern railway, which position he retained for two years. He then entered the employ of the Denver & Rio Grande as assistant engineer and remained with this company until 1880, when he went to the Chicago, Milwaukee & St. Paul in the same capacity. From 1882 to 1886 he was division engineer of the Canadian Pacific, returning to the Milwaukee, and later, transferring his services to the Duluth, South Shore & Atlantic and the Spokane Falls & Northern railway, in the order named. Of the latter system he soon became chief engineer and from that was made general manager, which position he retained until 1903.

Following this, he joined the force of the Great Northern as chief engineer, but, later, was called to the Chicago, Rock Island & Pacific as second vice president. In 1905 he was made chief engineer of the Panama canal, which position he retained up until his resignation a few months ago. His home is in Chicago.

SUCCESSFUL MEETING.

Northern Railway Club Hears Very Interesting Discussion.

The Northern Railway club had one of the most successful meetings in its history last night. It was held at the Commercial club, and close on to 175 men were inattendance, and all of them were actively interested in railroading in one department or another. The attendance was even larger than was expected, and was so large that all the chairs available were occupied, and the late comers had to be content with the radiators and the floor for seating space.

F. B. Farmer of the Westinghouse Air Brake company, whose paper on "Adequate Air Supply" was read at the last meeting, was present to take part in a discussion on the paper. Much interest was shown in the subject, and so many questions were asked Mr. Farmer that he was kept on his feet almost continuously for an hour and one-half answering them.

One of the best papers ever read at a Northern Railway club meeting was read last night by James R. Stack of the Great Northern railroad. His subject was "Creosote and the Processes of Treating Railroad Ties and Structural Timber." Mr. Stack showed remarkable knowledge of detail, and covered the ground thoroughly from 100 years ago to the present time. Because of the lateness of the hour a discussion on the paper, and the reading of other papers that had been prepared, was postponed until the next meeting.

FORMAL ORDER GRANTED.

Grand Rapids, Mich., April 27.—Judge Knappen in the United States court today made a formal order granting the temporary injunction restraining the Calumet & Hecla Copper company from voting stock which it holds in the Osceola mine. The order was purely formal, the decision which it promulgates having been announced two weeks ago.

FALLS DOWN ELEVATOR SHAFT.

Peoria, Ill., April 27.—Mrs. Chester of Chicago, grand secretary of the Illinois order of the Eastern Star fell down an elevator shaft at the Mayer hotel and was killed.

DR. HOAG.

Dr. Hoag will be in Superior, Wis., at Hotel Superior, Wednesday, May 8th, 1907; office hours from 11 a. m. to 9 p. m., and in Ashland at the Commercial house, Thursday, May 9th, 1907, where he can be consulted privately and free of charge.

THE SUCCESSFUL CHICAGO SPECIALIST.

Cures all affections of the Nose, Throat, Lungs, Stomach, Liver, Kidneys and Bladder, together with all Nervous derangements, and this reflex action upon the system; all affections of the Brain and Spinal Cord, Blood Impurities and taints, Skin Diseases, Rectal Diseases, Stubborn, unyielding cases of long standing, chronic in nature which refuse to yield to all other methods of treatment.

DISEASES OF MEN.

Those secret ailments, peculiar to the sex, including Varicocele, Hydrocele, Nervous Debility, Errors of Youth, and their baneful results, Infectious Diseases and all Blood Taints and Skin Eruptions of every nature he cures in less time than by any other treatment.

CONSULTATION FREE.

Address for home treatment, Dr. Chas. A. Hoag, 6362 Minerva Ave., Chicago, Ill.

STEADY AT THE CLOSE

The Copper Stock Market Is Quiet But Firmer.

Trading in Important Unlisted Shares Is Fairly Good.

Listed copper stocks were quiet today but there was some trading in the more important unlisted shares. The Boston list closed a trifle higher than yesterday and the general tone of the entire market seemed steadier at the close.

North Butte opened at $86.25, declined to $86 and closed at $86.50 bid and $87 asked. Amalgamated opened at $93.12½, declined to $92.87½, rallied to $93.75 and closed at $93.75 bid. Butte Coalition opened at $26.87½ and closed at $27 bid and $27.25 asked. Calumet & Arizona opened at $168.50, declined to $168.12½ and closed at $168 bid and $168.50 asked.

Greene-Cananea sold at $16.50, advanced to $16.87½ and closed at $16.50 bid and $16.75 asked.

Superior & Pittsburg sold at $18.50, advanced to $18.75 and closed at $18.50 bid and $18.75 asked. Keweenaw sold at $10.25 and closed at $10 bid and $10.25 asked, Denn-Arizona at $9.75 and $10 and closed at $9.62½ bid and $9.87½ asked, Warren sold at $8 and closed at $8 bid and $8.25 asked and Copper Queen of Idaho at $1.50 and closed at $1.59 bid and $1.62½ asked.

Hancock was inactive and closed at $8.50 bid and $9 asked, Globe Consolidated at $13.50 and closed at $13.75 asked, Calumet & Sonora at $20 asked, Calumet & Montana at $1.12½ bid and Cliff at $3.75 bid and $4 asked. Butte & Superior was $3.25 bid and $3.75 asked. Black Mountain sold at $5.87½ and closed at $5.75 bid and $6 asked.

• • •

A telegram received this morning by Jerome E. Cooley of the Calumet & Sonora Mining company, from J. W. Norton, the general manager, states that the latter has just completed the purchase of some 100 acres of land adjoining the Calumet & Sonora property.

The telegram does not go into details, merely stating that taxes on the land had been allowed to lapse and Mr. Norton was able to pick it up at a reasonable figure.

• • •

I. Freimuth returned this morning from Butte, where he was inspecting the properties of the Butte & Superior and Butte-Ballaklava Mining companies.

"The properties are looking fine," said Mr. Freimuth, when asked regarding their condition. "The Butte & Superior is now through the soft ground, and in the granite, being down 650 feet. On the 500-foot drift in the Four John claim, they are in vein matter. They are not mining yet and the work is merely development work, but the property is looking better than it ever did before, and I am much pleased with it.

"On the Butte-Ballaklava property they are grading for the building and the road."

The two properties are within half a mile of each other. Mr. Freimuth is heavily interested in both of them, having been largely intrumental in promoting them. The Butte-Ballaklava is a new property, the company just recently been floated.

Happenings at the Business University

Located at 105-7 West Superior Street—Third Floor.

The following young people left the college during the past week to accept the following positions:

Miss Charlotte Reitan, stenographer for John Brown, Attorney.

J. McDonald, bookkeeper for Works Biscuit Co.

Charles Johnson and E. T. Ove, bookkeepers for the Oliver Iron Mining company.

George Stafford, bookkeeper for D. R. Black & Co.

Lawrence Ames, bookkeeper for Contractor John F. Schleunes.

Miss Clare Collier, stenographer for Jacques & Hudson.

Miss Lulu Forsyth, stenographer for County Attorney, Grand Rapids, Minn.

Wednesday, May 1st, will be an excellent date to begin, as new classes will then be organized.

As a great many applications have been received during the past week for experienced help, if any D. B. U. graduates are out of employment, we advise them to register at the college at once.

CITY BRIEFS

Contributed Good Sum.

The contributions of the Duluth public toward the fund for the famine sufferers of China, has amounted to $153.25. This amount has been forwarded to the Christian Herald and the money will thus reach the sufferers in the most expeditious manner. The collections in Duluth were made through the efforts of Mrs. M. J. Kreidler, deaconess for the Duluth district, and Mrs. Kreidler is most grateful for the generous response with which the call has been met, and wishes to extend her thanks to the contributors.

Altar Guild Meets.

The members of the Altar Guild of St. Luke's church entertained last evening at the parlors of the church at the regular monthly social. The affair was entirely in charge of the young members of the society, who planned the program of musical numbers and recitations and prepared the dainty refreshments which were served. The evening was enjoyed by a large number of guests.

Meeting for Boys.

The older boys at the boys' department will resume its Sunday club meetings tomorrow at 4 o'clock. Charles W. Seymour will give his interesting lecture "Herod, King of the Jews." All boys over 14 years are invited. The meeting will begin promptly at 4 o'clock and will be followed by a lunch for those who care to remain.

Sweet Pea Seed

In bulk. Varied varieties, 5c per oz. Just half usual prices. Seekins.

Judgment Is Entered.

There was filed with the clerk of the district court today, the decision of Judge Dibell in the case of the Adriatic Mining company vs. Clymena Bell Sweet, et al. The case was heard Thursday in district court, without a jury, Davis & Hollister and Oscar Mitchell, of counsel, appearing for the plaintiff, and Grant & Sullivan for the defendants, Fred Sweet, Clymena Bell Sweet and Charles N. Clark, trustee for Perley D. Tower. The court finds that the plaintiff is the owner of the w½ of the ne¼ of section 30, township 59 north, range 14 west of Fourth Principal Meridian in St. Louis county, and that the defendants and all others claiming title have no claims under law.

Remodel Building.

A permit was granted today by Building Inspector S. M. Kelley for alteration and repairs to the building at present occupied by the Eagle Clothing company, on the north side of Superior street, between Third and Fourth avenues west, to cost in the neighborhood of $10,000, with a view to converting the place into a restaurant. The contract has been let to Theodore Nauffts. Besides extensive repairs to the present building a roomy addition will be built on to the rear.

Called to Milwaukee.

Frank Fisher, president of the local union of electrical workers, has been called to Milwaukee in connection with the strike of railroad linemen.

Danish Actor Here.

Charles Zangenberg, the well known actor from the Royal theater of Copenhagen, will be seen tomorrow evening at Flaaten's auditorium in songs and dramatic interpretations.

Y. W. C. A. Vesper Service.

Mrs. F. H. Barnard will speak at the Y. W. C. A. vesper service Sunday afternoon at 4 o'clock.

Goes Over to Monday.

The condemnation proceedings of the Wisconsin Central Railroad company against the property on Seventh and Eighth avenues west between Michigan and Superior streets was docketed for the special term of the district court today, but it went over to Monday afternoon, when it will be taken up before one of the judges. It is thought the acceptance of the franchise will be filed by that time.

Mother Dies Also.

Frank D. Day left today for Seattle, word having been received of the death of his mother in that city. Mr. Day will bring the remains back to Austin, Minn., where interment will take place. Mr. Day's father died only a few weeks ago and he but recently returned from the funeral.

Marriage License Issued.

A marriage license was issued at the county clerk's office today to John Herbert Schilling of Eau Claire, Wis., and Lillie Alice Cott of Tremble, Wis.

Funeral of Elizabeth Fay.

The funeral of Elizabeth Fay, who died on April 26, will be held Monday morning at 8:30 o'clock from the residence of her daughter, Mrs. Joan Flynn, 619 East Third street. From the residence the remains will be taken to the Sacred Heart Cathedral, where a service will be held. The remains will be buried at Calvary cemetery.

Complaint Is Attacked.

The case of Joseph Grande against Chief Caauncey H. Troyer of the Duluth police for alleged injuries through wrongful imprisonment, was given a severe setback this morning at the special term of the district court, when on motion of Bert Fesler, attorney for Troyer, certain parts of Grande's complaint were stricken out. The portions stricken out are all those referring to the arrest of Grande and the alleged wrongful actions of Chief Troyer and the granting of the motion will necessitate the filing of an entirely new complaint, if Grande wishes to push the case. Grande is suing Chief Troyer for $5,000 for alleged injuries by imprisonment, which he claims was unlawful.

Cyrus V. Maron Dead.

Cyrus V. Maron died at St. Mary's hospital this morning at 5 o'clock of rheumatism of the heart. He was 30 years of age and unmarried. He leaves three sisters and one brother, the latter being stationed in the Philippines. The funeral will be held Monday at 9 a. m. from 309 West Third street, and at 9:30 from the cathedral. He was a member of division No. 1 of the A. O. H. and his brother members will have charge of the services.

Alkaline—Antiseptic—Makes the gums strong and healthy, gives the teeth a pearly lustre, purifies the breath. What more could you ask of SOZODONT? Do not experiment with dentifrices. The teeth will not stand it.

Stand by SOZODONT and the teeth will stand by you.

Hair Dressing, Switches, Facial Massage, Shampooing. Scott's parlors, 17 E. Sup. St. Manicuring 25c. Zenith, 1241.

PERSONALS

J. O. Currie is visiting his ister, Mrs. George T. Miller, 619 West Second street. Mr. Currie is an old Duluth resident.

A. M. Fenton and family left for Eau Claire, Wis., yesterday.

J. H. Mahon left for Green Bay, Wis., yesterday.

Miss Anna DeNeffe of Saginaw, Mich., is registered at the Spalding.

Mrs. H. L. Lindsay of Eveleth, Minn., is a guest at the Spalding.

Miss Anna Carlson of Baraga, Minn., is a guest at the Spalding.

F. W. EATON IS NO MORE

Old Time Duluthian Passes Away at Fond du Lac.

Was at One Time Member of City Council.

Frank W. Eaton died shortly before 3 o'clock this afternoon at Fond du Lac.

Mr. Eaton was a very old resident of Duluth, and was at one time a member of the city council. He had lived in Duluth about thirty-four years, and was prominently connected with the famous Section 30 case.

Mr. Eaton leaves a wife and seven children, three girls and four boys. The girls are Pauline, Susie and Gertrude, and the sons, Grover, Frank, Willis and James.

He was 57 years of age at the time of his death. The family had moved to Fond du Lac but a few days ago, intending to spend the summer there. He was in good health when he left Duluth, and his death is a surprise to his friends in the city.

THE Y. W. C. A. BULLETIN

"We believe," said Mrs. Wesley Feetham, secretary of the local Young Women's Christian association, today in speaking of the prospects of the building fund reaching $130,000 by May 1. She said it emphatically and those two words describe best the optimism that marks the attitude of those most vitally interested in the campaign now being waged.

The report at 3 o'clock today was as follows:

Red—Charlotte Robinson	$2,078.93
Blue—Carrie Russell	3,073.66
Yellow—Alice Drew	2,327.76
Pink—Elsie Lock	1,406.16
Lavender—L. L. Garvin	1,610.25
Green—Augusta Ehling	991.45
Women's committees	10,414.40
Men's committees	67,083.50
Total	$88,986.11

There is no want ad. printed in The Herald to-day which does not strongly interest at least ten people—and there are some that will strongly interest thousands.

FILES CROSS SUIT.

Woman Answers Her Husband's Suit With Startling Accusations.

Muskegon, Mich., April 27.—Mrs. Gladys Manson Thayer of Chicago, well known in North Shore society circles, and a descendant of Daniel Boone, has filed in the Muskegon county circuit court her answer and cross-bill to the suit for divorce that her husband of five months, John E. Thayer, the Muskegon banker, instituted some time ago.

Mrs. Thayer denies every allegation made by the complainant, and in her cross-bill makes accusations that would shock the ordinary mind. She alleges that three weeks after their marriage her husband made to her a shameful proposition, and that once again, late in the month of January, he repeated his request. She also alleges inhuman treatment in other ways, such as being forced to carry coal and food and shovel snow in the dead of winter. She wants absolute divorce and alimony.

INFERNAL MACHINE.

Toledo, Ohio, April 27.—Great excitement prevails in the local postoffice as the result of the discovery of an infernal machine in the private drawer of Inspector Hennen. It is said that a few days ago Hennen discovered the mysterious box and turned it over to secret service officers.

MME. EAMES DIVORCED.

New York, April 27.—It became known today that Supreme Court Justice Tompkins had confirmed the report of Frank M. Buck, the referee in the matter of the application of Mrs. Emma Eames-Story for an absolute divorce from her husband, Julian Story. An interlocutory decree has been granted by which Mrs. Story is given the right to resume her maiden name and to remarry, if she so desires. Mr. Story is forbidden to remarry during the lifetime of Mrs. Story.

SIX KILLED.

Baltimore, April 27.—A new pier under construction at Locust Point, South Baltimore, collapsed today, carrying down about a score of workmen. Six bodies have been recovered. Two men are missing and fifteen were injured.

FATAL EXPLOSION.

O'Fallon, Mo., April 27.—While a freight engine on the Wabash railroad drawing a caboose was running rapidly near here today the boiler of the engine exploded, killing three trainmen and injuring two others.

SAFEBLOWER CAPTURED.

Chicago, April 27.—Edward Tate, known as the "Gentleman burglar," who escaped from St. Francis hospital in Peoria, Ill., was arrested here today.

"There's a Reason"

WOMEN'S WOES

Duluth Women Are Finding Relief at Last.

It does seem that women have more than a fair share of aches and pains that afflict humanity; they must "keep up," must attend to duties in spite of constantly aching backs, or headaches, dizzy spells, bearing down pains; they must stoop over, when to stoop means torture. They must walk and bend and work with racking pains and many aches from kidney ills. Kidneys cause more suffering than an other organ of the body. Keep the kidneys well and health is easily maintained. Read of a remedy for kidneys only that helps and cures the kidneys and is endorsed by people you know.

Mrs. Letitie Cole of 467 Mesaba avenue, Duluth, Minn., says: "I am pleased to repeat what I have said again and again recommending Doan's Kidney Pills. Five or six years ago, when suffering from disorders of the kidneys which had become aggravated by over-exertion and severe colds, I looked about in vain for a long time for relief, trying many different remedies which were recommended to me, but not until I got Doan's Kidney Pills did I find the long-sought for benefit. The first dose or two helped me, and I continued taking them until the heavy, aching through my back and kidneys was gone, and the kidney secretions had become natural. The treatment improved my health in every way, and the results have been permanent."

For sale by all dealers. Price 50 cents. Foster-Milburn Co., Buffalo, New York, sole agents for the United States.

Remember the name—Doan's—and take no other.

Moose Brand Bottled Beer.

Public taste as regards the use of Beer has undergone a change in the past decade. The family cask, so common a few years ago, is rapidly becoming a thing of the past, the bottled product having almost entirely replaced it.

At the same time the alcoholic strength of **Moose Brand Beer** has been reduced by about one-half, to satisfy the public requirement for a light drink. Our modern brewing methods have made it possible to thus reduce the alcohol in the Beer, it no longer being needed as a preservative.

Have us send you around a case of **Moose Brand Beer?**

RAILROADS

NEW TARIFF SHEET OUT

Fare From Duluth to the Twin Cities Will be $3.04.

Under the new law the railroad fare between Duluth and the Twin Cities will be $3.04, instead of $4.30, as formerly. While it has been known in a general way just about what the rate would be after the end of the present month, there has been nothing definite announced as to the exact figure, up to the present time, and much curiosity has been manifested locally on this point.

The Omaha road is the first of the several entering Duluth to get out its new passenger tariff sheet, effective May 1. According to this tariff the Duluth-Twin City rate, one way, will be $3.04, with the round-trip rate just twice that amount, or $6.08. The present rate is $4.30 one way and $8 for the round trip. The new rate becomes effective "under protest," acording to the Omaha circular. The Northern Pacific and Great Northern will have the same rates to the Twin Cities as the Omaha.

The latter road could charge more than this, because its line between the two points is long enough to warrant it, on a straight 2 cents a mile basis, but competition of the other lines, which will have the lower rate, makes it necessary to have the $3.04 rate effective. The same rate applies to Clear Lake and all points between Clear Lake and the Twin Cities. Clear Lake is 63 miles this side of Minneapolis.

OFFICIALS IN THE CITY

Party Looking Into Local Needs of Northern Pacific.

A party of Northern Pacific officials, headed by General Manager H. J. Horn, is in the city today looking over the local terminals, and investigating the needs of Duluth in the improvement line. They were in Superior yesterday, and may remain at the Head of the Lakes until tomorrow, for the Northern Pacific has much new work in prospect for the two cities this year.

"Yes, we expect to make extensive improvements at the Head of the Lakes this summer," said Mr. Horn. "Business has increased to such an extent that yard facilities in Duluth and Superior are entirely inadequate to meet the demands made upon them, and in order to meet the increasing demands we will have to expand. We have nothing definite to say regarding contemplated improvements as yet, but the details will be settled shortly."

The party, which came to the Head of the Lakes in two special cars, is made up as follows: General Manager H. J. Horn, General Superintendent F. W. Gilbert, Assistant General Superintendent Newton Cline, and Engineer of Maintenance of Way W. C. Smith, all of St. Paul. Supt. E. C. Blanchard of Duluth is also with the party on its tour of inspection of Head of the Lakes properties. Most of the day was spent in the Rice's Point yards, where some improvements are now under way.

It has been understood all along that the Northern Pacific would expend hundreds of thousands of dollars in improvements in Duluth and Superior this year. The main yards of the road at the Head of the Lakes are in Duluth, and most of the money spent in improvements will be expended on this side of the bay. The road was greatly cramped for room in the local yards last winter and fall, and the need of better facilities for handling cars at this terminal is very urgent, and will receive immediate attention.

One of the most extensive improvements contemplated, which The Herald has previously referred to, is the reconstruction of the Northern Pacific bridge, between Rice's Point and Superior. The bridge will be double tracked, and the draws, both on the Wisconsin and Minnesota side of the harbor, will be widened.

PRESIDENT OF N. P.

Rumored That J. F. Stevens Will Succeed Howard Elliott.

New York, April 27.—An apparently well authenticated rumor on Wall street today is that John F. Stevens, for nearly two years chief engineer of the Panama canal, is to become president of the Northern Pacific railway, succeeding Howard Elliott. Eastern newspaper railroad gossip has agreed that Mr. Stevens would soon return to railroad work, but it has been generally supposed and accepted that he was to go with the Pennsylvania system.

It now appears that he cast his lot with the New Haven & Hartford railroad for the next ninety days, when he will come to the Twin Cities to take charge of the Northern Pacific. It is to be presumed that this story will be vigorously denied, but the source of information is such that considerable credit is given it on the street today.

John F. Stevens was assistant engineer of the city of Minneapolis from 1874 to 1876. He then entered the railroad world as chief engineer of the Sabine Pass & Northwestern railway, which position he retained for two years. He then entered the employ of the Denver & Rio Grande as assistant engineer and remained with this company until 1880, when he went to the Chicago, Milwaukee & St. Paul in the same capacity. From 1882 to 1886 he was division engineer of the Canadian Pacific, returning to the Milwaukee, and later, transferring his services to the Duluth, South Shore & Atlantic and the Spokane Falls & Northern railway, in the order named. Of the latter system he soon became chief engineer and from that was made general manager, which position he retained until 1903.

Following this, he joined the force of the Great Northern as chief engineer, but, later, was called to the Chicago, Rock Island & Pacific as second vice president. In 1905 he was made chief engineer of the Panama canal, which position he retained up until his resignation a few months ago. His home is in Chicago.

SUCCESSFUL MEETING.

Northern Railway Club Hears Very Interesting Discussion.

The Northern Railway club had one of the most successful meetings in its history last night. It was held at the Commercial club, and close on to 175 men were inattendance, and all of them were actively interested in railroading in one department or another. The attendance was even larger than was expected, and was so large that all the chairs available were occupied, and the late comers had to be content with the radiators and the floor for seating space.

F. B. Farmer of the Westinghouse Air Brake company, whose paper on "Adequate Air Supply" was read at the last meeting, was present to take part in a discussion on the paper. Much interest was shown in the subject, and so many questions were asked Mr. Farmer that he was kept on his feet almost continuously for an hour and one-half answering them.

One of the best papers ever read at a Northern Railway club meeting was read last night by James R. Stack of the Great Northern railroad. His subject was "Creosote and the Processes of Treating Railroad Ties and Structural Timber." Mr. Stack showed remarkable knowledge of detail, and covered the ground thoroughly from 100 years ago to the present time. Because of the lateness of the hour a discussion on the paper, and the reading of other papers that had been prepared, was postponed until the next meeting.

FORMAL ORDER GRANTED.

Grand Rapids, Mich., April 27.—Judge Knappen in the United States court today made a formal order granting the temporary injunction restraining the Calumet & Hecla Copper company from voting stock which it holds in the Osceola mine. The order was purely formal, the decision which it promulgates having been announced two weeks ago.

FALLS DOWN ELEVATOR SHAFT.

Peoria, Ill., April 27.—Mrs. Chester of Chicago, grand secretary of the Illinois order of the Eastern Star fell down an elevator shaft at the Mayer hotel and was killed.

DR. HOAG.

Dr. Hoag will be in Superior, Wis., at Hotel Superior, Wednesday, May 8th, 1907; office hours from 11 a. m. to 9 p. m., and in Ashland at the Commercial house, Thursday, May 9th, 1907, where he can be consulted privately and free of charge.

THE SUCCESSFUL CHICAGO SPECIALIST.

Cures all affections of the Nose, Throat, Lungs, Stomach, Liver, Kidneys and Bladder, together with all Nervous derangements, and this reflex action upon the system; all affections of the Brain and Spinal Cord, Blood Impurities and taints, Skin Diseases, Rectal Diseases, Stubborn, unyielding cases of long standing, chronic in nature which refuse to yield to all other methods of treatment.

DISEASES OF MEN.

Those secret ailments, peculiar to the sex, including Varicocele, Hydrocele, Nervous Debility, Errors of Youth, and their baneful results, Infectious Diseases and all Blood Taints and Skin Eruptions of every nature he cures in less time than by any other treatment.

CONSULTATION FREE.

Address for home treatment, Dr. Chas. A. Hoag, 6362 Minerva Ave., Chicago, Ill.

STEADY AT THE CLOSE

The Copper Stock Market is Quiet But Firmer.

Trading in Important Unlisted Shares is Fairly Good.

Listed copper stocks were quiet today but there was some trading in the more important unlisted shares. The Boston list closed a trifle higher than yesterday and the general tone of the entire market seemed steadier at the close.

North Butte opened at $86.25, declined to $86 and closed at $86.50 bid and $87 asked. Amalgamated opened at $93.12½, declined to $92.87½, rallied to $93.75 and closed at $93.75 bid. Butte Coalition opened at $26.87½ and closed at $27 bid and $27.25 asked. Calumet & Arizona opened at $168.50, declined to $168.12½ and closed at $168 bid and $168.50 asked.

Greene-Cananea sold at $16.50, advanced to $16.87½ and closed at $16.50 bid and $16.75 asked.

Superior & Pittsburg sold at $18.59, advanced to $18.75 and closed at $18.50 bid and $18.75 asked. Keweenaw sold at $10.25 and closed at $10 bid and $10.25 asked, Denn-Arizona at $9.75 and $10 and closed at $9.62½ bid and $9.87½ asked. Warren sold at $8 and closed at $8 bid and $8.25 asked and Copper Queen of Idaho at $1.50 and closed at $1.50 bid and $1.62½ asked.

Hancock was inactive and closed at $8.50 bid and $9 asked, Globe Consolidated at $13.50 and closed at $13.75 asked, Calumet & Sonora at $20 asked, Calumet & Montana at $1.12½ bid and Cliff at $3.75 bid and $4 asked. Butte & Superior was $3.25 bid and $3.75 asked.

Black Mountain sold at $5.87½ and closed at $5.75 bid and $6 asked.

A telegram received this morning by Jerome E. Cooley of the Calumet & Sonora Mining company, from J. W. Norton, the general manager, states that the latter has just completed the purchase of some 100 acres of land adjoining the Calumet & Sonora property.

The telegram does not go into details, merely stating that taxes on the land had been allowed to lapse and Mr. Norton was able to pick it up at a reasonable figure.

* * *

I. Freimuth returned this morning from Butte, where he was inspecting the properties of the Butte & Superior and Butte-Ballaklava Mining companies.

"The properties are looking fine," said Mr. Freimuth, when asked regarding their condition. "The Butte & Superior is now through the soft ground, and in the granite, being down 650 feet. On the 500-foot drift in the Four John claim, they are in vein matter. They are not mining yet and the work is merely development work, but the property is looking better than it ever did before, and I am much pleased with it.

"On the Butte-Ballaklava property they are grading for the building and the road."

The two properties are within half a mile of each other. Mr. Freimuth is heavily interested in both of them, having been largely intrumental in promoting them. The Butte-Ballaklava is a new property, the company just recently been floated.

CITY BRIEFS

Contributed Good Sum.

The contributions of the Duluth public toward the fund for the famine sufferers of China, has amounted to $153.25. This amount has been forwarded to the Christian Herald and the money will thus reach the sufferers in the most expeditious manner. The collections in Duluth were made through the efforts of Mrs. M. J. Kreidler, deaconess for the Duluth district, and Mrs. Kreidler is most grateful for the generous response with which the call has been met, and wishes to extend her thanks to the contributors.

Altar Guild Meets.

The members of the Altar Guild of St. Luke's church entertained last evening at the parlors of the church at the regular monthly social. The affair was entirely in charge of the young members of the society, who planned the program of musical numbers and recitations and prepared the dainty refreshments which were served. The evening was enjoyed by a large number of guests.

Meeting for Boys.

The older boys at the boys' department will resume its Sunday club meetings tomorrow at 4 o'clock. Charles W. Seymour will give his interesting lecture "Herod, King of the Jews." All boys over 14 years are invited. The meeting will begin promptly at 4 o'clock and will be followed by a lunch for those who care to remain.

Sweet Pea Seed
In bulk. Varied varieties, 5c per oz. Just half usual prices. Seekins.

Judgment Is Entered.

There was filed with the clerk of the district court today, the decision of Judge Dibell in the case of the Adriatic Mining company vs. Clymena Bell Sweet, et al. The case was heard Thursday in district court, without a jury, Davis & Hollister and Oscar Mitchell, of counsel, appearing for the plaintiff, and Grant & Sullivan for the defendants, Fred Sweet, Clymena Bell Sweet and Charles N. Clark, trustee for Perley D. Tower. The court finds that the plaintiff is the owner of the w½ of the ne¼ of section 30, township 59 north, range 14 west of Fourth Principal Meridian in St. Louis county, and that the defendants and all others claiming title have no claims under law.

Remodel Building.

A permit was granted today by Building Inspector S. M. Keilley for alteration and repairs to the building at present occupied by the Eagle Clothing company, on the north side of Superior street, between Third and Fourth avenues west, to cost in the neighborhood of $10,000, with a view to converting the place into a restaurant. The contract has been let to Theodore Nauffts. Besides extensive repairs to the present building a roomy addition will be built on to the rear.

Called to Milwaukee.

Frank Fisher, president of the local union of electrical workers, has been called to Milwaukee in connection with the strike of railroad linemen.

Danish Actor Here.

Charles Zangenberg, the well known actor from the Royal theater of Copenhagen, will be seen tomorrow evening at Flaaten's auditorium in songs and dramatic interpretations.

Y. W. C. A. Vesper Service.

Mrs. F. H. Barnard will speak at the Y. W. C. A. vesper service Sunday afternoon at 4 o'clock.

Goes Over to Monday.

The condemnation proceedings of the Wisconsin Central Railroad company against the property on Seventh and Eighth avenues west between Michigan and Superior streets was docketed for the special term of the district court today, but it went over to Monday afternoon, when it will be taken up before one of the judges. It is thought the acceptance of the franchise will be filed by that time.

Mother Dies Also.

Frank D. Day left today for Seattle, word having been received of the death of his mother in that city. Mr. Day will bring the remains back to Austin, Minn., where interment will take place. Mr. Day's father died only a few weeks ago and he but recently returned from the funeral.

Marriage License Issued.

A marriage license was issued at the county clerk's office today to John Herbert Schilling of Eau Claire, Wis., and Lillie Alice Cott of Tremble, Wis.

Funeral of Elizabeth Fay.

The funeral of Elizabeth Fay, who died on April 26, will be held Monday morning at 8:30 o'clock from the residence of her daughter, Mrs. Joan Flynn, 619 East Third street. From the residence the remains will be taken to the Sacred Heart Cathedral, where a service will be held. The remains will be buried at Calvary cemetery.

Complaint Is Attacked.

The case of Joseph Grande against Chief Chauncey H. Troyer of the Duluth police for alleged injuries through wrongful imprisonment, was given a severe setback this morning at the special term of the district court, when on motion of Bert Fesler, attorney for Troyer, certain parts of Grande's complaint were stricken out. The portions stricken out are all those referring to the arrest of Grande and the alleged wrongful actions of Chief Troyer and the granting of the motion will necessitate the filing of an entirely new complaint, if Grande wishes to push the case. Grande is suing Chief Troyer for $5,000 for alleged injuries by imprisonment, which he claims was unlawful.

Cyrus V. Maron Dead.

Cyrus V. Maron died at St. Mary's hospital this morning at 5 o'clock of rheumatism of the heart. He was 30 years of age and unmarried. He leaves three sisters and one brother, the latter being stationed in the Philippines. The funeral will be held Monday at 9 a. m. from 309 West Third street, and at 9:30 from the cathedral. He was a member of division No. 1 of the A. O. H. and his brother members will have charge of the services.

Happenings at the Business University
Located at 105-7 West Superior Street—Third Floor.

The following young people left the college during the past week to accept the following positions:
Miss Charlotte Reitan, stenographer for John Brown, Attorney.
J. McDonald, bookkeeper for Works Biscuit Co.
Charles Johnson and E. T. Ove, bookkeepers for the Oliver Iron Mining company.
George Stafford, bookkeeper for D. R. Black & Co.
Lawrence Ames, bookkeeper for Contractor John F. Schleunes.
Miss Clare Collier, stenographer for Jacques & Hudson.
Miss Lulu Forsyth, stenographer for County Attorney, Grand Rapids, Minn.
Wednesday, May 1st, will be an excellent date to begin, as new classes will then be organized.
As a great many applications have been received during the past week for experienced help, if any D. B. U. graduates are out of employment, we advise them to register at the college at once.

Alkaline—Antiseptic—Makes the gums strong and healthy, gives the teeth a pearly lustre, purifies the breath. What more could you ask of SOZODONT? Do not experiment with dentifrices. The teeth will not stand it.
Stand by SOZODONT and the teeth will stand by you.

PERSONALS

J. O. Currie is visiting his ister, Mrs. George T. Miller, 619 West Second street. Mr. Currie is an old Duluth resident.

A. M. Fenton and family left for Eau Claire, Wis., yesterday.

J. H. Mahon left for Green Bay, Wis., yesterday.

Miss Anna DeNoffe of Saginaw, Mich., is registered at the Spalding.

Mrs. H. L. Lindsay of Eveleth, Minn., is a guest at the Spalding.

Miss Anna Carlson of Baraga, Minn., is a guest at the Spalding.

F. W. EATON IS NO MORE

Old Time Duluthian Passes Away at Fond du Lac.

Was at One Time Member of City Council.

Frank W. Eaton died shortly before 3 o'clock this afternoon at Fond du Lac.

Mr. Eaton was a very old resident of Duluth, and was at one time a member of the city council. He had lived in Duluth about thirty-four years, and was prominently connected with the famous Section 30 case.

Mr. Eaton leaves a wife and seven children, three girls and four boys. The girls are Pauline, Susie and Gertrude, and the sons, Grover, Frank, Willis and James.

He was 57 years of age at the time of his death. The family had moved to Fond du Lac but a few days ago, intending to spend the summer there. He was in good health when he left Duluth, and his death is a surprise to his friends in the city.

THE Y. W. C. A. BULLETIN

"We believe," said Mrs. Wesley Feetham, secretary of the local Young Women's Christian association, today in speaking of the prospects of the building fund reaching $130,000 by May 1. She said it emphatically and those two words describe best the optimism that marks the attitude of those most vitally interested in the campaign now being waged.

The report at 3 o'clock today was as follows:

Red—Charlotte Robinson	$2,078.93
Blue—Carrie Russell	3,073.66
Yellow—Alice Drew	2,327.76
Pink—Elsie Look	1,406.16
Lavender—L. L. Garvin	1,610.25
Green—Augusta Ehling	991.45
Women's committees	10,414.40
Men's committees	67,083.50
Total	$88,986.11

There is no want ad. printed in The Herald to-day which does not strongly interest at least ten people—and there are some that will strongly interest thousands.

FILES CROSS SUIT.

Woman Answers Her Husband's Suit With Startling Accusations.

Muskegon, Mich., April 27.—Mrs. Gladys Manson Thayer of Chicago, well known in North Shore society circles, and a descendant of Daniel Boone, has filed in the Muskegon county circuit court her answer and cross-bill to the suit for divorce that her husband of five months, John E. Thayer, the Muskegon banker, instituted some time ago.

Mrs. Thayer denies every allegation made by the complainant, and in her cross-bill makes accusations that would shock the ordinary mind. She alleges that three weeks after their marriage her husband made to her a shameful proposition, and that once again, late in the month of January, he repeated his request. She also alleges inhuman treatment in other ways, such as being forced to carry coal and food and shovel snow in the dead of winter. She wants absolute divorce and alimony.

INFERNAL MACHINE.

Toledo, Ohio, April 27.—Great excitement prevails in the local postoffice as the result of the discovery of an infernal machine in the private drawer of Inspector Hennen. It is said that a few days ago Hennen discovered the mysterious box and turned it over to secret service officers.

MME. EAMES DIVORCED.

New York, April 27.—It became known today that Supreme Court Justice Tompkins had confirmed the report of Frank M. Buck, the referee in the matter of the application of Mrs. Emma Eames-Story for an absolute divorce from her husband, Julian Story. An interlocutory decree has been granted by which Mrs. Story is given the right to resume her maiden name and to remarry, if she so desires. Mr. Story is forbidden to remarry during the lifetime of Mrs. Story.

SIX KILLED.

Baltimore, April 27.—A new pier under construction at Locust Point, South Baltimore, collapsed today, carrying down about a score of workmen. Six bodies have been recovered. Two men are missing and fifteen were injured.

FATAL EXPLOSION.

O'Fallon, Mo., April 27.—While a freight engine on the Wabash railroad drawing a caboose was running rapidly near here today the boiler of the engine exploded, killing three trainmen and injuring two others.

SAFEBLOWER CAPTURED.

Chicago, April 27.—Edward Tate, known as the "Gentleman burglar," who escaped from St. Francis hospital in Peoria, Ill., was arrested here today.

WOMEN'S WOES

Duluth Women Are Finding Relief at Last.

It does seem that women have more than a fair share of aches and pains that afflict humanity; they must "keep up," must attend to duties in spite of constantly aching backs, or headaches, dizzy spells, bearing down pains; they must stoop over, when to stoop means torture. They must walk and bend and work with racking pains and many aches from kidney ills. Kidneys cause more suffering than an other organ of the body. Keep the kidneys well and health is easily maintained. Read of a remedy for kidneys only that helps and cures the kidneys and is endorsed by people you know.

Mrs. Letitie Cole of 467 Mesaba avenue, Duluth, Minn., says: "I am pleased to repeat what I have said again and again recommending Doan's Kidney Pills. Five or six years ago, when suffering from disorders of the kidneys which had become aggravated by over-exertion and severe colds, I looked about in vain for a long time for relief, trying many different remedies which were recommended to me, but not until I got Doan's Kidney Pills did I find the long-sought for benefit. The first dose or two helped me, and I continued taking them until the heavy, aching through my back and kidneys was gone, and the kidney secretions had become natural. The treatment improved my health in every way, and the results have been permanent."

For sale by all dealers. Price 50 cents. Foster-Milburn Co., Buffalo, New York, sole agents for the United States.

Remember the name—Doan's—and take no other.

Moose Brand Bottled Beer.
Public taste as regards the use of Beer has undergone a change in the past decade. The family cask, so common a few years ago, is rapidly becoming a thing of the past, the bottled product having almost entirely replaced it.
At the same time the alcoholic strength of **Moose Brand Beer** has been reduced by about one-half, to satisfy the public requirement for a light drink. Our modern brewing methods have made it possible to thus reduce the alcohol in the Beer, it no longer being needed as a preservative.
Have us send you around a case of **Moose Brand Beer?**
Duluth Brewing & Malting Co.,

INTENTIONAL DUPLICATE EXPOSURE

BLASTING THROUGH THE SOLID ROCK TO MAKE A ROADWAY IN THE FASHIONABLE RESIDENCE DISTRICT OF THE EAST END

—Pohto by Fenney & Adams.

THE TWENTY-FOURTH AVENUE EAST ROCK CUT.

The above cut shows with unusual clearness the progress of the work which has been done by Contractor P. McDonnell on the rock cut between Superior and First streets on Twenty-fourth avenue east. The picture is taken from Superior street looking north into the cut and shows the amount of rock which had to be removed in order to open the avenue for the desired street car and vehicle traffic.

The work at present is estimated at about two-thirds complete. This does not mean that the rock is cut out two-thirds of the distance from Superior to First street, but that two-thirds of the whole amount of rock in the cut has been removed. The amount of rock which has to be removed is much greater at the Superior street end of the cut than at the First street end, and tapers off gradually toward the First street terminus.

The engineer's estimates figured the total amount of rock which would have to be removed at 4,330 cubic yards and the cost of this portion of the avenue will probably be in the neighborhood of $11,000. The whole job of improving the avenue, including, beside the rock cut, the paving of the street from Superior to Sixth streets will cost $24,600.

The board of public works has run against a snag in assessing for this improvement, for the property owners above and below the cut are unable to agree upon any form of assessment which has been drawn up. The owners from First to Sixth street object to being taxed for an improvement which does not abutt upon their own property and so have registered kicks against being assessed for the extra expense of the rock cut, while the owners below Superior street say that they derive no benefit from the cut, and that it is a general benefit which ought to be paid for out of the general fund or at least taxed along the whole line of the assessment. They have entered an appeal against the assessment as drawn up and confirmed by the board, which divided the cost equally among all the owners, and it was scheduled to come up for a hearing today.

At Fourth street the Duluth Street Railway company has already installed the necessary "Y's" for the tracks which are to be laid on the street before the paving is installed and the curbing for the street is already on the ground ready to be put in place. The improvement was planned to permit street car service between Hunter's Park, the normal school and all the eastern hill district and Lakeside and Lester Park without the necessity of going clear down to Third avenue in order to make the trip as at present.

SWEDISH AND NORWEGIAN SINGERS WILL HOLD THEIR ANNUAL SINGING CONTEST

SVEA GLEE CLUB COMMITTEE.
S. E. Olson, Axel Peterson and Andrew Nelson.

NORMANNA SINGING SOCIETY COMMITTEE.
C. J. Halling, Eiler Johnson and K. L. Fenney.

The fourth singing contest between the Normanna and Svea Glee clubs for the Carlson trophy will be held on Sunday, May 5, one week from tomorrow. These affairs are of annual occurrence. Up to the present time the Normanna singers are in the lead, with two victories to their credit, won in 1904 and 1905, while last year the Svea men won the decision. A second victory for them at the coming contest will result in a tie.

Both clubs have been in careful training for the event, and a rare treat is promised those attending. The Normanna club is made up of sons of Norway, and the Svea singers recognize Sweden as the land of their birth. Both countries are famed because of their songs and singers, and the Duluth organizations ably sustain this reputation. The clubs will render alternately several numbers during the evening. There will also be two grand choruses in which both clubs will take part.

In addition to the reguar numbers, Prof. Oscar Gronseth, who has established a fine reputation locally, will render a baritone solo, and Representative Clarence B. Miller will deiver an address. Olaf Halten is leader of the Normanna club, and Mr. Charles Helmer is at the head of the rival musical organization. The arrangements for the affair are in the hands of Carl J. Hallkig, K. L. Fenney, Eilert Johnson, S. E. Olson, A. Peterson and Andrew Nelson. Mr. Oson is chairman of the committee.

Following is the program:

Overture .....
Flaaten's Orchestra.
Introductory remarks .....
Andrew Nelson.
"Naar Fjordene Alaaner"...Paulsen
Normanna-Svea Grand Chorus
Baritone solo—"Bedouin Love Song" ..... Pinsuta
Oscar Gronseth.
Contest Number—"Hjemover fra Langreis" ..... Wendelborg
Normanna Male Chorus.
Contest Number — "Sang till Schwenke" ..... Moller
Svea Glee Club.
Address .....
Hon. Clarence B. Miller.
Clarinet solo .....
Fred Kretchmar.
Contest Number—"Sjomannen"..
..... Jahnke
Contest Number—"Ossian" .....
..... Beschnitt
Normanna Male Chorus.
Orchestra—"Hor oss Svea" ....
..... Wennerberg
Star Spangled Banner .....
Grand Chorus.
Announcement of judges' decision.

SCARCITY OF LABOR IN NORTH DAKOTA.

St. Paul, April 27.—Reports coming to the Great Northern railway headquarters here indicate that the farmers of the Northwest are suffering from lack of help during seeding time. A telegram from Devils Lake, N. D., to L. W. Hill, president of the Great Northern says: "Seeding just commenced and 25 per cent of the farmers' teams in barns for want of teamsters. Conditions serious. Can you help?"

Another telegram to B. Campbell, fourth vice president says: "Two hundred men needed, wages $35 to $40 per month."

While these telegrams did not surprise the railroad officials, it impressed them that the labor conditions were more serious than they thought and they are now making a canvas of the towns along the line to learn the exact situation.

State of Ohio, City of Toledo, Lucas County—ss.
Frank J. Cheney makes oath that he is senior partner of the firm of F. J. Cheney & Co., doing business in the City of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of Hall's Catarrh cure. A VETERAN OF THE SPANISH WAR

Expresses His Great Faith In Pe-ru-na.

Pe-ru-na Is a Tonic Especially Adapted to the Prevention and Relief of All Catarrhal Ailments Due to the Vicissitudes of Climate and Exposure Experienced by the Soldier.

An Old Soldier's Praise.

Mr. F. R. Cox, Avis, Pa., writes:

"I was taken with hemorrhage of the stomach and had from one to three a year.

"The doctors said my stomach could not be cured, and it was only a question of how soon one of these spells would kill me, and I was given up several times, as they had no hope for me.

"I finally wrote to you, and you said if it was not a cancer or a tumor, Peruna would cure me.

"I commenced taking Peruna right away, and have never had one of those spells since.

"I am an old soldier, one of Phil Sheridan's Rough Riders, and pretty nearly played out now, but I have a pretty good stomach again."

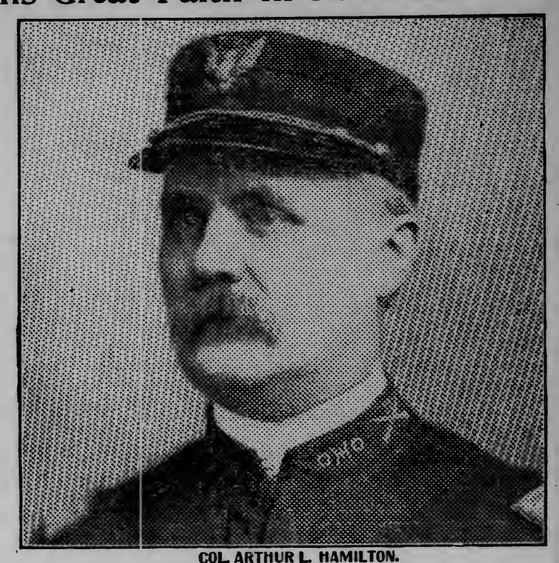
Assistant War Correspondent Recommends Pe-ru-na.

Mr. H. B. Manley, Assistant War Correspondent, during the war in China, 58 Spark St., care A. G. Pittaway, Ottawa, Can., writes:

"When a man travels in extremely hot or cold climates, he realizes how valuable a friend he has if he carries a bottle of Peruna.

"I know of no article in my traveling outfit which I have learned to praise higher.

"If you are suffering with the extreme heat, Peruna restores you, or if you are afflicted with a cold, la grippe, bronchitis, Peruna restores you in a short time.



"Or if you suffer with sleeplessness or if your appetite is poor, again Peruna acts as a good, true friend and is the tonic needed.

"I have tried it for months and am only too glad to acknowledge it as a true, loyal standby in times of trouble. I do not hesitate to recommend it to all."

T. T. Markland, a well known business man of Cincinnati, O., address R. R. No. 1, Mt. Washington, Ohio, writes:

Able to Work at the Age of Seventy-Three Years.

"I find that in my case Peruna is a flesh builder. I am now at work every day, and have gained ten pounds. I took your Peruna according to directions and the result was more than I expected. I took no other medicine but Peruna, and it accomplished all. You told me in your first letter that you thought Peruna would cure me and it has. I am 73 years old and can attend to my business as usual."

COL. ARTHUR L. HAMILTON.

Gallant Porto Rican Soldier Gives Praise to Pe-ru-na.

Col. Arthur L. Hamilton of the Seventh Ohio Volunteers, writes from 259 Goodale St., Columbus, O., as follows:

"Besides having the merits of Peruna fully demonstrated in my family, I have a number of friends who have taken it for catarrh and stomach trouble and all unite in praising it. As a remedy for catarrh, I can fully recommend it."

In a later letter to Dr. Hartman, Col. Hamilton writes:

"My command used your Peruna, during our service in the Spanish-American War, and I will say this, that if the War Department records are consulted, it will be found that the casualties in my regiment were less than in any other regiment of the Army Corps while at Camps Alger, Meade and Bushnell. The total deaths in my regiment during the seven months' service, were seven out of a total number of 1,400. I, of course, cannot help, but think that Peruna certainly was a great benefit to my command."

In a recent letter, Col. Hamilton says:

"I have used Peruna myself and in my family for the last seven years. I have already written you about the good results I experienced with your remedy during the Spanish-American War."

In old age the raucous membranes become thickened and partly lose their function.

This leads to partial loss of hearing, smell and taste, as well as digestive disturbances.

Peruna corrects all this by its efficient operation on all the mucous membranes of the body.

One bottle will convince anyone. Once used and Peruna becomes a life-long stand-by with old and young.

Pe-ru-na Contains No Narcotics.

One reason why Peruna has found permanent use in so many homes is that it contains no narcotics of any kind.

Peruna has no bad effect upon the system, and gradually eliminates catarrh by removing the cause of the catarrh.

Almost Nervous Prostration.

Rev. A. M. Smith, Hahira, Ga., writes:

"For the past two or three years I have been troubled with nervousness, at times resulting in almost nervous prostration. Recently I have had very severe attacks, and was induced by a friend to try Peruna. This I have done with more than satisfactory results, and consider Peruna the best medicine on the market for what it is recommended.

"To all who suffer with nervousness in any form I would say, use Peruna.'"

DUN'S WEEKLY TRADE REVIEW

The Weather Conditions Cause Reports of Irregular Trade.

New York, April 27.—R. G. Dun & Co.'s Weekly Review of Trade says: Weather conditions have again dominated trade, but reports have become irregular, some sections still complaining of unfavorable temperature, while most dispatches reflect the brighter results of the tardy sunshine. Similar uncertainty is recorded as the progress of the crops while the cereal markets are responsible to the strengthening influence of a broad foreign demand. It is noteworthy that manufacturers continue vigorously preparing for future activity regardless of any temporary interruption to distribution by the weather. The only idle machinery is reported at footwear factories where spring deliveries are about finished and fall contracts have not yet arrived freely. This is a seasonable event and the temporary reduction of about one-third in active capacity is not an alarming sign. A few small strikes are also interrupting manufacturers, but in the aggregate a very limited part of the nations producing power is inactive, and most of the idle machinery is due to the scarcity of labor.

Pig iron cannot be produced with sufficient rapidity in this country to meet the requirements of steel mills, more Middlesbrough iron being imported despite a further advance in foreign quotations. Prices of forms or iron and steel are strong, and some sales of pig iron for delivery during the last half of the year were made at $22, valley furnaces against $21 only a few weeks ago. Structural steel is wanted in great quantities for bridges, and at the leading cities there are many offices building and factory extensions that will take all the mills can produce for months. Pressure for merchant pipe ha sbeen so great that some mills have closed their books except at substantially higher quotations. Tin plate mills are sold up to the last quarter.

No accumulation of cotton goods has occurred in any position, the trade absorbing everything that comes from the factories, which as a rule, have orders so far in advance that there is no effort to revive buying at first hands. As the time approaches when another season's supply of raw material must be purchased, a little attention is paid to events in the cotton market, but that has no influence on finished goods of late. Export trade in cottons awaits reduction of stocks at Shanghai. Woolen goods are in a better position, demand having improved until it is evident that much machinery will be kept in operation throughout the season.

Conditions are unchanged at New England footwear factories, except that Eastern wholesale houses have placed more fall contracts, but most plants operate little more than two-thirds capacity. Manufacturers insist on full quotations, no concessions being offered to stimulate demand. Local jobbers report an exceptionally brisk inquiry for colored shoes of all descriptions. Sole leather is steady, a better demand improving the tone, but other varieties have declined still further, especially harness qualities. Some tanners report heavy cancellations of automobile leather.

CONSTRUCTION IS COMPLETED

Street Railway Company Has New "Y" at Garfield Avenue.

The street railway company has completed a new "Y" at Garfield avenue and Superior street which is an important piece of work, by reason of the greatly increased facility it will give the company for turning its cars at that point and running its passenger cars, work cars, snowplow, etc., from the eastbound track onto the Garfield avenue line without the necessity of sending the cars through to Eighth avenue west to be turned around. Hereafter the early morning cars from the car barn, on the interstate line, can be switched over at Garfield avenue. The "Y" has been a long felt want with the company and will be used to a considerable extent hereafter.

The switches that have been put in are a feature in themselves. These are heavy, solid piece switches, of a construction known as manganese steel, a steel that is far more durable than theo rdinary steel. Manganese steel switches are now being placed wherever the company has construction work of a character requiring new switches. Several have just been put in at Twenty-fourth avenue east and Fourth street.

DIED AT CASS LAKE.

Miss Virginia Lessard Passes Away After Two Years' Illness.

Cass Lake, Minn., April 27.—(Special to The Herald.)—Miss Virginia Lessard, one of the most prominent young ladies in Cass Lake, died after suffering for almost two years from tuberculosis. Miss Lessard was born 19 years ago at Brainerd, Minn. Six years ago she moved with her parents to Cass Lake. During this time she has attended school at St. Joseph, Minn. But two years ago she was forced to give up school, owing to ill health. Miss Lessard leaves behind her a host of friends who will mourn her loss. Her kindly disposition and loving qualities caused her to be beloved and respected by all who knew her. She is survived by a mother and father and two small brothers. The remains will be taken to Brainerd Monday for interment.

The declamatory contest between the high schools of Park Rapids, Grand Rapids, Akeely, Bemidji and Cass Lake, which was to have taken place here last night, was postponed owing to the sickness of several of the speakers.

Blood Humors

Persistent Eczema—Druggist Advised Proper Medicine—Another Complete Cure.

It makes no difference how severe or long-seated a case of bad blood, humors, eczema or scrofula may be, Hood's Sarsaparilla cures just the same.

It has the greatest record of any medicine ever made. Has received the largest number of testimonials—40,366 in two years.

It is the one above all others for you to take if you need a thoroughly good medicine for your blood.

C. C. BAILEY.

Read the following from Mr. C. C. Bailey, a well-known pump manufacturer, of Champaign, Ill.

"When I asked my doctor what that eruption was which came under my right ear, and which had refused to yield to home treatment, he said it was a bad case of eczema and that it would take a long time to cure it. Another doctor said it was about the worst case he ever saw. I followed their advice for 16 months, and still the eruption would not heal.

"One day I asked the druggist if he had anything he thought would do me good. He said if anything would cure me it was Hood's Sarsaparilla, and advised that I buy three bottles, watch the results, and be governed accordingly. There was such decided improvement at the end of that time that another bottle effected a complete cure." C. C. Bailey, 46 E. University avenue, Champaign, Ill.

Hood's Sarsaparilla

Will convince and cure where given a fair trial. Buy a bottle today.

Sarsatabs are Hood's Sarsaparilla in tablet form. Have identically the same curative properties. 100 doses $1. | Sold by all druggists or sent promptly by mail on receipt of price by C. I. Hood Co., Lowell, Mass.

GUARANTEED under the Food and Drugs Act, June 30, 1906. No. 324.

We Will Cure You

The Northwest's Most Reliable SPECIALIST In the Diseases of Men.

We want all afflicted people to feel that they can come to our office freely for examination and explanation of their condition without being bound by any obligation to take treatment unless they so desire. We will make a thorough and scientific **EXAMINATION** of your ailments **FREE OF CHARGE**—an examination that will disclose your true physical condition, without a knowledge of which you are groping in the dark. If you have taken treatment elsewhere without success, we will show you why it failed. Every person should take advantage of this opportunity to learn their true condition, as we will advise them how to best regain their health and strength, and preserve them unto ripe old age. **WE MAKE NO MISLEADING STATEMENTS** or deceptive propositions to the afflicted, neither do we promise to cure them IN A FEW DAYS in order to secure their patronage (an honest doctor of recognized ability does not resort to such methods). We guarantee **A SAFE AND LASTING CURE IN THE QUICKEST POSSIBLE TIME** without leaving injurious after effects in the system, and at the lowest cost possible for **HONEST, SKILLFUL AND SUCCESSFUL TREATMENT.** We cure **KIDNEY AND URINARY DISEASES, SMALL, WEAK ORGANS, SEMINAL EMISSIONS, STRICTURE, DISCHARGES, VARICOCELE, NERVO-SEXUAL DEBILITY, CONTAGIOUS BLOOD POISON** and all diseases and weaknesses due to habits, dissipation, or the result of special diseases. Write for symptom blank if you cannot call. **CONSULTATION FREE AND CONFIDENTIAL.** Office hours 8 a. m. to 8 p. m. Sundays 10 a. m. to 1 p. m.

Progressive Medical Association,

No. 1 West Superior Street, corner Lake Avenue, Duluth, Minn.

Ely

Ely, Minn., April 27.—(Special to The Herald.)—Pete O'Connor and wife left for Virginia last Thursday morning, where they will reside in the future. Mr. O'Connor having a good position in a sawmill there. The good wishes of their many Ely friends go with them.

Thomas Jury, who has been visiting and also attending to business matters, in some of the Mesaba range towns, returned Thursday night.

Miss Nettie Vail of Soudan is visiting here this week with friends and relatives.

William Mayne, who has been away on business for the past few weeks, returned on Wednesday.

John Potzel is at the Shipman hospital, laid up with a broken leg resulting from a fall in a shaft at the Sibley mine last Monday, where he is employed.

A drunken lumberjack fell through F. C. Miller's front window Thursday. Nothing was injured but the glass. The lumberjack was arrested.

There were three Austrian weddings here last Sunday afternoon.

Oscar Aubin, manager of the Ely Cigar company, has increased his force this week. He reports business as excellent.

Mrs. Mike Weinzierl, who has been confined to the bed for the past three weeks, has entirely recovered.

County Commissioner Grant McMahon is in Duluth attending a special meeting of the board of commissioners.

Mrs. Joseph Gezion, who has been seriously ill for the past six weeks is slowly recovering.

Bert Hooper of Rochester, N. Y., is visiting his brother Fred here this week.

F. L. Cowen left for Duluth Thursday morning on a business trip.

Mrs. William Mayne entertained a large number of the little folks Thursday afternoon playing games and having a general good time, including a dainty lunch, which all the little ones did justice to.

Peter Schaefer, editor of the Ely Miner, returned from St. Paul Thursday, where he has been since last December on business.

PROMISE OF CARDINALATE FOR IRELAND RUMORED.

Rome, April 27.—It is the impression at the Vatican that the pope intrusted Bishop O'Gorman of South Dakota, who had an unusually long farewell audience Wednesday, with a secret mission to the American government, the nature of which is unknown even to Secretary Merry Del Val. It also is rumored that the pope promised to elevate Archbishop Ireland to the cardinalate in November.

LABOR

ACTION IS ENDORSED

Trades Assembly Seconds Work of Local Barbers' Union.

Delegates Are Elected to Attend State Federation Convention.

The action of the local barbers' union in placing the barber shop of James H. Sullivan, 215 West Superior street, on the unfair list, was endorsed last evening by the Duluth Trades assembly. Before the resolution finally came to a vote the debate upon the question became so warm that President Hunt rapped repeatedly for order.

At the last meeting of the trades assembly two weeks ago a committee was appointed to investigate the trouble between the barbers and James Sullivan and last evening this committee reported. The committee's report was fair and impartial and set the facts before the members as they exist.

It was moved by one of the delegates that Mr. Sullivan be given another chance and that a committee be appointed to confer with him and offer him a scale of wages in proportion to the low prices he is charging, so that the union men would make as much in his shop as in those who are charging the higher scale. This was lost.

All the barber shops, exceptin that of James Sullivan, are now charging 35 cents for a haircut and 15 cents for a shave. This raise was ordered by the union barbers, their constitution allowing them to name the scale of prices. In order to keep the higher scale of prices and the resulting higher wages for the journeymen, it is necessary to compel Mr. Sullivan to come into the agreement or be placed upon the unfair list.

The discussion of this matter consumed nearly two hours, but when the resolution came to a vote, there were not more than one or two of the members who voted against it.

* * *

Five delegates were elected last evening to attend the meeting of the state federation at its annual convention at St. Cloud in June. Only one ballot was cast, the five delegates receiving the highest number of votes being declared chosen. They were as follows: William J. Hunt, 38; Martin Olmen, 29; Alex. Kennedy, 26; Ernest Peters, 25, and A. H. Barr, 22. There were about a dozen candidates nominated in all.

* * *

A communication from the international union of Flour mill workers, stating that the Montgomery, Minn., workers were in need of help was read and a resolution donating $10 was passed. This matter came up two weeks ago, but at that time it was not definitely known whether or not the mill workers were still on strike, and the secretary was directed to investigate.

* * *

The stationary engineers' union sent in a communication stating that the engineers working at the breweries in the city had asked for an eight-hour day, but that their request had been refused. The trades assembly was asked to investigate the matter and a committee was appointed to confer with the brewery companies and try to obtain the shorter hours. Delegates Scott, Kennedy and Cole were named.

* * *

Four new delegates presented their credentials at the meeting last evening and were obligated. They were Alexander Kennedy and Alfred Meyers of the Dock and Ship Carpenters' union, Capt. James Benson of the Licensed Tugmen's Protective association and Jacob Iverson of the Retail Clerks' union.

* * *

J. E. Nolan was elected to fill the place of H. W. F. Hegg, who was elected at the last meeting to fill the vacant office of treasurer.

* * *

Rev. Kirby S. Miller, who was booked to deliver an address at the meeting two weeks ago has promised to speak to the delegates of the trades assembly at the next meeting, May 10. He will speak on "Child Labor." The next meeting of the trades assembly will be held at Kalamazoo hall.

* * *

As the lease upon the old Labor World hall expires on May 1, no more meetings will be held there. Most of the unions have already secured new quarters, some in the Kalamazoo block and others elsewhere. The trades assembly will meet at the Kalamazoo hall, as will also the cigarmakers and leather workers for their next meetings. Following the meeting of the leatherworkers next Friday evening, the members will enjoy a smoke social. Refreshments will be served.

Elect New Officers.

The Freight Handlers' union held its annual election of officers Wednesday evening at the Kalamazoo building. It was one of the first meetings of the season, and considerable interest was manifested in the ballots. The following were elected: President, William Mahoney; vice president, Louis Bye; financial secretary, John Maxwell; treasurer, Nels Nelson; marshall, David Wright.

J. P. Noonan Here.

In the hope of bringing about an adjustment of the differences between the local contractors and the inside electrical workers, James P. Noonan, second vice president of the International Brotherhood of Electrical Workers, is in the city, and several conferences have been held. Mr. Noonan will afterwards go to the Twin Cities, where he expects to adjust some differences existing between the unions and employers.

Delegates Elected.

At the meeting of the Electrical Workers' union two delegates were elected to represent the organization at the annual convention of the Minnesota State Federation of Labor in St. Cloud in June. They are Frank Fisher and George Schufer. They are both well known members of union labor in Duluth.

PRESIDENT MAKES TRIP.

(Continued from page 1.)

not make the stops scheduled. It was expected that at Westover, Brandon and Shirley, the president and his guests would meet only the occupants of the estates. It is not known here just how much time the trip will consume, but early tonight the party expects again to be transferred to the Mayflower and start back to Washington.

In the president's party are Mrs. Roosevelt, Miss Roosevelt, Archie and Quentin Roosevelt, Justice Moody of the supreme court of the United States; Secretary Metcalf and Mrs. Metcalf; Assistant Secretary Bacon of the state department; William Loeb, jr., secretary to the president, and Asisstant Secretary Latta, Mrs. Ralph Cross Johnson, Capt. Lee, military aide to the president; Capt. Key, naval aide to the president; Lieut. Commander Long of the navy, and Dr. Ohnes of the navy.

ENTHUSIASM BOTTLED UP.

(Continued from page 1.)

driven directly from the depot to the home of Mr. Taft.

There was a decided demonstration, however, when the secretary entered the Sinton hotel three hours later to attend the convention of the Associated Western Yale clubs, of which he is president. It had only been with great difficulty that the Yale men were prevented from coming down to the depot en masse to greet the secretary, it being feared that they would by their demonstration give his arrival a political aspect. Their effervescence, however, lost no force by the temporary battling, and the secretary, when he entered the hotel, was given an enthusiastic reception.

Later the secretary was a guest at luncheon at the University club. Tonight he will speak at the banquet of the Yale association. His address will be confined to matters connected with the university and the work and influence of its alumni.

Cincinnati, April 27.—At the third annual meeting of the Associated Western Yale clubs in this city today, President Arthur T. Hadley of Yale university, was the guest of honor, but chief interest centered on Secretary of War W. H. Taft, who presided, being head of the organization. After brief introductory routine there was a general discussion of the best methods of extending the usefulness of Yale university in the West. Gardner Lathrop of Kansas City, Joseph G. Holliday of St. Louis, W. W. Heffelfinger of Minneapolis, Charles L. Bartlett of Chicago, Henry E. Bourne of Cleveland and Howard Hollister of Cincinnati were the chief speakers during this discussion. Between two and three hundred Yale graduates were present, representing cities and states as far West as the Pacific coast.

TO SUBDUE HINDOOS.

(Continued from page 1.)

at La Hore and elsewhere in the Punjab, and by attacks on Europeans. Professional and political agitators are now fomenting strikes on the railroads, and the government has concluded that it is time to suppress the plotting by forceful means if necessary. The authorities are satisfied that a determined front will speedily end the outward signs of disaffection, especially as they have the unanimous support of the great Mohammedan population, who, at numerous mass meetings, have emphatically condemned the anti-European movement. Recent events have given a remarkable impulse to enlistment in the volunteers. The recruits include five judges of the supreme court, the directors of public instruction, university professors, high government officials and leading bankers and merchants, all of whom have entered the ranks of the privates.

The Great House-cleaning Problem

NOW CONFRONTS ALL DULUTH

You need our assistance to solve the problem rightly. Decorating, Paper Hanging, Mural Painting and Upholstering in all its branches **is our business,** and it's to your best interest to have us call at your homes and give you new ideas in Interior Decorating and Mural Painting. We will suggest original color schemes and carry out the work in an artistic manner.

Imported and Domestic Wall Paper and Hangings

To suit every home and taste. Our stock of Wall Fabrics are all the newest designs and colors, and priced right.

OUR UPHOLSTERING DEPARTMENT is in charge of the best upholsterer in this city. Your old furniture made modern. Refinished in Weathered or Old English Oak, Mission or Mahogany, just as you desire. Reupholstered in Spanish or Morocco Leather, Panne Mohair or Silk Verona, in plain colors. Imported or Domestic Tapestries, Silk Damasks, Roman Silk Velours, etc. Hair Mattresses made over. 'Phone us and we will give you estimates on your work, whether it's Upholstering, Decorating, Paper Hanging or Wood Finishing.

SPECTACULAR FIRE.

(Continued from page 1.)

box cars which were standing between the sheds were burned to the trucks. Warehouse "A" was practically empty at the time of the fire and the flames made short work of the wooden shell, the roof collapsing within fifteen minutes after the flames struck the sides.

Firemen Have Narrow Escape.

Four firemen who were managing the nozzle of a hose line between the wall of warehouse "B" and the Gogebic boiler works had a narrow escape. The wall collapsed and fell hissing onto the wet ground where the firemen were standing. The four fire fighters leaped back and one of them missed being buried under the blazing pile so narrowly that his helmet was knocked from his head as the mass fell. This caused a rumor to spread through the crowd that one of them had been seriously injured.

Hose Bursts Several Times.

The big hose burst several times showering the too anxious crowd with water on several occasions and causing serious delay in fighting the fire.

A couple of flat cars which were standing on the track east of the warehouse were saved by the efforts of the crowd of men who volunteered their services and pushed the big cars bodily out of danger when it would have been impossible to get a locomotive on to the scene on account of the hose lines.

Only the roughest estimates of the loss involved by the fire could be secured this afternoon. There were thirty-six cars of hay in warehouse B, belonging to various commission men about town and they had an estimated value of about $150 a car, making an aggregate of considerably over $5,000. One of the employes of the company stated this morning that he thought the value of the lubricating oil which was in the warehouse would approach $2,000 in all. The warehouses were owned and insured by the Connecticut Mutual Life Insurance company, and were estimated by one of their representatives as worth about $7,500 each or a total of $15,000. They were insured at $12,000.

As the contents of the warehouses was scattered among several of the local commission men, no definite line could be secured on the amount of insurance which was carried on it, but one of the principal hay owners said that Randall, Gee & Mitchell handled a majority of it. The whole loss will probably fall a little bit short of $25,000.

ARCHITECTS ARRAIGNED

As Chiefly Responsible for Lack of Fireproof Construction.

Washington, April 27.—The chief officer of the International Society of Building Inspectors arraigns the architects of the country in an able article in a recent issue of Building Management.

"Particularly is there apathy," says this high authority, "in the profession regarding fireproof construction. When first confronted with this apathy, one is dumfounded, for it seems inexplicable, but we are face to face with the fact that if the city officers do not specifically call for it, there is scarce one architect out of ten who would think of even advising, let alone insisting, upon anything beyond the old-fashioned, combustible and expensive mode of construction—wooden joists, framing, etc. This is a most peculiar state of affairs, but a fact nevertheless. For years our people have mistakenly bent their energies waterwards. We have devised wonderful alarm systems, splendid fire departments and other expensive inventions with which to fight fire, and we have paid our billions in insurance and other alleged cures, but have failed to grasp the cardinal principle that prevention is infinitely better and saner than any attempt to cure epidemical or other diseases, including fire. Building properly and offering little or no fuel for fire to burn is the one logical solution of this grievous problem."

LETTERS LED TO LOVE; COUPLE HAVE NEVER MET.

Rutherford, April 27.—W. Denton went to Denver to marry Miss Helen Alling, a girl he has never seen, who lived in Patterson some fifteen months ago. But he knows her very well through correspondence.

Benton bought a rhetoric about a year ago. On the first page Miss Helen had written her name and scattered through the volume were critical verses and marginal notes. Denton became deeply interested in the writer.

He learned her address and wrote to her. Miss Helen answered the letter, and soon the mails were carrying tender missives to and fro. Two months ago Denton proposed marriage, and was accepted. He and his bride will live in the West.

ENTRIES ANNOUNCED FOR CHARTER OAK RACES

Hartford, Conn., April 27.—The entries in the early closing stake races of the grand circuit meet at Charter Oak park, opening on labor day are announced by Andrew Welch. For the $10,000 Charter Oak for 2:10 trotters, there are sixty nine horses named, including Miss Adbell, winner of the Kentucky futurity two years ago, and Sicilice, last years; Early Alice, by Flora, King Entertainer, Sonoma Girl and Clear.

For the Nutmet, $5,000 stake for 2:07 pacers, the nominees include Blacklock, Ethel Mack, Harry L., who made the record on the half mile track 2:09¼.

MAN BLOWS RIVAL'S HEAD OFF WITH GUN.

Callilipolis, Ohio, April 27.—Henry Williams and his uncle, Abraham Miles, farmers residing near this city, quarreled because the alleged attentions of Williams to Mrs. Miles. Williams, with a shot gun, blew Miles' head off his shoulders. Williams was captured by officers today.

HARGIS CASE SET FOR MAY.

Lexington, Ky., April 27.—The cases of James Elbert and Alex Hargis, Edward Callahan and Jesse Spicer, all charged with the murder of James Cockrill of Jackson, Breathitt county, during the feud troubles there on July 23, 1902, will be called here May 7. The trial of Bill Britton here on the same charge resulted in a disagreement of the jury.

SNOWSTORM AT ST. PAUL.

Inch of Snow Fell During the Night With Strong Wind.

St. Paul, April 27.—(Special to The Herald.)—A snowstorm descended on this city during the night and this morning about an inch of snow covered the ground. The snow is still falling, and is blown about by a strong north wind. The weather resembles that usually prevailing here in March.

YOUNG MAN IN TROUBLE.

St. Cloud, Minn., April 27.—Leo Albetter, a young man of the town of Holdingford, was arrested Thursday evening charged with threatening to kill Stephen Oudow, also of that town. The young man denied the charge, and the case is to be tried here May 3.

SAPOLIO

PLANS ARE DISCUSSED

The Sunday School Workers Holding Interesting Conferences.

A. M. Locker Will Conduct Sunday Afternoon Meeting.

Sunday school workers of the city are in conference just at present, under the auspices of the Minnesota State Sunday School association.

The initial meeting was held last evening at the Y. M. C. A. A session is being held this afternoon and another is scheduled for tomorrow afternoon, which meeting will conclude the series.

The meeting at the Y. M. C. A. rooms last evening was for the Sunday school superintendents; the one this afternoon at the First M. E. church is for the workers in the elementary grades of the schools, and the gathering tomorrow afternoon at the First Presbyterian church is for all of the Sunday school workers in the city. Teachers, superintendents, pastors, church officers and all persons interested in the work—of all denominations—will be welcomed.

A. M. Locker of St. Paul, general secretary of the state association, was the principal speaker at the meeting of the superintendents held last evening. The most important matter to come up for discussion was a plan to reorganize the Duluth Sunday School association, so that it may be divided into four districts, to be presided over by an executive committee. In each of these four districts, the State Sunday School association will conduct an institute once a year.

It is thought that this redistricting the city association will bring the Duluth association in closer touch with the state organization. In most other counties of the state, there are county associations, but St. Louis is so large that it is not thought practical to organize a county association here. So it is proposed to conduct the city association more along county association lines.

The state association employs four "experts" in the matter of conducting Sunday schools, whose aim it is to conduct meetings in all of the districts at least twice a year, in the spring and in the fall.

The plans for the redistricting of the Duluth association, provide for a division taking in West Duluth churches, another those of the West end, a third, the churches in the central part of the city and in the East end, and a fourth, the churches in Lakeside and Lester Park.

These plans for the city association will be recommended at the next meeting of the organization. They do not interfere with the methods of meetings in vogue at present.

The workers in the elementary grades of the Sunday school, who are in session this afternoon at the First M. E. church, are being addressed by Mr. Locker and Mrs. Howell of St. Paul, president of the elementary graded union of the St. Paul Sunday School association.

The big meeting in the Sunday school rooms of the First Presbyterian church tomorrow afternoon will begin at 4 o'clock and Mr. Locker will be the presiding officer. It is expected that the attendance will be large. Sunday school teachers and enthusiasts in and out of the city association will be welcomed. The general topic will be "The Graded Sunday School."

JAP ROSE transparent toilet and bath soap is made from the whitest, purest and best vegetable oils—OILS THAT YOU CAN EAT. Made by KIRK—sold by all druggists and grocers.

59 PATIENTS TREATED LAST VISIT.

Five Turned Away as Incurable.

DR. REA

Diseases of Men, Diseases of Women, Chronic Diseases, Nervous Diseases And Organic Diseases.

Next Visit to Duluth at Spalding Hotel,

SATURAY, MAY 4.

From 9 a. m. until 8 p. m.

One day only—returning every month.

All curable medical and surgical diseases. Eye, Ear, Nose and Throat, Lung Diseases, Early Consumption, Bronchitis, Bronchial Catarrh, Constitutional Catarrh, Nasal Catarrn, Dyspepsia, Sick Headache, Stomach and Bowel Troubles, Appendicitis, Rheumatism, Neuralgia, Sciatica, Bright's Disease, Diabetes, Kidney, Liver, Bladder Troubles, Prostatic and Female Diseases, Dizziness, Nervousness, Indigestion, Obesity, Interrupted Nutrition, Slow Growth in Children, and all wasting diseases in adults. BILLS MADE GOOD.

Park Rapids Member of Legislature Established Excellent Record.

St. Paul, April 27.—(Special to The Herald.)—One of the new members from Northern Minnesota, who have made a decided hit at the recent session of the legislature, is Hon. L. W. Bills of Park Rapids, whose picture appears above. Mr. Bills was assiduous in his attention to the duties of his office, closely regardful of the needs and wishes of his district, and by his close study of pending measures and his happy faculty of putting a point in concise, eloquent and convincing speech, he made himself a strong, influential and effective member of the house. Few members in a first term have acquitted themselves so well, and his colleagues will welcome his return next session.

L. W. BILLS.

WEST DULUTH

PROGRAM IS ANNOUNCED

Banquet of Western Curling Club Will be Big Affair.

Good List of Speakers and Singers is Secured.

The committee of the Western Curling club which is in charge of the preparations for the annual banquet, which will be given next Tuesday evening announced the official program for the affair this morning. The program includes an excellent list of speakers and singers and J. A. Scott has been named to act in the capacity of toastmaster.

On account of the large number of tickets which have already been procured and the big demand for more, the committee has decided to hold the banquet at Wade's hall instead of at the Commercial club hall. The hall will be appropriatedly decorated for the occasion and will be more suitable for the affair than the commercial club quarters.

The official program as given out this morning by the committee, is as follows: Invocation, Rev. H. W. Johnson; address of welcome, Martin H. Meldahl; solo, M. . Filiatrault; toast, "Our Own Club," Rev. Arthur Hoag; toast, "The Northewestern Curling Association," A. H. Smith; solo, C. O. Applehagen; toast, "The Duluth Club," H. Hurden; toast, "Our Inter-club Contest," A. G. Macauley; solo, J. C. Meyers; toast, "The Game of Curling," Alex McRae; toast, "Our New Members," P. H. Martin; toast, "The Ladies," Rev. W. J. Lowrie.

WANTS STREETS OPENED.

Club Thinks Ramsey and Wadena Should be Cut Through.

Members of the West Duluth Curling club are about to make another attempt to have Ramsey street opened through the Northern Pacific yards and also Wadena street between Fifty-sixth and Fifty-seventh avenues. The matter was brought up at a meeting of the club last evening and the members were all in favor of doing everything possible to have these thoroughfares opened.

The report o fthe Proctor extension committee was heard and the committee was continued until next meeting in order that a conference could be held with the Proctor people. The committees outlines the route up Fifty-seventh avenue and beyond, but nothing definite was decided upon. The committee will ask the city engineer to make a survey of the route and furnish estimates on the cost of building a road in order that the street car company may be induced to build its line.

The club passed a resolution recommending that the board of county commissioners of St. Louis county reopen the road that runs south from Proctor to the Thompson road on the east side of the Missabe tracks and that the bridge over Kingsberry creek, which burned a few years ago, be rebuilt.

The matter of planting some shade and a resolution was passed calling upan da resolution was passed calling upon the citizens to plant trees. Messrs. Scott, McCauley and Riddle were appointed as a committee to confer with Duluth park boards for the purpose of finding out the many feasible ways to secure trees in West Duluth. The club may devote some of its funds to the purchasing of seeding trees.

Death of Mrs. Holterud.

The death of Mrs. Serena Holterud occurred at the home of her son, Martin Holterud, 703 South Sixty-fifth avenue west. Mrs. Holterud was 72 years of age and had lived in West Duluth for the past six years. The funeral will be held from the Norwegian Lutheran church at 2 o'clock Sunday afternoon. The remains will be buried at Oneota cemetery.

West Duluth Churches.

At the Merritt Memorial M. E. church, Forty-sixth avenue west and Halifax street, Sunday school meets at 10 o'clock and there will be morning service at 11, when Thomas Dunn of the Star of Hope Mission will preach. The evening service begins at 7:45, and the pastor, Rev. Samuel G. Briggs, will preach on the subject, "Strength of Heart." Epworth league will meet at 7.

* * *

At the Plymouth Congregational church, the morning services will begin at 10:30 and the sermon subject will be "The Foundation of Prosperity." The evening service will be "The Life of Caleb." Rev. H. W. Johnson will preach at both services. Sunday school will meet at noon.

* * *

At the West Duluth Baptist church, the morning service will begin at 10:30 and the sermon topic will be "The Need of a Vision." The evening service will begin at 8, and the sermon topic will be "The Stolen Gods." Sunday school will meet at noon and B. Y. P. U. at 7 o'clock. Rev. Arthur Hoag will preach at the morning and evening services.

* * *

At the Asbury M. E. church, Sixtieth avenue west and Raleigh street, the morning service will begin at 10:30, and the subject of the sermon by the pastor, Rev. Thomas Grice, will be "The Dark Religion." The evening service will begin at 7:30, and the sermon subject will be, "Personality and Practice." Sunday school will meet at 11:45, and Epworth league in the church parlor at 6:45, leader, H. G. Wolian.

* * *

On account of the repairs which are being made at the Third Swedish Baptist church at West Duluth, there will be no services tomorrow. It is expected that the church will be in shape so that services can be held a week from tomorrow. There will be a special meeting of the choir tomorrow at 2:30.

* * *

At the Holy Apostles' Episcopal church, Fifty-seventh avenue west and Elinor street, Sunday school will meet at noon, and there will be evening prayer and sermon at 7:45. The sermon will be the first of six on the elements of a useful life, and the subject will be "Common Sense." Rev. Roderick J. Mooney is the rector. The musical program is as follows:

Processional, "Through the Night of Doubt and Sorrow" .. .. ..
Glorias .. .. ..

STUBBORN coughs and colds are dangerous because the irritated membranes get no rest, hence cannot recuperate. Robbed of their power of resistance, they are unable to throw off germs of bronchitis, pneumonia or consumption.

Scott's Emulsion soothes and heals the affected membranes with glycerine, restores the tissues and builds up the blood with cod liver oil, strengthens the nervous system with hypophosphites.

Scott's Emulsion will break up and cure the most stubborn cold.

ERROR OF A LAW CLERK

May Mean a Fortune to Russell Sage Raphael.

New York, April 27.—An error of a law clerk many years ago may mean a fortune to Russell Sage Raphael and his mother and sisters.

Many years ago Nathan Raphael, a close friend of Russell Sage, purchased $680,000 worth of second mortgage bonds of the Swasatch & Jordan Valley Railroad company of Utah. Interest was defaulted and the first mortgage was foreclosed, cutting out the holders of the second mortgage securities. Nathan Raphael spent a large part of his fortune trying to recover from the railway, but was unsuccessful.

A short time ago his son began suit in the federal court on the bonds and secured a judgment for $1,680,768, including interest. This judgment has been returned by the sheriff as unsatisfied and was yesterday filed in court.

Mr. Raphael's lawyers discovered that when the first mortgage was foreclosed the holders of the second mortgage, probably by a clerk's error, were not made parties to the suit. This, it is claimed, invalidated the foreclosure proceedings.

The old railroad property, which now belongs to the Denver & Rio Grande and the Rio Grande Western, is said to be worth about $30,000,000. The second mortgage bonds issued by the original road amounted to $800,000. It is not known who owns the other $120,000 of these bonds.

ANOTHER ROCKEFELLER GIFT.

Chicago, April 27.—John D. Rockefeller has presented to the University of Chicago, a tract of land comprising about ten city blocks, and valued at $2,000,000. The tract extends from Cottage Grove avenue to Madison avenue. It was added to the holdings of the university some time ago, but the identity of the donor has never been announced.

DR. RIESLAND IS HOME AGAIN

Returns After Two Months Absence on Important Business.

The hundreds of Duluthians who have been restored to health by Dr. D. W. Reisland will be delighted to hear that he has returned after two months' absence on important business. The doctor was again honored by the Association of American Chiropractors as the best qualified and ablest chiropractor in the United States, to demonstrate the science to the members of the house and senate of Minnesota. Chiropractic is now recognized the world over as the greatest discovery of modern times in the cure of disease. It works with not against nature, relieving the pressure on nerves, due to the luxation of the spine, the cause of all disease.

Duluthians have reason to feel proud that the dean of the profession, as Dr. Reisland is admitted to be, is among them. The doctor has made the deaf hear, the lame walk, the blind see, and has cured hundreds of cases, hitherto regarded as incurable, including Bright's disease, cancer and tuberculosis.

Dr. Reisland will continue to perform his wonderful cures at his old location, 707 Palladio building. (Adv't.)

At the evening service J. K. Stone of Newark, N. J., will speak. Misses Winnie and Pollie Fawcett will sing. Monday, the young people of Merritt Memorial church will have charge. A. R. Merritt will speak and L. Merritt will sing.

SECULAR SHOTS AT PULPIT.

Baltimore American: One minister in New York says that war is necessary and another that the millennium is coming And, concerning the truth of the matter, the general public is about as far as ever from either extreme.

Portland Oregonian: The pastor of John D. Rockefeller's church declared from the pulpit that "there are many men in this country who are willing to prostrate themselves and lick the blacking from a rich man's shoes just because he is rich." We have been wondering whether the pastor is jealous or is only testing the proverb that open confession is good for the soul.

Kansas City Star: While the great mass of humanity is struggling with the problem whether the soul survives the death of the body, a West side clergyman makes bold declaration of his belief that the body may live and continue active after the soul is dead. This is interesting and may even be regarded as important, but it is not as new or original as lots of other things that have been sprung in Kansas.

Baltimore News: A New York preacher who married a divorced woman, in whose trial he had been named as co-respondent, and brought her to the parsonage, declared himself surprised when the trustees and elders told him to clear out, because he himself had regarded his action as "a crowning proof of true Christian manhood." But the time is not yet when such crowning proof is thought to grace a pulpit.

Philadelphia Record: Dr. Munhull told the Methodist ministers that a man who gave $50,000 to a church object got no end of publicity in the religious and secular papers, while a man who contributed 50,000 souls was neglected. Evidently the doctor does not pay much attention to the church papers or the dailies. If a man wants to buy publicity he has got to pay a great deal more than $50,000; that is only a starter. He has got to go into the millions to make much impression.

NORTH STAR SHOE CO.
MINNEAPOLIS, MINN.

OLE BERG ON THE STAND

Young Clerk Denies Statements of Witnesses for Walsh.

Says He Can Prove Alibi on One Occasion Mentioned.

Ole Berg's testimony in the Walsh divorce trial was the feature of the program in court yesterday afternoon, and Mr. Berg made an excellent witness for Mrs. Walsh. He denounced without hesitation all the testimony which had been introduced which tended to indicate any improper relations between the plaintiff and himself, and claimed that he was in Seattle at the time when three of Mrs. Walsh's witnesses swore they saw him and Mrs. Walsh together, near the Iron Range "dump," outside of Virginia.

Berg stated that he would be 19 years old next June.

He admitted having been on the street with Mrs. Walsh, but said that there had always been some one with them, and that he had never met her by design or stealthily. He said that he had known the Walsh family for three years, and that it had been his duty to call at the house daily to take orders for groceries.

Says Stories Are Lies.

The boy said that Joseph Dempsey lied when he said that he saw Berg walking with Mrs. Walsh late at night with his arm around her waist; that Miss Mary Walsh lied when she said she saw him hugging and kissing Mrs. Walsh in the Walsh kitchen; that Miss Stewart lied as to her testimony that he had spent time in the Walsh parlor looking at pictures with Mrs. Walsh; that Arthur Walsh lied when he said he saw him driving with Mrs. Walsh; that Messrs. Walsh, Gorman and Apt lied in regard to finding him with Mrs. Walsh, when they came to the Walsh home in the evening, last fall, and that Max Cook lied when he said he saw Berg and Mrs. Walsh on the street in Duluth on Feb. 17 last.

Berg denied that he ever sneaked around the Walsh home to try to determine whether the coast was clear for him to pay a visit to Mrs. Walsh, and affirmed that the only times he had purchased ice cream and "treats" for Mrs. Walsh were when some one else was with her, and that there was no significance in his doing so.

Not a Ladies' Man.

Berg said it was "news to him" that he was a "hit" with the ladies. He said that Mrs. Walsh came to the store very frequently, but said that he showed her no preference over other customers. He said that he was driving with another girl the night that Ted Walsh said he saw him driving with Mrs. Walsh. He denied absolutely the testimony of Messrs. Walsh, Gorman and Apt as to his having been at the Walsh home when they came up for the evening, last summer.

He never wrote to Mrs. Walsh while in the West, and when questioned, declared that he had never sustained any improper relations with the plaintiff, and never heard her use profane language.

Child Again On Stand.

Twelve-year-old Eva Walsh, the little daughter of the principals in the case, was called late yesterday afternoon. She bore out Berg's testimony as to his not being in the house on the evening when Mr. Walsh brought the party of his friends up to spend the evening, and said there was no one in the house then but the children and their mother. She stated that Louis Apt was not in the party at this time. She said that she went with her mother to the door, and that Mrs. Walsh admitted the visitors. The little girl said that she never saw her mother kick any of the children, nor swear at them, or that her mother had ever whipped her so that the marks showed on her body. "I never showed any such marks to Miss Stewart," said the child.

She declared that on the last occasion in Virginia upon which her parents are said to have had a quarrel, it was her father, not her mother, who left the house.

She said when cross-examined by Mr. Baldwin that she had not consulted with her mother or her mother's attorney as to her testimony in the case.

Witness Retracts.

Anna Bergendahl was called for the defense. After being sworn she boldly affirmed that Mrs. Walsh had come to her house and arranged for board for a person whom she said was her "brother." When Mr. Adams commenced to cross-examine her she admitted that Berg had come himself and arranged for board. She admitted that she had testified as she did at first "to accommodate certain lady friends of Mr. Walsh."

Richard Callahan, at whose house Mrs. Walsh is staying, took the stand and denied that he had ever ordered the defendant from the house for using bad language. He had heard Mr. and Mrs. Walsh discussing the case at his house and had told them that that was no way to settle it.

M. E. Fanning, who was Berg's employer in the Virginia grocery store, testified that the young clerk had a proclivity for carrying Mrs. Walsh's bundles for her at every opportunity.

Mrs. Mary Patterson testified that Mary Walsh and Mrs. Walsh had been treated to ice cream by the young clerk in Virginia one day last summer. She said Mrs. Walsh had asked him if he was going to treat and he said he would.

Mrs. Walsh Denies Charges.

Mrs. Walsh took the stand last night and denied each and every allegation in her husband's counterclaim. She denied that she had had improper relations with Berg or McKillincan and claimed to have always been a good mother to the children. She said that on one occasion Mr. Walsh went away and left her without means to live. Mr. Walsh then took the stand and denied the last statement saying that when he went to the woods on the occasion referred to, his wife knew that she could get anything which she wanted from the stores of Virginia on credit and that if she had borrowed $35 from his brother, Jim Walsh, she knew it was unnecessary.

Owing to the fact that Judge Dibell will be busy on other matters Monday morning the case was taken up again last night, Mr. and Mrs. Walsh's testimony being given at the extended session. Their testimony completed the evidence on both sides and both the plaintiff and defendant rested.

Disposition of Children.

Judge Dibell then spoke a few words about the case. He expressed his sincere regret that estrangement should have come about and should have reached its present hopeless stage. The most important matter, now, said the court, was the disposition of the children, Frank, aged 8; Robert, aged 10, and Eva, aged 12. Mr. Walsh's sister, having signified her willingness to care for them if the father shall be awarded their custody, and Mrs. Walsh's brother having also expressed his willingness to care for them should the mother win out.

The arguments on this phase of the case will be heard Monday afternoon.

Auction Sale

Of 400 head of native and Western horses and mules, also 100 head of logging horses, weighing from 1,500 to 1,700 pounds each, will be sold Saturday, May 4, 1907, at E. Mark's, Princeton, Minn.

MADE MORE MONEY

But the Pittsburg Coal Company Produced Considerably Less Coal.

Pittsburg, Pa., April 27.—To the stockholders was issued a statement by the Pittsburg Coal company and subsidiary companies of the tonnage and earnings for the quarter ending March 31, 1907, as compared with the same period of 1906. For the Pitsburg district there was a decrease of 505,064 tons of coal compared with a year ago, while in the Hocking, Ohio, district there was a decrease of 98,052 tons, making a total decrease for the first quarter of 1907 of 606,116 tons. Of coke in the Pittsburg district there was an increase of 8,147 tons.

The gross earnings this year were $1,025,429, while a year ago they were $1,025,492, a decrease of $63. The net earnings this year were $327,329 and a year ago $282,701, an increase of $44,628.

A Woman Tells How to Relieve Rheumatic Pains.

I have been a very great sufferer from the dreadful disease, rheumatism, for a number of years. I have tried many medicines but never got much relief from any of them until two years ago, when I bought a bottle of Chamberlain's Pain Balm. I found relief before I had used all of one bottle, but kept on applying it and soon felt like a different woman. Although my advice many of my friends have tried and can tell you how wonderfully it has worked.—Mrs. Sarah A. Cole, 140 S. New St., Dover, Del. Chamberlain's Pain Balm is a liniment. The relief from pain which it affords is alone worth many times its cost. It makes rest and sleep possible. For sale by all druggists.

To Whom It May Concern.

Contractors and others, take notice: That Dock and Ship Carpenters' scale of wages will be thirty-five cents per hour, and double time for Sunday, and time and one-half for overtime, on and after May 1st, 1907. John E. Nolan, recording secretary.

Stockholders' Meeting.

The annual meeting of the St. Louis River Slate Brick company, will be held on the 15th day of May, 1907, at 2 p. m., in the office of A. H. Eckstein, Exchange building, Duluth, Minnesota.

The purpose of the meeting is to elect directors for the ensuing year, and to transact any other business that may properly come before the stockholders.

A meeting of the directors will be held immediately after the adjournment of the stockholders' meeting for the election of officers to serve the ensuing year.

CHARLES B. COXE,
Assistant Secretary.

California Excursions.

On account of the Mystic Shriners' convention and conference of German Baptist Brethern at Los Angeles, Cal., the Minneapolis & St. Louis railway will sell tickets to San Francisco and Los Angeles, Cal., from April 25 to May 18, limited to July 31 for return passage, at rate of one fare for the round trip. Rate will apply going via any direct route, returning via any other direct route. Stopover privileges granted at any point. For further particulars call on agents or address A. B. Cutts, G. P. T. A., Minneapolis, Minn.

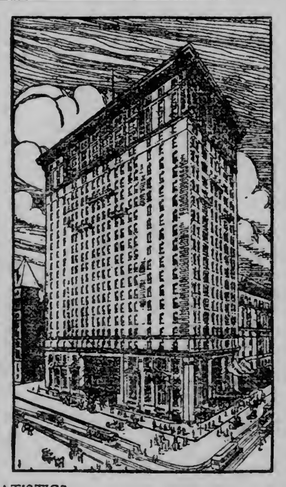
PLANS FOR THE CONVENTIONS

Committees Discuss Arrangements for Big August Meetings.

Plans for entertaining the delegates to the conventions of the National Fraternal Congress and Associated Fraternities of America, which will be held in Duluth next August, were discussed at a meeting at the Commercial club last night, attended by the chairmen and members of the committees having the arrangements in charge. Chairmen of the different committees will call meetings of members in the near future, and prepare to work along the lines suggested last evening.



The work accomplished last night consisted merely of a general discussion of the situation, acquainting the committees with the situation in regard to the conventions. George H. Crosby, chairman of the executive committee, presided, and Bentley P. Neff acted as secretary. It is expected the two conventions will bring between 1,500 and 2,000 persons to Duluth. The place of holding the conventions has not yet been decided upon.

Mandy—Hives and other blotches are supposed to be caused by an acid stomach. A simple remedy, and one that is very effective, is Hollister's Rocky Mountain Tea. 35 cents, Tea or Tablets. Ask your druggist.

JAPS START FOR THE HAGUE.

Tokio, April 27.—M. Tsuzuki, chief secretary of the Japanese privy council and head of the Japanese delegation to the second peace conference at The Hauge, and his party, including Vice Admiral Sa'amaura, Gen. Akeyama and H. W. Denison, advisor to the Japanese foreign office, left here this morning for The Hague.

"—gain the timely Inn,"
says Shakespeare, and we think the
Hotel Belmont
NEW YORK
deserves this title

"Timely" it is—at the very doors of the Grand Central Station — with surface and elevated lines right at hand and a private passage to subway station for both express and local trains.

And "timely" it is—in that it furnishes the wealth of conveniences—the completeness of service—the satisfying environment which modern hotelcraft aims to attain.

STATISTICS

Cost of Hotel Belmont, $10,000,000.
Four years in building.
Highest type of fireproof construction.
Twenty-seven stories.
More than a thousand rooms.
Foundation of hotel on solid rock.
Nearly ten thousand tons of steel used.
System of ventilation by filtered air.
Automatic heat regulators.
Nine elevators.
All rooms equipped with private and long distance telephones.

The latest addition to the great hotels of the world. Opened May 8th, 1906.

RATES
Rooms without bath, $2.50 and upward
Rooms with bath, $3.50 and upward
Parlor, bedroom and bath, $10 and upward
We would welcome you here and try to make you look upon this hotel as your New York home

The Hotel Belmont
42nd Street and Park Avenue, New York City.

DO NOT LIKE AMENDMENT

Citizens Want Employment Offices All Off Superior Street.

"No Favoritism" Slogan of Those Interested in Ordinance.

The amendment which was offered by Alderman McEwen to E. L. Ribenack's employment office ordinance, last Monday evening, and which was given its first reading at that time, is not meeting with very general favor among Superior street merchants and property owners.

Alderman Ribenack's motion provided that between Second avenue east and Seventh avenue west, on Superior street, no more employment office licenses should be granted by the council after the expiration of the licenses already in force on May 1 of this year. Alderman McEwen's amendment allowed the council to grant two licenses within the forbidden district, on the south side of Superior street, between Fifth and Sixth avenue west, provided that no such licenses should be granted after May 1, 1908, simply having the effect of allowing two of those already established there to maintain their places of business there for another year.

The sentiment of the principal property owners and business men in the district, when seen by a Herald representtive this morning, seemed to be condemnatory of the amendment.

"The council gave those fellows plenty of notice to get off the street by passing that ordinance last October," said one of them. "Some of them have been hustling since, and have been forced to pay higher rents to get places on Michigan street than they have on Superior street. I think it would be a serious injury to them if we were to allow two of their rivals to keep right on at the old stand at this late date after they had gotten themselves comfortably established on Michigan street."

"Superior street is no place for employment offices," said another. "The council realized that when they passed the ordinance, and I see no reason why they should make a concession in favor of any special agent on the street. In no other city will you find the employment offices for men on the main street.

"Alderman Ribenack's ordinance ought to stand intact. We don't want those fellows on Superior street. While I have nothing against the class of men which patronize them, as a rule, hard working, industrious men, the congregation of crowds of men on the street, such as are caused by these places, cannot help but be an inconvenience for passing women and children. The council ought to show no favors in this matter."

EARLY CLOSING AT VIRGINIA

Clerks to Form Union With That Object in View.

Virginia, Minn., April 27.—(Special to The Herald.)—The clerks of Virginia will form a union next Monday evening, the primary object of which is the earlier closing of stores. A committee has canvassed the stores during the week, and has secured the signatures of over 100 clerks who will join the union. The meeting will be held at the Finnish Temperance hall, and W. E. McEwen of Duluth, secretary of the State Federation of Labor, has been asked to come up or send an organizer for the occasion.

All the merchants of the city will be invited to attend the meeting, that they may have a voice in the matter of fixing the closing hours. A majority of the prominent merchants are in favor of the movement, and have promised to attend the meeting. The general sentiment appears to be in favor of closing at 6 or 6:30 p. m., excepting on Saturdays, pay days and during holiday seasons, and to close all day Sundays.

The closing movement is to include dry goods, clothing, grocery and hardware stores and meat markets, and should any of the dealers in the lines named insist on keeping open Sundays, after the union is formed, the aid of the state law will be invoked.

An effort was made two years ago to bring about earlier closing by the merchants themselves, but the matter failed after a short season because so many of the dealers failed to adhere to the rules. Now that both clerks and merchants have joined forces, it is expected that the movement will meet with better success.

SAYS MINISTER GRAVES HAS INSULTED THE KING.

New York, April 27.—Mrs. Ida Von Claussen, who recently attempted to see President Roosevelt and secure the removal of United States Minister Graves because that official refused to present her to King Oscar of Sweden, last night gave out a letter which she says she has sent to the Swedish prime minister. In it she demands that Mr. Graves be expelled from Sweden because of what she says are insults to the king.

OVER $100,000

Has Thus Far Been Raised in Defense of Moyer Et Al.

New York, April 27.—U. Solomon, campaign manager of the Socialist party for New York and a member of the Moyer-Haywood-Pettibone conference on Manhattan borough, has made a statement regarding the efforts of the conference here and in other cities to collect funds for the defense of the accused officials of the Western Federation of Miners.

"On April 1st," he said, "the sum collected was $101,587, and out of this $92,000 had been paid in preliminary expenses. Since then many large contributions have come in, and some individual unions have contributed as much as $5,000 each. There are 3,000,000 organized workers in this country alone and we expect eventually to raise $1,000,000.

INTENTIONS OF UNITED STATES

Regarding Cuba Should be Made Known, Say Conservatives.

Havan, April 27.—In an interview yesterday, Jose Lapuza, president of the Conservative party, said that he believed the chances of the Conservatives defeating the Liberals were good. The Conservatives want Article III of the Platt amendment so defined that it may be known how and under what circumstances another intervention might take place.

According to Article III the American government may intervene in Cuba whenever, in its judgment, it is convenient. The reason and manner are at the option of the United States, and Cuba has nothing to say on the subject. The Conservatives want to remedy this, and to find a guarantee of safety in some regulation of the application of Article III.

Asked whether he expected the Americans to withdraw from Cuba without new guarantees, or a verbal definition of Article III, Senor Lanuza answered that as the Americans were not withdrawing immediately, it was perhaps too early to answer the question. He said:

"It is true there was a price on the first republic, and there may be on the second, but I do not believe that the Americans are going to name it until shortly before they are ready to leave."

LYNX NUMEROUS.

Many Were Captured by Trappers on Isle Royale.

Capt. W. H. Singer, who returned yesterday from Isle Royale on the steamer America, says that three trappers who spent the winter on the island trapped 100 lynx, receiving $5 bounty from the state of Michigan for each one killed, besides the value of the skins. They were also successful in capturing a large number of mink and marten.

The captain says the people who wintered on the island were found in good health and spirits, and further states that here is no trace of the wreckage of the steamer Monarch, which was lost on the east end of the island last December.

HORSEBACK RIDE FROM ST. PAUL TO SEATTLE.

New York, April 27.—Quincy Scott, a young newspaper illustrator and cartoonist, and his bride expect soon to begin an odd wedding trip. Next week they will start on a horseback ride from St. Paul, Minn., to Seattle, Wash., a distance of about 2,000 miles. They expect to cover this distance following the line of the Northern Pacific road in about 100 days, or at the rate of twenty miles a day. They will leave New York for St. Paul next Monday and expect to begin their ride on Wednesday.

Mrs. Scott before her marriage was Miss Ella L. Allen of Seattle.

LOOKING FOR BURGLARS.

Milwaukee, April 27.—The Milwaukee police are looking for Edwin R. Tate, accused of having dynamited the safe of the school board of Peoria, Ill., and destroyed evidence of forgeries said to have been committed by Newton C. Dougherty, and others of that city. Tate, accompanied by Eddie Fay, said to be a notorious burglar and safe breaker, left Chicago for Milwaukee Thursday night.

Be Sure to Get What You Ask For.

THERE is a Reason—
Why the Good People of America buy Cascarets as Fast as the Clock Ticks.

Every second some one, somewhere, is Buying a little Ten-Cent Box of Cascarets.

1, 2, 3, 4, 5, 6—60 times to the Minute, 60 Minutes to the Hour, 3600 Boxes an an Hour, 36,000 Boxes a Day of Ten Hours, 1,080,000 Boxes a Month, and then some.

Think of it—220,000 People take a Cascaret tablet each day. Millions use Cascarets when necessary.

The Judgment of Millions of Bright Americans is Infallible. They have been Buying and Taking Cascarets at that rate for over Six years.

* * *

Over Five Millions of Dollars have been Spent to make the merits of Cascarets known, and every cent of it would be lost, did not sound merit claim and hold the constant, continued friendship, Patronage and Endorsement of well-pleased people year after year.

* * *

There is also a Reason—
Why there are Parasites who attach themselves to the Healthy Body of Cascaret's success—Imitators, Counterfeiters, Substitutors.

They are Trade Thieves who would rob Cascarets of the "Good Will" of the people, and sneak unearned profits, earned and paid for by Cascarets.

A Dishonest Purpose means a Dishonest Product and a Disregard of the Purchasers' Health or Welfare.

Beware of the Slick Salesman and his ancient "Just as Good" story that common sense refutes.

Cascarets are made only by the Sterling Remedy Company, and put up in metal box with the "long-tailed C" on the cover. They are never sold in bulk.

Every tablet marked "CCC."

Be sure you get the genuine. 748

Indigestion and Stomach Trouble Cured

MR. AUGUST ROEDIGER.

Mr. and Mrs. August Roediger of Junction City, Kansas, who are 73 years old, recently celebrated their golden wedding.

Mr. Roediger's family is one of the most prosperous in that county. Seven years ago when he retired from farming he divided 1,000 acres among his four sons. Mr. Roediger has for years been a sufferer from indigestion and stomach trouble. After in vain taking all kinds of so-called medicines, he was completely cured by Duffy's Pure Malt Whiskey.

"For years I was a sufferer from indigestion and stomach trouble. I have used all kinds of medicines and pills, without any benefit. I was advised by one of my neighbors to try a bottle of Duffy's Pure Malt Whiskey, as he had tried it with good results. I went to the drug store and bought a bottle, and before that bottle was used I was relieved and was much better than before I commenced to use the Malt Whiskey. I kept on using it steadily every day, and before I had used up five bottles, I was entirely well, and think that Duffy's Pure Malt Whiskey is one of the best tonics of the TWENTIETH CENTURY. I will keep it in my house steadily, as a family medicine and tonic. I take a small dose every day after each meal. It helps the digestion and promotes a good appetite. I am now 73 years of age and feel well and strong, thanks to Duffy's Pure Malt Whiskey."—AUGUST ROEDIGER, Junction City, Kansas, July 23, 1906.

The experience of Mr. Roediger is similar to that of thousands of men and women who are daily cured by this great disease exterminator and renewer of youth.

Leading doctors say Duffy's Pure Malt Whiskey is a form of food aready digested

Duffy's Pure Malt Whiskey

is recognized everywhere as the unfailing specific for the cure of consumption, nervousness, typhoid, malaria, every form of stomach trouble, all diseases of the throat and lungs, and all run down and weakened conditions of the brain and body. It restores youthful vigor to the old by nourishing and feeding the vital forces of life, and maintains the health and strength of the young. It is a form of food already digested. It is prescribed by doctors of all schools, is used in all the leading hospitals of the world, and is recognized as a family medicine everywhere. It is absolutely pure. Medical advice and a valuable illustrated booklet on diseases sent free. Our guarantee is on every bottle.

Duffy's Pure Malt Whiskey is sold by all first-class druggists, grocers and dealers, or direct, in sealed bottles, only. Price $1.00. See that the "Old Chemist" trade-mark is on the label and that the seal over the cork is unbroken. Look for them carefully, and refuse substitutes. It will cure you after all other remedies have failed. Duffy Malt Whiskey Co., Rochester, N. Y.

WILLCOX A SUICIDE

Former President of Delaware & Hudson Shoots Himself.

Commits Deed While Crossing Atlantic on Steamer.

New York, April 27.—David Willcox, former president of the Delaware & Hudson Railroad company, committed suicide at sea last Wednesday, while a passenger on the North German Lloyd steamer Barbarossa, according to a report made to Health Officer Doty by Capt. Langrenter, last night.

The Barbarossa is at quarantine, where the steamer arrived yesterday afternoon from Genoa and Naples. Upon the arrival of the liner it was reported that Mr. Willcox had died of heart failure. As he had been known to have been in ill health, and had gone abroad recently in the hope of recuperating, this version was no great surprise to his friends.

Subsequent investigations, however, according to the captain, developed evidence that Mr. Willcox had shot himself. In reporting to Dr. Doty, the captain said that he had only a few minutes before been made aware of the real cause of death. Dr. Doty said that he would make an investigation when the vessel comes up to her dock.

Mr. Willcox, because he had not secured the benefit physically that he sought, cabled his resignation of the presidency of the railroad, which was accepted. The directors chose as his successor Lenor F. Loree, former president of the Baltimore & Ohio and the Rock Island railroads. At the time it was given out that Mr. Willcox was prompted solely by ill health.

Mr. Willcox was feeling poorly, it was stated, when he took passage on the Barbarossa, at Naples, April 13. He did not appear to improve, and Wednesday died in his stateroom. The thought of suicide did not then occur to those on shipboard.

Mr. Willcox was born in Flatbush, L. I., Dec. 12, 1849. He was graduated from Yale in 1872, and was admitted to the bar at Poughkeepsie in 1874. He was made vice president of the Delaware & Hudson in 1903. He was president and general manager of the road, and of several of its subsidiary companies from 1903 until his retirement from the presidency. He was president and director of the United Traction company of Albany, director and member of the executive committee of the Southern Pacific Railway company, director of the Union Pacific railway. He was a member of many clubs in this city. Mr. Willcox never married.

As president of the Delaware & Hudson, Mr. Willcox took a prominent part in the negotiations with the anthracite coal miners whenever a strike threatened the "coal roads," in which group his company was classed.

With the late Samuel Spencer, president of the Southern Railway company, Mr. Willcox acted as representaative of the railways in the discussion preceding the enactment of the railway rate law in 1905 and contributed a number of articles to various periodicals.

Under his administration the Delaware & Hudson made steady progress but not without a severe tax upon the president's nervous system. A severe fall while skating last winter, caused injuries from which he rallied only slowly. It was because of this condition he sailed for Italy.

April 9 he sent his resignation to the board of managers of the company, accompanied with such representations that it was accepted the following day.

The news of the nature of the death of Mr. Willcox came as a shock to his friends in this city. His only relative here is a nephew. The general impression is that ill health only had prompted suicide. For years, they said, he had suffered from gout, rheumatism and an affection of the kidneys.

At the time of his retirement from the Delaware & Hudson there were rumors in Wall street that he had disagreed with the directors as to the management of the road. These reports were not confirmed.

BRIEF TELEGRAMS.

George Hively of Kettle, in Roane county, W. Va., shot Robert Summers of the same place with a rifle Friday. The weapon was loaded with slugs and sixteen of them took effect in Summers' body. Both men were respected farmers and have families

The call of the docket of the supreme court of the United States was suspended Friday for the present term and future sessions will be held only to render decisions and hear motions. For these purposes the court will sit next Monday and again on May 13 and May 27.

E. G. Bussell, executive agent of the Grand Trunk Pacific in British Columbia, committed suicide Thursday at Prince Rupert, shooting himself with a revolver.

The allenists engaged on the case of James Bartlett Hammond, the president of a typewriter company that bears his name and who for several days has been under observation at Bellevue hospital, have decided that Hammond is incompetent to manage his own affairs.

Citizens of Winona, Minn., after a banquet Friday night presented to James A. Tawney, chairman of the appropriations committee of the national house of representatives a solid silver loving cup lined with gold. The cup bears the inscription, "To our Jim, from his Winona Friends."

John Armstrong, a negro convicted of having murdered his wife, was hanged at Columbus, Tex., Friday. When the trap was sprung his feet touched the ground and it was necessary for officers to hold him up. He struggled wildly but was pronounced dead 12 minutes after the drop.

The residence of J. N. Greenshields, a lawyer of Montreal was destroyed by fire Wednesday afternoon. The damages are put at considerably over $100,000 on account of the picture gallery. A female servant jumped out of a third story window and may die.

CARNEGIE'S PORTER

Is a pure and nourishing malt beverage, brewed and bottled at Gottenburg, Sweden. Prescribed by prominent physicians. Carlson Bros., 15 West Superior street. Importers and Distributors. Zenith 'phone, 661; Bell, 1000.

Died at Hermantown.

Gust Anderson, who has been sick with a lingering illness, died at his home in Hermantown on April 7, and was buried on April 10. Many friends attended the funeral of the deceased, and their sympathy was shown by many beautiful floral offerings.

"Let me tell you—
Something about Pabst."

"For over sixty years Pabst has been brewing *quality* beer.

"Quality produces quality.

"The *best* materials, the *best* workmen and the *best* methods—these make the *best* beer.

"It is the *quality* of the malt, the *quality* of the hops, the *quality* of the Pabst methods that make

Pabst Blue Ribbon
The Beer of Quality

"There is a reason for this Pabst *quality*.

"For four generations the constant aim and purpose of Pabst has been to brew *quality* beer.

"No task has been too great for Pabst—no detail has been too small—only the final results have been considered—the perfection of brewing."

Order a case of Pabst Blue Ribbon today and satisfy yourself that quality in beer, like quality in everything else, is worth having.

NEW NORTHERN MINNESOTA LANDS.

The throwing open to settlement July 1 of 229,291 acres in the Red Lake, White Earth, Chippewa, Deer River and Fond du Lac reservations, as well as the sale during the summer of large tracts of state and school lands, cannot but add many thousands of the most desirable class of new citizens to the population of Northern Minnesota and aid materially in attracting the attention of the people of the country at large to this section.

The one thing needed above all else to bring about the turning of at least a due proportion of the tide of homeseekers from Manitoba and the far Northwest is proper advertising of the advantages of Northern Minnesota. This will now be given by the national land department and the state auditor's office, both of which will endeavor to bring about the widest possible publicity, to the end that the lands may all be taken.

Supplementing these and explaining the capabilities of the lands of Northern Minnesota, the exposition and details set forth in The Herald's industrial edition will prove of great advantage to this section. Some of these lands will require draining but, thanks to The Herald, this is now a matter of the near future. Most of it is, however, ready for settlers and can be made productive almost at once.

The markets for all of the products of these new lands lie within easy reach in Greater Duluth and in the range towns that are certain to be doubled in population with the opening of the great new steel plant here. If the new settlers will turn their attention to dairy and truck farming rather than to grain, they will profit steadily from the increase in demand consequent on the enlarged population. They need not fear that they will not have facilities for getting their products to market when they are ready with them.

The movement for a Northeast Minnesota Immigration association will meet the heartiest endorsement and co-operation of Duluth and the range towns and the sooner it shall be put into practical effect the better. Certainly now is "the time to strike when the iron is hot."

ROBBERS, BIG AND LITTLE.

It matters not whether a man holds up another man on a dark street by night and robs him or whether a magnate, a "captain of industry," holds up the stockholders of a railroad by dark and devious wrecking methods and robs them; the small highwayman no more violates the law and the commandment: "Thou shalt not steal," than does the other great Wall street plunderer. The difference in reality is only in degree—and in the punishment inflicted, severe in the one case, nil in the other.

Wall street methods, such as Harriman and his set adopted in the looting of the Chicago & Alton railroad may be a new way of making money but the ancient rule of honesty has not changed and applies to their "new way" just as much as it does to the acts of an ordinary burglar or highwayman. Millionaire "criminaloids," as they have been called, may try as they will to twist the old law but they cannot alter it "one jot or tittle." A thief is a thief whether he steal a railroad or a piece of pie and the one is morally as responsible for his wrongdoing as the other.

Not all the pirates died with Captain Kidd, nor did all of the highwaymen depart with Black Bart. There are today in high business, financial and social circles freebooters with no more conscience than the Morgan who sacked Panama; robbers whose booty runs into millions where Claude Duval and Dick Turpin secured guineas. Yet these latter day pirates and robbers are deserving of far less credit than those of old for the long-past outlaws had bravery and real courage while the present time hold-ups do it by devious trickeries with no displays of anything even slightly meriting admiration.

How the coal barons, who demand their full profits no matter how many may suffer from the cold, or the ice kings, who let babes die by thousands in the heat rather than give up one cent of what they may exact, can go home to their own little ones and find the least comfort, is past understanding. How the railroad pirate can attend the church to which his victims go for consolation in their helpless sorrow is a mystery beyond solution. Have such men either consciences or souls?

MEYER'S WARFARE ON TITLES.

Decidedly refreshing in these days when titles to which a person has no sign of a claim are prefixed to the names of practically every one who poses at all before the public, is the order issued by the new postmaster general, George Von Lengerke Meyer: "Postmaster General Meyer will be Mr. Meyer to his associates who will also be addressed as plain 'misters' instead of by their high-sounding and pompous titles."

The order will unquestionably meet with the heartiest approval and the delighted endorsement of the great mass of every-day American "misters" who have no titles and who want none. It will be especially grateful to the millions who believe that this is a republic where there are no titles except those won by distinction or necessary to differentiate the officers from the men in army and navy or to indicate the official position a person happens to hold by virtue of election or appointment.

But in official circles in Washington where, despite the fact that the city is the seat of government of the world's truest republic, there is more or less snobbishness and sham and a most decided inclination to set up a factitious aristocracy, the order has created gossip, disputation and a degree of consternation. Titles are the very bread and meat of departmental existence and to destroy these at one fell blow, as Mr. Meyer has done, robs official life of half its charm. If it were not that the salaries are badly needed by the majority of the "majors" and "colonels" and "generals" and "judges," many of them would probably resign and retire to the villages from which they came where their self-made titles will still be respected.

Some years ago, William Allen White of Kansas tried to break up by ridicule this habit of American officialdom of imposing titles on every one. He referred persistently in his witty writings to the "Noble Order of Hons" and he established the new "Order of Exes." But, in spite of all of the shafts of satire directed against this evident aping of European aristocracy, the habit has continued. It remains especially powerful in Washington, in the state capitals and in the country villages.

Whether Mr. Meyer will have any more success than had Author White remains to be seen. There is no doubt, however, that he has imposed on himself a task beside which managing the vast postal affairs of the nation is mere child's play.

JEAN VALJEAN IN REAL LIFE.

The millions of people all over the world who have read Victor Hugo's immortal "Les Miserables" and pitied the terrible trials of the titanic convict Jean Valjean have never supposed that his parallel could exist in actual, every day life and that a man who had for years lived an honorable and upright life could be forced by inexorable law back to stripes and degradation from the arms of loving wife and child.

Yet such a case has occurred within the last month in Kansas City and the poor victim—a federal convict—has been dragged from the home that he had made for himself, from a loving and beloved wife, from a tenderly cherished little daughter and from the respect and high regard of his neighbors, friends and business associates and forced back to a prison cell and to the stripes of the felon to serve out an unexpired sentence, from which he had escaped, with its added penalty.

The unfortunate twentieth century Jean Valjean is William January, who was convicted twelve years ago of robbing the postoffice at Stillwater, Okla., and was sentenced to five years in the United States prison at Leavenworth, Kan. He was then barely 21 years old and had been driven to the robbery by desperate want. For three years, he was a model convict. Then came a chance for freedom when a guard was asleep and his cell door unlocked. The temptation was too great and he scaled the prison wall and escaped.

Changing his name to Charles Anderson, the convict sought and easily secured work in Kansas City. So faithful and earnest was he that he was repeatedly promoted. Two years later, he met and loved and wooed and won a young girl of his new home. Always he concealed his prison record but he was a loving husband and a model citizen. Then came a little daughter whom he loved next to his wife. By careful saving, he managed to gather enough money to engage in the restaurant business. He lived an upright life and taught his employes honesty and integrity.

Then, like a thunderclap, came betrayal by a former fellow convict for a miserable $60 reward. Arrest on the street followed. The old burden, the old disgrace, the felon's wretchedness rolled over him like a giant wave of blackness. Thinking of his beloved wife and his wee daughter, he bowed his head to harsh fate. When his young wife sought him in the police cell, he told her all. "Be brave, Charlie," with a tender loving kiss and a fond embrace, was her answer. "Remember there is a wife and little one who will always believe in you. We will wait and watch. When you are released, we will be happy again."

The story of this twentieth century Jean Valjean has won the sympathy of all of the people of Oklahoma and Kansas and Missouri and not only has the Missouri legislature passed a resolution of appeal but a mighty petition, signed by tens of thousands is to be sent to President Roosevelt praying for free pardon for the poor unfortunate who is thus terribly punished for the sins of his youth. No more deserving appeal has ever been presented to any chief magistrate. President Roosevelt will be hard-hearted, indeed, if he shall not give prompt heed and send William January—or Charles Anderson as all know him—back to his wife and child and to an honorable life.

ENGLIST SLURS AT AMERICANS.

English authors who have visited America from time to time beginning with Dickens have, on their return home, thought it would tickle the literary palates of their own people to poke more or less ill-natured fun at Americans. They have either exaggerated or wilfully distorted the characteristics of the people, utterly unconscious, in their own self-centered egotism, that they have thereby given bad characters to themselves as people who have had no entree into the better circles.

The latest of these would-be smart writers is the English novelist whose pen name of "Rita" has been fairly well known in this country. She out-Dickens Dickens and indulges in such mean spiteful, small flings in her book, the name of which is not worth mentioning, that she really writes herself down a female cad or prig or confesses that she was not considered worthy to be received by the cultivated people of this country who, as a plain matter of fact, are fully as numerous as those of all Great Britain and are far more courteous than the average educated Englishman.

When "Rita," or Mrs. Humphreys as she is known in private life, says that she was "never fortunate enough to meet an American gentleman or an American lady," one is tempted to ask in what sort of society she mingled while visiting this country. Certainly, she was not even in what she calls "the middle class." Her assertion that it "will take centuries of refining before an American can claim equality with the English upper or middle classes" is so supremely nonsensical as to be considered broad "English humor." She surely knows that Americans have come from the "upper and middle classes" of not only England but all other European countries and the mere crossing of the ocean has not set them back centuries.

As for her slurs at American girls, "Rita" must know, unless her associates in England are the same as those she confesses she had in this country, that Joseph Chamberlain's wife is an American, that two of the most admired duchesses and a score or more of the wives of other English noblemen are Americans and that they hold their own in beauty and grace with any English women. Certain it is also, as she could easily find out if she would, many other Englishmen of the "upper classes" would be more than delighted to have American wives, if they could get them.

As a matter of fact, "Rita" has probably sought to advertise herself and her literary wares in this outre way. She will find, however, that Americans will laugh at her slurs just as they did at her caddish fellow countryman, Swettenham, but they will not buy her books.

THE WEST AND WALL STREET.

E. H. Gary, chairman of the executive and financial committees of the United States Steel corporation, recently expressed the opinion that the mighty West was "getting too big to be controlled by Wall street." He added that he believed that eventually Wall street would have to consent to the financial domination of the West because of its vast resources and its wonderful capabilities for the production of wealth.

Theoretically, Mr. Gary is undoubtedly right and it is a question whether even Wall street will quarrel with his premises that the West produces much the larger proportion of the real wealth of the nation. Practically, however, one or two very essential matters stand in the way and these are stock gambling that never ceases and the unending drain of the great insurance companies of all kinds that take millions on millions from the West and loan them to the speculators.

When the people of the West, farmers, stock-raisers, shipping firms and most of the merchants, need money, they need it only once a year and they pay normal rates and soon repay it. Most of the year this money would be in the banks if it were not for Wall street. There the speculative crop matures every week—sometimes oftener. The operators borrow money to "get in a big game" and they borrow more to stay in if the "deal" does not turn speedily enough. This must be real money and often they have to pay exorbitant rates of interest. The banks of the West are attracted by these chances to get big returns on their idle capital and the cash goes East to stay until the annual crop-moving demand comes. All this tends to give Wall street continued financial supremacy.

The big insurance companies have their offices where they can use their money to the best advantage and that is in making loans on Wall street. They receive each year hundreds of millions of dollars in premiums and return only a minor portion on policies. They want much to pay great salaries, build big buildings and make fine showings. Wall street offers them high interest and they, too, help to continue the financial supremacy of Wall street.

For these reasons and for others, while Mr. Gary is theoretically right as to the West being entitled to the financial crown, practically the only way it can win it and hold it is to set up a rival Wall street that will keep its wealth in constant use at high rates of interest. And there Wall street "holds the age" by virtue of its long experience and its European connections.

THE "HUMAN MACHINE."

"He does his work just like a machine" is often said by employer of employe. The words are usually accompanied by shrugs of the shoulder that express far more than the mere uttered sounds in themselves would imply, for they mean hopeless mediocrity conjoined with a measure of faithfulness that makes the employe endurable but certainly not entirely desirable.

The "human machine" is a man or woman who, when set to do a certain task, does it exactly as directed but does no more and no less than is laid down by the empoyer. A person of this kind apparently has no more than a mere modicum of brains or, if he or she has shown bright wits in other directions, is either unfitted for present work or is not willing to exert those wits for the benefit of the one who pays the salary or wages.

A "human machine" never rises or progresses from its place. It is seemingly, however, content, for it never grumbles, never complains, never really slurs what is set before it. But it is aggravating to an alive, active, pushing employer and it often exercises a depressing influence on its fellow employes, for it seems to say all the time: "Oh, what is the use of energy or of doing any more than one has to do." It does not seem to care to get higher, to become an active human being.

The "human machine" in business life is far better than the grumbler or the one who slurs. It is infinitely above the lounger. It is far more valuable than the quitter. But it is not the most desirable kind of a thing to have around where trade is active or where the machines of steel and iron are constantly humming busily. Its very lack of all ambition makes it a dampener on everything.

Many and many an employer has been tempted over and over again to go up to a "human machine" and give it a jar in the hopes that the cog might be loosened and the spring of ambition be set in motion. But wherever it has been tried, it has never succeeded. In fact, it may be set down as an axiom as to this class: Once a "human machine," always a "human machine."

THE PASSING SHOW.

The southern Republicans are reported to be "solidly with Roosevelt." Of course, they are for their livings depend on their fealty.

* * *

William Loeb, secretary to President Roosevelt, may become president of a Washington suburban electric line. Will he be called a "traitor" if he resigns to go with a better paying private corporation?

* * *

When Governor Johnson fixed Arbor day he did not calculate on winter remaining as an unwelcome guest all through April. What trees will be put out this year will be planted when spring begins—if it shall do so at all this year.

* * *

The board of public works and the health department are doing commendable work in ordering the removal of all rubbish and refuse as fast as possible. All public-spirited citizens will obey the orders at once, if they have not done so already.

HOTEL GOSSIP.

Maybe this isn't a new story. If it isn't, The Herald wishes to shift the responsibility on to the Lyceum box office. There is always room for doubt where stories emanating from theatrical sources are concerned, thanks to the untiring efforts of smiling press agents whose livelihood depends upon their ability to keep the attention of an admiring public centered upon the particular production they happen to represent. H. P. Hill, ahead of "The Tenderfoot" company, which is due in Duluth in the near future, is the hero of the tale. He registered at the Spalding yesterday.

When the company was last in Montgomery, Ala., Mr. Hill was the guest of the mayor of the town, who happens to be a very old friend of his. Following the performance, the two repaired to a cafe with two or three other men of the town for a midnight lunch. The crowd was a congenial one, and the men enjoyed one another's company to such an extent that they did not start for home until about 3 o'clock in the morning. Mr. Hill and the mayor started down a silent and deserted street, and walked along arm in arm.

The theatrical man noticed that his friend acted rather queer, in that, whenever they approached the shadow of a telegraph or telephone pole, the mayor stepped very high, as if he were going over a log in his pathway, and made a little jump. A brilliant moon was shining, so that these shadows were rather frequent, and it kept the Southerner busy lifting his feet high in the air. Mr. Hill made no comment, however, until, after going three or four blocks, they passed a church. The shadow of the steeple, fully ten feet across, darkened a portion of the walk. At the shadow's edge the mayor stopped and seemed perplexed. Then he stooped and began to roll up the bottoms of his trousers.

"What the deuce are you going to do now?" asked Mr. Hill.

"This'n here is too wide to jump," volunteered the mayor. "We'll have to wade it."

* * *

"You would be surprised to know how many men there are who carry revolvers all the time," said R. E. Hapgood of Chicago, traveling for a wholesale hardware concern, at the St. Louis. "If every man walking along Superior street tomorrow during a certain hour should be searched, and hauled into court if found carrying concealed weapons, the city would be enriched by as fine a bunch of fines as the judge has imposed in many a day. Lots of men own revolvers and leave them at home, or in their desks at the office, but there are lots of them that carry the weapons all the time.

"It is seldom that the average citizen has any excuse to carry a revolver. Of course, men who are doing watching stunts about buildings, or who carry large sums of money or other valuables in doubtful places, are to be excused for arming themselves, or men who are obliged to traverse country roads, but for the average citizen there is absolutely no excuse for carrying a deadly weapon. A woman really has more excuse for carrying a revolver than a man, and yet there isn't one in a million that does it.

"For one thing, they are more afraid of the gun than they are of anything that might occur to frighten them, and then there is the inconvenience of the thing. A man can stick a revolver in his hip pocket and no one will be the wiser, but a woman finds it hard enough to even find a place to put a handkerchief, let alone a piece of steel that occupies a bunch of space."

Reflections of a Bachelor.

New York Press: A man is terrible smart to have as big a bank balance as he wants people to believe he has.

A girl's idea of a nice man is one who says she broke his heart by not marrying him when he didn't ask her.

Most of the money a man could save if he had no bad habits wouldn't be any fun to him if he didn't have them.

A woman has a real good time at somebody else's dinner that is poor, thinking of the mean things she can say about it.

One thing a woman likes about a husband is she can pretend he understands about railroad time tables and let him figure out her train for her.

Who Wouldn't Be?

Providence Journal: The new courthouse in Chicago is to have its entire top story devoted to recreation quarters. Jurors may hereafter agree to disagree for indefinite periods, indulging in gymnastic exercises, eating, drinking and making merry generally between ballots. Who wouldn't be a juror under such conditions?

Do You Remember?

Atchison Globe: What has become of the old-fashioned man who wore paper collars?

Royal Baking Powder

ABSOLUTELY PURE

DISTINCTIVELY A CREAM OF TARTAR BAKING POWDER

It does not contain an atom of phosphatic acid (which is the product of bones digested in sulphuric acid) or of alum (which is one-third sulphuric acid), unhealthful substances adopted for other baking powders because of their cheapness.

THE WEATHER.

Sleet and snow covered the sidewalks early this morning and the atmosphere was as chilly and raw as an early March day. Old winter evidently is determined to stay the month out and give April no chance to show her smiling face to the people this year. The dense clouds that covered the sky kept the sun from exercising its balmy offices early and when the sun did finally come out, it was only half bright. The whole morning was so cold that no one ventured out without heavy wraps while many housekeepers, who had gone by the calendar and let their furnace fires die out, were forced to start them again. A northeast wind also added materially to the discomfort of the day and kept many Saturday shoppers from venturing down town. Last night's lowest temperature was 24 degs., and yesterday's highest was 48 degs. The weather man says that it will be generally cloudy tonight and tomorrow with freezing temperatures and possibly snow flurries.

The sun set at 7:12 o'clock this afternoon, will rise at 4:57 o'clock tomorrow morning, set at 7:14 tomorrow afternoon and rise at 4:55 o'clock Monday morning. Tomorrow will have another four minute gain of daylight.

A year ago today was decidedly chilly as the result of a northeast wind and rain added to the coolness during the evening.

Says Mr. Richardson of conditions: "The barometer remains low in the Southwest but the Eastern disturbance has moved out to sea. During the past twenty-four hours, these disturbances caused rain in the Atlantic states, snow in the Northwest, and higher temperature in the Lake region, Iowa, and from Kansas southward to Texas. High pressure areas overlie the St. Lawrence and Red river valleys, the latter being attended by unusually low temperatures for the season, the lowest reported being 2 degs. above zero at Prince Albert. Freezing weather prevails in the Rocky mountain districts, and the entire Northwest. Threatening and chilly weather is indicated for this locality tonight and Sunday."

Following were last night's lowest temperatures, as recorded by the weather bureau:

Abilene	62	Memphis	50
Asheville	54	Miles City	18
Atlanta	56	Milwaukee	32
Bismarck	20	Minnedosa	12
Boston	44	Modena	32
Buffalo	32	Montgomery	60
Cairo	36	Moorhead	22
Calgary	14	New Orleans	60
Charleston	62	New York	46
Chicago	36	Norfolk	54
Cincinnati	36	Northfield	30
Concordia	34	North Platte	36
Davonport	32	Oklahoma	54
Denver	32	Omaha	42
Detroit	30	Phoenix	54
Devils Lake	12	Pierre	28
Dodge	48	Pittsburg	36
Duluth	24	Port Arthur	24
Edmonton	8	Portland, Or	40
El Paso	46	Prince Albert	2
Escanaba	32	Qu 'Appelle	6
Galveston	68	Rapid City	22
Grand Haven	28	St. Louis	40
Green Bay	30	St. Paul	32
Havre	16	San Antonio	64
Helena	22	San Francisco	52
Houghton	30	Santa Fe	30
Huron	26	S. Ste. Marie	26
Jacksonville	66	Shreveport	56
Kamloops	26	Spokane	32
Kansas City	46	Swift Current	12
Knoxville	54	Washington	48
La Crosse	36	Wichita	48
Lander	26	Williston	10
Little Rock	62	Winnemucca	36
Los Angeles	52	Winnipeg	10
Marquette	30	Yellowstone	10
Medicine Hat	18		

Department of Agriculture, Weather Bureau, Duluth, April 27.—Local forecast for twenty-four hours ending at 7 p. m. Sunday: Duluth, Superior and vicinity, including the Mesaba and Vermilion iron ranges—Generally cloudy tonight and Sunday, with freezing temperatures and possibly occasional light snow flurries; fresh winds, mostly northeast.

H. W. RICHARDSON,
Local Forecaster.

Chicago, April 27.—Forecasts until 7 p. m. Sunday: Wisconsin—Partly cloudy tonight and Sunday; colder Sunday and in west portion tonight.

Minnesota—Threatening tonight and Sunday, with snow in south portion; continued cold.

The Dakotas—Snow in South Dakota, generally fair in North Dakota tonight and Sunday; continued cold.

Upper Lakes—Variable winds, gentle to fresh tonight and Sunday; generally fair weather, except probably snow flurries on Superior and Northern Michigan tonight.

TEA TABLE BRIGHTENERS.

Washington Star: "I ain't got time to kick about de cost of livin'," said Uncle Eben. "It's too busy hustlin' foh de price."

Cleveland Plain Dealer: "Mr. Chumley is doing slum work. Does he like it?"

"Enjoys it immensely. You see he's never had a chance to sow any wild oats."

Philadelphia Press: "He's the most eccentric autoist I ever met. He's got such queer notions about his machine."

"Thinks it's the very best made, I suppose."

"No, he says he bought it because it was cheap."

New York Sun: The man in the Iron Mask explained:

"Trying to keep out of the $5,000,000 conspiracy list."

In view of activity from Washington they forebore to press him further.

Boston Record: Hoax—Did you really enjoy your stay in Paris?

Joax—I came home in the steerage.

New York Herald: George III was wondering how the apple got in the dumpling.

"Another dinner conspiracy," he ejaculated.

Herewith the royal reason tottered on its throne.

Philadelphia Record: "It's no use your kicking about the growing popularity of the automobile," said Skorcher. "for nothing will stop it. It's bound to carry everything before it."

"Well," replied the plain citizen, "I do hope it will eventually carry its smell before it."

SATURDAY NIGHT TALK

To Anyone Soured on Life.

"What can a man do who has become soured on life?" That question opens the door into a great subject, for despite the fact that Americans have the reputation of being the happiest and most bouyant people of the world, the number of those wholly or partly soured on life is larger than is at first supposed. They may not have gone so far as to contemplate throwing themselves into the nearest river, or taking a dose of strychnine. They are hardly ready to present themselves for treatment at any of the anti-suicide bureaus which Gen. Booth and his followers are organizing in different cities; but the sweetness and charm of life have practically vanished for them, and they radiate gloom instead of sunshine as they go about the world. They have adopted a slower form of suicide. What word may be spoken to these individuals here and there that shall incite them to make one more desperate try for happiness?

It ought to be a word of sympathy first of all. Quite likely you have been unjustly treated. Some supposed friend has gone back on you. Circumstances over which you seem to have had no control have cramped your life. Your "luck," if you choose to call it that, has been harder than that of your neighbor. But does it all justify you in settling down to despair? Our question is not what others can do for you, but what can you do, and my first appeal must be to your will power. Maybe you need a kind of electric shock to summon up the forces of personal life that ought to assert themselves in a man, even though things have gone awry with him.

Maybe, too, your ideas need some reconstruction. If your preconceived program of life has included naught but pleasurable experiences; if you have grown up thinking that you ought to be exempt from pain, disappointment, reverses, shabby treatment by others—then it is high time that you got a larger view of the universe; a higher ideal of existence than that of sitting in easy chairs and sipping nectar from golden cups. Not to have any hard knocks means flabby, not virile manhood. You hardly know what life in its totality is until you have had some encounter with sorrow, loss or disappointment. But your sense of reaction from these things is evidence that life is meant to be joyous in spite of trial. Now go one step farther and believe that life is meant to be more joyous for you because of your afflictions, and set yourself resolutely to dissecovering the good at the heart of the evil.

Try the nature cure. Go out these fine spring days and watch the clouds floating over the sky. Bare your head to the breezes, sweet with the suggestion of flowers. Take delight in the bewitching greenery with which shrubs and trees and meadows are adorning themselves. A bright, spring morning is a splendid antidote for the sour spirit.

Try service. Somebody is worse off than you. Find him out and seek to alleviate his lot. Yes, you can do it even if you aren't a city missionary, or a social settlement worker; or even if you think you have no knack for cheering others up. Try, and you will be surprised how that faculty of bearing other people's burdens when once put at work strengthens.

Try faith. But you haven't any, you say. Oh, yes, there is a good big residuum of faith even in your skeptical mind, and your downcast heart. Cling to it. Nourish it by putting it in contact with others who are trying to walk by faith. Believe with all your might what you do believe, and your faith will grow.

It ought to be goodby from this day forward to the sour spirit, for the gift of existence is too precious a one to fritter away or despise under any circumstances. I know a man who remarks to his friends as he comes in to dinner every night, often after a hard and trying day, "The world's a great go, isn't it?" Yes, he is right, even this world, with all its aches and pains, is a "great go," and if you will say over to yourself every morning on arising the little verse that follows, I am ready to guarantee that you will cease to be soured on life:

"How good is man's life the mere living! How fit to employ
All the heart and the soul and the senses for ever in joy!"

THE PARSON.

AMUSEMENTS.

BIJOU

J. S. MAITLAND, Mgr.

MATINEE TOMORROW AT 2:30.
THIS WEEK—Gavin Platt and Peaches in "The Stolen Kid;" Harry Braham, Maud Isabel Entwistle and company; Lorrene Marchel, Reeves and Kenney, Isadore Silver, Moving Pictures, "The Curfew Shall Not Ring Tonight," a curious dream. Matinee daily, 2:15. Evenings at 8 and 9:30. Order seats by both 'phones.

TWENTY YEARS AGO.

Taken From the Columns of The Herald of This Date, 1887.

***E. E. Barnidge of Ashland, formerly proprietor of the Delmonico there, is moving to Duluth and will open a restaurant in the Beckman block on West Superior street about the middle of next month. It is the ultimate intention to transform the Beckman block into a European hotel.

***Henry Corwin of Harrison's real estate exchange is the possessor of a beautifully located home on the hills overlooking the Ohio valley at Cincinnati. It is on the very spot where Longfellow wrote his beautiful poem on the Catawba grape.

***This evening Willis A. Gorman post, G. A. R., will hold a reception and promenade concert at the St. Louis hotel in celebration of Gen. Grant's birthday. The occasion will be made doubly enjoyable by addresses by Senator Whiteman and Capt. W. H. Smallwood.

***Pat Lawler of this city was united in marriage at Morris, Minn., today to Miss Mary Ryan. The couple will come to Duluth to reside.

***At a meeting of the city council last evening, Alderman Monaghan resigned as alderman from the Third ward and recommended T. B. Daugherty as his successor. The rules were suspended and the city clerk was authorized to cast the vote of the council for Mr. Daugherty. The finance committee reported that, as the street improvements will be likely to foot up $1,000,000, it will be necessary to have plenty of money on hand for the payment of contractors, etc, and therefore recommended that $475,000 of bonds be printed. It was ordered that a survey be made by the board of public works with the idea of establishing a system of drives and parks, connecting with avenues on the bench or terrace at the top of the hill and along Chester and Miller creeks.

***The following real estate transfers have been recorded:

C. A. Long to George Long, lot 5, block 42, lot 14, block 31, lot 14, block 51, Endion $3,800.

Charles Wiggins to H. A. Norton, 35 by 100 feet, lots 50 and 52, East Third street, First division, $3,500.

Christine Burg to George Besser, east half lot 27, East Superior street, First division, $18,000.

F. A. Day to J. J. Dickeman, fractional lots 1 to 6, block 8, Highland Park, $4,120.

Mary A. Flnn to Charles Ouillett, lot 232, block 60, Second division, $2,000.

Christian Church to N. F. Hugo, 25 feet lot 76, block 32, Third division, $1,250.

George C. Howe to P. D. Jones, lot 459 and 441, block 46, Second division, $8,000.

Pat Spellman to E. C. Carey, lot 293, block 94, Second division, $2,100.

James McAuliff to James L. Dow, lots 418 and 42, block 85, Third division, $3,000.

George C. Howe to Helen M. Gorman, lot 422, 420, 424, 430 and 432, block 43, Second division, $20,000.

NEWS OF THE WEEK AT CENTRAL HIGH SCHOOL

Senior Class Will Present a Statue to the School.

Juniors and Seniors Will Hold Debate at Early Date.

At a special meeting of the members of the senior class, held Friday afternoon, it was decided to present the class with a statue as the graduation gift of the class. The piece of statuary which was selected, is a figure of Apollo Citherea, and represents the God of Music playing upon his zither.

The statue will cost $100, and the freight will amount to about $10. It is 6 feet 6 inches, and will be mounted upon a pedestal, which will be furnished by the board of education, and on which the name and motto of the class will be engraved. It is hoped to get the statue before the close of school, so that the members of the class may see their gift.

The question of commencement and class night invitations was brought up at the meeting for the consideration of the class. The one which seemed to be the general favorite had a maroon border, and if accepted will be embossed with the class pin. It is simple, plain, and carries out the colors of the class very artistically. It was finally decided to place the matter back in the hands of the committee, and after they have received suggestions from the members of the class, let them pick out the one which they like best. The prices ranged from 5 to 12 cents a piece.

After much delay the senior play has been selected, and work on it will be begun as soon as the play books arrive. The piece which was originallly decided upon has been abandoned, and a comedy, entitled "Just For Fun," will be presented. This play has six principal roles, two for boys and four for girls. Prof. Custance will try hard to work some chorus work into the piece. As soon as the books arrive he will look them over and pick out the characters.

Junior-Senior Debate.

After many postponements and delays the date for the junior-senior debate had been finally decided upon and the affair will come off in chapel next Friday morning, unless the present plans miscarry.

The seniors have been playing for time as their essays are due next week and these require so much time that they cannot very well put sufficient preparation on the debate.

The juniors have been urging that it come off as soon as possible and the two teams finally got together upon next Friday. The question is upon the navy subject and has been thoroughly debated at the meetings of the society, so that both sides will be well stocked with good arguments.

The senior team will be represented by David Fieldman, Frank Boerner and Richard Hodgeson, and the champions of the junior class are Oscar Helam, Frank Rich and Victor Meldahl. Each speaker will be allowed seven minutes for his preliminary speech and three or five minutes for rebuttal.

The juniors have intimated that they have something up their sleeves in the debating line that will make their opponents sit up and take notice when it is sprung. The seniors are equally confident and have warned the lower class men to prepare for defeat.

Juniors Have Meeting.

The regular monthly meeting of the junior class was held last Wednesday. The committee which was appointed to take charge of the junior-senior party, reported that they had rented the Spalding for the affair at a cost of $90. This also includes the punch and several incidentals which will be furnished without further charge. The class at present has $43.71 in the treasury and a good deal more will be required to pay the expenses of the affair. The class will raise the money by a collecting campaign among the members and this will soon be commenced. The cost of the party is great and every member of the class is asked to contribute as liberally as possible.

The president spoke briefly, saying that now that it has been decided to give a junior-senior party, it is up to the class to do it right and make the affair the best that has ever been given. In order to do this, he said, the co-operation of the whole class is absolutely necessary.

Capt. Clausen of the track team made a speech to the boys, telling them that he will have to have more material if he is going to turn out a team that will be a credit to the class.

Only a few men, he said, have shown up for practice so far and he named several good men whom he wanted to try for the weight contest, and also some whom he said it wouldn't hurt to get out and limber up for the dashes.

There had been some talk of forming a baseball league among the different classes of the school, similar to the basketball league which has just completed a very successful season. It was decided to appoint a committee to speak to Principal Smith about the matter, as it was thought that if the juniors took the initiative the other classes would soon follow.

The treasurer reported that he had collected dues to the amount of $5 during the month and had paid out $2.50 for balls and other baseball supplies for the class.

Arbor Day Talk.

Arbor day was celebrated last Friday at the high school by an appropriate program which was greatly enjoyed by the students. Wallace Webster read Governor Johnson's Arbor Day proclamation, and Prof. Ulrich talked on the forestry question.

Mr. Ulrich spoke of the immense forests which covered this country fifty years ago and drew a striking parallel between the conditions of those times and the present denuded state of the forests.

The causes which he assigned for this were in numbers. They were as follows: The clearing of the land for agricultural purposes; the destruction wrought by forest fires; the destructive system of lumbering; and the allowing of cattle to graze in the forests, thus destroying the young trees.

The result of this devastation of the land are various, he said. In the first place it increases the price of lumber, it effects the water supply of the region, and it is conducive to harsher climate.

The remedies which Mr. Ulrich suggested were the preservation of existing forests; the establishment of government reserves, and reforesing of the land which has been cleared of timber.

The difficulties in the way are the private ownership of large tracts of timbered land, the fact that greedy men wish to secure the greatest possible value from the land in the shortest possible time, and the fact that men do not wish to pay taxes upon land that is not paying them any income.

As a solution of these difficulties, Mr. Ulrich advocated state ownership of the forests as the state's life is perpetual and it can afford to wait for the income which is sure to come from the land in time.

The speaker concluded by saying that the problem will rest with the boys and girls who will be the citizens of the future and he urged them to study the matter carefully and try to find the solution to the problem.

University Exams.

Although the regular college entrance examinations for Eastern institutions will not be held at the high schol this spring, examinations for entrance to the State university will be given here the week commencing May 27, which is the week before the closing of the high school term.

Those who are going to enter the engineering courses will have to be examined in elementary and advanced algebra, and plane and solid geometry. All who intend to take the academic course at the university will be required to pass an examination in English. In regard to all the other studies, a high school certificate will admit a student to the U.

The examinations need not all be taken in the same year. For instance, a freshman or sophomore may take the examination in algebra or plane geometry, and the credit will hold good until he graduates. In this way the students may take the examinations while the study is fresh in their minds, and stand a much better chance of passing.

The list of students who are going to the State university was taken the other day, in order that Mr. Smith might ascertain as nearly as possible the number of examinations that will have to be given. A large number signified their intention of going to the state institution.

Report Cards Due.

The next to the last report card of the year is due next Monday, and those who are not far above the passing line are waiting with much anxiety to see the result of their last month's efforts.

There are just five more weeks of study left and one's week o examinations, and this will all figure in as one month The seniors get out a week before the other classes and will close their course of study May 31.

A large part of the last few weeks will be taken up with review and preparation for the final examinations, as their is much of the early work which the students have forgotten.

One of the pupils has figured out that there are just 7,500 minutes more of school, and another, who has the calculation down to a finer point, is authority for the statement that the agony will endure for exactly 450,000 seconds longer, figuring on the basis of five more weeks.

Seymour Lectures.

Next week will see the end of the Seymour lectures, which have been proceeding for the last four weeks at the high school. Tonight Mr. Seymour will review the life and work of Sir Walter Raleigh and next Monday, he will deliver a lecture entitled "The Cradle." The series of lectures will close next Saturday.

In addition to the lectures of his reguar course, Mr. Seymour spoke to the students of the high school Monday morning upon La Fayette. He reviewed the noted Frenchman's life and told of his services to this country during the revolutionary war. The talk was greatly enjoyed by the students for its interest and also because it cut an hour from the reguar recitation periods. A collection was taken up at the close of the lecture, by the senior boys, to defray the expenses of securing Mr. Seymour. Considering the excellence of the talk, the students thought that it was well worth the money and dug up cheerfully.

Previous to this talk to the students, those who attended the evening addresses were mostly men and women, and the sprinkling of students was not very thick. After hearing Mr. Seymour, however, many of the pupils have become interested in the lectures and intend to go to the rest of the lectures of the course. The object in bringing Mr. Seymour here was largely to present historical matters to the students in a palatable form, and special rates were offered to them in securing tickets.

High School Notes.

The senior essays are due May 3, which falls on next Friday and the members of that class are burning the midnight oil in their attempts to get through on time.

* * *

The baseball team of the junior class has been out for practice this week and the other class teams will soon get out. If enough interest is taken in the sport this year, it is planned to form an interclass league.

* * *

Examinations in spelling were given last Saturday for those who failed to pass in previous years. No one was allowed to enter unless he had spent five hours of study on the examination.

* * *

The Zenith board has held two meetings during the week, and is working steadily to make up the rest of the book in the brief time which is remaining. All those who contemplate handing in anything to the board should do so at once, as the time remaining is limited.

* * *

The girls' basketball teams have not indulged in anything more exciting than practice during the past week. The senior girls are still waiting patiently for a challenge from any of the other teams.

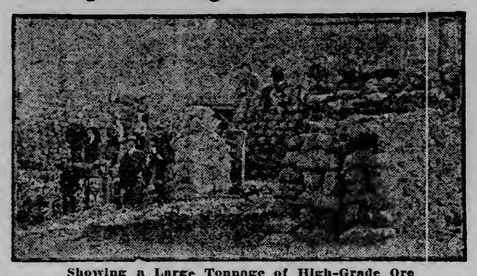
* * *

On Tuesday morning Norman McLeod secretary of the boys' department of the Y. M. C. A., presented a banner to the boys' basketball team of the senior class, who were the champions of the high school league. The pennant has a black background with the names of the players in gold letters.

* * *

During the week Principal Smith has been quizzing the students in chapel in regard to matter of civil and state government. Several students were found who were not up on the subject.

Nevada Copper

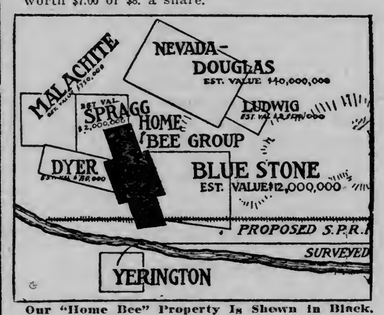


HON. JOHN SPARKS,
Governor of Nevada and President of the Nevada-Goldfield Mining, Milling and Smelting Co.

Telegram from Goldfield Says:

"Governor Sparks' Company Makes First Shipment of Ore From the 'Home Bee' Mine at Yerington."

Last Chance to Buy this $5.00 Stock at 50c. Price Advances to 75c Saturday, May 11th.



Showing a Large Tonnage of High-Grade Ore Sacked Ready for Shipment.

BUYING shares in this company at the present price is a good deal like buying $5.00 gold pieces for 50 cents. The public has waked up to this fact, and last week subscribed for many thousands of shares at the low initial price, which holds good for a short time.

Saturday, May 11th, the stock advances to 75c. All who buy before that date will make an immediate profit of 50 per cent. Further advances in price will develop rapidly, as this is a bona fide $5.00 stock. The immense holdings of the company headed by Governor Sparks—50 claims aggregating 995 acres in the Goldfield-Tonopah-Yerington copper-gold belt—make this property among the richest in the entire district famous for its big producing mines.

OUR RICH HOLDINGS AT YERINGTON.

Our "Home Bee" mine, referred to in the telegram from Goldfield, is surrounded by proved properties of great value. The "Nevada-Douglas" has an estimated value of $40,000,000. Its shares are selling around $14.00. The "Ludwig" is valued at $2,500,000; Capt. De la Mor's "Bluestone," $12,000,000; "Spragg," $2,000,000, with stock worth $7.00 or $8. a share.

Our "Home Bee" Property Is Shown in Black.

The Nevada-Goldfield M. M. & S. Co.'s is the only stock of all those mentioned selling at less than $5.00, and expert judges estimate the value of its "Home Bee" holdings as being fully as valuable as any property around Yerington.

We figure conservatively that we have at least 1,000,000 tons of ore in the "Home Bee" mine; enough to insure enormous dividends leaving out of consideration our rich holdings of hundreds of acres at Lida, Liberty, Goldfield and Tonopah.

In the big 8½x11 prospectus we have prepared, fully describing our entire proposition, we show four large maps giving the location of all our groups of claims. Send for this beautifully illustrated book. It is the most complete mining prospectus ever issued.

NOTE—The Western Assay Co. of Denver made a number of assays of ore taken from our various properties at different levels and reported an average value of 11.5 per cent copper. Many of the world's greatest copper mines that have paid millions in dividends produce ore that assays only from 3 per cent to 7 per cent copper.

CAPITALIZATION.

This company is conservatively capitalized at $5,000,000, divided into 1,000,000 shares, par value $5.00 each. In view of the immense acreage and the millions of tons of ore known to be in the 50 claims held by the company, a capitalization of $20,000,000 would not be inconsistent. There is no preferred stock or bonded indebtedness. All shares are common, non-forfeitable and non-assessable, carrying no personal liability.

There are 400,000 shares of Treasury Stock. We offer 200,000 shares, par value $1,000,000, for the purpose of raising money quickly for development work on a large scale.

WHY STOCK IS SOLD.

It will be our policy to pursue an active and vigorous campaign of development. The money received from stock subscriptions, after legitimate expenses are paid, will be applied only for the legitimate work of opening up the properties and putting them on a productive, dividend-paying basis as soon as possible. We will put a large force of miners at work on the Yerington group and as soon as sufficient tonnage is in sight we will build our own smelter, thereby saving an enormous amount in transportation charges.

We will also develop the properties near Goldfield and Lida and build a mill to treat these ores. The Liberty property will be worked and the ores treated at one of the plants in the neighborhood. Greenwater ores will be treated at the large smelter to be built near there by the Schwab interests.

MR. WATSON'S SWORN STATEMENT.

STATE OF ILLINOIS, } ss.
County of Cook, }

W. T. Watson, on oath, being duly sworn, deposes and says that he is the General Superintendent of the Nevada-Goldfield Mining, Milling and Smelting Co., and that he has been such superintendent since the incorporation of said mining company; that his duties have consisted in taking general charge of mining operations on the properties of said company, and that there is at the present time at the "Home Bee" mine of said company copper ore to the amount of fully One Hundred and Twenty (120) tons sacked and ready for shipment.

Affiant further says that he has thoroughly sampled said ore and that the results obtained show a value of shipping grade, and that the same can be profitably shipped at any time.

(Signed.) W. T. WATSON.

Gen. Supt. of the Nevada-Goldfield M., M. & S. Co.

Subscribed before me this 9th day of April, A. D. 1907.

HOWARD W. HARRINGTON,
Notary Public.

OFFICERS.

President—Hon. John Sparks, Governor of Nevada, Carson City.
Vice President and Managing Director—John H. Renlger, New York City.
Secretary and General Superintendent—W. T. Watson, Goldfield, Nevada.
Treasurer—T. H. Winsor, New York City.

DIRECTORS.

All of the above officers, with John E. Harper, A. M., M. D., Chicago, Ill.
Frank L. Wildes, Deputy State Treasurer, Carson City, Nev.

CONSULTING ENGINEERS.

H. H. Hunter and E. E. Stewart.

GENERAL COUNSEL.

Howard W. Harrington, Chicago; Henry M. Farnum, Goldfield.

This property is so good—so extensive and with such a wonderful showing of proved ore values—that the Governor of Nevada, the richest mining state in the Union, after a full personal investigation, accepted the Presidency of the Nevada-Goldfield M., M. & S. Co. Read

WHAT THE GOVERNOR SAYS:

"I would never have accepted the Presidency of this Company unless I believed in it thoroughly. I consider this $5.00 stock—selling for a limited time at 50c—the greatest opportunity offered investors in many years to make a fortune in legitimate mining. It is my honest opinion that those who are fortunate enough to buy shares now at the bottom price will reap rich profits within the next few months."

This is entitled to the respect and confidence of every thinking man or woman who has a little money to invest in a safe and profitable enterprise. It is the statement of an honest man, Chief Executive of one of our greatest states. Can you find, anywhere, at the head of a mining company a man whose word carries more weight or whose official standing gives you a better guarantee of protection?

Come into our office and let us show you the Ore, Assays, Maps, Etc.

Stearns' Electric Paste Co., Buffalo, N.Y., U.S.A. (Formerly Chicago, Ill.)

HAS RESIGNED HIS POSITION

A. C. Pearson is No Longer "Godfather" to 700 Newsboys.

A. C. Pearson, who has been circulation manager of The Herald, for nearly fourteen years, resigned his position today to take charge of the credit and collection department of French & Bassett, which position he will assume Monday.

Mr. Pearson came to The Herald in 1893, when the paper had a circulation of 2,200, and he has grown up with it until it now circulates over 23,000 copies daily. He has not only labored assiduously in the routine duties of his department, and conducted it admirably in its expansion from a small local circulation to the large general circulation over the Northwest, but he has found time to be a sort of godfather and "next friend" to the hordes of boys that have sold and carried the paper during all these years. He has had charge of the newsboys at sixteen Thanksgiving dinners, beginning with thirty newsies at the first and ending with 670 at the last; he has given the boys eight picnics, has chaperoned them to theaters a number of times, has taken them to carnivals and White City attractions, and has arranged and pulled off several newsboys' concerts. He has taken an affectionate interest in the boys all these years, and his consideration has been returned by them in full measure of respect and loyalty. Many of them have grown to manhood and have become fathers of boys themselves, and Mr. Pearson often hears from graduates of "The Herald school," as they call it, from all over the world.

The position which he now assumes has lately been created, made necessary, like the 25,000 addition to their building, by the growth of the business of French & Bassett. He will be succeeded on The Herald by Edward Armstrong, formerly with the Duluth News Tribune, but lately with the Louisville Herald.

HIGH SCHOOL BOYS PRACTICE

Schedule for Season Has Not Yet Been Arranged.

The high school baseball team has been practicing this week and much has been done toward getting the men in shape. Capt. Cole has had the squad out Tuesday, Wednesday and Friday nights and the work is improving at every practice. The representatives of the Blaine high school of Superior were to come over to the school last Wednesday, but they failed to show up, and, as a consequence, the schedule is still up in the air.

Manager Hicken is trying to get games with the Cloquet team and with both the Nelson-Dewey and Blaine teams of Superior.

A game will also be arranged with the alumni of the school if this is possible, and it should prove interesting, as there are many of the old high school men about town, and there is no doubt that they would be glad to get back in the game if the opportunity is offered.

Capt. Cole has not yet formed a very definite idea as to the merits of the respective men and will probably have the team picked by the end of next week.

men I found men sleeping on the floor, ... on tables, any place, and they were not the hangers-on of saloons, either, but reputable ... ers."

HOME BEE MINE SHIPS ORE.

New Copper Property Enters List of Producers.

Special Dispatch to The Inter Ocean.

GOLDFIELD, Nev., April 20.—One of the new mines to begin shipping ore this week is the Home Bee mine, owned by the Nevada-Goldfield Mining, Milling and Smelting company. This mine is one of a number of high-class copper properties owned by the Nevada-Goldfield company, the headquarters of which are in Chicago in the Rector building. It is the opinion of mining experts here that (the Home Bee, and probably the surrounding claims, are destined to prove exceedingly valuable properties.

The Nevada-Goldfield Mining, Milling and Smelting company is headed by Governor John Sparks of Nevada, and has interested in it a number of New York and Chicago capitalists of prominence. It owns fifty claims, aggregating 995 acres, in the famous Goldfield-Tonopah-Yerington money belt. These holdings are among the greatest in the district. The reports of the assayers have been extremely favorable, and the beginning of shipments of ore indicates that the development stage is already over.

NEW YORK COTTON MARKET.

DISLIKED DECISION.

College Men Tie Judges to Trees and Leave Them There.

Upper Alton, Ill., April 27.—Having decided in favor of the sophomores in an oratorical contest at Shurtleff college Thursday night, which decision was displeasing to the freshmen, Prof. M. Mugan of St. Louis, and E. M. Dey, general advertising agent of the Missouri Pacific system, two of the three judges, were seized by the freshmen, tied to trees on the campus and left there until morning. Attorney Harold Johnson of St. Louis, the third judge, who rendered a decision in favor of the freshmen, was not molested.

Alcohol not needed

Ayer's Sarsaparilla is not a strong drink. As now made, there is not a drop of alcohol in it. It is a non-alcoholic tonic and alterative. Ask your own doctor about your taking this medicine for thin, impure blood. Follow his advice every time. He knows. Trust him.

We have no secrets! We publish the formulas of all our preparations.

TOOK BANK FOR SALOON

T. A. Muzzier Asks for "Brandy and Soda" at First National.

Beer Mugs Were Used as Weapons in Saloon Fight.

Joseph Albany Muzzier has an exalted idea of the fittings which should go with a modern and up to date thirst cure establishment which caters to the most exclusive trade at the Head of the Lakes.

Joseph had been patronizing less elaborate joints somewhat freely earlier in the day and when he came in front of the First National bank building yesterday afternoon, he ambled aimlessly into the corridor and, catching a glimpse of shining counters and hurrying clerks in the bank room, he decided that he had struck a new kind of dispensary for liquid refreshment and decided to try it.

He reeled uncertainly in at the door and made his unsteady way to the counter.

"Shay," he mumbled, running one hand into his trousers pocket and feeling for the footrail which was not there with his right foot, "Shay, you, gimme a brandy'n soda," and he plunked down a quarter on the counter.

"A what?" ejaculated the man on the other side.

"A brandy'n soda. Don't you know how to make that?" said Joseph A. with rising ire.

"Well, that's not our specialty exactly," said the money handler. "You can get one down the street."

"No, you don't!" said Joseph with vigor, "I want my soda now. I'll pay, won't I? There's your money," and he steadfastly refused to move until an officer arrived on the scene and took him in charge. He was arraigned before Judge Windom this morning on a drunkenness charge.

Augustina Fiorenza got into an altercation with one of his countrymen in the Incline saloon at 701 West Superior street last evening, and in the heat of the argument picked up a beer mug which was handy and smashed it over his opponent's head. Thinking that he had not made sufficient impression with mug No. 1, Augustina picked up a second mug and very deftly repeated the trick. At this juncture a copper appeared and Augustina was bundled protestingly off to the police station. He pleaded guilty to disorderly conduct this morning and was given a thirty-day sentence at labor.

GOSPEL MEETINGS
at the
First Baptist Church
Conducted by Rev. W. A. DUNNETT.
Every Evening Except Saturday.

ODD FELLOWS, ATTENTION!

The Odd Fellows of Duluth will assemble at their hall on Lake avenue at 1:30 p. m., April 28, and meet with the Two Harbors and Carlton members and prepare to march in regalia to the First Methodist church, where the eighty-eighth anniversary exercises will be held at 3 p. m. sharp. All Odd Fellows are invited.

Turndown Lamps for Nurseries and Bedrooms

The continued introduction of new methods of applying the electric current to practical and useful purposes often causes wonderment as to where and when the limit will be reached—if ever.

One of the most notable of recent steps in this direction is the introduction of "turn down", electric lamps. There is an incandescent lamp which can be turned up and down at will, thus overcoming one of the criticisms which has been made to electric lighting—to the effect that the lamps must be burned at full candle power or not at all.

We will sell these lamps to our patrons during the month of May for 30c each. After that the price will be 40c.

MARINE NEWS

SOON READY FOR WORK

Big Dredge, Old Hickory, is Now Nearly Completed.

Machinery is Installed and Deck Houses Are Up.

Work on the monster dredge, Old Hickory, is progressing very satisfactorily at the shipyards at the foot of Sixth avenue west and the powerful boat will probably be placed in commission before many weeks are passed.

The erection of the deck houses on the big boat have about been completed and as the machinery had mostly been installed before the houses were built there is not a great deal left to do before the boat can be put in commission.

Although the boiler and engines have been installed the great dredging apparatus has not yet been put in place. Old Hickory was launched about two months ago before the ice had commenced to go out and it was necessary to cut a space for her before she could take her first plunge into the water.

She is the largest dipper dredge in the world with the exception of one which has been operated on the St. Lawrence river and she is as large as that. She will probably be used in the Duluth-Superior harbor for at least a part of the present season.

BOATS NOW EXPECTED.

Big Fleet Will Probably Begin to Arrive Sunday.

Only four boats of the great fleet of freighters which is on the way to Duluth have so far arrived, the steamer Christopher having followed the Westan, Bransford and Kerr at about 2:30 yesterday afternoon. The remainder of the fleet have been delayed by the ice in Whitefish bay.

It is expected that the rest of the steamers will begin to arrive some time tomorrow, as it was reported in marine circles that they had been released from the ice at Whitefish. The report stated that some boats of the downbound fleet had arrived at the Sault, after having been held by the ice in Whitefish bay, and it is thought that some of the upbound boats have also been freed.

Yesterday reports received in Duluth stated that the entire fleet were icebound, and that tugs and the whaleback Cort had been sent to their assistance.

This morning the two Anchor liners, Schuylkill and Mahoning, left port loaded with grain for Buffalo. They were among the first boats to get out of winter quarters two weeks ago, but have since been waiting for favorable conditions before leaving the harbor.

CRANAGE RELEASED.

Tugs Pull Freighter Off Shoal After Cargo is Partly Ligrtered.

The steamer Cranage was released at about midnight last night, after several bushels of grain had been lightered from her hold. She was pulled off the sand bar at the mouth of the Nemadji river by the tugs Excelsior and Inman, and was taken to the Allouez ore docks, where she is being reloaded today.

Whitney Bros. did the lightering and were working upon the boat nearly all day yesterday. The Cranage will probably depart for the lower lakes as soon as she is reloaded.

SPAR BUOY CHANGED.

That Marking Channel at Nemadji River Is Moved.

Capt. Pryor, United States lighthouse keeper, who has charge of the setting of the buoys in the different channels of the Duluth and Superior harbor, was today authorized by the government to change the red spar buoy, marking the north side of the channel at the mouth of the Nemadji river, 150 feet to the south and west of its present position.

This is at or near the place where the steamer Cranage grounded Wednesday night. This leaves a channel of 350 feet with a depth of water of eighteen feet. The change was made by Capt. Pryor this morning.

All of the spar buoys marking the different channels in the Duluth and Superior harbor were set yesterday and today the range lights are being placed in position. The lights marking the channel on the Duluth side of the harbor are already in place and they will all be in their positions in a day or two so that it will be safe for mariners to navigate at night after this week.

ICE BLOCKADE BROKEN.

Downbound Boats Held in Whitefish Bay Get Through.

Sault Ste. Marie, April 27.—(Special to The Herald.)—The fleet held by the ice between Whitefish and Iroquois has begun to arrive today, but locking is very slow owing to the ice in the locks.

SAULT IS CLEAR.

Boats Are Being Held by Ice at Whitefish Point.

Sault Ste. Marie, April 27.—The ice blockade in the Soo passage has been lifted and boats are now moving up and down the river without much trouble. In Whitefish bay, at the Lake Superior entrance to the river, conditions are worse than ever. No down-bound vessels have reached this point since Thursday at noon, and many are now fast in the ice off Point Iroquois. The ice has been blown into the bay and in some places the windrows are from 10 to 12 feet high.

Only five of the steamers which succeeded in making their way up through the Soo passage earlier in the week succeeded in reaching clear water in Lake Superior. They passed Whitefish point Thursday morning. The rest of the up-bound fleet is now fast in the ice in Whitefish bay, three miles of ice separating them from the down-bound fleet. About 150 ships, bound in both directions, are now scattered along the passage between Point Iroquois and Detour.

Two tugs together with the whaleback steamer Cort and ice crusher Algomah were used today in clearing a channel in the river. Late today the Cort and the two tugs were dispatched to assist the ice-bound fleet in Whitefish bay and it is expected that some of the boats will be released tomorrow. The two fleets are spread over such a wide area, however, that several days will probably elapse before all can be freed unless weather conditions change.

Ferry Is Running.

Capt. A. C. Majo started his ferry line across the bay from Duluth and Superior and will maintain a half hour schedule in the future for the remainder of the season. He has three boats in commission and another is ready for use in time of emergency.

Season Opens at Marquette.

A message was received today from Marquette stating that the season of navigation had opened at that point today with the arrival of the steamer Pendennis White. She will load ore at that point.

Grain Carriers in Demand.

Cleveland, April 27.—Grain carriers are in good demand at the head of Lake Superior and 2 cents was offered quite freely to Buffalo, but no charters were reported. More ore is being covered at the old rates by local shippers, and little wild chartering is being done. Owners of small carriers, it is said, have agreed among themselves not to take coal for the slow unloading docks at Portage at less than 50 cents. The steamer Peck was placed yesterday for the Soo at 40 cents.

Castalia Is Released.

Detroit, April 27.—The steamer Castalia was released today from Fighting island after lightering part of her ore cargo, which is now being reloaded by the lighter Newman.

Unable to Get Loads.

Chicago, April 27.—The Manchester for wheat to Buffalo at 1¼ cents made up the day's business in the grain trade. Several vessels unable to get loads at even present low prices were sent out light.

Nineteen in Mutual Fleet.

Nineteen vessels will be operated this season by the Mutual Transit company. Ten of them will ply between Duluth and Buffalo, so that insures the arrival of one of the fleet at least every other day. The officials of the company predict one of the busiest seasons ever known in the lake trade.

Will Raise Steamer.

An attempt will be made soon by Capt. Martin Peterson to save the steamer John M. Nicol, which was stranded on Big Summer island in the December gale last year. He has gone to Escanaba to take charge of the work. The steamer is broken in two, but it is believed she can be saved.

Will Be Felt Next Fall.

Next fall it is expected that the effect of the late opening of navigation will be felt more forcibly, for at that time there will be a grand rush for tonnage to carry down all the cargoes that have been missed by reason of the delay in the opening. A heavy movement of ore from the mines has so far been prevented by the cold weather and the effect of the late opening will probably not begin to be felt until next fall.

Long Trip For Small Yacht.

The small power yacht Mousuetaire reached Milwaukee Wednesday afternoon on her long voyage from New York to the West Indies, the Gulf of Mexico, up the Mississippi river and through the Illinois river and drainage canal to Chicago, and from Milwaukee she will proceed along the lakes to Buffalo. The voyage began on Jan. 15 and has continued to the present time without mishap. The little vessel, a gasoline launch, is owned by Paul E. De Fere of New York.

Passed Detroit.

Detroit, April 27.—(Special to The Herald.)—Up: Uranus, Twin Sisters, 9:30 Friday night; Peter White, 1:30 Saturday morning; Samoa, Clint, 3; Hayward, 3:20; Kongo, 5:40; Soper, Favorite, Trevor, 6:30; Nicholas, 6:40. Down: Henry Smith, 9 Friday night; W. H. Mack, 10; Walker, 10:35; Hoover and Mason, 11:15; Lake Shore, 11:30; Big Wolvin, 12; Ball Brothers, 12:20 Saturday morning; Mars, 12:30; Manola, 12:50; Venus, 2:30; Rand, consort, 3; Seneca, 3:40; Colborn, 4; Clyde, 5; Frank W. Oilbarge, 6:30.

Later—Up: Buffalo, Tempest, Barges, Wawatam, 7:30; Northern King, 8; Corona, 8:20; Mohegan, consort, 8:30; Zillah, Redington, Coshawk, Geness, Colgate, 9; McDougall, 9:15; W. G. Mather, 9:30; Saxon, 10:15; Corsica, 10:30; Crescent City 10:50. Down: Gill, 8:30; Case, 10:30.

Up yesterday: Cambria (cleared), 11 a. m.; Randolph, Warner, Thompson, Eads, 11:30; Superior City, 11:40; E. L. Wallace, Fulton, 12:30 p. m.; Alfred Mitchell, 12:40; W. C. Rhodes, Gault, 2:10; Coralla, 2:40; Chemung, Holden, 3:40; Omaha, Gilbert, 5:20; Western Star, 6:20; Griffin, 6:30, Maud, 6:40; G. Stone, Maryland, 7:15; Winnipeg, 7:30; Bunsen, 7:40; Ishpeming, 8:30. Down: Penobscot, Veronica, Holland, 11:40; Rend, Harper, Chisholm, 12:30 p. m.; Milwaukee, 1; St. Paul, 4; City of Ottawa, 5:50.

Passed Mackinaw.

Mackinaw City, April 27.—(Special to The Herald.)—Up: Davidson, consort, 11:50 Friday morning; Earl, 1:15 Saturday morning; Selwyn Eddy, 2; Majestic, 3:15; Manchester, 4; Shringley, consort, 7. Down: Alva, 9:20 Friday night; Large steamer, Pendennis, White, 9:40; Black, 6 Saturday morning. Wind south, 18 miles, clear.

The Sault Passages.

Sault Ste. Marie, April 27.—(Special to The Herald.)—Up: Heffelfinger, Leonard, 9:40 Friday night; Garretson, 11; Watson, Bullock, 11:30; Wilkinson, 12:30 Saturday morning; Yosemite, Osborne, 2:40; Midland Prince, 4; Sherwin, Westmount, Ungara, Hamilton, 5; Morse, 5:40; Gates, 6:0; Linn, 7:20; Umbria, Weeks, Howe, 8. Down: Matoa, 1:30 Saturday morning; Sheldon Parks, 4; Widener, 6:20.

Later—Up: P. Jones, 8:30; Laughlin, 9:30; Clemson, 10:30; Andrews, Neilson, 11. Down: Mariposa, Edenborn, 9.

Up yesterday: James Davidson, Rosemount, 11:40; small Hawgood, Nimick, Moore, Midland Queen, Watt, Davidson (small), Simla, Burma, 1 p. m.; Harvey Brown, Admiral, 1:30; Meadford, Clarke, 3; James Wallace, R. Wallace, Superior, Pendennis, White, 4; Joshua Rhoades, Cort, Monteagle, Widlar, Onoko, 5; Pabst, Reed, 6; Kerr (small), Pope, Saxona, D. M. Whitney, 7; H. H. Rogers, Norwalk, 8; Sonora, Sonoma, 8:40. Down: Anna Minch, noon; Norton, 2:30 p. m.

Vessel Movements.

South Chicago—Cleared, grain: F. D. Armour, Detroit. Merchandise: Muncey, Buffalo. Light: Dunham, Roman, Superior; Three Brothers, Boyne City, Emily and Eliza, Manistee.

Cleveland—Arrived: Mary Boyce, Emily Peck. Cleared, coal: Mohegan, Aloha, Glasgow, Jackfish; Anderson, Two Rivers; Vermillion, Portage. Light: Marina, Masaba, Marioupa, Corsica, Duluth.

Lorain—Cleared, coal: Uranus, Duluth.

Huron—Cleared, coal: Geeorge Stone, Soo; Wawatam, Two Harbors.

Ashtabula—Cleared, coal: Flagg, Zillah, Goshawk, Jenness, Portage.

Conneaut—Arrived: Livingstone. Cleared, coal: Redington, Portage.

Buffalo—Arrived: R. Mills, Pueblo. Cleared,coal: Owen, Chicago; light: Ishpeming, Superior. Mrde: Chicago, Mauch Chunk, Chicago; Huron, Gladstone.

Port Huron—The first of the downbound steamers from Lake Superior the H. W. Smith passed down at this point at 3:20 o'clock this afternoon.

Erie—Cleared, coal: Devereux, Chicago. Light: Queen City, Superior.

Toledo—Arrived: Iron Queen.

Oswego—Cleared, coal: D. C. Whitney, Chicago.

Ashland—Arrived: Colonel. Cleared, ore: Mecosta, Cleveland.

Escanaba—Arrived: Corey, Tampa. Departed: Walsh, Raleigh, Tokio, Lake Erie; Ravenscraig, Chicago.

Manitowoc—Departed: Langham, grain, Buffalo.

Green Bay—Cleared, grain: Bulgaria, Buffalo. Light: Niagara, Lake Superior.

Port Colbourne—Up: Pueblo, Buffalo; James, Chicago; Arabian, Fort William. Down: Whitaker.

Waukegan—Arrived: Luzon.

Sheboygan—Arrived: French. Cleared: Thomas Wilson, Superior.

Milwaukee — Arrived: McWilliams, Grammer, Hoyt, Gilchrist. Cleared: Pratt, Escanaba.

Chicago—Arrived: Saranac, Bethelem, Tuscarora, Averell, G. F. Williams, Burnham, Arthur Orr. Cleared—Light: Uganda, A. P. Wright, Buffalo; Aurania, Duluth.

Ocean Steamships.

New York.—Arrived: Patricia, from Hamburg.

Cherbourg—Arrived: Kaiserin Auguste Victoria from New York for Hamburg.

Plymouth—Arrived: St. Louis from New York for Southampton.

Queenstown—Arrived: Cedric frkom New York for Liverpool.

Genoa—Arrived: Friedrich der Grosse from New York.

Tonight

ONLY NIGHT SCHOOL IN THE CITY.

HEARING ON ASSESSMENT

The appeal of the property owners along Twenty-fourth avenue east from the assessment levied upon them by the board of public works for the improvements now in progress on the avenue is being heard before Judge Dibell today.

The appeal was taken by the owners on a protest against their paying the cost of the rock cut, which was necessary between Superior and First street. The owners say that they are not specially benefited by this improvement and that it ought to come out of the general fund.

GLASS COMPANY FAILS.

Cleveland, Ohio, April 27.—An involuntary petition in bankruptcy was filed for the Cleveland Window Glass company in the United States district court today. The liabilities are given as $450,000.

HUGE NEW FREIGHTER IS EXPECTED TO BREAK RECORD FOR GRAIN CARGOES

STEAMER WILLIAM B. KERR.

The third big freighter of the lower lake fleet to arrive in the Duluth harbor was the William B. Kerr, and the above picture shows her coming through the Duluth canal piers. The Kerr is a new boat having been launched only a few months ago. She is the largest carrier on the lakes and is expected to return to the lower lakes with the largest cargo of grain ever carried in a single vessel. She came up light and is now loading wheat at the Peavey elevator.

—TO THE—
READING PUBLIC!

On and after April 28, all Chicago, St. Paul and Minneapolis Sunday papers will be sold at 5c per copy. SUFFERS FROM BURNS.

Granville W. Smith of Stillwater in a Serious Condition.

Stillwater, Minn., April 27.—Granville W. Smith, proprietor of the Elliott house and a former sheriff here, was dangerously burned by a kerosene lamp fire Thursday night. In moving a stand with a lighted lamp upon it the lamp fell off and the flames caught his nightshirt. His stomach, legs, hands and arms were burned and his condition is critical. His wife had her hands and face blistered in helping to extinguish the flames.

YOUNG MAN DROWNED.

Hastings, Minn., April 27.—A telegram states that Richard, the youngest son of C. F. Beltz, formerly of Hastings, was drowned from a boat in the harbor at Aberdeen, Wash.

IN PROBATE COURT.

ORDER FOR HEARING ON PETITION FOR ADMINISTRATION.—

State of Minnesota, County of St. Louis.—ss.

In the Matter of the Estate of F. E. Noyes, Deceased:

The Petition of Lillian Mae Noyes having been filed in this court, representing, among other things, that F. E. Noyes, then being a resident of the County of St. Louis, State of Minnesota, died intestate, in the County of St. Louis, State of Minnesota, on the 6th day of February, 1907; leaving estate in the County of St. Louis, State of Minnesota, and that said petitioner is the widow of said decedent, and praying that letters of administration of the estate of said decedent be granted to her,

It Is Ordered, That said petition be heard before this court, at the Probate Court Rooms, in the Court House, in Duluth in said County, on Monday, the 13th day of May, 1907, at ten o'clock A. M., and all persons interested in said hearing and in said matter are hereby cited and required at said time and place to show cause, if any there be, why said petition should not be granted.

Ordered Further, That this order be served by publication in The Duluth Evening Herald according to law, and that a copy of this order be served on the County Treasurer of St. Louis County, not less than ten days prior to said day of hearing.

Dated at Duluth Minn., April 19th, 1907.

By the Court,
J. B. MIDDLECOFF,
Judge of Probate.

(Seal Probate Court, St. Louis Co., Minn.)
Duluth Evening Herald—April 20-27, May 4, '07.

ORDER FOR HEARING ON PETITION FOR ADMINISTRATION—

State of Minnesota, County of St. Louis, ss—

In the Probate Court.

In the Matter of the Estate of Nick Kasanic, Decedent.

The Petition of Peter Kasanic having been filed in this court, representing, among other things, that Nick Kasanic, then being a resident of the County of St. Louis, State of Minnesota, died intestate, in the County of St. Louis, State of Minnesota, on the 17th day of April, 1907, leaving estate in the County of St. Louis, State of Minnesota, and that said petitioner is the half brother of said decedent, and praying that letters of administration of the estate of said decedent be granted to Matt Prettner of Eveleth, Minn.

IT IS ORDERED, That said petition be heard before this court, at the Probate Court Rooms in the Court House, in Duluth in said County on Monday the 13th day of May, 1907, at ten o'clock A. M., and all persons interested in said hearing and in said matter are hereby cited and required at said time and place to show cause, if any there be, why said petition should not be granted.

ORDERED FURTHER, That this order be served by publication in the Duluth Evening Herald according to law, and that a copy of this order be served on the County Treasurer of St. Louis County not less than ten days prior to said day of hearing.

Dated at Duluth, Minn., April 19th, 1907.

By the Court,
J. B. MIDDLECOFF,
Judge of Probate.

(Seal Probate Court, St. Louis Co., Minn.)

Certificate of Incorporation

OF

CHEMUNG COPPER COMPANY.

The three persons hereinafter named, being desirous of forming a corporation for the purpose of carrying on the mechanical business of mining and reducing ores and minerals, do hereby subscribe and acknowledge the following certificate, under and pursuant to the appropriate provisions of Chapter Fifty-eight of the Revised Laws of Minnesota, 1905:

FIRST.

The name of this corporation shall be "CHEMUNG COPPER COMPANY." The general nature of the business of this corporation shall be that of mining, smelting, reducing, refining and working ores and minerals. The principal place of transacting the business of this corporation shall be Duluth, Minnesota.

There is hereby established an office of this corporation at Pittsburg, Pennsylvania.

SECOND.

The period of the duration of this corporation shall be thirty years from the date that it is organized.

THIRD.

The names and place of residence of the three incorporators are as follows: Arcadius L. Agatin, Fred L. Farmer and James Wanless, all of whom reside at Duluth, Minnesota.

FOURTH.

The management of its business shall be vested in a Board of seven Directors, who shall be elected at the annual meeting of the stockholders, which shall be held on the first Thursday after the first Monday of each April, at the office of the corporation in Duluth or in Pittsburg, upon such notice as the By-Laws shall order, and until such election the Board of Directors may fill any vacancy therein by a majority vote.

The names and addresses of those composing the first Board of Directors, who shall hold until the first election of Directors, are as follows:

Charles D. Fraser, residing at New York City, New York.

George E. Tener, residing at Pittsburg, Pennsylvania.

Thomas J. Crump, residing at Pittsburg, Pennsylvania.

James Hoatson, residing at Calumet, Michigan.

Thomas F. Cole, residing at Duluth, Minnesota.

Chester A. Congdon, residing at Duluth, Minnesota.

Isaac L. Merrill, residing at Los Angeles, California.

The first meeting of said Board of Directors shall be held without any notice thereof at 807 Lonsdale Building, Duluth, Minnesota, on the first day of June, A. D. 1907, at ten o'clock in the morning, and if at said meeting there shall be less than a majority of said Directors present, the minority present can adjourn said meeting from time to time until a majority of said directors are present.

FIFTH.

The amount of the Capital Stock of this corporation shall be Three Million Dollars, which shall be divided into three hundred thousand shares of the par value of Ten Dollars each. Said capital stock shall be paid in from time to time as called for by the Board of Directors, and such stock or any part thereof may be paid for by property of the actual value of not less than the par of the stock so paid for.

SIXTH.

The highest amount of indebtedness or liability to which this corporation shall at any time be subject shall be Five Million Dollars.

IN WITNESS WHEREOF, The parties hereto have executed this certificate this 17th day of April, A. D. Nineteen Hundred and Seven.

(Notarial Seal, St. Louis County, Minn.)
My commission expires Sept. 18, 1909.
Duluth Evening Herald—April 26-27, '07.

MORTGAGE FORECLOSURE SALE.

Default having been made in the payment of the sum of Three Hundred Fifty-Two and Seven One-hundredths Dollars ($352.07), which is claimed to be due and is due at the date of this notice upon a certain mortgage, duly executed and delivered by John M. U. Thompson and Charlotte E. Thompson his wife, mortgagors, to Robert S. Gaylord, mortgagee, bearing date the 6th day of November, 1906, and with a power of sale therein contained, duly recorded in the office of the register of deeds in and for the Counties of St. Louis and Carlton and State of Minnesota, in said St. Louis County on the 17th day of November, 1906, at 2:15 o'clock P. M., in book 230 of mortgages at page 11, and in said Carlton County on the 15th day of November, 1906, at 10:30 o'clock A. M., in book Q of mortgages on page 74. Which said mortgage, together with the debts secured thereby, was duly assigned by said Robert S. Gaylord mortgagee, to Fargo Loan Agency, a corporation, by written assignment dated the 18th day of November, 1906, and recorded in the office of the register of deeds of said St. Louis County on the 20th day of November, 1906, at 4:16 o'clock P. M., in book 148 of mortgages on page 609, and in the office of the register of deeds of said Carlton County on the 18th day of November, 1906, at 10:45 o'clock A. M. in book K of assignments on page 440, which said mortgage, together with the debt secured thereby, was duly assigned by said Fargo Loan Agency, a corporation, the assignee and holder thereof, to The First National Bank of Fargo, by written assignment dated the 9th day of December, 1906, and recorded in the office of the register of deeds of said St. Louis County, on the 18th day of February, 1907, at 8 o'clock A. M., in book 200 of mortgages on page 608, and in the office of the register of deeds of said Carlton County on the 21st day of February, 1907, at 2:45 o'clock P. M., in book T of mortgages, on page 23 and whereas, said mortgage in the said power of sale, contains a provision that in case any installment of interest is not paid when due, or within 15 days thereafter, then, in such case, the whole amount of said mortgage debt shall become due and payable at once, without notice; at the option of the legal holder of said principal note, and said The First National Bank of Fargo, the legal holder of said note does elect to consider the whole sum due and payable without notice, and the full sum unpaid thereon is at this date Twelve Thousand Eighty-seven and

REAL ESTATE MARKET CONTINUES VERY ACTIVE

Market Has Strongest Undertone That It Has Experienced in Years—Inquiry is Lively and Some Negotiations Involving Large Deals Are Now Going On—Sale of Residence Property Still a Feature.

An active real estate market with a stronger undertone than the public at large is aware of, may truthfully be said of the present situation in Duluth. There have been a number of large transaction closed up and several others are just about the closing point, although the parties interested are keeping them hedged about with a considerable degree of secrecy for purely business reasons of their own. These deals include not only acreages, but some centrally located Superior street and Michigan street properties where the considerations range from $35,000 to $50,000 and $60,000, and a still larger number of transfers in improved residence property.

The very encouraging feature about the situation is that there is no tendency toward boom prices, that is, extraordinary and unwarranted advances in realty values. That there is a steady upward tendency of prices in many localities is a fact that none of the most conservative real estate men will deny, but in about every instance there is a good reason for the advance, a reason based more on the actual than the speculative value. The industrial future of Duluth is so shaping itself that the ultimate results are no longer a matter of doubt. This alone, more than any other thing, is stimulating the local real estate market to an activity that it has not experienced in years and one that is bound to be long continued.

The city's population has been increased by the arrival of a large number of families within the past few weeks and new people are constantly arriving who have heard of the impetus that has been given to Duluth's industrial growth and who are seeking homes here. This statement can be corroborated by inquiry at any of the real estate and rental agencies, many of which have received applications from people who have just recently come to the city and who want to buy or rent homes. That this movement has only just begun and the next few years will witness a big influx of new citizens is equally true for industrial growth in any city is accompanied by proportionate growth in population.

* * *

It is understood that the water front acreage purchased by the Gregory company from Thomas Lowry last week was either purchased for, or has since been sold to the Wessinger Manufacturing company which has a plant in West Duluth adjoining the acreage mentioned. The rumors that have been afloat included the possible location of a steel foundry on the property by the Wessinger company, but this rumor has been denied. The property involved comprises about fifty-three acres and while it may have been purchased with a view of protecting the present plant of the company, and for trackage and warehouse room, the size of the tract would seem to indicate that the plans for the future may mean even more in the way of industrial improvement. It is also understood, in connection with this deal that John M. Stephenson, through whose office the transaction in acres is currently reported to have been made, has been negotiating other sales in the vicinity to an extent that will bring the aggregate consideration up to about $125,000.

* * *

Among the important changes that are now being made in office locations is the removal of C. H. Graves & Co., one of the city's long established real estate and insurance firms, from the Torrey building to the offices formerly occupied by G. G. Hartley and L. E. Lum, on the second floor of the First National bank building. C. H. Graves & Co. expect to occupy the new offices May 1, 1907.

* * *

Bray & Nystrom, the architects, are preparing plans for a brick flat building to be erected at Tenth avenue east and Second street, for Lundmark & Franson. The architects report the contract for the foundation for G. A. French's house at Second street and Twenty-second avenue east, awarded to William Berg.

* * *

Several sales of improved property have been made this week through the office of N. J. Upham & Co., including the four-flat brick building at 411 and 413 East First street, which was sold by Dr. C. A. Stewart to A. J. Anderson and Frank A. Thorwall, for $10,500. Among the other sales of the same office were the following: No. 310 Ninth avenue east, from E. G. Snyder to Frank Gaida, for $2,500; 324 North Fifteenth avenue east from John E. Lundmark to Mrs. C. F. Johnson, for $5,000; 1920 West Third street, from the Duluth Home company to Mrs. James Moriarity, for $3,750; 1908 West Third street, from the Duluth Home company to Charles Zygmanski, for $2,200; 322 Twenty-third avenue west, from A. J. Wagner to John Sass, for $2,625. The firm has a number of other good sized deals under negotiation.

* * *

The Travelers' Insurance company has sold John Swanson, for $3,500, a store property at the southwest corner of Eighteenth avenue west and Superior street. It is known as the east half of lot 292, block 35, Second division.

* * *

W. W. Carr has purchased from the West Duluth Land company a residence property on Central avenue, near Second street north, for $2,000.

* * *

E. A. Schulze has sold to J. H. Ebling a 100-foot property at the southeast corner of Lake avenue and Ninth street, for $1,654.90.

* * *

Martin Rosendahl has sold Solomon Berch lot 14, block 76, Portland, for $1,200. The property is a portion of that recently purchased by Mr. Rosendahl.

* * *

J. O. Smith has purchased from L. M. Helmbaugh, for $2,650, a residence on the lower side of Fourth street, between Fifth and Sixth avenues west.

* * *

Catherine Petz has sold B. A. Fedge a residence property at the northeast corner of Lake avenue and Fifth street for $2,500. The property is described as part of lots 1 and 3, West Fifth street, Fifth division.

* * *

Olga Antrobus has purchased from B. L. Tessman for $1,000 a lot at the corner of Fifth street and Second avenue west.

* * *

N. J. Miller has sold Amelia Sherwood a 150-foot property on the northeast corner of Eighth street and Fond du Lac avenue for $1,000.

* * *

The construction work on the new residence that is to be erected for the teachers in the Catholic parochial school at Second avenue west and Fourth street will be started very soon. The plans have been completed by Bray & Nystrom, and the permit has been taken out. The permit calls for a building to cost $18,000. The residence will be of the same general style of architecture as the school building. It will contain eighteen rooms, including a library, chapel, the sacristy, and the brothers' rooms.

* * *

Work is now well started on the improvements to the French & Bassett store at the corner of First street and Third avenue west. The company will add another story to the building, and further increase the floor space by a four-story addition, the improvement work to cost $15,000. Special attention has been given the designing to have the work as artistic as possible, and to get the greatest possible amount of light. The four-story addition will have ground dimensions, 40 by 30 feet.

* * *

Arrangements have been made by the Spalding Hotel company to put two handsome new fronts in the two stores on either side of the main entrance on Superior street.

* * *

John Christie, one of the city's best-known lithographers and printers, is contemplating the erection of a handsome four-story business building, on the fifty feet immediately back of the Collier building, Fourth avenue west and First street. The Christie building will be constructed of brick, and will face the new courthouse.

STREET CARS.

NOTICE TO THE PUBLIC.

This company operates a street railway line in the city of Duluth between Third avenue east and the end of Rice's Point, and another street railway line in the city of Superior between Twenty-first street and the end of Connor's Point. These lines are separated by the waters of St. Louis Bay, and are operated as two distinct and separate lines.

The fare for a continuous ride in one direction between any two points on either one of these lines is 5c.

The public is hereby notified that this company does not, by undertaking to carry any passenger, or by accepting fare for such carriage, assume any responsibility beyond that of carrying such passenger safely between points on the above mentioned lines.

This company is not responsible for close connections, nor safe transportation, between the above mentioned lines by any ferryboat or other means of transportation. While the employes of this company have been instructed to keep themselves posted and give upon request all the information they can as to the probability of connections being made with other transportation lines, the company has no better means of foreseeing unexpected interruptions in the service of such lines nor of telling how long such interruptions will continue, than the public has, and therefore cannot be responsible for notice of such interruptions.

DULUTH STREET RAILWAY CO.
By HERBERT WARREN, Gen. Mgr.
December 10, 1906.

IN PROBATE COURT.

ORDER FOR HEARING ON PETITION FOR LICENSE TO SELL, MORTGAGE OR LEASE LAND.—

State of Minnesota, County of St. Louis. In the Matter of the Estate of John P. Morrow:

The petition of Joseph Sellwood as representative of the above named John P. Morrow, having been filed in this court, representing, among other things, that for reasons stated in said petition, it is necessary and for the best interests of the estate of said John P. Morrow, and of all persons interested therein, to sell certain lands of said John P. Morrow in said petition described, and praying that license be to Joseph Sellwood, administrator, granted to sell the said land.

It Is Ordered, That said petition be heard before this court, at the Probate Court Rooms, in the Court House, in Duluth, in said County, on Monday the 20th day of May, 1907, at ten o'clock A. M., and all persons interested in said hearing and in said matter are hereby cited and required at said time and place to show cause, if any there be, why said petition should not be granted.

Ordered Further, That this order be served by publication in The Duluth Evening Herald, according to law.

Dated at Duluth, Minn., April 27th, 1907.
By the Court:
J. B. MIDDLECOFF,
Judge of Probate.
(Seal Probate Court, St. Louis Co., Minn.)

WHEAT IS IRREGULAR

Market Goes Off at the Close in America.

Flax Has a Big Bulge in the Duluth Market.

Duluth Board of Trade, April 27.—Wheat was strong at the opening of the market and the tone continued so until the close, when prices slumped off somewhat. The close was irregular, the tendency being weaker in Chicago and Minneapolis. In Duluth, the May option closed slightly up. The unfavorable weather for the crops in the Southwest caused a continued good demand at the opening. There was a good foreign demand here. Paris closed ¾c to 1c higher, Berlin 2c higher and Budapest 2¼c higher.

The May option closed ¼c higher in Duluth, ¼c lower in Chicago, ⅝-¾c lower in Minneapolis, ⅜c higher in New York, ¼-⅜c higher in St. Louis and unchanged in Kansas City and Winnipeg. The July option closed a shade lower in Duluth, ¼c lower in Chicago and Minneapolis, ¼c higher in New York and St. Louis and unchanged in Kansas City and Winnipeg.

Car receipts at Duluth were 224 against 66 last year, and at Minneapolis 235 against 128 last year, making a total for the Northwest of 459 against 194 last year. Chicago received 50 against 7 last year.

Clearances of wheat and flour aggregated 582,000 bus.

Clearances of corn were 318,000 bus.

Broomhall estimates the world's shipments of wheat for this week at 11,080,000 bus., of which Europe will take about 10,000,000 bus.

Wheat was active in the Duluth market throughout the session. May wheat opened ⅞c higher at 86¾c, declined to 85⅝c by 9:35, rallied to 86c by 9:45 and declined by the close to 85⅜c, a gain of ⅛c over yesterday. July wheat opened ⅝-⅞c higher at 87¼c, declined to 86⅞c, rallied to 87c and declined by the close to 86⅜c, a shade off from yesterday. September wheat opened ½c higher at 87¼c, declined to 86⅞c and closed at that price, a gain of ⅛c over yesterday.

Durum wheat closed ¾c higher and cash spring wheat was selling on a basis of ½c over May for No. 1 northern.

Flax was active and prices better. May flax opened ¾c higher at $1.18¾, advanced to $1.19½, declined to $1.19¼, rallied to $1.19½, went off to $1.19⅜ and closed at $1.19¾, a gain of 1¾c over yesterday. July flax opened ¼c higher at $1.20¼, advanced to $1.21½, declined to $1.21⅜, rallied to $1.21½, declined to $1.21⅜ and closed at $1.21¾, a gain of 1¾c over yesterday.

October flax opened ⅞c higher at $1.21½, advanced to $1.22⅜, declined to $1.22¼ and rallied by the close to $1.22¾, a gain of 2¼c over yesterday.

The coarse grains were unchanged.

Following were the closing prices:

Wheat—No. 1 hard, on track, 86⅞c; to arrive, No. 1 northern, 85⅞c; No. 2 northern, 84⅝c; on track, No. 1 northern, 85¾c; No. 2 northern, 84⅝c; May, 85⅜c; July, 86⅜c; September, 86¼c; May durum, No. 1, 73½c; No. 2, 70¾c; July durum, No. 1, 73¾c; No. 2, 71c; durum on track, No. 1, 73½c; No. 2, 70¾c. Flax—To arrive, $1.19¾; on track, $1.19¾; May, $1.19¾; July, $1.21½; October, $1.22¾. Oats—To arrive, 42c; April, 42c. Rye, 63c; barley, 50-62c.

Cars inspected—Wheat, 224, last year, 66; corn, 1; oats, 22; rye, 1; barley, 13; flax, 67, last year, 35.

Receipts—Wheat, 324,286; oats, 15,701; barley, 44,092; rye, 1,846; flax, 81,060.

Shipments—Wheat, 202,092; corn, 5,221; barley, 3,399; rye, 982; flax, 122,219.

THE CHICAGO MARKET.

Absence of Rain in Kansas Makes Wheat Active and Strong.

Chicago, April 27.—The wheat market opened active and strong on good demand. Continued absence of rain in Kansas was the main feature contributing to the strength. An advance of 1½@⅞d in the price of wheat at Liverpool was an additional bullish influence. July wheat opened ¼@⅜c to ⅝@¾c higher at 83⅝@84c. On liberal realizing the price touched 83⅛@⅜c. Minneapolis, Duluth and Chicago reported receipts of 509 cars against 651 cars last week and 201 cars one year ago.

July was later carried to 84 cents but heavy realizing sales caused a reaction and the close was steady, ⅛@¼c under yesterday's close at 83⅛@¼c.

In sympathy with wheat July corn opened at 50c to 50⅛c and on profit-taking sold off to 49⅝c. Local receipts were 136 cars with nine of contract grade.

The oats market was strong on dry weather. July opened ⅛@⅜c higher at 42⅛@42½c, sold at 41⅞c. Local receipts were 187 cars.

Corn closed easy. July ¼c down at 49⅜c.

Trading in provisions was quiet and prices steady in sympathy with hogs. July pork was unchanged at $16.02½. July lard was a shade lower at $8.82½. July ribs were 2½@5c higher at $8.80. Hogs, rough, $6.30@6.40.

Close: Wheat, May, 86¼c; July, 83⅛@¼c; Corn, May, 50c; July, 49⅝c. Oats, May, 44⅜c; July, 41¾@7⅛c. Pork, May, $15.70; July, $15.97½. Lard, May, $8.65@8.67½; July, $8.77½@8.80. Ribs, May, $8.57½; July, $8.72½@8.75. Rye, cash, 72c. Barley, cash, 66@74c. Flax, clover and timothy, nothing doing. Cash wheat, No. 2 red, 80@1½c; No. 3 red, 77½@79½c; No. 2 hard, 78½@80½; No. 3 hard, 69½@77¼c; No. 1 northern, 83½@86c; No. 2 northern, 82½@85½c; No. 3 spring, 77½@85¼c. Corn, No. 2, nothing doing; No. 3, 48c. Oats, No. 2, nothing doing; No. 3, 41@42c.

Minneapolis Wheat.

Minneapolis, April 27.—Close: Wheat—May, 82⅝c; July, 83¼c; No. 1 hard, 86⅝c; No. 1 northern, 85⅝c; No. 2 northern, 83⅝c; No. 3 northern, 80@81c.

New York Grain.

New York, April 27.—Close: Wheat—May, 90⅞c; July, 91c; September, 92c; December, 94½c. Corn—May, 60½c; July, 58½c.

Minneapolis Flour.

Minneapolis, April 27.—The flour market is steady. Buyers were not disposed to follow the sharp advance in wheat and little in the way of new business was done today. Shipping directions are good, and the car situation improved. Shipments 56,965 barrels. First patents, $4.40@4.50; second patents, $4.25@4.35; first clears, $3.20@3.50; second clears $2.40@2.50.

Liverpool Grain.

Liverpool, April 27.—Wheat, spot, No. 2 red Western winter, steady, 6s 2¾d; No. 1 California, quiet, 6s 4¾d; futures steady, strong; May, 6s 7½d; July, 6s 05½d; September, 6s 7¾d. Corn, spot, firm; American mixed, new, 4s 8¼d; American mixed, old, 5s ¾d. Futures, quiet; July, 4s 8¼d; Septembesr, 4s 8½d.

Duluth Car Inspection.

Grain Gossip.

Broomhall, Liverpool, on wheat: "There was a strong opening in wheat this forenoon, the market showing an advance of ⅝d to ¾d. The continued unfavorable American weather caused considerable excitement, particularly among shorts, although there was good support from prominent interests. During the trading there was some disposition to sell, prices losing some of the early advance, due largely to the fact that a large number of la Plata cargoes were diverted to Liverpool. At the close, however, prices again advanced, gained ¼d over the opening advance with the exception of May, which held steady at the opening gain. The undertone was very strong, attributed to the strength in Continental markets, higher spot which advanced ½d to ¾d."

* * *

Weather Forecast for grain belt:

Illinois—Fair and warmer tonight; Sunday probably increasing cloudiness with cooler in north.

Indiana—Fair tonight and probably Sunday; warmer tonight.

Missouri—Partly cloudy with probably snow Sunday; warmer tonight.

Lower Michigan—Fair tonight and probably Sunday; warmer tonight; variable winds.

Upper Michigan—Fair tonight and Sunday except snow flurries near Lake Superior tonight; colder tonight.

Wisconsin—Partly cloudy tonight and Sunday; colder Sunday and in west tonight.

Minnesota—Threatening tonight and Sunday with snow in south portion; continued cold.

Iowa—Probably showers tonight or Sunday; warmer in south and extreme east tonight.

North Dakota—Generally fair tonight and Sunday; rising temperatures Sunday.

South Dakota—Snow tonight and Sunday; continued cold, higher northerly winds.

Nebraska—Rain or snow tonight and Sunday.

Kansas—Partly cloudy tonight and Sunday; warmer tonight.

Montana—Partly cloudy tonight and Sunday with snow in west; rising temperatures Sunday.

REMARKS.

Snow or rain has fallen during the past twenty-four hours over the Dakotas, Minnesota and portions of the Ohio valley. Freezing temperature occurred in all districts last night except Nebraska, Kansas, Missouri and Kentucky.

H. W. RICHARDSON,
Local Forecaster.

T indicates inappreciable rainfall. * For yesterday. ** For twenty-four ending at 8 a. m., 75th meridian time.

NOTE—The average maximum and minimum temperatures and the average rainfall are made up at each center from the actual number of reports received. The state of weather is that prevailing at time of observation.

COMES HERE TO GET COAL

Canadian Pacific Taking Hundreds of Car Loads from Duluth.

Present Rail Movement of Coal is a Record Breaker.

Because of the big strike in the coal fields of Saskatchewan, the Canadian Pacific railway is looking to Duluth for the supply of coal with which it keeps its trains in operation, and to, in a measure, supply the demands of the consumers along its lines. The Canadian road is taking coal out of Duluth at present at the rate of 100 cars or more a day.

This unnatural movement, together with the fact that the docks are making unusually large shipments for this season of the year to interior points in the United States, means that the shipments of coal out of Duluth just now are breaking all existing records for this season of the year, and they probably are heavier than they have been at any time during the present year.

The Canadian Pacific finds itself in a very unpleasant position. Even if the strike had not occurred, it would probably be a little short of the fuel, for officials of the road confidently expected that coal cargoes would be received at Port Arthur and Fort William before this. During the season of navigation, the docks at these two points are stocked up to their full capacity, and the Canadian Pacific depends upon them for a considerable party of its supply. But this spring navigation is very late at these Canadian ports, and no boat has been able to get either in or out of Port Arthur yet. It is said that a field of blue ice, eighteen inches thick, extends out from the shore for a distance of thirty or forty miles, completly blocking the harbors and making it impossible for boats to enter.

Several boats loaded with coal are waiting for a chance to get into the Canadian towns, and as soon as a passage is opened up, they will make a rush for Port Arthur and Fort William. Meantime, the Canadian Pacific, and the whole Northwestern Canada, must depend to a considerable extent upon the Duluth docks for their supply. Fortunately boats are able to get into the local harbor now, and the commodity is arriving from the lower lakes at the rate of several vessel loads a day.

Owing to the car shortage during the winter, the local docks are all away behind in their orders, and, with the congestion on the railroads relieved to a considerable extent, are exerting every energy to get caught up with their orders. With this end in view, some of the docks are loading coal into cars direct from the boats, thus saving one handling, and saving just that much time. The car supply is still insufficient to meet the demands, however, and the docks cannot get as many cars as they want for coal shipments.

YIELDS TO SUICIDE MANIA.

Girl's Only Reason Was "to See What Death Was Like."

Sioux City, Iowa, April 27.—Saying that she did it just for fun, and wanted to see how it would seeem to watch the blood stop in the ends of her fingers and the nails turn blue, Carrie Mattison, aged 21 years, on Thursday took strychnine and died within an hour.

In the best of spirits the girl went about the home of Frank Richardson, where she lived, and about noon entered the cellar. On emerging she announced that she had taken a dose of that "poison down there." A physician was called and every effort was made to find why the young woman had taken poison.

Just before she died she said: "I did it just for fun; I wanted to see what death was like."

The dead girl was the daughter of R. H. Mattison of Battle Creek, Iowa, a farmer. She had had no love affairs or disappointments.

DULLNESS IN STOCKS

Trading Continued Light and Wholly of Professional Character.

Bank Statement Considered Favorable and Market Rallied.

New York, April 27.—The opening dealings in stocks were insignificant in volume and there was no decisive current in the price movement. The drift was limited to small fractions either way. New York, Chicago & St. Louis sold at a decline of 1.

The market showed a disposition to sag after the opening, but the decline had only reached half in Union Pacific and Reading when buying orders appeared. Later transactions were on a rising scale, but the demand was exhausted by the time the market had got back to a parity with yesterday's closing. Delaware & Hudson and Erie first preferred were lifted a point. Denver & Rio Grande fell 1¼.

The market closed firm, but almost lifeless. The higher prices after the bank statement was published were made on very light transactions and did not hold at the top. Union Pacific rose 1¾, Northern Pacific 1¼ and Southern Pacific, Atchison, St. Paul preferred and Erie second preferred, 1. Nashville, Chattanooga and St. Louis sold at an advance of 6. Prices recovered again in the final dealings.

Quotations furnished by Wisconsin Grain & Stock company, 109 Manhattan building:

Stocks—	High	Low	Close

The total sales were 155,300 shares.

Stock Gossip.

Logan & Bryan, New York, to Paine, Webber & Co.: Today's market was dull and of featureless character. Trade continues light and wholly professional. London bought a few stocks in our market early and prices showed slight signs of life, but the supply of stocks was inadequate. The bank statement was considered a favorable one and again the market rallied, but only fractionally. Too many New York operators have their eyes on the grain market, which is by far more inviting at present than the stock list. Would buy only moderately and on setbacks, with view of sales on bulges, and take reasonable profits on either side.

THE COPPER STOCKS.

The following are the closing quotations of copper stocks at Boston today, reported by Paine, Webber & Co., Room A, Torrey building:

The Cotton Market.

New York, April 27.—The cotton market opened steady at an advance of 2 to 4 points in response to higher cables and bullish week-end figures. Trading was moderately active and there was quite a good deal of realizing at the advance together with some selling for a turn on the better weather reports. Prices sagged off to within a point or so of last night's finals under this pressure, but the undertone of the market continues steady and prices in the middle of the morning were back to about the best point on covering and bull support.

Cotton futures closed barely steady. Closing bids: April, 9.88; May, 9.85; June, 9.84; July, 9.92; August, 9.96; September, 9.90; October, 10.02; November, 10.12; December, 10.15; January, 10.31; February,, 10.36; March, 10.44. Spot, closed steady; middling uplands, 11.30; middling gulf, 11.55. No sales. The market closed barely steady with prices 2 to 5 points net lower.

Treasury Balances.

Washington, April 27.—Today's statement of the treasury balances in the general fund exclusive of the $150,000,000 gold reserve in the division of redemption shows: Available cash balance, $249,345,-055; gold coin and bullion, $105,110,342; gold certificates, $40,886,710.

St. Paul Live Stock.

St. Paul, April 27.—Cattle: Receipts, 325; steady; no change in prices. Hogs: Receipts, 2,500; steady; range, $6.20@6.37½; bulk, $6.32½. Sheep: No receipts, steady and unchanged.

New York Money.

New York, April 27.—Close money on call nominal; time loans easy; 60 day 4½; 90 days, 4@4¼ and 6 months, 4½@4¾ per cent. Prime mercantile paper, 5½@6 per cent. Sterling exchange steady with actual business in bankers' bills at $4.86.10@4.86.20 for demand and at $4.83.25@4.83.35 for 60 day bills. Posted rates, $4.84 and 4.87. Commercial bills, $4.83@4.83¼. Bar silver, 65¾. Mexican dollars, 50¾. Government bonds steady; railroad bonds firm.

Bank Statement.

New York, April 28.—The statement of clearing house banks for the week shows that the banks hold $12,346,775 more than the legal reserve requirements. This is an increase of $641,950 as compared with last week. The statement follows: Loans, $1,123,417,600, decrease, $1,587,300; deposits, $1,106,183,300, decrease, $1,490,200; circulation $50,069,300, decrease, $37,500; legal tenders, $75,766,300; increase, $2,150,-000; specie, $213,126,300; decrease, $2,003,100; reserve, $288,892,600; increase, $146,900; reserve required, $276,045,825; decrease, $495,-050; surplus, $12,346,775, increase, $641,950; ex-United States deposits, $20,258,925, increase, $561,025.

HAPPENINGS IN THE DAKOTAS

"Blind Pig" Found in Cave Under Hill Near Bismarck.

NORTH DAKOTA.

Bismarck—The police discovered a cave under the hill south of the city in which they had reason to suppose was stored a large quantity of intoxicating liquors. Temperance Commissioner Murray was notified and with Chief Carr made a raid. The cave door was strongly barricaded and the place was entered only by burrowing underneath. The place was found to contain fully a carload of all kinds of liquor, including whisky and beer in barrels and cases. Wagon tracks showed it was visited by someone. The goods will be stored in vaults at the capitol. The value of the find is estimated at $1,000. This is the first raid of the commissioner.

Argument has closed in the case of the Fargo State Fair association against the Grand Forks State Fair association and the court has taken the case under advisement. Judge Bosard, for Grand Forks, admitted that the law had not been complied with in minute cases, but contended that Fargo seeks to take away from the Grand Forks association the appropriation by the state for a state fair, each town having the appropriation on alternate years.

Minot—Chief of Police Hagen yesterday made a raid on the Great Northern cold storage and confiscated a carload of whisky which was consigned to the blindpigs of Minot. The liquor, contained in bottles, kegs and barrels, was piled up in the city hall where it will probably be ordered destroyed. This was the first seizure made in Minot under the new law directing police officials to seize an intoxicating liquor without a search warrant.

Fargo—Simon Apsahl, a Northern Pacific car repairer, was crushed to death here yesterday. He was repairing a car when another one which had been shunted by a switching crew caught him. His body was thrown to the rails and run over, being badly mangled. He lived at Barnesville, Minn., and had been recently married.

Grafton—John Cavanaugh, who went down to view the river yesterday afternoon was found dead in the flood several hours later by Willie Trueman and Stewart Campbell, who were out boating. Cavanaugh resided here and leaves a wife and eight children. He was 60.

Grand Forks—The United States circuit court of appeals at St. Louis has affirmed the decision of the United States district court in the suit of Detective Dan Allman of St. Paul against the city of Grand Forks, in which the lower court found a verdict for the plaintiff for $1,028.40. Detective Allman tripped on a loose plank and started suit against the city for $10,000, alleging that he had sustained permanent injury to his knee.

Thirty-six pupils will be graduated from the Grand Forks high school on June 6.

An outbreak of smallpox among the full-blood Indians of the Turtle mountains north of Dunseith is causing the authorities alarm and trouble. Efforts are being made to maintain a strict quarantine.

The contract for the Washington school was let yesterday to Melby & Stadahl, whose bid was $22,645. Spriggs Bros. secured the plumbing contract and the heating contract went to F. L. Dixon.

Pembina—Word has reached here that J. D. Wallace is seriously ill in the California hospital at Los Angeles as the result of an operation for kidney trouble. Two sons, C. H. Wallace of Albee, S. D., and Ed H. Wallace of Prescott, Wis., are on their way to his bedside.

Cavalier—Miles and miles of farm land lying east of this city is flooded with water from the Tongue river and the big coulee east of here. The water is coming down from the Pembina mountains, where the snow has commenced to melt.

The Tongue river, which flows through this place, has risen until the city park is entirely covered and the rise of a few feet more will bring the flood to the business and residence districts.

Hamilton reports that almost the entire central portion of Pembina county is flooded. At Hamilton the water is so high that the railroad station has been cut off and it is necessary to cross upon rafts in order to reach trains. It is not believed, however, that the flood will do much damage.

Valley City—About two-thirds of the east wall of the Bank of Valley City toppled into the excavation being made for the new Lee & Rushford block, Thursday afternoon. The cracking of the wall and timbers gave the workmen and inmates of the bank and the rooms above time to get out. Cashier J. J. Early and Teller William Coop were alone in the bank when they heard warning sounds. They put all of the bank notes and moneys into the vault and hurried out of the building.

SOUTH DAKOTA.

Wilmot—Owing to ill health, Charles Good Boy, a Sisseton Indian living near here, committed suicide by shooting. He was about 55 years old.

Sioux Falls—Bishop Hare, who is in New York, has submitted to an operation for the removal of his right eye. According to the complaints the animals were kept in cars longer than twenty-eight hours, the limit provided by law.

Minneapolis' pure food product — Hunt's Perfect Baking Powder — is made under the supervision of expert chemists. Order a can today.

THOSE WHO HAVE PASSED BEYOND

Chicago, April 27.—S. T. K. Prime, who for twenty-five years was stationed at Dwight, Ill., gathering statistics on crops, died last night in the Chicago home for incurables. He was stricken with paralysis two years ago.

"Prime's Crop Reports" made the publisher kown throughout the country. Farmers regarded his figures and opinions as infallible. Even after the government broadened out its field on this work Mr. Prime was by many considered an authority where views of experts conflicted.

Mr. Prime was 75 years old, a native of Connecticut and the son of Samuel Irenaus Prime, minister, author, and for many years editor of the New York Observer. He moved from Dwight to Chicago ten years ago and for a long time made his home at the Union League club.

Buffalo, N. Y., April 27.—A dispatch to the News from Albion, N. Y., says Rufus B. Bullock, former governor of Georgia, died today at the family homestead at Albion, where he had resided since the death of his wife, two years ago. He was 73 years of age and leaves a daughter, Mrs. Leonard Kendall of Greenwich, Ga., and a son, Freeman Bullock of Omaha.

VIOLATION OF LAWS.

Chicago, April 27.—Eleven suits against the Chicago, Milwaukee & St. Paul; Chicago, Rock Island & Pacific, and the Chicago, Burlington & Quincy railroads were begun here yesterday in the United States district court by the district attorney, in which it is alleged that the shipping laws relating to the confinement of live stock in cars were violated. According to the complaints the animals were kept in cars longer than twenty-eight hours, the limit provided by law.

NEWS FROM THE NORMAL

Senior Class Will Present "The Rivals" in Near Future.

Plans Are Considered for Class Day Entertainment.

The seniors who take part in the class play, "The Rivals," are practicing daily with the members of the faculty who have charge of it. Miss Carey of the English department thinks that the play will be ready for presentation within five weeks. It was at first proposed to give the play at some larger hall but it was later decided to give two performances in the Assembly hall at the normal. This play is the first of its kind to be given at the Duluth normal and it is awaited with interest by the friends and students of the school.

• • •

The plans for the entertainment for class day have been decided upon by the senior committee, headed by Miss Elsie Krey. Class morning exercises will take place June 11.

• • •

Thursday, during chapel period, Mr. Bohannon read the proclamations of the president and the governor, for Arbor day, Friday, April 26. He also read the letter from State Superintendent Olson to the children of the public schools of Minnesota. In the normal grades part of the morning exercises were spent in talking of subjects appropriate to Arbor day.

• • •

The junior domestic science classes have been devoting study to "meats" lately. Wednesday the Tuesday and Wednesday classes combined and went with Miss Eaton, head of the home economics department, to a local meat market. Here a practical lesson on kinds and cuts of meats was given.

The senior classes in domestic science had lessons in baking cookies, nut bars and nut cake this week.

• • •

The elementary science students are taking advantage of the sunny days and are hunting for the variety of birds that are beginning to appear indoor work has been omitted on these days.

• • •

Tuesday and Wednesday the senior class met to discuss plans as to the senior play and other graduation exercises.

• • •

The walls of Washburn hall are to be tinted this week. This work was not done at the time of the completion of the building as it was decided to let them stand one year until in perfect condition for tinting.

• • •

Mr. Bohannon Wednesday morning spoke fully on the work accomplished by the state legislature at its recent session. Mr. Bohannon mentioned the defeat of the tonnage tax bill, the passage of the 2-cent fare bill, the continuous session of state normals, the non-fraternity and sorority bill, and other things accomplished.

• • •

The Glee club held a rehearsal Tuesday afternoon before senior conferences. It was decided that every Friday during May there would be a meeting. Extra meetings will be held, as the Glee club assists at the commencement programs. A well attended meeting was held Friday afternoon in the music room. New music, "Rest Thee on This Mossy Pillow," a trio by Henry Smart was sung for the first time. The chorus also sang "Three Flower Songs" by Margaret Deland and "Hesperus," a cantata, by John Hyatt Brewer. The members planned to have an informal spread next Friday.

• • •

The second-year and third-year classes held important meetings last Monday.

• • •

The freshmen and sophomore classes, with their counsellors, Miss Post and Miss Shoesmith, were hostesses Friday evening to their Eighth grade friends. The party was given in the drawing room on the third floor and the room was prettily festooned with crepe streamers of red and black and blue and yellow. A musical program was given, and several scenes in pantomime were acted during the evening in the Assembly hall. Refreshments were served.

A True Temperance Drink

Fitger's Beer

Temperance of drink does not mean prohibition of drink. It means to drink in moderate quantities and to drink liquids which contain a moderate quantity of alcohol, such as beer that contains but 3½ per cent of it.

Fitger Brewing Co.
Duluth, Minn.

MILLIONS IN COPPER

Senator Clark's United Verde That Is Paying Him Millions in Dividends Adjoins the Famous Hull Copper Mines for a Distance of Over THREE MILES.

BIG DEAL IN A JEROME MINE

Eastern Syndicate Takes Over the Hull Properties Adjoining the United Verde.

From the Prescott Journal Miner.

By far the most important mining deal made in this county in recent years was closed yesterday, when a group of twenty-one patented mining claims, adjoining the famous United Verde properties at Jerome, passed into the control of the Hull Copper Company, in which a number of Eastern capitalists are interested.

An amount, which is but the preliminary capital for the opening of the promising properties, is to be at once placed at the disposal of G. W. Hull, president and general manager of the new concern, the intention being to erect a reduction plant of large capacity.

The holdings of the company lie immediately north, west and south of and adjoining the great United Verde mines, and it is a fact well known to a large number of miners who are or have worked in the United Verde's Eureka, Wade Hampton, Chrome North and Chrome South mines that the immense ore bodies in these workings continue into the ground covered by the locations of the new company.

The opening of these ore bodies will mean much to the town of Jerome, which is now one of the most pretentious mining and smelter towns in the Territory, and it is safe to assume that the population and business of this prosperous place will be doubled within the coming year.

The preliminary plan of development agreed upon embraces the pushing of the Dillon tunnel into the mountain with greater energy than ever, and the starting of a drift from the bottom of the 475-foot shaft on the 1888 claim to connect with the tunnel, from which a series of laterals will be run into the ore bodies. A force of men will be at once put to work in the repairing of this shaft, and a pump will be at once installed to unwater it.

The tunnel is now in a distance of 2,040 feet into the mountain and taps several promising ore bodies in its course at depths ranging from 400 to 1,100 feet.

A number of shafts expose ore bodies on several of the claims, the deepest of which is on the Jerome mine, which has a depth of 259 feet.

On Monday next J. B. Girand will leave for Jerome to make surveys on the ground, to be used in the compiling of an elaborate report to be compiled by him.

G. W. Hull, the president and general manager of the new concern, has been engaged in the development of the group since 1888, when he first realized its great value. He has had several flattering offers for the property, all of which have been refused. He is a leading stockholder in the Hull Copper Company, and will at once assume its active management as president and general manager.

View Drawn from Actual Photograph, and Map Compiled by the United States Mineral Surveyor in His Report on Our Property, Showing Conclusively That Hull Property Is DIRECTLY AGAINST the Great Producing Claims of the United Verde, Whose Rich Deposits Run Right Into Our Claims.
Hull Copper's Rich Mines Surround Senator Clark's $100,000,000 Mine on Three Sides.

A DEVELOPED MINE---NOT A PROSPECT

DEVELOPMENTS AND RAILROAD FACILITIES

The shaft of the "1888" claim, 475 feet deep, shown in the above photograph, is within 150 feet of the United Verde smelter. Over this shaft we have just built a new hoisting pant for bringing the ore from two drifts that have been driven into bodies of rich ore at the bottom of this shaft. This ore yields in copper over $40 to the ton, besides some gold and silver.

Our Dillon Tunnel, 2,040 feet long, is cut through three rich ore bodies, showing a very large percentage of copper, with some gold and silver.

We are now working in the schist, driving the tunnle into the rich contact vein which extends from the United Verde into Hull Copper.

We are directly on the line of the Pacific Railroad Company, one of the principal branches of the Santa Fe Railroad. Any one interested in mining knows what this means to the Hull Copper Company. A famous railroad man writes:

"This is the first Company I ever saw in my life that had a railroad to its door. All the various mining companies which are floated have to build a railroad from one to one hundred miles in order to market their product."

The development is being rushed ahead just as fast as good management can do it.

We will be able to supply from our ore deposits a smelter of the size of the United Verde—one of the largest in the world—with 1,000 tons of ore daily, which will pay to our stockholders a net profit of $10,000,000 a year.

Sound and Practical Management at the Mines

RESPONSIBLE OFFICERS AND DIRECTORS

The officers and directors of the Hull Copper ompany are all of the highest standing and responsibility, and are pretty well known throughout the West in prominent and financial circles. None of them receives a salary.

Hon. George W. Hull, President and General Manager, at present at the mines in charge of the force of men now at work there, has been in all the great Western copper camps, and is thoroughly acquainted with copper mining in all of its branches. He is a member of the Arizona Legislature and has the esteem of every citizen of Jerome. He is a man of rugged honesty and sterling integrity.

Mr. O. B. Stanton, a practical miner for 27 years, is Vice-President. Mr. Stanton and his son have charge of the Eastern offices of the Company at Philadelphia.

Mr. M. B. Hazeltine, Treasurer, of Prescott, Arizona, is on the Board of Directors of one of the largest banks in the Territory.

M. H. E. Wilcox, Secretary, is a well-known capitalist, and lives at Jerome, Arizona.

Mr. J. W. Hubbard, Superintendent of the Mine, has been in the employ of some of the biggest copper interests in this country.

Our heaviest investors live at Jerome, where the mines are located. Miners in the employ of the United Verde—the greatest mining engineers of the West—citizens of Jerome—bankers, ministers, merchants and farmers—are all heavy stockholders of Hull Copper. These are the MEN WHO KNOW.

This is what one of the miners at Jerome writes.

"In regard to your mine, I will tell you that I worked in the United Verde mine on the 700-foot level in ore, and was stopped from going further by being told by the shift boss 'We are at Hull's line.'

"All you have to do is to drift from your shaft behind the United Verde workings to strike the ore; it is there.

"I have been working here about six years. I wish I could speak to you.

"I am sure you have got good claims. If I can do anything for you let me know."—Chas. Tyler, Jerome, Arizona.

United States Government Title

Every one of our claims is held under United States Patents, and the Hull Copper Company is sole owner of these claims.

Remember we have 20 claims, covering over 250 acres of the very richest copper there is in Arizona, where work is actually going on daily.

This is the most wonderful opportunity that has been offered the public since the day when United Verde sold at 10c. a share.

You can't buy any of its stock now. The last sale was at the rate of $300 a share.

A small fortune for a dime.

TO-DAY Hull Copper offers investors who come first this opportunity.

This is that wonderful, absolute, unqualified opportunity that comes to every man once in a lifetime.

To those who grasp this opportunity it means fortune.

To-day this opportunity is thrown open to all.

Every man and woman who can save as small a sum as a few dollars a month has it.

This is a real, genuine opportunity.

We have 6,200 feet of tunnels, shafts and levels.

But mark this—it is for to-day.

If you delay or hesitate, some other, quicker to act, grasps the opportunity that would have been yours.

A very limited amount of stock at present price.

Any day, any hour, the telegraph may bear to us from the mines important news that will cause the stock to double or treble in price without notice.

Negotiations of magnitude are rushing through.

We say to you in all earnestness, in all the sincerity of practical miners of twenty-seven years of experience in the mines, Don't delay. Write at once for our "FREE BOOK ON COPPER," a handsomely illustrated copyright book we have compiled at considerable cost. If you are interested in mining investments we will send you a copy prepaid. It shows you how to protect your investments and put your money into sound enterprises that can "show you," and will teach you to use your judgment and foresight in making money like Senator Clark did. You can do it. But you must act now. Send in your reservation to-day.

Here is the opportunity of your lifetime.

$100 Increased to $80,000

Supposing Senator Clark had come to you a few years ago and had said to you: "I want you to invest $100.00 with me in the United Verde Mine." Supposing you HAD invested that $100.00 with Senator Clark in his mine, which is BANG UP AGAINST our mine. You would to-day be worth $80,000.00, and you would be getting every year from that investment of $100.00—$1,600.00.

WORD FOR WORD—FACT FOR FACT—FIGURE FOR FIGURE—THIS IS EXACTLY THE SAME OPPORTUNITY THAT WE ARE OFFERING TO YOU TO-DAY. WE ARE NEXT-DOOR NEIGHBORS TO THE RICHEST COPPER MINE IN THE WORLD.

Hull Copper's claims are the ONLY ONES directly against the real Mines of the United Verde. These are the Mines from which the United Verde is making its millions and whose ore bodies enter into ours.

OUR GUARANTEE

We absolutely guarantee to refund your money to you at any time within thirty days after purchase, if upon investigation you find we have made any misrepresentations as to our Company.

We further guarantee to sell your stock for you at any time within a year, if for any reason you desire to part with it.

Fill This In and Mail Today.

WRITE PLAINLY.

SUE MINING COMPANIES

Personal Injury Cases Filed in District Court.

Railroad Company is Sued for Death of a Horse.

Complaint was filed this morning in the district court in a personal injury suit begun by Nester Maki against the Pitt Iron Mining company. In the complaint, Maki alleges that on Feb. 21, 1907, while in the employ of the company at the Miller mine at Aurora, he was ordered by the foreman to go out on a trestle, over which cars run, and while on the trestle, he was struck by a car and thrown to the ground. He alleges negligence on the part of the company, through its employes, and claims $2,000 damages for injuries sustained. W. H. Sher, Jr., of Virginia is the plaintiff's attorney and Leo A. Ball is the attorney for the defendant company.

Complaint was filed this morning in the district court in the personal injury suit of John Honnula vs. the Commodore Mining company. The complaint states that he was working for the defendant company in its mine at Virginia about the middle of last August. He and his partner lit the fuses to set off a blast and then went into another drift. As he was entering the drift, a blast there exploded and he was severely injured. He contends that the company was negligent in having men in its employ incompetent to handle dynamite and also that the men should have been instructed in handling the explosive and should have blocked the passage to the drift or give warning in some other manner. He claims damages to the amount of $7,000. W. H. Sher, Jr., of Virginia is acting for the plaintiff and Baldwin, Baldwin & Dancer for the defendant.

• • •

Joel Fernquist of Eveleth has filed suit in the district court against the Duluth & Iron Range railroad company for damages to the extent of $500 sustained by him through the killing of a horse, the injury to another, and the wrecking of a sleigh and harness, but the team being struck by one of the trains of the company. He alleges that on Jan. 25, 1907, while Louise Clark, a servant in his employ, was driving between Sparta and Eveleth, and crossing the tracks of the defendant company, an engine and train of cars struck the team, causing the injuries stated. He claims that no warning was given by bell or whistle and the track so obstructed that a person approaching could not see the train coming. He claims $300 for the death of the horse and $200 for the injury to the other animal and the loss of the sleigh and harness.

• • •

Answer was filed in the district court this morning in the case of August F. Diedrich and Herman Diedrich vs. the Duluth, Missabe & Northern Railway company. The defendant denies the allegations of the plaintiffs.

Solomon H. Eckman has begun suit against Abel Carlton, A. O. Stone and others in the district court for title to four lots in the Carlton Place addition to the city of Duluth.

YES H. W. BARKER'S COUGH CATARRH CONSUMPTION REMEDY 50¢ MADE AT SPARTA, WIS. IS FOR SALE AT YOUR DRUG STORE

DESPONDENCY DUE TO LOSSES

Willcox Said to Have Fared Badly in Stock Market Slump.

New York, April 27.—The body of David Willcox, former president of the Delaware & Hudson company, who committed suicide on board the steamer Barbarossa in midocean on Wednesday, was landed at Hoboken today and given into the care of his cousin, W. G. Willcox. It was found that Mr. Willcox shot himself in the mouth, dying instantly. Mr. Willcox was in a very nervous condition from ill health when he sailed for Europe a few weeks ago. After reaching Europe he cabled to his cousin that his condition was worse than when he left America. Since his relatives in America have had no word from him.

Mr. Willcox boarded the Barbarosse at Gibraltar. Although he shot himself on Wednesday night, it was not until noon the next day that his death was discovered, when the steward, growing uneasy, forced the door of his stateroom and found him lying dead in his berth.

His despondency was said today to have been partly due to financial losses suffered during the slump in the stock market in March.

MADE SPECIAL EXAMINER.

H. L. Phillips is Promoted by the Insurance Commissioner.

St. Paul, April 27.—Insurance Commissioner T. D. O'Brien has announced the appointment of H. L. Phillips as special examiner for the department. The appointment is made under a law passed by the recent legislature and carries an annual salary of $2,000 a year.

Mr. Phillips at present is chief clerk under Mr. O'Brien, and has been receiving a salary of $1,500 a year. He will be succeeded by J. D. O'Brien.

Insurance Commissioner O'Brien will leave the employ of the state this summer, having tendered his resignation to Governor Johnson some time ago. He will remain in office until the new insurance laws have been published and put in force.

DEATH BEFORE TOOTHACHE.

Sioux City, Iowa, April 27.—Told by the dentist to whom she applied for relief from a maddening toothache, that the offending molar must come out, Mrs. Arnold Karrer replied: "I'd rather die than have them pulled." She went home and drank three ounces of carbolic acid, dying in half an hour. Her husband is a Great Northern machinist.

BETTER THAN SPANKING.

Spanking does not cure children of bed wetting. If it did there would be few children that would do it. There is a constitutional cause for this. Mrs. M. Summers, Box 496, Notre Dame, Ind., will send her home treatment to any mother. She asks no money. Write her to-day if your children trouble you in this way. Don't blame the child. The chances are it can't help it.

HAUNTED BY HIS CRIME, A MURDERER CONFESSES.

Butte, Mont., April 27.—Haunted nights by thoughts of the man whom he had murdered until his mind could no longer stand the strain and he feared he was going insane, John Shire last night confessed to the murder of Morris Chaplin, a wealthy auctioneer of Denver, in 1906.

Shire says he saw Chaplin flash a large roll of bills in a gambling game and he followed him for the purpose of killing and robbing him. Making his way into Chaplin's home Shire says he was discovered by Chaplin's little daughter, who alarmed her father, and as the latter advanced with a stool in his hand to hit him he fired, killing Chaplin instantly.

Shire several days ago presented himself at the county jail, asking to be locked up, saying he was laboring under the hallucination that a mob was following him, and asking that he be placed in solitary confinement. He declares that the thud of the falling body of Chaplin still rings in his ears, and he rhearses the murder over and over until he cannot sleep.

HANGED HIMSELF.

Deer Lodge, Mont., April 27.—Martin Guinnane, a convict serving a three-year sentence in the penitentiary for grand larceny, killed himself in his cell. Tearing a blanket into strips, he tied his feet to the iron cot, and looping another strip about his neck, tied it to the head of the bed. He then rolled off the cot and was strangled.

DRANK QUART OF LINIMENT

Woodsman With Raging Thirst Was Dead Within an Hour.

Escanaba, Mich., April 27.—As the result of an insane desire for intoxicants, Herman Radue, a woodsman, drank a quart of liniment at a lumber camp near here Thursday night and died within an hour. He had just finished an extended spree, and being unable to get more stimulants at the camp, stole the liniment and drank it.

BRYAN HITS AT CLEVELAND.

Lincoln, Neb., April 27.—W. J. Bryan thinks Grover Cleveland has belittled himself by his appeal in behalf of life insurance companies. Mr. Bryan says in the Commoner that the former president now stands in the attitude of a lobbyist, and that he is now engaged in a work which is not likely to add to either his laurels or his reputation as counsel for the life insurance presidents.

AT LAKE COPPER MINES

Keweenaw Copper Company Gets Stamp Mill by Securing Control of Phoenix Property---Diamond Drill Work Has Been Started.

Calumet, Mich., April 27.—The absorption of the Phoenix property by the Keweenaw Copper company, as made public last week, means not a little for the latter, especially with regard to the securing of excellent mill facilities. The old Phoenix mill, located on Eagle river, about two and one-half miles from the mine proper, and will be easily accesible by the Keweenaw company. The mill is of wood construction, on concrete foundations, being 190 by 50 feet. It has an 18 by 24-foot stamp, with 24 Hodge jigs, 6 finisher jigs, 2 Wilfley tables and 8 Overstrom tables. The capacity of the plant is about 325 tons daily.

Keweenaw has about reached a stage where milling will become necessary, and it was with this end in view, in all probability, that the deal with the Stanton people was made. Development work at the Phoenix will likely be started some time late this year, but occupation of the mill will undoubtedly be made within the next few months.

The Keweenaw company has started diamond drill work on the Phoenix property south of the old workings. It is confidently expected that with the thorough campaign of exploration which will be conducted on the Phoenix lands, excellent copper values will be uncovered. The results of the work will be awaited with a great deal of interest.

Reports continue to reach Calumet of the richness of the Mandan branch of the Keweenaw company. The shaft is now down 540 feet and is bottomed in splendid stamp rock. Everyone who has visited the property has been agreeably surprised, and

(Continued on page 12, 1st col., 2nd sec.)

CLARK BUYS COPPER MINES

Report Says He Has Secured Options on Banner Producers in Wyoming---Placer Lands Along Little Big Horn River.

Cheyenne, Wyo., April 27.—Senator Clark of Montana has secured options on the Luman Williams copper claims on Copper mountain, and has offered $500,000 for the Cunningham group, control of both of which practically controls the Copper mountain district, which is a new and little developed field in this state, although sensational discoveries have from time to time been reported.

Henry C. Beeler, state geologist of Wyoming, in a recent interview, stated that mining conditions throughout the Northwest are improving rapidly, and are now more favorable for enlisting the co-operation of capital than ever before. This is due chiefly to the fact of improved transportation facilities, which have been brought into hitherto inaccessible regions, not only making it possible for capitalists to visit the mineralized fields in person, but also enabling mine opartors to secure their equipments and supplies at greatly reduced cost. Mr. Beeler also stated that the western slopes of the celebrated Medicine Bow range, in Wyoming, have been very extensively prospected and tested for placer gold, and that along Douglas Creek, in Albany county, unusually large nuggets and big paying clean-ups have come to light, indicating extraordinary values in the gravels at depth. Very extensive gold dredging operations in this district are to be undertaken at an early date.

Sheridan, Wyo., April 27.—Judge W. J. Nelson, formerly of the legal department of the Burlington railway, has recently been investigating the placer lands along the Little Big Horn river, in Sheridan county. He reports that from one delta of about 500 acres, he took enormous samples, yielding values of from $2 to $6 per cubic yard in gold. Judge Nelson estimates that the deposit of gravel above the crater wall is at least sixty feet in depth, and that the values near the bed rock should prove far richer than any of the assays yet secured. The magnetic iron in these gravels also carries enormous values in free gold.

THE BAXTER SPRINGS CAMP

Several Rich Strikes Made at the Different Mines---Electric Railway System to Connect With Galena and Columbus.

Baxter Springs, Kan., April 27.—Joseph J. Helm and his party of financiers and engineers spent a day in Baxter Springs going over the proposed route for the new electric line between that city and Quapaw. There is every reason to believe that this line will be under the course of construction within a very short time and it is the general opinion that Baxter Springs will be connected with Galena and Columbus with an electric railway system.

The camp here is on the boom. There has been several rich strikes made at the different mines which have shown up to be as rich as any in the Southwest fields.

The Omaha has struck a rich run of lead and jack in the north drift and also the northwest drift shows the same run of ore. This is on a 72-foot level. The Omaha will sink a shaft near the Hobo and one on the southeast corner of their twenty acres. They have been handicapped by not having their ground opened up sufficiently to run night and day. They are preparing to carry their work forward more aggressively so they can do this in two or three weeks.

Another rich strike was made on the Kramer-Morse mine. They have cut into a 6-foot face of disseminated lead in air drift. They have drifted into it forty-five feet.

The Merritt-Newands mine is pumping water and will start up next week.

The Sunburst has just finished its boiler room and is now connecting it up and will be ready in a few days to put in steam drills. This property has four drifts opened up and shows very good lead and zinc in all the faces. As soon as the steam equipment is completed a

(Continued on page 12, 2nd col., 2nd sec.)

COMBINE PLANNED BY HEINZE

Mining, Milling and Smelting Combination Being Rounded Into Form---Expect to Control Copper Mines of Park City District.

Salt Lake City, Utah, April 27.—The mighty mining, milling and smelting combination that is being gradually rounded into form by F. Augustus Heinze, James Breen, his close business associate; the Silver King crowd and other interests, is taking on more definite form every day. It should not be many weeks, and it is possible that it will not be many days, till some announcement of a formal character comes from the East. There is no longer a shadow of doubt that the Heinze crowd is going to control the mines of Park City. Plans of the Amalgamated Silver King Mines company have been formulated here, and last week President David Keith and General Manager Thomas Kearns pulled out for the East to join with the Heinze-Breen crowd in the promulgation of the new company.

Other significant news comes in an indirect way from Boston through one of the publications there. It is to the effect that J. E. Bamberger is going to come West about the first of the coming month and that, upon his return East, he will be ready to say what has been done with respect to the consolidation or merger of the Daly-West, Ontario, Daly and other propesitions. Reference is made to the fact that the properties named hold a strong position on one side of the mineral zone, while the Silver King combine covers the other side. It then intimates that closer relations between the two may be established. From what can be learned of what is really doing, this vague statement is not without foundation in fact. In reality, it need surprise no one to hear that the Heinze-King crowd has the situation so well in hand that it can bottle up the whole camp, so to speak, without difficulty.

Tremendous as such a combination would be, its rounding out is only a small portion of the scheme that is believed to be maturing and which is expected to be fully developed during the present season, if not during the next three months. As previously intimated in this department, many mining districts are to be drawn upon for the support of the monster parent company that will likely be formed on similar lines to the Amalgamated Copper company, to control the whole thing. Bingham will be a contributor, so will Tintic, Stockton, and possibly Alta and other Utah camps, while Nevada will be hit up for a few properties, and other contributions will come from Idaho and Montana. It sounds big, doesn't it? But if the proposition goes through, as it seems to have been planned, it will be even bigger than these outlines suggest.

Tens of millions of money are going to be required to swing this mammoth enterprise, and the men behind it know to a nicety just what is going to be accomplished when the undertaking is finally accomplished. Auxiliary smelting and matting plants may have to be established to save freight on crude ores and concentrates, but the main business it is believed, will be done within easy striking distance of this city.

"There is no doubt that Mr. Heinze and his associates have been working on this scheme for more than a year; it is just as certain they are working night and day on it now, and it is fair to presume that the day is not far off when it will be impossible for them to longer prevent the full disclosure of their plans. No such gigantic undertaking was ever before attempted in the mining world, unless the attempt of the Guggenheims of the world might be considered greater.

ORE STRUCK BY DAVIS-DALY

But Width of Vein or Value of Rock Not Determined—Report That Butte & Superior Has Run Into Good Silver Ore In Black Rock Mine.

Butte, Mont., April 27.—The Davis-Daly company has at last struck copper ore, but the extent of the find is not yet known on account of the fact that when the foot wall was punctured the flow of water was so heavy that work had to be suspended for the time being in order that a means of taking care of the molsture might be provided.

The strike was made in the crosscut which the company is driving south from the 1,800-foot station of the Original. The face of the opening is now about Park street, and the supposition is that the vein encountered is the one that traverses the Thomas, which crops a few feet north of Granite street. It may be the Thomas vein, or it may be some other vein. Eventually the vein, whether it is the Thomas or another, will drain to such an extent that the flow can be handled without the least trouble, but at present it is pretty severe.

When the vein was cut the news was wired to Boston and New York, with the result that Davis-Daly stock which had been selling at about $13 a share began to ascend.

This is the first pay ore struck by the company in any of its workings, but if everything goes right, it will not be the last, for without doubt veins of commercial value will be encountered north of the Colorado shaft when the company crosscuts that part of its possessions. Ore will undoubtedly be struck in the Mount Moriah, too.

In order to take care of the water from the vein in the crosscut, an additional pump is going in on the 1,800 of the Original, and when it is installed the vein will be crosscut.

* * *

A report is current in mining circles that the Butte & Superior company has struck a shoot of rich silver ore off its main shaft on the Black Rock, but the report has not been verified. The company has been sinking in the vein of the Black Rock, and is said to have run into the shoot near the foot wall at a depth of about 650 feet. The company is deriving a revenue from its leases on the Niagara, and has good ground.

* * *

The Amazon-Butte company, which is operating a group of good claims on the East side, has a four lot vein of sulphide copper ore in its shaft at a depth of 350 feet. The ore, according to a statement made by one of the officials of the company, carries a value of 7 per cent copper and 16 ounces of silver, which is good enough for any country. When first struck, the vein was a stringer of a few inches, but as sinking progressed, it widened to such an extent that the company now believes that it is permanent and will become a great producer. The vein is said to be the best of the sulphide brand yet struck on the east side.

* * *

The Calumet & Butte Development company, which has been operating the Richeliau and Albert claims, a short distance east of the Amazon, during the last year, has been reorganized and

(Continued on page 12, 3rd col., 2nd sec.)

ALL EYES UPON LARDER LAKE

New Rival to Cobalt Across the Canadian Line---Hopes of Considerable Gold Throughout Narrow Fifteen-Mile Strip—Nipissing Hiring Men as Fast as Possible.

Toronto, Ont., April 27.—All eyes seem now to be turned to Larder Lake and except for an inactive stock market Cobalt is almost completely forgotten. Men are flocking to the gold fields by the hundreds every day. As yet no one has returned who can give a detailed description of the camp or make any estimate as to its possibilities. Canadian investors seem to be confident of its future. A broker, after a careful estimate, said he was certain over $200,000 in Toronto cash was now invested around Larder Lake. This district is not yet a year old as a mining community, but when Cobalt was in about the same state of infancy far less than that amount of Toronto money was placed there. One mining man who came from the north the other day stated that as far as he could learn, the gold area around Larder Lake was fifteen miles long and about three-quarters of a mile in width. He was certain that much of the country contained paying gold, but would express no opinion about the remainder, since he had not seen it so as to speak with authority. On the other hand a Nevada gold man came to Toronto with the statement that Larder Lake was the greatest gold country in the world. Six gold claims were sold in Cobalt for $100,000 a few days ago.

The Temagami Copper company, composed of Toronto capitalists, has been organized with a capital of $2,000,000. More attention will be paid to the copper fields south of Cobalt this year than before and considerable American capital is interested. A strike on the Cobalt Lake property was reported this week. The assay gives 2,081 ounces to the ton.

Ten days before April 10, when the miners' licenses had to be renewed, no fewer than 5,000 were granted at Haileybury and a thousand at Cobalt. From these licenses the government received $60,000.

Full shipments for the week ending April 13 were O'Brien 64,130 to 66,000 pounds; Kerr Lake Mining company, 80,000 pounds; Coniagas, 99,660 pounds. The total is about 155 tons. The value of two cars from the Nipissing did not ship at all, and this is hard to account for.

Another silver district has been discovered about ten miles east of Cobalt and native silver has been found. A number of smaller companies have been persistently working on a limited scale in this region, which is known as Lorraine, but on account of lack of capital and distance from the railway little development has been done. The finds are reported to be in the same kind of rock as at Cobalt.

The destruction of Latchford by fire last week means a distinct loss to Cobalt camp and the whole silver region. It was from Latchford that all prospectors and miners went who had work on the Montreal river. In fact the town has been the base of supplies for a vast region. Little of what was a tidy mining town now remains.

Cobalt, Ont., April 27.—Spring is on in the district of Nipissing, and another summer is immediately before Cobalt. Already the local method of prospecting and trenching is being

(Continued on page 12, 4th col., 2nd sec.)

TONOPAH A MILLING CENTER

Stamps Humming in Plenty and New Ones Promised—Over $5,000,000 Already Invested in Wonder District—Golden Boulder Sold and Big Merger Scheme is Rumored.

Tonopah, Nev., April 27.—The concentrating plants of Tonopah are going to bring this camp forward soon as a milling camp of large proportions. At one time it was a question as to whether the mills were going to be a success. The Tonopah Mining Co.'s mill has been dropping on an average of ninety stamps, and will soon be dropping the entire hundred. The Midway mill has been letting fall ten stamps.

The average of the Midway has been 200 tons a week, the average being $25 a ton; that of Tonopah 300 tons a day. The ore that has passed through the big mill was sorted to a value of $30 a ton. In addition to this they have been sending out to the smelters and to Virginia City 2,000 tons a week, which will average not less than $55 a ton.

The production of the mills and the smelters is thus shown to be at the rate of more than $9,000,000 a year. When the mill is running in full blast the production will be brought up to $10,000,000 a year.

Tonopah Extension is fulfilling the promise of the early days of the mine. The fault which occurred several months ago has been corrected and Extension is into another ore body. The ore body faulted 1,250 feet west of the main shaft on the 400 level, and it was thought that it had petered out. General Manager Kirchen began investigating matters, and determined to go north. He went only 72 feet and found the ledge, widened out to 42 feet.

Of this lead eight feet will run from $100 to $150 without sorting, and the rest of it will go from $15 to $60 and $70 a ton. They are now stoping from the 400 level to the surface.

Then there is the Belmont, which is as far east from the Mizpah as Extension is west from it. Belmont is a big mine. They are now working on the 1,100-foot level, and the ore body has been thoroughly proved from the 600 level down. The ledge is from 20 to 70 feet wide between walls. From this point is being taken the highest grade ore in the camp. It will run, as it goes into the car, $100 a ton, and this is the character of rock that is being shipped without being sorted.

Belmont will have its 60-stamp mill completed by June 1, and then its production will be something to talk about. The regular 10-cent dividend was paid this week.

West End is another mine which is developing into one of the big producers. A double compartment shaft is being sunk 500 feet west of the present shaft, and a prospecting shaft has been started 600 feet west of this. The new working shaft is down 65 feet, and it will be extended to a depth of 400 feet before cross-cutting is begun. The reason for this is apparent.

On the 400-foot level, 400 feet west of the present working shaft, they are stoping on the ore body. The ledge here is 112 feet wide, and of this 40 feet runs on an average of $70 a ton. The remaining 72 feet will go on an average of $20 a ton.

In addition to these showings there are strikes in North Star and Montana Midway Extension.

The strike in the Montana Midway Extension continues to be the talk of the camp. Golden Anchor, the neighbor of the Extension on the west, has not seen a stroke of work for several months past, since the mine was closed down on account of the fuel shortage. And now the speculators are getting in on the chance of the ledge which has been uncovered in Montana Midway Extension extending through the Golden Anchor.

Wonder, Nev., April 27.—The following

LAKE SUPERIOR IRON MINES

Three Mines of Great Promise Being Developed In District Midway Between Biwabik and McKinley—Most of Mesaba Range Mines Shipping Again to Docks.

Virginia, Minn., April 27.—(Special to The Herald.)—There are few sections of the Mesaba range that surpass in activity the district lying about midway between Biwabik and McKinley. Here there are three future mines of great promise in the first stages of development and a person who enjoys viewing the transformation of the wilderness will be well repaid by making the district a visit.

An indication of the possibilities of the Mesaba range is here shown. Two of these properties are crossed by the county road leading from Biwabik to McKinley, a well improved and heavily traveled thoroughfare that has been in existence since the range was opened, over which prospectors and explorers have traveled in large numbers and yet it was only two years ago that any of them had the nerve to seek ore in that locality by going deep after it. There had been some shallow testpitting in the locality in the early days, but because ore was not found near the surface the effort to locate it was abandoned. The chances are that much more ore will be found in the vicinity as time progresses.

First on the road west from Biwabik is the Kellogg, the property explored by Capt. M. L. Fay and being developed by the New York State Steel company. The land here was heavily timbered with small evergreens and in the process of clearing the land, this has been made into logging sufficient for mining purposes for two years. Soon the entire forty will be cleared.

The sinking of a working shaft has resulted in the discovery of a vein of very fine and flourlike quicksand at a depth of about 90 feet that flows up into the shaft like water and so far has defied all efforts of the workmen to get the shaft timbers below it. After the shaft was driven to a depth of 92 feet and no farther progress could be made, a second shaft to be used for timber was sunk near by. At a depth of 80 feet the quicksand came into this shaft also as fast as it can be pumped out. It is hoped, however, that by working in the two shafts alternately to be able to get down below the quicksand and into the ore. Where the working shaft is located the surface is about 115 feet deep, so it will be necessary to drive the shaft about 20 feet deeper before the ore is reached.

The surface improvements being made on the property are all of substantial character. At present an engine house 36 by 32 and a boiler house adjoing, 36 by 44, are under course of construction. They are being built of frame with corrugated iron covering. The boilers and machinery to be placed therein are already on the ground. There is a double hoist with six foot drum and three boilers, each of 150 horse power capacity. The company has completed a two-story boarding house, 24 by 48, two five-room one and one-half story cottages and one two-story cottage, 20 by 24 feet in size containing five rooms. Additions will be made to the location as occasion demands. There will also be erected a commodious dry, office, blacksmith shop, storehouse, etc. A diamond drill is kept at work proving up the ore body. A spur of the Iron Range road is already constructed to the mine,

(Continued on page 9, 6th col., 2nd sec.)

WARREN DISTRICT'S OUTPUT

For the Month of April Will Show Normal Production ---No Shutdown at Any Shafts of the Bonanza Circle.

Bisbee, Ariz., April 27.—Notwithstanding the local labor situation, local mines for the greater part seem to be holding to their average in the way of output, and the gross tonnage of ore to be sent to the smelters for April bids fair to very nearly equal that of March.

The Copper Queen company is shipping approximately 310 tons per day from the old slag dump and the southwest dump, just south of the Copper Queen store.

The Shattuck and Denn mines, which were so badly crippled at the beginning of the strike, are working a larger number of men than at any time since the strike was called, and the gain at these properties seems to be greater than at any of the other mines where the loss of men was not so great.

The entire district has felt the effect of the strike, many men having left the Warren district as soon as the labor difficulty arose, but local merchants complain of little dropping off in business. At the smaller mines on the outskirts of the district work is progressing with vigor, none of the little fellows west of the divide being at all affected by the strike of the Western Federation.

Of the four large operating companies of the district, the Copper Queen company has been the least affected. It is stated that the production of the Copper Queen smelters at Douglas for the month of April will be up to the usual figure. This is explained by the fact that as compared with other companies of the district, a less number of miners employed by the Copper Queen company, left the employ of this company in response to the strike order. The Copper Queen company at Douglas has a large reserve ore pile, which is only used in the event of an emergency, and in addition the old waste pile and the slag dump serve as a reserve ore stock pile, which could be drawn upon for several months if necessary.

Again the Copper Queen company handles ores from Nacozari, which shipments can be increased as required, not to mention supplies of ore which could be drawn from Globe and Morenci, both nearby points, if such action was necessary

CALUMET AND ARIZONA PEOPLE

Purchase Swansea Claim at Cananea---Sale of Keno Property Adjoining Greene-Cananea---Progress of the Greene-Cananea.

Bisbee, Ariz., April 27.—At a meeting of the stockholders of theRonquillo Copper company, held in this city, ratification of a deal whereby the sale of the Swansea claim of that company's holdings was made. It is understood that the Calumet & Arizona interests are the buyers of the Swansea. The price paid for the Swansea is not given, but it is said to be sufficient to declare a dividend to the present holders of the Ronquillo copper stock and to leave enough in the treasury of the company to proceed with development work.

Of the holdings of the Ronquillo company the Swansea lies in close proximity to the proved district in the Cananea mineral zone and a shaft 100 feet in depth already sunk on the property, has demonstrated the existence of ore.

The deal which is thus consummated in the ratification of the stockholders in the second attempt on the part of the Ronquillo company to dispose of its claim. The first negotiations were started through N. E. Lugoff, a broker at that time of Bisbee, whose option expired before he finally succeeded in closing a deal

Negotiations were then begun with Col. L. W. Powell of this city, with the result noted.

Cananea, Mex., April 27. — Probably the most important deal which has been reported in this section for some time, is the sale of the Keno Mining property of S. M. Greenidge to interests represented by Harry Boland of this city, which, it is thought, with announcements made last week by Boland, would indicate a third company to begin operations in this district in the near future. The price paid for the Greenidge property is said to have been about $350,000. The Keno, which is located in the west boundary of the Greene-Cananea company's property, contains 350 pertenencias of some of the best looking mineral land in the vicinity of the big Mexica camp. Although little work has been done in it, the surface showing was so good and the properties adjoining so well proved that it was generally considered one of the best pieces of ground in the vicinity. No accurate statement can be obtained as to the identity of the people who have bought the property, but

(Continued on page 9, 5th col., 2nd sec.)

SCHWAB IN CANANEA FIELD

By Taking Over West Cananea and San Bendenito--- New Company Capitalized at $5,000,000 and Will Develop the Property.

Bisbee, Ariz., April 27.—By one of the most important mining deals perfected for several weeks, Charles Schwab and associates will enter the Cananea district with the Cananea Western Copper company, capitalized at $3,000,000, taking over the West Cananea company and other properties. Although persistently rumored that Schwab would enter the Cananea district soon, it has been denied until J. T. Wilkie, president of the West Cananea Mining company, passing through Bisbee on his way to Cananea from Douglas, where he was when he received word that the deal was consummated, stated that the West Cananea property and the San Bendenito had been taken over by the great copper magnate and associates.

According to Mr. Wilkie, the corporation holding the property was formed last week at Tonopah, Nev., under the name of the Western Cananea Copper company and the capitalization placed at $3,000,000. All necessary details, including election of a board of directors, was formally gone through with and the company prepared for extensive operations. The directors who will serve during the first year are M. McDonald Gillis, T. Pittman, J. R. Martin, and J. T. Wilkie. Wilkie was made the active manager of the property and will continue on the ground as heretofore.

It is a certainty, Mr. Wilkie stated, that a large producer will be added in the near future to the district. The West Cananea property which is taken over by the new corporation, had 398 pertenencias or fine mineral ground and good showing of ore have been found on it recently. It was capitalized at $500,000. The recent strike entirely proved the district in which it is located, it is thought.

It is the intention of the new corporation to proceed with work on a large scale, Mr. Wilkie stated, and to that end a visit will be made in the next few days by J. R. Martin, expert for the company, to the property. Mr. Martin and Mr. Wilkie will carefully go over the ground and outline the method of procedure.

The great beenfit which will be derived from the deal by the stockholders of the West Cananea company

(Continued on page 9, 6th col., 2nd sec.)

ALASKA MINES TO THE FRONT

Northern Possessions Add 8,000,000 Pounds of Copper Yearly---Two Smelters Are to be Constructed During Present Year.

Butte, Mont., April 27.—Alaska is rapidly coming to the front as a producer of copper, the developments of the past six years having place dthe Prince William district alone in a position where today it is contributing 8,000,000 pounds of copper a year to the world's supply. Nearly one hundred companies are developing their properties and many of them are now shipping. The first-class ores, averaging between eight and ten per cent, are being shipped to the Tacoma smelter. Inside of another year, however, two smelters will be in operation on the coast of Alaska.

Henry D. Reynolds, president of the Reynolds-Alaska Development company, a Boston corporation operating in the Prince William sound district, was in the city last week. He left for Seattle to consult with the chief engineer of the company relative to plans for the construction of a smelter on the Alaskan properties. He is authority for the statement that within the next twelve months the mines of his district alone will be reducing at least 700 tons of ore daily. A railroad into the Copper river country, which the Guggenheims are about to build will increase the output materially. In the latter district, which is 250 miles inland, great quantities of copper glance are found, running as high as 80 per cent copper.

In the Prince William sound country, which is on the coast 1,300 miles north of Seattle, glacer action has made mining exceptionally easy. The ore bodies lie very close to the surface, and directly on the coast they lie exposed. Much of the mining is done by means of open cuts along the veins, and tunneling is also a profitable method of reaching the ore bodies. The formation is not broken up as it is in the Butte district, and the rock is so hard that no timbering is necessary in either tunnels of shafts, except at the mouth of tunnels and in the stopes.

On La Fouche island are located the mines of the Beatson Bonanza company, which were first opened up about six years ago. For the past three years this company has been shipping copper averaging from 8 to 10 per cent copper from very large ore bodies, one recently encountered measuring 170 by 400 feet, which is being worked to a depth of 200 feet. It was reported some

(Continued on page 12, 7th col., 2nd sec.)

DEFECTIVE PAGE

SOCIETY

Those who could, went to the Twin Cities to attend grand opera and the remainder of the people have interested themselves in a flurry of excitement in the most convenient aid for the dispelling of ennui-spring housecleaning. One may have moved into a brand new house three months ago, one uncluttered with many draperies and guiltless of carpet, except for a few rare rugs, which are thoroughly dusted each week, but as surely as young man's fancy does the proverbial lightly turning, just so surely does the mind of every woman past the age of 25 summers turn toward that fetish of civilization which involves shoving all the living room furniture into the off-end of the dining room and carrying all the books from the library and depositing them in the living room, and taking down all the works of art that have been in places chosen with great care, and placed ignominiously together and stored behind the piano which has been shoved into the back entry, if anyone still has that sort of convenient thing in their houses. The rugs are put outside, a fetching dusting cap is donned, and the whole grand triumphant pageant is in progress.

Thus is society engaged. It insists upon so enjoying itself, but in a few days longer at least, some of the young matrons will be dashing around merrily in brand new runabouts which they will drive in their own right and then a spin out to the Country club will precede some smart function in which the awful dullness of the last few weeks will be dilated upon.

* * *

The immediate prospect is a bit more enlivening than any since Lent. Friday evening of next week the first of the post Lenten Assembly dances will be given and the party promises to be a most charming affair. The arrangements for the spring party are always most carefully made and dainty summery gowns add to the seasonableness of the function. It will be given, as usual, at the Spalding and La Brosse will play. Many of the society people, who have passed the winter and spring in the South or West, will have returned by that time and the affair will be a brilliant representative gathering.

* * *

Wednesday of this week the members of the Daughters of Liberty Chapter of the Daughters of the American Revolution will be entertained at the last meeting of the year, for which Mrs. E. T. Buxton will be hostess at Eden hall. The affair will be an afternoon musicale, the program for which has been arranged by Mrs. W. B. Silvey and the afternoon will be one of the most delightful of the society's meetings for the year.

* * *

Next Saturday, the members of the Saturday club will be hostesses at a May luncheon at the Spalding, the affair to mark the close of the year's study. The luncheon will be served at 1 o'clock and for the half hour preceding the luncheon, an informal reception will be held in the parlors, in compliment to the new officers of the club who were elected at the annual meeting this afternoon. There will be an informal program of toasts and the affair promises to be a delightful close of the year's study.

* * *

Then there will, of course, be the appearance of Mme. Schumann-Heink, which is always a gala appearance even in Duluth, which is not noted for its welcome to high class musical events, but this great voiced musician is the one exception and Wednesday evening all Duluth society will be gathered in one place to pay tribute to this genius of the musical world.

Mrs. J. N. McKindley and her guest, Mrs. R. M. Atwater attended grand opera at St. Paul this week.

* * *

Mrs Percy Gough left Tuesday for St. Paul to attend the season of grand opera there.

* * *

Mrs. D. Waite of East Superior street is the guest of Mrs. James T. Morris of Minneapolis.

* * *

Mrs. Edward Hazen and Mrs. Charles Hazen attended grand opera at the Twin Cities during the week.

* * *

Mrs. R. N. Marble, Jr., returned the first of the week to her home at Ishpeming.

* * *

Invitations have been issued by Mr. and Mrs. F. C. Smith of Minneapolis, formerly of this city, for the wedding of their daughter, Miss Gertrude Smith and Edward H. Mirick of this city. The wedding will take place Wednesday, May 8, at the home of the bride's parents, at Minneapolis. The wedding service will be read at 2 o'clock in the afternoon, and after July 1, Mr. Mirick and his bride will be at home in this city.

* * *

C. d'Autremont and daughter, Miss Antoinette d'Autremont returned the first of the week from a several weeks' trip to the Southwest.

* * *

Mr. and Mrs. B. Murray Peyton left during the week for a two weeks' visit with friends in old Virginia.

* * *

Mrs. A. W. Ryan is visiting friends at Berlin, Wis.

* * *

Mr. and Mrs. John G. Williams are in New York this week.

* * *

Announcements were received in this city during the week from Mrs. Jennie Pengilly of Northfield, Minn., of the wedding of her daughter, Miss Martha Frances Pengilly to Carl Luster Harkrader of St. Paul. The wedding took place Wednesday at the home of the bride's mother at Northfield. Mr. and Mrs. Harkrader will be at home after May 20, at 620 Ashland avenue, St. Paul. The bride is the daughter of the late Capt. Pengilly, well known in Duluth and on the ranges.

* * *

Mr. and Mrs. A. B. Siewert left Tuesday afternoon for the Twin Cities to attend the season of grand opera there.

* * *

Mr. and Mrs. Stillman H. Bingham of 1607 East Fourth street returned during the week from St. Paul where they passed the winter.

* * *

Mrs. B. Silberstein, Mrs. J. M. Gidding, Mrs. E. A. Silberstein and Miss Elsie Silberstein left during the week for a month's visit at French Lick Springs, Ind.

* * *

Miss Louise Hicks and Miss June Carr visited during the week at the Twin Cities.

* * *

Mrs. James E. Goodman of 1927 West Third street left Tuesday to attend grand opera at St. Paul.

* * *

Mrs. Charles Neimeyer and Mrs. E. H. Pugh left the first of the week for St. Joseph, Mo., called there by the serious illness of their father.

* * *

Mr. and Mrs. J. L. Dorsey of 410 West Fourth street have as their guest, Joseph Metter of Winnipeg.

* * *

Mrs. Fred M. Anderson attended grand opera at St. Paul this week.

* * *

Mrs. J. D. Zien was among the Duluthians who attended the Conreid opera productions at St. Paul.

* * *

Mrs. W. J. Ferguson entertained at a birthday party Tuesday afternoon at her home at 807 East First street, in honor of the 10th birthday of her little son, Bernard. From 5 to 8 o'clock the following little folks enjoyed a delightful social time:

Misses—
Mary Kennedy, Helen Dryer,
Margaret Hough, Ethel Harding,
Helen Zuger, Eleanor Kraft.
Masters—
Robert Zuger, Howard Zukforth,
Stephen Willcox, Hunter Towne,
Clinton Johnson. Forest Harding,
Walden Hough,

* * *

The wedding of Miss Pearl Howard and John Alfred Garlick took place Wednesday evening at the home of Mrs. Sarah Potter of 1623 South street. The marriage service was read at 8 o'clock by Rev. John W. Powell of the Endion Methodist church. Mrs. T. J. McKeon was the matron of honor, and the groomsman was J. H. Davis. The bride wore a pretty gown of pearl grey and carried a cluster of bride's roses. Mr. and Mrs. Garlick will be at home after May 1 at 1623 South street.

* * *

Mrs. William McCullough and her mother, Mrs. G. Kimball, returned during the week from Los Angeles, Cal., where they passed the winter.

* * *

Miss Rosalind Grochowski was the guest of honor at a pretty birthday party Wednesday afternoon from 4 to 6 o'clock, the affair being in honor of her sixth birthday. The decorations were in crimson and white and the first prize in the games for the afternoon was won by Vera McDonnell, and the consolation went to Dorothy McDonnell. The guests were:

Misses—
Alice Murphy, Anita Johnson,
Mildred Higgins, Alice Hillis,
Gertrude Harry, Marion Mitchell,
Esther Bell Frerker. Vera McDonnell.
Masters—
ClarenceGrochowski, Martin Grochowski,
Paul Shelby Grochowski.

* * *

Mrs. William Damm of Chicago is the guest of her sister, Mrs. Oscar Palmquist of 1314 East Fourth street.

* * *

Dr. and Mrs. F. H. Burnett and Mr. and Mrs. D. B. McInnis left during the week for a three weeks' trip to the Pacific coast.

* * *

Mr. and Mrs. Phelix Eber were pleasantly surprised Monday evening, at their home at West Duluth, by a number of friends. Mr. and Mrs. Eber will leave soon for Seattle where they will make their home. Cards were the amusement of the evening and the favors were won by Mrs. Brassard and Miss Elsie La Flair, and the men's prizes went to Messrs. Saya and Fred Brassard. The guests were:

Messrs. and Mesdames—
M. LaFlair, Bart Rosner,
Peter Hartough, Alex Forbes,
Marshall Eber, Fred Brassard,
Louis Caya. Louis Caya.
Mesdames—
James Pickard, J .Eber.
Joseph Goneau.
Misses—
Iva Hosner, Essie LaFlair,
Estella Rice, May Rice.
Messrs.—
Frank Rice, L. McDonald.

* * *

Miss Edith Leonard of the West end is visiting friends at Fond du Lac, Wis.

* * *

Mrs. G. Johnson entertained at luncheon Monday at her home at the West end.

* * *

Mrs. E. F. Wiberg, who will leave soon for a trip to Europe, was the guest of honor Monday afternoon, at a surprise party at her home, at the West end. The afternon was a most enjoyable one.

* * *

Mr. and Mrs. J. G. Ketcham entertained at dinner Thursday evening in honor of the birthday anniversary of their son, Gilbert. The table decorations were yellow jonquils, and the guests were:

Misses—
Charity Jones, Dale Montgomery,
Lelia Sparks, Emma Western,
Helen Majo, Pearl Hector.
Messrs.—
Robert Johnson, Frank Salt,
Ruben Ettlenan, Robert Ketcham.
Philip Holgate,

* * *

Mr. and Mrs. George Robinson were pleasantly surprised Monday evening at their home, 517 East Fifth street. The affair was in honor of their tenth wedding anniversary, and those present were:

Messrs. and Mesdames—
T. Bartholdi, W. Dyer,
B. Parigo, S. J. Neff,
M. Sharp, J. Schorbe,
C. Herzberg, F. McCassell.
Misses—
Ethel Henwood, Etta Bartholdt,
Erna Bartholdi, Flora Brant.

* * *

Mrs. A. Lofgren of the West end will leave next week for a few months' visit with relatives in Canada.

* * *

Miss Minnie Johnson of the West end is visiting friends at St. Paul.

* * *

Mrs. C. R. Stai of the West end is visiting at Cloquet.

* * *

Mrs. H. S. Jones of 2417 West Fifth street returned during the week from a visit at her former home at Marinette, Wis.

* * *

Miss Irma Stahl of the West end has returned from a month's visit at Chicago.

* * *

Miss Laura Hogstad, who was the guests of friends at West Duluth returned during the week to her home at Fond du Lac.

* * *

Mr. and Mrs. H. F. Williamson attended grand opera at St. Paul during the week.

* * *

Mr. and Mrs. W. D. Bailey returned during the week from Ashville, N. C., where they were the guests of Mr. and Mrs. J. L. Washburn, who will return to this city in five or six weeks.

* * *

Mr. and Mrs. L. J. Hopkins and children returned during the week from Florida where they passed the winter at their winter home. They will leave soon for Chicago where they will make their future home.

* * *

Mrs. W. W. Walker and Mrs. John P. Gordon are visiting in Chicago.

* * *

Mr. and Mrs. Lee Farmer returned during the week from their four months' wedding trip abroad.

* * *

Mrs. Arnold S. Wakeman, who has been the guest of her parents, Dr. and Mrs. D. D. Murray will return this evening to her home at Winnipeg.

* * *

Mr. and Mrs. F. W. Paine have gone to Washington, D. C. for a two months' visit.

* * *

George Suffel visited in Minneapolis the latter part of the week, a guest at the Phi Chi fraternity house, of which society he is a member. He will attend the banquet of the fraternity there this evening.

* * *

Mr. and Mrs. Fred Reynolds are in Minneapolis where they attended grand opera.

* * *

Mr. and Mrs. J. L. Mullin of 2115 East Superior street have gone to West Baden, Ill., for a visit.

* * *

Miss Mae Wylie has visited at the Twin Cities during the week attending grand opera. At St. Paul she was the guest of Miss Potter, and in Minneapolis, Mrs. Frank Suffel has been her hostess.

* * *

Mrs. K. O. Paulson of West Duluth left the first of the week for a visit with her son at St. Paul.

* * *

Miss Helen Marving, who was the guest of her sister, Mrs. T. H. Johnson of West Duluth, returned the first of the week to her home at Gresco, Minn.

* * *

Miss Martha Ramson of Madison is the guest of her sister, Mrs. L. J. Lewis of West Duluth.

* * *

Mrs. W. H. Wright of West Duluth left the first of the week for a visit with friends at St. Paul.

* * *

Mr. and Mrs. Richard Duby and Mr. and Mrs. John Bouchard of West Duluth left during the week for Ballard, Wash., where they will make their home.

* * *

Rev. and Mrs. S. G. Briggs of West Duluth had as their guest for a few days this week, Rev. J. B. Hingeley of Minneapolis.

* * *

Mr. and Mrs. Albert Meldahl and Miss Remfrey of West Duluth left during the week for Rochester, Minn.

* * *

Mr. and Mrs. Fred Raney of West Duluth returned during the week from a visit at Little Falls, Minn.

* * *

Mr. and Mrs. J. M. Oreckovsky of West Third street have announced the engagement of their daughter, Miss Lena Oreckovsky to B. Davidson of Chicago. Mr. Davidson, who has been visiting here during the week, has returned to his home.

* * *

The Delta chapter of the Delta Theta fraternity entertained at a delightful dancing party last evening at Steinway hall. The hall was decorated with college and fraternity banners and the fraternity colors, of gold and purple predominated in the decorations. The chaperones were Mr. and Mrs. A. L. Warner, Mr. and Mrs. William Burgess and Mr. and Mrs. Coffin. Those present were:

Misses—
Hazel Owens, Marjorie Shipherd,
Norma George of Superior, Hazel Aske,
Virginia Frisk,
Emily McDougall, Beulah Hubbard,
Faye Hobbs, Esther Coffin,
Ruth Hobbs, Harriet Stryker,
Gertrude Hoopes, Susan Stryker,
Evelyn Cash, Eleanor Warner,
Elsie Crasweller, Annie Meyers.
Messrs—
Harold Burgess, Earl Cummings,
Ralph Ely, Arthur Dudgern,
William Hicken, Elmer McDevitt,
Monroe Warner, Philip Poirier,
Ralph Hurdon, John Jenswold,
Edward Furni, Roy Deetz,
Palmer Harbison, John Staacke,

CLUBS AND MUSICAL.

Evening Musicale.

A vocal and instrumental recital will be given Tuesday evening of next week at the Unitarian church by the pupils of Mrs. Stella Prince Stocker, assisted by George Suffel, baritone. Anyone interested in the musicale is invited to attend. The program is as follows:

Melody (for piano) ..... Loew
Miss Dorothea Engel.
"Happy Hours" (for piano) .. Straebbog.
Master Seymour Sherwood.
March (for piano) ..... Straebbog.
Miss Dorothea Bidwell.
Allegretto and Rondo (for piano) ..... Diabeli.
Miss Ruth Johnson.
Spanish March (for piano) ..... De Kontski.
Miss Claryce Steimke and Mrs. Stocker.
Irish Love Song (for soprano) .... Lang.
Miss Evelyn Greenfield.
Toreador Son (for piano) ..... Bizet-Choudens.
Miss Irma Gujer.
"Love is Lord of You and Me" (for contralto) ..... Well.
Mrs. W. O. Kinsman.
Pastels (for piano) ..... Gretchaninow.
(a) Plainte.
(b) Chant d'Automne.
Miss Clara Stocker.
"Magic Song" for soprano) ..... Meyer Helmun.
Mrs. T. G. Bartholomew.
Valse, op. 15 No. 5 (for piano) .. Dennee.
Miss Mary-Emily Merritt.
"La Forge" (for piano, four hands) ..... D'Ourville.
Miss Mabel Rhodes and Mrs. Stocker.
"O Ye Tears" (for tenor) ..... Abt.
Porter J. Neff.
(a) "To the Spring" (for piano) ..... Grieg.
(b) "Moods ..... Schumann.
Miss Isabel Pearson.
"Thine Eyes So Blue and Tender" (for soprano) ..... Lassen.
Miss Evelyn Greenfield.
Song Cycle—"Captive Memories in Arcady" ..... Ethelbert Nevin.
Mrs. Bartholomew, Mrs. Kinsman, Mr. Neff, Mr. Suffel.

Pupils' Recital.

The piano pupils of Miss Mabel Fulton will appear in a recital next Friday evening at Miss Fulton's home on Fourth avenue west. Ernst J. Blount, basso, will assist. The program is as follows:

"Little Scherzino" ..... Seeboeck
Ethel Nelson.
"Playful Rondo" ..... Greene
Mabel Beaton.
"Elfin Dance" ..... Pennington
Dorothy Ribenack.
"In the Mountain Cot" .. Heins, Op. 15
Earl Brown.
Duo—"Viennese Waltz" ..... Gurlitt, Op. 178, No. 19
First piano—Olive McTague and Edith Drewett.
Second piano—Bruce and Frederick Campbell.
"Peasant Dance" ..... P. Kaiser
Viola Carlson.
"How Sweetly the Moonlight Sleeps" ..... Deceeve
Margaret Beresford.
Accompaniment on second piano, Miss Fulton.
"Twilight Idyl" ..... P. A. Schnecker
Mollie Harris.
"Song Without Words" ..... Holzel
Annabel McLeod.
Soprano solo—"Sing On" —— Denza
Gertrude Smith.
"Bubbling Spring" .. Spindler Op. 392
Frederick Campbell.
a. "Pretty Butterfly" ....
.. .... Wilhelm Fink Op. 179, No. 1
b. "Dance of the Gnomes" .. Faber
c. "May is Come" ....Bohm
Ruth Anderson.
"Angels Serenade" ..... Braga
Olive McTague.
"Sounds of Springtime" .....
.. ..Herman Wenzel Op. 12
Borgil Dahl.
Bass solo—"Armourer's Song" ..... De Koven
Ernest J. Blount.
"Postillion" ..... Godard
Ivar Northfield.
"Rondo Capriccioso" .....
.... Mendelssohn Op. 14
Pauline Solom.
"Mazurka De Concert" .....
.... Emile Pessard Op. 50
Dell Perry.
"Lucia Di Lammermoor" .....
.... Donizetta-Leybach
Nellie Fisher.

For Y. W. C. A. Fund.

The following program will be given Tuesday evening of next week at the basket social which will be held at the rooms of the Central Business college, the proceeds of which will go toward the Y. W. C. A. building fund:

Music .....
Y. M. C. A. Quartet.
Work of the Y. W. C. A. .....
Mrs. Feetham, secretary Y. W. C. A.
Violin solo—Romanza .....Schogren
Roy Flaaten.
What the Y. W. C. A. Is Doing..
Secretary Phil Bevis of the Y. M. C. A.
Piano solo .....
Miss Florence Gill.
Reading .....

Miss Agnes Poirier.
Violin solo—Polonaise .....Bohm
Henry Lavick.
Music .....
Y. M. C. A. Quartet.

Schumann-Heink Recital.

The following sketch of the life of Mme. Schumann-Heink, who is to be heard here on Wednesday, May 1, at the Lyceum theater, is of interest:

She was born in Lisbon, near Prague, Bohemia. The daughter of an Austrian army officer of hig rank, Ernestine Roessler, she was educated at the Convent of the Ursuline Nuns. As a child in school her wonderful musical talents was soon observed. In 1874 she went to Graz. Here she had an opportunity to pursue her musical studies to better advantage. After several years of diligent and earnest work, under the direction of Marietta Von Le Clair, she made such marked progress that she determined to go on the operatic stage, notwithstanding the bitter opposition of her father. Hearing that the position of contralto at the Royal Opera in Dresden was open, she presented herself along with many others and after her first private hearing by the director, she was immediately engaged for a term of three years. She made her debut when she was 17 years of age at this theater in the part of Azucena, in "Il Trovatore." Her debut was a phenomenal success. Then followed three years of most diligent and difficult work. Besides her arduous operatic duties, she devoted all of her spare time to preparing herself for greater triumphs under the famous voice teacher, Madam Krebs-Michaelsl.

At the termination of her contract with the Dresden Opera company she contracted with Pollini, the director of the Hamburg Stadt theater, where she remained for some years, after which she became a member of the Royal Opera in Berlin, having married in the meantime. It was not until this engagement that the name and fame of Ernestine Schumann-Heink became world-renowned. Engagement after engagement followed. Guesting performaces throughout Germany, tours in Russia and Austria, and then Bayreuth Festspiele, when reports of her great art occupied considerable space in the musical columns of American papers, and still later her triumphs at Covent Garden, after which she came to this country a member of the Metropolitan Opera company, which position she occupied until the close of the season. Of her successes here much has already been written until her name is known even to the music lovers in the smallest city in the country.

Next Wednesday evening, Mme. Schumann-Heink will offer the following program:

1. a—Aria from the Opera "Mitrane" ..... Rossi
b—"Du bist die Ruh," ..... Schubert
c—"Wohin," ..... Schubert
d—"Der Wanderer," ..... Schubert
2. Piano solos.
3. a—"Heimweh" (Longing) .. Hugo Wolf
b—"Die drei Zigeuner," ..... Liszt
c—"Widmung," ..... Schumann
4. a—"Sapphische Ode," .....Brahms
b—"Six Hungarian Gypsy Songs," (Cycle) ..... Brahms
1—"Ho there, Gypsy,"
2—"High and Towering Stream,"
3—"Know ye, When my Lov'ed one is Fa'rest of all Bliss?"
4—"Loving God, thou Knowest How oft I've Rued This."
5—"Art Thou Thinking Often Now, Sweetheart?"
6—"Rosebuds Three."
5. Piano solos.
6. Prison Scene (Act V) from "The Prophet." ..... Meyerbeer

Officers Elected.

The annual meeting of the Matinee Musicale was held Monday afternoon at Steinway hall and the officers for the year were elected. They are: President, Miss Mary Syer Bradshaw; vice president, Mrs. Margaret McLean; recording secretary, Miss Wiley; corresponding secretary, Mrs. Fred Bradbury; treasurer, Mrs. George Richards; librarian, Miss Woodbridge; directors, Miss Berenice Crowley, Mrs. Stephen Jones and Miss Winnifred Holmes.

The reports of the officers were given and the work of the club has been successful there being a surplus in the treasury of $443.52 after the current expenses of the club have been paid and the artists's fees. The artist recital this year has been of much profit and enjoyment the programs being presented by the Olive Mead Quartet, Herbert Witherspoon and Arthur Hartman.

Shanna Cummings.

The final arrangements were made during the week for the appearance here of Shanna Cummings of New York with the Duluth Oratorio club in the first May Festival to be sung at the head of the lakes. The season of the festival will take place in the middle of next month and the directors are delighted at having secured her as she is one of the foremost oratorio singers in the country.

Cecilian Society.

The "Cecilian Society" will hold the last meeting of the year at the home of Miss Therese Lynn, 114 West Third street, Thursday of next week at 2 o'clock.

The annual election of officers will take place and the following program will be given:

Quartet—Overture, "Presiosa," ...Weber
Piano 1—Mrs. Flaaten, Mrs. Strong.
Piano 2.—Miss Fee, Miss Lynn.

(Continued on page 5, 4th col., 2nd sec.)

SHANNA CUMMINGS,
Soprano Soloist Engaged for May Festival of Duluth Oratorio Society.

NORWEGIAN ARTIST HERE

GILBERT SETHER,
Norwegian Artist Now in Duluth.

The exhibit of paintings by Gilbert Sether, which is shown at the Flaaten conservatory, is of much interest to many people. Mr. Sether is a well known Norwegian painter, who has become widely known through his oil and water color canvases. He has chosen his subjects largely from the scenes in his home in the North, and his representations of the landscape effects of the northern country, the midnight sun and the northern lights, are noted for their brilliant and vivid coloring.

Mr. Sether is a pupil of Fritz Thaulow and after studying with this master he continued his studies in the art centers of the world. The collection of his paintings, which is on exhibit here, will be shown for a week or ten days, and anyone interested in the paintings may call at the Flaaten Auditorium, which will be open each day from 9 a. m. to 8 p. m.

HAIR STORE.

Pompadours. Hair Dressing.
Turban Puffs. Shampooing.
Wavy Switches. Facial Massage.
Hair Ornaments Scalp Treatment.
Wigs, Waves. Hair Coloring.
Switches, Curls. Manicuring.

MISS HORRIGAN,
Second Floor—Over Gidding's.

We Move May 1st.

From Our Present Location, 101 W. Superior St.,

To Our New Quarters, 24 W. Superior St. Next Door to Gidding's Upstairs.

A NEW DEPARTMENT

Ladies' Turkish Baths

With a competent attendant from the East. Thoroughly sanitary methods throughout. All bath sundries thoroughly sterilized before use.

Hair Dressing and Manicuring, Marcel Waving, Scalp Treatment, Superfluous Hair and Moles Permanently Removed.
Try Facial Mud Baths for the Complexion.

Separate apartments for all branches of our work.

KNAUF SISTERS,
New Location: 24 W. Superior St.
Next Door to Gidding's, Upstairs.
An invitation extended to all to inspect our new parlors.

H. M. Gerson,
LADIES' TAILOR.
1522 JEFFERSON STREET.
OldPhone 1721-L. DULUTH, MINN.

Smart Parisian Tailored Frock

TAILORED CLOTH SUIT.

This smaller tailor suit has a gored skirt with a modish flare at the hem, which is, moreover, adorned with machine stitching a good nine inches above the hem. Chic in the extreme is the coat, nearly close fitting and just passing the waist line to form an incidental little basque. And on this rests the chief decorative motif, arrived at through the medium of contrasting folds of cloth, artistically blended. In the case of the model sketched, on a navy blue serge, the dominate note of color interest was imparted by pale green enamel buttons, set in rims of gilt, and folds of reseda and pale mauve cloth. Illustration taken from "The Queen."

Girl's Dainty Dress for the Evening

YOUNG GIRL'S BABY PRINCESS MODEL
PHOTO BY JOEL FEDER.

A note of novelty in frocks for girls this year is the lingerie development of soft, white silks, such as chime or orkeda—that is to say, these materials are made up along the same lines as the lingerie dresses, inset and frilled with dainty laces and fine embroideries in the same manner as are sheer lawns or batistes.

The style of such garments is simple. This baby princess mode is the favored form of development for 1907, a full skirt touching the inset and a blouse with or without yoke, as one pleases. The skirt and waist are shirrred together, for usually the frock is made in two pieces and joined together after each part is finished. Some few sashes are used, but these are not as new and consequently not as fashionable as the girdles.

Useful Hat for the Summer

PLUMES AND VELVET USED ON BLACK STRAW HAT FROM HARRIET
Photo by Joel Feder-

Large black straw hats with plumes and velvet ribbon trimmings are again in vogue, and, fortunately for women who possess models of last season's shapes, these styles may be so bent and twisted that they will look quite as smart and as new as the varieties that are just out for 1907.

Such a hat as this one in the illustration may be readily made from a large shape that was new a year ago, and as the plumes and ribbon, bands and maline are put on so simply, a novice in hat trimming could duplicate this piece of headgear successfully.

Systematic Methods *of* Housecleaning Save Work

By HELEN HOWE.

Housecleaning can never be any but a thing to be dreaded by all members of the family, but it may be reduced to a system and much of the discomfort done away with. To accomplish this, the first thing I would suggest is that the housekeeper have a notebook and put down in it the various things to be done. This may seem a great deal of bother, but in the end it saves much trouble, for it the is made of the articles to be sent away, either for cleaning or renovation of other kind, none will be forgotten. Incidentally if they are sent at the same time, or so arranged that they will come back together, confusion and time may be saved.

Cleaning carpets and curtains is probably the most difficult and expensive part of the work, but a woman who is willing to take the pains may have much of this done at home and save money. The scientific use of a broom will take as much dirt out of a carpet as may be done by a professional, but to accomplish this result the covering must be taken from the floor.

To rip up a carpet, after the common fashion of the inexperienced, is abominable, as this consequent stretching spoils the shape and weakens the foundation. Each tack should be removed carefully, and then the whole swept and wiped afterward with a cloth well wet in amonia water and wrung quite dry.

After this fold the carpet in two and sweep the underside that is now on top. Fold again and repeat the sweeping until the whole is in a small bundle. If each strip has been swept vigorously it should be perfectly clean.

Sweep the lining with a soft brush and then wipe each breadth with a cloth before rolling and putting to one side while the floor is being washed in strong amonia water. The boards should be quite dry before they are covered again or mildew may be generated.

If one has a yard and wishes to give the carpet an extra cleaning it may be laid across the clothesline and beaten. It should then be spread down on the ground and thoroughly swept again on both sides. If grease or other spots are seen after the process, wash again with amonia water and let them dry in the sun.

Matting should always be taken up, because the dirt sifts through to the floors, but give it two sweepings first. Let the first be done with a stiff broom, following the grain. Then use a soft one, wetting it with warm water, shaking well and going across the straw. This will remove any lingering dust.

A half pound of salt, put into a pailful of tepid water, will brighten the colors in matting if applied with a cloth fairly well wrung out. Leave the windows of the room open, that it may dry quickly. Any grease spots should be covered with powdered chalk and then wet with turpentine. Allow this to stay on for a couple of days and remove with a very stiff brush. If the grease is well set it may be necessary to put a small proportion of washing soda with the chalk. In order to take out all traces of the stain.

Shirt Waist Suits in Silk and Linen Stylish Again

By A. T. ASHMORE.

Attention must now be turned to the lighter weight gowns, so that they may be in readiness for the first call of hot weather. The shirt waist dress still lives, and it is this style of simple frock that is of such immense service to the woman who remains in town late in the season. Naturally the material must be determined more or less by the rest of the costumes in the outfit, and whether the suit is to be worn only in town or as a generally useful dress for use in and out of the city, etc. The color of this garment is determined largely by the wear to which it is put. A linen gown, or linen coat skirt costume, for example, looks more attractive in warm weather, but is scarcely practicable if there is no other light weight frock for use in the city.

On the whole, a sheer silk gives best satisfaction for a really useful dress that is intended only for constant wear in hot weather. Such a gown should be made quite simple, with a detachable yoke and cuffs, so that it may be kept always fresh and neat. A sleeve finished with a deep lace cuff, or a narrow wristlet of embroidered linen, is altogether desirable for this style of gown, as short sleeves with long gloves are as uncomfortably hot in summer as they are cold in winter, and naturally one cannot go about in the city without gloves, and cotton varieties are anything but fashionable. The skirt for shirt waists suit should clear the ground by a good two inches, and should be worn over stiff silk petticoat that is fitted well about the waist and hips. This underskirt should flare out at the feet, or rather from below the knees, for a short silk skirt that is not very wide and flaring is distressingly unattractive. Princess and Empire frocks are to be popular, but the two-piece dress is also in favor.

A number of the very newest gowns are of foulard, and this light silk is excellent for a severe style of costume, as it gives splendid wear and is light and cool. Among the cheaper grades of foulard it is often possible to procure an exceedingly pretty dress length, but care must be taken to get only a silk back kind, as the cotton backs will wear out quickly. Striped, dotted and figured foulards of all sorts and descriptions are to be had, and it is difficult to say that any one particular design is more attractive than another. Stripes for stout people, dots and figures for the slender, are generally best, but there are always exceptions, and a tiny dot on a dark ground is becoming to any figure.

All imaginable colors are popular at the moment, from deep red—a sort of mahogany shade—to the palest tints of green and blue. Naturally dark colors are best for a shirt waist gown, but this does not limit one only to the sombre tones, for among the greens and blues particularly there are many shades that are bright and comparatively light, and yet are really serviceable. There is a queer Japanese blue that is especially good if it happens to be becoming.

Pongee and rajah cloth, both plain and embroidered, are as much in demand as ever, and will be seen more especially in the three piece costumes that are to be useful from now on until into the summer. Voile costumes with smart embroidered silk bolero, will be stylish during the spring, as will the three piece suits of taffeta silk.

Eton, Bolero and Long Coats for Children's Wear

By ELIZABETH LEE.

Seemingly, never before has there been such a diversity of coat models to choose from, until it would appear that girls of every build have been the special care of the designers, and no occasion has been lost sight of when a coat would be required. Certainly no figure, short of actual deformity, but can find something becoming, both in shape and coloring, and no need could represent itself that may not be filled from the lavish display set forth for selection this season.

Cloths in checks and hair line stripes fashioned for school use are actually of every length from the short loose Eton or bolero to the box and pony model just covering the hips through the three-quarter and seven-eights to the full length. So that it is possible to get the same material in a variety of models. School suits of checked mohair will be considered smart for spring school wear, and very natty and fresh looking are some of the mixed greens and grays, creams and navy blues, touched off with a collar of white pique simply buttonholed on the edge. These are worn over a tailored waist of madras or linen, while in the case of smaller girls—for these suits are for children from 8 years of age and upward—a jumper waist of the mohair is provided for wear over a guimpe. The new loose Eton model will be found becoming to the slight, slender girl, but the smart pony coat will be the better choice for a plump young woman.

A short white linen coat is rather a novelty. It is indeed quite short, only just covering the hips, and is so loose that it may be described as being as broad as it is long. The sleeves are a compromise between a bell and a kimona shape, and the only decoration is a colar of a contrasting color, the sleeves being hemmed with the same. The coat closes with a fly, and as a utility wrap, for slipping over night summer frocks, it would fulfill its mission, to my thinking, for only the exceptionally beautiful child would look well in anything so shapeless. The conventional little box coat is much smarter in effect, but the sleeves, of course, are not so convenient as those described as belonging to the former wrap.

Pleated skirts are very popular for girls' wear, and it is possible to make these up entirely of straight widths if one only knows just how. In the first place, from three to three and one-half widths forty-four inches wide will be required. These should be sewn salvage to salvage, then pressed and hemmed. Then lay on the wrong side. The next process is to take the measure of the hips of the wearer and then, laying the pleated goods flat upon the table—the back is not yet sewn up—lap each pleat evenly until the skirt and the hips measure the same. The back seam may then be sewn and the placket finished. The skirt should now be put on and pinned to the petticoats straight around the hip line, when the pleats are lapped from this point to the belt until it fits perfectly. In the case of a very slender girl the surplus cloth at the back of the pleats may remain; one stouter may have it cut away.

The advantages of this model are many not the least being that it is impossible for it to sag; it cannot help but set perfectly, the same length all the way around.

So much time, too, may be saved, as every amateur dressmaker knows who has wrestled with the bias edges of gored pleated skirts, to say nothing of the hem difficulties or facings. In fact the new model is so simple that it can be made without as much as waiting for a paper pattern, and is, moreover, suited alike for girls large and small, misses and adults.

Suits With Short Jackets Are Smart

Suits with short jackets are particularly smart for street wear this spring, and fortunately, the coats are stylish in so many different models that both stout and slender women will be able to select at least one fashion that is becoming.

The skirts worn with these natty wraps may be either short or decidedly long, which gives enough latitude to please the taste of the most exacting devotee of fashion.

The costumes in the illustration, taken from L'Art de la Mode, are models that will be much worn in New York and in Paris this season, and for the advantage of the home dressmaker are especially desirable, for they are made on lines that will be easy to copy.

AS TO CARBUNCLES.

New York Sun: "A carbuncle," said a man of an all over weary aspect, "is supposed to belong to the boil family, but it is to the ordinary plain adult boil as a complete demonstration of the binomial theorem is to x plus y.

"Job had boils," he went on, "and was patient, but it is not set forth in the Scripture or in any other secular work, nor is it entered in the wildest fiction, that any man ever had a carbuncle and was patient—except as he was a doctor's patient. We are told that the dogs came and licked the boils of Job; if Job had had carbuncles, he would have licked the dogs.

"A carbuncle," continued the man, with a serious scientific look, "is a sort of invested boil—a boil over, so to speak. A boil, if left to itself, will cure itself by maturing and eventually disappearing, but a carbuncle, instead of coming to a head, keeps burrowing deeper and deeper, and it matures about the time your old fashioned life insurance policy matures.

"Now, this little pet," said the man, looking at a bulge near the elbow of his left coat sleeve, "is a healthy carbuncle in the prime of its existence. You needn't feel of the back of you necks, gentlemen. Whenever two or three or more persons are gathered together and one of them says 'carbuncle,' half the others begin to feel for the scars on the back of their necks and get ready to butt in with their experiences.

"But they have studied their carbuncles only darkly with a hand glass. To know a carbuncle intimately—that is, anywhere nearly as well as the carbuncle knows you—it should be in a location accessible to the eye; on the elbow, for instance.

"One of Job's successors in the boil line remarked humorously that the best place to have a boil is on some other fellow; but no man with a carbuncle could be so inhuman as to wish it on any other fellow though he might wish it could be divided up between ten or a dozen robust men.

"This little pet," resumed the man at the point where he had interrupted himself, "has the clear pedigree. I was monkeying with a small boat on the shore of the lower bay two weeks ago, bare armed, when a striped wing fly with prismatic colored head lighted on this elbow and got in his work before I saw him.

"I made a slap at him and got him. I wish I had missed him, for he left proboscus, or whatever it should be called, in my arm; hence this carbuncle. This is only one of the ways of getting a carbuncle, but there are more ways of getting them than there are of getting in love.

"But," said the man, brightening up, "even carbuncles have their uses. When this one made its appearance, I went around to a drug store and bought various anti-inflammatory preparations that I thought could be more tidily used than flaxseed poultices, and from studying the Greek names of these I have so renewed my interest in the Greek language and literature that I am now killing time by going over the scanning of the 'Prometheus' of Aesch lus.

"But when the thing has declared itself as a sure enough carbunele, and claimed the right to life, liberty and pursuit of happiness, I had to resort to the time honored flaxseed poultices as mother used to make them.

"There is one point, however," said the man, a hard expression coming over his face, "which I cannot set forth too strongly, and that is that no man who lives in a flat should have a carbuncle. Now the flat I live in has a hall in which are various angular protul erances, caused by bedrooms, boudoirs and bathroom jutting into it; and such a hall is no place for a man with a carbuncle on his elbow to promenade in at night. Carbuncles require spacious apartments and magnificent distances."

Here the man arose and said that he saw his car coming. But he let it go, by saying:

"No, that is not my car. It is a church fair car from Borough Park, and as much as I love children, I don't like to have them play horse on my carbuncle. I'll walk on for a while."

THE AGILITY OF RABBITS.

New York Tribune: Interesting figures on the relative agility of hares and rabbits are given in a recent volume by J. G. Millais. "When running at ease," he says, "the length of the hare's stride is about four feet, but under conditions of fear its leaps extend to ten and twelve feet, while some authors claim that it can jump ten ditches twenty to twenty-five feet in width. Perpendicularly, a hare can jump on to a five-foot wall, but seems to be nonplussed by one of about six feet. The stride of the rabbit is about two feet; when necessary it can make leaps of six or seven feet horizontally. About three feet is the highest that a rabbit can attain to even when helped by the asperities of a stone wall." Mr. Millais tells how rabbits swim—when compelled to: "The swim with the head held as high as possible, while the hocks of the hind legs appear above the element at each stroke. The shoulders and front part of the body are buried beneath the water, while the rump and tail are high and dry."

COUNTRY OF TROUSERS.

London Mail: There is a point on the coast of France where not only the men but the women and donkeys too wear trousers.

At Ile de Re the peasant women work in the salt and the oyster beds, catch shrimps and take their turn in the fields. They don't draggle around in petticoats, however, but wear baggy knee breeches, loose waists and light colored sunbonnets.

The sabots of the winter have been put aside, and the feet are left bare, although the legs of old stockings are often drawn up as far as the knee as a protection from the heat and insects.

It is indeed a country of trousers. Nor does it stop with humanity, for many of the donkeys as well wear long striped red and white or blue and white covering on their legs, which look very much like the remnants of Uncle Sam's wardrobe. These are put on the stubborn little animals to keep off the flies and mosquitoes, so that they will be less liable to kick.

LATEST BOOKS AND MAGAZINES

"The Long Trail," by Hamlin Garland, Is a Story of Adventure, Picturing the Realization of His Boyhood Dream—"Graham of Claverhouse," by Ian Maclaren.

THE LONG TRAIL. By Hamlin Garland, New York: Harper Bros. $1.50.

The story of "The Long Trail" is a curiously interesting human document, for it pictures the realization of the boyhood dream of one of the best known American authors, Hamlin Garland. It is a story out of the heart and longings of his youth.

"The Long Trail" is the realized fancy of a boy, told out of the experiences of a man and with the literary skill of a trained writer. It pictures the long and weary trail to the mining regions, and then the fierce search for gold.

That was the dream which the boy, Hamlin Garland, dreamed. It was to be realized while he was still a youth; but youth passed and it was still unfulfilled. But at length the realization came, many years after he had attained maturity. Then, a full grown man of world wide fame, he followed the wide trail, reached the mining regions, and sought for treasure.

He experienced, as a man, just what he had longed for and imagined as a boy.

In his boyhood dream he not only searched for gold but found it. In his story he makes his boy hero—the Hamlin Garland of the vanished past—find it. And in reality, as a man, he also found it. But (such are the unhappy quirks of the law) he found it near a boundary line and, assuming possession according to the customs which he mistakenly supposed to be in force, lost his title through not having observed the laws which actually held.

But the essence of the dream was realized—the vital, vigorous life, the adventure and the dangers, the wild strange experiences, the mingling with fevered men in a fevered search for treasure—and so, recognizing all this as the coming true of his never forgotten dream, he searched back into the heart and mind of himself as a boy and wrote his book, infusing fiction into fact and mingling dreams with their reality.

In essence, therefore, this book is quite as much the book of the lad Hamlin, as of the mature Hamlin Garland.

Hamlin Garland was born in Wisconsin in 1859. At the age of 8 the family removed to Iowa, and in the years of his Iowa life the lad attained a striking development.

Before he was 9 years old he had learned to carry and use a gun. In the ensuing years, up to his sixteenth, he continued the life and experiences which led to success as a cowboy. He learned to capture and throw and train wild horses, and to drive wild cattle. He could swing the lariat, and with unerring precision could, with the five yard lash of the drover's whip, hit a mark or pick off a flower. He learned to ride as only cowboys learn, and as a mere lad was given the care of droves out upon the prairie.

And he remembers how, through it all, he longed to set forth for gold.

He would look out of his little garret window at night, across the great sweeping plain, bright in the moonlight, and picture himself getting horses, and strapping a pack, and starting off, and camping under the stars—and at last reaching his goal and claiming a mine.

Once, when he was 14, he set out with some companions for a distant lake, and there they camped and hunted and fished, their own masters, and dependent for the time upon their own resources; and this experience whetted his appetite for more.

And—although the fact is almost stranger than the final coming true of his dream—his friend and chum on that boyish trip was his close friend and chum on the trail that he followed so many years after.

Roping steers and riding wild horses, and hunting deer and wolves, and ever thinking of the trail to the regions of gold, were a strange preparation for the writing of books.

In truth, Hamlin Garland was of two distinct personalities.

On his mother's side he inherited traits of outdoor vigor; her brothers, whom he strove to emulate were giants physically, wonderful rifle shots, splendid runners and horsemen.

On his father's side he inherited the traditions of New England, and he was thrilled by thoughts of music and literature. His father often talked of Boston, and gave him Scott to read, and then put some of Hawthorne's stories into his hands; and by Hawthorne young Hamlin was impressed as by no other writer before or since, for the influence came when youth was vigorous and strong and the mind was formative.

In the conflict of impulses, the East won, and Hamlin Garland became a writer instead of a cowboy and miner.

But the East did not win until after many a struggle.

Young Hamlin saw "prairie schooners" trail by his Iowa home, mottoed with "Pike's Peak or Bust!" and his boyish blood was aflame. Later, he saw man after man start for the Black Hills, and he longed eagerly to join in that mad rush for gold. But always there were circumstances to restrain him.

"Pike's Peak" waxed and waned, and the Black Hills fever waned, and Garland came East and became an author.

But in 1898 there was wild Klondike excitement, and all his early impulses, long dormant, were aroused, and he eagerly and joyously "struck the trail!"—the long telegraph trail to the North.

He was living again his vanished youth—he was realizing the dream of that youth!

And so, the adventures of his hero in this book, in his weeks of adventure and hardship on this long Telegraph Trail, are what came to Garland's eyes or imagination on that very trail. He made his notes in the saddle and at camping places, beside roaring rivers and by the blaze of campfires. And then, fusing fact and fancy, visualizing himself as the boy of his own long-past years, he wrote this story. It is of what Hamlin Garland the boy would have done and seen on the trail that Hamlin Garland, the man, followed.

• • •

GRAHAM OF CLAVERHOUSE. By Ian Maclaren. Duluth: I. Freimuth. 50 cents.

The historical romance has declined of late. For this falling off there were two causes. First, the market was overstocked by a flood of inferior books of the sort. Second, not one author in ten has the slightest qualifications for historical novel-writing. For it is an art that none but a genius possesses. This has been proven by the fact that whenever a real master of his craft has attempted such a work, his success has been great and immediate. Of course, these successes are always followed at once by the inevitable host of imitators. But of late (owing probably to the fact that so few really great authors have recently written historical fiction) the supply has ebbed.

Now, during the lull, comes one of the best books of the sort that has been put on the market during the past fifty years. It is "Graham of Claverhouse," by Ian Maclaren. This will also have its swarm of followers until the public, as well as the reviewer, will regret the day the custom was revived. But for the moment, "Graham of Claverhouse" stands for the alone and unequalled. It deals with the adventures of that John Graham, viscount of Dundee, who was hero of Scott's ballad, "Bonny Dundee," and whose picturesque, melancholy, dashing figure was one of the brightest splashes of color in that dark era of English history, represented by the reign of James II, and the first troublous months of William of Orange's rule.

It was ever Claverhouse's misfortune to serve on the wrong side. He fought for William of Orange in the early and less successful period of that worthy's career. Then, commended to the favor of the duke of York, he was sent to work out the barbarous and thankless task of hunting down and slaughtering the contumaceous "Covenanters," his own countrymen. Next, without ever tasting the rewards of this bitter task, he found himself leader of the forlorn hope that sought to stem the tide of William's growing power, and, last of all, he was forced to fight a losing battle against all he had once held dear. The one woman who brightened his life was Jean Cochrane, beautiful daughter of his enemy's house.

Ian Maclaren has taken the most dramatic passages and love episodes of Graham's life and interwoven them into a romance of stirring interest, rare literary quality and abounding local color. "Graham of Claverhouse" is the strongest work of historical fiction on the market.

SIGISMOND DE IVANOWSKI,
One of the Most Interesting and Notable Illustrators and Artists of the Day, Lives Quietly and Works Hard in Westfield, N. J., Coming to New York Several Times a Week. A Pole by Birth, He Has Lived in America Nearly Four Years. He Has Given Practically All of the Last Year to His Work for the Century Magazine.

Literary Gossip.

The Bobbs-Merrill company has published a pamphlet entitled "Has Brand Whitlock told the Truth?" It relates to his new novel, "The Turn of the Balance," which was recently reviewed in these columns, and contains comments written by men of varying distinction from United States senators to convicts in state prisons. These comments range from violent denunciation as utterly false to enthusiastic praise as entirely true.

• • •

Few people know how comprehensive a library of Shakesperian literature is in the personal possession of Horace Howard Furness, the famous scholar. Some idea of its magnitude may be gained from the fact that in the compilation of the "Variorum," he has hardly ever had occasion to go further afield than the four walls of his own room. Here he carries on day by day the work he loves, and the announcement that a new volume of the unapproachable "Variorum Edition," "Antony and Cleopatra," will be published in May by the Lippincott's will be received with great interest.

• • •

The oldest and the most interesting chapters in the history of the United States were written by the Mission fathers in the Southwest and on the Pacific coast. Jesse S. Hildrup's "The Missions of California and the Old Southwest," recently brought out by A. C. McClurg & Co., tells the story of the fine old buildings still standing as relics of a vanishing civilization, with an abundance of reproduced photographs of the churches and convents to make the volume the most appropriate of guide books to those intending a visit or the most beautiful of souvenirs for those who have already seen these interesting structures.

• • •

Dodd, Mead & Co. has published "Indiscreet Letters from Peking" by B. L. Putnam Weale. This is the story of the seige of the Legations in Peking. It is not a history, but the story of the dramatic scenes and events told by an eye witness. Reading the book one sees the worn and harrassed defenders of the legations in scene after scene of grim fighting, beating back the hordes of Chinese soldiers. Mr. Weale is also the author of "Manchu and Muscovite," "The Reshaping of the Far East," which have gained for the author much credit as an authority on Eastern questions. The author himself has said concerning the book: "Everything I have written has been a close approximation to the truth and has given people a better insight into the real conditions obtaining beyond Singapore than other works." Indiscreet Letters from Peking" tells the story of 1900, and is an explanation of much that is going to happen.

In "Highland Mary," a most attractive book just issued by the C. M. Clark Publishing Co., of Boston, the author has made use of the most romantic episodes in the life of the poet, Robert Burns. His courtship of Mary Campbell, his love affair with Jean Armour, the "Belle of Mauchline," and his troubles with Lady Glencairn of Edinburg, are woven into a most entertaining and absorbing story. Although the book is fiction, the author, Mr. Legge, has seen to it that almost all of his historical references and details are authentic. Clayton Mackenzie Legge, who wrote "Highland Mary," is a direct descendant on his mother's side of the clan Mackenzie, who were the first to recognize the genius of the poet Burns. The book is dedicated to the Rev. Dr. Donald Sage Mackay, D. D., pastor of the Collegiate church, New York city, who is a cousin of the author.

• • •

A new novel by Harold Bindloss, author of "Alton of Somasco" and "The Cattle Baron's Daughter," has just been published by Frederick A. Stokes company. It is entitled "The Dust of Conflict.' The action takes place for the most part in Cuba in the time just preceding the Spanish war. The blowing up of the "Maine" has a dramatic part in the plot. The publishers are confident that it will be the most popular book Mr. Bindloss has yet written.

• • •

Duffield & Company announce for publication a new novel by Charles Egbert Craddock, entitled "The Windfall." Other novels for early publication on the same publishers' spring list are, "The Dower Woods," by Emma Brooke, author of "The Engrafted Rose"; and "A Winged Victory," by Prof. Robert Morse Lovett of the University of Chicago, author of "Richard Gresham."

• • •

The Harpers have published a novel nature-book, entitled "The Friendly Stars," by Martha Evans Martin. It is an absoutely new idea in the literature of the stars. The book is full of enthusiastic and even fond friendship for them, and shows how readily an intelligent acquaintance with them can be acquired. No technical knowledge of astronomy is required of the reader; all is presented in a clear and fascinating and untechnical manner; and yet, as Prof. Jacoby, professor of astronomy in Columbia university says in his introductory note to the book, there is no sacrifice of scientific accuracy. Numerous simple diagrams add materially to the value of the book.

Among the Magazines.

In the May number of the Century begin David Homer Bates's reminiscences of "Lincoln in the Telegraph Office," which promise new light on a phase of President Lincoln's daily life during the war hitherto little considered. Mr. Bates was manager of the war department telegraph office and cipher operator from 1861 to 1866; and the opening chapters of the series are full of details of Lincoln's visits, morning, afternoon and evening, to the war department telegraph office. There is also an intimate account of McClellan and his relations to the administration, and on at least one important point—the suppression of dispatches—the article has the interest of surprise. The most timely article is George M. Stratton's discussion of "Railway Disasters at Night," a warning presentation of the failings and dangers of our present system of signals, and of the psychological need of revising them, with suggestions, based on science, and, seemingly, on common-sense, for a more reliable system of protection. The writer is professor of experimental psychology and director of the psychological laboratory at Johns Hopkins university. Other notable features of the May issue are a sketch of Jamestown by Thomas Nelson Page, more "Stories of Whistler," by Otto Bacher, friend and champion of the great artist in his Venetian days; and Ernest Rhys's "William Sharp and Fiona Macleod"—giving reminiscences of a long friendship and "episodes which may, in passing, help to disclose the sources, mysterious and deliberately obscured, of the Fiona Macleod tales and fantasies."

• • •

A new serial by Octave Thanet begins in the Reader for May, entitled "The Lion's Share." Its opening chapters launch the story in a fascinating setting fully worthy this well-known author. The persons introduced—a veteran army officer; a millionaire old lady (the colonel's aunt); her 14-year-old ward, Archie; her charming companion, Miss Smith, supposed by the colonel's sister-in-law to be an adventuress; two men who seem to be plotting the kidnaping of Archie—all these are brought together on a limited train bound for California. The next installment will be awaited with eagerness.

The remarkable series of debates under the general title, "The Problems of People," written for the Reader by William Jennings Bryan and Senator Albert J. Beveridge, continue with two striking articles in the May number on "Trusts and Their Treatment," which define the positions of the Republican and Democratic parties on this issue in the coming presidential campaign. There are three unusually interesting short stories—"The Hearth," by Alma Martin Estabrook; "The Transformation of Wilders," by Charles Caryice, and "The Crosby Case and the Crosby Woman," the story of a murder trial, by L. C. Hopkins. All are well illustrated by Worth Brehm, Will Grefe and F. Nelson Vance.

• • •

Scribner's Magazine for May opens with an account of the adventurous journey of the dry-dock Dewey half-way around the world, by way of the Suez Canal. A young artist, W. J. Aylward, accompanied the expedition, sometimes on one of the consorts and part of the time on the dry-dock itself. He has made a series of wonderful pictures at first-hand of this remarkable voyage, showing the life on board, the tribulations by sea, and the adventures through the canal; the collisions and the rescues and, finally, the safe arrival at Subig Bay. Mr. Aylward has the gift of writing with a rare appreciation of the novelty of the voyage, and he gives extraordinary impressions of the life by the way. The article is both romantic and picturesque, and is a bit of real adventure seen through the eyes of an artist. Sidney Lee, the eminent English authority, begins in this number a series of papers on "The Call of the West," in which he seeks to depict "America in the process of revelation to the sixteenth century Englishman." He defines what Shakespeare and his contemporaries knew of the new world," and tracks their information to its source, suggesting the influence which this knowledge exerted on the current of thought and feeling in the Old World. The survey closes with the year 1607, when an English settlement took permanent root in Jamestown. The first paper, in this number, graphically outlines the energy of Spain in exploration.

• • •

A vivid account of the most daring feat in recent mountain-climbing—the conquest of Mount McKinley, the highest mountain in North America—is the opening article of Harper's Magazine for May. Dr. Frederick A. Cook has the honor of being the first to gain the top of that mighty peak, and this is his own first published narrative of his achievment. It is an article of high popular interest, as well as of scientific value. It gives fascinating details of how the ascent was made; it tells of peril from thundering avalanches; of climbing up impossible slopes of ice; of dogged persistence in the face of failure after failure; and at length of final triumph. It is natural, after this description of height and cold, that one's thoughts should turn to Indoors, and so there is an article descriptive of the new mural decorations of John W. Alexander, painted for the Carnegie Institute of Pittsburg. Fully a score of panels are reproduced, and the comment is by Charles H Caffin. An article of unusual interest is by Frederick Trevor Hill, in his series of "Decisive Battles of the Law." This article is descriptive of the trial of the Chicago anarchists, "the first capital case in America involving abuse of the liberty of the press," and the author presents both sides with eminent fairness, and at the same time gives a brilliant narrative of the trial. Capt. A. T. Mahan, U. S. N., than whom there is no higher authority in his field, the American navy, writes of "Our Navy before the War of Secession," an article rich in personal anecdotes.

• • •

The leading article in the May number of House and Garden is from the pen of Mary Hodges. The writer deals delightfully with her subject, "Ashland Past and Present," once the home of Kentucky's greatest statesman, Henry Clay, and now occupied by his direct descendants. The views of the house, as it was in the days of Mr. Clay and as it is at the present time, are extremely interesting, for today as in the long past, "Ashland" stands as a type of all that is best in a Kentucky blue-grass estate and home.

• • •

Besides a complete novel of exceptional interest, "The Magistrate's Own Case," by Baron Palle Rosenkrantz, the famous Danish writer, Transatlantic Tales for May contains a score of short stories by such authors as Mathilde Serao, George Ohnet, Pedro de Alarcon, Anton Chekhov, Rene Bazin, V. Blasco Ibanez, Hans Arnold, Gustavo A. Becquer, etc. With the literatures of all Europe to draw from, the contents of this magazine win for it a unique place among the periodicals that must depend solely upon their respective shares of the material furnished by America alone. It is to be noted that in the adventures of Arsene Lupin, the "French Raffles," a series of stories has been secured for American readers which will rival in popularity the Sherlock Holmes tales. The magazine seems carefully to preserve the American standard of morals.

• • •

Ainslee's for May offers to its readers another collection of fine stories of great variety and surpassing quality. "Her Son," by Horace A. Vachell, completes its fourth instalment. The novelette is an exciting mystery story, entitled "The Blotting Book," by E. F. Benson. Will Levington Comfort has a stirring dog story, "The Collie and the Celebrity." A child story by Mary Heaton Vorse, "One Man's Heart," is filled with humor and pathetic interest. Roy Norton has another of his inimitable Western tales in "The Conquering of Socorro." Other contributors are Gertrude Lynch, Johnson Morton, Broughton Brandenburg, Elizabeth Duer, and Mary Manners.

• • •

Charles Stokes Wayne has written for May Young's, in "The Marriage of Mrs. Merlin, an entrancing romance of a beautiful woman, enormously rich, who calmly buys a husband as she would a piece of rare bric-a-brac. It's purely a business deal. The man, in addition to being ornamental, is to serve as a protection from the fortune hunters her vast riches attract. He is to be husband in name only—in reality, a highly salaried employe, his service to be terminated by divorce at will. But the woman has overlooked the fact that a young, handsome and more than commonly attractive man, like this husband-in-name-only, must have a past of more or less variegated color. When this past begins to lap edges with the present complications come thick and fast. The tale is unravelled with a swing and briskness of action that carries one along breathless.

• • •

Probably the most vivid and yet the most artistic story of the month, is that called "As a Man Soweth," written by G. B. Lancaster. It appears in the May Popular—a magazine, by the way, which is crammed with stories and novelties of unusual excellence. Mr. Lancaster's tale is written around the building of a big bridge in New Zealand, and has the same realism that characterized Kipling's best known stories. The plot is an ingenious one and centers around a man of strong personality—a man gifted with wonderful ability to control others, and yet signally unable to control himself. It is a character study of a man who, though conquered by his baser nature, yet demonstrates his ability to do great things in a moment of stress.

• • •

"Who Wrote Dixie?" is the title of the entertaining feature article in Our Country for April. The claims of both Daniel Decatur Emmett of Ohio and Will S. Hays of Kentucky are discussed in an unbiased way. It is clearly proved that neither Emmett nor Hays wrote the music, and that Hays wrote the first song, although the words of the song as sung today are those of Emmett. This April issue of the magazine is one of the most attractive yet put out. There are two splendid stories, a description of a trip from Baltimore to Liverpool made by three college boys on a cattle ship, and other interesting features, besides the regular departments, devoted to the home, the school, the farm, etc.

• • •

"The house of Guggenheim," an article in the present number of Smith's Magazine, is one of the most remarkable contributions in any of the current magazines. How Meyer Guggenheim came to this country fifty-eight years ago, and with his seven sons built up a business valued conservatively at something considerably exceeding $500,000,00, is a story of more than usual interest. "The Conflict," by W. B. M. Ferguson, is a complete novelette in the same issue, and is sure to attract a great deal of attention. In no story of the same length published in recent years have we seen the same degree of dramatic intensity and feeling. The series of reproductions of paintings of Spanish folk by L. Luis Mora is exceptionally interesting. The short stories in this number of the magazine are even better than usual.

• • •

The May issue of The People's, which is a short-story magazine, contains a readable tale of Ghetto life in "The Goblet of Elijah," by Sigmund Krauez. Mr. Krausz has made a sympathetic study of the life of the Ghetto, with which he has been long familiar. In this tale, al of the pathos, the pride, and some of the poetry of the people of the Ghetto are brought out. There are no exaggerations in the story, but the inherent truth of the pathetic and dramatic situation will strike home to al readers. Beside the many short stories in this issue of the magazine, there is a complete novel by William Walace Cook, entitled "The Mysterious Mission."

• • •

Among the leading articles in the Technical World Magazine for May are: "To Drain the Florida Everglades," by A. B. Clark; "Make Money Growing Weeds," by Edward B. Clark; "Machine Made Hypnotism," by John Elfreth Watkins; "Man's Fight With a Monster," by Wilbur Bassett; "Wrath of the Desert," by Henry M. Hyde; "New Wizard of Power," by Charles F. Carter; "Life-Saving Dogs of Paris," by W. G. Fitz-Gerald; "New Wealth From the Sea," by William Briggs; "War Against the Silent Death," by W. G. Fitz-Gerald.

• • •

The North American Review for April 16 presents a table of contents of extraordinary interest. Mark Twain, in his ever-fascinating Autobiography, relates a marvelous prophetic dream that he had in his youth. W. H. Mallock, the English philosopher and economist, begins a series of most absorbing articles entitled "A Critical Examination of Socialism." "Frauds in the Mail" is the title of an exceedingly interesting article by the Hon. George B. Cortelyou, late postmaster general, now secretary of the treasury. Ernest Renan, that master spirit, speaks again to American readers in a series of charming letters, hitherto unpublished, to his sister Henriette. These letters relate to Renan's first years after he abandoned the Catholic church. "Japan and Tomorrow," by Col. Willard French, is a very timely warning to the United States concerning the menace that Japan is becoming in the Pacific.

• • •

Beginning in the Housekeeper for May is the first of a series of short stories by Arthur Upson under the general head, "Tales for the Twilight." In the first story, "A Maid of Pornic," Mr. Upson has again shown his power of creating original plots set forth in a charming and compelling style. The maid is none other than Browning's "Gold-Hair," and round about her he weaves a pleasing romance which must be read to be appreciated. Marian Bonsall, the associate editor who was sent to Japan to prepare a series of articles to be of interest to American women, contributes the last article of her series, "The Interchange of Ideas and Ideals." An especially interesting article by W. G. Fitz-Gerald is a disclosing of the secrets of Paris "Hat-Land." It is illustrated by photographs taken in the exclusive Paris shops.

• • •

In the Engineering Magazine for May, Lewis Nixon announces that the gas engine is already adopted for heavy marine service. Ten torpedo boats of 35-tons displacement and 20-knots speed have been built, and one of them has been run across the Atlantic in winter gales. Designs are complete for a destroyer of 625 tons and 12,000-horse power, and for a scout of 1,800 tons and 30,000-horse power, with an endurance of 3,000 miles at 30 knots. F. B. Warren describes the methods of the Pennsylvania railroad in training men for its service at Altoona. H. Cole Estep gives a new and startling insight into the attitude of the technical student toward the apprenticeship courses offered by the large engineering manufacturers. H. Von Schon explains the commercial development of a water-power project. J. B. Van Brussel presents an illustrated account of the electrification of the Simplon Tunnel railway. R. P. Bolton concludes his discussion of superheated steam, adding a bibliography of the subject.

• • •

Among the topics of the day which the May number of Current Literature discusses, special mention should be made of "Taft and Foraker: Mastiff and Bulldog," "The Rich Men's Conspiracy," "Will Roosevelt Dominate at The Hague" and a clever caricature of W. T. Stead, that Barnum of the pen. A biographical sketch of "Carnegie on the Verge of Seventy" is almost epical in its broadness of appeal. The literary department excels as usual in unique features. Literature, domestic and foreign, is treated with remarkable insight and skill. There are articles on Jack London, Thomas Bailey Aldrich, Lord Leighton, Hawthorne, "Mistral, the Honner of Provence," and "The Mad, Bad Genius of Baudeclaire." The dramatic department, too, abounds in unique features. It offers the most stirring scenes from Broadhurst's timely dramatization of graft, "The Man of the Hour," and "The Veritable History of Peter Pan," with exquisite illustrations by Arthur Rackham; an article that will appeal to every mother and every man who is at heart a Peter Pan. And it is said at heart that all men are Peter Pans.

• • •

The May issue of McClure's Magazine is both important and pleasing. The first article is C. P. Connolly's "The Fight of the Copper Kings," in which are described in a vidid manner the struggle between F. Augustus Heinze and the Amalgamated Copper company, the picturesque campaign of 1900 and re-election of Clark to the senate, and the beginnings of the great legal battle over the Butte Hill. "The Reminiscences of a Long Life" by Carl Schurz give his personal experiences as a general in the Civil war. "Chicago As Seen by Herself" pictures those developed as a natural result of its existant government which George Kibbe Turner described last month in "The City of Chicago." The fifth installment of "Mary Baker G. Eddy" tells of Mrs. Eddy's residence in Lynn, her first disciples and her first years of comfort and success, and of her third marriage—to Asa Gilbert Eddy.

The readers of fiction will be delighted with the May McClure's for it contains an unusual array of exceedingly good stories. "One Way of Peace" by Paul Kester and "The Road at Night" by William Lucius Graves are thoughtful and distinctive poems.

• • •

In the May American Magazine Ray Standard Baker goes on reporting the facts about the increasing antagonism between whites and blacks in this country. Some of the stories Mr. Baker tells are extraordinary.

Assistant District Attorney Train of New York county, reports "The Patrick Case, Complete—in which an ingenious conspiracy crumbled, and a famous crime was exposed. Mr. Train's article is really a great murder story. Walter Prichard Eaton writes a fine character sketch of Oscar Hammerstein, the wonderful New York Jew who has succeeded in establishing a grand opera house that is a real competitor of the Metropolitan Opera house. Miss Tarbell, continuing her history of the tariff, has reached the early 80's. These articles, as they draw near the men and politics of the present day, grow more interesting.

David Grayson writes another of his "Adventures in Contentment." F. Marion Crawford goes on with his serial. Short stories are contributed by Octavia Roberts, Harrison Clark, Mary Stewart Cutting, Mrs. L. H. Harris and John G. Neihardt.

• • •

The Broadway Magazine is every month taking New York affairs of national moment and making from them such indispensable articles that no up-to-the-hour man or woman in America can afford to be without them. In the May number, for instance, there is an article entitled $161,000,000 For Water," by Charles H. Cochrane, with illustrations by H. D. Nichols. Another interesting feature is "Christian Science in New York," by William A. Johnston, illustrated from exclusive photographs. Frederick Upham Adams discusses the question, "Is New York City Bankrupt?" Other articles are: "The Fairest Woman in New York," by Cora A. Moore; "The Fickleness of New York," by Thomas

(Continued on Page 7, 6th Col., 2nd Sec.)

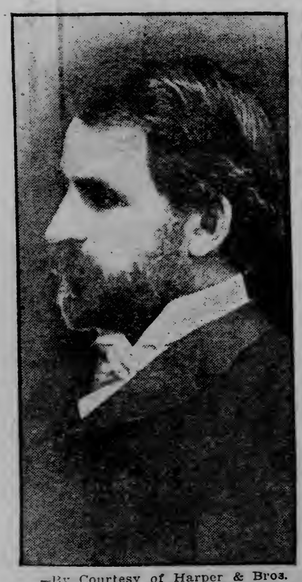
AUTHOR OF "THE BIRD OF TIME"

MRS. WILSON WOODROW,
Who Is Well Known in Duluth, Having Visited Here With Her Sister, Mrs. Jane W. Guthrie.

"The Bird of Time," Mrs. Wilson Woodrow's first book, has won the distinction of no adverse criticism; and this is unusual considering it either as sparkling epigrammatic essays—imaginary conversations by a group of men and women of the world on all sorts of subjects, or as a novel—and it is both, the conversations being bound together by the golden thread of a delightful love story. It is daring enough to attract the sharp point of some critical pen, for as one critic writes: "It says the things that every woman thinks and no woman dares to say."

The Nation, the New York Evening Post, the Boston Transcript and the Philadelphia North American, all most conservative of reviewers, have commended this little volume from the McClure press as charmingly original in conception and exquisite in construction; many of its reviewers assert that it sounds a new note in literature.

No one can read it and not long to wander with Egeria through her "sweet, sedate, secluded garden," or follow The Bird of Time through the record of the lives of the Bishop, the Judge, the Financier, the Editor and all the rest of the interesting people who discuss books and clothes, and art and the realities—any and everything from chiffons to food, from "Shakespeare and the musical glasses" to the self-supporting woman and modern economics. It is, in a measure, an epitome of Mrs. Woodrow's versatility, for she has contributed, in the last five years, to the magazines and periodicals, almost every form of literature—verses, essays, sketches, reviews, criticisms, satires, burlesque novels and short stories.



Her most notable work has been done for Life and McClure's magazine. In the pages of the former, she has burlesqued the most successful novels of the past two years and contributed satires and sketches which have established her reputation as a satirist—a woman whose pen is not tipped by humored ridicule, but with that finer, rarer, more delicate shaft which uses its art to paint the pretensions and affectations as well as the vulgarities of humanity with pointed but good natured raillery.

To the readers of McClure's she is known by her stories of the mining camps of the Rocky mountains, and it is in the portrayal of the women of these camps that she has done her most notable creative work. Heretofore, stories of the West and of mining camps have been stories of men, with the feminine element, the woman, used merely as an accessory to bring out the masculine high lights. Mrs. Woodrow has enlarged upon this and given us a new type of Western fiction. She has written of woman, not as the background of man's more vivid and vital activities, his shadow amid the humors and the realities of life and the tragedies of existence, but woman as a force, placed amid sordid surroundings, in the barren offerings of the mountains, revealing herself, her aims, her ambitions and loves—the directing agent and man the accessory. Her people are real types, drawn with that fidelity, that quality of humorous characterization which she has made her own; and they are pictured with the delicate touches of satire by which we know them as the commonplace, everyday characters of an everyday life to be met with everywhere. They are the subjects of Mrs. Woodrow's next book upon which she is now at work and which will be ready for fall publication.

Destiny seems to have intended Mrs. Woodrow to write. She has always found the pen a medium of expression, but it is only in the past five years that she has seriously devoted herself to it. Born in Chillicothe, Ohio, she had some newspaper training there on her brother's paper, the Chillicothe News. After her marriage, she went to Colorado, and it was there that she secured material and atmosphere for her stories of Western life. She came to New York a little more than five years ago to devote herself to her profession and began then writing for mazagines and periodicals.

Her work has shown constant and increasing growth and power. It has a masculine fiber in the strength of its construction and in those qualities of humor and satire in which she excels; but her distinctly feminine touch in the delicate play of her fancy, in her clever and brilliant repartee, her psychologic penetration and the discerning and intuitive revelations of the motives that sway humanity.

There is strength in her Western stories—the somber, deep underlying strength of the mountains—in her portrayal of the homespuns of existence, the simplicities the realities, the tragedies of life amid grimly humorous conditions and in small and elemental communities with a circumscribed outlook; while in "The Bird of Time," clever, brilliant, scintillant with epigram, finished and fine, one meets people who know and love the embroideries of existence, who, feeling the depths, yet live outwardly, as much as possible, upon the surface of life. The contrasts seem to point the extremes of Mrs. Woodrow's genius and the sweep of her ambition.

"The Long Trail," by Hamlin Garland, Is a Story of Adventure, Picturing the Realization of His Boyhood Dream—"Graham of Claverhouse," by Ian Maclaren.

THE LONG TRAIL. By Hamlin Garland, New York: Harper Bros. $1.50.

The story of "The Long Trail" is a curiously interesting human document, for it pictures the realization of the boyhood dream of one of the best known American authors, Hamlin Garland. It is a story out of the heart and longings of his youth.

"The Long Trail" is the realized fancy of a boy, told out of the experiences of a man and with the literary skill of a trained writer. It pictures the long and weary trail to the mining regions, and then the fierce search for gold.

That was the dream which the boy, Hamlin Garland, dreamed. It was to be realized while he was still a youth; but youth passed and it was still unfulfilled. But at length the realization came, many years after he had attained maturity. Then, a full grown man of world wide fame, he followed the wide trail, reached the mining regions, and sought for treasure.

He experienced, as a man, just what he had longed for and imagined as a boy.

In his boyhood dream he not only searched for gold but found it. In his story he makes his boy hero—the Hamlin Garland of the vanished past—find it. And in reality, as a man, he also found it. But (such are the unhappy quirks of the law) he found it near a boundary line and, assuming possession according to the customs which he mistakenly supposed to be in force, lost his title through not having observed the laws which actually held!

But the essence of the dream was realized—the vital, vigorous life, the adventure and the dangers, the wild strange experiences, the mingling with fevered men in a fevered search for treasure—and so, recognizing all this as the coming true of his never forgotten dream, he searched back into the heart and mind of himself as a boy and wrote his book, infusing fiction into fact and mingling dreams with their reality.

In essence, therefore, this book is quite as much the book of the lad Hamlin, as of the mature Hamlin Garland.

Hamlin Garland was born in Wisconsin in 1859. At the age of 8 the family removed to Iowa, and in the years of his Iowa life the lad attained a striking development.

Before he was 9 years old he had learned to carry and use a gun. In the ensuing years, up to his sixteenth, he continued the life and experiences which led to success as a cowboy. He learned to capture and throw and train wild horses, and to drive wild cattle. He could swing the lariat, and with unerring precision could, with the five yard lash of the drover's whip, hit a mark or pick of a flower. He learned to ride as only cowboys learn, and as a mere lad was given the care of droves out upon the prairie.

And he remembers how, through it all, he longed to set forth for gold.

He would look out of his little garret window at night, across the great sweeping plain, bright in the moonlight, and picture himself getting horses, and strapping a pack, and starting off, and camping under the stars—and at last reaching his goal and claiming a mine.

Once, when he was 14, he set out with some companions for a distant lake, and there they camped and hunted and fished, their own masters, and dependent for the time upon their own resources; and this experience whetted his appetite for more.

And—although the fact is almost stranger than the final coming true of his dream—his friend and chum on that boyish trip was his close friend and chum on the trail that he followed, so many years after.

Roping steers and riding wild horses, and hunting deer and wolves, and ever thinking of the trail to the regions of gold, were a strange preparation for the writing of books.

In truth, Hamlin Garland was of two distinct personalities.

On his mother's side he inherited traits of outdoor vigor; her brothers, whom he strove to emulate were giants physically, wonderful rifle shots, splendid runners and horsemen.

On his father's side he inherited the traditions of New England, and he was thrilled by thoughts of music and literature. His father often talked of Boston, and gave him Scott to read, and then put some of Hawthorne's stories into his hands; and by Hawthorne young Hamlin was impressed as by no other writer before or since, for the influence came when youth was vigorous and strong and the mind was formative.

In the conflict of impulses, the East won, and Hamlin Garland became a writer instead of a cowboy and miner.

But the East did not win until after many a struggle.

Young Hamlin saw "prairie schooners" trail by his Iowa home, mottoed with "Pike's Peak or Bust!" and his boyish blood was aflame. Later, he saw man after man start for the Black Hills, and he longed eagerly to join in that mad rush for gold. But always there were circumstances to restrain him.

"Pike's Peak" waxed and waned, and the Black Hills fever waned, and Garland came East and became an author.

But in 1898 there was wild Klondike excitement, and all his early impulses, long dormant, were aroused, and he eagerly and joyously "struck the trail!"—the long telegraph trail to the North.

He was living again his vanished youth—he was realizing the dream of that youth!

And so, the adventures of his hero in this book, in his weeks of adventure and hardship on this long Telegraph Trail, are what came to Garland's eyes or imagination on that very trail. He made his notes in the saddle and at camping places, beside roaring rivers and by the blaze of campfires. And then, fusing fact and fancy, visualizing himself as the boy of his own long-past years, he wrote this story. It is of what Hamlin Garland the boy would have done and seen on the trail that Hamlin Garland, the man, followed.

• • •

GRAHAM OF CLAVERHOUSE. By Ian Maclaren. Duluth: I. Freimuth. 50 cents.

The historical romance has declined of late. For this falling off there were two causes. First, the market was overstocked by a flood of inferior books of the sort. Second, not one author in ten has the slightest qualifications for historical novel-writing. For it is an art that none but a genius possesses. This has been proven by the fact that whenever a real master of his craft has attempted such a work, his success has been great and immediate. Of course, these successes are always followed at once by the inevitable host of imitators. But of late (owing probably to the fact that so few really great authors have recently written historical fiction) the supply has ebbed.

Now, during the lull, comes one of the best books of the sort that has been put on the market during the past fifty years. It is "Graham of Claverhouse," by Ian Maclaren. This will also have its swarm of followers until the public, as well as the reviewer, will regret the day the custom was revived. But for the moment, "Graham of Claverhouse" stands for the alone and unequalled. It deals with the adventures of that John Graham, viscount of Dundee, who was hero of Scott's ballad, "Bonny Dundee," and whose picturesque, melancholy, dashing figure was one of the brightest splashes of color in that dark era of English history, represented by the reign of James II, and the first troublous months of William of Orange's rule.

It was ever Claverhouse's misfortune to serve on the wrong side. He fought for William of Orange in the early and less successful period of that worthy's career. Then, commended to the favor of the duke of York, he was sent to work out the barbarous and thankless task of hunting down and slaughtering the contumacious "Covenanters," his own countrymen. Next, without ever tasting the rewards of this bitter task, he found himself leader of the forlorn hope that sought to stem the tide of William's growing power, and, last of all, he was forced to fight a losing battle against all he had once held dear. The one woman who brightened his lot was Jean Cochrane, beautiful daughter of his enemy's house.

Ian Maclaren has taken the most dramatic passages and love episodes of Graham's life and interwoven them into a romance of stirring interest, rare literary quality and abounding local color. "Graham of Claverhouse" is the strongest work of historical fiction on the market.

SIGISMOND DE IVANOWSKI,
One of the Most Interesting and Notable Illustrators and Artists of the Day, Lives Quietly and Works Hard in Westfield, N. J., Coming to New York Several Times a Week. A Pole by Birth, He Has Lived in America Nearly Four Years. He Has Given Practically All of the Last Year to His Work for the Century Magazine.

Literary Gossip.

The Bobbs-Merrill company has published a pamphlet entitled "Has Brand Whitlock told the Truth?" It relates to his new novel, "The Turn of the Balance," which was recently reviewed in these columns, and contains comments written by men of varying distinction from United States senators to convicts in state prisons. These comments range from violent denunciation as utterly false to enthusiastic praise as entirely true.

• • •

Few people know how comprehensive a library of Shakesperian literature is in the personal possession of Horace Howard Furness, the famous scholar. Some idea of its magnitude may be gained from the fact that in the compilation of the "Variorum," he has hardly ever had occasion to go further afield than the four walls of his own room. Here he carries on day by day the work he loves, and the announcement that a new volume of the unapproachable "Variorum Edition," "Antony and Cleopatra," will be published in May by the Lippincott's will be received with great interest.

• • •

The oldest and the most interesting chapters in the history of the United States were written by the Mission fathers in the Southwest and on the Pacific coast. Jesse S. Hildrup's "The Missions of California and the Old Southwest," recently brought out by A. C. McClurg & Co., tells the story of the fine old buildings still standing as relics of a vanishing civilization, with an abundance of reproduced photographs of the churches and convents to make the volume the most appropriate of guide books to those intending a visit or the most beautiful of souvenirs for those who have already seen these interesting structures.

• • •

Dodd, Mead & Co. has published "Indiscreet Letters from Peking" by B. L. Putnam Weale. This is the story of the seige of the Legations in Peking. It is not a history, but the story of the dramatic scenes and events told by an eye witness. Reading the book one sees the worn and harrassed defenders of the legations in scene after scene of grim fighting, beating back the hordes of Chinese soldiers. Mr. Weale is also the author of "Manchu and Muscovite," "The Reshaping of the Far East," which have gained for the author much credit as an authority on Eastern questions. The author himself has said concerning the book: "Everything I have written has been a close approximation to the truth and has given people a better insight into the real conditions obtaining beyond Singapore than other works." Indiscreet Letters from Peking" tells the story of 1900, and is an explanation of much that is going to happen.

In "Highland Mary," a most attractive book just issued by the C. M. Clark Publishing Co., of Boston, the author has made use of the most romantic episodes in the life of the poet, Robert Burns. His courtship of Mary Campbell, his love affair with Jean Armour, the "Belle of Mauchline," and his troubles with Lady Glencairn of Edinburg, are woven into a most entertaining and absorbing story. Although the book is fiction, the author, Mr. Legge, has seen to it that almost all of his historical references and details are authentic. Clayton Mackenzie Legge, who wrote "Highland Mary," is a direct descendant on his mother's side of the clan Mackenzie, who were the first to recognize the genius of the poet Burns. The book is dedicated to the Rev. Dr. Donald Sage Mackay, D. D., pastor of the Collegiate church, New York city, who is a cousin of the author.

• • •

A new novel by Harold Bindloss, author of "Alton of Somasco" and "The Cattle Baron's Daughter," has just been published by Frederick A. Stokes company. It is entitled "The Dust of Conflict.' The action takes place for the most part in Cuba in the time just preceding the Spanish war. The blowing up of the "Maine" has a dramatic part in the plot. The publishers are confident that it will be the most popular book Mr. Bindloss has yet written.

• • •

Duffield & Company announce for publication a new novel by Charles Egbert Craddock, entitled "The Windfall." Other novels for early publication on the same publishers' spring list are, "The Dower Woods," by Emma Brooke, author of "The Engrafted Rose", and "A Winged Victory," by Prof. Robert Morse Lovett of the University of Chicago, author of "Richard Gresham."

• • •

The Harpers have published a novel nature-book, entitled "The Friendly Stars," by Martha Evans Martin. It is an absolutely new idea in the literature of the stars. The book is full of enthusiastic and even fond friendship for them, and shows how readily an intelligent acquaintance with them can be acquired. No technical knowledge of astronomy is required of the reader; all is presented in a clear and fascinating and untechnical manner; and yet, as Prof. Jacoby, professor of astronomy in Columbia university says in his introductory note to the book, there is no sacrifice of scientific accuracy. Numerous simple diagrams add materially to the value of the book.

Among the Magazines.

In the May number of the Century begin David Homer Bates's reminiscences of "Lincoln in the Telegraph Office," which promise new light on a phase of President Lincoln's daily life during the war hitherto little considered. Mr. Bates was manager of the war department telegraph office and cipher operator from 1861 to 1866; and the opening chapters of the series are full of details of Lincoln's visits, morning, afternoon and evening, to the war department telegraph office. There is also an intimate account of McClellan and his relations to the administration, and on at least one important point—the suppression of dispatches—the article has the interest of surprise. The most timely article is George M. Stratton's discussion of "Railway Disasters at Night," a warning presentation of the failings and dangers of our present system of signals, and of the psychological need of revising them, with suggestions, based on science, and, seemingly, on common-sense, for a more reliable system of protection. The writer is professor of experimental psychology and director of the psychological laboratory at Johns Hopkins university. Other notable features of the May issue are a sketch of Jamestown by Thomas Nelson Page, more "Stories of Walstier," by Otto Bacher, friend and champion of the great artist in his Venetian days; and Ernest Rhys's "William Sharp and Fiona Macleod"—giving reminiscences of a long friendship and episodes which may, in passing, help to disclose the sources, mysterious and deliberately obscured, of the Fiona Macleod tales and fantasies."

• • •

A new serial by Octave Thanet begins in the Reader for May, entitled "The Lion's Share." Its opening chapters launch the story in a fascinating setting fully worthy this well-known author. The persons introduced—a veteran army officer; a millionaire old lady (the colonel's aunt); her 14-year-old ward, Archie; her charming companion, Miss Smith, supposed by the colonel's sister-in-law to be an adventuress; two men who seem to be plotting the kidnaping of Archie—all these are brought together on a limited train bound for California. The next installment will be awaited with eagerness.

The remarkable series of debates under the general title, "The Problems of People," written for the Reader by William Jennings Bryan and Senator Albert J. Beveridge, continue with two striking articles in the May number on "Trusts and Their Treatment," which define the positions of the Republican and Democratic parties on this issue in the coming presidential campaign. There are three unusually interesting short stories—"The Hearth," by Alma Martin Estabrook; "The Transformation of Wilders," by Charles Garvice, and "The Crosby Case and the Crosby Woman," the story of a murder trial, by L. C. Hopkins. All are well illustrated by Worth Brehm, Will Grefe and F. Nelson Vance.

• • •

Scribner's Magazine for May opens with an account of the adventurous journey of the dry-dock Dewey half-way around the world, by way of the Suez Canal. A young artist, W. J. Aylward, accompanied the expedition, sometimes on one of the consorts and part of the time on the dry-dock itself. He has made a series of wonderful pictures at first-hand of this remarkable voyage, showing the life on board, the tribulations by sea, and the adventures through the canal; the collisions and the rescues and, finally, the safe arrival at Subig Bay. Mr. Aylward has the gift of writing with a rare appreciation of the novelty of the voyage, and he gives extraordinary impressions of the life by the way. The article is both romantic and picturesque, and is a bit of real adventure seen through the eyes of an artist. Sidney Lee, the eminent English authority, begins in this number a series of papers on "The Call of the West," in which he seeks to depict "America in the process of revelation to the sixteenth century Englishman." He defines what "Shakespeare and his contemporaries knew of the new world," and tracks their information to its source, suggesting the influence which this knowledge exerted on the current of thought and feeling in the Old World. The survey closes with the year 1607, when an English settlement took permanent root in Jamestown. The first paper in this number, graphically outlines the energy of Spain in exploration.

• • •

A vivid account of the most daring feat in recent mountain-climbing—the conquest of Mount McKinley, the highest mountain in North America—is the opening article of Harper's Magazine for May. Dr. Frederick A. Cook has the honor of being the first to gain the top of that mighty peak, and this is his own first published narrative of his achievment. It is an article of high popular interest, as well as of scientific value. It gives fascinating details of how the ascent was made; it tells of peril from thundering avalanches; of climbing up impossible slopes of ice; of dogged persistence in the face of failure after failure; and at length of final triumph. It is natural, after this description of height and cold, that one's thoughts should turn to indoors, and so there is an article descriptive of the new mural decorations of John W. Alexander, painted for the Carnegie Institute of Pittsburg. Fully a score of panels are reproduced, and the comment is by Charles H Caffin. An article of unusual interest is by Frederick Trevor Hill, in his series of "Decisive Battles of the Law." This article is descriptive of the trial of the Chicago anarchists, "the first capital case in America involving abuse of the liberty of the press," and the author presents both sides with eminent fairness, and at the same time gives a brilliant narrative of the trial. Capt. A. T. Mahan, U. S. N., than whom there is no higher authority in his field, the American navy, writes of "Our Navy before the War of Secession," an article rich in personal anecdotes.

• • •

The leading article in the May number of House and Garden is from the pen of Mary Hodges. The writer deals delightfully with her subject, "Ashland Past and Present," once the home of Kentucky's greatest statesman, Henry Clay, and now occupied by his direct descendants. The views of the house, as it was in the days of Mr. Clay and as it is at the present time, are extremely interesting, for today as in the long past, "Ashland" stands as a type of all that is best in a Kentucky blue-grass estate and home.

• • •

Besides a complete novel of exceptional interest, "The Magistrate's Own Case," by Baron Paile Rosenkrantz, the famous Danish writer, Transatlantic Tales for May contains a score of short stories by such authors as Mathilde Serao, George Ohnet, Pedro de Alarcon, Anton Chekhov, Rene Bazin, V. Blasco Ibanez, Hans Arnold, Gustavo A. Becquer, etc. With the literatures of all Europe to draw from, the contents of this magazine win for it a unique place among the periodicals that must depend solely upon their respective shares of the material furnished by America alone. It is to be noted that in the adventures of Arsene Lupin, the "French Raffles," a series of stories has been secured for American readers which will rival in popularity the Sherlock Holmes tales. The magazine seems carefully to preserve the American standard of morals.

• • •

Ainslee's for May offers to its readers another collection of fine stories of great variety and surpassing quality. "Her Son," by Horace A. Vachell, completes its fourth instalment. The novelette is an exciting mystery story, entitled "The Blotting Book," by E. F. Benson. Will Levington Comfort has a stirring dog story, "The Collie and the Celebrity." A child story by Mary Heaton Vorse, "One Man's Heart," is filled with humor and pathetic interest. Roy Norton has another of his inimitable Western tales in "The Conquering of Socorro." Other contributors are Gertrude Lynch, Johnson Morton, Broughton Brandenburg, Elizabeth Duer, and Mary Manners.

• • •

Charles Stokes Wayne has written for May Young's, in "The Marriage of Mrs. Merlin, an entrancing romance of a beautiful woman, enormously rich, who calmly buys a husband as she would a piece of rare bric-a-brac. It's purely a business deal. The man, in addition to being ornamental, is to serve as a protection from the fortune hunters her vast riches attract. He is to be husband in name only—in reality, a highly salaried employe, his service to be terminated by divorce at will. But the woman has overlooked the fact that a young, handsome and more than commonly attractive man, like this husband-in-name-only, must have a past of more or less variegated color. When this past begins to lap edges with the present complications come thick and fast. The tale is unravelled with a swing and briskness of action that carries one along breathless.

• • •

Probably the most vivid and yet the most artistic story of the month, is that called "As a Man Soweth," written by G. B. Lancaster. It appears in the May Popular—a magazine, by the way, which is crammed with stories and novelettes of unusual excellence. Mr. Lancaster's tale is written around the building of a big bridge in New Zealand, and has the same realism that characterized Kipling's best known stories. The plot is an ingenious one and centers around a man of strong personality—a man gifted with wonderful ability to control others, and yet signally unable to control himself. It is a character study of a man who, though conquered by his baser nature, yet demonstrates his ability to do great things in a moment of stress.

• • •

"Who Wrote Dixie?" is the title of the entertaining feature article in Our Country for April. The claims of both Daniel Decatur Emmett of Ohio and Will S. Hays of Kentucky are discussed in an unbiased way. It is clearly proved that neither Emmett nor Hays wrote the music, and that Hays wrote the first song, although the words of the song as sung today are those of Emmett. This April issue of the magazine is one of the most attractive yet put out. There are two splendid stories, a description of a trip from Baltimore to Liverpool made by three college boys on a cattle ship, and other interesting features besides the regular departments, devoted to the home, the school, the farm, etc.

• • •

"The house of Guggenheim," an article in the present number of Smith's Magazine, is one of the most remarkable contributions in any of the current magazines. How Meyer Guggenheim came to this country fifty-eight years ago, and with his seven sons built up a business valued conservatively at something considerably exceeding $500,000,000, is a story of more than usual interest. "The Conflict," by W. B. M. Ferguson, is a complete novelette in the same issue, and is sure to attract a great deal of attention. In no story of the same length published in recent years have we seen the same degree of dramatic intensity and feeling. The series of reproductions of paintings of Spanish folk by L. Luis Mora is exceptionally interesting. The short stories in this number of the magazine are even better than usual.

• • •

The May issue of The People's, which is a short-story magazine, contains a readable tale of Ghetto life in "The Goblet of Elijah," by Sigmund Krausz. Mr. Krausz has made a sympathetic study of the life of the Ghetto, with which he has been long familiar. In this tale, al of the pathos, the pride, and some of the poetry of the people of the Ghetto are brought out. There are no exaggerations in the story, but the inherent truth of the pathetic and dramatic situation will strike home to al readers. Beside the many short stories in this issue of the magazine, there is a complete novel by William Walace Cook, entitled "The Mysterious Mission."

• • •

Among the leading articles in the Technical World Magazine for May are: "To Drain the Florida Everglades," by A. B. Clark; "Make Money Growing Weeds," by Edward B. Clark; "Machine Made Hypnotism," by John Elfreth Watkins; "Man's Fight With a Monster," by Wilbur Bassett; "Wrath of the Desert," by Henry M. Hyde; "New Wizard of Power," by Charles F. Carter; "Life-Saving Dogs of Paris," by W. G. Fitz-Gerald; "New Wealth From the Sea," by William Briggs; "War Against the Silent Death," by W. G. Fitz-Gerald.

• • •

The North American Review for April 19 presents a table of contents of extraordinary interest. Mark Twain, in his ever-fascinating Autobiography, relates a marvelous prophetic dream that he had in his youth. W. H. Mallock, the English philosopher and economist, begins a series of most absorbing articles entitled "A Critical Examination of Socialism." "Frauds in the Mail" is the title of an exceedingly interesting article by the Hon. George B. Cortelyou, late postmaster general, now secretary of the treasury. Ernest Renan, that master spirit, speaks again to American readers in a series of charming letters, hitherto unpublished, to his sister Henriette. These letters relate to Renan's first years after he abandoned the Catholic church. "Japan and Tomorrow," by Col. Willard French, is a very timely warning to the United States concerning the menace that Japan is becoming in the Pacific.

• • •

Beginning in the Housekeeper for May is the first of a series of short stories by Arthur Upson Upper the general head, "Tales for the Twilight." In the first story, "A Maid of Pornic," Mr. Upson has again shown his power of creating original plots set forth in a charming and compelling style. The maid is none other than Browning's "Gold-Hair," and round about her he weaves a pleasing romance which must be read to be appreciated. Marian Bonsall, the associate editor who was sent to Japan to prepare a series of articles to be of interest to American women, contributes the last article of her series, "The Interchange of Ideas and Ideals." An especially interesting article by W. G. Fitz-Gerald is a disclosing of the secrets of Paris "Hat-Land." It is illustrated by photographs taken in the exclusive Paris shops.

• • •

In the Engineering Magazine for May, Lewis Nixon announces that the gas engine is already adopted for heavy marine service. Ten torpedo boats of 35-tons displacement and 20-knots speed have been built, and one of them has been run across the Atlantic in winter gales. Designs are complete for a destroyer of 625 tons and 12,000-horse power, and for a scout of 1,800 tons and 30,000-horse power, with an endurance of 3,000 miles at 30 knots. F. B. Warren describes the methods of the Pennsylvania railroad in training men for its service at Altoona. H. Cole Estep gives a new and startling insight into the attitude of the technical student toward the apprenticeship courses offered by the large engineering manufacturers. H. Von Schon explains the commercial development of a water-power project at Big Bend. Van Brunsel presents an illustrated account of the electrification of the Simplon Tunnel railway. R. P. Bolton concludes his discussion of superheated steam, adding a bibliography of the subject.

• • •

Among the topics of the day which the May number of Current Literature discusses, special mention should be made of "Taft and Forker: Mastiff and Bulldog," "The Rich Men's Conspiracy," "Will Roosevelt Dominate at The Hague" and a clever caricature of W. T. Stead, that Barnum of the pen. A biographical sketch of "Carnegie on the Verge of Seventy" is almost epical in its broadness of appeal. The literary department excels as usual in unique features. Literature, domestic and foreign, is treated with remarkable insight and skill. There are articles on Jack London, Thomas Bailey Aldrich, Lord Leighton, Hawthorne, "Mistral, the Homer of Provence," and "The Mad, Bad Genius of Baudeclaire." The dramatic department, too, abounds in unique features. It offers the most stirring scenes from Broadhurst's timely dramatization of graft, "The Man of the Hour," and "The Veritable History of Peter Pan," with exquisite illustrations by Arthur Rackham; an article that will appeal to every mother and every man who is at heart a Peter Pan. And it is said at heart that all men are Peter Pans.

• • •

The May issue of McClure's Magazine is both important and pleasing. The first article is C. P. Connolly's "The Fight of the Copper Kings," in which are described in a vidid manner the struggle between F. Augustus Heinze and the Amalgamated Copper company, the picturesque campaign of 1900 and re-election of Clark to the senate, and the beginnings of the great legal battle over the Butte Hill. "The Reminiscences of a Long Life" by Carl Schurz give his personal experiences as a general in the Civil war describe the great leaders and throw new light on many important events of the war. "Chicago As Seen by Herself" pictures those developed as a natural result of its existant government which George Kibbe Turner described last month in "The City of Chicago." The fifth instalment of "Mary Baker G. Eddy" tells of Mrs. Eddy's residence in Lynn, her first disciples and her first years of comfort and success, and of her third marriage—to Asa Gilbert Eddy.

The readers of fiction will be delighted with the May McClure's for it contains an unusual array of exceedingly good stories. "One Way of Peace" by Paul Kester and "The Road at Night" by William Lucius Graves are thoughtful and distinctive poems.

• • •

In the May American Magazine Ray Standard Baker goes on reporting the facts about the increasing antagonism between whites and blacks in this country. Some of the stories Mr. Baker tells are extraordinary.

Assistant District Attorney Train of New York county, reports "The Patrick Case, Complete—in which an ingenious conspiracy crumbled, and a famous crime was exposed. Mr. Train's article is really a great murder story. Walter Prichard Eaton writes a fine character sketch of Oscar Hammerstein, the wonderful New York Jew who has succeeded in establishing a grand opera house that is a real competitor of the Metropolitan Opera house. Miss Tarbell, continuing her history of the tariff, has reached the early 80's. These articles, as they draw near the men and policies of the present day, grow more interesting.

David Grayson writes another of his "Adventures in Contentment." F. Marion Crawford goes on with his serial. Short stories are contributed by Octavia Roberts, Harrison Clark, Mary Stewart Cutting, Mrs. L. H. Harris and John G. Neihardt.

• • •

The Broadway Magazine is every month taking New York affairs of national moment and making from them such indispensable articles that no up-to-the-hour man or woman in America can afford to be without them. In the May number, for instance, there is an article entitled $61,000,000 Per Water," by Charles H. Cochrane, with illustrations by H. D. Nichols. Another interesting feature is "Christian Science in New York," by William A. Johnston, illustrated from exclusive photographs. Frederick Upham Adams discusses the question, "Is New York City Bankrupt?" Other articles are: "The Fairest Woman in New York," by Cora A. Moore; "The Fickleness of New York," by Thomas

(Continued on Page 7, 6th Col., 2nd Sec.)

AUTHOR OF "THE BIRD OF TIME"

MRS. WILSON WOODROW,
Who Is Well Known in Duluth, Having Visited Here With Her Sister, Mrs. Jane W. Guthrie.

"The Bird of Time," Mrs. Wilson Woodrow's first book, has won the distinction of no adverse criticism; and this is unusual considering it either as sparkling epigrammatic essays—imaginary conversations by a group of men and women of the world on all sorts of subjects, or as a novel—and it is both, the conversations being bound together by the golden thread of a delightful love story. It is daring enough to attract the sharp point of some critical pen, for as one critic writes: "It says the things that every woman thinks and no woman dares to say."

The Nation, the New York Evening Post, the Boston Transcript and the Philadelphia North American, all most conservative of reviewers, have commended this little volume from the McClure press as charmingly original in conception and exquisite in construction; many of its reviewers assert that it sounds a new note in literature.

No one can read it and not long to wander with Egeria through her "sweet, sedate, secluded garden," or follow The Bird of Time through the record of the lives of the Bishop, the Judge, the Financier, the Editor and all the rest of the interesting people who discuss books and clothes, and art and the realities—any and everything from chiffons to food, from "Shakespeare and the musical glasses" to the self-supporting woman and modern economics. It is, in a measure, an epitome of Mrs. Woodrow's versatility, for she has contributed, in the last five years, to the magazines and periodicals, almost every form of literature—verses, essays, sketches, reviews, criticisms, satires, burlesque novels and short stories.

Her most notable work has been done for Life and McClure's magazine. In the pages of the former, she has burlesqued the most successful novels of the past two years and contributed satires and sketches which have established her reputation as a satirist—a woman whose pen is not tipped by ill-natured ridicule, but with that finer, rarer, more delicate shaft which uses its art to paint the pretensions and affectations as well as the vulgarities of humanity with pointed but good natured raillery.

To the readers of McClure's she is known by her stories of the mining camps of the Rocky mountains, and it is the portrayal of the women of these camps that she has done her most notable creative work. Heretofore, stories of the West and of mining camps have been stories of men, with the feminine element, the woman, used merely as an accessory to bring out the masculine high lights. Mrs. Woodrow has enlarged upon this and given us a new type of Western fiction. She has written of woman, not as the background of man's more vivid and vital activities, his shadow amid the humors and the realities of life and the tragedies of existence, but woman as a force, placed amid sordid surroundings, in the barren offerings of the mountains, revealing herself, her aims, her ambitions and loves—the directing agent and man the accessory. Her people are real types, drawn with that fidelity, that quality of humorous characterization which she has made her own; and they are pictured with the delicate touches of satire by which we know them as the commonplace, everyday characters of an everyday life to be met with everywhere. They are the subjects of Mrs. Woodrow's next book upon which she is now at work and which will be ready for fall publication.

Destiny seems to have intended Mrs. Woodrow to write. She has always found the pen a medium of expression, but it is only in the past five years that she has seriously devoted herself to it. Born in Chillicothe, Ohio, she had some newspaper training there on her brother's paper, the Chillicothe News. After her marriage, she went to Colorado, and it was there that she secured material and atmosphere for her stories of Western life. She came to New York a little more than five years ago to devote herself to her profession and began then writing for mazagines and periodicals.

Her work has shown constant and increasing growth and power. It has a masculine fiber in the strength of its construction and in those qualities of humor and satire in which she excels; humor and satire in which she excels; humor and satire in which she excels;

MEADOWLANDS TOWNSHIP IS RAPIDLY BECOMING A THRIVING AND PROSPEROUS FARMING COMMUNITY

Tract of Prairie Land in Midst of the Forests.

Settlers Are Rapidly Getting the Land Under Cultivation.

L. B. Arnold and Sister Have Erected Modern Bungalows.

WHITEFACE LODGE ON THE WHITEFACE RIVER.

L. B. ARNOLD'S FARM HOME IN MEADOWLANDS.

One of the most progressive farming communities in St. Louis county is found in the town of Meadowlands in the Whiteface river district, between the main line of the Duluth, Missabe & Northern road to Hibbing and the Bovey branch, connecting at Alborn.

A few years ago the town of Meadowlands was almost unheard of, as it was sparsely settled and, being some thirty-five or forty miles distant from Duluth, not much attention was paid to it.

The Duluth & Iron Range Railway company owned a large amount of lands in that town and when its hustling assistant land commissioner, L. B. Arnold, decided that the district looked pretty good to him and that there was a splendid opportunity to dispose of the acres of wild land, suitable for agricultural purposes, to actual settlers at low prices, things began moving in Meadowlands and they have been moving since at a rate that bespeaks a bright future for the town.

Just to show the people whom he has been taking into Meadowlands that he has absolute confidence in what the soil in that part of the county will do when brought to a state of cultivation, Mr. Arnold bought about 320 acres on his own account, for experimental farm purposes, and has already cleared about half the acreage. He expects this year to begin the cultivation of his land on quite a large scale. Not only has Mr. Arnold put his own money into Meadowlands farm land, but some of his relatives have made extensive investments in that locality.

The Herald presents herewith two pictures of the substantial and attractive farm houses that Mr. Arnold and his sister have erected for themselves in Meadowlands, and where they spend all the time available throughout the year.

Whiteface Lodge, the property of Miss Harriet R. Arnold, is situated on the owner's farm, comprising 100 acres in section 23-53-19. The lodge is located on the bank of the Whiteface river in a most picturesque spot. It is constructed of logs, but such construction is along lines very much different than the homely old log houses built in the early pioneer days of some parts of Northern Minnesota. The artistic lines of the building are entirely in keeping with the picturesque location and the interior work makes the lodge what Miss Arnold's friends are pleased to term "a dream."

The lodge comprises six large rooms beautifully finished off with the natural woods of the locality and is a desirable summer or winter home for the most exacting city-bred person.

Mr. Arnold's lodge is located on his farm in section 16-53-19. The lodge itself comprises three good-sized rooms. Besides this lodge, for his own use, Mr. Arnold has a substantial farm house of about eight rooms for those in his employ.

Both of the owners mentioned, Miss Arnold and her brother, have, ever since their advent into Meadowlands, taken a great interest in the town affairs and have figured in several important movements looking toward the welfare of the citizens there.

Meadowlands is the first agricultural district in the county to form a farmers' association or club for mutual advantage. The town has a very healthy and active organization of the kind mentioned and one that is accomplishing things. The town also has a school district recently formed, a new school house that is well patronized by the children of the settlers who have been taking up farms there and arrangements are just about complete for a non-denominational church society, which will include practically every farmer and his family in Meadowlands. The project contemplates the early construction of a new church with funds already raised. The executive committee is comprised of some of the progressive farmers of Meadowlands including Miss Arnold and L. B. Arnold.

The activity of the farmers in Meadowlands in the matter of getting new roads has ben a matter of common knowledge. A great deal of road construction has been accomplished in that town in the last two years and the work is of a high grade character. Not a mile of poorly built road is to be found within the town limits and the settlers have displayed their zeal in the matter by turning in their services, to a large extent, for little or no compensation. They are planning on a considerable amount of road work the coming season and the indications are that the same high standard of roadbuilding will be maintained. New farms are being opened up right along and roads will be constructed to give the farmers an outlet to the towns and to the railway stations.

It is thought probable that a brick-making plant will be established in the town, as some very successful tests have been made of the clay beds found in that locality and experts have been making a personal investigation of the matter.

IRVING T. BUSH, DIVORCED LAST YEAR, WEDS A WIDOW

New York, April 27.—Friends of Irving T. Bush, millionaire devotee of golf and other sports, and Mrs. Francis D. Beard, widow of a well known horse show exhibitor of Brooklyn have learned of their marriage last Saturday at Lakewood, N. J., where both have country residences. The wedding took place in Mrs. Beard's cottage and was performed by the Rev. Dr. J. F. Goodwin.

Mrs. Bush has long been prominent in society circles of Lakewood, and her name was on the roll of the "Gould set." She is a daughter of Joseph Howard, Jr., a journalist. Her first husband was Francis D. Beard of Brooklyn, who was prominent on the turf and a member of the Riding and Driving club. He died on April 26, 1901, at Lakewood, following an operation for appendicitis.

Mutual friends watched with interest the growing attachment between Mrs. Beard and Mr. Bush, after his wife had divorced him in January of last year. Two corespondents were named by his wife in the divorce suit, but their names were kept secret.

Reports had it subsequently that Bush settled $2,000,000 on his former wife, one half of which was for failure to make public the names of the correspondents.

Mr. Bush is head of the Bush Terminal Warehouse company of Brooklyn.

HOW THE Y. W. C. A. IS ENDEAVORING TO ASSIST THE YOUNG FOREIGN WOMEN OF DULUTH

THE CLASS IN ENGLISH FOR FOREIGN BORN YOUNG WOMEN. —Photo by Maher.

The most prominent authorities have agreed that the only settlement of the servant problem is in the education of the mistress and the maid and the educational classes of the Young Women's Christian association are doing their share toward helping solve this question in Duluth. The educational classes were not planned with that as an object but it will be one of the minor results. The above picture of the Monday Evening English class at the association rooms will give some idea of the work carried on in this department of the work. The Duluth association has a large demand among the young foreign women who arrive in the city and are struggling with the labor of acquiring a new language and of becoming accustomed to the ways of an alien country. Misunderstanding and misunderstood, these young foreign girls have found great comfort and help in the educational classes. They receive the necessary instruction in the language which they wish so much to acquire and at the same time are brought in touch with the best of American womanhood, being made to realize that courtesy and kindness will greet them if they bring such to their work. When the course in English has been discontinued many of them become interested in the domestic science classes and join them. The work of the association in reaching the young foreign women is one of the most valuable that the local association undertakes and special provision will be made for it in the way of class room in the new building.

Fifty young women have been enrolled this year in the English classes. Two lessons each week are faithfully attended. The above picture was taken at one of this week's meetings.

The members of the English classes are among the most enthusiastic and interested members in the new building and the fund for which the members are working so arduously, and there are but few of these members but have signed a pledge for a share of the fund. The young women are for the most part employed as servants in Duluth homes and some of them are factory workers. The board of directors feels that if every person in Duluth will but do his or her share as faithfully as have these young women that there will be no doubt but that Wednesday morning will see the amount asked for, oversubscribed.

"We are delighted to get the subscription of the working women," said Mrs. Feetham today in speaking of the matter. "We realize as well as any one can that the woman on a salary and dependent upon herself and perhaps helping others, cannot afford to give a large subscription, but the small amounts coming in with the spirit of good will do much to make us feel that the work is reaching and interesting, and helping women we wish to help. We need the large assistance of the very successful people of the city, but the spirit of the dollar subscription goes far."

Two more days of active work for the campaign committees remain and there are several thousand Duluth women who will be overjoyed if association headquarters announce upon Wednesday that the necessary amount has been realized.

CLUBS AND MUSICAL

(Continued from page 2, second section.)

Vocal solo—"The First Song." Gumbert
Mrs. Leo. Ball.
Violin solo, Serenade .....Franz Drdla
C. D. Ostergren.
Piano solo—Prelude, Op. 28, No. 15.....
..... Chopin
Mrs. Gow.
Vocal solo—"Rose Adair," .....Wynne
George Tyler.
Vocal solo—
a. "The Danza"..... Chadwick
b. "Sweet Wind that Blows,"..... Chadwick
Mrs. C. P. Craig.
Duo—Praeludium and Sarabande.....
..... Von Wilm
Piano 1.—Mrs. Flaaten. Piano 2.—Mrs. Strong.
Accompanists—Mrs. Ostergren, Miss Pearson.

Park Point Study Class.

The resident women of Park Point have met during the winter to study French history. At the last meeting, held at the home of Mrs. Ray Newell, it was decided to form a permanent organization to be known as The Park Point Study class.

The officers elected were: President, Mrs. W. B. Phelps; first vice president, Mrs. H. J. Gude; second vice president, Mrs. M. S. Cook; third vice president, Mrs. M. Puck; secretary, Mrs. George H. Miles; treasurer, Mrs. H. M. Haig.

A special feature of the new club is a civic committee with Mrs. Merritt S. Cook as chairman.

The next meeting will be held with Mrs. Harry Coney on Wednesday afternoon, May 8.

Bishop's Club Meeting.

The last meeting of the season of the Bishop's club will be held Tuesday evening at the club rooms on West Fourth street. The meeting will be open to the friends of the members, and a special program has been arranged. It is as follows:

Wilson—"Carmena" .....Waltz Song
Miss Jane Everington.
Reading .....Selected
Miss Adele McClaren.
Helmund—"The Magic of Thy Voice"
Walter Smith.
Address .....
Bishop McGolrick.
Burleigh—"Jean" .....
Walter Smith.
Reading .....Selected
Miss Adele McClaren.
Vocal solo .....Selected
Miss Jane Everington.

Interesting Piano Recital.

The fourth annual musicale, given at the Lester Park church by the piano pupils of Mrs. Emma L. Schmeid and Miss Berta Schmeid, was held last evening, and the church was filled with the interested friends of the young players, who were heard to special advantage in the carefully arranged program. Mrs. Schmeid's pupil recitals are always heard with interest, and last evening's performance was an artistic and most delightful success. By special request, last evening's program will be repeated in the city, and the date has been set for Friday evening, May 10. Assisting at that concert will be Carl Venth, concert meister of the St. Paul Symphony orchestra, who will be heard in several solos at that time.

The program last evening was presented by Misses Berta Schmeid, Helen Smith, Marion Fitger, Elsie Cole, Dorothy Dowse, Melville Silvey, Ruth Kennedy, Pearl Ettinger, May Jeffery, Dora Williams, Carolyn Munger, Dorothy Olcott, Irma Richards, Margaret Panton, Marie d'Autremont, Marjorie Harrison and Ruth Sutton and Leo Schmeid.

Women have decided that in case they cannot vote, they will cut out the "Stork" proposition. Perfectly proper. Take Hollister's Rocky Mountain Tea, it is good for most everything. 35 cents. Tea or Tablets. Ask your druggist.

FIANCEE SAYS JANIS HAD NO MOTIVE FOR SUICIDE

MISS ELOISE STEELE

New York, April 27.—Miss Eloise Steele, a winsome miss who plays a minor part in "The Vanerbilt Cup," sent word from her apartments at the Marie Antoinette that she had had no misunderstanding or quarrel with Percy Janis, a young actor, who disappeared from the Atlantic Transport liner Minneapolis four days ago. Miss Steele and the brother of Elsie Janis were engaged to be married. Her statement was called forth by Rialto gossip that dissension between them might have made the young man throw himself in the ocean in a fit of despondency.

Mrs. Jane Bierbower, the young man's mother, who is also at the Marie Antoinette, confirmed Miss Steele's denial of any breach between the young people.

"I am sure," Mrs. Bierbower said, "that when the Minneapolis reaches London we will find that Percy's death was purely accidental. If not, he was not in his right mind. He has had a derangement of the stomach and this, with seasickness may have caused him such pain as to make him act rashly."

Beyond a wireless message from the steamship saying that services had been held in memory of the young actor, the family has no information upon the circumstances of his death. Miss Steele is prostrated with grief over her fiance's death. She was at the pier, Mrs. Janis said, when the young actor left America with a company to play "Mrs. Wiggs" in London.

Cured of Rheumatism.

Mr. Wm. Henry of Chattanooga, Tenn., had rheumatism in his left arm. "The strength seemed to have gone out of the muscles so that it was useless for work," he says. "I applied Chamberlain's Pain Balm and wrapped the arm in flannel at night, and to my relief I found that the pain gradually left me and the strength returned. In three weeks the rheumatism had disappeared and has not since returned." If troubled with rheumatism try a few applications of Pain Balm. You are certain to be pleased with the relief which it affords. For sale by all druggists.

PLAYS and PLAYERS of the WEEK

BIJOU. REFINED VAUDEVILLE. | THE LYCEUM DRAMA. | METROPOLITAN. BURLESQUE.

AT THE LYCEUM

The Juvenile Bostonians Will Be At the Lyceum For Five Nights In a Repetory Of the Standard Comic Operas---Schumann-Heink On Wednesday.

Much enthusiasm is being shown in the engagement of the famous Juvenile Bostonians in a repertoire of select operas and musical comedies, which should afford a week of real enjoyment.

They will open their engagement at the Lyceum Monday night by presenting the comic opera "The Gypsy Girl." The Morning Albertan of Calgary, Canada, in speaking of the "Bostonians" in "Gypsy Girl," says: "The Juvenile Bostonians, the little band of funmakers, were at the Lyric last night to dispel whatever resembles wrinkles from

RUBY LANG,
With the Juvenile Bostonians.

Calgary's brow, in that merry-go-round of mirth and madness, entitled 'The Gypsy Girl.' There is plenty of the sparkling action that has characterized the Bostonians' best productions and the same lavishness in the costumes and stage settings has always been noticeable here. Babe Mason, as might have been expected, was the bright star of the collection and her humor was as remarkable as of yore. Everything she did was funny, and she couldn't remain in view long enough to suit the audience. Rose Cole worked as conscientiously as she always does, and scored a double hit, inasmuch as she was a whole show in herself, and, in addition, convinced her auditors that she could work to distinct advantage without the aid of a Dutch side character, for there was no other role similar to her own in the piece."

Tuesday night they will present "Olivette," one of their newest pieces. Among the musical numbers to be rendered in "Olivette" are "Heart To Let," "Darling, Good Night," "Marriage Bells Chorus," "Belle of the Silvery Nile," and "First Love."

Wednesday night they will go to Superior, returning Thursday night in the musical number "Tips." Babe Mason will be seen as Mr. Short.

Friday night they will present Alfred Cellier's comic opera success "Dorothy." While this is a very difficult piece to render even by adults, the children acquit themselves nobly. The musical numbers in "Dorothy" are exceptionally tuneful. Among them are sextette, "Come Fill Up Your Glasses;" quartette, "You Swear To Be Good and True," "Queen of My Heart," "Hunting Chorus," and "Good Night Chorus." "Dorothy," the daughter of a wealthy fox-hunting squire, dons a peasant dress, and at the village inn, serves the landlord's customers. She falls in love with a gentleman whose horse has lost a shoe. Dorothy is accompanied by a friend who masquerades with her, and also falls in love with a customer. The two girls give their lovers two rings, which they swear never to part with, and the same evening present them to two grand ladies at a ball, who are no other than their sweethearts of the morning, now clad in their legitimate raiment. The two gentlemen in the middle of the night play at burglars and bind the squire in his chair and rob him. Dorothy, disguised in male attire, challenges her lover to a duel, and the challenge being accepted, displays arrant cowardice, thus making the inevitable explanation, easy and natural. The title role of Dorothy Bantam will be assumed by Rosy Cole, while Babe Mason will be seen as Lurcher, the sheriff's officer, tiny Malcyon Martin, the baby "Nordica" will be seen as Phyllis Tuppitt.

Saturday night they will present one of

ROSE COLE,
With the Juvenile Bostonians.

their favorites "The Rajah of Pazala," the opening chorous "The Sunrise Ceremonies," is one of the finest ever produced and everyone should be in their seats early to avoid missing this part of the piece. Three years previous to the opening of the play a company of Americans landed on the island of Pazala, and one of their numbers, the admiral's daughter, wandered from her companions and her whereabouts could not be discovered. The first act opens with dawn's opening ceremonies on the island, when it is discovered the Rajah has disappeared and cannot be found. According to the laws of the island, when this occurs, the first man landing before sunrise of the next day must be made the ruler. It may be added that Lieut. Claire of S. S. Washington is an old sweetheart of Miss Golding's the admiral's daughter, and has been searching ever since her mysterious disappearance.

There will be a special matinee Saturday afternoon for the ladies and children. Every child should see this remarkable organization of children.

The Motion Pictures.

Shepard's Motion Pictures will again be shown at the Lyceum next Sunday evening. Next Sunday a special program will be given, showing the latest and best films that can be secured, a number of pictures having just been received from the manufacturers and shown here for the first time. In addition to these splendid pictures, Herbert Parkhurst, the well-known baritone, will sing the illustrated songs. The prices will remain the same, 10 cents for children and 25 cents for adults, to any part of the theater.

LYCEUM NOTES.

News and Gossip of the Coming Attractions.

"The Free Lance," John Philip Sousa's stirring new opera, will play a return engagement at the Lyceum May 13, with the same superb company seen here last fall. The company has electrified the coast cities, and will play Duluth again on its return East.

* * *

A delightful play, a charming star, and a strong supporting company, is the combination that the Lyceum will offer to its patrons on May 6, when Miss Isabel Irving will be seen in Jerome K. Jeromes' newest comedy, "Susan in Search of a Husband."

* * *

Oscar L. Figman, the co-star of "The Tenderfoot," with Ruth White, owes much of his great success as a comedian to the thorough training he got in the old stock companies in the East. Dramatic writers all over the country have deplored the passing of the stock companies, and with reason. There is no school wherein the actor may learn so many of the fine points of his profession as in a permanent organization of this kind. Figman started on the stage playing utility parts, as they were called, and playing villians. The change of comedy roles was a big one, but was made at the request of William P. Cullen, who saw the possibilities in the young actor five years ago, and put him under a long term contract. He first gave him the part of the actor in "The Burgomaster." Figman was such a hit in this part that he was featured in it for two seasons, and now he is starred with "The Tenderfoot."

HALCYON MARTIN,
As "Ko Ko" With the Juvenile Bostonians.

AT THE METROPOLITAN

Miner's American Burlesquers, Prime Favorites On the Empire Circuit, Will Furnish the Entertainment During the Week.

Miner's Americans will furnish the amusement at the Metropolitan all next week, beginning their frivolities with a matinee tomorrow afternoon.

Miner's shows always make a hugo hit with patrons of the "Met" so the management confidentially expects to entertain large audiences all the week.

In addition to the matinee tomorrow, there will be afternoon performances Tuesday, Thursday (ladies' day), and Saturday.

Instead of the familiar two burlesques, the Americans are presenting an original two-act musical comedy by Dave Marion, called "Mixed Pickles." It is said to be the funniest thing he has ever written.

Tom Miner always sees to it that his shows do not look shabby from a want of pretty girls and those with the Americans are said to be prettier than any others on the circuit.

The list of principals who are also offering specialties include the famous Breakaway Barlows, in a most sensational aerial act; Zeb and Zarrow, the comical contractors, in their fun feast "At the Club;" Clark, Higgins and Bergman, sweet singers and eccentric dancers; Melville and Roller, "merry mixers in mirth and music," and Joe Goodwin, the boy monologuist.

AT THE BIJOU

Chas. Bowser and Company With a Sketch Entitled "Home Sweet Home" Will Head Next Week's Vaudeville Bill---Spanish Dancers Also Featured.

The appearance of Charles Browser and company at the Bijou next week is a guarantee the public will be well satisfied with the performance. This well known dramatic star of Daniel Frohman's staff of stars, has but recently entered the vaudeville field and has been a great succes from the start, having been featured in all the Keith & Proctor theaters of the East as a headline attraction. Mr. Browser is presenting as his vaudeville offering, the clever sketch, entitled "Home, Sweet Home." Few comedians delight and hold the attention of an audience, more successfully than does this brilliant comedian. As leading lady of the sketch Miss Lorraine Dreux will be seen. She is an artist of equal reputation, whose charming stage appearance, clever acting, and beautiful gowns are all that could be asked for.

Lopez and Lopez, Spanish musical artists will be another feature attraction. This act is surrounded by magnificent electrical effects, gorgeous costumes direct from the courts of Spain, and melodies from old Madrid, as well as popular music. Both of these artists are of Spanish blood. The lady member is of the Spanish type of beauty that is known the world over.

Charles Harris will be one of the principal comedy hits of the week. Mr. Harris was a big hit at the Bijou a year ago, and will present an entire new line of stories and songs for his return engagement. His impersonations of an old maid are very funny and never fail to bring down the house.

The Learys, Edward, Maggie and little Martine, will offer one of the prettiest sketches ever seen at the Bijou, entitled "Getting a Divorce." It is brim full of good comedy and singing numbers by little Martine.

As an added attraction, Sid Baxter, sensational aerial cyclist and juggler, will be seen. He is cleverly assisted by Miss Beatrice Southwick.

Sid Baxter is known as the man who wanted to cross a volcano in the Hawaiian Islands on a wager. He was stopped by the officials. He is the only cyclist in the world who performs the feat of going through the frame of a bicycle while riding on a slack wire, suspended in midair. He also rides unicycles and does expert juggling upon the wire.

Mr. Isadore Silver will render the popular ballad entitled "Dearie," which will be illustrated with beautiful colored views.

The moving pictures for the week show the complete story of Daniel Boone or early days in America, which is one of the best picture subjects ever seen at the Bijou.

Matinees are given daily at 2:45 and evening performances at 8 and 9:30. Seats may be reserved for matinee and night performances by either phone. A special school children's matinee will be given Saturday afternoon, with regular shows Sunday afternoon and night.

LORRAINE DREUX, AT THE BIJOU NEXT WEEK.

GOSSIP OF THE RIALTO

Bracco's Light Comedy of Serious Purpose in English ---The Art of Nazimova---The Return of Novelli.

New York, April 27.—What constitutes light comedy? Because it is light, is it a thing to be despised? Roberto Bracco, whose "Infidele," under the rather unfortunate title of "Comtesse Coquette," has served to introduce Mme. Alla Nazimova to us as a comedienne, has been sorely tried by such questions.

At least one gathers this from Herman Bahr's report of a conversation with him. This able Viennese critic of the drama is ambitious to write plays, and has written plays; but his colleagues in the one art proved loath to accept him in the other.

Bracco's contemporaries, the Italian complained—Bahr had crossed the Alps to meet him—had known him as a light and beguiling essayist and author of little dialogues and "scenes" and refused to take him for anything else. The mark had usurped the face. Whatever he wrote, they still looked upon him indulgently as a mere prattler. "plunderer" is Herr Bahr's German word.

"Infidele" is an ironic title. "Comtesse Coquette" is flat prose and false prose besides. Mrs. Moulton has given us the true measure of the lighter womanly impulse: "Thistledown is a woman's love." It is not so with the lady of Roberto Bracco's play. First, last and always she is faithful to one man and that man her husband. Patient Griselda was no more so. Only—and here is the heart of the playwright's mystery—her fidelity is sphered in freedom. Bracco does not tell us—at least not in so many words—that without freedom there can be no faith. He is not of the tribe of Holmes' katydid that saith such an undisputed thing in such a solemn way. He only tries to make us feel it. That is as well. What other end has art than to convince us that the world-old platitudes of life are next neighbors to the sky?

Yet the note of modernity is in it all. Gino and the Comtesse Nina, when they married, made it the measure of their love that on the one hand there should be no concealments, and on the other neither of them should in any way seek to narrow the other's freedom. The first touch of jealousy was to break the bonds of mutual trust and give charter to deception. In any previous age so slear and frank a recognition of the scantity of the individual in wedlock would have been impossible. Even today there are those who have stigmatized it as frothy and distasteful. Would they say the same thing of the undying theme of the play—the necessity of liberty to loyalty? One suspects that if it had been explicitly stated they would have been foremost in stigmatizing it as a platitude.

It is Gino who breaks the compact. Nina has been seeing a great deal of Silvio, and Silvio, he says, is the kind of familiar who is dangerous. At about the same time, as it happens, Silvio develops the same idea of himself. He charges that Nina, while seeming to grant everything, grants nothing. She allows herself all liberty of conduct, yet keeps free of the slightest license. How has she been able to resist him? It is not, as he rather pointedly hints, because he lacks the might of the conqueror, nor yet because she is more faithful than other wives. The man's unconscious vanity is superb. It is because she hedges herself about with all the safeguards of conventional propriety. Now if she would come to his room alone—there would be a test of prowess and of her virtue! It is a challenge, and Gino's present jealousy has left her free to accept it. The native force of her fidelity is put to the severest proof.

This matter of the first act has transpired in the lightest touch and go of conversation—plauderei, if you will. The second, which brings Nina to Silvio's bachelor rooms, develops situation and action. But still the touch is the lightest. It is not an unwarrantable levity, this playing with the idea of chastity? Is it not, in fact, frivolous, shocking? Perhaps. But, per contra, may it not be said that it is only a feeble and anaemic virtue which such a hazard can sully? It takes the forge and the hammer to put the edge on the best metal.

Silvio has prepared the field of conflict with all the arts of his kind. He has written an amorous poem to charm her mind. He has left in evidence the photographs of beautiful women—his former conquests—to pique her spirit of adventure. He has got out Chopin in the piano rack. "Chopin—das wirkt!" he says in the German text, from which Miss Colbron made her translation—a touch which has evidently defied linguistic powers. Nina finds the poem and reads it in the tone of ridicule. She passes over the feminine photographs with the eye of easy scorn and asks most interested questions about the only photograph of a man—a solemn, bearded man. Clearly the Chopin dodge won't work, and Silvio is too wise to try it. All this leads up to a masterpiese of comic invention. "You promised to seduce me," Nina says. Here I am, seduce me!" The idea—or is it only the word?—proved too much for our language. The text is "tempt me!" a change that no doubt was to have been expected from a propriety which finds a falsely pretended coquetry preferable to an open question of fidelity. Alas for conscious modesty! Instead of throwing Nina's rectitude frankly and courageously into comic relief, the suggestion is that she is covertly playing with an illicit idea, and we wish her ill.

It fares better with the critical scene of the play which follows. Gino's suspicions have kept pace with his wife's concealments. He turns up in Silvio's rooms even before Nina does, and all along one feels that his return is imminent. There is delicious comedy in the encounter of the two men, yet beneath it the suspense and the thrill of a structurally dramatic situation. In the moment in which Nina has come out triumphant from her serio-comic duel with Sylvio, Gino appears. And now the play sounds the depths of the drama of character. There is a door of escape, but Sylvio holds the key to it. Scarpia like, as he himself remarks, he demands a parting embrace as the price of Nina's successful retreat. This she refuses with brave anger and herself opens the door to her husband. For a moment a duel threatens—and much to the gallant Sylvio's dismay—but with skill and presence of mind equal to her courage, she pacifies her husband, avoiding bloodshed and scandal.

Throughout Bracco's touch is subtle and fine, his wit trenchant, his command of humorous absurdities in character broadly masculine, and throughout one feels the pulse of pure strong womanhood beneath the irridescent lightness and charm of the woman of the world.

The third act, like the first, is mainly a matter of dialogue. Gino and Nina are living as strangers under the same roof, he still the victim of jealous suspicion, she outraged by his unbelief. By a deeply

SID BAXTER,
At the Bijou Next Week.

conceived feminine ruse she lures him to make love to her even while he believes her faithless, and then in a fine turn of passion denounces his weakness as equal to that of which he suspects her. In the end she relents, giving him proof of her innocence and pardoning the jealousy, of which he is now ashamed. Sylvio comes in—the scene in Nina's boudoir—again self-duped with the idea that he is victorious. His reward is to hear the laughter of Nina and Gino reunited in the neighboring room.

An idea of conjugal loyalty as fresh and intimate as it is eternally true has been embodied in vivid characters and illuminating dialogue and developed with inerrant logic and dramatic effect in all its essential phases.

Those who judge art by the conventions of morality may convict the play of levity, or frivolity; but as an English writer has lately pointed out, the public is emerging from the state of ignorance in which judgments so formed passed as valid. The moralities, no doubt, are eternal—or at worst, as nearly so as the verities. But because it is wrong to do a thing in life is the worst of all reasons for refusing to see it enacted in the theater. For it is only by dealing frankly with life in all its essential phases that the drama can take its proper place as tonic art. The one important question about a play is that it be a true representation drawn in the spirit of wholesome seriousness.

Light "Infidele" undoubtedly is, in that it abounds in gossamer subtlety and breezy vivacity. But since when has it been an artistic crime for a comedy to amuse?

The part of Nina reveals Mme. Nazimova's exotic charm of personality in a new and more convincing phase and affords her an opportunity to show that her powers are by no means limited to Ibsen and intellectual gloom. Her dark and sharply outlined masque and her serpentine plastique are as ill adapted to comedy as they are well adapted to tragedy. Yet she lived vitally through every mood of the play and touched out unerringly its varied phases of superficial gayety and emotional depth. Each successive character she has assumed has deepened the impression of her histrionic intelligence

and versatility.

But each has also deepened the sense of the perils that beset her path. The most fleeting of all charms is the charm of the exotic, and those who have acclaimed her weird beauty are likely to tire of it first. It is a fair guess that the Nazimova undulation will one day be as obsolete as the Marcel wave. The outlook is dire. But even more portentious is the over-demonstrativeness, the restlessness of her mimetic method. It is begging the question to condone this as natural in a Slav. Unlike morals, art is not a question of geography, at least the art of impersonation. This heroine of Bracco's, with all her dexterity and lightness of mood, was above all a creature of mental poise and self-command. Her force was the force of reserve, sprung from a harmoniously blended nature, and impulses on the best of terms with one another. It jarred the illusion of Mme. Nazimova's art, though it could not destroy it, to have her quite so persistently doing things.

Most perilous of all is her speech. Her voice is of very limited range, being high pitched and almost without chest notes. She speaks nervously and from the throat. And her accent is as far as ever from accuracy and ease. Many phrases, in fact entire sentences, were indistinguishable even in the forward part of the house. Much might be said of the merely musical value of speech in the theater. Unfortunately the present case is even more vital. In any play it is an advantage to know what is being said.

MISS LAURA NELSON HALL.

• • •

In a comedy as finely and wittily written, and at the same time as subtle, as "Infidele," the loss of the precise phrase, of the accurately vernacular manner of delivering it, is all but irreparable.

• • •

Ernete Novelli is to return to the country next season for fifteen weeks under the management of Messrs. Shubert. Mr. Novilli and his wife left for Europe last week. Mr. Novelli's next American engagement will begin in New York in November, and after remaining here one month the Italian actor will make a tour as far south as New Orleans. Two plays, to be presented here next season by Mr. Novelli, in which he has not been seen in New York during his present engagement, are "Macbeth" and "Nero."

• • •

Defeating several candidates Frank Daniels, in Charles Dillingham's production of "The Tattooed Man," has been elected to the all-summer attraction for the Grand Opera house, Chicago, so his New York engagement in the Criterion theater was brought to a close at the end of last week.

• • •

Harrison Grey Fiske has signed a contract with Bertha Kalich to continue under his engagement for several seasons. Their original agreement, which covered a period of two years, terminates in May. Besides Percy MacKaye's "Sappho and Phaon," the poetic tragedy in which Mme. Kalich will appear next autumn, Mr. Fiske has selected two other new plays for her future use.

• • •

"An American Geisha," a play made from the late A. C. Gunter's novel, "My Japanese Prince," was given its first production at Worcester, Mass., last Wednesday evening. Florence Reed played the title role. The dramatization was made by Will A. Page.

• • •

Da niel Frohman has commissioned Mrs. Rida Johnson Young, who has turned out several successes during the past year, to write a comedy for him to be produced next season.

• • •

It is likely that Harrison Grey Fiske will give "The New York Idea" a London production.

• • •

E. S. Willard sailed for London last week. He does not expect to return to America for several seasons. He will devote the coming year entirely to rest and recreation.

• • •

The re-engagement of Madame Marguerita Sylva, at a handsome increase in salary, as one of the stars at the Opera Comique, Paris, gives ample evidence of the substantial success of that singer abroad, and should be a source of great pleasure to her many friends and admirers in America. The new contract just signed, provides that she is to sing only leading roles, and contemplates several creations for her during the coming season in addition to her present repertoire, which now includes Carmen, Cavalleria Rusticanna, Werther, La Navaraise, Faust, Ghyslaine, etc.

• • •

Laura Nelson Hall, who has been appearing in the role of Rhy Macchesney in "The Three of Us," at the Madison Square theater, at the Wednesday matinees, will assume the character at all performances when the company leaves New York. The run of "The Three of Us" ends tonight. The company will remain idle one week and then will play an engagement in Brooklyn at the Shubert theater.

• • •

Clare Kummer, who has been known as a writer of popular songs, has essayed to make a comic opera and has recently completed the book, lyrics and music of a two-act piece, entitled "Noah's Ark," which will have its premiere in Baltimore this month.

• • •

It is reported that rehearsals of "The Prince of Pilsen" may be given in Paris while the composer, Gustave Luders, and Henry W. Savage are in Europe prior to the coming European premier of this tuneful musical comedy. "The Prince of Pilsen" is now approaching the end of its fifth successful season in this country. Next year the piece will be sent on an extended tour to the Pacific coast.

• • •

A Paris cablegram announces that Gertrude Rennyson, for four years

MISS CLARE KUMMER

one of the prima donnas with the Savage English grand opera company, is soon to make her European debut as Elsa in "Lohengrin" under the management of the Theater Royal de la Monnale in Brussels. Miss Rennyson last appeared in this country as Sieglinde in "The Valkyrie." During the past year she has been studying in Paris.

• • •

The cornerstone has been laid for David Belasco's new Stuyvesant theater, in New York city. It is now in the course of construction in Forty-fourth street, between Sixth avenue and will be ready for occupancy next September. It is said that it will be a model of architectural elegance, artistic propriety and absolute safety and comfort. Of course Mr. Belasco's ideas of aestheticism will be carried out. David Warfield, in a new play, will be one of the early attractions to be seen there.

• • •

David Warfield's vacation this summer will be largely taken up with study and rehearsals of the new comedy in which he is to open the Stuyvesant theater in September. It can be stated on good authority that Mr. Belasco has not yet handed him his part.

• • •

Ole Bang has been chosen leader of a company of Scandinavian actors to give performances in Brooklyn, Boston, Philadelphia and some smaller cities. The first appearance was made in Brooklyn on April 11, when a modern drama, "Mrs. Mimi," by Gustav Wild, was presented.

• • •

The company at Elitch's Gardens, Denver, will include Ida Conquest, Dorothy Donnelly, May Buckley, Marion Abbott, Edna A. Crawford, William R. Mack, Dodson Mitchell, Edward Mackey, Frederick Paulding, Walter E. Perkins, Hall McAllister and G. Harrison Hunter. The company will open at the Tabor Grand, Denver, on May 5, in "A Social Highwayman," and after three weeks they will go to the Gardens for the summer.

• • •

Olga Nethersole will play a four weeks' season of English drama in Paris this year, beginning about June 1.

• • •

Arrangements were under way last week for William A. Brady to secure the Auditorium theater, Chicago, for a term of ten years, at an annual rental of $100 000. Up to last Saturday contracts had not been signed, but there was every prospect that the deal would be carried through.

• • •

Harrison Grey Fiske has secured the stage rights of "Sappho and Phaon" from Percy Mackaye, its author, and Madame Bertha Kalich will appear in it as Sappho next season. The play, a poetic tragedy, while preserving in technique the ancient unities and in subject matter dealing with legendry, and historical persons of the time (60 B. C., is in no sense archaic. It is essentially a modern drama, whose plot—woven of a few large, distinct characters—reveals a passionate love story. It is set in a single scene, the exterior of a Greek temple overlooking the Aegean sea. During the action, temple, olive grove, shore and sea are seen successively in the brilliance of day, by moonlight and in the mists of dawn.

• • •

J. Ward Kent and H. Guy Woodward have formed a partnership for sending out companies in new plays. The firm, to be known as Woodward & Kent, has offices in Chicago. The first company will open in June with "Little Yenie Yonson." Others to follow are "In the Silence of the Night" and "Sheriff Sal."

• • •

Ezra Kendall is to appear next season in a new play by George Ade. He expects to open at Ogden, Utah, on July 31, and play west to San Francisco. His present season will last into June.

• • •

Cyril Scott has had an offer to appear in the title part of "The Prince Chap" in Paris. Mr. Scott speaks French, and has received a copy of the French adaption to study.

• • •

Maude Fealy's tour in "The Illusions of Beatrice" ended on April 20. Later in the spring she will go to London to see "The Stronger Sex," in which she is to appear next season.

• • •

W. A. Brady appeared as the butler in the first act of "The Man of the Hour" on April 9, taking the place of Mark J. Cody, who read the lines of Scott Gibbs, usually played by Charles D. Mackay. Mr. Mackay was taken ill just before the performance and his understudy could not be found.

• • •

Robert Edeson has formally announced his engagement to Ethel Levey. The marriage will probably take place next month in London.

• • •

Augusta Gloss, recently with the "White Chrysanthemum" and even more recently in vaudeville, was married to Charles S. Leeds, a wealthy Western man, at Christ church, Philadelphia, on April 2.

• • •

Gus Hill has decided to organize a second company to play "The Shoemaker" in the territory not reached by Joe Welch next season.

• • •

Arrangements have been made for Blanche Walsh to play an eight weeks' engagement in San Francisco at the new Van Ness theater.

• • •

Madame Melba has had a wing of the Home for Blind Babies named in her honor because of her interest in the institution. She raised a large sum toward the construction of the new wing by the sale of autographed photographs.

• • •

Charles H. Prince, the Mr. Blake in George M .Cohan's "Forty-Five Minutes from Broadway," will be featured next season in a three-act musical play from his own pen, called "That Man Blake." The new play by Charles Klein, which Charles Dillingham is to produce, has been named "The Stepchild." Among the players already engaged are Chrystal Herne, John Finley, Grace Filkins and William Sampson.

• • •

William Archer, the dramatic critic of the London Morning Leader and known on both sides of the Atlantic as the author of the standard translations of Ibsen prose plays, has come to visit America after an absence of eight years. Officially, he is the British representative in connection with the simplified spelling commission, now sitting in New York, but Mr. Archer proposes to combine pleasure with his work and visit many American cities.

• • •

Madame Modjeska, with her husband, the Count Bozenta, have been in New York for a fortnight attending plays and otherwise enjoying themselves. Madame Modjeska reasserts her farewell to the New York public as an actress. She is now engaged in writing her memoirs. She says English fetters her thought, and she is writing in Polish to be translated later.

• • •

One of the highest tributes that can be paid a dramatic author is the realization that his works outlive the period of their creation, for tastes and fashions in plays change the same as the designs of the modiste. No plays are more often presented by the stock companies all over the country than "The Wife," "The Charity Ball" and "Men and Women," all of which date back to the earlier stage of Mr. Belasco's creative energy. Within a few weeks these three plays were revived in New York this season. Even "La Belle Russe," one of Mr. Belasco's earliest successes, has recently been played. The reason is that each strikes a note that rings true to human nature and leaves a lasting memory of pleasant entertainment.

• • •

It is a long lane that has no turn, and "The Road to Yesterday" is stretching away to the vista of the dim and distant past, when youth was in flower and all the world was smiles. "The Road to Yesterday" leads from Brooklyn to New York. This dainty and fantastic comedy left the Shubert in Brooklyn to continue its long run at the Lyric theater in West Forty-second street, last Monday evening. There have been no changes in the cast, and the popularity obtained by this production, styled by the New York public, "So different," was again attested. It has been decided to keep "The Road to Yesterday" at the Lyric theater throughout the summer. It will then be given a winter home in some local theater.

• • •

Ethel Barrymore who is now in the third month of her New York engagement has scored a great success at the Empire theater with her third play, Robert Marshall's farcical romance, "His Excellency the Governor." Miss Barrymore's admirers find genuine delight in the bright lines and clever situations as well as in the charming performance which the star gives of the heroine Stella De Gex. This is a role which required just that touch of gaiety and dash of humor that Miss Barrymore can so skillfully put into a comedy part. She acts the character splendidly, getting all the fun and charm out of it, and in the succession of gorgeous gowns she wears during the performance, presents a series of wonderfully beautiful pictures. The cast comprises Bruce McRae, Eugene Jepson, Hattie Russell, Mary Nash, John Barrymore and William Norris who plays the part he originated when the play was first produced in this country.

• • •

William Collier is doing more to keep Broadway lively and happy these evenings than any other comedian in New York. He continues to be a great big laughing hit in "Caught in the Rain" at the Garrick theater, where he is playing to crowded houses eight times a week, and where the end of his reign of fun and jollity does not seem to be anywhere in sight. There is no let-up to the merriment from the moment the first curtain goes up on a street in Denver, until the bright and breezy romance come to a finish in a picturesque little log clubhouse in the Rocky mountains. Mr. Collier in the role of Dick Crawford, the hero, who is a fellow of infinite repartee—one who knows how to hand out the merry jest in teling fashion—is, of course, in the forefront of the fun-making, and he takes a big hand, too, in the love making, for after shyly losing his heart to a delightful young woman, he does not cease the amusing pursuit of her until he wins her. It is the best Collier part the comedian has ever had.

• • •

Hattie Williams' first starring season has been one succession of triumphs. Opening at the Criterion theater, New York, on the hottest night of the summer "The Little Cherub" scored instantaneously. The success was not momentary for it grew in popularity and rounded out the most prosperous run any musical play has made in New York this season. The following weeks in Boston were marked by the same sold out nightly houses. Miss Williams has by her cleverness, attractive personality and pleasing voice thoroughly established herself as one of the big stars in the Frohman firmament. Miss Williams will open next season in "The Little Cherub" and after a brief tour will come into New York in a new musical play.

• • •

Sam Bernard and his laughter landslide, "The Rich Mr. Hoggenheimer" after having completely covered Manhattan with a fine strata of merriment have moved westward and the gale of fun has increased. In Pittsburg at the Nixon, Mr. Bernard broke all laughter-show records of the season and Cincinnati followed with an equally good week. He is now settled at the Illinois, Chicago, for a spring run and one that has opened with every sign of turning out to be the biggest engagement he has ever played there. Mr. Bernard was never funnier than he is as "Piggy" in his new play which is a sequel to his former success "The Girl From Kay's." In the new play "Piggy" has married Winn , an dthey have a grown son whose love affairs bring "The Rich Mr. Hoggenheimer" on his first trip to America.

• • •

What should five lovely mermaids do if they suddenly discovered themselves locked up in a sealed air-chamber with one poor little mouse? That was the predicament in which five mermaids of "Neptune's Daughter" at the New York Hippodrome found themselves one night last week, and which nearly broke up the performance. Margaret Townsend, the queen of the mermaids, almost lost her voice as a result of the catastrophe, and Angelina Pessione, who is an Italian and a good swimmer also, came to the surface of the water ten minutes too soon, rather than stay in the air-chamber with the mouse. She spent the intervening time swimming around the tank, and when the scene was over she was almost exhausted from the hard effort. The mouse was killed, but only after putting up a brave fight.

Every one who has seen "Neptune's Daughter" knows that the mermaids come up through the water from the bottom of the tank, but no one knows what sort of an apparatus they have under the water to provide them with air. The secret of this apparatus is carefully guarded, but it is known that the mermaids are in some kind of an air-chamber, and are completely cut off from the outside world, except by means of telephones. In some way last week, before the tank was filled, a mouse got in the center air-chamber and was concealed among some of the intricate machinery. Margaret Townsend, Angelina Pessione, Bernice Elsler, Juanita Davis and Beryl Clifton all took their places in the air-chamber before the tank was flooded, accompanied by Sam Baker, an expert swimmer who manipulates the machinery under water by which the mermaids arise. After the water shut off all communication with the outside world, Miss Townsend and Miss Pessione were exchanging reminiscences, when suddenly Miss Townsend saw something move on the wall of the air-chamber, which was brilliantly lighted.

"Great Heavens!" she cried, "it's a mouse!"

The mermaid shrieked, but there were no chairs handy on which they could stand, and they had no skirts to gather closely around them, for the mermaids do not wear skirts. Sam Baker made a grab for the mouse and cornered it behind the telephone, but the little animal gave him a vicious bite on the finger and escaped. At this juncture Angelina Pessione concluded the air-chamber was getting too warm for her. She gave an extra shriek and dived into the water to come to the surface. The stage manager saw that something was wrong, but could not stop the performance to ask Miss Pessione why she came to the surface, so Miss Pessione drifted around with the tide until the scene was over. Meanwhile, the other four mermaids huddled together, emitting shrieks that the audience could not hear, while Mr. Baker valiantly tried to catch the mouse. He had no weapons but his hands, and nothing was loose in the air-chamber with which to hit it. At one stage of the conflict the mouse dropped upon Miss Townsend's bare shoulder, and she almost collapsed. Finally, Baker grabbed it a second time and held its head under water, thus drowning it. Miss Townsend was so upset that when her cue came to leave the air-chamber and speak her lines on the top of the water, she could hardly get through her part. It was the most exciting time the mermaids have ever known at the Hippodrome.

LAKE SUPERIOR IRON MINES

(Continued from Page 9, Second Section).

thousand feet. The lens has widened somewhat at this point, and there is at least a hope of better things to come. The ore at the Lamont runs about 54 per cent, and like that produced at the bulk of the mines of the Crystal Falls district it is well up in phosphorus. It is won by the caving system, which at this mine has answered admirably, practically all the ore body being recovered, with a minimum use of timber.

Corrigan, McKinney & Co.'s Armenia mine at Crystal Falls shipped less than 30,000 tons last season, but it will do much better this year. This is an old property rejuvenated latterly in consequence of fresh ore discoveries. The mine made its first output in 1888, but for ten years prior to 1901 it was closed down, and in 1905, again, it made no production. It shipped over 100,000 tons in 1902, its banner record, since which time its output has been small. The ore is low in metallic iron and quite high in silica. There are two shafts, and the product is won by the caving system. All told, the Armenia has shipped 275,000 tons.

The Kimball is a new mine with the earmarks of developing into a comparatively big proposition in time. So far it has met all expectations. The ore body on the level opened during the winter is larger and the ore, itself, better than that encountered on the first level. A fair-sized stockpile has been accumulated in the course of the development work, and this ore will be shipped this season, together with as much more still to be hoisted. The property is without railroad facilities at present, but these will be provided early in the summer. The Chicago, Milwaukee & St. Paul tracks are distant one mile, and those of the Chicago & Northwestern half a mile.

Corrigan, McKinney & Co. also are developing a new mine in the Fairbanks. This property adjoins the Great Western, and was the pioneer proposition of the Crystal Falls field. It was opened in 1882, and closed one year later, shipping 8,500 tons in both seasons. The work done was merely a surface scratch, affording no basis for judging, the real worth of the property, but nothing more was done until last year, when Corrigan, McKinney & Co. took over the tract and proceeded to investigate its possibilities. Since then it has been determined to be a good mine—one not as large as others in the vicinity, but one offering much promise of expansion as depth is attained. A fair-sized production will be made this season.

In all, from the time of their initial shipments to the opening of the present season, the Crystal Falls properties now operated by Corrigan, McKinney & Co. have forwarded 6,532,500 tons of ore. The other mines in the Crystal Falls district are the Hollister, an old-time property, taken over some time ago by the Cleveland firm of M. A. Hanna & Co.; the Brisbol, operated by Oglebay, Norton & Co.; the Hemlock of Pickands, Mather & Co., and the Mansfield and Michigan of the United States Steel corporation. The Hollister will probably enter the shipping list in a small way this season. This property is about four miles east of Crystal Falls and about midway between that city and the Mansfield mine. It was first opened in 1890, and closed three years later after shipping 4,000 tons of ore. The present operators have found some ore in the upper workings, the result of drifting, but are basing their hopes on developments at depth. Sinking is in progress.

Something over 100,000 tons of ore were shipped from the Hemlock mine last season, since which time considerable has gone out by the all-rail route. Altogether, the mine has produced 1,280,000 tons, and it will be active for many years yet. The ore bodies are large and continuous. The back-stoping method of mining is the system followed. There is one fine shaft, 7x15 feet in dimensions, and down 950 feet. The mine was disvovered in 1887, and was leased by Pickands, Mather & Co., two years later. The deposit is a hard, non-Bessemer hematite. The vein was thirty to thorty-five feet in width in the upper levels, and has widened to three times that in the bottom. A portion of the mine is opened under the bed of the Hemlock river, but little water has ever come in, and every precaution has always been taken to prevent breaking through.

It was at the Mansfield mine, located seven miles east of Crystal Falls, and in part developed under what formerly was the channel of the Michigamme river, that in consequence of the stream breaking through into the workings, there was occasioned the worst disaster ever known in the Lake Superior iron region. This was in September, 1893, some years before the Steel corporation took over the property. It was in following a rich vein of ore so high that the river broke through filling the entire mine in less than five minutes and drowning twenty-eight men like rats in a trap. After that the mine was permitted to lie idle until 1896, when the river was diverted to a new channel for a distance of nearly a quarter of a mile, and the property was unwatered. The ore at the Mansfield is of very good grade, but the Steel corporation has been operating the property with a reduced force the past two years, and during that time has made no shipments from it, with the exception of 40,000 tons sent out in 1905. A big stockpile is being accumulated. Whether it will be drawn upon this season is not known. The Mansfield has shipped 750,000 tons of ore all told.

The Steel corporation's Michigan mine is located in the vicinity of the Hemlock property at Amasa. It has been idle the past year, and it has not been announced when operations will be resumed. The property has shipped only 114,000 tons altogether. It was opened in 1832, but has been closed down most of the time since. A considerable stockpile has been accumulated, and as is said in connection with affairs at the Mansfield there is a belief that the product is being conserved for use at the big steel works building at Gary, Ind. The ore here is hematite, 55 per cent in metallic iron and .25 per cent phosphorus. The Michigan is developed by one shaft, 6 by 16 feet, three-compartment, and down 500 feet. The slicing method is the system of mining in vogue. The Wilkinson estate of Marquette is interested in the fee of this property.

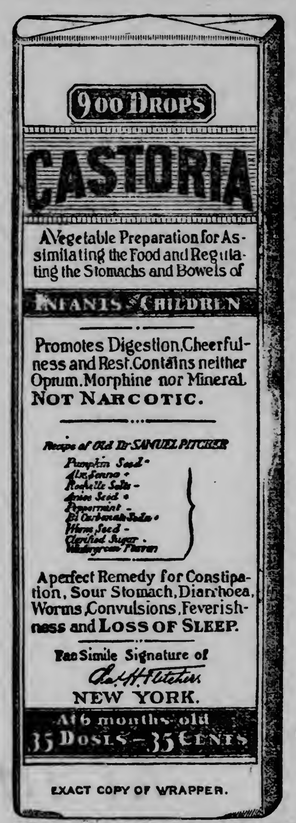
The Bristol mine of Oglebay, Norton & Co. shipped 300,000 tons of ore last season, and will do even better than that this year. The property is just north of the city of Crystal Falls and adjoins the old Youngstown mine on the west. Only the eastern end of the tract is being developed at present. Despite that it is not far above the Bessemer line in phosphorus, the ore is of low grade, a hard brown hematite, and it contains more manganese than is ordinarily found in the Lake Superior product. For the most part the deposits have been small and irregular, but they are persistent, and it is the expectation that these will be found to be united at farther depth and form one substanial body. The milling system of mining is used. The mine was originally developed as an open pit proposition. The shaft, 8 by 12 feet, three-compartments, is down 750 feet. Considerable stripping was done during the winter, exposing much of the manganate grade of ore for slicing down. Later on, when the iron trade slackens and more time can be devoted to the task, the western end of the property will be exploited. There is a big territory of much promise here, although as far as this portion of the mine has opened little more than small pockets of ore have been found. The Bristol has shipped in all, 1,252,500 tons of ore, while of the 58,,676,500 tons produced on the entire Menominee range since the opening of those fields in 1877, approximately 11,100,000 tons have come from the Crystal Falls district.

For the purpose of ore quickly determining their mineral value, additional diamond drills have been installed on the lands of the old Hennipin Iron company on the Menominee range. This tract lies between the city of Crystal Falls and the Tobin mine, and is being exploited by Corrigan, McKinney & Co. of Cleveland, the biggest mining operators in the district. Important developments are anticipated. One drill has been in commission for nearly a year past, and now that it has been reinforced by two others is taken as an indication that the company is satisfied with the showing made to date.

The Sullivan Exploration company of Chicago has a diamond drill in operation on the Swanson property, in section 29, 43-34, western Menominee range, for the Buffalo & Susquehanna company. The tract is very favorably located. This is the first work ever done in the district by the Sullivan people, and now that they have entered the field it is expected they will land other contracts, the older operators in the region having in hand about all the drilling they can conveniently attend to. The Sullivan company has a large number of drills in commission in foreign lands. The so-called Walter Prickett lands, embracing several thousand acres on both sides of the Paint river, north of the village of Iron River, have been taken over under option by A. J. Whiteside of Duluth, who has operated with much success on the Mesaba range. They will be given a thorough test.

Several hundred new dump cars, manufactured in Detroit, have been delivered to Steel corporation mines on the Mesaba range during the past few weeks. There will be approximately forty mines shipping over this company's Duluth & Iron Range road this season, and to handle their outputs will tax the rolling stock of the line to the utmost. The total shipments are expected to exceed 10,000,000 tons, which will be greater than in any preceding year, the 8,000,000 tons forwarded in 1906 now holding the record. The Hawkins mine of the International Harvester company will ship upwards of 400,000 tons this year. This will compare with 300,000 tons forwarded last season. The Hawkins, opened originally as an underground mine, is now a steam shovel proposition entirely. The new mine which the Consumers Ore company is opening near Mountain Iron has been named the Hanna. A large amout of new work is in progress there at present. The E. I. DuPont Powder company, with mills at Marquette and Ashland, and which supply the bulk of the explosives used in the Lake Superior region, has recently constructed a large magazine on the outskirts of Bovey, from which will be served the big properties the Steeel corporation is developing in that vicinity.

The Wisconsin Central railroad has awarded a contract to McArthur Bros. of Chicago to fill in the big White River ravine on the line near Ashland. The work will be started shortly and will not be completed until next November. A crew of some 300 men will be employed on the improvement all summer. The Gogebic range ore traffic will be facilitated with this project carried out. The old Father Hennepin and Snyder mines, Gogebic properties held for some time past by Jones & Laughlin, promise to become important shippers during the next two seasons. The developments are reported entirely satisfactory.



A report, as yet unconfirmed, is in circulation to the effect that the Munro mine, near Norway, on the Menominee range, will not be operated this season. The Munro, which is a property of the Buffalo & Susquehanna company, is an open cut, summer proposition, and has usually given employment to about fifty men. The ore is of a low grade, plenty of which is produced at other mines of the company.

Hoisting and general mining operations have been resumed at the Steel corporation's Section 16 mine at Ishpeming, Marquette range. The property had been working with a reduced force for nearly two months past while the shaft was being retimbered and equipped with new cages and skips. An increased production will be possible with the new equipment installed.

Exploratory operations are still being conducted by the Steel corporation in the Baraboo region of Southern Wisconsin. Most of the work is being done in the North Freedom district. Capt. William Trebilcock, formerly of Crystal Falls, is in charge of the operations.

Don't Poison Baby.

FORTY YEARS AGO almost every mother thought her child must have PAREGORIC or laudanum to make it sleep. These drugs will produce sleep, and A FEW DROPS TOO MANY will produce the SLEEP FROM WHICH THERE IS NO WAKING. Many are the children who have been killed or whose health has been ruined for life by paregoric, laudanum and morphine, each of which is a narcotic product of opium. Druggists are prohibited from selling either of the narcotics named to children at all, or to anybody without labelling them "poison." The definition of "narcotic" is: *"A medicine which relieves pain and produces sleep, but which in poisonous doses produces stupor, coma, convulsions and death."* The taste and smell of medicines containing opium are disguised, and sold under the names of "Drops," "Cordials," "Soothing Syrups," etc. You should not permit any medicine to be given to your children without you or your physician know of what it is composed. CASTORIA DOES NOT CONTAIN NARCOTICS, if it bears the signature of Chas. H. Fletcher.

Letters from Prominent Physicians addressed to Chas. H. Fletcher.

Dr. J. W. Dinsdale, of Chicago, Ill., says: "I use your Castoria and advise its use in all families where there are children."

Dr. Alexander E. Mintie, of Cleveland, Ohio, says: "I have frequently prescribed your Castoria and have found it a reliable and pleasant remedy for children."

Dr. J. S. Alexander, of Omaha, Neb., says: "A medicine so valuable and beneficial for children as your Castoria is, deserves the highest praise. I find it in use everywhere."

Dr. J. A. McClellan, of Buffalo, N. Y., says: "I have frequently prescribed your Castoria for children and always got good results. In fact I use Castoria for my own children."

Dr. J. W. Allen, of St. Louis, Mo., says: "I heartily endorse your Castoria. I have frequently prescribed it in my medical practice, and have always found it to do all that is claimed for it."

Dr. C. H. Glidden, of St. Paul, Minn., says: "My experience as a practitioner with your Castoria has been highly satisfactory, and I consider it an excellent remedy for the young."

Dr. H. D. Benner, of Philadelphia, Pa., says: "I have used your Castoria as a purgative in the cases of children for years past with the most happy effect, and fully endorse it as a safe remedy."

Dr. J. A. Boarman, of Kansas City, Mo., says: "Your Castoria is a splendid remedy for children, known the world over. I use it in my practice and have no hesitancy in recommending it for the complaints of infants and children."

Dr. J. J. Mackey, of Brooklyn, N. Y., says: "I consider your Castoria an excellent preparation for children, being composed of reliable medicines and pleasant to the taste. A good remedy for all disturbances of the digestive organs."

GENUINE CASTORIA ALWAYS
Bears the Signature of
Chas. H. Fletcher.

The New England Magazine for May contains a surprising amount of matter of much and varied interest to readers in general and New Englanders in particular. The number starts off with a monograph on that stout old New Hampshire warrior, Ex-Senator William E. Chandler, head of the Spanish treaty claims commission, by David S. Barry. Mr. Chandler himself contributes the story of his famous "liar" controversy with President Roosevelt, of the work of the Spanish claims commission and the story of the part in the Hayes Tilden controversy of long ago. There is a splendid frontispiece portrait of Mr. Chandler as well as other interesting pictures of him and members of the Spanish claims commission.

G. Stanley Hall, president of Clark university, bitterly arraigns the American teaching methods and compares them unfavorably with those of the Germans in a vigorous and informative article entitled, "The German Teacher Teaches." The telling sarcasm and vigorous criticism of this article will no doubt raise a controversy among American teachers and superintendents to whose methods and ability it gives very little credit.

"A Day in Howell's Boy-Town" is the story of a visit to Hamilton, Ohio, made famous by being the birthplace of William Dean Howells and a trip to the places of which Howells has written in the story of his boyhood days. The authors were fortunate in finding a playmate for the boy Howells of old and learning many interesting things about the boyhood of the eminent author and editor.

The poet Lowell asked "What is so rare as a day in June?" And the answer is: A right down good detective story. Lippincott's Magazine is therefore lucky to secure for the complete novelette in its May issue one that is up to the top-notch. "The Moyett Mystery," by Nevil Monroe Hopkins, is superlatively original in scheme, yet quite within the realm of reason. A satisfying conclusion is reached through rapid-acting scenes of thrilling obscurity. While love is not the primary interest in this captivating tale there are glimpses of the tender passion, between a niece of the victim and one of the men who essays to unravel the mystery, which delieve the high tension in which the whole is enveloped.

There are eight short-stories up to the standard which this magazine has established—and endeavors to raise a peg with every number. Bertha M. Sinclair contributes one of her best stories of the Far West, "The Deputy," which is humorous and pointed. A charming love-story of artistic trend is "The Real Thing," by Katherine Metcalf Roof. "The Firebrand, a tale of South Russia by George Allan England presents a powerful picture of present-day priest-craft in the land of the czar. Minna Thomas Antrim's sweet child sketch, "Sadie of the Kind Eyes," blends humor and pathos. A lively story of modern home life is "That Deal of Doughty's," by Walt Makee. "The Great Tangle," by Jane Belfield, is a clever emotional monotone. An entertaining satire of a triangle—one man and two girls—is "As Managed by Carolyn," by Jean Louise West. "Jimmie Emmencé, Matchmaker of Circle N" is a Western love-story on novel lines; its author is C. Cunningham.

Two of the leading articles in the May issue of Wood Craft are on the modern shop practice of the wood finisher. They take up the essentials of the art in the one instance, and in the other discuss with zest the various explanations offered for the imperfect workmanship on a piece of veneer used by a maker of automobile bodies. The reasons advanced are diverse and thoughtfully suggestive. There is a thorough treatment of the swagging of thick saws for grooving and a chemist of considerable experience in manufacturing processes gives a lengthy list of approved recipes and methods for the making of all sorts of glues and cements of value to the worker in wood. This latter article is especially complete, and contains the essence of a volume on agglutinants.

If one would know what is "doing," one should read The World To-Day for May, which supplies information for the trifling sum of 15 cents, with plenty of pictures thrown in. The leading article is entitled "Packington Today," and is the result of a thorough personal investigation of the packing houses by the editor, Shailer Mathews. It is illustrated with unretouched photographs. As pertinent to the holding of the national arbitration and peace congress in New York in April, the editorial entitled "The Luxury of War," points out the folly of this method of settling differences between nations. A sketch of Richard Bartholdt, author of two important propositions to be discussed at The Hague conference, is from the pen of Jewell H. Aubere. There is also an interesting account of the Shakespearian and Early English scholar, Frederick J. Furnivall, by Frederick M. Padelford, with a fine portrait, which serves as a frontispiece. Hugh C. Weir describes "The Fighting Spirit of Eva Booth." The subject of immigration is one of such live interest today that the story by Prof. A. S. Isaacs, "How the Jewish Immigrant is Cared for at New York," is timely as well as suggestive of what might be advantageously done for all immigrants.

Faces are bright or not. Depends upon nerves.

BEST KNOWN HALF DOZEN GOVERNORS IN THE LAND

Two of Them Are Supposed to be Grooming Themselves for Possible Presidential Choice, Though Neither Hughes of New York Nor Johnson of Minnesota Will Say a Word on the Subject---Contrasts and Parallels Between the Two Men---Each First Won National Reputation by Working for Insurance Reform ---Each the Only Candidate of His Party Chosen at Last Year's State Election.

By DEXTER MARSHALL.

(Copyright, 1907, by Dexter Marshall.)

For various reasons, such as the president's boom for his friend Taft, the vice president's boom for his friend Fairbanks and the activities of Mr. Bryan, there is less talk than formerly about the presidential chances of certain state governors. Yet their chances have by no means been eliminated. The national conventions are still a year in the future, and there is plenty of time for the development of some mighty promising gubernatorial White House movements.

Only two state governors are now often mentioned for first national honors, however. Folk of Missouri, the subject of many an impassioned platform and flaming head letter indorsement for presidential nomination by the Democrats in the last few years, it is now understood, has senatorial aspirations only. He hopes to represent his state as conspicuously in the upper house as Former Governor Tillman has represented South Carolina and Former Governor La Follette of Wisconsin. Deneen of Illinois and Cummings of Iowa seem to be definitely and irrevocably out of it for 1908. The latter, like Folk, say his friends, has senatorial ambitions only, and is not likely to have any other.

For present at least, Deenen seems to be riding on the Taft band wagon, and there is no present sign that he will try to mount a Washington band wagon seat of his own for some years to come.

It is different with the governors of New York and Minnesota. The entire country looks upon Hughes as a possibility, should he make good in his present fight as governor for control of public utilities, etc. The country at large knows less about Johnson, and is only beginning to speak of him and Washington in the same breath, but the people of Minnesota, regardless of politics, have long been thinking of the time when he may be invited upstairs by his party.

Contrasts and Parallels.

There are many contrasts and some paralels in the character and history of these two men. Hughes is 45, Johnson 46. Hughes, Republican, was the only candidate of his party chosen at last year's state election, all the other elected officers in the Empire state being Democrats of the Hearst following. Hughes' plurality was over 57,000.

Johnson, Democrat, was the only candidate of his party in his state to be chosen either in 1904 or 1906—he is now serving his second term—and he was elected the first time by a plurality of only about 8,000. Last fall, however, his plurality was more than 75,000; this in a state that has never given a Democratic plurality in a presidential year, and is normally Republican by from 50,000 to 60,000.

Both Hughes and Johnson first made the national public sit up and take notice by their work in the life insurance field. Hughes coming to the front first, since Johnson did not suggest the Chicago conference of governors, state insurance commissioners, etc., over which he presided, until after the Armstrong committee's exposure had been laid before the world. Johnson's work in forcing reorganization upon a big Minnesota company, however, was done before the conclusion of the Armstrong investigation. He has been a prominent member of the international policyholders' committee.

There has been quite as much apparent harmony between Governor Johnson and the president, despite their opposite party affiliations, as between Governor Hughes and the president. All three men profess to be guided by the same basic principles, and there have been several complimentary passages between Roosevelt and Johnson. Such passages between Roosevelt and Hughes of late, however, have been somewhat rare, though Roosevelt indorsed Hughes before the election, and they have broken bread together several times since. The two governors are similarly situated with regard to their state legislatures, each finding it rather difficult to secure the passage of his favorite measures, but with a difference; the majority in the New York legislature is of the same party as the governor, while the majority in the Minnesota legislature and the governor are of opposite parties.

It is generally agreed by all hands, their bitterest opponents included, that Hughes and Johnson are both men of strict integrity. Personally they are of widely different type.

Charles Evans Hughes is of middle weight, light, ruddy complexion, about 5 feet 10 inches in height, and with brown hair and beard, the latter being so bushy as to lead an opponent in last fall's campaign to liken him to an animated feather duster. John Albert Johnson—there are thousands of John A. Johnson's in Scandinavian Minnesota—is 6 feet, loose jointed, swarthy and smooth shaven. He weighs 184 pounds.

Hughes still carries himself with the air of a rather bookish lawyer, and thought himself so poor a mixer last fall that he got one of the best Republican mixers in New York—Job Hedges by name, you may have heard of him—to make the campaign rounds with him and add warm hand spice to the speaking. Despite Johnson's rather slender length, his movements are graceful, and he always was a good mixer. He learned to be one when a poor boy, as poor boys have to before they can do much climbing, adaptability being one of the most important courses in the college of hard knocks.

Evolution of Hughes.

Both Hughes and Johnson have grown immensely since 1905, the year in which each of them began to come forward, Hughes in the gas investigation, and Johnson serving his first gubernatorial term. Johnson always was personally popular with whoever knew him; Hughes' personal popularity before his election was restricted to a small percentage of his acquaintances, and even those who made up this percentage used to say that he never would be able to make himself popular. Yet today ,only seven or eight months after his nomination, he is an unusually "hail fellow, well met," who makes friends quickly, and with nearly everybody he meets, excepting those who oppose his most cherished plans.

Nobody has ever charged Hughes with playing politics in the conventional way, but his determination to overcome his old professional stiffness, and to make himself personally known to an unusually wide circle is generally apparent, and his efforts to do these things are being watched with interest.

His activities along this line have greatly increased since the beginning of January. All through December he received many invitations to attend public dinners, at each of which he would have a chance to speak his mind to the public, but he refused most of them. Then, when asked to speak at a dinner inaugurating a movement to decrease accidents, he accepted, because he believed in the movement, but let it be known that he expected to be too busy with his reform program as governor to attend any other functions away from Albany until after the close of the legislative session.

He attended the "safety" dinner and made a rattling good adddress, short, to the point, and utterly devoid of anything concerning his gubernatorial plans. Within a few days thereafter, however, he began to accept invitations right and left, most of them in New York, each of which required a considerable absence from Albany, and in many of his speeches he has spoken freely of his plans and purposes. Instead of being more difficult to secure for post prandial speaking than most early governors, as apparently he had planned, he has done more miscellaneous speaking in the last four months than almost any New York governor within the memory of man.

Furthermore, he has generally been accompanied by his military secretary, and not infrequently has had the support of his entire military staff, gorgeously uniformed and highly impressive from a spectacular standpoint.

His aloofness with regard to the politicians of which you have read, has been as marked as his unexpected cordiality toward the public. His decision not to occupy the little back conferences by his predecessors, but conferencesby all his predecessors, but to talk to everybody in the big governor's room where everybody can hear what is said, caused almost as much amazement at first as his most drastic legislative proposals.

Johnson is not a college man; Hughes is, having attended Hamilton, now Colgate, before going to Brown university, where he was graduated; but he had to work as a youngster before graduation, as well as afterward. He has been a small money lender's clerk, a school teacher, an instructor in a law school, and has followed several other callings beside the law and the governorship for a livelihood.

He had a hard time getting his first job as a teacher at the Delaware academy, Delhi, N. Y., because of his youthful appearance, and thereby hangs the tale of his whiskers, which lend him such distinction in these days of smoothly shaven faces, or mustaches only.

He made several applications in person before trying Delhi. In each case he failed, and, as he suspected, because he looked so young so he wrote to the Dehli authorities, detailing his qualifications as he understood them, and was promptly engaged. But he received quite a jolt when he presented himself. Slender, angular, fair, smooth-faced and immature in appearance, not at all the sort of chap the authorities expected, they seemed to hesitate after looking him over. Then they told him frankly that they had some doubt whether one so young looking could manage the stalwart big boys to be placed in his care.

"Why," said one, "you have no more whiskers than an egg."

It was admitted, though that there was no question as to his scholarship or mental ability, also that a contract was a contract, and he was allowed to go to work. He managed the big boys all right, but he grew whiskers all over his face as soon as ever he could.

How Johnson Came Up.

The story of the rise of Johnson was published broadcast over the United States during the first gubernational campaign, and has been repeated and alluded to many times since then.

He is one of the class from which countless statesmen, soldiers, captains of industry and leaders of American men in every line have come, and his story strikes a almost universal responsive chord. His election on the second time by nearly tenfold as great a plurality as the first, however, must have been due to something quite different from any sentimental interest felt in him personally because of his early difficulties.

Those who know Johnson best say he is an accomplished politician, yet a man whom the solid business element is not afraid to trust. He is something of a reformer, too, and some fear has been expressed that if he has his entire will as to the control of the great insurance companies in Minnesota they will be driven altogether out of the state. He began on the National Insurance Company of Minnesota during his first term, removed its officers, including the president and a former president, and caused the conviction of several insurance men on criminal charges.

He has brought about a degree of state railroad reform, has lessened illegal trespasses upon state timber lands, and somehow has managed to carry on the state government harmoniously, despite the fact that all the elected state officers, except himself, are Republicans.

He is a born harmonizer on the line of the homely old maxim that "You can catch more flies with molasses than you can with vinegar;" he tells stories occassionally though not too often, and they are generally pretty good ones. He speaks forcibly and gracefully and there is a literary flavor about his official papers. His admirers say his face contains more than a suggestion of Lincoln's expression, although its outlines are anything but Lincolnesque, and while there is no trace of the morose about him, his countenance in repose suggests sadness rather than elation or enthusiasm.

He is not a lady's man, but he is decidedly a favorite with the women, who delight to hear him speak, and turn out in large numbers whenever and wherever he is scheduled to appear, whether a campaign is going on or not. He had to begin to help take care of the family at 12, and he got a job in a printing office at St. Peter, Minn., where he was soon earning big enough wages to relieve his mother altogether from her labors. She lived until about two years ago, and was proud of her son, as he was proud of her.

Unlike Governor Hughes, who had nothing whatever to do with politics till past 40, Governor Johnson went into politics young. He has been editor and part owner of the St. Peter Herald for some years, he served in the state senate before he was elected governor and for seven years he was a member of the Minnesota Nation Guard, in which he rose to be captain.

Unless the temper of the Democrats of Minnesota changes between now and the date of holding the national convention, Governor Johnson's name will certainly be presented to that body as a candidate for nomination. The governor himself has never openly encouraged the idea, however, and his friends apparently will be fairly well pleased if he should be named for the second place.

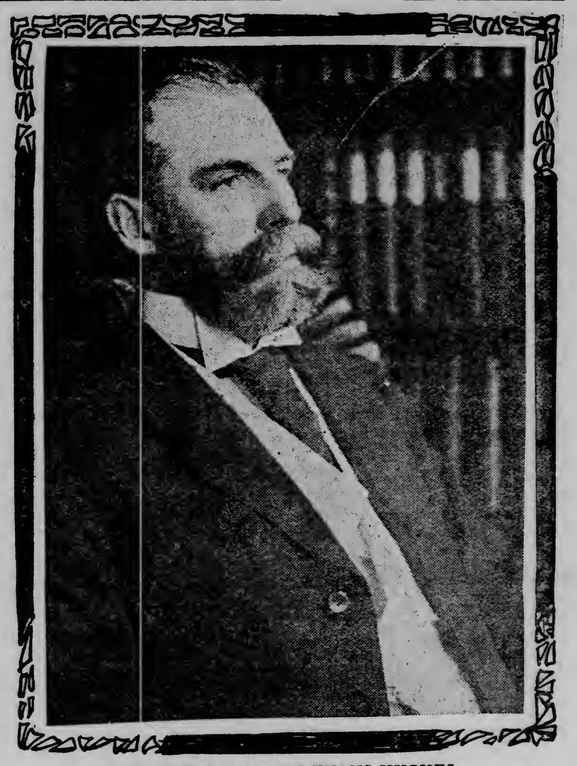
Folk Now For the Senate.

No man was ever more vociferously talked of for the presidency than was Joseph Wingate Folk during his candidacy for the governorship of Missouri in 1904. Even then, however, his friends, if not Folk himself, announced repeatedly that he would rather represent his state in the upper house of congress than to sit in the White House. He feels the same way today, and unless he should change his mind meanwhile, will surely try to succeed William J. Stone in 1909, when Stone's term as senator and Folk's as governor will expire.

There are two opinions as to his probable success. His enemies, more bitter and more numerous than those of most public men, declare that he can never, shall never, succeed Senator Stone. His friends, who are also numerous and loyal to a degree, declare that he is sure to win the senatorial place he covets, especially if the proposed constitutional amendment throwing the senatorial nomination into the hands of the people and taking it away from the legislature is adopted. That a warm contest for and against his candidacy will be waged is as certain as it is that the springtime sun will melt the winter's snow.

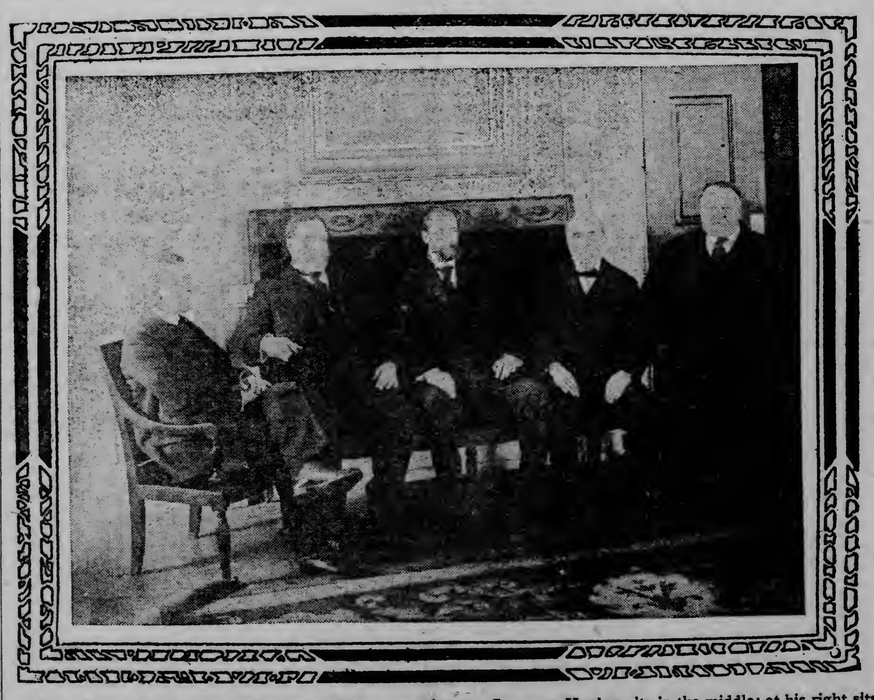
Like Hughes, Folk is a Baptist. He is also the youngest of the five or six governors now almost prominently before the nation, being only 38. He is short of stature, he shaves his face clean, he wears a dimple in his chin and his speech has a strong Southern accent, although he does not speak in dialect. He is said to be the seventh son of a seventh son. His father was Judge Henry B. Folk of Tennessee. His mother was descended from an old Virginia family. He is college bred, an alumnus of Vanderbilt college, Nashville, but he had to work his own way and there is a tradition that while studying law he was able to give his evenings only to his law books, being obliged to hoe cotton in the daytime in order to keep the financial ball a rolling.

He settled in St. Louis in 1892, at 23. He had been admitted to the bar two years before, and he was not long in gathering a good practice. Still, he made no special headway in politics until 1900, although years before then he became connected with the Jefferson club, the strongest Democratic organization in St. Louis. His chance to win personal prominence came when all others who tried failed miserably in their attempt to settle the disastrous street car strike of 1900. It had resulted in the destruction of much property and some lives before he took hold. Somehow the young lawyer from Tennessee succeeded in bringing the



J. K. VARDAMAN of Mississippi. JEFFERSON DAVIS of Arkansas. ALBERT B. CUMMINS of Iowa.

Governor Folk of Missouri and Governor Cummins of Iowa Wish to Go to the Senate When Their Gubernatorial Terms Expire and Help Former Governors La Follette of Wisconsin and Tillman of South Carolina Run the Deliberate Upper House---Former Governor Jefferson Davis of Arkansas Already Has Realized a Similar Ambition---Vardaman, the Mississippi Radical, Still Has Nearly a Year to Serve--- Deneen of Illinois.



GOVERNOR JOHN ALBERT JOHNSON of Minnesota.

GOVERNOR CHARLES EVANS HUGHES. Of New York, in His Law Library. From a Photograph Taken a Few Days Before He Was Inaugurated Governor.

GOVERNOR JOSEPH W. FOLK of Missouri, Who Plans to Go to the United States Senate When He Leaves His Present Job.

This photograph shows a rather remarkable group of men. Governor Hughes sits in the middle; at his right sits Secretary of War Taft, the president's favorite for the nomination in 1908, and at Taft's right—the extreme left of the picture—George B. McClellan, mayor of New York, who once hoped to rise to the presidency through New York's governorship as Hughes does now. At Hughes' left sits "Deacon" White of Wall street, and next to him, at the right of the picture, William Marshall, engineer of the monument to the prison ship martyrs of Revolutionary days, now being completed in Brooklyn.

GOVERNOR CHARLES S. DENEEN. of Illinois, Who Plans for Only Six Months Ahead.

men and their employers together and the strike was stopped.

This gave him great local prestige; his nomination and election to circuit attorney followed as a matter of course. It is well remembered in St. Louis that he balked when the nomination was offered to him, also that he said before accepting it that he should get after the boodlers if elected. There is a story that he promised not to bother one Edward Butler, who helped in the nomination and who was eventually prosecuted by Folk, but that story is pronounced untrue even by some of the bitterest anti-Folk men in the city. They say Butler himself has admitted that Folk said frankly that if elected he should spare no one, but that he, Butler, had no idea the candidate meant what he said; his words, Butler supposed, were only "the usual hot air" and meant nothing.

It took Folk eighteen months to get down to business with the boodlers, but he "made the dirt fly" after he began, as all newspaper readers must remember. He brought about two score bribery cases to trial and got convictions in about half of them. A dozen of the convictions, or thereabout, however, were reversed when appealed, on technical grounds, by the supreme court of the state. His nomination and election as governor and his stormy gubernatorial career, which has about two years more to run, have made him better known even than his work as circuit attorney.

One of Folk's strongest characteristics is nerve, another his love for fishing. He never flinched at the many threats of assassination made against him when circuit attorney and he never flinched since. He isn't a very expert fisherman, but he gets away to whip the waters of a certain little Missouri lake whenever he can and always goes back to his duties much refreshed.

The loudest protests now made in St. Louis against Folk are uttered by those who want an open Sunday. As governor he has made this a difficult thing to maintain. Both his supporters and his opponents are well divided between the two great parties.

Deneen and Cummins.

There has never been a great deal of talk outside of Illinois about Governor Charles Samuel Deneen as presidential timber, and there seems to be no thought even there that he is likely to be nominated for that high office until some of the more prominent candidates at present before the nation are disposed of one way or another, but he has friends a plenty who think that eventually the White House lightning may strike him. He says himself that he has plans for only six months ahead.

Deneen is 44. His father was president of McKendree college at Lebanon, Ill., and the boy got his degree at that institution in 1882. He taught school three years, and then went to Chicago, studied law, got a good practice together, was appointed attorney for the sanitary district in 1895, and state's attorney for Cook county (Chicago) a year later. He became famous in this position, getting after many big criminals and corruption in various forms with much vigor, wherefore he was often spoken of later as "Folk's Forerunner."

He is 5 feet 9, solidly built and closely knit. His lower jaw and chin are strong and square, his nose is a well modeled organ, and his ears are not small; his eyes are clear brown, his forehead is high and his brown hair is beginning to turn gray.

He is a man of great determination, and, although he has been working in harmony with Roosevelt of late with regard to the railroads and the nomination of Taft, his nomination to the governorship in 1904 was regarded as a distinct rebuke to the president, who tried to secure the nomination of Lowden, but was frustrated by a union of the followers and forces of Deneen, Yates and two or three others. The contest which followed was exceedingly bitter, and Deneen polled a larger vote than President Roosevelt himself.

Deneen's most famous cases while state's attorney in Chicago were the trials of Luttgert, who killed his wife and dissolved her body in a sausage vat, and the treasurer of the West Chicago park commissioners, who, with some other bankers, was charged with misappropriating more than $3,000,000 of park funds.

The things of which he, as governor, is said to be especially proud, are the passage of the primary bill and the general state civil service law, his work for Chicago's new charter, his struggle for the reduction of freight rates and his recovery, in one way or another, of about $2,000,000 in unpaid taxes.

The presidential rash has never been especially violent with Governor Albert Baird Cummins of Iowa, but because of his attitude on the tariff, his constant opposition to Former Secretary of the Treasury Shaw, also at one time governor of Iowa, and the fact that he is now serving his third gubernatorial term—unprecedented in his state—he has long been one of the most talked of governors in the country.

His present term will expire in 1909. He hopes then, if not sooner, to be made United States senator, perhaps to succeed Allison. All hands look for a battle royal between Cummins and whoever may be chosen for a candidate by the Dolliver wing of the party. Cummins is a native of Pennsylvania and a self-made man.

Jefferson Davis of Arkansas, who, during his record-breaking three terms as governor of Arkansas made himself as widely talked about as any other governor in the land, has already succeeded in being chosen to the United States senate, and his term began on March 4. James K. Vardaman of Mississippi, whose gubernatorial term will not expire until next year, and who has been talked about as much as any other governor in the country because of his radical sayings and doings, has yet to announce what he means to do after he is let out as governor.

DIAMOND DRILL AT WORK ON THE GILBERT MINING PROPERTY NEAR PETTIT, MINN.

DEAL FOR CONTROL OF IDORA

Understood That New York Financiers Have Their Eyes on Valuable Idaho Property---Price Reported to be About $200,000.

Wallace, Idaho, April 27.—It is understood that a deal is pending whereby a controlling interest in the Idora mine, in the Coeur d'Alenes, is to pass to Eastern capitalists for a consideration of $200,000. An option on the control was given some time ago to New York financiers, whose names have not yet been made public, but George P. Larson, vice president of the Idora company, has admitted that the deal is pending, and he states that it will be consummated within thirty days.

It is only a matter of days since an offer of $150,000 was refused for the control, and this offer was made by the parties to whom the option was at last given over at $200,000. An offer of $50,000 was refused for the property thirty days after its purchase by the present owners about one year ago, and before any work at all had been done upon it.

The option, which is in force at present, will almost certainly be taken up, as it was given before the rich strike of ore, which his reported this week, was made. Rumors of this strike had been going the rounds for some time past in Wallace, but the full extent was not made public until Mr. Larsen's return from the property last night. This strike consists of solid galena, from fourteen inches to two feet in width, and was encountered in the footwall side in the No. 2 tunnel, at a distance of about 600 feet in, and at a depth of about 275 feet. Samples of the ore have been brought down from the property and placed on exhibition with Kratzer & McKinnis of Wallace. Assays of the ore have been made, and the result of these shows that the ore ranks among the richest yet found in the district. These assays showed returns of 72 2-10 per cent lead, and about 30 5-10 ounces in silver.

The property has been developed to a large extent at a total cost of about $5,000, of which $43,000 was expended by the old Colwyn company, from which the Larsen-Peterson & company acquired the property, afterward organizing the Idora Mining company.

The property of the Idora company consists of six full claims and three fractions located on Sunset peak and adjoining the Portland property on the south and W. A. Clark's property and the Parrot on the west, and just across Carbon creek from the Callahan property. The group was originally purchased for $25,000, and the company is capitalized at $1,500,000 in shares of the par value of $1 each. Up to date 650,000 shares have been issued, and the balance of 850,000 shares still remains in the treasury together with between $7,000 and $8,000 in cash, to be used for development purposes.

It is generally thought among the brokers and mining men of Wallace that the basis on which the control of the Idora will pass will not be less than 30 cents a share.

THE COLORADO DISTRICTS

Bids Asked for Construction of Gatch Park Tunnel---Several Large Ore Bodies Opened in Mines at Crippie Creek.

Colorado Springs, Colo., April 27. — The Cripple Creek Drainage & Tunnel company has completed specifications and is now advertising for bids until May 15 for the construction of Gatch Park tunnel. The bore will be 7x10 feet in the clear and 15,500 feet in length. The contractor must progress 350 linear feet daily. The Elkton mine will be the objective, but the route will be via the El Paso and other important mines. The tunnel portal is being opened and an electric power site established.

The Bull Hill Mining & Development company, operating on the Cresson property, Cripple Creek, is shipping 2,900 tons of ore averaging about $18. Both leasing and owning companies are paying monthly dividends.

The Aetna Development & Investment company has sunk the Index shaft, Cripple Creek, 900 feet and will rush cross cuts to get under valuable shoots developed in upper workings.

The Damon mine, Cripple Creek, is in a vein three feet wide, carrying $30 to $60 per ton. The strike was made at 312 feet depth in the main workings, which had been idle for years.

The Shurtloff claim of the Findley Gold Mining company, Cripple Creek, is in a three foot ore body carrying $800 per ton values from a five inch seam. The vein is sprinkled with sylvanite. The high grade seam is a talc formation. Cross vein values approximate $40. The vein is probably an extension of a rich body encountered in the Findley mine several weeks ago.

The ore body recently opened on the Gold Sovereign, Cripple Creek, has widened to fifteen feet and returns $25 to $75 per ton.

The Robert Burns Leasing company is cross cutting on the Robert Burns mine, Cripple Creek, at 800 feet depth, to cut the junction of the Mary McKinney, Doctor Jack Pot and El Paso veins.

Operations have been resumed on the Terrible mine, in Custer county, Colo. The Allie Katherine, adjoining, is in $10 ore. The Sylvanite claim is in ore showing 25 per cent silver.

The Sandy Hook Mining Ccopany has been incorporated by W. H. Martin of Quincy, Mich.; W. S. Henderson, and J. H. Wagner of Pitkin, Colo., at $1,000,000, to operate a group of valuable claims on Ohio Creek, between the Denver City and the Chronicle. Two electric light and power plants are planned for Quartz Creek near Ohio City.

The Copper Ridge Mining & Milling company is in a two foot vein of highly mineralized quartz at eighty feet depth on the Republican mine on Copper Ridge, near Steamboat Springs, Colo. The content shows $10 gold, $1.60 silver and 16 per cent copper. The vein is fissure. Its discoverer has quickened development and prospecting throughout the district. The country roads are schist, gneiss, porphyry and hornblend schist. Silver values are low.

The Roman Eagle Mining company's tunnel is in 250 feet with Thunderbolt claim as objective. The breast is in a six inch seam of native and crystalized silver of bonanza value. A car load of high grade ore was recently shipped to Denver. Recent samples of low grade ore show 20.56 ounces silver with .04 ounces gold, 46.80 silver and 16.58 silver. The six inch seam has yielded 228 ounces of silver. Other properties in the Jamestown, Boulder county, district are looking up.

The old Anchoria-Leland mine, Cripple Creek, in which ore worth $153,700 a ton was encountered in the early days, is once more active under lessees with 800 to 1,000 tons of $30 ore monthly as output.

The Hobo Leasing company, operating on Hobo claim, Guyot Hill, Cripple Creek, is in ore at 75 feet depth, which returns $25 per ton. The shaft will be sunk to 400 feet.

A old report from the Ironclad cyanide mill, Cripple Creek, returned $7,000 values. It resulted fro a three weeks' run on ore that averaged $2.85 per ton.

The Wild Horse cyanide mill on Bull Hill, Cripple Creek, its treating fifty tons of $8 ore daily. The ore is coming from the Wild Horse mine.

The W. P. H. Leasing company's cyanide mill on Ironclad hill, Cripple Creek, will start about June 1 with 100 tons daily capacity.

The Aspen, Colo., district will be drained by a tunnel which is estimated to cost $1,000,000. D. R. C. Brown of Aspen, Charles J. Hughes of Denver and others are interested. The lower workings of many of the big mines of the district, now under water, will be drained.

The British-American Leasing company, operating on the Dante mine, Cripple Creek, composed mainly of the Stratton's-Independence Limited of London, four in number, expended $10,000 in driving a long lateral from the Trail tunnel. Within the past five months dividends have been paid to the extent of $15,000. A new working shaft is being sunk on the property to save cost of a long tram. Shipments aggregate five cars weekly.

The Fluorine claim on Copper Mountain, northwest of Cripple Creek, is shipping twenty cars of ore monthly from the 1,000-foot level. The ore averages $20.

The Jennie Sample mine's ore body, recently discovered, has widened to ten feet, and the value has increased to $40 per ton. A new cross vein has been cut.

The Old Town shaft, Central City, Colo., has reached a depth of 4,765 feet. The shaft will be sunk to 2,300 feet, where connections will be made with the Hot Time lateral.

The Hudson mill is now treating seventy-five tons of Shafter mine ore daily. A two-foot vein carries values exceeding $100 per ton.

The Honest John tunnel on Chicago Creek, Idaho Springs, Colo., is believed to be rapidly approaching a fissure vein at 1,900 feet from the portal. The tunnel is built for a double track.

Edgar L. Street of New York, and Frank Owen of Santa Fe, N. M., have acquired ownership of the Old Timer mine in the new placer mining district, for $5,000. The property, located in Southern Santa Fe county, will be extensively developed.

Breckenridge, Colo., April 27.—Rich silver and gold ore has been struck in a vein recently explored in the eastern portion of the Wellington estate. Some of the samples yielded loftily in the white and yellow metals, and a shipment was settled for on a basis of about forty-five ounces in silver and $10 in gold to the ton, in addition to the lead and zinc. One of the streaks contained ore with values of $60 to $80 in gold to the ton. At one point ore was removed from a body seven feet in width. This body should yield heavily. From the main workings of the mine the ore shipments now amount to three carloads daily.

OLD DOMINION'S NEW RECORD

First Half of Month Shows Increased Development and Production---Rich Strike of High Grade Ore in Crown King.

Globe, Ariz., April 27.—Old Dominion has made a fine record this month as to both development and production. There has been further enlargement of the big sulphide stope opened in the sulphide vein from crosscut No. 2, in the fourteenth level, from which a heavy tonnage is going to the smelter. Connection for air has been made between crosscuts Nos. 2 and 3, and work has been resumed in the latter crosscut, which is now nearly fifty feet in high-grade glance ore.

A station for a winze in the footwall will soon be completed, and sinking to the sixteenth level will begin shortly. The winze should be completed and the first crosscut on the sixteenth level should be in sulphide in August.

The Globe-Kirkey vein, near the east line of the Old Dominion, on the tenth level, is producing desirable sulphide, running 8 per cent copper, and the entire drift is in ore. Work is in progress to develop the vein on the eleventh level.

The smelter record for the first fourteen days in April shows a high average daily output of copper—considerably over 110,000 pounds. There have been 1,200 cars of coke ordered, and arrivals are better.

Prescott, Ariz., April 27.—A wonderful strike of high grade ore has been made in the Crown king mine, which bids fair to be richer than any ever made in the history of its development. Only meager details of the strike are at hand at present, but it is reliably stated that the ore is of extraordinary richness, fairly sparkling with gold, the ore body, where broken into, being of greater thickness than any of the pay shoots worked in former years, the product of which startled the entire West by their high grade values in the yellow metal. The new find was uncovered in a cross vein, tapped by a crosscut from the main tunnel, and in which drifts are now being run. This vein produced some very high grade ore nearer the surface, but the shoot now struck, in the opinion of miners working there, and familiar with the Crown King mine, will prove to be the largest ore shoot ever found in the famous producer, and equal in richness to any of the other bonanza stopes.

Since the discovery of a three-foot pay streak of ore sampling $64.42 to the ton in gold on the Promoter claim, in the Crook Canyon district last week, there has been a large influx of prospectors and miners into that section, eager to locate extensions of the claim where the strike was made or anxious to secure any vacant ground in its immediate vicinity. However, all were disappointed, as the vein had been covered by locations by the owners of the Promoter and their immediate friends immediately after the rich ore body was uncovered, and before news of the rich strike spread to other parts.

Jerome, Ariz., April 27.—The coming investigations of the earnings of the United Verde Copper company by the supreme court of Texas is arousing keen interest among local mining men and capitalists. Rumors have long been current to the effect that this company has for years been paying its stockholders 200 per cent annually, but until now it has never been possible to ascertain the exact facts in the matter. It goes without saying that a judicial confirmation of these rumors would tend to a decided enchancement in the value of the new copper properties immediately adjoining the United Verde, such as the Verde Grande and the North Verde, where active development work is now going forward.

Mayer, Ariz., April 27.—The Consolidated Copper Creek Mining company is about to undertake the development of a number of newly acquired claims known as the Sunset group, situated just south of the holdings of the celebrated Rosalle Copper company and on the identical ore veins. The Rosalle company is now opening up enormous bodies of rick copper ore at the 100 foot level.

Winkelman, Ariz., April 27.—The Guggenheims are reported to have acquired recently a controlling interest in the Saddle Mountain copper mines. The smelter capacity of these mines is to be increased from 200 to 600 tons daily. The great extent and richness of the Pinal county ore bodies is coming more and more in evidence. At the Two Queens gold-copper mine active preparations are going forward for the installation of an immense plant and the equipment of the entire property with thoroughly modern machinery. Stoping work in the main tunnel is now making rapid progress, and the tunnel itself being driven forward at the rate of from five to eight feet daily.

WARREN DISTRICT'S OUTPUT

(Continued from Page 1, Second Section).

to prevent a shutting down of any Copper Queen furnaces.

The strike committee and the organizers still declare that the strike is in full force and effect, but it is apparent that at no time were a majority of the men employed in sympathy with the strike, and out of a possible 1,200 or 1,300 men who walked out, at least 800 or 900 of this number have left the city. It is noticeable that there has been little or no disorder in the camp. There have been no attempts at violence, and the merest approach to disorder has been the threats of a few hot headed pickets. After the first few days of the strike the men who remained at work paid no attention to the arguments of the pickets, and, as each succeeding day demonstrated that the strikers were in the minority, a number of men who went out at first notice, returned to their work and were given employment.

At the Irish Mag shaft of the Calumet & Arizona a good force of men is at work, and, although union rumors would place the number of men at a very low figure, the fact remains that this shaft is turning out a good daily shipment of ore to the Douglas smelters of the company, and is holding its own as to daily average. The normal output of the Calumet & Arizona will be held for the month of April.

It might be said that the story of the week for the Calumet & Arizona fills the bill for the Superior & Pittsburg properties, all of which are under the supervision of Col. W. A. Powell of the Calumet & Arizona. There has been no shut down at either of the shafts of this company and none is expected, although the output is below normal.

The plans for doubling the capacity of the Calumet & Arizona smelter have become history. They are in practical evidence on every hand.

Operations there have sustained no change as the result of friction in Bisbee. True, the movement in the camp has affected the Calumet & Arizona more than it did the Queen, for the very plain reason that more union men were employed there than in the Queen. The acknowledge scarcity of ore at the smelter, however, is not attributed to that cause. The Calumet & Arizona has plenty of ore broken, and most of it in the bins at Bisbee to run for weeks but has been unable to get the rolling stock to convey it to Douglas. That detail, however, has been reached and disposed of and nothing in the nature of a shut down is thought of.

The Wolverine & Arizona is still working with its diamond drill outfit. As yet no definite results have been obtained. The management is waiting for the visit of prominent stockholders who are expected weekly to visit the property and decide upon the future plans of the company. All development work has been at a standstill for

General Manager William Clute of the Bisbee Extension reports that he is working a full force of men and is crowding development work through a double compartment shaft. The shaft is making about five or six feet per day and is now approximately ninety feet. Much headway has been made in the past week in the improving of the surface buildings and the men's quarters are now in good shape.

Notwithstanding the rumor that the Modern, in the same neighborhood with the Bisbee Extension, would be forced to shut down by reason of the action threatened by the union, that mine under the management of Mr. Harlan, has worked continuously a full force of men. Great activity prevails west of the divide ever since the Modern and Bisbee Extension began to show an aggressive spirit in the development of their properties.

At the North Bisbee work is progressing in the main tunnel being driven to cut the big vein that shows much good values on the surface. But little can be said of this property until it has determined what its surface croppings show with depth. The management has great hopes, but they are giving out nothing until they are possessed of actual knowledge of the values at their command. It is their intention to push development work along the most approved and economical lines with a view to making of the North Bisbee a producer that will pay.

Reports have gained ground recently to the effect that placer claims are being staked out near the Warren district. While the report has gained more or less credence, those who know are saying nothing and if the rumor is based on any degree of truth few Bisbee people are aware of the exact location of the reported gold fields adjacent to the district.

CALUMET AND ARIZONA

(Continued from Page 1, Second Section).

It is stated unofficially that Boland is representing New York interests which will enter the field and make a third big company operating in thee district, adding greatly to the prosperity of the whole and putting Cananea in the lead of all camps in this section.

The results of the careful work which has been done at the Greene-Cananea since Dr. L. S. Ricketts came into control of the property, and which, indeed, were started under the regime of Col. Greene, are beginning to be apparent.

The smelting plant was the first item that was canvassed by the new management. Three new pulverizers for fuel for the reverberating furnace have been installed. By this method all the combustibles in the coal will be consumed and a much greater efficiency will be obtained.

The same method will be tried at the furnace plant, and it is hoped that a saving of from 15 to 30 per cent will be effected.

The new furnace will be blown in at the smelter, and as soon as it is in full swing the work of starting the new No. 2 furnace will be begun.

It is also understood that the entire plant will gradually be changed over to the Montana style.

The old bin system at the smelter will also be taken out and steel cylinder bins substituted. Among the other improvements is an entire new system of blast mains, which will replace the present tangle of pipes. New slag tracks are also being installed at the furnace on a plan which will permit the handling of slag pots with greater facility.

The spur to the canvas plant at the concentrator will shortly be running. In this plant there will be 3,500 feet of canvas tables, which, it is expected, will materially increase savings.

The company is also building a new foundry and machine shop. A new thirty-horse power Connellsville blower, with direct connection, will be immediately installed. The company has already installed seven boilers with which to provide power for work that was formerly done by men. Machinery is also arriving for every department of the big company.

In the mining end of the property the company has placed an order for drills with which to prospect all parts of the property. It is the intention of the management, just as soon as the drills can be put into operation to prospect the entire property to a depth of 500 feet.

The company is also doing a lot of work on the surface of the American and Cananea-Duluth properties, which are two constituent concerns of the Cananea Central. The management is grading and getting ready for large operations, which, it is hoped, will furnish the Greene-Cananea with a considerable tonnage of high-class ore.

With regard to progress of improvements and plans for betterments, both to the end of increased economics in operation and larger bullion output, the important announcement made during the week was the placing of orders for four furnaces of the type of the new No. 1 furnace recently put in commission, and since operated with excellent results. The four new furnaces will replace 3, 4, 5 and 6 furnaces now in operation. The duplicate of No. 1 furnace to replace No. 2 furnace, was ordered some time ago, and preparations are now being made for its installation. The time of delivery of the last four furnaces ordered is not certain, but they are to be crowded along by the builders as fast as possible, and will be received here and installed at the earliest possible time.

Manager Jack Evans of the Espiritu Santo returned last week from a visit to the property, adjoining Chispas. He reports showings extant in the workings to be very satisfactory and the outlook for the future excellent. At present development is at a standstill in the No. 1 shaft, pending installation of a boiler, hoist and pump. These will go in as soon as a road is completed which will connect with a road being built by J. P. Casey from his Carman mining property to Babicanora. Only about fifty yards of grading will have to be done by Espiritu Santo to make the connection. The No. 1 shaft encountered its water at eighty-seven feet, at which depth the shaft is all in ore. The water came in such flow that it was found impossible to handle it with bailers, and work necessarily stopped. Its coming in is considered to add to the very favorable indications which prevail. The winze from the drift on the Ventura property of the company is down sixty-eight feet, and has shipping ore. Owing to the comparatively shallow depth this work attains, the pay chute is small. In order to get greater depth, and thereby speedily ascertain the situation at a much lower level, Mr. Evans determined to at once start a shaft at the bottom of the hill, 100 feet lower than the collar of the winze. This shaft will be put down 100 feet before a halt is made, when a depth of 200 feet below the winze collar will prevail, and tapping of the ore showing in the winze through crosscut from the shaft should give a pretty good line on what to expect.

SCHWAB IN CANANEA FIELD

(Continued from Page 1, Second Section).

are easily to be perceived, as, from a company with practically little standing in the mining world, they are placed among the leaders by association with Schwab.

In addition to this it is a more satisfactory gain as Mr. Wilkie, after much negotiation, was able to secure from them terms of exchange for their old stock for that of the new on the basis of share for share. This will, without doubt, gladden the hearts of Bisbee and Douglas stockholders of the company. The stock of the new company is divided into 3,000,000 shares at a par value of $1.

When asked if there were yet any definite outlines of plans for the development of the property, Mr. Wilkie stated that he could say nothing on this subject until after Mr. Martin had concluded his inspection of the property. The first work which will be undertaken, however, is the completion of the wagon road between the mines and the town of Cananea.

The new corporation will offer no stock to the public for subscription, preferring to keep it in their own treasury.

LAKE SUPERIOR IRON MINES

(Continued from Page 1, Second Section).

which makes it handy for the handling of machinery and supplies.

Unless the quicksand in the shaft should prove too contrary, it is the purpose to have the Kellogg in shape to begin shipping the present season.

Adjoining the Kellogg on the west is the Monica property, being developed by the Republic Iron & Steel company. This property contains a continuation of the Kellogg ore body and comprises eighty acres. Here clearing of the land is also in progress. An engine and boiler house is nearing completion and the hoist and boilers are already in place. An office and dry have been erected and preparations are now being made for the erection of several cottages. Grading is in progress for extension of the Kellogg spur to this property.

The Monica shaft is located on the east line of the property and it is probable that like conditions will be met here as in the Kellogg shaft. It is now down to a depth of about thirty feet, and timbers are being framed for a shafthouse.

Owing to the fact that these mines form a valley running north and south lying between two hills water is very plentiful both on surface and underground and it will require considerable pump capacity to keep the shafts free from water.

About a half mile to the westward of these properties is the McKinley mine of the Oliver Iron Mining company, where two steam shovels are now employed in removing the surface. A considerable cut has already been made and one shovel is down to the ore, the surface running about twenty to twenty-five feet in depth. A boarding house, three cottages, a commodious office building, warehouse and other structures have been completed. South of the open pit a shaft is being sunk and it is said that shipments will be made from this shaft as well as from the open pit the present season. This is one of the properties owned in fee by the Oliver company and contains a large body of high grade ore that was found in the early history of the range by the McKinleys. It has lain idle until this time, because of the policy pursued by the company of working its leased mines first. Lately, however, the demand of the Steel corporation furnaces for more ore of higher grade has led to the opening of this property as well as the Gilbert at Sparta and resumption of work on the company's properties in Virginia.

As a result of the opening of this property, and the other debelopments in the district, the village of McKinley is feeling the impulse of new life after lying dormant for many years. But its expansion and growth are retarded by the fact that the owners of the townsite refuse to sell any more lots at this time because of the probability that a body of ore underlies the townsite. A diamond drill is now at work determining this question, and should ore be found it is probable that the town must share the fate of Sparta and other villages, where the uncertainty regarding the stability of location hinders and retards development.

After a temporary setback on account of the cold weather, most of the mines on the range are again shipping to the docks at Two Harbors and Duluth, and the outlook is that the ore carrying roads will be taxed to their capacity from this time forward. The opening of the shipping season brings the usual influx of railroad and steam shovel men and common laborers, and many of them have difficulty in finding houses to reside in, with the result that many of the married men are compelled to leave their families in Duluth and elsewhere while they are employed here. The demand for more residences is strong at many range points, and especially in Virginia, but owing to the high cost of materials and skilled labor, there are few capitalists willing to risk their money in the building of houses for rent. This makes it necessary for the mining companies to erect many cottages, and to their credit be it said, that the class of cottages being built by the companies is first-class in every particular, and the men employed in the mines, who are so fortunate as to secure company houses, enjoy decent places of habitation, even if they are compelled to forego some of the other pleasures of civilization.

The erection of so many cottages on mining locations makes bright the future of a trolley line to connect the range towns, as there will be much travel between the locations and the trading places.

Iron Mountain, Mich., April 27.—(Special to The Herald.)—Operating the big Stevenson and developing other mines on the Mesaba; producing heavily in Crystal Falls district of the Menominee, and controlling the Star West, on the Marquette, and the Colby, Ironton and Winona properties on the Gogebic range, Corrigan, McKinney & Co. of Cleveland are, with the single exception of Pickands, Mather & Co. of the same city, the largest independent ore producing concern in the Lake Superior region. The firm has a string of eight mines in the Crystal Falls field. Much new ground has been opened at these properties since the close of navigation last fall, and while complaint is made of a shortage of labor, more than 1,000,000 tons of ore will be shipped from the group this season. This will compare with 983,476 tons, the output last year.

Although it was only by a narrow margin, the Great Western, with a production of 317,000 tons, was the biggest shipper of the group last season, and in all probability the property will retain that position this year. Opened in 1882, the mine has to date shipped 1,400,000 tons; and if the product of the Lincoln, now operated in connection with the Great Western, is included, the aggregate amount forwarded is increased by 240,000 tons. The Great Western is operated through two fine three-compartment shafts. The back stoping system of mining is practiced. The ore is a red hematite, running about 57 per cent iron and quite high in phosphorus. The mine is unusually wet, in part due to the proximity of a big swamp lying just to the north of the present workings, and pumping charges are necessarily heavy. However, the mine is today a bigger proposition than ever, and in the light of more recent developments it appears that the swamp, itself, will be found underlaid with a continuation of the ore deposit.

Corrigan, McKinney & Co.'s second largest shipper in the district last year was the Tobin mine. This property sent out only a few hundred tons less than did the Great Western, and it is counted on to at least duplicate its output, which, with that of the Genesee portion of the property, was 316,800 tons. Like the Great Western, the Tobin has two three-compartment shafts, and it produces a similar grade of ore. It was the first mine in the field to adopt the caving system of mining, and it has used this method of winning its ore with entire success. The stock pile is not as large as that of a year ago, but a new level has been opened and the property is equipped to at least equal last season's record. The Tobin sent out its first ore in 1901, and to date, the Genesee product included, it has forwarded 1,002,500.

The Crystal Falls mine, with a production of 112,000 tons, was the third largest shipper on the list last season. But this property, unless fresh surprises are found at greater depth, has seen its best days. Altogether, it has sent out 1,620,000 tons of ore. It made its first shipment as long ago as 1880, but its real history did not begin until fifteen years afterward. However, there is still considerable ore in sight, and just at present the mine is in better physical condition than it has been at times in the past. During the winter, the transfer shaft was so improved as to permit operation of a two-ton skip, and with the upper portion of the main shaft, a three-compartment opening, newly timbered, a work just completed, a better record in hoisting will be made. A good sized stockpile is awaiting shipment. The ore produced at the Crystal Falls—a red hematite—although running some 58 per cent in metallic iron, is unusually high in phosphorus. This undesirable element has averaged as high as eight-tents of 1 per cent—nearly twenty pounds of the metal phosphorus to the gross ton of ore, weighing 2,240 pounds—a proportion rarely exceeded in the Lake Superior region. However, the mine is exceptionally dry, and the walls are firm, requiring very little timbering, the costs in these two respects thus being reduced to the minimum. A novelty in mining that has been followed quite extensively at this property has been shaft "sinking" by raising exclusively. The method followed in this connection has been to put down a winze from the bottom level then to run a drift to the point where the shaft is in touch and cut through to the bottom of the shaft from below, thus reversing the usual plan of sinking shafts and raising winzes. By the plan described the smaller opening is sunk and the larger one broken from below, where the rock takes care of itself.

The Dunn mine of the Corrigan-McKinney group has a stockpile of almost 40,000 tons of ore and it expected to double its production of last year, which was 91,500 tons. This property is an old mine reclaimed, and its present physical condition is such as to lead to the conclusion that its aggregate output of 1,178,000 tons will be duplicated in the future. A new level was opened during the winter, the present operating shaft, 6x18 feet and of three compartments, now being down some 870 feet. The ore produced is a red hematite of the same general grade as the product of the Tobin and Great Western. The Dunn has an interesting history. At one time a big money-maker both for its fee owners and its operators, it has been abandoned as worthless, and was a thoroughly discredited property when Corrigan, McKinney & Co. took it over in 1899. The mine was first outlined by Ferdinand Schlesinger—the uncrowned king of the iron ore trade at that time. It was lost by him on his failure in 1893, but he regained it three years later. The property failed to meet expectations, based on its former records, however, and it was robbed of pillars and floors in 1897 and 1898, collapsing in the latter year. The workings were so completely wrecked that the present operators were compelled to sink a new shaft, that which is now in commission. New ore bodies were found at depth, and the Dunn has become a better and bigger mine than seemed possible when, despite the popular lack of faith in the prospects of the property, the Corrigan-McKinney people took over the Schlesinger plant and lease. The backstoping method of mining is used to recover the product.

Including the production from the Paint River shaft, the Lamont mine of Corrigan, McKinney & Co. shipped 118,300 tons of ore last season. The aggregate output since the opening of the property as the Monitor mine in 1889 is 803,500 tons. As at the Crystal Falls, the future of this property hinges on new developments at depth. Much of the ore taken out for some time past has been that left in pillars, and in the connection considerable development work has been done. Once a deposit of fair size, the lens had narrowed until further sinking in the main shaft—this 6x18 feet and of three compartments—was suspended, and instead a transfer shaft was put down from the bottom level until at present it has attained a depth of a

(Continued on page 7, 3rd col., 2nd sec.)

WHATS WHAT IN THE SPORTING WORLD

By Naughton and Ye Sporting Scribe.

Lid Off in Chicago.

Hats off to Mayor Fred Busse of Chicago, all you who like a good boxing match. The mayor of the Western metropolis has shown his hand. Boxing matches will be allowed in Chicago during the Busse regime and the promoters are happy, the fight fans are happy, and the fighters, themselves, are waiting with outstretched hands for the coin, which is to be theirs, but which has been denied them for months past in the Windy City on the lake.

Busse is to allow boxing matches, not bruising, grueling prize fights. "Six round matches, no decision," he says, "and I will not molest them." Mayor Busse has the right idea. The people who patronize boxing matches, who take real enjoyment in the sport, do not insist that in return for their money, two big bruisers get inside the ropes and wallop each other within an inch of their lives. That isn't the kind of sport they believe in. Of course, they like to see a knockout, but it is the science of the game, which attracts, not its brutal features.

In Philadelphia, the fight game is very much alive, although only six round bouts, with no decision, are allowed. But the fight fans in the Quaker City put up their money to see those matches, and some of the leading lights of the prize ring are satisfied to journey East to pick up what they can before a Philadelphia club. If they are really classy men, can deliver the goods in approved style, and make the best of the six rounds allotted to them, they get the money, without working inordinately hard for it. They can't do any betting, because the no decision provision precludes that, but they support the game for sport's sake. Fighting will thrive in Chicago under the new arrangement and it will anywhere if the fighters are willing to show what they can do in six rounds. Finish bouts aren't necessary to keep the game alive and the Chicago fans will prove it by supporting the short matches liberally.

Early Baseball Season.

The men who guide the destines of the two major leagues are coming in for their full share of roasting over the coals of the fans' wrath. Newspaper writers in every town in the circuits are handing out a line of knocks calculated to make the aforesaid magnates sit up and take notice of the fact that the fans are not hankering to see baseball in midwinter. The fans don't object to the seeing baseball

Lid's off in Chicago.

part of it. The true baseball bug will go to see the game if the players had to get around in a blinding snowstorm. If there's baseball, they want to see it, but they are after the magnates to remove the temptation by moving the opening of the season along a couple of weeks, when the weather will be more suitable for the game and the cry of the peanut butcher, "Ice cold lemonade" will not fall upon such barren ground.

There is justice in their claims. Both leagues opened the season under the most unauspicious weather conditions and since the opening, the players have been compelled to perform in weather more suitable for skating, coasting, and hockey than for baseball. The poor fans have been up against the worst end of the deal, for while the players could move around and keep some of the chill out of the blood, the fans were compelled to sit through it all and let the wind whistle through their shivering frame. Truly from their viewpoint, there is more truth than poetry in the names "Arctic league," "Polar league" and similar nom de plumes, which they have applied to the two big baseball organizations.

The two big leagues will probably go back to the short season again next year. They have had their lesson, for in nearly every case, the first two weeks of the season have lost money for the managements. With the season opening April 21 or thereabouts, the fans would be just as well satisfied and the weather man would undoubtedly be kinder than he has been for the past two weeks.

Arctic League Fan.

Middies in Regatta.

The East is all stirred up over the announcement that the secretary of the navy will permit the Annapolis crew to row in the Poughkeepsie regatta. The Poughkeepsie affair has always figured prominently in the acquatic sports of America, but now it promises to be doubly interesting on account of the zest which will be added to it by the competition between the soldiers and the sailors. The middies have been showing up well in college rowing in recent years and have victories over some of the best crews in the East. They will not, therefore, get beyond their depth in the Poughkeepsie events.

The only competitor for favor which the Poughkeepsie regatta now has is the Yale-Harvard event. But the race on the Hudson is gradually overshadowing that on the Thames, and it is believed before many years are past, Yale and Harvard will get into the fold and one great regatta will result. There are certain to be nine entries in the Poughkeepsie events this year and if Yale and Harvard would settle their little differences in competition with the others, supremacy on the water in the East would be definitely setled in the one great series of events.

Mike Schreck's Place.

While Messrs. Jeffries, Burns, O'Brien et al are fluttering around, Bosher Bill Squires, Mike Schreck is content to let them have it out among themselves before he butts into the campionship game.

Mike's next match will be with the Italian fighter, Tony Ross, at Newcastle, Pa. There are those who will say Schreck shows poor judgment in stepping out of the class to which he promoted himself by putting John Wille away. Be that as it may, Mike is not going into the match with his eyes closed. He is an industrious boy and likes the money. His hoodoo, which pursued him for so long, cut him out of a good many good American dollars, and now that he thinks he has shaken it, he wants to get every cent he can before he takes the trail again. He knows that he can't get on with any of the top-notchers for some time to come and he is willing to take anything that comes along. The Ross match put in its appearance and Schreck closed.

But if Mike thinks he's going to walk away with the money in the Pennsylvania town, he may come to a terrible awakening. Ross hasn't much of a name in the pugilistic world, but those who have seen him perform says he is not altogether a stick and because he has been licking dead ones right along, is no reason why he couldn't be able to put a live one in the land of dreams. Mike will have to be in shape, for if Ross should get the better of him, it will be back to Porktown for him, to remain for all time.

Incidentally Mike has a good excuse for not putting Wille away in less than nineteen rounds. They fought with seven-ounce gloves, instead of the regulation four-ounce. Mike had the Chicago man going time and again, but he could put over the sleep producer with the pillows. A man who can put a wallop-absorber like Wille away with seven-ounce gloves can make some of the big ones go, when he gets five-ounce mitts on his hands.

Tex Rickard Once More.

Tex Rickard comes to the front once more. The man who made Nevada famous, pugilistically speaking, is out with an offer of a purse of $40,000 for a match between Nelson and Gans and he makes it in all sincerity. He says if he can get the colored boy and the Dane together again, they will draw a $75,000 house and he can afford to turn $40,000 of it over to the fighters.

It's now up to the wily William Nolan. Nelson has sidestepped Gans so long that he has practically taken a place far in the rear in the estimation of sporting men and unless he comes around in response to Rickard's offer, he may as well go back to England and stay there. Fight promoters will have nothing to do with him on this side of the water. The proposed Gans-Lewis match will not stand in the way. When that was first announced it was regarded as a joke and no promoter would take it seriously enough to offer $20,000 to see Harry get his. Both Gans and Lewis have evidently seen that the public wouldn't fall to their game and they are now after other fish.

Gans stands ready to fight Nelson, but he will insist on dictating the terms. The grand split comes over the weight question. Nelson insists that he dictate the weight stipulations, but the Baltimore lad, as the champion, says that he will attend to that part of the arrangemens. Nelson is now lighter than he has been for some time. He can make 128 pounds at 3 o'clock or 131 at ringside, while Gans would have trouble getting to 133 at 3 o'clock. But that doesn't make any difference to Gans. As the title holder, he is in a position to dictate the weights, and if Nelson wants to go after that title, it will be up to him to bow to the colored man's will and take his chances on recovering what he lost at Goldfield.

Who's the Champion?

It would take a score or so of Philadelphia lawyers to figure out just how the heavyweight championship situation stands. There are title claimers galore and the real title holder continues to labor midst the alfalfa. The coming of Bill Squires promises to straighten out

There are title claimers galore.

the situation. They all want to fight the kangaroo. Even poor old John Root, whom almost everybody had forgotten, has come out of his shell and hurled a defi at the antipodean, backing it up by the nufficient sum of $500, which he promises to increase to $5,000 if Squires will fight him.

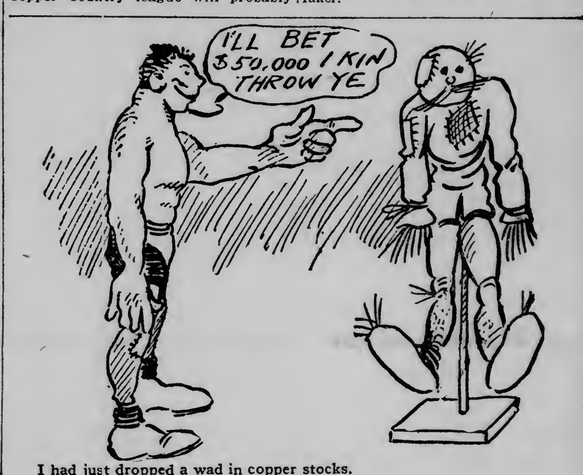
There's no danger of Squires fighting Root, though. There is bigger game waiting for him. Tommy Burns and Jack O'Brien are on the ground ready to hook up with him and now the king of them all, Jeffries, breaks the long drawn out silence to remark that if Squires "makes good," he will endeavor to prevent the migration of the championship title from the shores of the United States.

In the meantime, it is thought that the little matter between Tom McCar and O'Brien has been settled amicably and O'Brien and Burns will hook up at Los Angeles, May 9. Squires is now in training to meet the winner, presumably on Decoration day, and if he can put away his opponent there, the hopes of the Americans will rest on Jeffries.

Jeffries is in a fair way to be forced back in the ring anyway. If the winner of the Burns-O'Brien match should show Squires up, he would never stop howling until he had a chance at Jeffries and it looks as though Farmer James will have to prove that he is the real champion heavyweight, or deliver the title to some other man.

Baseball and the Clergy.

A Buffalo minister refused a season pass from the manager of the Buffalo baseball team, saying that there were too many poor souls to be saved for him to countenance a minister's "wasting" an afternoon at a baseball game. Father McCarty, a Catholic priest, threw the first ball to the umpire at the opening of the baseball season in Brooklyn. Rev. Haley, a M. E. circuit riding preacher in Indiana, umpired a ball game last Saturday.



Which type of clergyman will the unbiased, broad-minded Christian uphold—the one who can be clergyman and man, or the one who must needs be all clergyman, withdraw himself from the world, and devote himself entirely to the saving of souls. This is not a day of hard-shell Christianity. Clergymen and church workers realize that the church and the world must go hand in hand, in order that both might prosper. And it is safe to say that the Christian, who is a Christian, in spirit and work, will not condemn his pastor, who will see life as it is, without smoked glasses.

The clergyman, who will spend an afternoon, encouraging and supporting good, clean, manly athletics, is none the less a clergyman for having been a man.

The Grasshopper League.

The time draws near for the opening of the season in the Grasshopper league and as baseball talk becomes more prevalent, the alleged comic references to the four-club circuit increase proportionately. But the Northern-Copper Country league will probably show a few of its critics that quality, not quantity counts, and that it can live, even though teams must jump 800 miles. J. M. Lamb, the Winnipeg magnate, has the thing sized up right, when he says that it is better for the league to start with four good towns and finish the season with them, than to have six or eight at the start and break up in the middle of the season.

If the magnates of the Northern-Copper Country league will furnish the fans with good ball, there will be no danger of the league going wrong. The people up in this north country know good ball and they are willing to support it. The best ball towns in the Northwest are in the circuit and if the present league can't make it a go, baseball is a failure in the Great Lakes district.

I had just dropped a wad in copper stocks.

Dwyer Makes It Strong.

Assistance! Assistance!! likewise Help!!!

Prof. M. J. Dwyer, who has been throwing a number of wrestlers, good, bad and indifferent, before the Denver Athletic club, who threw poor old Dan McLeod at Denver last week and who is matched with Fred Beell for some time next month rises to remark that he has $5,000 he wants to wager that he can throw Beell two out of three falls. Here's what Dwyer says in a Denver paper:

"I have had the winner's end of five matches and the loser's end of one, and I am so confident that I can beat Beell that I am going to risk all of my winnings on the match next month. I will bet Beell $5,000 or any part of it, even, that I can put him down two falls out of three. When I wrestled Beell before, my physical condition was good, but my mind was upset over the fact that I had just dropped a good sized wad of money in copper stocks. Everybody knows that mental depression affects the physical condition and I am certain I could have won the second fall, had I been in the condition I am now."

If Dwyer is handing out that line of talk in all sincerity, he must have revived wonderfully. He had his day and a good one it was. But he went back, away back out of sight, and his coming forward in this way is very shady. He is matched with Beell for May 7 or 14 and if he throws the Wisconsin man, there are two conclusions which may be drawn, Dwyer has come back or Beell has turned faker.

BOYS PLAN FIELD MEET

Eleven Schools Represented at Meeting Held at Y. M. C. A.

Date Selected for the Contest is Saturday, June 1.

The Interscholastic field meet committee met yesterday afternoon at the boys' department, Y. M. C. A., to make arrangements for the fourth annual meet. The committee elected Stanley Lamb of the Lakeside school as president and Roy Drake of the Irving school, secretary. The following schools were represented: Lakeside, Stanley Lamb, Russell Jones; Endion, Robert Mars, Burdett Pillsbury; Jefferson, Palmer Bevis, Alphonse Walter; Washington, Charnley McKinley, Ralph Hovde; Jackson, Tom Horneman; Emerson, Wellmer Wright, Fred Huttle; Adams, Reuben Anderson; Lincoln, Albert Olson, Meredith Helm; Longfellow, Ragnor Larson, C. Gamache; Irving, Roy Drake, Clyde Kinze; Whittier, Don Irving, William McDonald.

The committee was very enthusiastic and the prospects are that more boys will take part this year than in any previous meet. The date set was Saturday, June 1. This will give the schools plenty of time to get their men out for practice. A silk banner will be given to the school winning the largest number of points, and a gold medal to the boy winning the most points. In addition to this the winner of the first and second place will receive a silk badge, and the boys representing the school selling the largest number of tickets will get a free trip to Camp Miller, the boys' department annual camp. The following were the events selected by the committee:

Fifty yard dash, potatoe race and sack race for boys under 15 years; 75 yard dash, 100 yard dash, one-fourth mile, one-half mile, running high jump, three standing broad jumps, running hop, step and jump, standing high jump, one-half mile relay, standing broad jump, running high jump, three legged race. The committee will meet again Friday, May 3, at 5 o'clock.

Ragnor Larson, Robert Mars and Burdett Pillsbury were appointed a committee on advertising.

* * *

The interscholastic baseball games are being played this afternoon as follows: Jackson vs. Endion, Jackson field; William Eklund umpire. Emerson vs. Longfellow, Longfellow; Harvard Rockwell, umpire. Washington vs. Jefferson, Jefferson field; Asher Taylor, umpire.

The interscholastic baseball teams met at the boys' department, Y. M. C. A. last evening for a social time. All the teams were well represented, and a very enjoyable time was spent.

Whooping Cough.

I have used Chamberlain's Cough Remedy in my family in cases of whooping cough, and want to tell you that it is the best medicine I have ever used.—W. F. Gaston, Posco, Ga. This remedy is safe and sure. For sale by all druggists.

FRED BEELL VS. MAYNARD

Wrestling Match at the Temple Rink Monday Evening.

Best Wrestling Match in Duluth in Several Months.

Monday night at the Temple roller rink on Second avenue east Fred Beell, the Wisconsin wrestler, and Billy Maynard, a wrestler well known in Duluth, will go on the mat. The match will be catch-as-catch-can, best two in three falls, and it offers to Duluth lovers of the mat game the best opportunity of enjoying the sport, which this city has afforded in a good many moons.

Both men are in excellent condition. Maynard was in Duluth a few days ago and he says he is in fine shape, having been working out for some time past in anticipation of securing a match with the Wisconsin man. As Beell had the big championship match with Gotch at Chicago last night, he is certainly in shape, and he will be prepared to show Duluth patrons of the game some of the most clever wrestling ever seen in the city.

It has been charged that the match would not be on the square, but people who know Beell, will not countenance such charges. The Wisconsin man has not been known to mix in any shady deals since he began his career on the mat, so there is little danger of the match here being fixed. Beell has a reputation as a square wrestler and he would not go into any such deal now that he has that reputation.

On Billy Maynard's showing in that match a good deal depends for the Mankato man. Beell did not win the championship from Gotch in his match last night, but he is recognized as one of the premier exponents of the wrestling game on the mat today.

Maynard has been mixed in some questionable wrestling matches here, and the followers of the game would not stand for a go between him and a man like Parr again. When he is booked against Beell, however, it is a different proposition. Maynard is undoubtedly a clever, heady wrestler and when he is forced to wrestle on the square he will undoubtedly put up a hard fight against Beell. It is the chance of a lifetime for Maynard to square himself, in part at least, with Duluth followers of the game.

BEELL DOWNED BY TOE HOLD

Frank Gotch Retains Title to American Championship.

Chicago, April 27.—That the discarding of shoes will not prevent the toe hold in catch-as-catch-can wrestling, was demonstrated here last night when Frank Gotch of Iowa defeated Fred championship. Gotch is fully fifty pounds heavier than Beell, and when pounds heavier than Beeell, and when the match was made, Beell insisted that no shoes be worn. Beell put up a great fight and secured the second fall in less time than Gotch took either of the two falls.

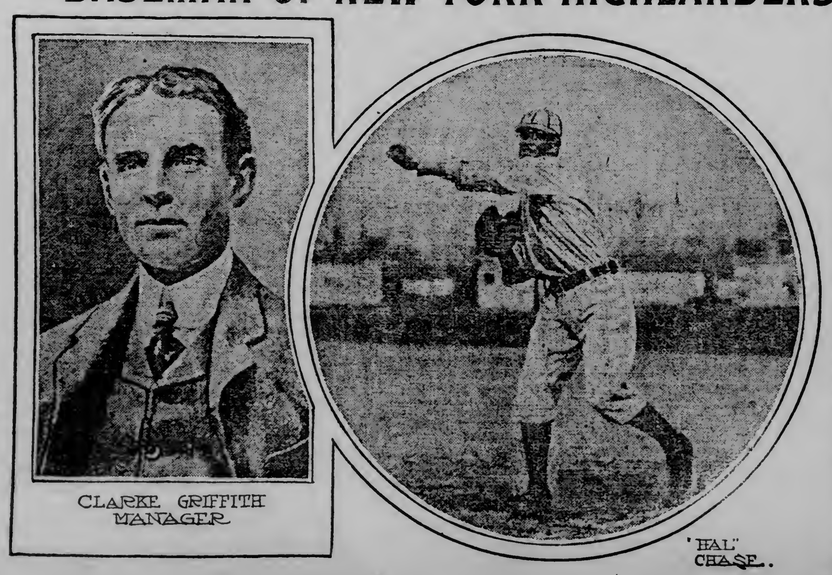
Gotch won the first fall in thirty-six minutes with the toe hold and bar lock. All during this period Gotch never let up in his efforts to secure a grip on Beell's feet, and it was only by the fastest and cleverest kind of work that the smaller man managed to keep his shoulders from the mat. The absence of shoes was a handicap to Gotch, but, after nearly thirty minutes of work, he came out of a tangle of legs and arms with a firm clasp of Beell's left foot.

In the second bout, after rolling around on the canvas, both having leg and arm holds, Beell came on top with a combination grape vine, and bar lock and Gotch was straightened out in three minutes even.

When they came together for the third and deciding fall, both men started out with determination, and, although Gotch had his little opponent on the defensive most of the time, it took fifteen minutes to secure the deadly toe hold a second time.

LIGHTWEIGHTS WILL WRESTLE

Arrangements were practically completed yesterday for a wrestling match between George Milton, the local midget wrestler, and Frank Myers, champion lightweight of the Northwest. Myers was in the city yesterday with Tommy Sullivan, the fighter who was to have appeared at Superior last night, and he and Milton got together and talked business. Both expressed a willingness to make the match and the only thing remaining is for them to sign articles.



Myers is in good shape now and weights about 122 pounds. Milton hasn't done any work for about a month, but he says he can get in shape in about two weeks. When down he will weigh about 116 pounds. It is very probable the match will be held in the Metropolitan opera house sometime during the week of May 11-18, when there is no show billed for the playhouse.

Friends of Milton will be glad to see him get on the mat with a man of Myers' class. The little fellow ham made a large number of friends since he came to Duluth and his work has been such that he will be able to get plenty of backing against Myers. Myers has a wide reputation throughout the Northwest as a lightweight mat artist. Both men are lightning fast and they could be depended upon to put up a match, which would be worth witnessing.

Miss Sutton Wins.

New York, April 27.—Miss May G. Sutton, the California girl, and her partner, Mrs. J. V. L. Pruyn, yesterday won the women's double final on the court at the St. Nicholas rink. They defeated Miss Nora Iselin and Mrs. Barger-Wallach 6-2; 6-2. Tomorrow Miss Sutton is scheduled to meet N. W. Niles of Boston in a single match.

BOUTS FOR TOM McCUNE

Local Fighter Has Accepted Challenge From Tony Caponi.

Jack Parres Would Also Go Into Ring With McCune.

There is every likelihood that fight followers at the Head of the Lakes will see Tom McCune in action shortly. McCune has been casting about for a match until now he has several in sight and has a pick of good opponents. F. Black, a Detroit fight promoter in the city, has posted $100 as a forfeit and side bet for a match between McCune and Otto Sieloff, the Chicago fighter, who was scheduled to go on with Tom Sullivan at Superior last night. It is not known yet whether Sieloff will accept, but if he doesn't care to put up the money, another man will undoubtedly be secured.

McCune has accepted the challenge issued to him by Ted Murphy on behalf of Tony Caponi, the Chicago middle weight, and he is now waiting to hear from Murphy in answer to the acceptance. If the fight comes off, as it probably will, it will take place before some club in the vicinity of Duluth. Caponi has a wide reputation as a hard man to best in the ring, but McCune is looking for those hard men and he thinks he can dispose of the Italian handily.

Another match in sight is between Jack Parres, the Iron River middleweight, and McCune. Parres has expressed his preference of a match with McCune over one with Tony Caponi and McCune said last night he is perfectly willing to take on the Iron River man. Parres stipulates 158 pounds as the weight and McCune says he can make it and be in good shape.

Fight fans would like to see McCune and Sieloff come together. The Chicago German has shown class in the ring, which entitles him to some consideration, and he can undoubtedly make things interesting for the local man. McCune has not been in the ring for a time, but he has kept in shape and is now ready to go on at short notice.

DIAMOND IS PLOWED UP

Baseball Park Being Put in Shape for the Season.

Sox Could Not Play Yesterday on Account of Cold.

Preparations are going forward for the opening of the baseball season in Duluth. For several days past a force of men have been at work on the ball park in the West end, and by the time the season opens everything will be in first-class shape. The fence has already been rebuilt, certainly a marked improvement.

The diamond was plowed up this week and a new surface will be formed. Clay mixed with black earth makes an excellent diamond, and that will be used at Athletic park. The steam roller will be taken out next week, and the diamond will be thoroughly rolled. A good clay diamond is a perfectly satisfactory field and Duluth will have as good a diamond as there is on the circuit, when the work now under way is completed. The management is also figuring on increasing the bleacher seating capacity, and something in that line may be done before the season opens.

The Sox were idle at Madison yesterday. Cold and wind were too much for the prospective players in the Arctic league, and they had to call the game off. It is expected that the teams will be able to go today, however. Krick will work for the Sox, with Cummings on the bill tomorrow.

After the Madison series the Sox will work out by themselves for two more days, and then they begin a barnstorming tour which should show just what they can do. Next Wednesday and Thursday, May 1 and 2, they play at Fond du Lac; May 3 and 4, at Oshkosh; May 5 and 6, at Green Bay; May 7 and 8, at Eau Claire, and then home to Duluth for the series with Medicine Hat and Lethbridge, before the opening of the regular league season.

If the hoodoo lets up sufficiently to allow the Sox to play the majority of the practice games scheduled, they should be pretty well seasoned by the time they come to Duluth. They have been able to do little thus far on the training trip. Climatic conditions and the failure of men to report has handicapped Smith all the way through, and the Sox are certainly not now in shape to start the season, despite the fact that they have been gathered together for two weeks. If the recreant ones report by the time the team leaves for Fond du Lac, Smith may be able to get his forces into some kind of shape by the time they come to Duluth, and perhaps they will win some of the games on their tour, at that.

Manager Kuehnow reported yesterday that an impostor is visiting the business men soliciting advertising for a wall card, in the name of the Duluth Baseball club. Mr. Kuehnow says the man has no authority from him to use the name of the club, and he warns business men against him.

You like to find a bargain—and if you have one to offer you may be sure that the "want ads' readers" of The Herald will soon seek you out.

THE "KIDS" WITH THEIR GAMES OF "SCRUB" ON THE CORNER LOTS HERALD THE APPROACH OF SPRING

"SHORTY" AT THE BAT AND "CHOOSING UP" AS THEY WERE CAUGHT BY THE PHOTOGRAPHER.

—Pohto by Fenney & Adams.

The small boy is in the hey-day of his glory. The disappearance of the snow, the coming of the spring sunshine and the warming of the wind all tend to infect him with that now prevalent malady, spring fever. Nearly everybody has spring fever in one form or another. It's one thing to have it and another to secure relief. The small boy finds relief in baseball, and outside of school hours in Duluth the youngsters gather on the vacant lots and the streets and take their lessons in the great national game, generally with more zest and spirit than they give to their lessons in school.

The Herald photographer happened on a "gang" of future-greats in a spirited game of "scrub," on Second street, one day this week. With all the seriousness of world-beaters, they posed for the camera, the two captains measuring off the bat for first choice of the available material. Once the picture was "took," and the youngsters were assured that it would appear in The Herald, they returned to their game, and the camera man took another snapshot of them in action. The scenes are characteristic, and such as may be seen on any corner lot on a fair day during the summer. The boys learn baseball from the time they are able to associate with others boys, and unfortunate is the man to whom the pictures shown today will not bring recollections of the choosing up of sides for "one-old-cat," "scrub" and the other games of his boyhood. The boys shown are good American youngsters. They may not be future Lajoies, Chances or McGraws, but they have the true spirit and respresent the type of boy truly representative of Young America.

THE MANY STRANGE TYPES OF BASEBALL ROOTERS

The Genuine Article is Heard on Only Rare Occasions.

His Work is a Never Ending Source of Pleasure.

But the Imitation Rooter is a Sad, Sad Affair.

Let us now consider the rooters for a little brief space.

Washington is renowned throughout the baseball world as one of the rootfulest towns ever. With any thing like the teeny-weeniest break the Washington fans will rip enough holes in the circumambient to make the encircling atmosphere look like something all shot full of holes. Give them a straw to clutch at, just a little piece of tempest-tossed chicken-coop to grab at in the tumultuous sea of baseball, and the hungry, wistful Washington fans will root themselves right over to the borderland of the big divide; will root till their teeth drop out; will root till the bovines return; will root till their countenances are of the colors that of the lamented Dorsey Foultz; will root till the ambulances line up and drag them, limp and exhausted, but deliriously happy, to the reviving works.

The Funny Fans.

But there are rooters and rooters, here as well as every where else.

The great majority of them are the bulliest fellows imaginable. But there are just a few types of baseball rooters who are irksome.

They don't know it. That's the pathetic part of it. They mean well. Their intentions are the best in the world. But they are sufferers from what might be termed the confused ego. They have the imaginative temperament.

For example, quite a few rooters imagine themselves to be humorists, when they really are not—not at all; not a little bit.

The sure-enough funny baseball rooter is a rare bird. Few ball towns have more than two or three of them at the most. And they're a joy. They're about half the fun of the afternoon. They're quaint, inventive, quippish and wholly agreeable. They don't overdo it. They don't keep blatting all the time, like megaphonists on the rubber-neck wagons. They pick the pat moment and send the funny one over, convulsing all hands within sound of their voices. They have the genuine sense of proportion and of time measurement. They known to the eighth of a second just when to shoot in the right one. And they're always good-natured about it. The honest-Injun funny baseball rooter is never a grouch. He's there for the outing and the fun, a game man willing to take his medicine if need be, as entertaining in defeat as he is jovial and generous in victory. He's got comedy in him. He's there with the bright mind, stored with quirks and quillets. He isn't obviously trying to make a hit with the folks. He isn't posing as a funnyist. He's just letting the stuff out of him that seethes in a naturally joyous midriff.

Imitation Humorists.

But, we repeat, the relly-and-truly funny baseball rooter is a rara avis. Washington has its quota, like other baseball towns, of two or three—no more.

The imitators of the real article, however, are many. They are not able to view themselves from the proper focusing distance. They don't know how to stand off and look themselves over from the correct angle. Otherwise they wouldn't be imitation funny baseball rooters.

They somehow or another develop the exaggerated ego-ish notion that they are the real slips, cut-ups, teases, hoydens of the game. And they are out to show folks that they're with the stuff. Candor compels the statement that, for from being in the leastwise entertaining, they are "very, very" sad persons.

They do not conduce to the gayety of an afternoon at a ball park. Their utterances have about as much point as a carpenter's pencil that has been used as a can-opener. They excite about as much mirth as does the sight of a gored horse at a bull fight. They diffuse an auro and aroma of gloom all over the occasion. They surcharge the affair with an atmosphere of sorrow. They render the concourse uneasy and unhappy. They mistake antediluvian gibes for up-to-the-minute witticisms, thereby creating a perspective of verbal monotony that is irksome to the spirit and wearisome unto the flesh.

And they never, never stop till the last man's out. They are making the hit of the afternoon, according to their dope, and so they don't feel like depriving the crowd of their funniness till it's all over. They begin just as soon as the umpire sweeps off the home plate, or a little bit earlier, and from then on till the wind-up they are making funnels of their hands and making their near neighbors long for sudden death. If compressed into a box of similar size, the thing they suppose to be their humor, would resemble a 10-cent can of French sardines caught off the coast of Maine. And all the time they imagine that everybody all over the place is just rocking from side to side and holding his sides with sheer, uncontrollable laughter. That's the pity of it, Jago—that these imitation funny rooters actually suppose that they are conferring a benefit upon the folk who have given up their good coin at the gate. Nobody feels like trying to flag one of these imitations. It is so perfectly apparent that the phony funnyist actually thinks that he alone is worth twice the price of admission, that generous-hearted men, no matter how horribly they suffer under the affliction, haven't the gizzard to go up and tell him that he's in wrong; that he really is a shine, and a smudge and a nuisance as a would-be diverting rooter. Moreover, such a confrontation would perhaps fetch up a grouch and a growl, and perhaps a scrap, and so the imitation funny rooter is rarely or never called. He goes right on, from year to year, making people wretched and miserable and misanthropic.

Let's wistfully, prayerfully hope that we will not have many of him this year. It doesn't cost anything to hope.

The Know-All Rooter.

Then there's the rooter who knows more about the game than Mr. Cantillon, Lave Cross and people like that. He, too, can and does send scores of ordinary cheery-hearted men away from the ball park with deep dark crimes in their soul. This boy with the confused ego has got the bug that he's the commander in chief. He takes it that the fellow in the uniform on the home club's bench are straw-stuffed marionettes or Stoughton bottles who don't know how to play bean-bag. He's got it all platted out in his mind that they're just walking around trying to lose in time enough to enable them to get home to dinner. So he tells them—tells them in a raucous, strident, bleating horrific, tympanum-bursting bawl—just what to do. He tells them just when to lay it down or line it out. He advises when the proper moment has arrived to execute the squeeze play. He counsels them when to steal. He tells 'em everything. The game is just the primer in big letters for him. He knows more about it than Ned Hanlon ever dreamed of knowing. He takes it sorely to heart when the home players don't do just as he tells 'em. He looks like somebdy abused when they do it the other way. He knows durned well, so he does—and says so—that if the team had done it just his way last year they'd have finished in the first division for a pipe. He's the instructor, all right. What he doesn't know about the coaching gag when it comes to inside ball could be inscribed under the left wing of a dwarfed gnat.

A depressing, soul-searing rooter, this boy, too. Let's take another little excursion into the free domain of hope and root that he will not be with us in any appreciable numbers this year.

The Knocking Rooter.

The rooter who picks on certain individual players of the home club of whom he doesn't himsel approve, belongs also t othe index expurgatorius. There's a deal of bile in this rooter's system. He is possessed with a fixed dislike for some certain player of the home club, say. Well, that settles it. It's all off with that certain player, so far as he is concerned. He can't see that player with a lens as big as a Homestead blast furnace stack, and he desires—infact, demands—everybody to know it. That player, he asserts, asseverates, vows and vums, couldn't play marbles with his little brother, much less baseball. He couldn't play on a rag carpet with a broomhandle. He couldn't play jacks on the front steps. He ought to be rolling a hoop down hill. He's a fat-head and a shoemaker. He belongs with some grip league on the class Z circuit. Maybe he might do as a utility man with the White Horse Rapids team up in the Klondike—but only maybe. Look at him all over himself, the big slob! Yah! There he goes again, bootin' an easy one! He couldn't hit a street car with a popgun if he was standing inside of it. Hi! watch him drop that little bit of an easy one that any kid from the foundlings' home 'ud eat up alive! There's no use a-talkin', that dub ought to be driving a brick wagon. Whoever picked him out to play ball with a major league nine must sure have had one of them Thaw-storms at the time.

And that's the way this type of rooter bawls along, nagging players that are doing their best—that may, at the time, be suffering from the temporary doldrums in which the very best of players find themselves on occasions.

He isn't any nice kind of a fellow, this type of rooter. But 'tis an age when the elimination of the more disagreeable types and species is going on all along the line. Maybe the nagging rooter will take a fall to himself one of these blithe old days and vanish adown the ashphodel meadows. He won't be missed.

The Worst Type of All.

Neither will that still more malignant type of rooter who has got it in for the whole team. This boy belongs to the I-told-you-so's. Didn't he know all along that the team would never make good? Sure he did. He knew—or more often knowed—it! The team's a bunch of misfits, and that's all there is to it. The team isn't meant. It's a joblot. Play ball? Ha! ha! ha! Why, that bunch couldn't play tiddledywinks with a team from the Old Ladies' Home! Same old gag! Lots of promises and nothin' doin'!

This type of rooter is, as a matter of fact, the most hopeless and utterly discouraging type of the whole fitout. He is the chief pessimist of all the groundlings. He jeers and hoots uproariously every time anybody on the home club makes a mistake. Wowee! There they go again! Go-ing up! He hopes that every team that comes along'll wallop 'em. Yes, he wants to see 'em walloped—and then this malignant type of walloper looks around defiantly, for he is a pugnacious cuss, and he doesn't care who hears him say it, and he'd like to see anybody knock the chip off his shoulder! The team's a gang of mutts, and that's all there is to it. Here, he's been digging up his good coin all these years just to see a lot of boobs and hacks rare and gyrate around, etc.

There are several other well-known types of rooters, but we observed in the top line of this story that we were going to be brief, and we're going to keep our word.

Anyhow, it's the one grand, good thing that these specified types are in the immense, preponderating and overwhelming minority. The tremendously major number of rooters are kindly, benevolent, allowance-making, hopeful, sympathetic, bully good chaps with what our old mate Shakespeare calls "the good gravies" of helpfulness in them—and so here's to them!

GIANTS ARE AT CHICAGO

Houghton Team to Play First Game Next Wednesday.

Other Live Sporting Events of the Copper Country.

Houghton, Mich., April 27.—(Special to The Herald.)—In just twenty more days the playing season of the Northern-Copper County—The "Grasshopper"—league, with its four team circuit of "big league" jumps, will open, with Houghton at Duluth and Calumet at Winnipeg.

The Houghton team will report at Chicago today for the first time and will go to Oshkosh, Wis., for the first pre-season game Wednesday. The Houghton squad is small, but the men Capt. "Kid" M. O. Taylor has picked are all good, seasoned players and there will be very little weeding to do. Taylor is in Chicago at the present time, getting his men together.

* * *

It is not unlikely that a Copper Country-Iron Country baseball league will be formed, made up of semi-professional teams in the near future. The scheme originated in the Copper country, when the Franklin team was turned into the Hancock aggregation and announced that it would play independent ball. Then Lake Linden got into line and other teams, including Ontonagon, the amateur champions of the upper peninsula last year.

Now Marquette fans come forward and are working up interest in Marquette, Ispheming, Negaunee, Munising and Iron River. The two sections will likely join forces, form a league and play ball on only Sundays and holidays. About the only things likely to hurt the plans is the likelihood of the passage of an anti-Sunday baseball law by the legislature. Whether this bill will go through or not is rather uncertain, however.

* * *

By defeating the Calumet Y. M. C. A. team recently the Crystal Falls basketball team, the champions of the Iron country, took the championship of the upper peninsula and retained it by defeating the normals of Marquette this week. The Crystal Falls teams are fast goers and have played all winter and spring without defeat. They seem to have an almost undisputed right to the championship, although the L'Anse team has put in a claim for a game. The L'Anse team has not been defeated this year, but it has been up against the tough propositions that the Crystal Falls bunch has met and would probably stand but little show against the champions.

Boston	11	3	8	.273
St. Louis	12	2	10	.167

CHICAGO, 2; CLEVELAND, 1.

Cleveland, April 27.—Chicago defeated Cleveland yesterday, 2 to 1, in a game featured by the pitching of Walsh and Liebhardt and a one-handed running catch by Birmingham. Clark and Lajoie tripled for Cleveland but were unable to score. Manager Jones was put off the field after an argument with Umpire Stafford. Score:

	R	H	E
Cleveland	0	0	0
Chicago	0	0	1

Batteries—Liebhardt and Clark; Walsh and Sullivan. Umpires—Sheridan and Stafford.

ATHLETICS, 1; BOSTON, 0.

Boston, April 27.—Philadelphia won yesterday's game, 1 to 0, the home players being unable to hit Dygert. The run was scored by Seybold, who with two strikes called, swung at a wild pitch, went to second on a base on balls, to third on an out and reached the plate on Wagner's error. Manager Mack of the Philadelphia team suspended Pitcher Waddell for thirty days for refusing to obey the rules of the club. Score:

	R	H	E
Philadelphia	0	0	0
Boston	0	0	0

Batteries—Dygert and Berry; Pruitt and Armbruster. Umpire—Evans.

DETROIT, 3; ST. LOUIS, 1.

Detroit, Mich., April 27.—Detroit won on base-running, two of its tallies being due to steals to the plate. Howell was hit hard, but pitched at his best when in tight places. In both the eighth and ninth innings, St. Louis had chances to tie. An error allowed the visitors their only run. Score:

	R	H	E
Detroit	0	2	1
St. Louis	0	1	0

Batteries—Willett and Schmidt; Howell and Stephens. Umpire—O'Loughlin.

NEW YORK, 4; WASHINGTON, 0.

New York, April 27.—The New York Americans shut out Washington yesterday easily. Brockett pitched a strong game and kept his hits scattered. Keefe pitched the ninth inning, after a shower had made the ball wet. Score:

	R	H	E
Washington	0	0	0
New York	1	0	1

Batteries—Graham and Warner; Brockett, Keefe and Kleinow. Umpire—Hurst.

	R	H	E
Milwaukee	6	7	2
Indianapolis	2	9	1

Batteries—Goodwin and Roth; Briggs and Livingston. Umpires—Sullivan and Hayes.

NO FIGHT AT SUPERIOR

Attempt to Put on Card Last Night Falls Through.

About Seventy-Five Turn Out to See Good Bouts.

The attempt to stage a boxing card at Superior last night was a miserable fizzle, through the failure of the fight fans to turn out and support their game. The promoters had arranged one of the best cards, which has been offered at the Head of the Lakes this year. Mickey Towers and Charles Milton were to go six rounds in the preliminary and the semi-windup and main bouts were to have been: Otto Sieloff vs. Jimmy Kelly and Curley Ulrich vs. Tommy Sullivan.

The preliminary was to have begun at 9 o'clock and at that hour there were between fifty and seventy-five sports in the hall. Sullivan wouldn't consent to go on with that amount of money in sight, nor did the fans expect the full card. They agreed to contribute a little more money for one bout between Sieloff and Jimmy Kelly. Both men were stripped and preparing to enter the ring, when the trustees of the Eagles' hall put an end to the proceedings.

The fiasco last night makes a noise like the swan song of the fight game in Superior. When bouts such as those arranged last night can't draw 100 people, there is no use in trying to keep the game alive and it may as well die a respectable death. The affair last night didn't kill the fight game over there, however. The death blow was delivered some time ago, when Grif Jones and Bill Moseby pulled off an affair across the bay, which was liberally streaked with yellow. Since then the fans prefer to remain at home rather than take chances on being the recipients of another persimmon. An affair like the Jones-Moseby frost is enough to make a man think twice before attending a fight again, but the class of the fighters scheduled to go on last night precluded the possibility of such an affair as that staged by the colored men.

The handful of sports present were willing to let their money go for the one bout, but the trustees of the hall called it off. They might better have allowed it go on, for both of the men are good fighters and they would have given the spectators their money's worth. Incidentally, a man needs money to stake a boxing card and it isn't well sometimes to depend entirely on the gate receipts, although nobody likes to pocket a loss.

MINING IN THE BLACK HILLS

Castle Creek Company, to Have Plant in Operation by Latter Part of July---Large Crew at the Saginaw.

Mystic, S. D., April 27.—The Castle Creek Hydraulic Gold Mining company expect to have its plant in operation by the latter part of July. The company owns a large acreage along Castle Creek, rich in placer, also valuable timber lands. It has made application for patents upon mineral holdings. Three carloads of machinery have been received and it is being installed as rapidly as possible. The straight hydraulic elevator method will be used and the first plant will be set up near bridge No. 72 of the Burlington, near Mystic. The water will be brought four miles through flumes and pipes, and will have a tremenduous pressure at the nozzles of the monitors. The gravel will be washed from the surface down to bed rock and carried in ground sluices to the foot of the elevator. It will then be raised a distance of forty feet and dumped into the gold gathering sluice box, where modern methods will be used to catch the gold. The plant will have a capacity of 3,000 cubic yards daily, and it is estimated that the gravel will yield $1.45 to the cubic yard. The company will also erect two sawmills, one with a capacity of 20,000 feet a day and the other 10,000.

Custer, S. D., April 27.—The Clara Belle, which has been drifting on the 250-foot level for some time for its ore body, announces that the ledge encountered is not the one which was sought. Further drifting will be necessary to locate the original ledge. The body through which the drift is now being run is of different material from the ledge sought, and, while it is all of mining grade, it carries much lower values.

A large crew of men is employed at the Saginaw, and the work at present is largely surface work. The men are getting out logs and sawing lumber for the mill which the company proposes to erect this summer. The mine is sufficiently well developed to warrant the building of a 100-ton mill and enough milling ore is in sight to run the mill for a number of years. The plant will be a concentrating and cyaniding one.

GARFIELD SMELTER'S OUTPUT

Now Treating About 800 Tons of Ore Daily and Will Handle 2,000 Tons When Completed--- The Majestic Properties.

Salt Lake City, April 27.—The Garfield smelter of the American Smelting & Refining company at Garfield, Utah, was treating about 800 tons of ore a day last week. It will handle about 2,000 tons a day when the plant, as at present planned, has been completed. The fourth converter of the eight that will be used is now being set up. Two of the four blast furnaces are already in position and three of the four reverberatories are at work. This is the situation in the furnace house, one of the busiest places in the great plant. To the roar of the furnaces is added the noise of the builders, while high over head two giant traveling cranes, each with a capacity of 120,000 pounds, move back and forth, bearing tons of iron and wood to be added to the structure, stopping frequently to pick up a few iron cars or forty-five tons of converter to be moved about the room. Just outside, the railroad trains come and go, bringing ore and building material and taking away the metal products of the plant. Electric engines, loaded and unloaded, but always hurrying, wind in and out through the works, bringing fuel and carrying away the waste material. The ore, after it is delivered by the railroad to the plant, is handled by belt conveyors through all the stages of treatment, and it moves rapidly. The product of the Garfield smelter is blister copper and 94 per cent pure, and small amounts of gold and silver.

The Majestic properties of Beaver county are making a satisfactory record under the direction of the management which took hold last year. The company is shipping from the Old Hickory about 100 tons of ore per day. This is yielding ample funds to continue development and meeting all expenses and fixed charges, including the interest on the bond.

E. E. Abercrombie of the New England Gold & Copper company and the Majestic company, and F. A. Schirmer of the Boston Consolidated and other companies operating in Utah, have been spending several days in the state looking over the various interests. They expressed themselves as well pleased with the results of their visit.

D. P. Rohlfing of the Lulu and Frisco contact has been at the properties this week. The power drills are now at work on the former property, and the manager expects to make a showing this month that will be very interesting to the stockholders. The Lulu will be on a shipping basis before very long.

The New England Gold & Copper company, operating in Bingham, has equipped its mine with electric power for all purposes. The milling ore, which is being reduced, runs very well, as two tons are put into one and the concentrates will average around $35 a ton. The ore runs very well in gold, silver and lead. This property is one of the small mines of Bingham and promises something in time for the stockholders.

The management of the Silver Shield company proposes to put up a jigging plant that will handle fifteen to twenty tons a day. In order to secure the funds the company has levied an assessment of 3 cents a share, calling for $9,000.

There is a report that Thomas Weir, who secured the Winnamuck property from the Ohio Copper company some time ago, has secured some additional holdings, giving a large territory and bringing the whole in close contact with the big mines of the camp. The group which is contemplated in the deal is one of much promise.

It was thought that the Utah Copper company's big plant at Garfield would be in operation by this time, but it will not be running before some time early in May.

The May Day property has been closed down for a time. The management hopes to secure a more favorable contract with the smelters. During the month of March the output from the mine amounted to about $16,000. The reports from Uncle Sam are certainly encouraging, and the favorable condition is reflected in the advance in the price of the stock. The Star Consolidated and Black Jack are likely to be combined under one management. The proposition is to organize a company with one million shares, and give one share of the new stock for one share of the old. This is another venture in which Mr. Jesse Knight of Provo is largely interested.

The conditions at the Ajax remain about steady, the output being four carloads per week. The company is adding considerable to the treasury every month.

AT THE LAKE COPPER MINES

(Continued from Page 1, Second Section).

has come away filled with optimism for its future. The company now has at least 30,000 tons of good rock piled up ready for treatment.

• • •

Beginning May 1, wages at the Michigan, Victoria and Mass mines will be increased about 7 per cent. The scale for miners will be advanced from $2.50 to $2.50 per day; trammers from $2.08 to $2.25, and surface men from $1.85 to $2. The increase is voluntary on the part of the companies.

Adventure has made no announcement of an increase as yet, but it is probable that the same scale will eventually be adopted. Just recently the company advanced the wages of miners from $2.25 to $2.35 and added a couple of dollars per month to the trammers.

The increase in wages is due to the continued high price for the red metal and to the fact that there has been an increase in the cost of the necessaries of life. It is the purpose of the companies to treat their employes as liberally as conditions warrant and they are even willing to strain a point in their favor.

• • •

No. 1 shaft of the Osceola Consolidated will resume in about ten days. Some delay was caused in getting timber. With this, the richest shaf on the Kearsarge lode, again producing, Osceola should be able to produce over 22,000,000 pounds for 107, and with its other shafts, now in course of sinking on the Kearsarge, and producing, Osceola will eventually turn out 25,00,000 pounds or more annually.

• • •

By the installation of new drills at shafts 4 and 5, a greater quantity of rock is being surfaced at the Mohawk; the men are kept busy handling it. In an interview with Superintendent Smith he said: "Yes, we are very busy and can hardly handle our output with our present force." When asked if he was hiring more men, he said that they were taking on men as fast as they can be secured. It is probable that the output for April will equal, if not exceed, the output for any previous month. The wages paid at the Mohawk are exceptionally good. The miners receive about $75 per month of about twenty-one days' work. The men are given their Sundays off and in the changing from one shift to the other each man gains about eight or nine days during the month.

• • •

During 1906 the Adventure Consolidated Copper company expended more than $50,000 in excess of the earnings, the greater portion of the deficit being expended on construction and in sinking the new No. 4 shaft. Operations were retarded to some extent by the strike during the summer and difficulty in securing help, and this was followed by a falling off in the mineralization of the rock. However, when hope was at a low ebb there became a noticeable improvement in the quality of the rock and this condition is continuing. The output last month was eighty-eight tons of mineral, and fully as good, if not better,, is anticipated for this month.

• • •

Active work on the erection of the structural steel for the new Michigan stamp mill is now in progress at Keweenaw Bay, the work being done by the Wisconsin Bridge & Iron Co.

The new Michigan mill will be 177 by 92 feet, and its highest point about seventy feet above the foundations. It will be a two-head mill, sufficient for the wants of the Michigan for some years to come. The foundation was laid last fall, it being located about one mile west of the Mass mill, also located at Keweenaw Bay. S. Howard Brady, formerly at the mine, is in charge of operations at the new millsite, with F. C. Goggin acting as consulting engineer.

The mill is to be of the ordinary type, equipped with the latest milling machinery, and will be ready to go into commission some time this summer.

With its new mill in commission and two heads available for stamping a substantial increase in the output of the Michigan is looked for. Within two years it is expected Michigan will enter the ranks of the Lake Superior dividend payers.

• • •

John L. Vivian has resigned his position as surface foreman of the Tamarack Mining company, the resignation to take effect between now and May 15. His successor has not yet been named. Mr. Vivian has been offered and has accepted the position of general manager of the Laurium & Butte Mining company, situated in Montana, a large percentage of the stockholders being residents of Houghton county.

About the year 1880 Mr. Vivian went to the Ludington mine at Iron Mountain where he labored for some time, later going out to the Old Dominion property where he acquired much valuable information. After an absence of several years Mr. Vivian came back to the Copper country, securing a position with the Osceola Consolidated Mining company at the Osceola mine. Later he left the Osceola for the Franklin, where he worked for some time. In 1889 he went to the Tamarack, and has been connected with that company ever since. In 1891 he was promoted to the head surface foremanship, a position he has held up to the time of his resignation.

THE BAXTER SPRINGS CAMP

(Continued from Page 1, Second Section).

large force of men will be put to work and the development will be pushed as rapidly as possible. The splendid strike of this lead and jack made at the Hobo in its northeastern and northwestern drifts, demonstrates the uniformity of this immense deposit all the way from the Sunburst shafts Nos. 2 and 3 to a point connecting with the Hobe property. This is looked up to as one of the most promising leases now under development. A new mill will be started on this property as soon as sufficient underground development has been done to keep the mill running as soon as completed.

The Lancaster, located just south of the Omaha and Hobo mines, is taking out wonderfully rich ore. The development has progressed to a point where the parties interested feel that they can put up a large mill and from the drilling they are assured that they will have enough ore to keep their mill running steadily for many years.

The Monon Mining company has been pushing the development of the underground work for some time. This development has proved very rich ore in all the drifts and is now ample to keep the mill running.

Another new mill just started is the McAllister, located directly south of the Mason and Monon Mining company's leases, and just north of the Old Abe. This property has been under development for about one year and has produced some very fine ore, a mill having been installed which was completed and started up this week.

The Mission Mining company has been turning out double its usual quantity of lead and zinc concentrates as the propeey is being run double shift. The improvements that have been made about the property within the last sixty days have added very materially to the economical operations and increase of productions. Shaft No. 3 has been sunk to the 90-foot level, which is the bottom of the upper run of ore. The bins are filled with ore at this mill awaiting the arrival of cars, which seem to handicap the shipments to some extent. In addition to this, two cars could have been loaded could the company have been able to secure the cars. This is pretty much the same condition which prevails at all the other mills in the camp.

A NUMBER OF FINNISH WORKMEN EMPLOYED AT DUMPING CARS AT THE GILBERT MINE NEAR PETTIT, MINN.

ORE STRUCK BY DAVIS-DALY

(Continued from Page 1, Second Section).

it is known as the Calumet & Butte Mining company. The new company is organized under the laws of Wyoming and has a capitalization of $1,500,000 in 150,000 shares. Its officers are: President, Frank H. Schumaker; first vice president, John R. Ryan; second vice president, John A. Gries; secretary, W. J. Galbraith; treasurer, J. D. James. The consulting engineers are Messrs. Baker and E. J. Strasburger of Butte.

The new company has recently increased its holdings by adding to the Richelieu and Albert 11 other claims in that part of the district. These claims are the William, Hillside, Evangelist, Mason, Jimmy Collins, Copper Trust, Silver Moon, John the Baptist, Irma S., Elma and Helen G. The Albert adjoins the Evangelistic on the north and the Richlieu adjoins it on the west. The company now controls and owns 176 acres of mining ground, all of which is in one continuous lump. Some of the property carries the mineral right of the ground comprising Columbia gardens.

The Calumet & Butte was the first of the new companies to begin operations on the east side, and has made good progress in the development of the ground. It has a shaft 500 feet deep on the Richlieu, and proposes to sink several hundred feet deeper before doing much crosscutting. In sinking to the present depth it struck a vein of sulphide ore which at one point and for quite a distance below the place where it was encountered filled the entire shaft. The vein has dipped out of the opening, however, disappearing to the south at a depth of a little more than 400 feet, but the company intends to tap it at the present depth.

According to a statement made by one of the members of the company, the outcrop of the veins within the lines of the property can be traced 4,000 feet. This ore is said to be principally red oxide, with azurite and copper silicate, and carries an average of 13.60 per cent copper.

That the work on the Richelieu has resulted beneficially to the company is evidence by the fact that the adjoining ground was taken into the fold and the company reorganized. Up to the present the company has had little to say regarding its operations, but reports of a good character have been received from it through other channels at intervals.

• • •

The Butte-New York Mining company, which controls the Butte-Milwaukee, is doing excellent work on its group of claims north of the North Butte property, and is destined to success. Its new shaft is now about 235 feet deep. The shaft was started about twenty or thirty feet north of the immense vein on the Colonel Sellers claim, which precludes the possibility of running it into the vein, and thus making sinking difficult, for the vein is pitching south, the general dip of all permanent veins of the Butte district.

• • •

All of the new companies operating in the Butte district are confident that success will crown their efforts. Most of them have been working a year or more, but their work has been confined to sinking shafts. As a rule, ore is not struck in Butte shafts, for the men who are doing the work take particular pains to sink where there are no veins, in order to secure good shafts.

A majority of the companies are now reaching the point at which ore in paying quantities can be expected by crosscutting, but many prefer to go deeper before prosecuting this class of work. Butte & Bacorn one of the most substantial of the lot, is down 800 feet in the Belinda, and is going to the 1,000. Mining men familiar with this company's property assert that if the veins in the Belinda and the Calumet are crosscut at the present depth, pay ore would undoubtedly be struck.

The Bullwhacker company is shipping about 100 tons of silicate of copper ore a day from its property. Its shaft is only 400 feet deep, but an opening from the 200 has been made in the big vein east of the main shaft, and the ore is coming through it.

Butte & Summit Valley is quite hopeful of good results. It is still operating the diamond drill on the 250 of the Little Boy, and is understood to be securing good results. The work is prosecuted in an intelligent manner, and if ore in commercial quantities is not found in the property, it will not be the fault of the management.

• • •

N. P. Pierce & Co. have secured the contract for sinking the shaft on the Butte & London property to the 1,500-foot mark, and are now prosecuting the work. The shaft is 950 feet deep, and if nothing happens, some crosscutting may be done at the 1,200. The company is anxious to ascertain what the vein cut above shows at that depth. The contractors are the men who sunk Shaft No. 2 of the Pittsburg & Montana from the 1,200 to the 1,400 recently, and made a good job of it.

Lessees on the Niagara mine are shipping ore continuously and making money. They have made five shipments so far this month, the last of which, consisting of 11 tons of first-class, netted between $600 and $700. The ore carried 129 ounces in silver and $9.80 in gold per ton. The first-class is shipped in fractional carloads, but the second is sent out in carload lots. The latter always yields a profit. The Niagara is owned by the Butte & Superior Copper company, or at least it will be owned by that company when all of the payments on it are made.

• • •

The shaft on the Alliance is going down in good shape and will reach the 300-foot mark in a short time, provided nothing happens to retard the work. By the use of power drills the company is able to make splendid headway. The rock is hard, which insures a good shaft when the work is finished. The vein struck on the 200 will be crosscut at the 300. The pump is taking care of the water without much of an effort, and the new hoisting engine is giving first-class satisfaction.

• • •

The work of cutting a station at the 2,100-foot depth of the Gagnon mine is about completed, having been commenced several weeks ago, and crosscutting to reach the vein is about to be commenced. The ore body is close to the shaft and the cross-cutting will be slight. The vein is one that dips from the Original on the east, and it is known to be richer than at a point above where it was tapped. It was found on the 2,100-foot level, but the Trenton company, a subsidiary of the Amalgamated company, considered that a depth of 100 feet greater would bring it witain the Gagnon ground.

It was not so many years ago that the Gagnon mine was considered exhausted, but recent developments have proved that beneath the iron capping there is a deposit of much richer ores, and much more extensive.

• • •

Under the most encouraging conditions the Butte-Curtis & Majors Mining company is sinking a shaft on its property in the southwestern part of the city, and extensive development work will shortly be commenced. The shaft is now close to the 200-foot depth. At that point a cross-cut will be run to reach the vein which dipped out of the shaft at a depth of 115 feet. The vein showed a width of seven feet, three and one-half of carrying between 3 and 4 per cent copper.

• • •

Articles of incorporation have been filed by the Montana-Illinois Copper Mining company, which has taken over the properties of the Bismarck Copper company at Mammoth, in Madison county, on the Northern Pacific railroad. The company is capitalized for 2,000,000 shares at par value of $1 each. The incorporators are J. R. E. Sievers, J. C. English, J. K. Heslet, Frank A. Craver, James A. Sharp, William L. McCugan and W. G. Bennett. The latter is a Chicago capitalist and is the president of the company.

The property consists of eleven quartz claims, two placer claims, a mill site, water right and 220 acres of timber land, making a total acreage of 550 acres. It is the purpose of the company to utilize the water power, which is said to be great, for operating an electric power plant to furnish power for drills and other necessary work in mining operations.

ALL EYES ON LARDER LAKE

(Continued from Page 1, Second Section).

carried on on many of the properties, including the Nipissing. There is now every indication that there will be no delay in pushing matters on the Nipissing. Six or eight sleeping camps are going up on the property, and men are being engaged as fast as possible. Vein No. 7 is being worked with open cut, but three shafts are being sunk after standard methods. Last winter a large additional area of Nipissing was denuded of timber, and the hill to the east of Cobalt lake and opposite the town is quite bare. This means that workmen can be spread over a great area, and also that any number can be employed.

While there is little chance that Cobalt will have a rival, yet there are strong indications that other camps with similar ores in similar mode of occurrence may be found. Twenty-five miles west, up the Montreal river, in the township of James, ores similar to standard Cobalt varieties are being found, and the locality will receive a great deal of attention from the prospectors this coming summer, large numbers of whom are flocking into the country.

Dr. Wilson, geologist of McGill university, Montreal, who visited the Larder lake district last winter, reports that while he advised against the purchase of the property he went to examine, that he found free gold there. His investigations, owing to the season, were limited to a few square feet. It now appears that finds of goid of merit are being made towards Lake Abitill. The probabilities are that all these new men spreading out through the district will dig up something worth while, and the next season will see a greater influx by far than this one.

The mines of the Cobalt camp generally are progressing favorably, though slowly. The Conlegas is putting up a concentrator and already has its new 12-drill compressor running. The Conlegas has the Trethewey on its north and the Buffalo on its south. The Buffalo is to install a concentrator, as is the Silver Queen and several other mines in camp.

The Temiskaming and Hudson Bay are running their new strike to the north of the Trethewey and producing ore of high grade.

The O'Brien property, against which the Ontario government holds a quarter interest in the gross returns of the ore, is now one of the most extensive shippers in camp. It is generally understood that the Lawson mine is to be put on the market, now that the litigation hanging over it has been settled. The capitalization, it is understood, will be $5,000,000. The Lawson has one of the most spectacular surface showings in camp.

The town of Cobalt has reached its limit, building being absolutely curtailed.

The Nipissing will not allow any more buildign on any part of its property, nor is the Conlegas any more lenient, and the City of Cobalt Mining company have bought up all the surface rights in their part of the town and intend to acquire and hold the surface rights in any areas that they own.

Approximately 200,000 acres have been taken up around Larder Lake, and as the claims are divided into parcels of forty acres, and each prospector can take up three claims, the amount due the government is estimated to be $37,495 from registration of licenses.

The Cobalt field is just emerging from winter, and it will not be long before prospecting and development work will be in full swing, and large shipments are expected as a result. Before the close of this summer, smelting plants will probably be erected near Cobalt, which will materially assist in reducing and marketing the Cobalt product. Both the La Rose and Nipissing companies will probably erect their own smelting plants.

At the South end of Cobalt Lake the Cobalt Lakine Mining company is sinking a shaft. At the twelve-foot level a calcite and smaltite vein was struck, bearing values to the extent of 2,000 ounces to the ton. The discovery was made near the McKinley & Daragh mine. The shaft was purely a prospect, but now will be sunk deeper and ore taken out. The shaft on the big silver vein admitted water from the lake recently, but the inflow has now ceased.

Cobalt ores are at the present time being largely retained at the mines in anticipation of the beginning of operations at the Montreal Reducing & Smelting company of Canada, which is situated near North Bay, on the line of the T. & N. O. railway. The capacity of these works when in full operation will be 500 tons per day. The erection of buildings and installation of machinery has been going on ever since last summer. Within another month Cobalt ores should be undergoing treatment in the company's furnaces.

The Argentite Cobalt company, incorporated under the state of Maine, holds five mines in the district and one townsite company. These are the Isa, Louis and the Argentite Townsite company, in all fifty-two acres. At Argentite, 160 acres have been laid out in lots out of the 240 acres the company possesses there. The Isa corners on the Greene-Meehan to the south. Some trenching has been done and a little drifting on a shallow shaft. A shaft is down twenty-eight feet on a calcite vein and crosscutting is commenced. The parent company is capitalized at $2,000,000.

Recent shipments from the Kerr Lake or Jacobs at Cobalt have been most satisfactory. They have averaged above 3,000 ounces to the ton. The lowest assay on any shipment, the directors say, was 1,768, and the highest about 4,200 ounces. A carload shipped last week brought $80,000 net. Two carloads of this rich ore were shipped on April 8. It is expected that when the large plant is installed and running next month, the output of this mine will be doubled. Benjamin D. Lawrence, consulting engineer of this company, is now on the development of the mine. Messrs. McMartin, Timmins and Dunlop, the owner of the LaRose mine, have filed a claim with the government for the whole of the royalty received from the O'Brien mine. This is 25 per cent of the ore mined, less some deductions for the expense of mining. The claimants base the request on the ground that they asked the government for a fiat to bring suit against the O'Briens to recover part of their property, claiming that it was purchased from parties who did not make the alleged discoveries on which their application for the title was granted, and that the owners of the La Rose made the bona fide discoveries. The government brought on the action, but settled the case out of court, on the O'Briens agreeing to pay the royalty stated. The government has received about $54,406 from the O'Briens, and is waiting for returns from nine other cars.

The flotation of the La Rose mines of Cobalt on a capitalization basis of $6,000,000 in 6,000,000 shares, par value $1, and a stock market basis of $30,000,000 the shares being floated at $5 has attracted increased attention to the Cobalt district. The LaRore has the same capital as the Nipissing, $6,000,000, only the Nipissing has 1,200,000 shares, par value $5. Both companies have about the same acreage, the Nipissing 856 acres and the La Rose 800 acres, the latter company having recently absorbed a number of other properties. Its proportion of developed territory, however, is no larger if as large as the Nipissing.

TONOPAH A MILLING CENTER

(Continued from Page 1, Second Section).

facts about Wonder are supplied by local newspapers.

The Wonder mining district is situated eighteen miles north of the Fairview mining camp and fifty-two miles by wagon road from Fallon on the Southern Pacific railroad. A railroad connecting Wonder and Fairview with the main line of the Southern Pacific has already been surveyed. Virginia City, that made multi-millionaires of Mackey, Flood, Fair and O'Brien, by the production of silver from the Comstock Lode in the 70's, is sixty-five miles west of Wonder. Reno, the metropolis of Nevada, is eighty miles northwest of Wonder.

The highly mineralized territory of Wonder consists of a mountainous section six to nine miles square.

The proportion in value of silver to gold in most of the ore is about six to one, although in some places the ratio of gold is much greater than this.

The general formation is that of strong quartz ledges in porphyry and ore contacts with andesitic rocks.

The first location in the district was made last March in what has since become known as the Jack Pot group. The locations and strikes on what is now called Wonder Mountain, which brought the district to the attention of the world, were made about the middle of last May.

The first assay ran a little less than $1,200 to the ton in silver and gold.

The western and southwestern parts of the district have since been opened up and appear to be of even more importance than the east. Here are located the Colorado, Rich Gulch, Golden and Ruby groups.

The stampede from the great Fairview mining camp, eighteen miles to the south, and from other sections, began on May 30th, 1906.

The town of Wonder has a population of about 1,500, two newspapers, six up to date mercantile establishments, ten restaurants, and five assay offices. A first-class hotel of adequate size has been thrown open to the public.

floocmifwy cm ic c m w y p p j 1⅛16

On April 18th, Secretary Horrigan of the Miners' union reported that 725 miners in good standing were employed in the eastern and southern part of the Wonder district, and 405 in the western part, or a total of 1,127.

A mile and a half to the northwest of Wonder is the town of Hercules, which is close to some important mining properties. Hercules has a good hotel and a general store carrying a wide variety of goods. It has recently been given a postoffice, and plans have been made for a newspaper.

At the base of the hill on which is located the Spider-Wasp property is the new townsite of Victor, which boasts of a hotel and several general stores.

For a water system for Wonder, pipes are being laid from Bench Creek, six miles away. The stream is absolutely uncontaminated, and the water will be taken from the land. The pressure will be obtained from a fall of seven hundred feet. The equipment is of the most improved kind.

Over a thousand claims have been recorded in the Wonder mining district.

It is estimated that over five million dollars have already been invested in the district.

Development work is now being pushed with great vigor, and the first shipments of ore have been made. This ore averages between $200 and $300 a ton. At least thirteen properties already have in sight ore of this remarkable high grade.

The promise of the district is that it will make more millionaires than ever Goldfield has.

Goldfield, Nev., April 27.—Supt. Joe Morris of Wingfield & Nixon's Fairview Eagle mine confirms the purchase by his employers of the control of the Fairview Golden Boulder. The sellers were the Taylor Bros., who developed the Jumbo mine in Goldfield into a bonanza and then disposed of their holdings to Wingfield and Nixon for $600,000. The Jumbo was later merged into the Goldfield Consolidated, the $35,000,000 corporation that took over the Mohawk, Red Top and Laguna. General Manager Finch of the Goldfield Consolidated states that the showing on the Golden Boulder stamps it to be a million dollar mine. The vein, which is said to give an average of $600 for four feet of its width, has been prospected to great depth and demonstrates the presence of a sensational body of high-grade.

The purchase of the Golden Boulder by Wingfield and Nixon is believed here to be a part of a gigantic merger scheme that will in the end take in the Eagle, Eagle's Nest, Dromedary Hump, Hallstone, St. Paul and intervening properties. The owners of the control of the Eagle's Nest, Dromedary Hump and Cyclone, the latter being the sole property of Johnny Harnan of Cripple Creek fame, have all been seounded recently and requested to name a cash figure for their holdings.

A deal was closed several days ago by which Charles Schwab, through Malcolm MacDonald, became the possessor of the original strike at Pitting, the new camp a short distance from Luning in Esmeralda county. The estate consists of about 200 acres, and has a splendid outcropping of the ores of the red metal. The sellers of the property are Frank Boudine, W. I. Snook, Fred Wallace, Martin Fitting and Mr. Schertzer. The location is eight miles from Acme tanks, on the Nevada & California railroad. The original owners of the property will not state the consideration, but say that it was a "big chunk of cash with a comfortable block of stock."

Searchlight, Nev., April 27.—During the past six months some 150 mining companies have come into existence in the district, the majority by purchase of prospects and others through location. In every instance surface showings have been encountered, and despite the short period lapsing between acquisition of territory and perfection of organization, a majority of these concerns have prosecuted development. There are a few instances where workings have gone below 200 feet.

To date no effort has been made toward production; in fact, with the present development this would not be possible on any extended scale, as in a majority of instances the workings have only served to display the dimensions of ledges, and give some idea of their permanency.

Rhyolite, Nev., April 27.—R. B. Whittemore, the Salt Lake man who is interested with Curtis Mann in some of the biggest deals of the Lee district, has furnished much of the material for the annual spring report upon the conditions of the Bullfrog properties.

According to the report there has been more than 100,000 feet of work done on the mining properties of the district in the past two years.

Mr. Whittemore, in speaking of the showing of the district, said: "The fact that there is 100,000 feet of underground work already done means that there are more than twenty miles of work done. The engines and air compressors that are at work on the various properties are valued at thousands of dollars.

"For a new camp, Rhyolite has made a good showing."

Rosebud, Nev., April 27.—A strike which bids fair to be one of the most important in the history of the district was made last Tuesday on the Five of Diamonds claim, located by Frank Spitler and Thomas Kearns, about five miles south of Rosebud. The discovery was made by H. C. Parker, who purchased Kearns' interest in a large group of claims in that territory. In prospecting a large ledge which runs through the Five of Diamonds claim Mr. Parker knocked off a piece from the croppings and was astonished to find the piece of rock covered with flecks of brittle silver. An assay of the ore gave values of better than 300 ounces in silver.

Ely, Nev., April 27.—The two railroad tunnels through the canon west of Ely are practically completed. The grading gang has recently been doubled, and for a considerable distance ties are in place. It is probable that the branch of the road which will be known as the Mountain Line, connecting the mines with the McGill smelter plant, will be ready by August.

A substantial reduction in freight and passenger rates will shortly be made by the Nevada Northern Railroad company.

Progress of work at the McGill smelter is satisfactory. Very much of the grading has been done and foundations are in for the power plant, the first unit of the concentrators and for several of the larger buildings. The force of masons and carpenters has been practically doubled during the month, and nearly all the necessary machinery is now on the ground. Preliminary work is under way for the purpose of bringing the water from Duck Creek through the mountain to the smelter site. The water supply will be amply sufficient to treat 25,000 tons of ore daily.

The tunnel connecting the Ruth and Star Pointer workings of the Nevada Consolidated is practically completed. This tunnel is over a mile in length and will be equipped with an electric hauling system. A spur from the Mountain Line of the Nevada Northern will run direct to the crusher, and the ores will be handled almost automatically from the time they are "broken down," in the Ruth mine until they are turned out as refined copper at the smelter.

As soon as the Mountain Line reaches Copper Flat, at which point is located the Eureka mine of the Nevada Consolidated, a battery of powerful steam shovels will be installed for the purpose of tearing down the mountain of copper. There has already been several thousand feet of tunnelling, drifting and development work at the Eureka mine, which has proved the existence of a large ore body very uniform in copper values, ranging from 2¼ to 2½ per cent.

The Wedge shaft of the Cumberland-Ely group is now down about 150 feet. Copper sulphides and oxides have been uncovered, and drifting has commenced along the vein. Progress at the Ada and Jupiter workings of the same group is satisfactory. At the Veteran mine, belonging to the same company, everything is in readiness for large shipments of ore as soon as the smelter is ready. The ore body on the lower level of the Veteran is the highest in value thus far discovered in the Ely district. It bids fair also to be extensive.

ALASKA MINES TO THE FRONT

(Continued from Page 1, Second Section).

time ago that this property had been sold to the Rothschilds for $5,000,000. Three million dollars was refused for it, the offer having been made by the Guggenheims. Mr. Beatson is now on his way to New York, presumably to close the deal with the Rothschilds.

Copper mining in the Prince William district, according to Mr. Reynolds, is an easy matter, owing to the absence of water, the rock being so hard that although the mines are on the sea coast, and some of the levels below water level, not a drop of water penetrates the workings. The company of which Mr. Reynolds is president has sunk a shaft 600 feet below water level, and it is perfectly dry. The company also has a tunnel, the mouth of which is only six feet above the level of the sea. The tunnel and the drifts extend for a distance of 1,600 feet. The vertical depth is 2,000 feet at the end of the tunnel, and by drifting and other workings it is estimated that there are 2,000,000 tons of ore in sight, which will average between 1½ and 3 per cent, with gold and silver values of $2 a ton. The company is now mining 1,000 tons a month, and by putting in an aerial tramway the output will shortly be increased to 3,000 tons a month.

There are no fissure veins in the district, the whole deposit being a contact between slate an dgreen stone and slate and porphyry walls. The ore is chalcopyrite, and there is an abundance of sulphur. Electricity is used exclusively for power by the Reynolds-Alaska company for operating the hoisting machinery, the drills and the pumps.

South of the Prince William properties is La Fouche iron mountain, on which an ore body nearly a mile long has been opened. The mineral zone is here nearly 200 feet wide ,though not all in ore.

The Central Railway company is now building a road to the coal fields at Matanuska, where there are enormous deposits of coal, 81 per cent fixed carbon, which is one of the finest steaming coals. There are also fine deposits of coal at Kayak, to which the Guggenheims are building a railroad from Cordova bay.

Two smelters are contemplated, stated Mr. Reynolds last night, one by his company to treat 500 tons a day, and another on La Fouche island, by the Central Railway company, the first unit of which will treat 200 tons a day. The latter is planning to treat 1,000 tons in the near future. Both will be constructed this year.

At the present time the companies operating in Alaska enjoy a low rate of transportation and by reason of the favorable character of the ore, an extremely low rate is offered by the Tacoma smelter for treatment, the total cost of production, including mining, transportation and smelting, is about 6 cents a pound.

During the past two days Mr. Reynolds made a tour of inspection of the mines of Butte, and of the Washoe smelter at Anaconda. While in Butte he visited the Ophir mine, the property of the Butte Central & Boston Copper corporation, in company with John Cameron, superintendent in charge. Speaking of the Ophir, he stated that the work being done there is among the best that he has ever seen. He expressed the opinion that the Ophir would, within reasonable time, develop into one of the biggest producers in the Butte camp.

If you are selling enough goods—then your advertising in The Herald is sufficient.

BLOOD POISON

Have You Sore Throat, Pimples, Copper-Colored Spots, Aches, Old Sores, Ulcers, in the Mouth, Hair Falling? Write for proofs of permanent cures of worst cases of Syphilitic blood poison. Capital $500,000. 100-page book FREE. No branch offices.

COOK REMEDY CO., 252 MASONIC TEMPLE, Chicago, Ill.

LATEST NEWS of the NEIGHBORING TOWNS

New Duluth

New Duluth, Minn., April 27.—(Special to The Herald.)—Mrs. Frank Noael and Mrs. William Millen were Duluth visitors Friday.

Miss Isabel Thayer went to Duluth Friday to stay for some time.

Peter O'Connell spent Saturday and Sunday in Duluth with his father Michael O'Connell.

James Murphy came home from Proctor Saturday night to spend Sunday with his family.

Miss Zella Herbert and Miss Margaret Nicholson of West Duluth, were the guests of Miss Herbert's cousin, Miss Lorette Mc Kay, Saturday and Sunday.

A number of Miss Vivian Cragler's little friends gave here a very pleasant surprise party Saturday evening. Games were played and refreshments were served and a most delightful time was had. Those preesnt were, Misses Alma Christopherson, Violet Huber, Doris Tower, Laura Tower, Agnes Wills, Florence Wills, Nancy Widell, Florence Olson, Rosa Fischer, Emma Fischer, Ida Fischer, Hilma Freburg, Ruth McGrath, Margaret Nicholson, Zella Herbert, Lorette McKay, Hattie Bloyer, Vivian Crager, Mabel Reindl, Anna Brand, Ethel Brand, Anna Rutter; Masters John McGrath, Algot Olson, Henry Durdis, Frank Hicks, William Rieckhoff, Julius Bernt, Hans Bernt, Verule Sprague, Norman Smith, Frank Reindl.

Frank Wacha came down from Bovey Monday to spend the day looking after his property here.

Charles Carlson came home from Duluth Saturday to visit his father until Monday.

Walter Lundquist of Smithville, is spending the week in New Duluth.

Among those who spent Saturday in Duluth were Mrs. Brophe, Miss Margaret Smith, Miss Maud Miller, Miss Constance Willner, Miss Sarah Smith, Miss Louise Smith, Miss Winnifred Tower, Mrs. U. C. Tower, Miss Violet Huber, Miss Alma Christopherson, Mrs. Frances Fischer, Miss Rosa Fischer, John Jarosch.

Miss Hazel Fischer of Duluth, was the guest of Mrs. Frances Fischer Sunday.

Mrs. Gust Jacobson entertained a few ladies at a coffee party Friday afternoon. A very pleasant time was had. Those present were, Mrs. John Bernt, Mrs. Frank Brand, Mrs. Charles Gustafson, Mrs. Frank Widell, Miss Mamie Gustafson, Miss Anna Brand, Miss Ethel Brand, Miss Florence Jacobson, Miss Hazel Jacobson; Masters Sidney Jacobson and Roy Brand.

Miss Bernice Johnson was the guest of Miss Mamie Gustafson, Sunday.

Rev. Knudsen held services at Smithville Sunday morning and at Fond du Lac Sunday afternoon. Rev. Blair preached at the Presbyterian church Sunday evening.

Don Overton of Smithville, called in New Duluth Sunday.

Mrs. Frank Brand entertained a few friends Friday evening, in honor of her daughter Anna's birthday. Delicious refreshments were served and a most enjoyable evening was spent. Among those present were, Mr. and Mrs. Charles Gustafson, Mr. and Mrs. Jacob Duclett, Mr. and Mrs. Frank Brand, Misses Marie Carlson, Betsy Duclett, Anna Brand, Ethel Brand; Masters Sigurd Duclett, Roy Brand.

Miss Katheryn Noael spent several days of this week visiting relatives in Duluth.

Mrs. Frank Widell and Miss Nancy Widell visited friends in Smithville, Saturday.

Miss Mamie Gustafson spent Saturday in Smithville with her cousin Miss Bernice Johnson.

Miss Smith, Miss Willner and Miss Miller attend teachers' meeting at the Duluth high school Saturday.

Miss Florence Smith went to Eveleth Monday to visit Mr. and Mrs. Shea for some time.

Mrs. Charles Wills entertained a few friends Wednesday afternoon. A dainty luncheon was served and a most enjoyable time was had. Those present were Mesdames William Hicks, Frank Widell, Andrew Olson, John Imbertson, George Reindl; Misses Constance Willner, Mabel Reindl, Margaret Reindl, Hilma Freburg, Florence Wills, Agnes Wills, Nancy Widell, Gladys Wills.

Miss Elizabeth Smith returned from Cohasset, Wednesday, and is the guest of Miss May Thayer.

Mr. and Mrs. C. H. Giddings and family moved to New Duluth Wednesday from Duluth. The ywlll make their home in one of their houses recently purchased on Ninety-eighth avenue.

After the meeting of the Lady Maccabees Thursday evening, a social session was held and a delicious spread was served in honor of Mrs. William Hicks. The members of the lodge presented Mrs. Hicks with a table cloth and a set of nankins.

Mrs. W. H. Crosby and son Manson, spent a few days of this week with friends in Duluth.

Miss Amelia Bayer of Duluth and William Bayer of Fond du Lac, are the guests of their sister, Mrs. Leo Biebl and their brother Wenthal Bayer.

Mrs. Andrew Olson gave a delightful party Thursday afternoon in honor of her sister Mrs. John Imbertson. A delicious luncheon was served and a delightful afternoon was enjoyed. Those present were, Mesdames George Reindl, William Crager, Charles Wills, John Imbertson, Alfred Leonard, Peter Olson., L. S. McKay, Charles Bartz; Misses Mabel Reindl, Elsie Crager, Agnes Wills, Florence Wills, Gladys Wills, Hilma Freberg, Aleen Leonard; Masters Stewart Bartz, Arnold McKay, William Leonard, Ernest Leonard and Arthur Olson.

Rev. Knudson went to Willow River Friday to hold services there and at Barnum Sunday.

Miss Ida Williams of Chicago, arrived in New Duluth Thursday to visit Mr. and Mrs. F. M. Hicks and family.

Among those who spent Thursday in Duluth were Mrs. William Hicks, Miss Jennie Hicks and Mrs. L. S. McKay.

Aitkin

Aitkin, Minn., April 27.—(Special to The Herald.)—Dr. J. W. George has taken possession of the property known as the Lano house that he recently purchased.

Mrs. E. P. Duffy visited relatives this week in Superior, Wis.

J. H. Bedbury has gone to St. Paul to engage in contracting during the summer.

Mr. and Mrs. F. E. Krech left this week for Minneapolis, where they will join the excursion of Shriners for a trip to California and other western points.

Alex Hetherington and family have returned from Deer River, where they spent the winter, and have taken a house on the South side.

Mrs. Leonard Tripp, formerly of Aitkin but now of Washington, is visiting friends here. Mrs. Tripp is suffering from several bruises received in a wreck on the Great Northern while on her way here.

Irving Grey of Osakle, a cousin of R. M. Duncan, has taken a position as night clerk at the Foley.

C. J. Kordes, who has been critically ill in a Minneapolis hospital, is now convalescing.

The 5-year-old son of Mr. and Mrs. Barney Sturre died last week of cholera infantum. The funeral was held in the Catholic church.

Mrs. W. P. Hay has returned from a visit with relatives in Hudson, Wis.

Mrs. Welch of Minneapolis has been the guest of Mrs. S. J. Warren.

A new cement floor is to be placed in the main building of the creamery.

C. G. Krelwitz of Duluth was in town this week locating the corner of the Willard annex for the Potter-Casey company. The matter of lines on the lots on Fourth street will be settled before more buildings are erected.

Alfred Leithley and wife of England have been in Aitkin for the past few days and have purchased property here. Mr. Leithley is looking for suitable locations for several young men from England who desire to come here.

Mrs. Marion Randall of Aitkin and Harry Caswell of Duluth were married in the latter city last week and then took a trip to Winnipeg, before making their home in Superior. Mrs. Caswell is a daughter of Norman Falconer of this place.

Theodore Carlson, aged 22 years, was drowned last Saturday in the Mississippi while in the employ of Eddy & McKenney, who are getting out a cedar drive. The body was recovered Sunday and the funeral held Monday in the Morrison church. Mr. Carlson was unmarried and has one brother, Leonard Carlson, living in the town of Morrison.

The farm home of F. O. Bodin of Glory was burned to the ground Sunday afternoon and the family succeeded in saving only a small part of their belongings. The fire started in the roof and was discovered by a passing neighbor. Owing to the wind that was blowing a gale the fire could not be checked. There was no insurance. Miss Wilson, who was teaching the school near there and boarding with the Brodin family, saved her trunk.

The farmhouse of F. W. Buck of Malmo was burned last Friday with no insurance. A defective chimney was the cause and the family saved only a few pieces of furniture and a little clothing.

Clyde McKay has moved into the Hungerford house on the South side.

C. H. Grey of Kimberly has been called as a petit juryman for the United States court at Fergus Falls, May 1.

S. J. Warren is building an addition to his house on Birch street.

Biwabik

Biwabik, Minn., April 27.—(Special to The Herald.)—Now that it is practically settled that a sewer system will be constructed in Biwabik this year, a number of substantial and costly residences will be erected by local business men the present summer. Among the most substantial will be those of S. F. Colvin and Fred Lerch, to be erected on Canton avenue, near the hospital. The lumber and other materials for these houses are now being assembled. It is understood that F. B. Myers and N. B. Shank will build new homes for themselves in the near future, while a number of smaller houses but of modern build are being planned for. The demand for real estate is lively and many transfers are being made. It is expected that as a result of the development of several new mines both east and west from the village, Biwabik will have a considerable growth this year and next.

Alfred Maki is up from the St. Louis river making repairs to his boarding house here.

Brainerd

Brainerd, Minn., April 27.—(Special to The Herald.)—There have been nine divorces granted to Crow Wing county couples the past thirty days.

There have been several deaths among old residents of Brainerd the past week.

Patrick O'Conners, who has resided here for over twenty-five years, died Friday and was buried Saturday.

Andrew Olson, for twenty-five years a leading business man of this city, died of locomotor ataxia as the result of having been held up and beaten by thugs five years ago. He was never well a day after that. He was 59 years old and left a wife, daughter and several sons.

Justus Gray, another business man, who had made Brainerd his home for over a quarter of a century passed to his reward Sunday. He was buried here Tuesday morning. He left a wife, son and daughter.

A bad fire in the cedar yard of George A. McKinley & Co., destroyed about $1,500 worth of poles Sunday. A perfect gale of wind was blowing, but fortunately in a direction that made it possible to save most of the yard. Had the wind been from the east the entire yard must have been destroyed.

Word has been received here of the death of Mrs. Emma Thurston, formerly of this city at her home in Monticello, Minn. She was a former resident of Brainerd and had a brother and four sisters still residing in this city.

J. C. Manville of Chicago was in the city over Sunday and accepted the position of general secretary of the Y. M. C. A. here. He will return in a few weeks to take up the work.

C. A. Walker, for many years a resident of Brainerd and at one time owner of the Brainerd telephone exchange, but now residing in Couer de Alene, Idaho, has purchased a half interest in a patent thermostat for controlling the heat of articles heated by electricity and will engage in the manufacture of the thermostats and electric flat irons, to which the invention will be applied.

The first district conference of the Brainerd district of the Methodist Episcopal church closed in this city Sunday night. The principal speakers from outside the district were Rev. Dr. Robert Forbes of Philadelphia, Rev. Dr. S. P. Long and Rev. Dr. Illingley of Minneapolis. There were about forty delegates present and all declared the sessions both pleasant and profitable.

A series of Evangelistic meetings closed at the Swedish Baptist church on Sunday evening. There were a number of conversoins deported.

Mrs. Mary Halsted, mother of Hon. A. J. Halsted, publisher of the Brainerd Tribune, was stricken with paralysis last week, but is recovering. As she is 83 years of age there was some doubt as to her recovery, although the attack was slight, but she has improved steadily and much hope is now felt for a complete recovery.

A crew of men is at work at the Pillsbury forest reserve, northwest of Gull lake, transplanting 500,000 Norway and white pine and spruce seedlings from the nursery at the reserve into the reserve itself. It is estimated that it will take the crew of men about three weeks to do the work.

John Lee, of Como, is in the hospital here as the result of dropping a car wheel on his foot in the Northern Pacific shops at that place.

Dr. G. R. Leonard, a prominent dentist of Mandan, N. D., died in this city last week from complications following an abscess.

Mrs. George Sullivan and John Ripplinger returned Friday night from Chippewa Falls, Wis., where they had been attending the wedding of their sister, Miss Agnes Ripplinger, well known in this city.

A. F. Kenyon has packed his stock of clothing and stored it in this city and gone to Minneapolis on for business. He will not reopen his store here, but will probably sell the stock in a bunch to some one.

Edwin Floberg, a prominent citizen of East Brainerd died last week of tuberculosis. The funeral was from the Swedish Methodist church Monday afternoon, the funeral being largely attended. The services were conducted by Rev. A. Nelson assisted by Revs. J. E. Berry and A. H. Sedine.

John Britton had the index finger of his left hand taken off in the shops here Monday. He was working in the laboring gang when the accident occurred.

The Methodist Episcopal Sunday school broke all previous records in the matter of attendance, there being 182 present.

Miss Ora Hoy, one of the popular teachers of the Brainerd public schools, was called to Cresco, Iowa, this week by the dangerous illness of a sister.

Mrs. R. R. Wise returned tht first of the week from Columbus, Ohio, where she had been spending the winter. Her mother accompanied her on her return and will spend the summer at the home of Mayor Wise Summerdale ranch.

Alfred Towers went to St. Paul and Stillwater on business the first of the week.

John Gilmer and Patrick Welsh went to Little Falls the first of the week to figure on the contract of returning to the water the logs which were scattered on the banks by the recent log jam at that place.

Dr. S. W. Mowers, for the past ten years assistant surgeon at the Northern Pacific hospital in this city, has resigned, having been appointed chief surgeon of the company's hospital at Tacoma. Dr. Mowers is succeeded here by Dr. A. W. Ide, for the past two years an interne in the hospital here. Dr. Mower stands high in his profession, his fellow surgeons according him a place high among the best in his profession in the state. He and Mrs. Mowers will leave soon for their new home. A large circle of friends regret to see them leave. He has made many friends here, while Mrs. Mowers has lived here from girlhood and has hosts of dear friends in the city.

Tony Wyscocky, who was registered at the Globe hotel as John Jacobson, is charged with having gone through the pockets of three of his fellow boarders while they slept, getting three purses, quite a sum of money and a watch, besides some smaller plunder. He got 40 days in jail on one charge while two more are hanging over him. He succeeded in hiding four $5 gold pieces, but the rest of the stuff was recovered in a closet in the hotel where he is claimed to have planted it.

The lath mill of Polk & Wood will start for the season the first day of May. The mill was started last week and found to be all in running order.

Alfred Reid and Miss Lulu Tuttle were married at the bride's home near Pequot Wednesday. The happy couple went to the Twin Cities for a brief honey moon after which they will be at home at Park Rapids. The bride is a sister of R. E. Tuttle of this city.

The Iron Moulders gave their annual ball the 24th of April and it proved one of the swellest events of the season. Every lady present was presented with a handsome hand mirror with the compliments of the moulders. There were about 200 couples present.

The work on the telephone line from Midland, Mille Lacs, to this city, is progressing, over half of the poles having already been set. It is hoped to get it in readiness for business early next month.

Eugene Merrill, who was hurt in a collision in the St. Paul yards Dec. 28, 1906, has so far recovered as to be able to leave the hospital. He expects to return to his home in St. Paul in a day or two. He is just able to be out on crutches.

There have been more real estate transfers, especially in the way of city property this spring than for many seasons.

Married Women

Every woman covets a shapely, pretty figure, and many of them deplore the loss of their girlish forms after marriage. The bearing of children is often destructive to the mother's shapeliness. All of this can be avoided, however, by the use of **Mother's Friend** before the baby comes, as this great liniment always prepares the body for the strain upon it, and preserves the symmetry of her form. **Mother's Friend** overcomes all the danger of child-birth, and carries the expectant mother safely through this critical period without pain. It is women's greatest blessing. Thousands gratefully tell of the benefit and relief derived from the use of this wonderful remedy. Sold by all druggists at $1.00 per bottle. Our little book, telling all about this liniment, will be sent free.

Mother's Friend

The Bradfield Regulator Co., Atlanta, Ga.

LATEST NEWS of the NEIGHBORING TOWNS

Earl Stanley, who has been working on the section here with his father, left Tuesday night for Grand Rapids, where he will take charge of section No. 18, on the Great Northern.

Mr. Danielson has purchased a forty-acre tract of land on the north side of the St. Louis river and will immediately commence the erection of a house and barn, and will cultivate the land. He purchased the tract from Ed Lambert of Alborn.

Rev. Wolff, who has frequently conducted church services here during the past year, departed this week for the Pacific coast. He has resigned the pastorate of the Scanlon church and will seek a location in the West.

Mrs. W. A. Epperson, who has been seriously ill for the past nine weeks, succumbed to the ailment last Tuesday afternoon. She was at St. Luke's hospital in Duluth and had submitted to a surgical operation a week before her death. Mrs. Epperson was in her thirty-eighth year, and leaves a husband and three children to mourn the loss of a loving wife and mother. She came here in the fall of 1901, and was considered a pioneer resident of the village. Always prominent in church circles, her loss to the community will be greatly felt by her neighbors and friends. She was born and reared in Tipton county, Indiana, and the remains were taken there for interment. The parents and a sister of the deceased came to Duluth, and they together with Mr. Epperson and children accompanied the remains to the old home. The husband and the motherless children have the sympathy of the entire community in this their hour of bereavement.

Eveleth

Eveleth, Minn., April 27.—(Special to The Herald.)—H. G. Walker of Chicago, Ill., arrived Tuesday to take a position in the Fayal laboratory.

Roadmaster M. D. Kelley is here superintending the work at the gravel pit.

Miss Hannah Carlson and Mrs. C. Lindskog were visiting in Moose Lake last week.

Miss Mamie Lee reopened her school west of Moose Lake, Monday.

Harriet & Rinbrick Smith of Superior, spent Sunday with their little friends in Barnum.

R. W. Barstow was over to Cloquet, Sunday.

S. Cain was in Moose Lake, Tuesday.

Mrs. A. Traggart spent Saturday in Moose Lake.

Bernice Giberson returned from Scanlon, Tuesday.

William Cain was in town Tuesday.

Miss Mary Brett spent Saturday and Sunday with friends in Duluth.

T. M. Duesler was down to Sturgeon Lake, on business, Tuesday.

Mrs. T. D. Heustis arrived here Friday from St. Paul, to visit friends and pack her household goods before leaving for Ellensburg, Wash., where she will reside in the future.

Moose Lake

Moose Lake, Minn., April 27.—(Special to The Herald.)—A. W. Johnson was called to Duluth Friday by the illness of his daughter, Agnes, who has appendicitis. He returned with her Sunday.

George Goodell and Will Felgen were Moose Lake callers Tuesday night.

John Ristad was down to Sandstone on business Tuesday.

C. J. Dodge was a Twin City visitor this week.

Fred Gay came home from Sandstone Wednesday.

Mrs. Lindblad was taken to Duluth Friday to be operated on for appendicitis.

Miss Clara Jacobson went down to St. Paul Friday for a short visit.

Mrs. Ole Swanson and son, Rodney, went down to St. Paul Tuesday.

P. W. Ehr of Carlton was in town Saturday on business.

Mr. Herbert of Barnum was here Saturday.

David Johnson shipped a carload of cattle to Sparta Saturday.

A baseball meeting was held at the Friedman house Friday evening and officers elected and plans laid for the coming season. Dr. J. T. Speck was elected manager and E. A. Rydeen captain.

Sheriff Al Lee was down from Carlton Wednesday on business.

Miss Effie Rydeen returned to St. Croix Falls Tuesday.

Mrs. J. T. Speck was in town between trains Monday.

Attorney John Green of Carlton was in town on business Wednesday.

Mis Ella Gray of Sturgeon Lake was in town Monday.

Pete Slettum of Cloquet arrived Friday to visit old friends.

Invitations are out for an entertainment to be given by the local Odd Fellows Saturday evening to celebrate the eighty-eighth anniversary of

OUR YOUNG FOLKS' PAGE

Minnie's Protector.

Little Minnie Gold-curls
Sleeping in the sun:
Teddy Bears beside her.
Isn't it great fun?

Round the corner Tramp creeps:
Minnie doesn't hear.
Teddy Bear leaps forward—
Gets Tramp by the ear!

Tramp, his ear a-stinging,
Goes off on the run.
Smiling, Teddy sits down
By Minnie in the sun.

TIM TURNIPS.

When Jappie Left the Circus.

BY HELENA DAVIS.

The little village of Berton was all excitement. A circus was coming to town. For a week after the great posters were pasted on barns, fences and trees the entire community was full of excitement. It was the first time during the life of Berton that a circus was to do it the honor of pitching its tents there. The place chosen for the tent site was the baseball ground, where the enthusiasts of that game had dug a fine well that was half-full of clear, cold water. Here the men, animals and strange creatures that belonged to the show might have water in plenty. This fact alone made the boys of Berton very unhappy, for now there was no chance of procuring a ticket by carrying water to the elephant or other show animals.

The morning of the arrival of the circus wagons — Berton was not blessed with a railroad—all Berton boyhood went half a mile into the country to meet them and act as escort into town. And few were the homes in Berton that day that saw hide or hair of its young male members after breakfast, for they staid uptown for the parade, followed the paraders to the tents and remained standing about watching for any chance excitement that might happen. There was the feeding of the wild animals inside one of the tents, and the Berton boys could hear ferocious growls and snapping issuing forth, although they could see nothing but the stained and weather-worn canvas. Then there were the side-show tents, to which the freaks were hurried, wrapped closely against the intruding boys' eyes.

At 1 o'clock there was a free outside performance near the sideshow tents. Berton boys watched with relish the snakecharmer, the fire-eater and sword-swallower; then they cheered lustily, making themselves hoarse with their shouts. Before they hardly realized that the morning had passed the people were surging into the tents to see the show. First they wended their way round the menagerie tent, going from there into the big tent, where the thrilling circus performance would begin at 2 o'clock. Boyhood now became wild with enthusiasm. Some had no tickets, and no money to buy them with. These poor little chaps were obliged to content themselves with stealing peeps under the circus tent. Occasionally one of them was caught by a circus "super" and so shaken up that he forgot for a time just where he was. But boys cannot be controlled on a circus day, and soon the watchful "super" took himself inside the tent, where more arduous duties awaited him. Then the boys who were unable to produce a quarter and walk right in at the front entrance found looking under the edge of the tent the next best thing. A few of these being a bit braver than the others, crept inside the circus tent and found seats among their luckier playmates who had paid their way and sat enjoying themselves as only boys can who have enjoyed the distinction of paying for their admission.

The band started up and everybody clapped their hands, and those whose mouths were not too full of popcorn or peanuts shouted their approval of the music and things in general. Old grandfathers and mothers were there with the little folk, grinning and mumbling their pleasure. Sweethearts in their teens were there eating candy hearts and drinking pink lemonade that was passed about by a red-headed boy in soiled linen clothes. Fans were buzzing furiously, for every woman, young, old and intermediate, had brought her palm leaf to create breeze.

The grand parade was something to remember so long as life should last. The elephant led the procession, a couple of midgets on his back. The camel followed, carrying a huge-headed clown that made people split their sides with laughter, his jokes just suiting them. Then came the beautiful horses, spotted, snow-white, black and cream-colored. They were ridden by the bareback performers in spangles and tights. Then monkeys, grinning, jabbering, came in on the backs of trained dogs. Oh! when had anyone ever seen such a show? Never in Berton before.

But the wonders came when the performers entered the rings—for there were two of them. And of all that the boys of Benton saw that day in the circus a little Jap, who did acrobatic feats, pleased them most. He was about 10 years old, and people marveled at his performance. He was truly wonderful.

After the circus there was a concert, to which a few of the boys remained; those who had so much as a dime left after having paid a quarter to get in and five cents for peanuts and the same sum for pink lemonade, could afford to stay.

Then they ran home to supper and returned to watch the tents lowered, for the circus must travel that night to reach a larger town 20 miles away, where a performance would be given the next day.

But just as the circus train was about to start there was a cry that the little Jap acrobat was missing. Search was made for him about the grounds and throughout the town. Everybody became excited and the men and boys of Berton turned out to assist in the hunt. But to no avail—the missing Jap seemed to have sunk into the earth.

After three hours of fruitless search the circus manager, his temper in a dangerous mood, declared that the circus should move on, but that if he ever laid eyes on that "devilish Jap" he'd "skin him alive and make shoe leather of his hide." This awful threat made several boys, who had that day made up their minds to run away with the circus, tremble till their teeth chattered. They decided that home was a safer place than a circus with such a terrible boss to obey.

Long after midnight, and while every youngster of the town was in blissful dreams of clowns, monkeys and elephants, the man in the moon looked down on Berton and saw a strange sight. He saw a little black head come rising out of the big well that was on the baseball grounds—the site of the late circus. Pretty soon the dark head came entirely out of the well, followed by a slender body and long, active legs. Then the man in the moon discovered that it was none other than the little Jap whom all the town and circus people had hunted so vainly. Little Jap looked about him and grinned. "That's the time I stole a march on old Peterson," he said. "Uh! how mean he was to me! I hate him and I hate being a show man!"

But just now a new problem presented itself to little Jappie. He knew no living soul in the town that was now asleep. Not a light was to be seen anywhere. But Jappie was born brave and could feel no fear save of a great brutal master in the form of a circus manager. He untied a rope from about his waist and left it lying by the well, one end of it remaining tied about an upright beam fastened above the curb. He had guarded against falling into the water by securing himself with the rope to the curb. Then he had gone down almost to the water's edge, holding his toes and fingers tightly into the crevices of the stone wall. He knew when descending that should anyone come to draw water from the well while he was hidden there he would be in danger of being thrown to the bottom by the heavy bucket. But he knew that risk must be suffered if he ever got away from old Peterson. But he felt in luck when, after what seemed an endless time, the noise of the circus people, animals and vehicles ceased. He knew that they were on the move. Also the shouts and commotion in the streets of the town became hushed and the moon rose to give him light after the day had died. But Jappie would take no chances by coming out of his cold and dungerous hiding place too soon. So he remained there till the night was half spent. Then, his fingers and toes becoming stiff and unable to hold him safely, he decided to pull himself up from the depth of the well.

Berton boys watched with relish the snake-charmer, the fire-eater and the sword-swallower.

After untying the rope Jappie set out to walk through the town. He passed the line of small business houses, every one as dark and silent as the well he had just left. He felt the sweet freedom of being able to do as he pleased. He sat down on a box in front of a grocery store and began to count the stars. For the first time in his young life he felt that there was no one to scold him and beat him into submission of their selfish wishes. He had been taken while a mere baby and trained to be an acrobat. His teacher often swore at him and beat him. He was an American, and told Jappie that he had bought him from an old woman who found him on the streets of a California city, where he had been abandoned by his mother, no doubt.

And then when Jappie was about nine years old he was given over to old Peterson, the circus manager. Life had then become hard indeed. Most every day he was obliged to go through two performances. Some of the feats he performed were dangerous, and his life was often held in the balancing of a pole or the poise of his body on top of a ladder.

As Jappie sat counting the stars and feeling happy to be free, his little black eyes became heavy and sleep crept into them. He leaned against the big show-window of the store, in front of which the box was placed, and gave himself up to blissful slumber. How sweet to feel the fresh night air instead of the close atmosphere of the wagon where he slept when en route with a lot of other tired-out acrobats and showmen.

Jappie must have slept soundly, for the next morning a man coming down the street saw him there on the box, his head against the window, resting. Not till this early pedestrian shook him did the little fellow rouse himself. Then he opened his eyes and wondered how he come to be there. Quite a minute went by before memory of the previous night came to him. In the meanwhile the man who had wakened him was saying: "Ah, little chap, we hunted everywhere for you last night. Where were you hidden, anyway? The show has gone on without you. Now, what will you do?

"Stay here and work for somebody," said Jappie, getting up and yawning. "Nobody in the world cares for me, so I've got to look out for myself. I hate the circus and old Peterson, who curses me and kicks me whenever he feels like doing it. I hid in the well at the circus grounds."

"Whew," whistled the man. Then he unlocked the door of the grocery store and went in, calling Jappie to enter also. Once inside, he said:

"Do you think you'd like to learn to be a storekeeper? If you do here's the place for you. I've got no children and my wife—as motherly a soul as there is in the world—will jump at the chance to take you and teach you to be a Christian and a good, honest boy. What do you say?"

"It's a soft snap, and I'll take it," said Jappie, talking in the way he had been trained. "And now I'd like to do some work so I can have a bite of breakfast. I'm as hungry as our lions always are."

"Well, I've come to get something for breakfast now," said the man. "You may eat first and work afterwards. It's only 6 o'clock. My store isn't open for trade till seven. So you've an hour to eat and get acquainted with my wife, who'll take you to her bosom as her own. She loves children in general and is daffy on the subject of Japs. She will be too happy to mention when she finds you are to live with us."

Then the grocer—who proved to be a good and honest man—filled several paper bags with provisions and led Jappie from the store. "You see, yesterday being circus day my wife forgot to get what she needed for breakfast. Now that we are to have a circus performer living with us, I reckon she'll forget all the time."

"Then I'll learn to think of those things for her," said Jappie, trotting along beside his new father towards the pretty house shaded by trees that was to be his future home.

And so it was that Jappie, the acrobat, became Japanard, the scholar of Berton and the pride and joy of the good grocer and his loving wife, for he was sent to school regularly and allowed to work in the store only during his vacations.

Bunny Puzzle.

Poor Bunny has been pulled into parts. Can you join him together again? Try pasting the parts together on a bit of white paper. If done correctly Bunny will appear in coat, trousers and cap.

"Do you think you'd like to learn to be a storekeeper? If you do here's the place for you. I've got no children and my wife—as motherly a soul as there is in the world—will jump at the chance to take you and teach you to be a Christian and a good, honest boy. What do you say?"

"It's a soft snap, and I'll take it," said Jappie, talking in the way he had been trained. "And now I'd like to do some work so I can have a bite of breakfast. I'm as hungry as our lions always are."

"Well, I've come to get something for breakfast now," said the man. "You may eat first and work afterwards. It's only 6 o'clock. My store isn't open for trade till seven. So you've an hour to eat and get acquainted with my wife, who'll take you to her bosom as her own. She loves children in general and is daffy on the subject of Japs. She will be too happy to mention when she finds you are to live with us."

Then the grocer—who proved to be a good and honest man—filled several paper bags with provisions and led Jappie from the store. "You see, yesterday being circus day my wife forgot to get what she needed for breakfast. Now that we are to have a circus performer living with us, I reckon she'll forget all the time."

"Then I'll learn to think of those things for her," said Jappie, trotting along beside his new father towards the pretty house shaded by trees that was to be his future home.

And so it was that Jappie, the acrobat, became Japanard, the scholar of Berton and the pride and joy of the good grocer and his loving wife, for he was sent to school regularly and allowed to work in the store only during his vacations.

Lissa's Garden and Bob Rabbit.

BY MAUD WALKER.

Lissa had a little garden all her own. When her papa and mamma began making the big garden—where the vegetables were to grow for the family's use—Lissa was so much interested that she begged for "a teentsy-weentsy little bit of dirt and a dozen seeds to plant in it all by herself."

So Lissa's papa measured off a "teentsy-weentsy bit of dirt," about 10 feet by 10 for her. Then her mamma gave her several seeds of various kinds of vegetables. There were lettuce, radish, onion and pea seeds, and with these and a short-handled hoe Lissa went to work with a happy heart.

But she had not worked long when a voice she knew and loved called from over the high fence that separated Lissa's home from that of a neighbor's. It was Joe Smith calling, and he was saying: "Why, Lissa Brown, what you doing? —making garden? Where'd you git that hoe? Does your papa and mamma know you are digging up the dirt? Won't you get a spanking? Say, may I come over and help you?"

Lissa paid no attention to any of the first questions, but answered the last one. "Yes, Joe, you may come over and help me, for I'm getting a-w-f-u-l tired. My arms just ache with digging." And the little girl dropped her hoe and waited till her manful little playmate should come over the fence and relieve her of the laborous work.

Joe leaped over the fence and came running to the garden spot. "Oh, is this patch all yours?" he asked, his eyes gleaming.

"Yes, and I'm going to make the grandest garden you ever saw. I'm going to raise enough vegetables to sell for maybe $10—or maybe—maybe $3, anyway."

"Whew!" whistled Joe. "What you going to buy with so much money?" And he took the hoe and began to dig industriously.

"Oh, I'll buy a doll's carriage or a Shetland pony," said Lissa. "And if you help me with my garden, Joe, I'll buy something nice for you, too."

"Will you get me a football?" queried Joe. "Or maybe I'd rather have a pair of skates. My old ones are getting too small. Next winter I'll be so big I'll have to have some others. I'm growing a-w-f-u-l." Here Joe paused in his work and straightened up to display his height. He rolled up his shirtwaist sleeve and showed his enormous muscle. Lissa was much astonished at the development of the latter and declared that she would not wonder if Joe would yet become a strong man in a circus.

"Nope," said Joe, resuming his work, "I'll never be a circus man. Circuses have too many dangerous animals in the tents. They might break out some night and then everyone would run and hide behind me, for I'd be the strong man and would have to fight the lions and tigers and snakes. And being alone they'd about finish me. Besides, I don't care for circuses. I like fishing best."

"And I like picnics best," said Lissa. "I just love picnics."

"I like swimming next best to fishing," said Joe, sitting down to rest and clean the damp earth from the hoe blade. "But, of course, girls can't fish ner swim. Girls are too tender, I reckon."

Just at this moment Mrs. Brown came into the garden, and seeing Joe at work smiled and said: "Well, so my little daughter has had to call Joe to help her! I thought she'd find making garden pretty tiresome work. But Joe is strong and can do the hoeing and Lissa can lay off the beds and do the planting. That is a good way to divide the work."

"And it's so lonesome working alone," said Lissa. "With Joe helping me I don't mind working. Then it's fun."

"Well, no wonder it's fun," laughed Joe, "for I do the work and you do the resting. Anyone could enjoy making garden that way, couldn't they, Mrs. Brown? And Joe smiled knowingly at Lissa's mother, who laughed heartily at the jolly little chap's wit.

And so the garden grew into shape with Joe to do the work and Lissa the bossing. They planted a prettily laid out little bed of lettuce, another one of peas, another of onions, and a fourth one of radishes. Then they decided to wait and see them grow. As soon as luncheon was over both children took their seats on an old rug Lissa had brought for the purpose and began their watch of the garden. They were quite certain the seeds would sprout within a short time after planting, for the ground was so warm and damp. Then up would shoot little green sprouts, which would in course of time become beautiful vegetables fit to eat.

But as the afternoon wore away and no green sprouts showed above the newly broken earth Lissa's and Joe's enthusiasm began to wane. Lissa thought of her dollies that needed attention. Joe saw two of his young friends going toward the creek with fishing poles over their shoulders. He rose and went off without so much as an excuse, only saying as he ran toward the fence: "There goes Tom and Penn!" Then he was over the barrier at a bound, calling after his chums to wait for him.

Lissa, with a sigh of relief, got up and went to her playroom and told her dolls all about the pretty garden she—with Joe Smith's help—was making; that within a few days the pretty white onions and red radishes would be ready to eat.

The next morning, and the next, and the next, Lissa and Joe visited their partnership garden to find not a green sprout. At last, half discouraged, they dug their fingers down into the pea bed to see if the seeds were still there. To their great joy they beheld the seeds swollen and bursting with tiny green sprouts starting to grow. They hastily covered up the seeds they had exposed and decided to wait till they had time to get through the soil. But both knew that the garden was an assured thing. It was not on top of the ground yet, but it was bravely starting that way.

After several days of watching Lissa found a little green point sticking up in the onion bed. She ran to the fence and called to Joe. He was fixing his fishing tackle in the back yard of his home, but when he heard Lissa's voice he knew a radish or onion or lettuce leaf was up. He ran and jumped the fence, and was as proud of the one green spear as was Lissa. They stuck a little stick beside it, so that they might measure its growth from day to day. But as the days passed other spears and leaves popped into sight over night, and now one could see whole rows of them laid out as staight as a B-line.

But not only did the vegetables grow. There were ugly little weeds coming up everywhere, and Mrs. Brown had to show Lissa and Joe which green things to pull up. After a few lessons they learned to know the vegetables from the weeds. After that they kept their garden clean and nice by working in it every morning as soon as breakfast was over.

But one night while Lissa slept in her little bed and Joe in his there came from the woods bordering the creek a small grey animal. He sniffed the air and ran a few paces at a time, stopping now and then to glance about him, always on the outlook for danger. Seeing none he pursued his way, going straight for the back yard of Mr. Brown's house, where Lissa's and Joe's garden was now growing finely. This little grey four-footer was none other than Bob Rabbit, one of the prettiest little rabbits in all the valley. He smelt the growing radishes and could not resist the temptation to sample the tender tops.

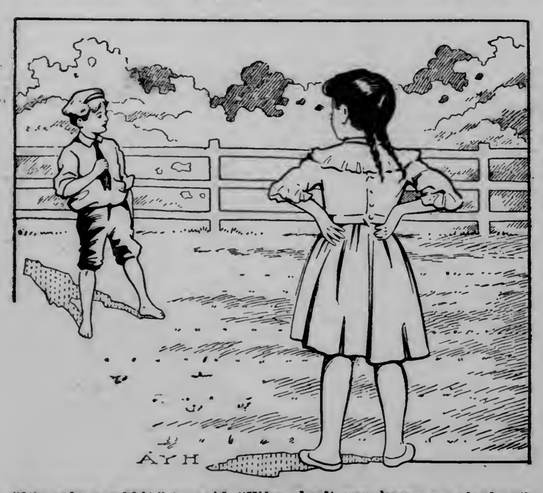
Bob Rabbit sniffed a few times, smiled to himself and sat down to nibble the tender bits of green so generously showing themselves under the bright moonlight. The first row of radish tops were so delicious that Bob Rabbit went over the next and the next till not one was left to tell on him. Then he tasted the onion tops. Not quite so much to his liking, for they bit his little pink tongue. But after swallowing one he decided he relished the flavor beyond anything he had ever eaten. So he took off the onion tops one by one till not one was left to tell or him. Then he wound up by eating every pea sprout and lettuce leaf in sight. "A nice salad," he quoth after the last lettuce leaf was swallowed. "Ah, ha, I'll come here during the vegetable season!" So saying, Master Bob Rabbit took himself off, to return again as soon as there was promise to his nostrils of more sprouts tender and green.

But can you imagine the consternation of Lissa the next morning, when, in slippers and wrapper, she ran out to take a peep at her garden? Not a spear or leaf of green to be seen in the prettily laid-out vegetable beds. Only little funny paw prints everywhere over the soft ground. Lissa ran to the fence and called to Joe, who was out at the chicken trough with a can of fishing worms. On hearing Lissa's voice so full of sorrow Joe dropped the can of worms and ran and leaped the fence. "What's up?" he cried as his eyes fell on Lissa's pitiful little face, for she was on the point of shedding tears over their loss.

"Some terrible animal—maybe a bear or an elephant—has et up our garden, onions and all!" she wailed. And now the tears broke their bonds and poured over the pretty pink cheeks of the little gardener girl.

"Oh-o-o-o!" was all Joe said. Then he ran to the garden and beheld the ruin. "It's only a rabbit," he said to Lissa, who had followed him. "Why, don't you know that an elephant's foot would cover the whole garden? Yep, it would. But these prints are made by a rabbit."

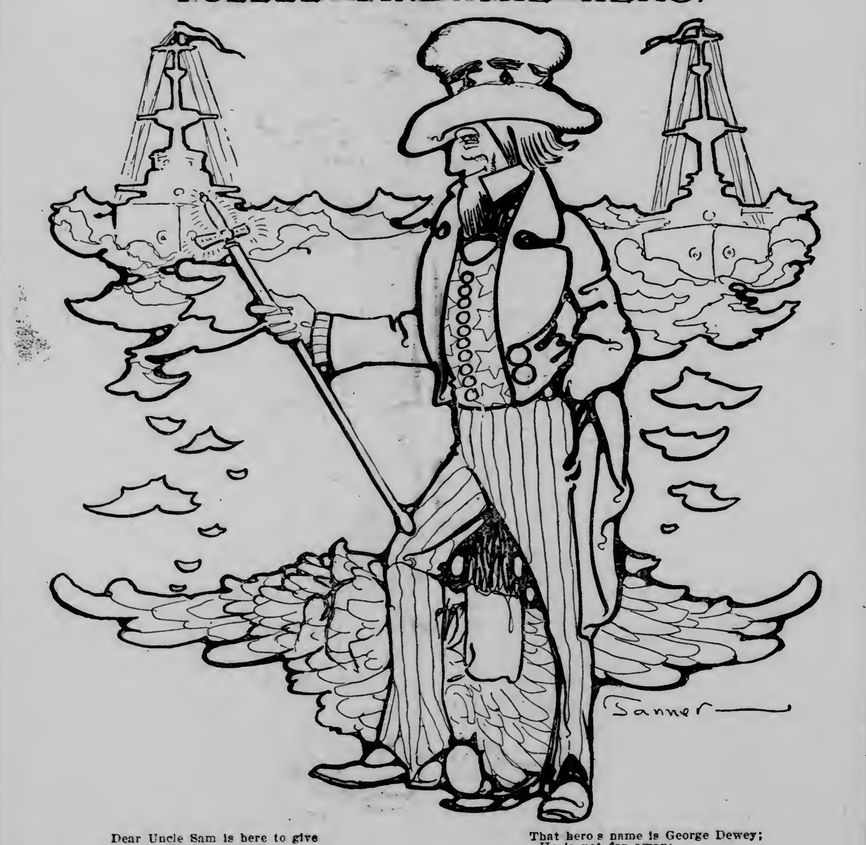
Then it was Lissa's time to say "Oh-o-o-o!" Still, she could not check the tears for a few seconds. When at last she could master her voice she said: "I don't so much mind a rabbit eating up our garden, for I do love rabbits so. But I do wish he had left just half of it for us. It's piggish to take it all. And even a rabbit ought to have better manners than that."



"Uh, that's all you know about rabbits," said Joe. "But, say, since we haven't any weeding to do today, let's go down into that big pasture and hunt for wild flowers. I saw a lot of daisies there when I was digging worms yesterday."

"May I take Lucy May?" asked Lissa, her face becoming radiant with anticipation. "She hasn't been out of the house since I began making garden."

"Sure, bring her if you want to," acquiesced Joe. "But if it was me I'd hate to be bothered with a great big doll to pack, so I would."



Then their mothers' voices were heard calling them to breakfast, and they ran from the demolished garden, forgetting it in their happy plans for the morning. After all, gardening was for grown-ups, Lissa said afterwards. As for her, she'd take picnics and dolls, while Joe clung to his preference of fishing and swimming.

The following day Lissa turned her "teentsy-weentsy bit of dirt" over to her father for the consideration of one dollar, saying he might have it, rabbit tracks and all.

"It's only a rabbit," he said, "Why, don't you know an elephant's foot would cover the whole garden?"

PUZZLE - FIND THE HERO.

Dear Uncle Sam is here to give
A sword of honor to
A hero all the world does know,
And who is known by you.

That hero's name is George Dewey;
He is not far away;
And if you'll look quite closely
You'll find him, I dare say.

Queens of England.

Catharine of Braganza, queen-consort of Charles II., of Great Britain, was born in Portugal November 25, 1638, and was named in honor of St. Catharine, having been born on that saint's day. When she was two years old her father, the Duke of Braganza, became king of Portugal, assuming the title of Juan IV.

When Catharine was but six years old her father made overtures to Charles I., of Great Britain, regarding a marriage between her and the young Prince of Wales, afterwards Charles II. But these negotiations came to naught, and it was not till 17 years later that a marriage between the infanta and the Prince of Wales was arranged. There was much opposition in England to the King taking a Roman Catholic queen, and he had some difficulty in bringing about a marriage with the Portugal Princess and heiress.

Catharine of Braganza.

But Catherine was the one who called for pity. Her union with Charles brought great unhappiness into her life. He was a monster of infidelity and heaped wrongs, insults and humility upon her helpless shoulders. She bore her wrongs and gross neglect with wonderful patience, only remonstrating when the load became no longer bearable. With wanton prodigality Charles squandered her dower on his favorites, pauperizing not only her but himself. His extravagance knew no bounds till at last it put him so deeply in debt—and disgrace with the tradesmen—that he was denied credit.

During the 22 years of her queenhood as wife to Charles II. Catharine knew not one day of unalloyed happiness. As the years went on she became—in a measure—so accustomed to her royal husband's neglect that she tried to assume indifference to it, but all the while her wrongs left their incurable stings. However, she proved to be of a most noble disposition, forgiving Charles on his death bed and truly mourning him, for in spite of his neglect of her she loved him as a mother loves an erring child.

After Charles' death Catharine returned to her beloved country, sunny Portugal, where she spent the remainder of her life in sweet quiet and rest. She died of a sudden attack of colic on the night of December 31, 1703.

JOKELETS.

How He Might Be Identified.

A man from town was calling at a farmhouse on business. Meeting a half-grown boy in the yard, he inquired for the farmer who lived there. "Oh, he's my dad, an' you'll find him down in the holler with the hogs. You'll know him, for he's got a hat on," was the information innocently given by the boy.

Impatient Tommy.

Tommy went to kindergarten. One day the teacher said: "Now, children, I want you all to be so quiet you could hear a pin drop." The little ones straightened up and kept very quiet, not one moving a finger or toe. Pretty soon Tommy, becoming impatient, cried out: "Well, why don't you drop 'er?"

LETTER ENIGMA.

My first is in dirt, but not in clay;
My second is in bark, but not in Leigh;
My third is in night, but not in day;
My fourth is in sun, but not in ray;
My fifth is in millet, but not in hay;
My sixth is in come, but not in stay.
My seventh is in sound, but not in bay.
My whole spells blossoms
That come in May,
And children gather them
Wherever they may.
